- plants and animals and the biological processes used to produce plants or animals, with the exception of microbiology processes and the products of these processes; and
- methods for treating the human or animal body surgically or therapeutically, and methods of diagnosing disease applied to the human or animal body, with the exception of products that are used in any of these methods.

The Patent Law does not protect plant varieties and animal species.

According to Article 15, patents are valid for a period of four years, but can be renewed for cumulative periods of up to 20 years.

At present, the Patent and Trademark Office (PTO) processes applications for industrial designs, while other patent applications are directed to the GCC Patent Office in Riyadh, Saudi Arabia. When approved, a registration in the GCC Patent Office in Riyadh may be enforced in Kuwait.

An owner or rights holder of a patent, a drawing, a design or a utility model may file a complaint under the Patent Law to protect their rights. During a civil or criminal lawsuit, a rights or title holder may ask the court to issue an order to take precautionary measures, which may include the seizure of the contravening goods and the equipment and machines used for committing the offence. Where necessary, the order issued for taking such measures may require the appointment of an expert and other court officers to assist in its execution.

Unlike under Law No 13 of 2015 (the "TM Law" – see **7.2 Trade Marks**) and Law No 75 of 2019 (the "Copyright Law" – see **7.4 Copyright**), which specifically allow a rights or title holder to seek an order from a Kuwait court for the enforcement of precautionary measures prior to the filing of a substantive infringement action (and on an ex parte basis when necessary) to prevent patent infringements and violations, the Patent Law grants such a right only after the substantive claim for patent infringement or violation of the Patent Law has been filed.

The 1970 Patent Cooperation Treaty (as amended) (PCT), an international patent law treaty, is also of significance, and was ratified by the State of Kuwait on 9 September 2016. The PCT makes it possible to seek patent protection for an invention simultaneously in a number of countries by filing an "international" patent application; such an application may be filed by anyone who is a national or resident of a contracting state with the national patent office of the contracting state or, at the applicant's option, with the International Bureau of WIPO in Geneva. However, it should be noted that the PCT application does not itself result in the automatic granting of a patent, and the granting of a patent is at the discretion of each national or regional authority. In other words, a PCT application establishes a filing date in all contracting states but must be followed up on by entering into national (or regional) efforts to obtain one or more patent registrations.

## 7.2 Trade Marks

Trade mark protection is regulated under the TM Law, which is largely based on a treaty between the various GCC states. The TM Law defines "trade marks" as "anything which takes a distinct form or style in the form of names, words, signatures, letters, symbols, numbers, titles, stamps, drawings, graphs, inscription or combination of same, or any signs or group of signs if used or intended to be used to distinguish such products or services of an organisation or entity relevant to such products or services from products or services of other entities or to indicate the performance of a service or to control or check such products or services" (informal translation).

Trade marks, service marks, logos and trade names may be registered in Kuwait under the TM Law in accordance with international classification standards, except those relating to certain prohibited items (ie, alcohol and pork products) and certain restricted activities (such as gambling). These registrations are valid for up to ten years from submission of the application for registration, and may be renewed for similar periods. When foreign marks are to be used in Kuwait, the owner thereof is typically recommended to consider registering them locally in accordance with the TM Law as this affords the mark owner more protection than when the marks have not been registered.

In the case of an infringement of a registered trade mark, the remedies available to the trade mark owner under the TM Law include:

- filing a criminal action (see Articles 2, 3 and 4 of the TM Law);
- seeking injunctive relief, which may take the form of confiscating infringing items, impounding the tools used in infringing the mark and/or the destruction of unlawful marks and property (see Article 40 of the TM Law);
- if the infringing party manages to register the infringing mark, filing a case to de-register the trade mark of the infringing party (see Articles 22 to 24 of the TM Law);

- seeking damages (see Article 41 (1) and (2) of the TM Law); and
- filing an application with the Customs Department to prevent the entry of counterfeit goods (see Article 38 of the TM Law).

Of significance, a complainant should file a substantive action with the relevant court within 20 days of the granting of a precautionary order/injunctive relief.

### 7.3 Industrial Designs

Industrial designs are also protected in Kuwait (but not separately defined, strictly speaking) under Law No 4 of 1962 (the Patent, Designs and Industrial Models Law), Article 35 of which provides that "any arrangement of lines or any type of figure, whether coloured or uncoloured, designed for use in industrial production by a mechanical, manual or chemical process shall be considered a design or industrial model" (informal translation). Although industrial designs are regulated similarly to patents, they are subject to certain different rules. For example:

- the initial protection period for industrial designs is ten years from the application date;
- industrial designs may be renewed for one further period of five years; and
- industrial models are registered with the PTO on the Register of Designs and Industrial Models.

### 7.4 Copyright

The Copyright Law governs copyright issues and defines a "work" as "any creative literary, artistic or scientific work of whatever kind, expression, importance or purpose" (informal translation), and provides for the protection thereof. Article 23 of the Copyright Law provides that copyright protections will typically endure for the lifetime of the author and for 50 years after the author's death; additional considerations may apply, depending on the nature of the work and the author involved (joint works, juristic entities, etc). Certain limited exceptions from the copyright protection are provided for (copying short portions for educational purposes, etc).

A party seeking to protect its copyright does not need to register the copyright locally in order for it to be granted protection under the Copyright Law; however, it may wish to apply and file a request with the Kuwait National Library (KNL) to deposit works sought to be protected in order to enhance the ability to evidence the author's entitlement to copyright protection. The KNL is authorised to accept applications for the deposit of works from authors or creators, their descendants or their official representatives. Only one classification of work will be allowed for each application. If the material is accepted for deposit, the KNL will classify the material and issue a certificate indicating the serial number, the date of deposit and an international classification.

Under Article 35 of the Copyright Law, a complainant may petition a court to grant interim relief (an order restricting the publication, presentation, performance or copying of the work for a certain period of time, seizure of the revenue generated from the exploitation of the work, etc) when there is a violation of any rights stipulated under the Copyright Law. Significantly, a complainant should file a substantive action with the relevant court within 15 days of the granting of the interim relief.

### 7.5 Others

While certain laws protect trade secrets (eg, the Companies Law restricts directors from sharing company secrets), there is no formal registry for such information.

While a database can enjoy protection under the Copyright Law, depending on its nature, the authorities have not issued a directive as to the basis on which software is protected. Depending on the type/format of the software, possible arguments can be made that it should be protected under copyright or as a patent. In this regard, the Copyright Law expressly provides for the protection of "computer programs" but, as provided in **7.1 Patents**, the Patent Law states that patents "shall be granted in accordance with the provisions of this Law for any new invention which is utilisable in industry, whether it concerns a new industrial product, original industrial process and techniques or a new application of know industrial process or techniques" (informal translation), and it is conceivable that certain software could also satisfy this language in the Patent Law.

## 8. Data Protection

### 8.1 Applicable Regulations

Data protection considerations and restrictions are addressed in various laws of Kuwait, including:

- the Kuwaiti Constitution;
- the Electronic Transactions Law (the "ET Law");
- Law No 37 of 2014 on the Establishment of the Communications and Information Technology Regulatory Authority (CITRA);
- the Evidence Law;
- the Right to Access Information Law and its implementing regulations;
- Law No 9 of 2019, Concerning the Exchange of Credit Information and its implementing regulations;
- various resolutions/regulations issued by CITRA, such as:
  (a) CITRA Resolution No 26 of 2024 on the Regulations of Data Privacy Protection (DPR); and
  (b) the Cloud Computing Regulatory Framework ("Cloud Regulations") issued by CITRA;
- Decree No 37 of 2022 regarding the establishment of the National Cyber Security Center (NCSC); and
- various resolutions/regulations issued by the NCSC, such as:
  (a) Resolution No 35 of 2023, "Concerning the National Framework for Cybersecurity Governance";
  (b) Resolution No 1 of 2025, "Concerning the National Framework for Cybersecurity Governance"; and
  (c) Resolution No 2 of 2026 "Concerning the National Controls for Cybersecurity."With respect to data protection generally, the ET Law applies to all records and information recorded electronically relating to civil, commercial and administrative transactions, unless the parties agree otherwise. Regarding the collection, use and disposal of personal information, the ET Law provides that, except as otherwise authorised, all government and private entities may not unduly or illegally disclose any personal data documented in electronic form unless and until it has been agreed to by the data subject. These restrictions on the collection, use and disposal of personal data and items that may be considered as personal data are further expanded upon in the provisions of the DPR and the Cloud Regulations. However, the DPR and Cloud Regulations are more specific in the application and considered sectoral resolutions that apply only to regulated entities which are operating in the telecommunications sector (mobile network operators, ISPs, cloud service providers, etc).

### 8.2 Geographical Scope

Companies that are doing business "in" Kuwait are typically required to abide by Kuwaiti laws, regardless of whether or not they have a physical presence in Kuwait; such laws include the ET Law. While this is decided on a case-by-case basis, the likelihood of the foreign entity being subject to Kuwait's laws increases according to the strength of the link between the activities of the foreign entity and Kuwait. Having noted this, there are restrictions on the export of certain government and sensitive information (although these points are currently being looked into and new reforms are expected).

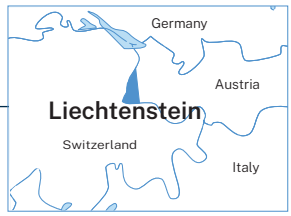
### 8.3 Role and Authority of the Data Protection Agency

There is no particular agency in Kuwait that is specifically charged with and dedicated to enforcing Kuwaiti data protection rules. The agency that may have jurisdiction will depend on the specific data protection rules that are being contravened. For instance, CITRA would be the authority in charge of overseeing the application of the DPR and Cloud Regulations when it is related to a company which is licensed by CITRA to conduct telecommunication services, while the Central Bank of Kuwait would be the primary authority in relation to entities which it may regulate (such as banks).

## 9. Looking Forward

### 9.1 Upcoming Legal Reforms

With respect to business reforms in 2026 and beyond, it is expected that a number of reforms will be issued to facilitate foreign parties seeking to do business directly in Kuwait. Perhaps the most significant of



these are the regulations to be issued permitting the establishment and operation of an Article 24 Branch.

Furthermore, Kuwait now has a new Digital Commerce Law No 10 of 2026 (the "Digital Commerce Law") published in the Kuwaiti Official Gazette on 1 March 2026. The Digital Commerce Law will enter into force one month after the publication of its Executive Regulations (which are still pending issuance). The Executive Regulations must be issued within one year of the Law's publication. The legislation introduces a framework governing commercial activities conducted through websites, digital platforms, applications and social media channels, with the objective of enhancing transparency, strengthening consumer protection and bringing greater structure to digital commercial practices in Kuwait's online marketplace.

There have also been discussions on the following developments.

- A new mortgage law that aims to address the nation's housing challenge: this legislative move seeks to regulate the housing finance system and expand homeownership opportunities for Kuwaiti citizens. Under the proposed law, a Kuwaiti citizen could access mortgage loans with flexible repayment periods. This move will invigorate the financial and real estate sectors.
- Overhauling of Kuwait's data privacy and information security policies: no details have been disclosed save for certain discussions/market speculation.

**Gasser Partner** is an international law firm recognised for legal excellence, strategic clarity and a strong client-focused approach. The firm brings deep expertise in private client work, banking and financial services, corporate/M&A and litigation. As one of Liechtenstein's leading practices, Gasser Partner advises private clients, family offices, financial institutions and businesses on sophisticated legal matters, including transactions, cross-border structuring and high-stakes disputes. With offices in Schaan, Zurich and Vienna, and a global network, the firm delivers seamless cross-border advice and representation.

## Authors

**Hannes Arnold** is a senior partner at Gasser Partner. He advises international companies, families and family offices on corporate law, wealth and corporate structuring, and complex domestic and cross-border M&A transactions, relocations and financings. This broad transactional practice gives him a deep understanding of the challenges facing sophisticated international structures. In addition to his advisory work, Hannes represents clients in complex international litigation and arbitration proceedings, with a particular focus on foundation and trust law as well as asset tracing and recovery. Hannes is admitted to the bar in Liechtenstein and Austria and is also a Public Notary in Liechtenstein.

**Thomas Nigg** is a senior partner at Gasser Partner. He is admitted to practice law in Liechtenstein and specialises in advising clients on all matters relating to Liechtenstein companies, foundations and trusts. He has in-depth knowledge and experience in the establishment and restructuring of such structures. He advises clients on complex transactions. His expertise also includes civil and criminal litigation with a focus on corporate, foundation and trust law. His clients include international private banks, trust and asset management service providers, high net worth individuals, insurance companies and family offices.

**Christina Pointner** is a managing attorney at Gasser Partner and a key contact for all matters relating to Liechtenstein banking and financial services law, insurance law and investment funds regulation. Christina advises on licensing and regulatory matters, product structuring, financings and M&A transactions in regulated sectors. She also advises private clients and family offices on wealth and succession planning. Christina holds a Master's degree from the University of Vienna, an LLM in Banking and Securities Law and a PhD from the University of Zurich. She is admitted to the Liechtenstein Bar and publishes regularly on financial services law and related topics.

**Sebastian Auer** is a senior partner at Gasser Partner. He specialises in dispute resolution in commercial and private client matters as well as private wealth law. His main focus is cross-border commercial and high net worth individual disputes. He is experienced in handling complex litigation and arbitration cases, often including parties in several jurisdictions. He also advises clients on private wealth vehicles and asset planning. This broad knowledge enables him to assist in all legal matters arising in commercial, trust and foundation disputes. Sebastian regularly publishes on trust and foundation matters.

**Contributed by:** Hannes Arnold, Thomas Nigg, Christina Pointner, Sebastian Auer, Johannes Sander, René Saurer and Marta Baftiaj, **Gasser Partner**

**Johannes Sander** is a senior partner at Gasser Partner. He is admitted to the Liechtenstein Bar and is also qualified as a lawyer in Austria. He specialises in advising clients on all matters relating to Liechtenstein corporations, foundations and trusts. He also advises on civil law matters, white collar crime, corporate law, litigation and dispute resolution. As part of the private client and litigation team at Gasser Partner and due to his professional knowledge, Johannes Sander regularly advises international trust and fiduciary service providers, high net worth individuals, insurance companies and family offices.

**René Saurer** is a partner at Gasser Partner and specialises in corporate law and data protection. He is experienced in handling complex transactions and litigation. He has substantial knowledge in corporate, trust and foundation and data protection law.

**Marta Baftiaj** is a senior associate at Gasser Partner and a member of the Liechtenstein Bar. She advises domestic and international clients on civil and commercial litigation, with a focus on disputes involving corporate structures, foundations and trusts, including cross-border matters. She is active in private client matters, including estate planning, asset protection and succession planning, as well as in white-collar criminal law, representing individuals and entities in complex proceedings. She acts for high net worth individuals, family offices and corporate clients, providing strategic advice and representation before Liechtenstein courts.

## 1. Legal System

### 1.1 Legal System and Judicial Order

Liechtenstein is located at the heart of Europe, bordered by Switzerland and Austria. With around 40,000 residents and the highest GDP per capita in the world, the principality combines the ways of a small jurisdiction with genuine economic depth.

Liechtenstein is a constitutional hereditary monarchy on a democratic and parliamentary basis. Under the Constitution of 1921, state power is vested jointly in the Reigning Prince, as the Head of State, and the People. The Parliament (*Landtag*) consists of 25 members elected by proportional representation for four-year terms. The *Landtag* proposes laws, and the government, a collegial body of five ministers including the Prime Minister, is responsible for day-to-day administration. Liechtenstein has pronounced direct democratic rights, where citizens may launch a referendum to put parliamentary decisions to a popular vote or initiate constitutional amendments. For a law to enter into force, it must be approved by both Parliament and sanctioned by the Reigning Prince, reflecting the dualistic principle of shared sovereignty.

Liechtenstein is a civil law jurisdiction with strong historic ties to Austria and Switzerland, and their respective legal traditions. The cornerstone of civil law is the General Civil Code (*Allgemeines bürgerliches Gesetzbuch*, ABGB), adopted from the Austrian model and in force since 1812. Key procedural laws, including the Code of Civil Procedure (ZPO), the Jurisdiction Act (JN) and the Execution Code (EO), are also derived from Austrian law. By contrast, property law is based on the Swiss model, and company law is governed by the Persons and Companies Act (*Personen- und Gesellschaftsrecht*, PGR), which draws heavily on Swiss corporate law. Employment law and social security law likewise follow the Swiss model.

The Liechtenstein judicial system is organised into three main branches. The first is the ordinary jurisdiction for civil and criminal matters, operating through a three-tier court system. The second branch comprises the administrative courts, with the Administrative Court (*Verwaltungsgerichtshof*) as the highest administrative tribunal. The third branch is the constitutional jurisdiction, exercised exclusively by the Constitutional Court (*Staatsgerichtshof*). This court serves as an extraordinary court of appeal and may be petitioned against final decisions for alleged violations of constitutional rights, rights guaranteed by the European Convention on Human Rights, or rights under the European Economic Area Treaty. All courts are located in Vaduz.

Liechtenstein has maintained a customs union with Switzerland since 1923 and shares the Swiss franc as its currency. Since 1995, it has also been a member of the European Economic Area, giving Liechtenstein-based service providers passporting rights across the EU single market. This dual access, Swiss and European, is unmatched by any other jurisdiction.

## 2. Restrictions on Foreign Investments

### 2.1 Approval of Foreign Investments

Unlike some larger jurisdictions, Liechtenstein does not operate a general foreign direct investment screening regime. A foreign investor therefore does not generally require stand-alone investment approval merely because it is acquiring shares in, establishing or financing a Liechtenstein business.

Approval requirements arise instead from sector-specific regimes and rules governing particular assets. The most important practical examples are regulated financial services, including banks, investment firms, funds and insurance undertakings, where acquisitions of qualifying holdings or control (meaning in general, if the investor has at least 10% of capital or voting rights or another possibility to exercise considerable influence) may require prior notification to, or approval by, the Liechtenstein Financial Market Authority (FMA).

Other regulated activities, such as gambling, telecommunications, energy or certain professional services, may also require an operating licence or regulatory consent irrespective of the investor's nationality. Liechtenstein's European Economic Area (EEA) membership is of importance in this context: EEA investors generally benefit from the free movement of capital and establishment, but that benefit does not displace generally applicable licensing, fit-and-proper, pruden-

tial, anti-money laundering, sanctions or real estate rules.

With regard to the acquisition of domestic real estate, the express aim of the Real Estate Acquisition Act is that ownership of real estate in Liechtenstein should be distributed in a way which is socially acceptable and consistent with the size of the country.

Generally speaking, all transfers of ownership of domestic real estate or economically equivalent rights thereto (hereinafter each a Transfer and collectively Transfers) are within the material scope of the Real Estate Acquisition Act, wherefore an approval by the relevant authority is required. This also includes the acquisition of shares in legal persons or partnerships whose assets consist wholly or predominantly of domestic real estate or equivalent rights.

In order for an investor to be granted the authorisation of the transfer, the investor may have to prove that he has a legitimate interest in the transfer.

Yet, in principle, a legitimate interest is to be considered apparent if the applicant, in this case the investor, requires business premises for a duly authorised business within Liechtenstein and if it has no other premises available.

### 2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance

Where approval is required, the process depends on the relevant sector or asset.

In financial-sector transactions, the investor typically files information on its identity, business, beneficial owners, financial soundness, source of funds and governance arrangements with the FMA before closing. The FMA then assesses the suitability of the acquirer, the sound and prudent management of the regulated entity and compliance with applicable prudential and anti-money laundering requirements. If the FMA does not object within the assessment period (approximately 60 working days), the acquisition or increase is deemed approved; the FMA may impose conditions and obligations as prerequisites for approval.

For real estate, legal transactions requiring approval must be submitted to the Office of Justice within four months after conclusion. Until approval is granted, the Transfer remains ineffective and becomes void if it is not submitted in time, if approval is finally refused, or if approval is finally revoked.

The consequences of non-compliance depend on the applicable regime.

In real estate transactions, intentional circumvention of the approval requirement may be punished by imprisonment of up to six months or a monetary penalty of up to 360 daily rates; negligent conduct may be punished by a fine of up to CHF20,000.

In the banking sector, failure to notify, completion during the assessment period, or completion despite an FMA objection may result in rather high administrative fines; if a qualifying holding is acquired or increased despite an FMA objection, the acquirer's voting rights may not be exercised, and any vote cast is void.

### 2.3 Commitments Required From Foreign Investors

Since Liechtenstein has no general FDI screening authority, there is no standard set of national security or public interest undertakings imposed on foreign investors as a condition to closing.

Commitments arise mainly in regulated sectors and are tailored to the regulatory concern identified by the competent authority. In financial services, commitments may relate to governance, capital adequacy, risk management, substance in Liechtenstein, reporting lines, anti-money laundering controls, etc.

In real estate matters, approval may be linked to a legitimate interest and the permitted use of the property and compliance with land-transfer conditions.

### 2.4 Right to Appeal

A refusal or conditional approval by a Liechtenstein administrative authority may generally be challenged through the applicable administrative appeal route. The precise forum and deadline depend on the respective legal grounds under which the decision was issued and on the form of the decision.

In financial-sector matters, in general (ie, unless special provisions apply) FMA decisions and orders may be challenged within 14 days from service of the decision before the FMA Complaints Commission; decisions of the FMA Complaints Commission may then be challenged within 14 days from service of the decision before the Administrative Court.

With regard to the acquisition of domestic real estate, decisions of the Office of Justice may be appealed within 14 days from the date of service of the decision to the Administrative Complaints Commission; decisions of that Commission may be appealed within 14 days from service to the Administrative Court.

## 3. Corporate Vehicles

### 3.1 Most Common Forms of Legal Entity

#### General Features of Liechtenstein Corporate Law

Liechtenstein's corporate law offers a remarkably broad range of legal entities and is characterised by a high degree of organisational flexibility, with comparatively few mandatory provisions. Several features are common to all or most corporate forms.

- Capital may be denominated in francs, euros or United States dollars.
- Minimum capital requirements are low by international standards, starting from CHF/EUR/USD10,000.
- Liechtenstein follows the incorporation principle, meaning that the law of the state in which the entity is registered governs its legal status, providing certainty for cross-border structures.
- There is no mandatory employee participation in the board of directors (*Verwaltungsrat*).
- The AG and the GmbH are EU-harmonised corporate forms; as an EEA member, Liechtenstein implements the relevant EU company law directives, making these vehicles internationally recognised and widely accepted in cross-border dealings.
- Both natural and legal persons may serve as members of the board of directors, regardless of nationality or domicile.
- All entities must designate a representative (*Repräsentant*) for official communication with Liechtenstein authorities, unless a domestic delivery address is specified, and must generally appoint at least one qualified board member with a nexus to Liechtenstein (see **3.4 Management Structures** for details).

The most common corporate vehicles used in practice are the following.

#### *Company limited by shares (Aktiengesellschaft, AG)*

The AG is the most widely used corporate vehicle in Liechtenstein, with approximately 4,857 AGs registered as of 31 December 2025. It is a company with a predetermined share capital divided into shares. The minimum share capital is CHF/EUR/USD50,000, which must be fully paid up at incorporation. At least two founders are required, though immediately after formation all shares may be held by a single shareholder (one-person AG).

The AG is well-suited for businesses of all sizes, with main areas of application including active international trading companies, holding structures, regulated financial services entities, and joint ventures. The AG may issue both registered shares (*Namenaktien*) and bearer shares (*Inhaberaktien*); bearer shares remain available in Liechtenstein, subject to mandatory deposit with a registered custodian. As an EU-harmonised vehicle, the AG avoids the recognition difficulties that may arise with Liechtenstein-specific forms such as the Establishment.

#### *Limited liability company (Gesellschaft mit beschränkter Haftung, GmbH)*

The GmbH has gained significantly in popularity following a comprehensive reform aimed at increasing its attractiveness and is currently one of the fastest-growing corporate forms in Liechtenstein, with approximately 1,376 registrations as of 31 December 2025. The minimum share capital is CHF/EUR/USD10,000, which must be fully paid up. The GmbH is an internationally well-known corporate form and is particularly suited for small and medium-sized enterprises (SMEs). For the GmbH, a single founder suffices.

### *Establishment (Anstalt)*

The Establishment is a corporate form unique to Liechtenstein with no direct equivalent in foreign legal systems. As of 31 December 2025, 4,030 Establishments were registered, making it the second most popular corporate form after the AG. Conceived as an intermediary form between a corporation and a foundation, the Establishment offers maximum flexibility and can be structured either as a corporation-like or a foundation-like entity, often described as the "building block" of Liechtenstein corporate law. The minimum capital is CHF/EUR/USD30,000, which must be fully paid up. The Establishment does not require shareholders.

Control usually rests with the founder, who may reserve extensive rights including the right to amend the founding documents, appoint and remove board members, and designate beneficiaries. Founders' rights may be held by one or several persons, may be divided among them, and are transferable and inheritable, making the Establishment particularly attractive for succession planning. The Establishment is widely used as a vehicle for holding real estate and participations, for asset protection and wealth transfer across generations, and as an enterprise vehicle for SMEs.

### *Foundation (Stiftung)*

The foundation is Liechtenstein's most distinctive legal export and the most numerous legal entity in its register, with approximately 8,936 foundations as of 31 December 2025. The minimum endowment capital is CHF/EUR/USD30,000. The foundation has no shareholders or owners; it is a purpose-dedicated endowment with independent legal personality. The key distinguishing feature of the Liechtenstein foundation is that it may serve purely private purposes (*privatnützige Stiftung/Familienstiftung*). Unlike in most other European jurisdictions, where foundations must generally pursue charitable or public-benefit purposes, Liechtenstein expressly permits foundations established exclusively for the benefit of designated private beneficiaries, typically family members. This makes the foundation a central instrument for intergenerational wealth planning, asset protection and succession structuring.

Private-benefit foundations are not subject to state supervision, unlike charitable foundations, which are overseen by the Foundation Supervisory Authority (STIFA). Foundations may be either registered in the Commercial Register (*Handelsregister*) or merely deposited (*hinterlegt*), provided they do not conduct a commercial business in a commercial manner (e *in nach kaufmännischer Art geführtes Gewerb* e). Deposited foundations do not appear in public records, providing an additional layer of confidentiality.

### *Trust (Treuhänderschaft)*

Liechtenstein is the only country on the European continent with a comprehensive statutory trust law. While the trust is not a legal entity, it is a well-established and widely used legal arrangement, particularly for asset protection, succession planning, and wealth structuring, with approximately 1,568 registered trusts as of 31 December 2025. In practice, trusts are frequently combined with other Liechtenstein vehicles such as the Establishment to achieve optimal structuring results.

The Liechtenstein trust was originally inspired by Anglo-American trust law but has since developed into a distinct civil law instrument, fully integrated into Liechtenstein's civil law framework. A trust is created by a settlor (*Treugeber*) who transfers assets to one or more trustees (*Treuhänder*) for the benefit of designated beneficiaries (*Begünstigte*). Notably, Liechtenstein also permits pure purpose trusts without identifiable beneficiaries, which remain restricted or unavailable in many other jurisdictions.

## 3.2 Incorporation Process

The establishment of a corporate vehicle in Liechtenstein typically takes between two and four weeks, depending on the complexity of the structure and the completeness of the documentation provided. In practice, entities are usually formed through a licensed fiduciary, who acts as a professional intermediary and ensures compliance with all regulatory requirements, including anti-money laundering due diligence (KYC/AML).

### Corporations (AG, GmbH) and Establishment

The incorporation of an AG, GmbH or Establishment requires the drafting of articles of association (*Stat-*

*uten*) and the deposit of the required minimum capital at a Liechtenstein bank. Capital may also be contributed in kind, in which case an expert valuation report is required. The incorporation is typically executed in a notarised public deed (*öffentliche Urkunde*). For the GmbH, a simplified incorporation procedure is available using a standardised model protocol (*Musterprotokoll*) that requires only certification of signatures rather than full notarisation. The entity is then registered with the Commercial Register, which reviews the application for compliance with all legal requirements before approving registration. Legal personality is acquired upon entry in the Commercial Register. If the entity intends to conduct a commercial business, a trade permit (*Gewerbebewilligung*) must also be obtained.

### Foundation (Stiftung)

A foundation is established by a unilateral declaration of the founder (*Stiftungserklärung*). Foundations may be registered in the Commercial Register. In the case of a deposited foundation, a founding declaration (*Gründungsanzeige*) must be filed with the Commercial Register within 30 days.

### Trust (Treuhänderschaft)

A trust is established by execution of a trust deed (*Treuhandurkunde*) between the settlor and the trustee. No minimum capital is required, and no notarisation is necessary. Trusts must be either registered in the Commercial Register or deposited if they are established for a duration exceeding 12 months. The trust does not acquire legal personality through registration or deposit; these serve evidentiary and regulatory purposes.

## 3.3 Ongoing Reporting and Disclosure Obligations

All entities registered in the Commercial Register must notify the Commercial Register of any changes to the board of directors, management, articles of association, registered office or authorised signatories. Deposited foundations and trusts are subject to corresponding notification obligations.

Entities operating a commercial business in a commercial manner are required to keep proper books and records in accordance with commercial accounting principles and must submit their audited annual financial statements to the Commercial Register and the Liechtenstein Tax Administration (for audit requirements, see **3.4 Management Structures**).

Under Liechtenstein's anti-money laundering framework, all entities are required to maintain a register of beneficial owners (*Verzeichnis der wirtschaftlich berechtigten Personen*), which is not publicly accessible but must be available to the Financial Intelligence Unit (FIU) and other competent authorities upon request.

Entities subject to specific regulatory supervision, such as charitable foundations (overseen by the Foundation Supervisory Authority, STIFA) or financial services entities (supervised by the Financial Market Authority, FMA), are subject to additional reporting requirements under the applicable special legislation.

## 3.4 Management Structures

Liechtenstein follows a monistic (one-tier) system of corporate governance. All legal entities have a supreme body (typically the general meeting of shareholders or an equivalent organ) and an executive body (the board of directors, or equivalent), which is responsible for overall management and representation. The articles of association may additionally provide for a supervisory board (*Aufsichtsrat*), which would approximate a two-tier structure, although this is very rare in practice. Entities that do not have a licensed trade or financial market director must appoint at least one board member who is a licensed Liechtenstein fiduciary, attorney, or auditor (or equivalent EEA-qualified person).

For the foundation, the governing body is the foundation council (*Stiftungsrat*), which must consist of at least two members. The foundation council manages the foundation's assets and ensures compliance with the foundation's purpose. It is initially appointed by the founder and thereafter typically reconstituted by co-optation or in accordance with the foundation deed.

For the trust, the trustee is responsible for the administration and management of the trust assets in the interest of the beneficiaries. As of 1 July 2026, every private-benefit trust must designate at least one information-entitled person (*Informationsberechtigter*) with

comprehensive statutory rights to information and access vis-à-vis the trustee. The information-entitled person is also subject to a duty to review the trustee's administration.

The AG and the GmbH are generally required to appoint an auditor (*Revisionsstelle*), with limited exceptions for small entities meeting specific criteria. For the Establishment and the foundation, an auditor is required only if the entity conducts a commercial business in a commercial manner. For trusts, no statutory audit requirement applies. Entities subject to specific regulatory supervision, such as financial services entities supervised by the Financial Market Authority (FMA), are subject to additional governance requirements under the applicable special legislation.

### 3.5 Directors', Officers' and Shareholders' Liability

#### Liability of Directors and Officers

Liechtenstein has a notably strict liability regime for directors and officers. All persons entrusted with the management and control of a legal entity are personally liable for damages caused by negligent or intentional breach of their duties. The liability is characterised as contractual, which triggers a reversal of the burden of proof: the officer must demonstrate that no fault occurred, rather than the claimant proving negligence. Organs are liable primarily to the entity itself; only in exceptional circumstances may shareholders or third parties pursue direct claims against the organs. Multiple liable persons are jointly and severally liable.

Liechtenstein law explicitly codifies a business judgement rule: a board member acts in conformity with legal requirements if, in making an entrepreneurial decision, it was not guided by extraneous interests and could reasonably assume to be acting on the basis of adequate information for the benefit of the entity. The Supreme Court (OGH) has characterised the strict liability regime as a counterbalance to Liechtenstein's liberal and flexible corporate law system.

#### Liability of Shareholders and Founders

The fundamental principle across all Liechtenstein corporate vehicles is that only the entity's own assets are liable for its obligations. Shareholders, founders and beneficiaries are not personally liable for the entity's debts beyond their respective capital contributions.

However, Liechtenstein law recognises the concept of piercing the corporate veil (*Durchgriff*). Where the separation between a person controlling an entity and the entity itself is abused in violation of the principle of good faith, courts may disregard the separate legal personality and hold the controlling person personally liable. Conversely, the entity's assets are generally protected from claims by personal creditors of the founder or shareholder. The courts apply both the piercing and the reverse piercing of the corporate veil restrictively and only in clearly exceptional circumstances.

## 4. Employment Law

### 4.1 Nature of Applicable Regulations

Liechtenstein's employment law is characterised by a distinctive system rooted in the reception of multiple foreign legal orders.

General contract law is based on the historical reception of the Austrian Civil Code (*Allgemeines Bürgerliches Gesetzbuch*, ABGB). The rules of interpretation applicable to contracts are therefore those of the Liechtenstein ABGB (FL-ABGB). Employment law itself, however, was adopted virtually verbatim from the Swiss Code of Obligations (*Obligationenrecht*, OR) (Articcle 319 et seq. CH-OR) and is codified in § 1173a Article 1 to 113 FL-ABGB. In addition, Liechtenstein has developed its own body of law that supplements the received provisions.

This reception history is of considerable practical significance: Swiss legal scholarship and case law are regularly consulted for the interpretation of employment law provisions, while Austrian commentaries and jurisprudence serve as guidance for the underlying contract law rules. The Liechtenstein Constitutional Court (*Staatsgerichtshof*) has clarified that, where the legal position in Liechtenstein and Switzerland is identical, the case law of the Swiss Federal Supreme Court should generally be followed. Received provisions are to be interpreted in the same way as in their country of origin, since the Liechtenstein legislature intended

to align its own law with the legal position actually prevailing there. However, Liechtenstein is not rigidly bound to the interpretation of the country of reception and may adopt its own interpretations where compelling reasons so warrant.

In addition, European law provisions in the field of social security influence substantive Liechtenstein employment law, particularly with regard to continued payment of wages. These provisions have an autonomous character that takes precedence over the Act on Private International Law (IPRG).

The sources of Liechtenstein employment law thus comprise statutory law (§ 1173a FL-ABGB as the central provision), case law (both domestic and Swiss and Austrian jurisprudence as interpretive aids), European law requirements, and, additionally, individual employment agreements and, where applicable, collective bargaining agreements.

### 4.2 Characteristics of Employment Contracts

The employment contract is directed at the performance of personal work in return for remuneration. The law also makes clear that regular part-time work is covered.

An employment contract does not, in principle, require any particular form and may therefore also be concluded orally or by implied conduct. In practical terms, this means that an employment relationship can come into existence even without a written contract where a person actually works in the service of an employer and remuneration is to be expected. The ABGB provides in this regard that the contract is also deemed concluded "where the employer accepts work in his service for a period of time, the performance of which, in the circumstances, is only to be expected in return for remuneration".

Nevertheless, the employer is subject to written information obligations. Employees who are employed for at least one month or who work part-time for at least eight hours per week must be informed within two months of commencement of the employment relationship of the conditions applicable to it.

### 4.3 Working Time

Working time in Liechtenstein must be considered on two levels: the employment contract determines the contractually owed scope of work, while public-law occupational health and safety regulations safeguard maximum limits, breaks and rest periods. Working time may be defined contractually "by unit of time", "by output" or "by area of work". In addition, statutory employment law rules protect against overexertion (for example through provisions on maximum duration and mandatory breaks) as well as social contacts, such as the prohibition of Sunday work and the prohibition of night work. For the purposes of Liechtenstein law, a distinction should therefore be drawn between contractual normal working hours, overtime (*Überstunden*) and public-law excess hours (*Überzeit*).

The ABGB regulates overtime as work performed beyond the agreed, customary or collectively agreed scope. Under the ABGB, an employee is only obliged to work overtime insofar as they are able to do so, and it can reasonably be expected of them in good faith. This rule is of considerable practical importance: employers cannot order additional work without limit; reasonableness, capacity and good faith constitute the boundary. Responsibility for compliance with working time law remains with the employer.

Overtime may be compensated either by time off in lieu or by monetary payment. The ABGB permits, with the employee's consent, compensation "by time off of at least equal duration". Where no time off in lieu is granted and nothing to the contrary has been agreed in writing or regulated by a standard or collective employment agreement, the employer must pay "wages" calculated on the basis of the normal wage plus a supplement of at least one quarter.

### 4.4 Termination of Employment Contracts

Liechtenstein does not operate an "employment at will" system. Although an indefinite employment relationship is subject to relatively free ordinary termination, it is bound by statutory notice periods, protection against abusive dismissal and blocking periods. An indefinite employment relationship may be terminated by either party. A statement of reasons is not automatically required but must be provided upon request.

The terminating party must state the reasons for the termination in writing if the other party so demands. Statutory notice periods depend on the length of service. After expiry of the probationary period, the employment relationship may be terminated with one month's notice in the first year of service, two months' notice from the second to the ninth year of service, and three months' notice thereafter, in each case effective at the end of a calendar month.

Abusive terminations remain valid in principle but give rise to compensation claims. The ABGB considers as abusive, among others, terminations on grounds of personal characteristics, the exercise of constitutional rights, the frustration of claims, or because the other party asserts claims arising from the employment relationship in good faith.

Termination without notice is only permissible for cause (*wichtiger Grund*). A cause is deemed to exist in any circumstance in which the terminating party cannot, in good faith, reasonably be expected to continue the employment relationship. Where an employee is dismissed without notice and without cause, the employee is entitled to compensation for "what he or she would have earned had the employment relationship been terminated in compliance with the notice period or upon expiry of the agreed contract term".

Collective redundancies trigger special information, consultation and notification procedures. A collective redundancy is defined as planned dismissals that are unrelated to the person of the employees and that affect at least 20 employees within a period of 90 days, regardless of the size of the undertaking. The employer must inform and consult the employee representatives in good time so that they may put forward counter-proposals, in particular regarding "the possibility of avoiding or reducing planned collective redundancies" and mitigating their consequences, for example through "retraining". In addition, notification must be filed with the Office of Economic Affairs (*Amt für Volkswirtschaft*); planned collective redundancies generally take effect no earlier than 30 days after receipt of the notification, although the Office may extend this period to "60 days" where there is a legitimate interest.

### 4.5 Employee Representations

An employee representation body is not mandatory in every undertaking, but employees have a statutory right to representation once certain thresholds are met.

The workforce is entitled to a representative from among its members in undertakings (enterprises) with at least 50 employees and in establishments that are attributable to an enterprise and are at the same time independent tax subjects (parts of an enterprise) with at least 20 employees.

The employee representative body serves primarily as an information and consultation body, rather than as a corporate management body. The labour law obligations to inform and consult employee representatives are particularly significant in cases of transfers of undertakings and collective redundancies.

## 5. Tax Law

### 5.1 Taxes Applicable to Employees/ Employers

For employees in Liechtenstein, the wealth and income tax (*Vermögens- und Erwerbssteuer*) is of primary relevance.

Individuals are subject to income and wealth tax. Income tax is calculated based on taxable income. Wealth tax applies to all kinds of assets, including movable and immovable assets. Many proceeds are not subject to profit and income tax but are subject to wealth tax (no double taxation).

Natural persons are subject to unlimited tax liability if they are resident or habitually present in Liechtenstein. Without a domicile or habitual residence, only limited tax liability arises in respect of domestic connecting factors. In practical terms, this means that employees with a Liechtenstein nexus are subject to tax either on their worldwide income by virtue of their domicile or on their Liechtenstein income by virtue of domestic employment.

A withholding tax (*Quellensteuer*) is levied on employment income, which is credited against the assess-

ment for persons subject to unlimited tax liability. This is of practical importance for employers, as they must ensure the organisational handling of payroll, withholding tax deductions and remittance.

In addition, social security contributions are payable. The Liechtenstein social security system comprises the state pension scheme with age and survivors' insurance (AHV), disability insurance (IV), the family compensation fund (FAK) and unemployment insurance (ALV).

For employed persons, contributions are shared: the contributions payable are divided between the employee and the employer; the employee's share amounts to "4.700% of the relevant gross wage" and the employer's share to "7.191%". In practice, contributions are processed by the employer: the employer withholds the employee's contributions and remits them.

### 5.2 Taxes Applicable to Businesses

The principal taxes applicable to companies doing business in Liechtenstein are corporate income tax (*Ertragssteuer*) and, if applicable, real estate capital gains tax (*Grundstücksgewinnsteuer*).

A legal entity is subject to unlimited tax liability on its entire income if its registered seat or place of effective management is located in Liechtenstein. Legal entities without a domestic seat or place of effective management are subject to limited tax liability only in respect of domestic connecting factors.

Corporate income tax is levied at a flat rate of 12.5% on taxable net income. Liechtenstein does not levy a general withholding tax on dividends or interest. There is no value added tax (VAT) in the traditional sense; instead, Liechtenstein applies Swiss VAT law by virtue of the Customs Treaty with Switzerland, currently at a standard rate of 8.1%. Transfer taxes are not levied as a separate category, though real estate transactions are subject to the real estate capital gains tax.

As of 1 January 2024, Liechtenstein introduced global minimum taxation for large enterprise groups in accordance with the GloBE Model Rules of the OECD/G20 Inclusive Framework on Base Erosion and Profit Shifting (IF on BEPS). Liechtenstein has implemented a qualified domestic minimum top-up tax (QDMTT), and the existing safe harbour mechanisms for jurisdictions applying a QDMTT remain unchanged.

The current rules contain various safe harbour mechanisms that offer the enterprise groups concerned administrative simplifications. In early 2026, these provisions were comprehensively updated by the IF on BEPS, necessitating a corresponding amendment of the national legal framework, the GloBE Act (*Mindestbesteuerungsgesetz*).

The revision comprises in particular the new Side-by-Side Safe Harbour, which provides a broad exemption for enterprise groups with a US parent entity on the basis of US controlled foreign company rules. In addition, high-tax countries are afforded a simplified means of demonstrating compliance with the effective minimum tax rate (Simplified ETR Safe Harbour).

### 5.3 Available Tax Credits/Incentives

Liechtenstein offers a relatively low-tax, broad-based, and internationally compatible tax system rather than a wide range of traditional tax credit or incentive regimes.

One of the key tax relief mechanisms is the participation exemption (participation deduction), which exempts income derived from qualifying shareholdings from corporate income tax. This provision codifies the participation exemption that had previously been granted in practice. Notably, there are no minimum holding period or minimum ownership requirements. As a result, all dividend distributions received by a corporate taxpayer in its capacity as a shareholder are exempt from corporate income tax.

For private wealth holding structures, Liechtenstein provides the Private Asset Structure (*Privatvermögensstruktur*; PVS) regime. Upon application, a legal entity may qualify as a PVS, provided that it does not carry out any economic or commercial activity in pursuit of its purpose. A qualifying PVS is subject only to the minimum annual corporate income tax, currently CHF1,800, and is not subject to ordinary tax assessment.

### 5.4 Tax Consolidation

Liechtenstein also provides for a tax group regime (group taxation). Under this regime, affiliated legal entities may form a tax group, allowing losses incurred by one group member during a tax year to be offset against the profits of other group members in the same year. In practice, the primary purpose of the group taxation regime is to facilitate the intra-group utilisation of tax losses.

A tax group consists of a group parent and one or more group members. The group parent must be subject to unlimited corporate income tax liability in Liechtenstein and must hold a qualifying participation in the group member(s).

### 5.5 Thin Capitalisation Rules and Other Limitations

In Liechtenstein there is no traditional thin capitalisation regime based on a fixed debt-to-equity ratio. Instead, the main limitation is based on the arm's length principle and the tax treatment of excessive or non-arm 's length remuneration on debt financing.

### 5.6 Transfer Pricing

Transfer pricing rules expressly apply in Liechtenstein. Article 49 of the Tax Act (SteG) codifies the arm's length principle. Where income or expenses arising from transactions with related parties or permanent establishments are affected by conditions that are not at arm's length, taxable net income must be determined as if the transactions had been carried out between independent parties. This constitutes the principal statutory basis for transfer pricing adjustments in Liechtenstein.

### 5.7 Anti-Evasion Rules

Liechtenstein has a general anti-evasion rule in its Tax Act. Article 3 of the Tax Act (*Steuergesetz*) covers arrangements that are inappropriate in light of the underlying economic circumstances and whose sole economic purpose is to obtain tax advantages. An arrangement is considered abusive where granting the tax benefit would be contrary to the purpose and intent of the Tax Act, and the taxpayer cannot demonstrate any commercial or other significant non-tax reasons for the arrangement. The consequence is the application of the substance-over-form principle: where an abuse is found, taxes are assessed as they would have been under a legal structure that appropriately reflects the underlying economic transactions, facts and circumstances.

### 5.8 Tariffs

Liechtenstein is closely integrated with Switzerland for customs purposes. Under the Treaty on the Accession of the Principality of Liechtenstein to the Swiss Customs Territory (Customs Treaty), Swiss customs and indirect tax legislation applies in Liechtenstein. For businesses, this means that import and export matters are generally governed by the Swiss customs system and should be assessed in accordance with Swiss customs law.

Accordingly, when assessing the highest or most commonly applied customs duties, the relevant framework is not an independent Liechtenstein customs policy but rather the Swiss customs tariff and trade regime, insofar as it applies to Liechtenstein under the Customs Treaty.

## 6. Competition Law

### 6.1 Merger Control Notification

Liechtenstein has no separate national merger control statute and no domestic turnover or market-share notification thresholds. From a competition law perspective, mergers and acquisitions in Liechtenstein are governed by the EEA Agreement, implemented domestically by the Liechtenstein EEA Competition Implementation Act.

The main legal basis for EEA merger control is Article 57 of the EEA Agreement, applied together with Annex XIV to the EEA Agreement, Protocol 21 to the EEA Agreement on the implementation of competition rules applicable to undertakings, and Protocol 24 to the EEA Agreement on cooperation in the field of control of concentrations.

The transaction types covered are those qualifying as a "concentration" under Article 3 of Council Regulation (EC) No 139/2004, namely mergers, acquisitions of direct or indirect control, and full-function joint ventures. The concept is based on a lasting change of

control and the possibility of exercising decisive influence over an undertaking.

The notification thresholds are turnover-based and are set out in Article 1 (2) and Article 1 (3) of Council Regulation (EC) No 139/2004, as incorporated into the EEA Agreement and subject to the EEA adaptations. In broad terms, a concentration is notifiable at EEA level if it meets either the main threshold under Article 1 (2) (combined aggregate worldwide turnover above EUR5 billion and Community-wide turnover of each of at least two undertakings above EUR250 million) or the alternative lower threshold under Article 1 (3). The applicable two-thirds exception (for turnover in one and the same Member State) and the EEA allocation rules must be considered.

Where the relevant thresholds are met, the transaction must be notified before implementation to the competent authority under the EEA system. Depending on the allocation of competence under Article 57 of the EEA Agreement, review is carried out by the European Commission or, in EFTA-dimension cases, by the EFTA Surveillance Authority.

Thus, transactions that fall below the EEA merger thresholds are not subject to a local Liechtenstein merger-control filing merely because the target is incorporated in Liechtenstein. However, sector-specific regulatory approvals may still be required, for example for qualifying holdings in regulated financial institutions, insurance undertakings, investment firms, asset managers or funds, and corporate-law merger filings may be necessary for the legal implementation of the merger.

### 6.2 Merger Control Procedure

In general, a notifiable concentration must be notified prior to implementation and following conclusion of the agreement, announcement of the public bid or acquisition of a controlling interest; see Article 4 (1) Regulation (EC) No 139/2004.

A concentration with an EU or EFTA dimension may not be implemented before notification or before it has been declared compatible according to Article 7 (1) Regulation (EC) No 139/2004, as adapted for the EEA. Exceptions exist for certain public bids and securities transactions. Those exceptions do not remove the notification requirement; they require notification without delay and restrict the exercise of voting rights unless a derogation is granted.

Following formal notification, the competent authority examines the filing. The authority's decision shall generally be adopted within 25 working days, calculated from the working day following receipt of the notification or, if the notification is incomplete, from the working day following receipt of the complete information. This time period is extended to 35 working days where commitments are offered or where a relevant referral request is made.

If the authority finds that the notified concentration raises serious doubts as to its compatibility with the EEA Agreement, it initiates proceedings. The final decision must generally be adopted within 90 working days from the initiation of proceedings. This period may increase to 105 working days where commitments are offered in the circumstances specified. Likewise, the period may be extended by up to 20 working days at the request of, or with the agreement of, the notifying parties, and may be suspended in exceptional cases where information requests or inspections are required due to circumstances attributable to one of the parties.

The authority may clear the concentration, clear it subject to conditions and obligations, prohibit it, or order interim or restorative measures where an incompatible concentration has already been implemented or where the obligations or conditions have been breached.

Failure to notify before implementation or implementation in breach of the standstill obligation may result in fines of up to 10% of the aggregate turnover of the undertakings concerned. Supplying incorrect or misleading information in a notification, submission, certification or supplement may result in fines of up to 1% of the aggregate turnover of the undertaking or association of undertakings concerned.

### 6.3 Cartels

Anti-competitive agreements affecting Liechtenstein are governed by the competition rules of the EEA

Agreement, in particular the prohibition on agreements, decisions by associations of undertakings and concerted practices that have as their object or effect the prevention, restriction or distortion of competition within the EEA pursuant to Article 53 EEA Agreement.

The rules cover classic cartel conduct such as:

- directly or indirectly fixing purchase or selling prices or any other trading conditions;
- limiting or controlling production, markets, technical development, or investment;
- sharing markets or sources of supply;
- applying dissimilar conditions to equivalent transactions with other trading parties, thereby placing them at a competitive disadvantage; and
- making the conclusion of contracts subject to acceptance by the other parties of supplementary obligations which, by their nature or according to commercial usage, have no connection with the subject of such contracts.

Agreements or decisions prohibited under Article 53 (1) EEA Agreement shall be automatically void under Article 53 (2) EEA Agreement.

The decisive issue is not where the agreement was signed or implemented, but whether it may affect trade and competition in the EEA. Agreements that satisfy the conditions for exemption may be permissible – ie, if they generate efficiencies, allow consumers a fair share of the benefit, are indispensable to those efficiencies and do not eliminate competition.

The Liechtenstein Office of Economic Affairs assesses requests, market information and complaints concerning national or international competition law. Under Article 2 (1) of the Liechtenstein Act on the Implementation of the Competition Rules in the European Economic Area, the Office of Economic Affairs is the Liechtenstein authority responsible for implementing the EEA competition rules, unless jurisdiction lies with the courts. In that role, it assists the EFTA Surveillance Authority and/or the European Commission in EEA competition matters. Where jurisdiction lies with the courts, competition-law issues may also arise in judicial proceedings, including in civil disputes between private parties.

### 6.4 Abuse of Dominant Position

As mentioned above, Liechtenstein has no separate national antitrust statute. Rather, unilateral conduct is governed by Article 54 EEA, prohibiting the abuse of a dominant position within the EEA or a substantial part of it, insofar as trade between EEA states may be affected. Thus, a dominant position is not unlawful in itself, but a dominant undertaking must not abuse its market power to restrict competition.

Such abuse may, in particular, consist in:

- directly or indirectly imposing unfair purchase or selling prices or other unfair trading conditions;
- limiting production, markets or technical development to the prejudice of consumers;
- applying dissimilar conditions to equivalent transactions with other trading parties, thereby placing them at a competitive disadvantage; or
- making the conclusion of contracts subject to acceptance by the other parties of supplementary obligations which, by their nature or according to commercial usage, have no connection with the subject of such contracts.

The assessment is effects-based. The decisive issue is not, as such, where the conduct was carried out, but whether the undertaking holds a dominant position within the EEA or a substantial part of it, whether the conduct is abusive, and whether trade between EEA Contracting Parties may be affected. Conduct carried out in Liechtenstein or outside Liechtenstein may therefore be relevant if it has the required effects in the EEA.

Enforcement and decision-making competence for individual Article 54 EEA cases is allocated under Article 56 (2) EEA Agreement to the surveillance authority in whose territory the dominant position is found to exist, with the further allocation rules in Article 56 (1) applying where a dominant position exists in the territories of both surveillance authorities.

Liechtenstein's Act against Unfair Competition (UCA) operates alongside the EEA competition-law regime as an adjacent unfair-competition regime. It does not create a separate national antitrust prohibition of abuse of dominance, relative market power or

economic dependency. However, unilateral conduct may still be relevant under the UCA – ie, if it is unfair, deceptive, contrary to good faith, aggressive, involves undue influence over consumers, or involves abusive general terms or grossly detrimental contractual terms or business practices.

## 7. Intellectual Property

### 7.1 Patents

#### Definition

A patent protects inventions of a technical nature that are new (ie, not obvious from the state of the art) and commercially exploitable. Liechtenstein does not have its own patent law or patent office; instead, patents are governed by Swiss patent law and administered by the Swiss Federal Institute of Intellectual Property (IGE) in Berne, pursuant to a bilateral Patent Protection Treaty of 1978. Granted Swiss patents cover the territories of both Switzerland and Liechtenstein, irrespective of the route of filing (Swiss national, European regional via the EPO or PCT international).

#### Length of Protection

The maximum term of patent protection is 20 years from the filing date, always provided that the annual fees are paid. Otherwise, the patent expires. Supplementary Protection Certificates (SPCs) are available for pharmaceutical products and plant protection products.

#### Registration Process

Swiss/Liechtenstein patent applications are not examined on the merits for novelty and inventive step but are only examined on formal issues. It is therefore up to the applicant to file enforceable claims that patentably distinguish the claimed invention from the prior art. A patent may also be obtained via the European Patent Office (EPO) by designating Switzerland/Liechtenstein, or through the international PCT route. Given that Swiss patents share various characteristics with utility patents and petty patents (except for the 20-year term), the currently applicable law does not provide for the possibility of obtaining utility patents.

#### Enforcement and Remedies

Liechtenstein provides civil law remedies for patent infringement, including injunctive relief to prevent further infringement, claims for damages or disgorgement of profits, and orders for the destruction, seizure or recall of infringing goods. Provisional measures, including preliminary injunctions, are available; further, patent infringements may also be punished under criminal law.

### 7.2 Trade Marks

#### Definition

A trade mark is a distinctive sign or symbol that serves to differentiate the goods or services of one enterprise from those of others. Trade marks can take various forms, including words, personal names, images, letters, numbers, colours, the shape, presentation or packaging of a product, sounds, or a combination of these elements. The primary function of a trade mark is to identify and distinguish the goods or services of a company; it also fulfils a marketing function, a protective/defensive function and a guarantee function.

#### Length of Protection

The duration of protection is ten years from the filing date (*Anmeldedatum*). Registration can be renewed indefinitely for further ten-year periods. The renewal application must be filed within the last 12 months before expiry of the validity period or at latest within six months after expiry, subject to additional fees.

#### Registration Process

The main legislation is the Law Regarding the Protection of Trade Marks and Geographical Indications (the "Trade Mark Protection Act"). An application must be filed with the Liechtenstein Office of Economic Affairs (*Amt für Volkswirtschaft*) in German. The application must contain the name of the applicant, address, reproduction of the trade mark, exact designation of the goods or services (following the Nice Classification) and proof of paid fees. Further, a trade mark owner who has neither residence nor a registered office nor a branch in Liechtenstein must also have appointed a local lawyer or patent agent; trade mark owners from the EEA or Switzerland must have appointed an agent for service of process. The representative/agent will be registered with the trade mark in the trade mark register, and it must be ensured to appoint such rep-

resentative/agent for the entire duration of the registration. The Office examines formal requirements and absolute grounds for refusal (such as lack of distinctiveness or descriptiveness), but does not conduct a search for older trade marks. The procedure from filing to registration typically takes three months if no objection is raised. Since 1 January 2023, Liechtenstein has introduced an administrative opposition procedure, as well as procedures for declaration of nullity and invalidity. International registration is possible via the Madrid Agreement/Protocol. The trade mark must be used within five years from the uncontested expiry of the opposition period or, if opposition has been filed, from the date on which the decision concluding the opposition proceedings became final; use within any of the territories of Liechtenstein, Switzerland or the EU is regarded as proper use.

### Enforcement and Remedies

Civil law remedies include actions for injunctive relief, claims for damages and disgorgement of profits, and orders for the destruction, seizure or recall of infringing goods, actions for declaratory judgment, actions for assigning a trade mark, and publication of respective judgements. Provisional measures, including preliminary injunctions, are available; further, trade mark infringements may also be punished under criminal law.

## 7.3 Industrial Designs

### Definition

A design protects the shapes, lines, contours, colours and other aesthetic characteristics of a product or parts thereof. Protection is governed by the Liechtenstein Design Act (*Designgesetz*; DesG) of 11 September 2002. Designs can be protected when they are new (novel) and possess individual character, and are not offensive or contrary to public order.

### Length of Protection

Protection lasts for five years from the date of filing and may be extended by four additional protection periods of five years each. Accordingly, a maximum protection period of 25 years is provided for.

### Registration Process

Application forms are filed with the Office of Economic Affairs (*Amt für Volkswirtschaft*) in German. The procedure from filing to registration typically takes three months. The design may refer to the entirety of a product or only parts thereof. A design owner who has neither residence nor a registered office nor a branch in Liechtenstein must also have appointed a local lawyer or patent agent. The representative will be registered with the design in the design register, and it must be ensured to appoint such representative for the entire duration of the registration. The design is then registered without prior examination of its novelty and individual character; the Office of Economic Affairs only examines formal requirements and mandatory grounds for exclusion according to the Design Act. Priority may be claimed in line with the Paris Convention for the Protection of Industrial Property of 20 March 1883. International registration is also possible via the Hague System for the International Registration of Industrial Designs.

### Enforcement and Remedies

Civil law remedies include actions for injunctive relief, claims for damages and disgorgement of profits, and orders for the destruction, seizure or recall of infringing goods, actions for declaratory judgment, actions for assigning a design and publication of respective judgements. Provisional measures, including preliminary injunctions, are available; further, design infringements may also be punished under criminal law.

## 7.4 Copyright

### Definition

Copyright protects intellectual creations in the fields of literature and art that possess an individual character. The main source of copyright law is the Copyright Act (*Urheberrechtsgesetz*). Protected works include literary works, artistic works, musical compositions, dramatic works, photographs, software, databases (under certain conditions) and films/audiovisual works. Authors receive both economic rights (reproduction, distribution, public performance, communication to the public, adaptation) and moral rights (right to be named as author, right to object to distortions).

### Length of Protection

The general term of protection is the author's lifetime plus 70 years after death. For anonymous or pseudonymous works, protection expires 70 years after publication. For films, protection lasts 70 years after

the death of the last surviving principal creator (such as director, screenwriter, dialogue writer and composer of film music).

### Registration Process

Copyright protection arises automatically upon the creation of a work and does not require registration or any other formality. Although the Copyright Act allows for the establishment of a voluntary register that would create a rebuttable presumption of authorship, no such register has been implemented in practice. Proof of authorship and date of creation must therefore be established through secondary evidence.

### Enforcement and Remedies

Civil law remedies include actions for injunctive relief, claims for damages and disgorgement of profits, and orders for the destruction, seizure or recall of infringing goods, actions for declaratory judgement and publication of respective judgements. Provisional measures, including preliminary injunctions, are available; further, copyright infringements may also be punished under criminal law.

## 7.5 Others

### Software

In Liechtenstein, software is primarily protected through copyright under the URG, where computer programs may be protected as works of literature and art, provided they are intellectual creations with an individual character. Copyright protection arises automatically upon creation. Additionally, software can be patentable as part of a "computer-implemented invention" if it solves a technical problem and achieves a technical effect beyond the normal physical interactions between the program and the computer. Under the Liechtenstein Design Act, software is generally not eligible for design protection. Under the Copyright Act, if an employee creates software in the course of employment and in fulfilment of contractual duties, the rights are transferred to the employer unless agreed otherwise.

### Databases

Databases may benefit from copyright protection if they constitute a distinct intellectual creation by reason of the selection or arrangement of their contents. Apart from and independently of any creative element, the maker of a database who has made a substantial investment in obtaining, verifying or presenting its contents benefits from a sui generis database right, which prevents the extraction or re-utilisation of the content of the database or a substantial part thereof.

### Trade Secrets

The infringement of trade secrets and professional secrets may give rise to both civil and criminal liability. Civil remedies include injunctive relief, damages or disgorgement of profits, and orders for the destruction or recall of infringing goods. Provisional measures are available where urgent action is required. Liechtenstein, as an EEA member state, is subject to European harmonisation in this area.

# 8. Data Protection

## 8.1 Applicable Regulations

The primary data protection framework in Liechtenstein is the General Data Protection Regulation (GDPR), which applies directly by virtue of Liechtenstein's membership in the EEA. The GDPR was incorporated into the EEA Agreement through EEA Joint Committee Decision No 154/2018 and has been applicable in Liechtenstein since 20 July 2018. At the national level, the GDPR is supplemented by the Liechtenstein Data Protection Act (*Datenschutzgesetz*, DSG), in force since 1 January 2019, and the Data Protection Ordinance (*Datenschutzverordnung*, DSV).

The DSG implements opening clauses left to EEA member states under the GDPR and sets out, inter alia, rules for public bodies, the organisation and powers of the supervisory authority, and procedural aspects.

Overall, Liechtenstein's data protection framework is closely aligned with EU standards, ensuring a high and uniform level of data protection throughout the EEA.

## 8.2 Geographical Scope

As the GDPR applies directly in Liechtenstein through the EEA Agreement, the geographical scope of Liech-

tenstein's data protection rules mirrors that of the GDPR under Article 3.

### 8.3 Role and Authority of the Data Protection Agency

The competent supervisory authority in Liechtenstein is the Data Protection Office (*Datenschutzstelle*, DSS). The DSS is an independent authority established under the DSG and operates in accordance with the requirements of Articles 51 to 59 GDPR.

The DSS performs its tasks independently and is not subject to instructions. The DSS has investigative, corrective and advisory powers. Its responsibilities include monitoring and enforcing compliance with the GDPR and the DSG, handling complaints from data subjects, conducting investigations and audits, issuing warnings, ordering controllers and processors to comply with data protection obligations, and imposing administrative measures and fines within the GDPR framework (including the fine ranges set out in Article 83 GDPR).

The DSS also advises public bodies on legislative and administrative matters relating to data protection and publishes guidance to raise awareness among controllers, processors and the public.

As Liechtenstein is part of the EEA, the DSS participates in the European Data Protection Board (EDPB) cooperation and consistency mechanisms and cooperates with other EEA supervisory authorities in cross-border cases.

## 9. Looking Forward

### 9.1 Upcoming Legal Reforms

The European financial services industry is undergoing profound transformation. New regulatory frameworks, digitalisation and geopolitical uncertainty are reshaping markets across Europe. Legislative changes in Liechtenstein are driven by European requirements as well as the need to keep pace with market developments. They share a common objective: maintaining Liechtenstein's competitiveness within Europe while preserving stability and legal certainty. For international market participants, market access remains a key consideration when selecting a jurisdiction, and Liechtenstein continues to offer access to the European Single Market alongside a stable, specialised legal environment.

#### Recent Key Legislative Reforms

Recent key legislative reforms include the comprehensive reform of Liechtenstein trust law, which has just come into force, early implementation of AIFMD II and ELTIF II, continued development of the digital asset ecosystem under the Markets in Crypto-Assets Regulation (MiCAR) and the introduction of a new Trading Place and Exchange Act (TPEA).

- The reform of Liechtenstein trust law that entered into force on 1 July 2026, is one of the most significant legal developments in recent years and seeks to strengthen governance and oversight while preserving flexibility that has traditionally made the Liechtenstein trust attractive to international clients.
- The Liechtenstein fund centre looks back on years of impressive growth. The number of management companies is continually growing, as is the number of newly established funds. The cross-border management of Liechtenstein funds has become as popular as relocations to Liechtenstein. Although incorporation of AIFMD II and ELTIF II into the EEA Agreement is still pending, Liechtenstein has aligned its domestic legislation with these standards ahead of formal incorporation. This ensures Liechtenstein-based fund structures remain fully competitive within the European market.
- Liechtenstein's digital asset sector has entered a new phase of development and digital assets and tokenisation will become increasingly integrated into mainstream financial services. In the past, Liechtenstein attracted international attention with the Token and Trusted Technology Service Provider Act (TVTG), establishing one of the world's first comprehensive legal frameworks for the token economy. Today, Liechtenstein's position is shaped by the interaction of two complementary frameworks. MiCAR provides a harmonised European regulatory regime for crypto-assets and crypto-asset service providers, while the TVTG continues to provide the legal foundation for tokenisation and areas outside MiCAR's scope. Multiple crypto-

asset service providers have obtained MiCAR authorisations in Liechtenstein, underlining its relevance for the evolving European digital asset market.
- A comprehensive reform of Liechtenstein's financial market legislation also came into force on 1 February 2025, including the new TPEA. This law creates the regulatory framework for the operation of stock exchanges and other trading venues in Liechtenstein, positioning the country as a modern and competitive financial centre.

### Corporate Law Modernisation and Digitalisation

Liechtenstein has also undertaken significant corporate law reforms. Recent amendments to the Persons and Companies Act (PGR) have created the possibility to incorporate certain companies digitally and to file electronic applications to the commercial register. The commercial register is being further modernised, with a project scheduled for completion in the second half of 2026 that will enable all entries to be submitted electronically, regardless of a company's legal form. Hybrid and virtual meetings have also been legally established on a permanent basis, meaning all corporate meetings can now be held virtually.

### Increasing Harmonisation

The regulatory landscape will continue to evolve alongside European developments. Europe's new Anti-Money Laundering Package, adopted in 2024, will bring harmonised AML rules directly applicable across all EEA member states, with full implementation in Liechtenstein anticipated by mid-2027. The EU AI Act (Regulation (EU) 2024/1689) is also expected to be incorporated into EEA law, bringing requirements for governance and oversight of artificial intelligence in financial services.

The implementation of Directive (EU) 2019/2121 (the "Mobility Directive") is also underway, introducing a harmonised legal framework for cross-border conversions, mergers and divisions of capital companies within the EEA. The amendments are expected to enter into force during 2026. This reform increases legal certainty and transparency for cross-border corporate restructuring, giving companies greater planning reliability for transformation processes.

# Trends and Developments

## Introduction

Liechtenstein is located at the heart of Europe, bordered by Switzerland and Austria. The Principality offers a distinctive combination of geographic proximity, political stability and deep financial expertise that few jurisdictions can match. Today, Liechtenstein stands as one of Europe's most established and respected financial centres.

With around 40,000 residents and the highest GDP per capita in the world, the Principality combines the ways of a small jurisdiction with genuine economic depth. Industry accounts for roughly 40% of GDP, which is unusually high by European standards, while a sophisticated financial services sector complements this manufacturing strength. This combination provides the foundation for the country's enduring stability and innovation.

Liechtenstein is a constitutional hereditary monarchy on a democratic and parliamentary basis, where state power is vested jointly in the Reigning Prince, as the Head of State, and the People. The Parliament (*Landtag*) consists of 25 members elected by proportional representation for four-year terms. The *Landtag* proposes laws, and the government, a collegial body of five ministers including the Prime Minister, is responsible for day-to-day administration. Liechtenstein has pronounced direct democratic rights, where citizens may launch a referendum to put parliamentary decisions to a popular vote or initiate constitutional amendments. For a law to enter into force, it must be approved by both Parliament and sanctioned by the Reigning Prince, reflecting the dualistic principle of shared sovereignty.

Liechtenstein is a civil law jurisdiction with strong historic ties to Austria and Switzerland and their respective legal traditions. The cornerstone of civil law is the General Civil Code (*Allgemeines bürgerliches Gesetzbuch*, ABGB), adopted from the Austrian model and in force since 1812. Key procedural laws, including the Code of Civil Procedure (ZPO), the Jurisdiction Act (JN) and the Execution Code (EO), are also derived from Austrian law. By contrast, property law is based on the Swiss model, and company law is governed by the Persons and Companies Act (*Personen- und Gesellschaftsrecht*, PGR), which draws heavily on Swiss corporate law. Employment law and social security law likewise follow the Swiss model.

The Liechtenstein judicial system is organised into three main branches. The first is the ordinary jurisdiction for civil and criminal matters, operating through a three-tier court system. The second branch comprises the administrative courts, with the Administrative Court (*Verwaltungsgerichtshof*) as the highest administrative tribunal. The third branch is the constitutional jurisdiction, exercised exclusively by the Constitutional Court (*Staatsgerichtshof*). This court serves as an extraordinary court of appeal and may be petitioned against final decisions for alleged violations of constitutional rights, rights guaranteed by the European Convention on Human Rights, or rights under the European Economic Area Treaty. All courts are located in Vaduz.

Liechtenstein has long been a premier destination for private banking and wealth management. The principality's banks collectively manage over CHF500 billion in client assets, with net new money inflows of CHF17.6 billion recorded in 2024 alone. The fund sector has experienced remarkable growth, with assets under management reaching CHF117.8 billion in 2024 – an increase of nearly 70% over three years. Asset management companies further contribute to this ecosystem, overseeing CHF54.2 billion in client assets.

Political and economic stability underpin this success. Liechtenstein maintains a AAA rating from Standard & Poor's, while its banks boast an average Tier 1 capital ratio of approximately 20% – well above the European average of 17.5% and placing them among the best-capitalised institutions in Europe. These fundamentals make Liechtenstein highly attractive to fund managers, family offices and wealth management professionals seeking a secure and efficient domicile.

Liechtenstein occupies a unique position at the crossroads of two major economic spheres. It has maintained a customs union with Switzerland since 1923 and shares the Swiss franc as its currency. Since 1995, it has also been a member of the European Economic Area, giving Liechtenstein-based service providers passporting rights across the EU single market. This

dual access, Swiss and European, is unmatched by any other jurisdiction.

Innovation has long been a hallmark of the Liechtenstein legal system. The country's flexible corporate law offers extensive private autonomy in structuring, providing a wide range of legal forms including the stock corporation (AG), limited liability company (GmbH), establishment (Anstalt), foundation (Stiftung) and trust. Notably, Liechtenstein remains the only continental European jurisdiction with a trust law tradition, dating back to 1926. This unique combination of flexible corporate structures, the foundation as a versatile wealth planning vehicle, and the established trust framework makes Liechtenstein a preferred destination for international wealth structuring and succession planning.

Liechtenstein has also embraced regulatory innovation. The jurisdiction was among the first to adopt a comprehensive legal framework for token-based business models (the TVTG), which now operates alongside the Markets in Crypto-Assets Regulation (MiCAR). More broadly, Liechtenstein's approach to financial regulation balances robust supervision with proportionality, ensuring compliance with international standards while avoiding excessive regulatory burden.

Practical advantages complement this regulatory environment. Company registration is straightforward, with the commercial register offering swift turnaround times. Regulation avoids gold-plating wherever possible, and licensing procedures reflect Liechtenstein's pragmatic approach to supervision. The Financial Market Authority (FMA) is accessible and responsive, enabling a time-to-market that few jurisdictions can match.

## Recent Legislative Reforms

The European financial services industry is undergoing profound transformation. New regulatory frameworks, digitalisation and geopolitical uncertainty are reshaping markets across Europe. Against this backdrop, Liechtenstein has strengthened its position as a specialised international financial centre through regulatory modernisation while preserving stability and legal certainty.

Key developments include the comprehensive reform of Liechtenstein trust law, early implementation of AIFMD II and ELTIF II, continued development of the digital asset ecosystem under the MiCAR, corporate law digitalisation initiatives and implementation of cross-border mobility rules. These reforms share a common objective: maintaining Liechtenstein's competitiveness within Europe while offering access to innovative, well-regulated structures.

## Trust Law Reform

One of the most significant legal developments in recent years has been the reform of Liechtenstein trust law that entered into force on 1 July 2026. The Liechtenstein trust, introduced almost a century ago, remains the only common-law style trust available within a civil law jurisdiction in continental Europe. It has long been used for succession planning, asset protection and wealth management.

The reform represents one of the most significant developments in Liechtenstein private wealth legislation in recent years and seeks to strengthen governance and oversight while preserving the flexibility that has traditionally made the Liechtenstein trust attractive to international clients.

A central feature is the "information rights-holder" concept. Privately beneficial trusts must appoint a person with statutory information and oversight rights, including broad inspection rights, an annual review duty and, where serious concerns arise, notification duties toward the court and the Foundation and Trust Supervisory Authority. A designated successor must also be appointed to ensure continuity. Charitable trusts also benefit from enhanced supervisory mechanisms aligned with international standards.

The reform strengthens the broader governance framework applicable to trusts. Trustees will operate within an environment that places greater emphasis on documentation, oversight and accountability. While these requirements will increase administrative responsibilities, they are also expected to strengthen confidence in Liechtenstein trust structures among international clients.

Existing private-benefit trusts generally have until 31 December 2027 to adapt their documents, while existing charitable trusts require separate treatment with important steps due by 31 December 2026.

### Growing Importance of Family Offices and Wealth Governance

The trust reform coincides with another important development: the growing importance of family offices and structured wealth governance. Over the past decade, family wealth has become increasingly international, with assets, businesses and investments held across multiple jurisdictions. Governance, succession planning, family decision-making and long-term asset preservation, has become as important as tax considerations. Liechtenstein is well positioned for this trend, offering trusts, foundations and corporate entities supported by specialised legal, fiduciary and financial professionals. This area is likely to remain an important pillar of its financial centre.

### Investment Funds: Growth and Regulatory Alignment

The Liechtenstein fund centre looks back on years of impressive growth. The number of management companies is continually growing, as is the number of newly established funds. The cross-border management of Liechtenstein funds has become as popular as relocations to Liechtenstein.

Private credit has grown rapidly. Institutional investors continue increasing allocations to alternative lending strategies, while companies increasingly view non-bank financing as valuable. AIFMD II introduces a dedicated framework for loan-originating funds with requirements for credit risk management, diversification, leverage and risk retention. Although incorporation of AIFMD II and ELTIF II into the EEA Agreement is still pending, Liechtenstein has aligned its domestic legislation with these standards ahead of formal incorporation. This ensures Liechtenstein-based fund structures remain fully competitive within the European market.

### From Blockchain Pioneer to MiCAR Jurisdiction

Liechtenstein's digital asset sector has entered a new phase of development. In the past, Liechtenstein attracted international attention with the Token and Trusted Technology Service Provider Act (TVTG), establishing one of the world's first comprehensive legal frameworks for the token economy.

Today, Liechtenstein's position is shaped by the interaction of two complementary frameworks. MiCAR provides a harmonised European regulatory regime for crypto-assets and crypto-asset service providers, while the TVTG continues to provide the legal foundation for tokenisation and areas outside MiCAR's scope. As MiCAR becomes fully operational, Liechtenstein enters this era with practical experience and established legal infrastructure. By 2026, multiple crypto-asset service providers have obtained MiCAR authorisations in Liechtenstein, underlining its relevance for the evolving European digital asset market.

The digital asset market has also matured significantly. Beyond cryptocurrencies, attention has shifted to tokenisation. Financial institutions and asset managers are exploring blockchain-based representation of traditional assets, including fund units, bonds and debt instruments, equity participations, private market investments, real estate-related assets and other transferable rights. All in all, digital assets and tokenisation will become increasingly integrated into mainstream financial services. Liechtenstein's combination of civil-law recognition under the TVTG, practical supervisory experience and access to the European market places the jurisdiction in a favourable position to participate in this development.

### Corporate Law Modernisation and Digitalisation

Liechtenstein has also undertaken significant corporate law reforms. Recent amendments to the Persons and Companies Act (PGR) have created the possibility to incorporate certain companies digitally and to file electronic applications to the commercial register. The commercial register is being further modernised, with a project scheduled for completion in the second half of 2026 that will enable all entries to be submitted electronically, regardless of a company's legal form. Hybrid and virtual meetings have also been legally established on a permanent basis, meaning all corporate meetings can be held virtually.

The implementation of Directive (EU) 2019/2121 (the "Mobility Directive") is also underway, introducing a

harmonised legal framework for cross-border conversions, mergers and divisions of capital companies within the EEA. The amendments are expected to enter into force during 2026. This reform increases legal certainty and transparency for cross-border corporate restructuring, giving companies greater planning reliability for transformation processes.

A comprehensive reform of Liechtenstein's financial market legislation also came into force on 1 February 2025, including the new Trading Place and Exchange Act (TPEA). This law creates the regulatory framework for the operation of stock exchanges and other trading venues in Liechtenstein, positioning the country as a modern and competitive financial centre.

### Increasing Harmonisation

Liechtenstein occupies a unique position within Europe. As an EEA member, it participates fully in the European Single Market with passporting rights across financial services. Simultaneously, it maintains a customs and monetary union with Switzerland, using the Swiss franc. This dual integration provides businesses with European market access alongside Swiss economic integration, a combination difficult to replicate elsewhere. For international market participants, market access remains one of the most important considerations when selecting a jurisdiction. The ability to establish operations in a stable and highly specialised environment while maintaining access to the broader European market continues to be one of Liechtenstein's most significant competitive advantages. Recent regulatory developments demonstrate that policymakers remain committed to aligning Liechtenstein with European standards while maintaining flexibility and legal certainty.

The regulatory landscape will continue to evolve alongside European developments. Europe's new Anti-Money Laundering Package, adopted in 2024, will bring harmonised AML rules directly applicable across all EEA member states, with full implementation in Liechtenstein anticipated by mid-2027. The Digital Operational Resilience Act (DORA), which came into force in 2025, establishes cross-sectoral requirements for ICT risk management, incident reporting and resilience testing across financial entities. The EU AI Act (Regulation (EU) 2024/1689) is also expected to be incorporated into EEA law, bringing requirements for governance and oversight of artificial intelligence in financial services.

As regulatory requirements continue to evolve at the European level, Liechtenstein's approach remains consistent: early adoption of EU standards, combined with the flexibility and legal certainty that a smaller jurisdiction can provide. For market participants seeking access to the European Single Market through a well-regulated and specialised environment, these recent developments underscore Liechtenstein's continued relevance.

**ATOZ Tax Advisers** ATOZ Tax Advisers is a leading independent tax advisory firm offering a comprehensive range of direct and indirect tax solutions, as well as transfer pricing, corporate finance, tax litigation and ESG services, to local and international clients, across industries including all alternative investment asset classes and the private wealth domain. Founded in 2004, the firm operates offices in Luxembourg, Morocco, the United Kingdom and the Middle East. In addition, in 2005, ATOZ was amongst the founding members of the Taxand network, the world's largest independent organisation of tax experts with more than 700 tax partners and over 3,000 tax advisers in 51 countries. With over 20 years of long-standing relationships, the firm assembles bespoke, multi-jurisdictional teams, delivering seamless and high-quality tax advice tailored to its clients' needs.

## Authors

**Romain Tiffon** is a partner in the international and corporate tax department at ATOZ. A tax professional since 2006, he has experience in structuring pan-European alternative investment funds across all asset classes, as well as co-ordinating tax structuring advice and implementation for a wide range of institutional investors. Romain also has extensive experience in structured finance, M&A transactions and sovereign wealth funds, and is currently co-heading ATOZ's technological initiatives, via ATOZ Solutions.

**Marie Bentley** is ATOZ's chief knowledge officer, having joined the firm in 2017. She has worked as a tax lawyer for over 10 years, qualified as a Belgian lawyer on the Brussels Bar in 2008 and practised until 2017. Marie has gained extensive experience in Luxembourg, Belgian and international tax law, both in advisory and litigation. She was notably involved in international tax projects focusing on the private equity sector, M&A and high net worth individuals. Marie is the author of numerous articles on tax-related topics published in various legal journals, including the Revue Générale de Fiscalité and the Journal de Droit Fiscal.

# 1. Legal System

## 1.1 Legal System and Judicial Order

Luxembourg has a civil law legal system. The judicial system of Luxembourg is organised into two main branches.

### The Judicial Courts

This branch deals with civil and criminal matters. It is composed of three main levels.

- Lower courts –
  (a) Justice of the Peace Courts (*Justices de paix*), which handle minor civil disputes and small claims, as well as certain tenancy and employment cases.
- Intermediate courts –
  (a) District Courts (*Tribunaux d'arrondissement*), which deal with more significant civil and criminal cases and hear appeals from the Justice of the Peace Courts.
- Higher courts –
  (a) Court of Appeal (*Cour d'appel*), which reviews judgments from District Courts.
  (b) Court of Cassation (*Cour de cassation*), which is the highest court in the judicial order, ensuring the correct application of the law (it does not retry cases but reviews legal compliance).

### The Administrative Courts

This branch deals with disputes involving public authorities or administrative decisions. It includes:

- the Administrative Tribunal (*Tribunal administratif*), which is the first instance for administrative disputes; and
- the Administrative Court (*Cour administrative*), which hears appeals against judgments of the Administrative Tribunal.

### Constitutional Court

Luxembourg also has a Constitutional Court (*Cour constitutionnelle*), which is separate from these two branches. It rules on the conformity of laws with the Constitution when a question is referred to it by a court.

# 2. Restrictions on Foreign Investments

## 2.1 Approval of Foreign Investments

Foreign investments in Luxembourg are not generally subject to prior approval. However, a foreign direct investment (FDI) screening mechanism applies to certain sensitive investments. This mechanism was introduced in 2023 and targets investments that may affect public security or public order. The screening mechanism applies to foreign investments made by an investor – whether acting individually, jointly or through intermediaries – that both (i) establish or maintain lasting and direct links with a Luxembourg entity, and (ii) confer the ability to exercise meaningful influence over that entity's management in the context of a critical activity in Luxembourg that could affect public security or public order.

Critical activities include:

- sectors such as energy, transport, water, aerospace, agrifood, health, communications, data processing and storage, defence, media and finance, as well as activities involving dual-use goods;
- production or research connected to these sectors; and
- ancillary activities that provide access to locations where such operations are carried out or where sensitive information is stored.

An investor is deemed to exercise effective control over an entity in particular where it:

- holds, directly or indirectly, a majority of the voting rights;
- is entitled to appoint or remove most members of the management or supervisory body while being a shareholder;
- controls a majority of voting rights through an agreement with other shareholders; or
- directly or indirectly holds more than 25% of the voting rights, or reaches this threshold at any time.

## 2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance

Before completing a foreign direct investment in Luxembourg, the investor must notify the Ministry of the Economy. If the investor exceeds the threshold of

25% of voting rights in a Luxembourg-law entity as a result of events that modify the distribution of the capital, the foreign investor has a period of 15 calendar days to notify the Ministry of the Economy.

The authorities then have a two-month period to assess whether the transaction falls within the scope of the screening regime. If a formal review is initiated, a decision is generally taken within 60 days (subject to certain exceptions) to determine whether the investment poses a risk to public security or order, and whether it should consequently be blocked or be authorised subject to conditions.

Failure to comply with the notification requirement or with any conditions imposed may lead to sanctions. These may include the suspension of voting rights, the amendment or unwinding of the transaction, revocation of the authorisation, and financial penalties of up to EUR1 million for individuals and EUR5 million for legal entities. Sanctions can be appealed in front of the Administrative Tribunal. The appeal must be filed within one month from the date of the notification of the challenged decision.

### 2.3 Commitments Required From Foreign Investors

Under the Law of 14 July 2023, the Luxembourg authorities may authorise a foreign direct investment subject to conditions where necessary to ensure that the transaction does not undermine public security or public order. Although the law does not provide a detailed list of possible commitments, it gives the Ministry of the Economy broad discretion to impose mitigation measures tailored to the identified risks.

The commitments that may be required typically aim to preserve strategic assets, sensitive information and operational resilience. These may include the following.

- Governance and control safeguards –
  - (a) limiting the investor's decision-making powers in sensitive areas;
  - (b) ensuring that certain key decisions remain subject to approval by Luxembourg-based management or authorities; and
  - (c) appointment of independent or approved board members.
- Protection of sensitive information –
  - (a) restrictions on access to confidential, strategic or security-related data;
  - (b) implementation of data localisation or cybersecurity measures; and
  - (c) segregation of IT systems or information flows.
- Operational and continuity commitments –
  - (a) maintaining critical activities, infrastructure or know-how in Luxembourg;
  - (b) commitments to ensure continuity of supply or services in strategic sectors (eg, energy, telecoms, finance); and
  - (c) restrictions on transferring key assets or technologies abroad.
- Ownership and structural undertakings –
  - (a) caps on shareholding or voting rights beyond certain thresholds;
  - (b) prohibition of subsequent transfers to third parties without approval; and
  - (c) ring-fencing of sensitive business units.
- Reporting and compliance obligations –
  - (a) regular reporting to the authorities on compliance with commitments; and
  - (b) acceptance of monitoring mechanisms or audits.

### 2.4 Right to Appeal

A decision by the Luxembourg authorities prohibiting (or conditioning) a foreign direct investment constitutes an administrative act and can therefore be challenged before the Administrative Courts. An investor may bring an action before the Administrative Tribunal (*Tribunal administratif*), typically seeking annulment of the decision (the standard form of review in administrative law).

The Tribunal will not reassess the transaction from a pure economic or policy standpoint, but will examine:

- the legality of the decision (compliance with the FDI law of 14 July 2023 and general administrative law principles);
- its procedural correctness (respect of due process, rights of defence, reasoning); and
- manifest errors of assessment or misuse of powers, including whether the risk to public security or public order has been properly justified.

Rulings of the Administrative Tribunal can be appealed before the Administrative Court (*Cour administrative*), which has the final say.

The standard deadline to initiate a judicial challenge is three months from:

- the notification of the refusal decision; or
- the date on which the investor became aware of it.

## 3. Corporate Vehicles

### 3.1 Most Common Forms of Legal Entity

Luxembourg offers a wide range of corporate forms, but in practice the most commonly used vehicles are as follows.

#### Private Limited Liability Company (Sàrl)

- *Key characteristics* –
  - (a) liability: limited to contributions;
  - (b) minimum share capital: EUR12,000; and
  - (c) minimum shareholders: one.
- *Governance* –
  - (a) managed by one or more managers; and
  - (b) managers may or may not be shareholders.
- *Typical uses* –
  - (a) most widely used corporate form in Luxembourg;
  - (b) suitable for holding companies, operational businesses and group subsidiaries; and
  - (c) preferred where control over shareholders and flexibility are important.

#### Public Limited Liability Company (SA)

- *Key characteristics* –
  - (a) liability: limited;
  - (b) minimum share capital: EUR30,000; and
  - (c) minimum shareholders: one.
- *Governance* (flexible structure) –
  - (a) one-tier system: board of directors; or
  - (b) two-tier system: management board + supervisory board.
- *Typical uses* –
  - (a) suitable for large companies, public or listed companies, or structures seeking flexibility in financing instruments; and
  - (b) can publicly offer shares.

#### Partnership Limited by Shares (SCA)

- *Key characteristics* –
  - (a) hybrid of company and partnership;
  - (b) liability: limited for limited partners but unlimited for at least one general partner; and
  - (c) minimum share capital: EUR30,000.
- *Governance* –
  - (a) controlled by the general partner, who manages the company.
- *Typical uses* –
  - (a) often used for investment structures, and situations where control needs to remain with a specific sponsor; and
  - (b) allows public listing, while limiting takeover risk.

#### Limited Partnerships (SCS and SCSp)

- *Key characteristics of the SCS* (*common limited partnership*) –
  - (a) legal personality: yes;
  - (b) liability: limited partners have a limited liability and the general partner has an unlimited liability; and
  - (c) minimum capital: none.
- *Key characteristics of the SCSp* (*special limited partnership*)(similar to SCS but with the following differences) –
  - (a) no legal personality; and
  - (b) highly flexible structure.
- *Governance* –
  - (a) typically managed by the general partner.
- *Typical uses* –
  - (a) very popular for private equity, investment funds and joint ventures; and
  - (b) favoured due to contractual flexibility, absence of capital requirements, and tailored governance arrangements.

#### Simplified Joint Stock Company (SAS)

- *Key characteristics* –
  - (a) liability: limited;
  - (b) minimum share capital: EUR30,000; and
  - (c) cannot publicly offer shares.
- *Governance* –
  - (a) must have at least a chairman, but governance is otherwise flexible.
- *Typical uses* –
  - (a) suitable for start-ups and joint ventures;

(b) used when flexible governance is required while retaining some corporate features.

### Other Forms

These are less common in practice.

- Simplified Sàrl (Sàrl-S) – low-capital form for entrepreneurs.
- General partnership (SNC/SENC) – unlimited liability.
- Co-operative (SCOP) – flexible ownership structure.
- European company (SE) – cross-border EU operations.

## 3.2 Incorporation Process

### Main Steps

The following are the main incorporation steps.

#### *Preparation phase*

Before incorporation, the founders must:

- choose the legal form (eg, Sàrl, SA, partnership);
- prepare the constitutional documents (articles of association or partnership agreement); and
- arrange capital contributions.

Typically, a bank account is opened and the share capital is deposited and blocked until incorporation.

#### *Incorporation act*

Most companies (eg, SA, Sàrl) are incorporated by notarial deed before a Luxembourg notary. Some partnerships (eg, SCS, SCSp) may be incorporated by private instrument.

The notary will:

- verify compliance with legal requirements (identity, capital, documents); and
- formally execute the incorporation deed.

#### *Registration and publication*

Following incorporation, the deed is filed with the registration authorities and registered with the Luxembourg Trade and Companies Register (RCS). It is then published in the official gazette (RESA).

### Timing of Incorporation

Incorporation is notarial-driven for most company types and results in immediate legal existence upon execution of the deed. The process is completed by registration and publication shortly afterwards, with a key reference point being the one-month filing period.

Additional sector-specific authorisations may extend the timeline depending on the activity.

The overall process can be summarised as:

- preparation phase (drafting, bank account, capital);
- execution before notary – company legally exists;
- filing and publication (within approximately one month); and
- additional licences/registrations (if applicable).

## 3.3 Ongoing Reporting and Disclosure Obligations

Private companies in Luxembourg are subject to extensive reporting and disclosure obligations, which can be summarised as follows.

### Corporate Records and Ongoing Obligations

All companies must maintain key corporate documentation (books and records) at the registered office. These include minutes of shareholders' meetings and board meetings, current articles of association, shareholders' or members' register. This ensures transparency of governance and ownership internally.

### Filing and Disclosure of Annual Accounts

#### *Preparation and approval*

Annual accounts must be prepared by the management of the company, whether this is a board of directors, or one or more managers. These accounts must then be approved by the shareholders. Such approval is typically given at a general meeting, which is mandatory for public limited liability companies (SAs) and for private limited liability companies (Sàrl) with 60 or more shareholders. For smaller Sàrl, approval may instead be granted through written shareholder resolutions.

#### *Filing and publication*

Once approved, the annual accounts must be filed with the Luxembourg Business Registers (RCS),

where they become publicly available. Filing must take place within one month following shareholder approval. Failure to comply with this obligation may result in sanctions, including fines, potential liability of directors or managers, and, in serious cases, the possible dissolution of the company.

### Changes to Constitutional Documents

Any amendment to the articles of association must be adopted by the shareholders, generally at an extraordinary general meeting, and for corporate entities such as SAs and Sàrl such amendments typically require execution before a notary. Once adopted, the changes must be filed with the RCS and published in the official gazette (RESA). This process ensures that key structural changes are publicly disclosed.

### Changes in Management and Corporate Organs

Although the documents do not set out each step of the process in detail, they establish that corporate records must include minutes and decisions relating to the appointment and removal of directors or managers. In addition, the notarial and registration framework implies that changes requiring formal corporate acts are filed and published through the RCS system. As a result, changes in management are subject to formal recording and, where applicable, registration and public disclosure.

### Ultimate Beneficial Owner (UBO) Disclosure

Luxembourg law imposes specific obligations regarding beneficial ownership. Companies are required to register their UBO in the Register of Beneficial Owners (RBE) and to update this information within one month of any change. The information to be disclosed includes the individual's name, nationality, date and place of birth, country of residence, as well as the nature and extent of the ownership or control exercised. A UBO is generally defined as a natural person who directly or indirectly holds more than 25% of the shares or voting rights, or who otherwise exercises control over the entity. This constitutes a key transparency requirement, particularly in the context of anti-money laundering regulations. Companies must ensure that their beneficial ownership information in the RBE remains up to date.

### Shareholder Meetings and Corporate Decisions

Companies are required to organise the annual approval of their financial statements each year. In this context, shareholders typically decide on the following:

- the approval of the annual accounts;
- the allocation of profits (including the declaration of dividends);
- the discharge of the management for the performance of their duties; and
- the appointment or removal of directors and auditors, where applicable.

All such decisions must be properly documented and retained in the company's records.

## 3.4 Management Structures

Luxembourg company law offers flexible governance models, which vary depending on the legal form.

### SA

The SA provides the most flexible governance framework, as it can operate under either a one-tier or a two-tier system. Under the one-tier system, the company is managed by a board of directors. The board is appointed by the general meeting of shareholders and is responsible for the overall management of the company. Under the two-tier system, governance is divided between a management board, which is responsible for the day-to-day management; and a supervisory board, which oversees and monitors the management board. The supervisory board is appointed by the shareholders, while the management board may be appointed by either the supervisory board or the shareholders, depending on the articles of association. The SA is therefore characterised by a choice between monistic and dualistic governance, making it suitable for more complex organisations.

### Sàrl

The Sàrl follows a simpler, purely one-tier structure. It is managed by one or more managers, who may act individually or collectively (often as a board of managers, although this is not mandatory). There is no two-tier system available for this entity. This streamlined governance reflects the Sàrl's typical use for closely held companies, subsidiaries and SMEs.

### SCS and SCSp

Limited partnerships (both SCS and SCSp) follow a contractual and flexible governance model rather than a formal tiered system. They are generally managed by one or more managers, but in practice most often by their general partner. There is no formal one-tier versus two-tier distinction, and governance is largely determined by the partnership agreement, which can be tailored to the needs of the parties. This flexibility makes partnerships particularly suited for investment funds and joint ventures.

### SCA

The SCA combines features of a company and a partnership and is typically managed by its general partner, who exercises control over the company's management. Like partnerships, it does not follow the classic one-tier/two-tier distinction but instead relies on a controlled management structure centred on the general partner.

### SAS

The SAS is characterised by a flexible and largely contractual governance structure.

The law requires at least a chairman (*président*), but otherwise allows significant freedom to organise governance arrangements in the articles of association. This structure does not strictly follow a traditional one-tier or two-tier model and is designed for tailored governance, particularly in joint ventures or start-ups.

### Overview

Overall, Luxembourg company law combines classical corporate governance models (for SAs) with highly flexible, contractual approaches (for partnerships and SAS).

## 3.5 Directors', Officers' and Shareholders' Liability

The liability of directors and officers in Luxembourg is primarily governed by:

- the Law of 10 August 1915 on commercial companies;
- the Civil Code (general tort liability); and
- where relevant, the Criminal Code and Commercial Code.

Directors act as agents of the company and benefit from the principle of separate legal personality (the "corporate shield"), meaning they are not automatically personally liable for corporate obligations. However, this protection is not absolute and liability may arise in several situations.

The liability of directors in Luxembourg primarily arises under civil law, which constitutes the core regime and takes several forms. First, directors may incur liability towards the company itself for faults committed in the performance of their mandate, such as negligence or mismanagement. This is generally characterised as contractual liability (actio mandati) and may only be enforced by the company, or by a liquidator in the context of insolvency. Secondly, directors can be held jointly and severally liable towards both the company and third parties in cases where they breach the Companies Act or the company's articles of association. In addition, directors may also incur liability under general tort law if they commit a fault that causes damage to third parties, provided that fault, damage and a causal link are established. In practice, Luxembourg courts apply an objective standard of care, assessing the director's conduct against that of a reasonably prudent and diligent manager acting in similar circumstances.

Beyond civil liability, directors may also face criminal liability in cases involving serious misconduct. This includes, for example:

- the falsification of accounts or corporate documents;
- misappropriation of company assets;
- the distribution of fictitious dividends; or
- fraudulent behaviour.

Such offences may give rise to penalties ranging from fines to imprisonment.

Directors are further exposed in situations of insolvency or bankruptcy, where their responsibility is more closely scrutinised. They may be held liable if mismanagement contributed to the company's financial distress or if they failed to file for bankruptcy in a timely manner. In more severe cases, courts may impose

personal liability for part or all of the company's debts or order a disqualification from acting as a director.

These liability regimes are closely linked to the fundamental duties incumbent upon directors. In particular, directors must:

- act with due care and diligence;
- behave loyally in the best interests of the company; and
- ensure compliance with applicable laws and the company's constitutional documents.

Courts will consider lifting the corporate veil where the company structure is misused: for example, in cases of fraud, abuse of rights, or where there is a clear confusion between the assets or identity of the company and those of its controllers. Such intervention remains rare and is assessed on a case-by-case basis, with a high evidentiary threshold.

## 4. Employment Law

### 4.1 Nature of Applicable Regulations

Employment relationships in Luxembourg are governed by a combination of statutory law, regulations and negotiated instruments, rather than by a single source.

#### Statutory Law

The primary source is statutory legislation, in particular:

- the Luxembourg Labour Code, which contains the core rules governing employment relationships; and
- additional laws and Grand-Ducal regulations, which complement the Labour Code and regulate specific aspects of employment.

These statutory rules lay down the fundamental framework applicable to employment relationships, including rights and obligations of employers and employees.

#### Collective Bargaining Agreements

Employment relationships are also shaped by collective bargaining agreements, which:

- reflect the practices of specific economic or industrial sectors; and
- may supplement or refine the statutory framework.

This means that, depending on the sector, employees' rights and working conditions may be influenced by collectively negotiated rules.

#### Individual Employment Contracts

At the individual level, the relationship between employer and employee is governed by an employment contract, which must:

- be provided to the employee at the latest on the first day of employment; and
- set out the key terms and conditions of employment (such as remuneration, working time and duties).

Where applicable, the contract may incorporate provisions from collective agreements.

#### Role of Practice and Additional Instruments

Rules and practices may reflect sectoral customs, especially through collective agreements and established practices within industries.

### 4.2 Characteristics of Employment Contracts

Under Luxembourg law, an employment contract must be provided to the employee in writing. Employers are required to provide the contract no later than the first day of employment.

The contract must set out the essential terms and conditions of employment, including:

- identity of the parties;
- starting date;
- job title;
- place of work;
- wages;
- working time;
- holiday entitlement; and
- notice provisions.

Where applicable, the contract may incorporate provisions from collective bargaining agreements.

Luxembourg law distinguishes between different types of employment contracts:

- permanent (open-ended) contracts, which are the standard form; and
- fixed-term contracts, which have a predetermined duration.

The duration is therefore regulated by law, as different rules apply depending on the type of contract (see, for example, **4.4 Termination of Employment Contracts** regarding the applicable rules for contract termination).

### 4.3 Working Time

Luxembourg law sets clear limits on working time. The normal legal working time is:

- 8 hours per day; and
- 40 hours per week.

However, working time may be extended, subject to legal limits, up to:

- 10 hours per day; and
- 48 hours per week (including overtime).

Overtime is also regulated by law. Overtime is defined as any work performed in excess of the working time set out in the employment contract. Overtime is not automatically permitted, and is allowed only in specific circumstances. It is subject to prior notification and authorisation requirements. Overtime does not always require the consent of both parties, except in limited cases.

Additional flexibility in working time can be achieved through specific arrangements, such as a work organisation plan, or a flexitime system. These mechanisms allow companies to adapt working hours within the legal framework.

### 4.4 Termination of Employment Contracts

Luxembourg is not an employment-at-will jurisdiction. Termination of employment contracts is strictly regulated by law and must be based on legally recognised grounds and procedures.

An employer may terminate a permanent (open-ended) employment contract with notice on personal grounds (eg, insufficient performance, behavioural issues) or economic grounds (eg, restructuring, abolition of the position, financial difficulties). An employer may also terminate a contract with immediate effect in cases of serious misconduct, which justifies immediate departure (eg, criminal acts or violence). Fixed-term contracts may generally only be terminated early for serious misconduct.

During the probation period, termination with notice is possible without stating a specific reason.

The dismissal procedure involves the following.

- Dismissal must be notified by written letter.
- For dismissal with immediate effect, the grounds must be stated in the letter.
- For dismissal with notice, the employee may request the reasons, and the employer must respond in writing.

If the employer has 150 or more employees, in addition to the above, a pre-dismissal interview must be held, allowing the employee to respond to the proposed dismissal.

Dismissal with notice is subject to statutory notice periods depending on seniority:

- two months (less than five years);
- four months (five to ten years); and
- six months (more than ten years).

Employees dismissed with notice and having at least five years of service are entitled to severance pay, ranging from one month's to 12 months' salary, depending on length of service. If a dismissal is found to be abusive, the employer may be ordered to pay damages covering material loss and moral prejudice suffered by the employee.

A collective redundancy procedure applies where an employer intends to dismiss for economic reasons:

- at least seven employees within 30 days; or
- at least 15 employees within 90 days.

Employers must follow a specific statutory procedure, which includes the following.

- Information and consultation – the employer must inform and consult staff representatives (staff delegates and trade unions).
- Negotiation of a social plan – the employer is required to negotiate a social plan with staff representatives and trade union representatives.

This social plan sets out measures to address the consequences of redundancies. The social plan typically includes measures to mitigate the impact on employees, and complements the statutory severance and termination protections.

### 4.5 Employee Representations

Employee representation is mandatory once a statutory threshold is met.

- Employers must organise the election of staff delegates if they have employed at least 15 employees during the 12 months prior to the elections.
- Companies employing fewer than 15 employees are exempt from this obligation.

Therefore, employee representation is not universal but becomes compulsory once the workforce reaches a certain size.

Employees are represented by staff delegates, who are elected every five years and entrusted with representing the workforce within the company. Their main role is to safeguard and defend employees' interests, in particular regarding working conditions, job security and employment status, but also to act as an intermediary between employees and the employer.

Employers are subject to mandatory information and consultation obligations vis-à-vis employee representatives. Employers must inform and/or consult staff delegates on a range of matters, particularly those relating to working conditions, employment conditions and employee welfare. This establishes a continuous obligation for management to engage with employee representatives on relevant issues.

For companies employing at least 150 employees, the role of employee representatives is strengthened. The employer and staff delegates must jointly take decisions in certain areas. Examples include decisions relating to the introduction or application of technical systems used to monitor employees' conduct and performance. In these cases, employee participation goes beyond consultation and amounts to co-determination.

In addition to staff delegates, trade unions play a role in representing employees, notably by negotiating collective labour agreements. This adds a second layer of representation, particularly at sectoral or collective bargaining level.

## 5. Tax Law

### 5.1 Taxes Applicable to Employees/ Employers

An employee is subject to Luxembourg taxation if they qualify as a Luxembourg tax resident or have Luxembourg-source employment income. For Luxembourg tax purposes, an individual is considered resident in Luxembourg if they have their domicile or permanent home in Luxembourg. Non-resident employees are taxed in Luxembourg on Luxembourg-source employment income (eg, work physically performed in Luxembourg), subject to applicable double tax treaties.

Employment income is subject to progressive personal income tax, withheld at source via payroll withholding (*retenue d'impôt sur salaires*). The applicable progressive scale varies from 0% up to 42%. However, taking into consideration the solidarity surcharge, the effective maximum marginal rate applicable is of approximately 45% (ie, 42% base rate + 7% solidarity surcharge) for high income brackets.

Taxable income includes salary and bonuses as well as benefits in kind (eg, company car, stock options under conditions), less social security contributions and certain allowances and deductions.

Employees must contribute to Luxembourg social security, which covers pension, health, accident insurance and dependency insurance.

Approximate *employee contributions* (on gross salary up to a cap for some items) are:

- pension insurance: ~8%;
- health insurance: ~3.05%; and
- dependency insurance (*assurance dépendance*): ~1.4% (on adjusted base).

Total employee contributions amount to approximately 12%–13% of the gross salary. These contributions are withheld directly by the employer.

Employers must also pay additional contributions on top of gross salary. Approximate *employer contributions* are:

- pension insurance: ~8%;
- health insurance: ~3.05%;
- accident insurance: ~0.5%–1.5% (rate depends on sector risk); and
- health at work/mutual insurance scheme: ~1%.

Total employer contributions amount to approximately 12%–15% of gross salary. These contributions can vary slightly depending on the employee's status and the employer's risk category.

Social security contributions are capped to a gross remuneration of EUR13,518.68. This cap is revised regularly based on minimal wage indices.

Employers must:

- withhold income tax at source;
- withhold employee social contributions;
- pay both employee and employer social contributions to the *Centre Commun de la Sécurité Sociale* (CCSS); and
- file monthly/annual payroll reports.

## 5.2 Taxes Applicable to Businesses

To be subject to taxation in Luxembourg, a company must be considered as tax resident in Luxembourg or receive certain Luxembourg sourced-income. In the first scenario, the company is taxable on its worldwide income; in the second one, only the Luxembourg sourced-income is taxable.

An entity is considered Luxembourg-resident if:

- it is incorporated in Luxembourg; or
- its place of effective management (central administration) is located in Luxembourg. Effective management includes where strategic decisions are made, board meetings held, and senior management operates.

### Corporate Income Tax (CIT) and Municipal Business Tax (MBT)

The ordinary CIT rate applicable to resident and non-resident collective entities in 2026 is:

- 14% for taxable income not exceeding EUR175,000;
- EUR24,500 plus 30% of the income exceeding EUR175,000 for taxable income between EUR175,000 and EUR200,001; and
- 16% for taxable income exceeding EUR200,000.

CIT applies only to corporate entities listed in Article 159 of the Income Tax Law and does not apply to tax-transparent entities (eg, general or limited partnerships or European economic interest groupings unless they are subject to reverse hybrid rules).

To CIT rate, the following must be added.

- Solidarity surcharge: 7% of CIT for the year 2026 – bringing the aggregate CIT rate to 17.12% (16% rate + (7% x 16%)) for the year 2026 for collective entities whose taxable income is above EUR200,000.
- Municipal Business Tax (MBT): rate varies by municipality, approximately 6.75% in Luxembourg City.

### Net Wealth Tax (NWT)

NWT applies to resident companies (subject to exemptions for certain holding companies). NWT is a state tax levied on the net wealth of companies, charged on their worldwide so-called "unitary value" (generally equal to the net asset value of the company

or branch – subject to certain exemptions and adjustments).

The NWT rate is 0.5% on that part of the net wealth which is lower or equal to EUR500 million and 0.05% on that part of the net wealth exceeding EUR500 million. A reduction of the NWT can be requested by an entity in its CIT tax return, provided that it undertakes to enter, before the end of the following year, an amount equivalent to five times the reduction requested in a reserve account and to maintain this reserve in its balance sheet for a five-year period.

Luxembourg companies are subject to the higher of either the NWT as per the unitary value or a minimum NWT varying between EUR535 and EUR4,815.

Since 2025, the amount of minimum NWT is computed as follows:

- a minimum NWT of EUR535 where the total balance sheet is less than or equal to EUR350,000;
- a minimum NWT of EUR1,605 where the total balance sheet is greater than EUR350,000 and less than or equal to EUR2 million; or
- a minimum NWT of EUR4,815 where the balance sheet total is greater than EUR2 million.

### Withholding Taxes

As a general rule, Luxembourg does not levy withholding tax on the following outbound amounts paid, credited or otherwise made available by Luxembourg corporate taxpayers to non-residents:

- ordinary interest paid at arm's length;
- royalties;
- liquidation proceeds; and
- dividend distributions made by exempt undertakings for collective investment.

Dividends distributed by Luxembourg-resident companies are, in principle, subject to a 15% withholding tax. However, subject to the General Anti-Avoidance Rule (GAAR), a withholding tax exemption may apply where dividends are paid by a fully taxable Luxembourg resident company to:

- a non-resident collective entity falling within the scope of the EU Parent–Subsidiary Directive;
- a Swiss-resident corporation subject to Swiss corporate tax and not benefiting from a Swiss tax exemption;
- a corporation or co-operative resident in an EEA country (other than an EU member state) and fully subject to an income tax comparable to Luxembourg CIT;
- a collective undertaking resident in a tax treaty jurisdiction and fully subject to an income tax comparable to Luxembourg CIT; or
- a Luxembourg permanent establishment of any of the above qualifying foreign entities.

The exemption applies where the parent company has held or commits to hold – directly or indirectly through a tax-transparent entity – at least 10% of the share capital or a participation with an acquisition cost of at least EUR1.2 million, for an uninterrupted period of at least 12 months.

A 20% withholding tax applies to directors' fees (increased to 25% if the tax is borne by the company paying the fees). For non-resident directors whose Luxembourg-source professional income consists solely of directors' fees not exceeding EUR100,000 per fiscal year, the withholding tax constitutes the final tax, unless the director opts for assessment.

A 10% withholding tax applies to income from independent literary or artistic activities and from professional sports activities performed in Luxembourg.

### Value Added Taxes (VAT)

In Luxembourg, VAT applies to supplies of goods and services, to intra-Community acquisitions made by taxable persons in the course of their business, and to imports from outside the EU. The standard VAT rate is 17%. A taxable person is anyone who independently and regularly carries out an economic activity.

Luxembourg also applies several reduced rates. An intermediate rate of 14% applies to items such as fuels, certain advertising publications, and services relating to the administration or custody of securities. A reduced rate of 8% applies to gas, electricity and, under certain conditions, works of art and their supply.

A super-reduced rate of 3% covers a wide range of goods and services, including broadcasting services, copyrights, most food products, books and periodicals, children's clothing, water, pharmaceuticals, passenger transport, accommodation, and access to cultural, educational, sporting, entertainment events and e-books.

Finally, a zero rate applies principally to exports and intra-Community (interstate) supplies of goods.

### Registration Duties

In Luxembourg, registration duties vary depending on the type of transaction or document. Transfers of Luxembourg real estate generally trigger a registration tax of 6% (increasing to 9% for certain properties in Luxembourg City), plus a 1% transcription tax, calculated on the higher of the purchase price or the property's fair market value. These taxes are deductible for corporate income tax purposes.

Certain corporate-law formalities – such as the incorporation of a Luxembourg entity, amendments to its articles of association, or the transfer of its registered seat to Luxembourg – are subject to a fixed registration duty of EUR75.

When real estate is contributed to a company in exchange for shares, the contribution is subject to a proportional registration duty of 0.6% (or 0.9% for some Luxembourg City properties), plus a 0.5% transcription tax. If the consideration consists of something other than shares, the proportional duty increases to 6% (or 9% in Luxembourg City), and the transcription tax to 1%. Certain reorganisations may benefit from exemptions from proportional duties.

Contributions of movable property remunerated by means other than shares are also subject to a proportional registration duty, with the applicable rate depending on the nature of the assets contributed.

### Top-Up Tax Under Pillar Two

Luxembourg transposed the EU Pillar Two Directive on global minimum taxation in December 2023. As a result, Pillar Two is now in force, with the Income Inclusion Rule (IIR) and the Luxembourg Qualified Domestic Minimum Top-Up Tax (QDMTT) applying for fiscal years beginning on or after 31 December 2023, and the Undertaxed Profits Rule (UTPR) applying for fiscal years beginning on or after 31 December 2024.

Luxembourg has been granted safe harbour status on the OECD's central record.

## 5.3 Available Tax Credits/Incentives

Luxembourg's tax framework contains multiple incentives tailored to specific transaction types.

### Participation Exemption

Under the participation exemption, dividends received from a foreign subsidiary can be exempt if the following conditions are met.

- The distributing subsidiary must be:
  - (a) an EU company covered by the Parent–Subsidiary Directive; or
  - (b) a fully taxable Luxembourg company; or
  - (c) a non-resident joint stock company fully liable to a tax comparable to Luxembourg CIT (generally at least 8% as of tax year 2025).
- The Luxembourg parent company must be a fully taxable resident company (or qualifying PE).
- The participation must satisfy a minimum threshold of:
  - (a) at least 10% of the subsidiary's share capital; or
  - (b) acquisition cost of at least EUR1.2 million for dividend exemption.
- Minimum holding period: the parent must hold or commit to hold the participation for at least 12 months.

If these conditions are met, the dividend is fully exempt from Luxembourg corporate income tax.

If dividends received by a Luxembourg company do not meet the conditions for the full participation exemption, 50% of the dividend is nevertheless exempt from CIT under Luxembourg's domestic half-income method, provided the income is paid by:

- a fully taxable Luxembourg resident company;
- a company resident in a state with which Luxembourg has concluded a double tax treaty and which

is fully liable to a tax corresponding to Luxembourg CIT; or
- a company resident in an EU member state covered by Article 2 of the EU Parent–Subsidiary Directive (Directive 2011/96/EU).

### Capital Gains Exemption

Capital gains realised by a Luxembourg company or permanent establishment on the disposal of shares in a subsidiary can also be exempt from tax where, at the time the gain arises, the seller has held – or commits to hold for at least 12 uninterrupted months – a direct and continuous participation of at least 10% in the subsidiary or shares with an acquisition cost of at least EUR6 million. The subsidiary must be either an EU undertaking covered by the Parent–Subsidiary Directive, a fully taxable Luxembourg capital company, or a non-resident company subject to a tax comparable to Luxembourg corporate income tax. In practice, the Luxembourg tax authorities generally require that the foreign company be subject to a minimum tax rate of 8% on a basis comparable to Luxembourg's.

### Waiver Under LITL Article 166

As from tax year 2025, the Luxembourg tax law provides, in Article 166 of the Luxembourg Income Tax Law (LITL), for the possibility for a taxpayer to waive the benefit of the Luxembourg participation exemption referred to in Article 166 of the LITL. However, this option is only available to the taxpayer where the conditions for the participation exemption are met solely by virtue of the threshold of the acquisition price of the shareholding, ie, if is at least equal to an amount of EUR1.2 million. In other words, when the conditions for the exemption are met on the basis of a shareholding of at least 10%, it is not possible to exercise this waiver. The limitation of the waiver to these cases is due to the constraints arising from the Parent–Subsidiary Directive. The waiver must be exercised individually for each tax year and for each shareholding and has an impact on the recapture rule. If the waiver is not exercised, the participation exemption continues to apply normally.

### Innovation-Driven Activities

Luxembourg offers targeted incentives for innovation-driven activities.

- Research and development (R&D) expenses are generally tax deductible. Since 1 January 2018, Luxembourg has implemented an intellectual property (IP) regime that complies with the "modified nexus" approach endorsed by both the OECD and the European Union as part of the Base Erosion and Profit Shifting (BEPS) project. Under this regime, an 80% exemption from CIT and MBT may apply – subject to certain conditions – to the net income derived from qualifying rights in patents (defined broadly) and copyrighted software. The exemption is limited to IP assets that are not marketing-related and that were created, developed or enhanced after 31 December 2007, provided the income originates from eligible R&D activities. In addition, IP assets that qualify for the 80% (corporate) income tax exemption are 100% exempt from net wealth tax.
- In addition to the IP regime, the law on 19 December 2023 introduced a major reform of the investment tax credit (ITC) framework, effective as from the 2024 tax year. This framework aims to accelerate the digital transformation as well as the ecological and energy transition of Luxembourg businesses and to strengthen the competitiveness of Luxembourg companies, by stimulating more innovation, while promoting the development of knowledge and skills in digital transformation and ecological and energy transition. The framework provides for the following:
  (a) a global ITC of 12% based on the acquisition price or cost price of investments made during a financial year, granted on investments in tangible depreciable assets other than buildings, livestock and mineral and fossil deposits, and for the acquisition of software;
  (b) for investments in fixed assets approved to be eligible for the special depreciation referred to in Article 32bis of the LITL, the tax credit is increased to 14%; and
  (c) a specific income tax credit for investments and operating expenses linked to the digital transformation or ecological and energy transition – the rate of the new tax credit is either 18% or 6% depending on whether investments are made in tangible depreciable assets or not.

### Specific Industries

Luxembourg's tax framework also contains multiple incentives tailored to specific industries. For that purpose, Luxembourg offers a wide range of investment vehicles, some of which benefit from a tax regime which differs from that applicable to fully taxable corporate entities. The following regulated investment funds are exempt from any taxation on their income, but are subject to a so-called "subscription tax" on the value of their net assets:

- undertakings for collective investment in transferable securities (UCITS) within the meaning of the UCITS Directive;
- alternative investment funds (AIFs) (ie, undertakings for collective investment which are not UCITS); and
- specialised investment funds (SIFs), which are multi-purpose investment funds dedicated to so-called "sophisticated investors".

While the income exemption applies in the same way to all investment fund types listed above, the rate of subscription tax varies depending on the type of fund, from 0.01% to 0.05%. Some subscription tax exemptions apply in certain cases. Notably, actively managed exchange traded funds are exempted from subscription tax with effect as from 1 January 2025, aligning to the regime already applicable to passively managed exchange traded funds.

Securitisation vehicles (SVs) set up as a securitisation fund (which acquires or assumes, directly or through another undertaking, risks relating to claims, other assets or obligations assumed by third parties or inherent to all or part of the activities of third parties and issues securities whose value or yield depends on such risks) are exempt from taxation on their income and are subject to the tax provisions applicable to UCIs. However, they are not subject to subscription tax.

Some other types of investment vehicles are fully subject to tax on their income as any other fully taxable Luxembourg corporate entity, but either benefit from certain exemptions on certain income categories (*sociétés d'investissement en capital à risque* (SICARs)) or are subject to specific rules when computing their tax base (SVs in corporate form):

- an investment company in risk capital (SICAR), designed for private equity and venture capital investments, must invest its assets in securities representing risk capital; and
- an SV set up as a corporation (same activity as a securitisation fund) is fully subject to tax on its income like any other fully taxable Luxembourg corporate entity, but is subject to specific rules (specific deductions) when determining its taxable income.

Finally, the reserved alternative investment fund (RAIF) combines the characteristics and structuring flexibilities of both the Luxembourg regulated SIF and the SICAR qualifying as an AIF managed by an authorised AIF manager (AIFM), except that RAIFs are not subject to prior authorisation from the Luxembourg financial regulator as they must be managed by a fully authorised AIFM. For tax purposes, depending on the activity they perform, RAIFs are subject to either the same income tax exemption regime as SIFs (and subscription tax) or the same tax regime as SICARs.

## 5.4 Tax Consolidation

Fiscal consolidation is permitted for CIT and MBT purposes, but not for NWT. Luxembourg law allows groups to elect either vertical or horizontal tax consolidation, with the consolidated group being bound by the regime for a minimum period of five years. A company may not simultaneously belong to more than one tax-consolidated group.

Vertical tax consolidation is available where a fully taxable Luxembourg resident company, or the Luxembourg permanent establishment of a foreign company subject to a tax comparable to Luxembourg CIT, directly or indirectly holds at least 95% of the share capital of one or more fully taxable Luxembourg resident companies, or of a Luxembourg permanent establishment of a foreign entity subject to a comparable tax. Both the integrating parent and the integrated subsidiaries must have the same financial year-end.

Horizontal tax consolidation applies where several subsidiaries are held, directly or indirectly, at a mini-

mum of 95% by the same non-integrated parent entity. The integrating and integrated entities may be fully taxable Luxembourg companies or Luxembourg permanent establishments of foreign companies subject to a tax comparable to Luxembourg CIT. The non-integrated parent may be a fully taxable Luxembourg company, a Luxembourg permanent establishment of a foreign company, a foreign company resident in an EEA member state and subject to a comparable tax, or a permanent establishment located in an EEA member state of such a foreign company. Even though the parent is not part of the consolidation, the 95% shareholding requirement must still be met. All integrating and integrated entities must share the same financial year-end.

Where the 95% shareholding is held indirectly, all intermediary companies must themselves be corporate entities fully subject to a tax comparable to Luxembourg CIT.

Tax consolidation takes effect only upon written request to the Luxembourg tax authorities and applies retrospectively from the start of the fiscal year in which the request is filed. Once elected, the regime must be maintained for at least five tax years.

### 5.5 Thin Capitalisation Rules and Other Limitations

In the absence of statutory thin-capitalisation rules under Luxembourg tax law, the principles set out in Chapter X of the OECD Transfer Pricing Guidelines on financial transactions, released on 11 February 2020, serve as the primary reference point. Consequently, a Luxembourg company's debt-to-equity ratio must, in practice, be supported by a debt-capacity analysis carried out as part of a transfer pricing assessment. Where the level of indebtedness is considered excessive, related interest payments may be recharacterised as hidden profit distributions, resulting in the denial of the tax deduction and potentially triggering Luxembourg dividend withholding tax.

Historically, the commonly used 85%/15% debt-to-equity ratio for shareholding activities has not been systematically challenged, although the Luxembourg tax authorities have, in certain cases, requested formal debt-capacity analyses. More recently, however, the Administrative Court has clarified that this 85/15 practice does not have any legally binding force.

### 5.6 Transfer Pricing

Luxembourg's transfer pricing framework is anchored in Article 56 of the Income Tax Law, which empowers the tax authorities to adjust a company's taxable income when transactions between associated enterprises diverge from arm's length conditions. This may lead to an upward adjustment where a Luxembourg entity confers an undue advantage on a related party – for example, by paying interest at a rate above arm's length – or, conversely, to a downward adjustment where the Luxembourg entity is the beneficiary of such an advantage.

Separately, Article 164 (3) of the Income Tax Law provides that hidden dividend distributions – meaning benefits granted to a shareholder that would not have been provided absent the shareholding relationship, such as interest charged at a rate above arm's length – are not deductible for tax purposes. These rules governing hidden distributions operate alongside the transfer pricing framework and may, in certain cases, take precedence over arm's length adjustments.

### 5.7 Anti-Evasion Rules

Luxembourg rarely challenges the application of tax treaties. Nonetheless, domestic legislation includes a general anti-abuse rule (GAAR), as well as the anti-abuse provision of the EU Parent–Subsidiary Directive, under which treaty or directive benefits may be denied when an arrangement is primarily designed to obtain a tax advantage.

Since 1 January 2019, Luxembourg's domestic GAAR has been aligned with the wording of ATAD 1, introducing the concept of a "non-genuine arrangement". Under this rule, a transaction may be disregarded or recharacterised when all of the following conditions are met:

- the arrangement involves the use of one or more legal forms or legal structures;
- the main purpose, or one of the main purposes, of using such legal forms or structures is to obtain a tax benefit that defeats the object or purpose of the applicable tax law; and

- the use of such forms or structures is considered non-genuine.

These principles are further reinforced by Luxembourg's substance-over-form doctrine, under which the tax analysis focuses on the economic reality of a structure or transaction rather than its legal form. This doctrine is embedded in Luxembourg legislation and case law and remains a central interpretative tool for the tax authorities and courts.

In addition, since 1 January 2020, the principal purpose test (PPT) has applied to Luxembourg's tax treaties. Under the PPT, treaty benefits may be denied if it is reasonable to conclude that obtaining the benefit was one of the principal purposes of an arrangement or transaction that directly or indirectly gave rise to that advantage.

In addition, Luxembourg applies the full EU anti-hybrid mismatch rules, which deny tax deductions or other advantages in circumstances involving double deductions or deduction-without-inclusion outcomes, ensuring consistency with the ATAD 2 framework.

The Luxembourg hybrid mismatch rules follow OECD BEPS Action 2 recommendations and target a wide range of hybrid mismatch scenarios, including:

- hybrid financial instruments (equity in one jurisdiction, debt in another);
- hybrid entities (transparent vs opaque treatment);
- hybrid permanent establishments;
- imported hybrid mismatches (mismatches arising outside Luxembourg but imported via deductions);
- hybrid transfers;
- dual-resident entities; and
- reverse hybrids (transparent in Luxembourg, opaque to investors).

Hybrid mismatches arise when entities or instruments are treated differently across jurisdictions, leading to outcomes such as double deductions or deductions without inclusion. ATAD 2 requires EU member states – such as Luxembourg – to neutralise these mismatches either by denying deductions or by including otherwise untaxed income.

Luxembourg's implementation strictly adheres to ATAD 2 minimum standards, without adding extra layers of complexity, but opting into all permitted exemptions or safe harbours to avoid unintended double taxation.

Under Article 38 of the Luxembourg Income Tax Law (LITL), exit taxation is triggered where Luxembourg loses, in whole or in part, its taxing rights over assets or business activities as a result of a cross-border transfer. This may arise, in particular, where:

- assets are transferred from a Luxembourg head office to a foreign permanent establishment;
- assets are transferred from a Luxembourg permanent establishment to its foreign head office or to another foreign permanent establishment;
- a taxpayer transfers its tax residence outside Luxembourg; or
- a business carried on through a Luxembourg permanent establishment is transferred to another jurisdiction,

provided that, as a consequence of the transfer, Luxembourg no longer has the right to tax any future gains realised on the relevant assets.

Upon the occurrence of an exit event, unrealised gains inherent in the transferred assets are deemed to be realised for Luxembourg tax purposes. The taxable gain generally corresponds to the difference between:

- the fair market value (or going concern value) of the assets at the date of the transfer; and
- their tax book value for Luxembourg tax purposes.

Accordingly, gains that accrued while the assets were subject to Luxembourg taxation become taxable at the time of the transfer, notwithstanding the absence of an actual disposal.

Where the transfer is made to another European Union member state or to a qualifying European Economic Area State with which arrangements for the mutual recovery of tax claims are in place, the taxpayer may elect to defer payment of the exit tax by paying it in equal instalments over a period of up to five years.

The benefit of the instalment regime may be withdrawn and the outstanding tax liability become immediately payable in certain circumstances, including where the transferred assets are subsequently disposed of or transferred to a non-qualifying jurisdiction.

By contrast, where the transfer is made to a jurisdiction that does not qualify for the deferral regime, the exit tax is generally due immediately upon the occurrence of the exit event.

### 5.8 Tariffs

Luxembourg does not maintain an independent national tariff regime. As a member of the European Union (EU) and the EU Customs Union, Luxembourg applies the EU Common Customs Tariff (CCT) to goods imported from non-EU countries. Goods moving between EU member states circulate free of customs duties, while imports from outside the EU are subject to the tariff rates and trade measures established at EU level.

## 6. Competition Law

### 6.1 Merger Control Notification

Luxembourg does not currently operate a general ex ante merger control regime. Consequently, mergers, acquisitions and joint ventures are not subject to mandatory notification or prior approval by the Luxembourg competition authorities under national competition law. As a general rule, therefore, M&A transactions are not reportable in Luxembourg on the basis of turnover or market share thresholds.

Notwithstanding the absence of a national merger control system, certain transactions may nevertheless be subject to regulatory review at the European Union level. In particular, concentrations, including mergers, acquisitions of control and certain full-function joint ventures, fall within the scope of the EU Merger Regulation where the applicable jurisdictional thresholds are met. Transactions meeting those thresholds must be notified to and cleared by the European Commission prior to implementation.

Furthermore, although no prior notification is currently required at the national level, the Luxembourg Competition Authority retains the ability to intervene on an ex post basis where a transaction gives rise to competition concerns, including potential abuses of a dominant position or other anti-competitive effects.

It should also be noted that a draft bill proposing the introduction of a Luxembourg merger control regime is currently under consideration. The proposal would establish a system of mandatory pre-closing notification for transactions meeting specified turnover thresholds, including where the parties' combined turnover in Luxembourg exceeds EUR60 million and at least two parties each generate Luxembourg turnover exceeding EUR15 million. However, the proposed legislation has been subject to criticism and has not yet been adopted. Accordingly, the timing of its entry into force and the final form of the regime remain uncertain.

### 6.2 Merger Control Procedure

Luxembourg does not currently have a national ex ante merger control regime. As a consequence, there are no national rules describing the steps or timing of merger notifications.

### 6.3 Cartels

Luxembourg has a framework addressing economic and anti-competitive conduct, as part of its broader system governing economic crimes and market regulation. These are governed by a combination of the Luxembourg Criminal Code, and EU-derived regulations, such as the Market Abuse Regulation. This indicates that Luxembourg's system is strongly influenced by EU law, including in areas relating to competition and market conduct.

Economic offences include:

- fraud;
- market abuse and insider trading; and
- other forms of unlawful conduct affecting markets.

### 6.4 Abuse of Dominant Position

Luxembourg does have rules governing unilateral conduct and, in particular, abuse of economic dependence, though the framework is somewhat limited and closely aligned with EU competition law.

Luxembourg competition law is primarily based on the Luxembourg Competition Act (Law of 23 October 2011, as amended). As Luxembourg is an EU member state, national courts must interpret domestic law in a manner compliant with EU law. This implies that EU competition law principles (including Articles 101 and 102 TFEU) are relevant in Luxembourg, and the legal framework follows an effects-based approach, where conduct may be assessed in light of its impact within the EU, even if carried out elsewhere.

Article 5 of the Luxembourg Competition Act prohibits abuse of a dominant position. This mirrors Article 102 TFEU and covers unilateral conduct such as:

- unfair pricing;
- exclusionary practices;
- refusal to supply; and
- discriminatory conditions.

This requires market dominance (not just strong bargaining power).

Luxembourg authorities (eg, the Competition Authority) may act ex post in competition matters, including intervention in cases of abuse of dominance.

In relation to the concept of abuse of economic dependence, Luxembourg does recognise the concept, but it is not as fully developed or codified as in some neighbouring countries (eg, France or Belgium). Abuse of economic dependence is addressed more indirectly, via:

- general civil law principles;
- unfair competition rules; and
- contract law (good faith, imbalance, abuse of rights).

## 7. Intellectual Property

### 7.1 Patents

#### Definition

A patent is an industrial property right granted by the Luxembourg Ministry of the Economy that provides legal protection for inventions that are new, involve an inventive step and are capable of industrial application. Patent protection is also available for certain biotechnological inventions. A patent confers on its holder an exclusive right to exploit the invention and to prevent third parties from manufacturing, using, marketing, distributing or selling the patented invention without prior authorisation.

To qualify for patent protection, an invention must:

- be novel, meaning that it does not form part of the state of the art;
- involve an inventive step, such that it is not obvious to a person skilled in the relevant field;
- be capable of industrial application; and
- not fall within any category expressly excluded from patentability.

#### Registration Process

To obtain a patent, full disclosure of the invention is mandatory. A patent application must include a sufficiently clear and complete description of the invention, together with any necessary drawings, enabling a person skilled in the relevant field to reproduce the invention. It must also contain one or more claims defining the scope of the protection sought, which may relate to a product, process, device or specific use. In addition, the applicant must pay the applicable filing and procedural fees required for the grant of the patent.

In exchange for this disclosure, a patent grants its holder exclusive rights for a maximum period of 20 years from the filing date of the patent application, subject to compliance with any applicable maintenance requirements.

The right to a patent belongs to the inventor or their successor in title (any person who has acquired the right from the inventor). Any natural or legal person may apply for a patent.

An application for a Luxembourg national patent must be filed with the Intellectual Property Office (*Office de la propriété intellectuelle* – OPI) of the Ministry of the Economy.

In addition to national protection, applicants may seek broader territorial coverage through:

- European patent applications filed with the European Patent Office (EPO), which can provide protection in multiple European countries through a centralised application procedure; and
- international patent applications filed under the Patent Cooperation Treaty (PCT) administered by the World Intellectual Property Organization (WIPO).

The patent is valid in the countries where such protection has been requested. An applicant who first files a patent application in Luxembourg benefits from a 12-month priority period, during which corresponding applications may be filed in other jurisdictions while preserving the original filing date.

The filing of a Luxembourg patent application is subject to prescribed fees, including a filing fee of EUR40, payable within one month of filing, and, where requested, a search fee of EUR450 for the preparation of a search report. Applicants may also request early publication of the patent application to accelerate the grant process, subject to payment of an additional EUR49 fee. Following grant, the patent remains in force only if the applicable annual renewal fees are paid.

### Enforcement and Remedies

The owner of a patent, or, where the owner fails to act, a licensee entitled to use the patent, may bring infringement proceedings before the Luxembourg courts. Where infringement is established, the Luxembourg District Court may grant a range of remedies, including:

- injunctive relief to prevent or cease the infringing activities;
- confiscation or destruction of infringing goods; and
- an award of damages to compensate the patent holder for losses suffered as a result of the infringement.

These remedies are intended both to halt unlawful use of the patented invention and to compensate the rights holder for the harm caused by the infringement.

## 7.2 Trade Marks

### Definition

A trade mark is a distinctive sign used to identify and distinguish the goods or services of one undertaking from those of another. It serves as an indicator of commercial origin and may take various forms, including word marks, figurative marks, combined word and figurative marks, and three-dimensional marks.

### Registration Process

Any sign capable of being represented in a manner that enables the competent authorities and the public to determine clearly and precisely the subject matter of protection may qualify for registration, provided that it is capable of distinguishing the goods or services of one undertaking from those of another. Eligible signs include, among others:

- words;
- slogans;
- letters;
- numbers;
- drawings;
- shapes;
- colours;
- sounds; and
- combinations thereof.

However, a trade mark will be denied registration, or may subsequently be declared invalid, if it lacks distinctive character, is contrary to public policy or accepted principles of morality, is misleading as to the nature, quality or origin of the relevant goods or services, cannot function as a trade mark, or conflicts with an earlier registered trade mark or other prior right.

A trade mark may be registered by any natural or legal person, including individuals, self-employed persons, companies and other entities. Upon registration, the proprietor obtains the exclusive right to use the trade mark in relation to the goods and services for which it is registered.

The owner of a registered trade mark enjoys the exclusive right to use the mark and may prevent third parties from using identical or similar signs that are likely to cause confusion among consumers. Protec-

tion may also extend to the use of identical or similar signs that take unfair advantage of, or are detrimental to, the reputation or distinctive character of a well-known trade mark.

In principle, trade mark rights arise through registration. Unregistered trade marks do not generally benefit from protection, except in limited circumstances relating to well-known marks. A trade mark is generally protected for a period of ten years from the filing date. Registration may be renewed indefinitely for successive ten-year periods, provided that the applicable renewal requirements and fees are satisfied.

Luxembourg does not have a national trade mark protection scheme. Trade mark protection in Luxembourg is governed by the EU Trade Mark Regulation (EU) 2017/1001 and the Benelux Convention on Intellectual Property. Applications may be filed with the Benelux Office for Intellectual Property (BOIP) or through the relevant national authority, which in Luxembourg is the Intellectual Property Division of the Ministry of the Economy. Trade mark protection obtained through a Benelux registration extends automatically to Belgium, the Netherlands and Luxembourg.

Businesses seeking broader protection across the European Union may apply for an EU Trade Mark (EUTM), which provides unitary protection throughout all EU member states.

The trade mark registration process typically takes approximately four months for Benelux registrations, nine to ten months for EU trade marks, and between four and 24 months for international registrations, depending on the jurisdictions concerned. Once registered, trade mark protection takes effect retroactively from the filing date, which therefore constitutes a key element of the registration process.

The official filing fees for trade mark registration vary depending on the territorial scope of protection. The standard fee for a Benelux trade mark covering up to three classes is EUR240, while the registration of an EU trade mark covering three classes generally costs between EUR900 and EUR1,050. For international trade mark registrations, applicants pay a single set of fees to the World Intellectual Property Organization (WIPO).

The applicable registration fees must be paid within one month of the filing date. Failure to do so will result in the date of receipt of payment being deemed the filing date of the application. As the filing date determines the priority of trade mark rights and their precedence over subsequent applications, timely payment is of particular importance.

### Enforcement and Remedies

Trade mark owners may enforce their rights through administrative or judicial proceedings.

At the administrative level, the proprietor of an earlier trade mark may initiate opposition proceedings before the BOIP against a later-filed mark that infringes its rights. The BOIP may also hear applications for the revocation or declaration of invalidity of registered trade marks on specified grounds. Appeals against BOIP decisions fall within the exclusive jurisdiction of the Benelux Court of Justice.

At the judicial level, trade mark owners may bring infringement proceedings before the Luxembourg District Court. In urgent cases, the trade mark owner may also seek interim injunctive relief through summary proceedings before the President of the Luxembourg District Court in order to prevent or stop ongoing infringement.

## 7.3 Industrial Designs

### Definition

An industrial design (or drawing and design) is the visual appearance of a product, including its shape, lines, contours, colours, texture, materials or ornamentation, provided that these features are aesthetic rather than purely functional in nature. Drawings relate to two-dimensional representations, while designs generally concern three-dimensional objects.

### Registration

Ownership and exploitation rights in a drawing or design may be exercised either by its creator or by any person or entity that has lawfully acquired such rights.

To qualify for protection, a design must:

- relate to the appearance of an industrial or handicraft product, or part thereof;
- be new;
- possess individual character, creating a different overall impression on the informed user; and
- derive from the product's visual features rather than its technical function.

Purely functional features, as well as immaterial concepts or ideas, are not eligible for protection.

Design protection may be obtained through either:

- a single design application covering one design; or
- a multiple design application covering several designs falling within the same class under the International Classification for Industrial Designs.

In the Benelux region, design registration provides protection in Belgium, Luxembourg and the Netherlands, as national registrations no longer exist separately. Applicants seeking broader protection may apply for a Registered Community Design, which affords protection throughout the European Union. Where protection is required beyond the EU, applications may be filed through the World Intellectual Property Organization (WIPO) under the international design registration system.

At Luxembourg level, registering a simple drawing or design costs EUR108 plus EUR10 per representation (photo, illustration, etc). At European level, a single application is subject to a fee of EUR350.

A registered design grants its holder an exclusive right to use the design and to prevent unauthorised use of identical or substantially similar designs. Registered designs benefit from an initial protection period of five years from the filing date, which may be renewed in successive five-year periods up to a maximum term of 25 years.

### Enforcement and Remedies

The holder of a registered design may enforce its rights before the Luxembourg District Court. In urgent circumstances, the design holder may also seek interim relief through summary proceedings before the President of the Luxembourg District Court, including injunctions aimed at preventing or immediately stopping infringement.

Under the Community Designs Regulation, an unregistered design that has been made available to the public within the European Union benefits from protection for three years from the date of first disclosure.

EU law also provides limited protection (for three years from the date of first disclosure) for unregistered designs that have been disclosed to the public within the European Union. Unlike registered designs, the holder of an unregistered design may only prevent use that results from the copying of the protected design. Registration therefore offers significantly broader protection, as it enables the holder to prohibit unauthorised use irrespective of whether copying can be demonstrated.

The enforcement mechanisms and remedies available for unregistered designs are substantially the same as those applicable to registered designs.

## 7.4 Copyright

### Definition

Copyright is the legal protection granted to the creator of an original literary, scientific or artistic work. In Luxembourg, copyright is governed by the Act of 18 April 2001 on Copyright, Related Rights and Databases, as amended.

Copyright protection applies to original works that reflect the author's own intellectual creation and have been expressed in a tangible or identifiable form. Protected works include, among others:

- literary works;
- artistic creations;
- computer programs; and
- databases.

Mere ideas, concepts or methods are not protected.

### Protection

Copyright protection arises automatically upon the creation of an original work and is not subject to any registration or other formality. The author acquires exclusive rights in the work from the moment of its

creation, enabling them to control its use and exploitation by third parties.

Although registration is not required, it is advisable to retain evidence establishing the date of creation of the work. Such evidence may be provided by any appropriate means, including an i-DEPOT registration with the Benelux Office for Intellectual Property, the deposit of a copy of the work with a notary or financial institution, or other reliable methods capable of demonstrating the existence of the work at a specified date. The copyright holder enjoys exclusive rights over the work, including the following:

- to authorise or prohibit its reproduction;
- communication to the public;
- distribution; and
- modification.

These rights enable the author to control the use of the work and to prevent unauthorised exploitation by third parties.

Copyright protection subsists for the lifetime of the author and for 70 years following the author's death. Upon the author's death, the rights pass to their heirs or other successors in title. Copyright may also be transferred or licensed, in whole or in part, to third parties.

### Enforcement and Remedies

Copyright holders may bring civil proceedings to enforce their rights against unauthorised use of their works. In addition to civil remedies, Luxembourg law provides for criminal sanctions where copyright infringement is committed in the course of trade with malicious or fraudulent intent. Unauthorised reproduction or distribution of protected works may constitute the criminal offence of counterfeiting and may result in:

- fines of up to EUR250,000;
- confiscation or destruction of counterfeit goods; and
- in cases of repeated infringement, imprisonment for up to two years.

These remedies are intended both to compensate rights-holders and to deter unlawful exploitation of protected works.

## 7.5 Others

### Trade Secrets

Trade secrets benefit from specific legal protection under the Luxembourg Act of 26 June 2019 on the protection of trade secrets, which implements the EU Trade Secrets Directive. This regime is particularly relevant for commercially valuable information that does not qualify for intellectual property protection or that a business prefers to keep confidential rather than register.

Protection arises automatically and does not require registration, provided that the information:

- is not generally known or readily accessible to persons operating in the relevant sector;
- has commercial value because of its confidential nature; and
- is subject to reasonable measures by the lawful holder to preserve its secrecy.

Protected information may include:

- technical know-how;
- business processes;
- customer lists;
- strategies;
- formulas; and
- other confidential business information.

Trade secret protection is not limited in time and may continue indefinitely, provided that the information remains confidential and retains its secret character. However, claims relating to unlawful acquisition, use or disclosure must generally be brought within two years of discovery of the infringement.

No registration, filing or other formality is required to obtain trade secret protection. Protection arises automatically once the statutory conditions for secrecy, commercial value and reasonable protective measures are met.

The holder of a trade secret may bring proceedings before the Luxembourg District Court against any person who unlawfully acquires, uses or discloses the protected information. Certain exceptions apply, notably where the acquisition, use or disclosure of the information is connected with the exercise of freedom of expression, whistle-blowing activities or the disclosure of unlawful conduct.

### Other Related Rights

In addition to trade secret protection, Luxembourg law provides protection for other intangible assets, including software, databases, domain names and related rights granted to performers, phonogram producers and broadcasting organisations.

## 8. Data Protection

### 8.1 Applicable Regulations

The processing of personal data in Luxembourg is principally governed by Regulation (EU) 2016/679 of 27 April 2016 (the General Data Protection Regulation, or GDPR), which has been directly applicable in all member states since 25 May 2018. The GDPR is supplemented by the Luxembourg law of 1 August 2018 on the organisation of the National Commission for Data Protection and the implementation of the GDPR, which specifies and gives effect to certain provisions of the Regulation, notably with respect to the structure, powers and enforcement functions of the National Commission for Data Protection (*Commission nationale pour la protection des données* – CNPD).

The Law of 1 August 2018 further establishes specific provisions applicable to particular categories of processing activities. These include the processing of special categories of personal data, notably health data, as well as processing undertaken for journalistic purposes and for scientific or historical research and statistical purposes. The law also regulates employee monitoring within the context of employment relationships, an area in which Luxembourg law provides for enhanced safeguards and specific compliance requirements.

In addition to the GDPR framework, the processing of personal data in the electronic communications sector is subject to supplementary obligations under the Luxembourg Act of 30 May 2005 on electronic communications, as amended. This legislation addresses, inter alia, the use of cookies and similar technologies, the confidentiality of communications, and direct marketing activities. At the European Union level, the proposed ePrivacy Regulation is expected to replace or further harmonise the existing national framework and, once adopted, would be directly applicable throughout the member states in a manner comparable to the GDPR.

More generally, Luxembourg's data protection regime is founded upon the core principles established by the GDPR, including:

- lawfulness;
- fairness and transparency;
- purpose limitation;
- data minimisation;
- accuracy;
- storage limitation;
- integrity and confidentiality; and
- accountability.

While closely aligned with the European framework, the Luxembourg regime also reflects certain national particularities, especially in relation to employment-related processing and regulatory oversight. In this regard, the CNPD exercises active supervisory authority and is empowered to impose administrative fines, corrective measures and other enforcement actions in accordance with the GDPR and applicable national legislation.

### 8.2 Geographical Scope

Luxembourg data protection law follows the territorial and extraterritorial scope of the GDPR. Accordingly, the GDPR applies not only to processing activities carried out in the context of an establishment located in Luxembourg or elsewhere in the European Union, irrespective of where the processing itself takes place, but also to certain processing activities conducted by organisations established outside the EU.

In particular, entities with no EU establishment may nevertheless be subject to the GDPR where they offer goods or services to individuals located in the EU, including Luxembourg, or monitor the behaviour of such individuals, for example through online tracking, profiling or behavioural advertising. The decisive factor is the individual's presence in the EU at the time of the processing, rather than their nationality or residence.

Where the GDPR applies, non-EU organisations must comply with the full range of applicable obligations, including:

- ensuring a lawful basis for processing;
- complying with transparency requirements;
- respecting data subject rights; and
- implementing appropriate technical and organisational security measures.

In certain circumstances, they may also be required to appoint a representative within the EU.

Furthermore, transfers of personal data outside the European Economic Area are subject to the GDPR's international transfer regime and must be supported by an adequacy decision or other appropriate safeguards, such as standard contractual clauses.

From an enforcement perspective, cross-border processing may fall within the competence of the Luxembourg National Commission for Data Protection, particularly where Luxembourg constitutes the main establishment of a corporate group. The CNPD also co-operates with other European supervisory authorities under the GDPR's one-stop-shop mechanism, enabling co-ordinated investigations and enforcement action across the EU, including against organisations established outside the Union.

### 8.3 Role and Authority of the Data Protection Agency

In Luxembourg, the enforcement of data protection rules is entrusted to an independent supervisory authority: the *Commission nationale pour la protection des données* (CNPD). The CNPD is the national data protection authority established under Luxembourg law and responsible for ensuring the application of the GDPR and related national legislation. It operates as an independent administrative body. Its core mission is to monitor and enforce compliance with data protection rules. This includes:

- supervising how public authorities and private entities process personal data;
- advising the government and Parliament on data protection matters;
- issuing guidance, recommendations, and opinions; and
- handling complaints lodged by individuals and ensuring the exercise of their rights.

The CNPD is vested with extensive powers under the GDPR and Luxembourg law, which can be grouped into three main categories.

- *Investigative powers* – it may conduct inquiries, request information, carry out on-site inspections, and access relevant data and documentation.
- *Corrective powers* – it may order controllers or processors to comply with the law, impose temporary or definitive bans on processing, or require rectification or deletion of data.
- *Sanctioning powers* – it may impose administrative fines, which can reach up to EUR20 million or 4% of the undertaking's worldwide annual turnover, depending on the seriousness of the infringement.

**Contributed by:** Hassan Maaz Shareef, Aminath Amathulla, Aishath Shifala, Mohamed Azmee, Nazahath Ahmed, Maaisha Mohamed Musthafa, Aifa Shareef and Noorul Hudha Ahmed, **Premier Chambers LLP**

**Premier Chambers LLP** is a full-service law firm and was established in the early 1990s. It has a dedicated team of foreign and locally trained lawyers who are qualified to and experienced in tackling complex legal matters. The firm's core expertise lies in banking and finance transactions, corporate and commercial matters, real estate, IP and tax disputes. The firm has been ranked by Chambers and Partners as a top-ranked Band 1 law firm in the Maldives for 15 consecutive years.

## Authors

**Hassan Maaz Shareef** is a senior partner at Premier Chambers LLP and has more than 20 years of experience. He has expertise in banking and finance, corporate and commercial matters, foreign investment, IP and tax disputes. He regularly advises major foreign and local companies and other corporate bodies engaged in various businesses on a wide range of corporate and commercial issues, including tax disputes. He also has considerable experience in the field of Islamic banking and finance. In addition to providing legal advice, a significant portion of his practice is dedicated to his extensive litigation portfolio.

**Aminath Amathulla** joined Premier Chambers LLP in 2012 and is a senior associate at the firm. She is well-versed in corporate, commercial and employment matters. Her areas of practice also include banking and finance, tourism-related acquisitions, litigation and dispute resolution. She assists, advises and represents various foreign and local clients before the tribunals and courts in the Maldives. She also provides legal advice and assistance to clients in general commercial matters. She has also been involved in drafting, vetting and finalising complex commercial contracts.

**Aishath Shifala** has over a decade of experience in private practice, joining Premier Chambers in 2013, following three years at the Supreme Court of the Maldives as Deputy Legal Officer and Acting Registrar. Her main areas of expertise include corporate and commercial law, banking and finance, as well as Islamic banking and finance, foreign investments, tourism-related acquisitions and employment matters. She regularly advises foreign owners and operators of tourist resorts, handling complex legal issues and representing clients in litigation before the courts and tribunals of the Maldives. Notably, she was appointed by the President of the Maldives to the Privatisation and Corporatisation Board from the legal sector in January 2014. She served a full term of four years at the Board in that capacity.

**Mohamed Azmee** joined Premier Chambers LLP in 2020 and is an associate at the firm. He frequently advises foreign and local businesses on legal requirements, corporate compliance and best practices in commercial, corporate, land and real estate matters. His areas of expertise include corporate and commercial, banking and finance, foreign investment, land and real estate, employment and labour, family, litigation and dispute resolution matters. He currently manages a substantial caseload in the Maldivian courts and tribunals with a focus on resolving contractual, corporate and commercial disputes. He is ranked as Up-and-Coming by Chambers and Partners in the area of general business law in the Maldives.

**Contributed by:** Hassan Maaz Shareef, Aminath Amathulla, Aishath Shifala, Mohamed Azmee, Nazahath Ahmed, Maaisha Mohamed Musthafa, Aifa Shareef and Noorul Hudha Ahmed, **Premier Chambers LLP**

**Nazahath Ahmed** joined Premier Chambers LLP in 2024 as an attorney and engages in multi-transactional work. Primarily focusing her practice in the areas of corporate and commercial law, she has previously acted as counsel for banks and financial institutions in connection with corporate transactions and regulatory matters. She is well-versed in litigation and dispute resolution and has extensive experience in tax and enforcement matters. In addition, she has represented the Maldives Inland Revenue Authority (MIRA) in the courts and tribunals during her tenure there.

**Maaisha Mohamed Musthafa** has assisted in a wide range of legal matters, including civil and criminal litigation and corporate and commercial transactions. She is experienced in drafting complex contracts, civil claims and responses as well as corporate documents. Some of her notable work includes working on loan transactions and drafting security documentation. She has previously served as in-house counsel at the Maldives Monetary Authority and is experienced in reviewing, drafting and translating laws and regulations relevant to the financial sector. With over nine years of experience in the legal field, Maaisha is currently an in-house attorney at Premier Chambers LLP.

**Aifa Shareef** of Premier Chambers LLP is an experienced chartered accountant with a strong background in tax audits and investigations. At MIRA, she conducted audits of medium, large and international taxpayers, including multinational corporations. She also led criminal investigations of tax-related offences and played a significant role in enforcing tax laws and ensuring adherence to both national and international tax standards. She was actively involved in the Tax Inspectors Without Borders (TIWB) programme and worked alongside international experts to enhance the tax systems in the Maldives.

**Noorul Hudha Ahmed** of Premier Chambers LLP is a chartered accountant (ACCA) with expertise in tax auditing and regulatory compliance. During her tenure at MIRA, she demonstrated proficiency in managing complex tax matters. As a senior tax officer, she gained valuable experience in resolving tax disputes. She subsequently joined the large taxpayer and international tax audit department, dedicating over two years to auditing multinational corporations and large entities. Later, as deputy manager of the Medium Taxpayer Audit Department, she led audits for nearly two years. She is currently a member of the Tax Committee of the Institute of Chartered Accountants of the Maldives.

# 1. Legal System

## 1.1 Legal System and Judicial Order

The legal system of the Maldives is a combination of civil and common law traditions aligned with the principles of Islamic law. Under Section 10 of the Constitution of the Maldives, Islam is the state religion and all laws are based on it. This means that no law inconsistent with the principles of Islam may be enacted. This hybrid system has enabled the Maldives to preserve its Islamic ethos while modernising its legal framework. While much of the legal framework is now covered by statutes, where there is a gap, it may be supplemented by Islamic law or common law, with precedence given to Islamic law.

The judicial system of the Maldives is organised into three tiers. The Supreme Court of the Maldives is the highest court in the country and has:

- original jurisdiction;
- inherent jurisdiction;
- appellate jurisdiction; and
- advisory jurisdiction.

The Supreme Court's decisions are final and binding on all other courts. Under the Supreme Court Regulation 2020, a Supreme Court decision may be reviewed in limited circumstances. These circumstances are those in which an applicant can show a blatant disregard for the law or there has been a gross injustice.

The High Court of the Maldives is subordinate to the Supreme Court and has both original and appellate jurisdiction. The High Court hears appeals from superior and lower courts and tribunals.

The third tier of the judicial system consists of first instance, superior and lower courts, along with tribunals. These include the Civil Court, the Criminal Court, the Family Court, the Juvenile Court, the Drug Court, the magistrates' courts, the Employment Tribunal and the Tax Appeal Tribunal. All courts, apart from the magistrates' courts, have specific jurisdictions. The magistrate courts have jurisdiction to hear civil, family and criminal matters.

# 2. Restrictions on Foreign Investments

## 2.1 Approval of Foreign Investments

### Approval of Foreign Investments

Foreign investments in the Maldives are currently governed by the Foreign Investment Act (Law 11/2024) (the "FI Act"), which became effective on 3 December 2024. It repealed and replaced the previous Law on Foreign Investments (Law 25/1979), which was enacted in 1979. The FI Act establishes a new legal framework for regulating foreign direct investment in the Maldives, including provisions on eligible investment areas, approval procedures, investor rights and protections and conditions for the revocation of licences.

The FI Act requires that all foreign investments be approved, regardless of their nature or type. A licence has to be obtained before any foreign investment can be established in the country.

### Criteria for Review

All foreign investments are subject to the review criteria and considerations set out in the FI Act. There is no specific review process mandated under the FI Act for specific investments.

The approval of foreign investments under the FI Act is subject to an assessment of several factors, including, but not limited to:

- the financial capacity of the investor;
- the investor's eligibility for residence and entry into the Maldives;
- compliance with any conditions applicable to restricted sectors or investments subject to additional requirements;
- the extent to which the proposed investment may pose a risk to national security;
- the potential effect of the proposed investment on existing businesses within the relevant sector;
- the extent to which the investment is expected to generate employment opportunities and contribute to the development of human resources in the Maldives;
- the potential to increase the export of local products, goods or services as a result of the investment;

- the environmental impact of the proposed investment; and
- the potential to introduce and develop technology in the Maldives through the investment.

### Eligibility

Under the FI Act, the foreign investment in the Maldives is open to:

- citizens of foreign countries;
- companies with 100% foreign shareholders;
- companies with both Maldivian and foreign shareholders;
- companies incorporated outside of the Maldives with 100% direct or indirect shareholding by Maldivians;
- partnerships and companies consisting of shares held by foreigners; and
- companies to be re-registered in the Maldives under the Companies Act.

Joint ventures between Maldivians and foreigners, foreign NGOs and legal entities incorporated outside of the Maldives are also eligible to invest in the country.

## 2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance

### Stages of Approval

The FI Act has introduced the following stages for obtaining approval for a foreign investment in the Maldives.

- Foreign investment application: A formal application must be submitted to the Ministry of Economic Development, Transport and Trade (the "Ministry") along with the required documentation, investor profile and proposed activity.
- No objection letter: Following a review of the application, the Ministry may issue a letter of no objection to eligible applicants. This letter sets out the specific procedures that the applicant must complete before the investment can proceed.
- Administrative fee: Upon receipt of the letter of no objection, the applicant is required to pay a non-refundable administrative fee for foreign investment to the Maldives Inland Revenue Authority ("MIRA").
- Registration of business: Applicants must register the business with the Ministry after settling the foreign investment administrative fee.
- Foreign investment licence: Upon complying with the procedures and submitting the required documents, the Ministry issues a foreign investment licence to the investor, enabling them to legally engage in the approved business activity in the Maldives.
- Foreign investment agreement: Following the grant of the licence and completion of the formalities, the Ministry enters into a foreign investment agreement with the foreign investor, which formally regulates the terms and conditions of the investment.

### Non-Compliance with the Approval Requirement

While the FI Act does not prescribe specific penalties for investing without prior approval, non-compliance with the approval requirements will result in the foreign investment not being recognised. If an investor with an approved foreign investment engages in business activities outside the scope of the approved investment licence or in contravention of the FI Act or regulations, a penalty not exceeding 30% of the total value of the unapproved investment or business will be imposed on the investor.

## 2.3 Commitments Required From Foreign Investors

### Minimum Investment Requirements

Investors must meet the minimum initial investment thresholds applicable to the specific business activity they intend to undertake. These thresholds vary by sector and range from USD250,000 to USD100,000,000. For business activities that do not have a predefined investment amount, the terms can be negotiated with the authorities. Sectoral investment requirements are currently governed by the New Foreign Investment Entry Requirements (the "FI Entry Requirements"), which were published on 8 October 2025.

### Foreign Shareholding

The maximum allowable percentage of foreign shareholding varies depending on the type of business activity. Under the FI Entry Requirements, foreign shareholdings may range from 40% to 100%, depending on the proposed activity.

### 2.4 Right to Appeal

Under the FI Act, investors have the right to challenge decisions made by the Ministry or any other government authority concerning their foreign investment. The Ministry has to establish a review committee to consider these matters.

If the investor's complaint is not resolved through a decision of the Ministry, the investor has the right to refer the matter to the relevant court or pursue the dispute resolution process outlined in the investment agreement.

## 3. Corporate Vehicles

### 3.1 Most Common Forms of Legal Entity

The most common forms of corporate vehicles in the Maldives are companies and partnerships. Another form of vehicle used for conducting business is a co-operative society. Any person who wishes to conduct business in the Maldives must register their business under one of these corporate structures. Unlike other forms of corporate structure, which can be utilised to conduct any type of business, co-operative societies can only be formed to meet common economic and social needs shared by a group of individuals within a society.

Companies registered in the Maldives, including re-registered foreign entities, are regulated by the Companies Act (Law 7/2023). Partnerships are regulated by the Partnership Act of the Maldives (Law 13/2011). There are regulations under the relevant Acts that also govern matters relating to each corporate entity. There is a distinct law relating to co-operative societies as well.

#### Companies

The following types of companies can be incorporated in the Maldives.

##### *Private companies*

These are companies where shares are privately held and the sale of shares to the public is prohibited. The minimum number of shareholders in a private company is one and the maximum number is 50. There is no minimum share capital requirement.

##### *Public companies*

The general public has the right to subscribe to shares, debentures or bonds in publicly traded companies. The number of shareholders in a public company is unlimited. There is also no minimum share capital requirement. However, if the company is going to be listed on the Stock Exchange before listing, they must have an issued and paid-up capital of at least MVR10 million.

##### *State-owned companies*

State-owned companies are incorporated under a Presidential Decree or by legislation and all shares are owned by the government.

##### *Local authority companies*

Local authority companies are incorporated by local councils to conduct business activities that benefit citizens under the secretariat's regulatory remit.

##### *Foreign investment companies*

Any company where one or more shares are held by a foreign individual, a foreign company or a partnership is considered a foreign investment company in the Maldives. A foreign investment company can be either private or public. Foreign investment companies are subject to the FI Act. Specific designated sectors are open to foreign investment companies to conduct business with a 100% foreign shareholding, while restrictions, such as foreign shareholding percentages, apply in other areas.

##### *Re-registered companies*

Foreign-registered companies, including foreign-registered co-operations, charities, foundations and other types of entities, can re-register in the Maldives and conduct business operations. Like foreign investment companies incorporated in the Maldives, re-registered companies are subject to the same restrictions regarding the areas in which they can operate. Every re-registered company must appoint an agent in the Maldives who is accountable to the Registrar of Companies for fulfilling all obligations under the Companies Act. The agent will be personally responsible for all actions taken against the re-registered entity under the Companies Act.

### Liability of Company's Members

The shareholders of the company are only liable towards the company:

- to the extent of the value of any unpaid shares held by them;
- in a manner clearly specified in the constitutional documents of the company; and
- any other manner specified in the Companies Act.

### Directors

Only Maldivians are eligible to serve as directors of companies, with the exception of foreign investment companies, State-owned companies and public companies with government shareholdings.

At least one director must be resident in the Maldives. A person is generally considered to be residing in the Maldives if that person resides in the Maldives for 183 days or more within a 12-month period.

### Partnerships

The following types of partnerships can be incorporated in the Maldives.

- General partnership: the liability of the partners is unlimited and the members are liable for all losses and debts of the partnership. In this form of partnership, only individuals can become partners.
- Limited liability partnership: the liability of the partners is limited to the extent of any unpaid capital of the shares which they have subscribed to. Both individuals and corporate entities can become partners in this type of partnership.

In both general and limited liability partnerships, there are no legislative restrictions on the number of partners. The maximum number of partners will be determined in the partnership agreement.

## 3.2 Incorporation Process

To incorporate a private company or partnership, a name for the business needs to be reserved and the relevant documents specified in the relevant Act and regulations lodged with the Registrar of Companies.

The incorporation process can be completed online. Once all requirements are met, registration is typically completed within one to two business days, after which a certificate of registration is issued. This certificate serves as definitive proof of registration under Maldivian law.

## 3.3 Ongoing Reporting and Disclosure Obligations

### Reporting

All private companies in the Maldives must report the following changes to the Registrar of Companies to register them in the register maintained by the Registrar.

- Amendments to the memorandum or articles of association of the company within 30 days of adoption.
- Changes to the directors and the managing director of the company must be made within 15 days of the change.
- Changes to the authorised share capital of the company must be made within 30 days of the change.
- Transfer of shares of the company, allotment of shares and any changes to the shareholding of the company within 15 days of the change.
- Charge over the shares of the company within 30 days of the creation.
- De-registration of the charge over the shares within 30 days of the release of the charge.

The director's report and financial statements of the company need to be submitted to the Registrar within 15 days of the date of the annual general meeting of the company or within another deadline determined by the Registrar.

### Disclosure Obligations

The shareholders of the company must provide the details of the beneficial owners of the shares to the company. The company must verify the accuracy of this information and maintain a register of the beneficial owners of the company's shares.

Significant beneficial owners are considered members of the company and are considered to hold a minimum 25% shareholding in the company, whether directly or indirectly and possess voting and dividend rights corresponding to that shareholding. Anyone who has the

right, whether directly or indirectly, to exert influence and control over the company's financial and strategic decisions will also be considered a significant beneficial owner.

Companies are required to submit details of the significant beneficial owners to the Registrar of Companies within 30 days of receiving the information.

### 3.4 Management Structures

#### Private Companies

Private companies registered in the Maldives are managed by their boards of directors. All companies have to appoint a managing director from among their directors. The managing director will be a full-time officer of the company and will be responsible for its management under the guidance of the board of directors.

The directors may delegate their powers, duties and responsibilities to a director's committee, an individual director or an employee of the company, as determined by the board of directors, provided the delegation is not prohibited by the company's constitutional documents. Even with the delegation of powers, the directors will remain accountable for the actions of the delegate.

#### Partnerships

In all partnerships registered in the Maldives, a managing partner has to be appointed. The managing partner is responsible for managing and overseeing all matters relating to the partnership according to the partnership agreement.

### 3.5 Directors', Officers' and Shareholders' Liability

Companies registered in the Maldives acquire a legal personality upon registration, distinct from that of their members, directors and officers. However, this is not absolute and the Companies Act states that if the company has committed a fraud and dishonest action and if the shareholders, directors or officers of the company have used the company for personal gain, the corporate veil of the company may be pierced and the shareholders, directors and officers of the company may be held personally liable.

Specific responsibilities are imposed on the directors of a company under the Companies Act. If the directors fail to comply with them, they commit an offence and can be penalised.

There is an obligation on shareholders to disclose details of beneficial owners and if they fail to do so, they are considered to have committed an offence and can be penalised.

The Companies Act recognises situations in which a company will be considered to be committing a criminal offence. These circumstances arise when the company submits false information, submits forged documents to the Registrar of Companies or obstructs an inspection conducted by the Registrar of Companies or someone delegated by the Registrar of Companies.

## 4. Employment Law

### 4.1 Nature of Applicable Regulations

#### Laws

##### *Employment Act*

The Employment Act of the Maldives (Law 2/2008) (the "Employment Act" as amended) is the law that determines the fundamental principles relating to employment in the Maldives, as well as the rights and obligations of employers and employees and all other employment-related matters. The Employment Act applies to both private and public sector employees. The Employment Act states that it will not apply to any other persons exempted from it by any other statute. At the time of writing, the only parties exempted from it are the police and armed forces.

##### *Other related laws*

Other employment-related laws are as follows.

- The Industrial Relations Act of the Maldives (Law 1/2024) (the "Industrial Relations Act"). This Act lays out a detailed framework for the formation of trade unions and employer organisations participating in such unions, as well as for mediation between workers, employees and employers. It applies to both public and private sector employees and employers, except for the parties exempt-

ed from the Act by any other statute and the police, armed forces and Presidential appointees.
- The Occupational Safety and Health Act of the Maldives (Law 2/2024) (the "Occupational Safety and Health Act"). This Act provides for matters relating to safeguarding workplaces and workers and employee health and safety. The Act provides that, except for the parties exempted from the Act by any other statute, it applies to both public- and private-sector employees, employers and independent contractors.
- The Prevention of Sexual Abuse and Harassment Act (Law 16/2014). This Act outlines what constitutes sexual abuse and harassment and the responsibilities of employers in preventing these acts in the workplace.

### Regulations

There are regulations enacted in line with the Employment Act which have legal force. They provide more details regarding specific matters. The regulations currently in force are as follows.

- General Regulation on Employment (Regulation 2021/R-63). This provides details on employees' redundancy, working hours and overtime, as well as salary and wages.
- Expatriate Employment Regulation (Regulation 2025/R-120). This provides details relating to the employment of expatriates.
- Employment Agency Regulation (Regulation 2022/R-63). This provides details relating to employment agencies.
- Service Charge Regulation (Regulation 2021/R-41). This provides details on the collection of a service charge from businesses and its distribution among employees.

### Precedents

The precedents set by higher courts in the Maldives relating to employment cases are considered the authority for deciding subsequent cases with similar facts. They also play a key role in determining the relevant employment relationship rules when the law or regulations are silent on the issue.

### Employment Contract

The Employment Act requires the execution of an employment contract between the employer and employee. The employer may grant the rights to a greater extent than provided for in the Employment Act. Any provision in the employment contract that prevents or impedes any rights or benefits conferred to an employee by the Employment Act will be void.

### Collective Bargaining Agreements

The recently enacted Industrial Relations Act allows for trade unions to initiate collective bargaining with employers by appointing representatives. Collective agreements reached after the collective bargaining must be registered with the Director General of Industrial Relations and the terms of the agreements are binding on the parties to the agreements and are legally enforceable.

## 4.2 Characteristics of Employment Contracts

### Form of Employment Contracts

Maldivian law requires a written employment contract to be executed between employers and employees. The Employment Act stipulates that certain provisions must be included in the employment contract.

### Types of Employment Contracts

Employers in the Maldives may enter into any of these types of employment contracts:

- indefinite term contract;
- definite term contract; and
- work-based or project-based contract.

### Duration of Employment Contracts

The duration of a definite-term employment contract will not exceed a maximum period of two years. If a definite term contract is extended so that the total duration of employment is more than two years or if it can be implied from the actions of both parties that a renewal or extension has occurred, it will be considered as an indefinite term employment contract.

An employment contract of definite term or specific to a certain type of work is also considered an indefinite term employment contract if the objective or result of the employment agreement is such that the employee has to continue carrying out duties and responsibili-

ties which are usually and normally carried out at the place of work on a permanent basis.

## 4.3 Working Time

### Working Hours

An employee's normal working hours must not exceed 48 hours a week. The normal working hours do not include any overtime that an employee works. The Employment Act specifies particular categories of employees exempt from the normal working hour limitations.

Employees in sectors specified in the Employment Act may be required to work two additional hours per day beyond the normal working hours limit (as outlined in the employment agreement), provided they are compensated for the additional hours as overtime.

There is no limitation on the maximum number of hours an employee may work in a day. However, the minister designated to oversee the implementation of the Employment Act has the discretion to formulate a regulation imposing a maximum number of hours per day. As of now, no such regulation has been formulated.

The general rule is that employers are prohibited from requiring an employee to work for more than six consecutive days without granting a break of 24 hours. However, there are exceptions to this rule: employees working in specific sectors may be required to work more than six consecutive days without a break, provided they are granted rest days in lieu of each day worked beyond the six consecutive days, which can be accumulated and utilised thereafter.

### Overtime

Employers are prohibited from requiring employees to work overtime unless it is specified in the employment contract. Any work carried out as overtime must be paid at the following hourly rates.

- Overtime on a normal working day: 1.25 times an employee's regular hourly wage.
- Overtime on a Friday or a public holiday: 1.5 times an employee's regular hourly wage.

## 4.4 Termination of Employment Contracts

### Termination of Employment Contracts

After the Employment Act came into force in 2008, the Maldives abolished employment at will. Currently, for an employment contract to be terminated, there must be a reasonable cause. Three types of dismissals are currently recognised in the Maldives.

- Dismissal with notice: This is allowed after showing appropriate cause for failure to maintain a work ethic or inability to perform employment duties and responsibilities related to the proper functioning of their place of work, even after implementation of measures to discipline the employee or address skill deficiencies.
- Summary dismissal: This is where an employee is dismissed without notice when their work ethic is deemed unacceptable and continuing employment is likely to be detrimental to the employer or the workplace.
- Redundancy: This is considered a reasonable cause for dismissal in the following circumstances:
  (a) closure of the business and services of the employer;
  (b) redundancy due to restructuring of the business; and
  (c) financial distress.

The onus is always on the employer to show cause for dismissal.

### Severance Pay and Notice of Termination

Severance pay need not be paid to employees upon dismissal. In the event of dismissal with notice, the employer must give notice to the employees based on the employee's length of service and the employer can terminate the employment immediately by paying the employee's salary in lieu of any required period of notice, together with any accrued holiday pay up to the date notice is given.

In the case of redundancy, no mandatory compensation or redundancy pay is required to be paid to employees who are made redundant. However, the Employment Act obliges the employer to give notice of dismissal to the employees being made redundant based on the employee's length of service. The

employer is granted discretion to pay the employee's salary in lieu of the required notice.

Based on the employment duration, the minimum notice period or payment in lieu of notice period is as follows.

- Less than one year: two weeks.
- Between one year and five years: one month.
- More than five years: two months.

### Collective Redundancies

In the Maldives, the laws and regulations do not differentiate between collective and individual redundancies. The same procedure laid down in the relevant laws and regulations needs to be followed for both.

The Maldives High Court has set a precedent on the matter, stating that as there are no laws or regulations that provide that redundancy procedures are different for individual and collective redundancies, unless limited by a law or by the employment agreement, the procedures laid out in the laws and regulations need to be fulfilled regardless of the number of persons being affected by the redundancy.

Before terminating any employees for redundancy, the employer must notify the employees that there may be circumstances in which one or more employees may have to be made redundant or that the decision to make the employees redundant has already been made. This notification will include the policy relating to the determination of which employees will be dismissed. Before dismissing any employees for redundancy, the employer must take measures to avoid termination or minimise the number of employees affected, as far as circumstances allow.

The employer must establish a policy outlining the criteria for determining which employees will be made redundant and this policy must be communicated to employees. This policy, at the very least, has to consider:

- the service duration of the employee;
- the employee's skills, education and experience required for the job;
- the employee's attendance and disciplinary records; and
- the criteria for the fulfilment of job duties or staff appraisal.

The employees who will be made redundant must be determined according to the policy and in good faith and in a fair manner.

## 4.5 Employee Representations

There is no law in the Maldives that states it is mandatory for employees to be represented in employment-related matters. However, the Industrial Relations Act provides that employees can register trade unions and that they have the right to participate in or refrain from participating in the activities of the trade unions, including the implementation of collective bargaining or strikes through trade unions.

Trade unions have the right to commence collective bargaining with employers and initiation will not be aimed at securing rights or gaining advantage for a particular individual in the union. Unions are generally restricted from utilising unions in ways that are not in the interests of members or where members have conflicting interests.

Employers must commence collective bargaining negotiations if the union making the request represents a majority of the employer's employees.

The Employment Act only mandates that employees be informed by the employer in the event of redundancy.

The Occupational Safety and Health Act mandates that the employer inform employees in the following circumstances:

- any health and safety policy amendments; and
- regularly updating employees on safety measures related to machinery, equipment, plants and other instruments used in the workplace.

There are no circumstances in which employers are mandated to consult employees.

## 5. Tax Law

### 5.1 Taxes Applicable to Employees/ Employers

#### Employee Withholding Tax

Under the Income Tax Act of the Maldives (Law 25/2019) (the "Income Tax Act"), employee withholding tax is applicable where an employer pays remuneration to an employee, whether in cash, annuities, in-kind benefits or any other form. Employers must deduct employee withholding tax from the gross amount of each payment made monthly at the following rates:

- 5.5% (if remuneration is more than MVR60,000 but less than MVR100,000);
- 8% (if remuneration is more than MVR100,000 but less than MVR150,000);
- 12% (if remuneration is more than MVR150,000 but less than MVR200,000); and
- 15% (if remuneration is more than MVR200,000).

#### Social Charges

Under the Pensions Act (Law 8/2009), both employers and employees have to contribute to the Maldives Retirement Pension Scheme. Both must contribute at least 7% of the pensionable wage (basic salary).

Participation in the Maldives Retirement Pension Scheme is mandatory for all local employees aged between 16 and 65. Foreign employees in the same age bracket may voluntarily register and contribute to the Maldives Retirement Pension Scheme.

### 5.2 Taxes Applicable to Businesses

#### Taxes Applicable to Businesses

##### *Income tax*

Under the Income Tax Act, entities other than banks and individuals who are resident in the Maldives must pay income tax at a rate of 15% if taxable income exceeds MVR500,000. For income tax purposes, a company is considered resident if it is incorporated, has its head office or central management and control in the Maldives. Partnerships are considered resident if they are incorporated and have their head office in the Maldives.

Banks are taxed at a rate of 25% of their taxable income.

##### *Capital gains tax*

Under the Income Tax Act, the Maldives does not impose a separate capital gains tax. Instead, gains arising from the disposal of movable, immovable, intellectual or intangible property are treated as part of taxable income and are subject to income tax at 15%. Capital gains may arise from, among other things, the disposal of immovable property situated in the Maldives, shares or interests in entities whose value derives from Maldivian immovable property and other business or investment assets.

##### *Non-resident withholding tax*

Under the Income Tax Act, income derived from the Maldives by non-residents is subject to a 10% tax on the gross amount of income received. Non-resident withholding tax is payable on rent in relation to immovable property situated in the Maldives, royalties, interest, dividends, fees for technical services, commissions paid in respect of services supplied in the Maldives and insurance premiums paid to insurers.

Payments to non-resident contractors are subject to withholding tax at the rate of 5%.

##### *Capital gains withholding tax*

Under the Income Tax Act, gains derived by non-residents from the disposal of certain assets are subject to capital gains withholding tax at 10% of the gross payment. This applies in particular to disposals of immovable property situated in the Maldives and to offshore indirect transfers, where more than 50% of an entity's value is derived from Maldivian immovable property. The obligation to withhold and remit the tax lies primarily with the payer or acquirer of the asset, with secondary liability rules applying where the payer fails to comply.

##### *Employee withholding tax*

See **5.1 Taxes Applicable to Employees/Employers**.

##### *Goods and services tax*

Under the Goods and Services Tax Act (Law 10/2011), businesses operating in the general sector are cur-

rently required to pay goods and services tax (GST) at the rate of 8% to MIRA and businesses operating in the tourism sector have to pay a tourism goods and services tax (T-GST) at the rate of 17% to MIRA.

### *Green tax*

Under the Tourism Act of the Maldives (Law 2/99) (the "Tourism Act"), the green tax, introduced by the Tourism Act, applies to tourists staying in various types of accommodation such as tourist resorts, integrated tourist resorts, resort hotels, tourist hotels, hotels, tourist guesthouses and tourist vessels. It is the responsibility of the establishment operator to collect the green tax from tourists and remit it to MIRA.

Tourism establishments must pay USD12 daily per guest, while tourist hotels and guesthouses with fewer than 50 rooms must pay USD6.

### *OECD Two Pillar solution*

The Maldives is a member of the OECD/G20 Inclusive Framework on Base Erosion and Profit Shifting (BEPS). While both pillars have been endorsed, domestic legislation to implement them has not yet been enacted. A mechanism to implement the Two Pillar solution is scheduled to be formulated in 2026.

The Maldives has not introduced a domestic top-up tax (Qualified Domestic Minimum Top-up Tax or QDMTT). Consequently, there is no domestic top-up tax that has been granted or is expected to be granted, safe harbour status on the OECD central record at this stage.

As a result, any top-up tax applicable to Maldivian entities within the scope of multinational groups would currently be collected in other jurisdictions under the Pillar Two rules, once those rules are effective elsewhere.

## 5.3 Available Tax Credits/Incentives

### Tax Incentives Under the Special Economic Zone Act (SEZ Act)

The SEZ Act classifies various zones, including industrial estates, export processing zones, free trade zones, enterprise zones, free ports, single-factory export processing zones, centres providing offshore financial services and high-technology parks, as special economic zones. Under the SEZ Act, zone developers are guaranteed the following incentives:

- relief from import duty on capital goods;
- relief from GST for the first ten years; and
- relief from withholding tax for the first ten years.

The SEZ Act provides similar concessions to individuals investing in SEZs, with the extent of these benefits depending on the industry and type of investment.

### Special Exemptions Provided Under the Income Tax Act

Under Section 12-1 of the Income Tax Act, the President, in specific circumstances, can exempt income from specific business projects or industries from tax.

The determination of eligible projects or industries is made by the President, with advice from the Cabinet of Ministers and published in the government gazette.

Exemptions are granted for a specific period and take into account factors such as revenue impact, economic and social impact and the attainability of objectives.

A list of exempted persons and the reasons for exemption needs to be published in the government gazette.

### Foreign Tax Credit

Under Section 72 of the Income Tax Act, residents paying taxes abroad can deduct either the foreign tax paid or the tax payable in the Maldives on the net foreign-sourced income, whichever is lower.

Deductions are applied separately with respect to each type of income and each country or territory from which each type of income was derived.

Deductions must be claimed within two years after the end of the accounting period and adjustments can be made within two years of any tax payable adjustments.

### Tax Treaties

Tax credits are also applicable under any double tax avoidance agreements (DTAAs) and are deducted in line with the provisions of the Tax Administration Act

of the Maldives (Law 3/2010) (the "Tax Administration Act").

The Maldives has signed DTAAs with the UAE, India, Bangladesh and Malaysia and all four are currently in effect. The Maldives is also a party to the SAARC Limited Multilateral Agreement on Avoidance of Double Taxation and Mutual Administrative Assistance in Tax Matters, which came into force on 1 January 2012 in the Maldives.

A DTAA with Hong Kong, which was signed on 26 May 2025, has not yet come into force.

## 5.4 Tax Consolidation

Tax consolidation for the purposes of tax calculation and deduction by a group entity is not available under the tax laws in the Maldives.

Under the Income Tax Regulation (Regulation 2020/R-21), each entity in the group has to prepare and submit separate income tax returns. Parent companies must submit consolidated accounts, including their subsidiaries, as they are considered group entities under the Income Tax Regulation. However, under the Income Tax Act, group entities must divide the tax-free threshold of MVR500,000 among themselves to determine the tax bracket for the group's taxable income. Companies within a group cannot therefore benefit from the tax-free threshold as individual companies, as they are grouped together for tax purposes.

## 5.5 Thin Capitalisation Rules and Other Limitations

Thin capitalisation rules are implemented in the Maldives in line with Section 71 of the Income Tax Act.

Where the total amount of interest paid, exceeds the interest capacity of a person (30% of a person's tax EBITDA) for that period, the excess amount cannot be deducted in the computation of taxable profit of that person for that period, except where interest is paid to a bank licensed under the Banking Act of the Maldives (Law 24/2010) (the "Banking Act") or to an insurance business or finance leasing business or housing finance business licensed under the Monetary Authority Act of the Maldives (Law 6/1981) (the "Monetary Authority Act").

The following taxpayers are exempt from the thin capitalisation rules.

- Commercial banks licensed under the Banking Act.
- Insurance businesses, finance leasing businesses, housing finance businesses or non-banking financial institutions licensed to conduct financing business under the Monetary Authority Act.
- Persons categorised as micro, small or medium-sized businesses under the Law on Small and Medium Enterprises (Law 6/2013).
- State-owned enterprises (SOEs), in which the government of the Maldives directly holds a majority of the ordinary share capital.

## 5.6 Transfer Pricing

Under Section 67 (a) of the Income Tax Act, if an arrangement or transaction is between associates and the terms are not arm's length terms, taxable income will be computed based on arm's length terms. This applies where the actual terms result in higher income, lower deductions, lower losses or lower tax credits for any person involved.

## 5.7 Anti-Evasion Rules

### General Anti-Avoidance Rule (GAAR)

Section 66 (a) of the Income Tax Act grants the Commissioner General of Taxation the authority to invalidate any arrangement or transaction, where the Commissioner has reasonable grounds to suspect that an arrangement or transaction was entered into for the purpose of tax avoidance or to reduce tax liability, either by issuing an assessment under Section 39 of the Tax Administration Act or by other means.

Reasonable grounds for action by the Commissioner General, highlighted under Section 128-1 of the Income Tax Regulation, include:

- conducting a transaction which lacks a bona fide commercial purpose;
- conducting a transaction which lacks economic substance;
- abuse of organisational form; and
- recharacterisation of an arrangement or transaction.

## 5.8 Tariffs

Tariffs in the Maldives are governed by the Export Import Act (Law 31/1979) (the "Export Import Act"), which is implemented and enforced by the Maldives Customs Service. Tariff rates are generally applied uniformly based on the type of goods, while preferential rates and exemptions may apply to some countries under free trade agreements (FTAs). The tariff rates in the Maldives generally range from 0% to 400%.

### Goods and Applicable Tariffs

A general list of goods subject to the highest tariff rates is as follows.

- Tobacco and related products:
  - (a) general tobacco and tobacco products: 200%;
  - (b) cigarettes: 50% + MVR8 per cigarette;
  - (c) Bidi (traditional cigarettes): 50% + MVR8 per Bidi;
  - (d) flavoured chemicals for e-cigarettes and tobacco: 50% + MVR8 per ml;
  - (e) heated tobacco products and sticks: 50% + MVR8 per stick;
  - (f) electronic devices (e-cigarettes, vaping devices, tobacco heating products): 200%; and
  - (g) paper used for rolling cigarettes/bidis: 200%.
- Other products:
  - (a) non-biodegradable plastic bags and sacks: 400%;
  - (b) drinking straws: 400%;
  - (c) single-use/disposable plastic items (eg, plates, cutlery): 200%;
  - (d) used passenger vehicles (cars, jeeps, vans): 200%;
  - (e) other passenger transport vehicles (excluding cars, jeeps, vans, motorcycles, auto-cycles): 150%;
  - (f) chemicals with hydrochlorofluorocarbons: 100%;
  - (g) new passenger vehicles (cars, jeeps, vans): 100%;
  - (h) auto-cycles and motorcycles: 100%; and
  - (i) pork and pork products: 50%.

### Value-Based Tariff Rates

Notwithstanding the general rates specified in the Export-Import Act, for goods with a CIF value per unit exceeding MVR6,425,000, the following tiered rates apply:

- CIF value per unit between MVR6,425,000 and MVR12,850,000: 13%;
- CIF value per unit between MVR12,850,000 and MVR25,700,000: 7%;
- CIF value per unit between MVR25,700,000 and MVR38,550,000: 5%; and
- CIF value per unit between MVR38,550,000: 4%.

### General Exemptions

The following items are exempt from tariffs:

- personal items and duty-free allowances determined by the President;
- goods imported for re-export;
- biodegradable and non-biodegradable variants of plastic bags, sacks, films, sheets, tube rolls, polyurethane, prefabricated greenhouse units, water system pipes and hydroponic/drip irrigation pipes;
- renewable energy vehicles, machinery and equipment;
- renewable energy generation equipment;
- items and fish imported for fish processing and value addition;
- items and raw materials for poultry production expansion;
- agricultural items listed by the Ministry of Agriculture and Animal Welfare of the Maldives; and
- diesel exemptions for fishing vessels operating within Maldivian waters and for electricity generation by registered public utilities.

### Partial Exemptions

Under the Export and Import Act, a duty exemption of 50% is granted for items imported via regional sea and air ports outside the Malé area, except for:

- tobacco products and substitutes (including e-cigarettes and components);
- alcoholic beverages; and
- pork and products containing pork.

This partial exemption under the Export and Import Act only applies to goods stored on or cleared through the regional port's associated island.

### Exemptions Granted by the President

Under the authority granted by the Export-Import Act, the President may decide to fully or partially exempt goods from import duties when imported for activities considered economically beneficial to the Maldives. These exemptions apply to:

- activities aimed at reducing imports and increasing exports;
- activities that introduce and promote technologies not currently available in the Maldives;
- activities that expand the country's core economic sectors, generate business and employment opportunities and improve overall living standards;
- activities that enhance foreign currency inflows into the Maldives;
- new or uncommon economic activities that contribute to diversifying the Maldivian economy;
- activities that support the growth of small and medium-sized enterprises; and
- entirely new ventures in the tourism sector or capital expenditure and renovation projects for existing tourism investments, where costs exceed 25% of the original investment value.

### FTAs

The Maldives is a party to the South Asian Free Trade Agreement (SAFTA), which has been effective since 2006. Under SAFTA, the Maldives allows lower tariff rates on specific goods imported from countries in the region.

The free trade agreement between the Chinese government and the government of the Maldives (the "China-Maldives FTA"), ratified in 2017, has been in effect since 1 January 2025. The China-Maldives FTA provides distinct tariff treatments for goods imported from China.

- Category A: goods on which all tariffs will be eliminated starting from 1 January 2025.
- Category B: goods on which tariffs will be eliminated over a five-year period.
- Category C: goods on which tariffs will be eliminated over an eight-year period.
- Category E: goods on which tariffs will remain at "base rates".

## 6. Competition Law

### 6.1 Merger Control Notification

The Maldives introduced the Competition Act (Law 11/2020) (the "Competition Act") in 2020 and it became effective on 28 Feburary 2021. The Competition Act defines a "merger" as:

- the merger of two or more legal entities that were previously independent; and
- the acquisition of direct or indirect control over all or part of the assets and goodwill of an entity through a joint venture agreement.

The Competition Act states that the criteria to determine whether a merger infringes the principles of mergers under the Competition Act are to be formulated and published by the Ministry within six months from the date on which the Competition Act came into force. However, the Ministry has not published any such criteria to date, leaving uncertainty over what it considers an anti-competitive merger, in terms of either revenue or market share.

### 6.2 Merger Control Procedure

Unlike other jurisdictions, the existing legal framework for merger control in the Maldives does not mandate notification of mergers to the Minister of Economic Development, Transport and Trade, nor does it provide an option for voluntary notification. However, this may change once the necessary merger control regulation is published by the Ministry.

Where a merger contravenes the Competition Act's provisions, the Minister of Economic Development, Transport and Trade has the authority to issue an order to amend a merger agreement and levy a fine of between MVR10,000 and MVR100,000. Following the Ministerial Order, the Registrar of Companies reserves the right to deny any service to the parties involved that could aid the execution of the merger agreement.

### 6.3 Cartels

The Competition Act prohibits business agreements or conduct that hinders, limits or distorts competitive practices within a market. The Competition Act considers the following types of agreements or conduct to be anti-competitive practices:

- price-fixing;
- market divisions and customer allocations;
- intentional limitation in the production of goods and the development of technology;
- refusal to sell or deal with certain parties; and
- control of investments.

If the Ministry determines that a business has exploited or abused its dominant market position, it has the authority to impose a fine of between MVR10,000 and MVR100,000.

The Ministry has not taken any enforcement action against businesses for an anti-competitive agreement or practice to date.

### 6.4 Abuse of Dominant Position

The Competition Act assesses whether or not a party holds a dominant position based on:

- the nature of the market it is operating in;
- its share and power in the market; and
- the significant control it has over the market.

Actions such as predatory pricing, imposing unfair prices, refusing to deal with certain parties, limiting production of goods or development of technology to the detriment of consumers, imposing unnecessary obligations which have no commercial use or are not material to the subject of the contract or imposing differing conditions to trading parties to block their entry or operation in the market could all amount to abuses of a dominant position.

If the Ministry determines that a business has abused its dominant position in the market, it may impose a fine of between MVR10,000 and MVR100,000.

However, these enforcement powers have yet to be used by the Ministry.

## 7. Intellectual Property

### 7.1 Patents

There is currently no patent legislation in the Maldives. Therefore, currently, there is no process by which a patent owner can register their patent in the country.

### 7.2 Trade Marks

The Trademark Act (Law 19/2025) ("Trademark Act") was enacted on 11 November 2025 and will come into force on 11 November 2026. Until then, a limited trade mark registration system is operational in the Maldives. Please see **9.1 Upcoming Legal Reforms**.

#### Limited System of Registration

As a matter of practice, a business may register a trade mark with the Ministry on the basis of a business name registered by the business before they register the trade mark. However, only businesses incorporated or re-registered in the Maldives may register these trade marks in the Maldives.

Under Section 12 (a) of the Business Registration Act (Law 18/2014) ("Business Registration Act"), any business activity may only be undertaken in the Maldives by a registered business entity after registering a business name under which the business activity will be undertaken. Under the Business Registration Act, the Registrar of Business can refuse to register any name in the following situations.

- Where the name is already registered by another business or is believed to be similar to a name already registered.
- Where the name is registered as a trade mark by another party.
- Where the name is a famous name outside of the Maldives and the registration of the business name may mislead the public into wrongfully believing that the name is associated with the famous business carried on outside the Maldives.
- Where the name contravenes acceptable community standards.
- Where the name, without using any additional word or phrase, depicts only a matter, place or thing that cannot be owned by a single party.
- Where the name, as determined by judgment of a court of law, is prohibited from use as a business name.
- Where the name is reserved for another party.
- Where the name is a type of name that cannot be registered for reasons prescribed in the regulation.

Given that the registration of a business name must precede the registration of a trade mark, these restrictions will apply when registering a trade mark as well.

### Registration Process

Applications can be made online to reserve a business name, then to register it via the oneGov portal after the prescribed fee has been paid. The current prescribed fee is MVR100 per registered business name. The registration process usually takes one business day. The registration of the business name will be valid for the entirety of the business entity's registration.

Applications can be made online to register or renew a trade mark via the oneGov portal after the prescribed fee has been paid. Trade marks may be registered for the period specified in the application, provided that the minimum period is 12 months. A non-refundable fee of MVR50 a month is currently payable. The registration process usually takes one business day.

### Publication of Cautionary Notices

As a matter of practice, international businesses and trade mark owners and parties that are not incorporated or re-registered in the Maldives in line with the Business Registration Act, from time to time publish a trade mark cautionary notice, announcing to the general public in the Maldives that a particular trade mark is owned by the business or trade mark owner and caution against trade mark infringement. Even though this is a very common practice, it does not, by itself, afford legal protection against infringement or guarantee protection from unauthorised use of the trade mark in the Maldives. Publication of cautionary notices is not the same as registering a trade mark.

However, the publication of trade mark cautionary notices can be used as evidence to support complaints made by trade mark owners/licensees to the Ministry under the Business Registration Act, against a business entity registered in the Maldives that has registered or is using, a business name in contravention of the rights of the trade mark owner or licensee.

### Remedies

If a business entity registered in the Maldives has registered or is using, a business name in contravention of the rights of a trade mark owner/licensee, the Business Registration Act provides an opportunity for the parties concerned to submit a complaint to the Ministry, requesting an order to change the business name if the period of using the business name after registration of the business entity has not exceeded 12 months. If the Registrar of Business gives notice to the party to which a business name is registered or reserved to change the name, the party must do so within a period of one month from the date of notice.

If the party does not comply with the notice, the Registrar of Business may cancel the party's business registration.

## 7.3 Industrial Designs

There is no specific industrial design legislation in place in the Maldives. However, industrial designs are generally considered protected under the Copyrights and Related Rights Act of the Maldives (Law 23/2010) (the "Copyrights Act"). Please see **7.4 Copyright**.

## 7.4 Copyright

The Copyrights Act and the Regulation on the Registration of Copyright and Related Rights of the Maldives (Regulation 2011/R-16) (the "Copyright Registration Regulation") protect copyrights and related rights in the Maldives and prescribe actions and penalties for copyright infringement.

### Application

The Copyrights Act generally protects literary and artistic works, performances, audio recordings and broadcasts produced in the Maldives.

#### *Literary and artistic works*

The Copyrights Act protects the following.

- Works produced by citizens and residents in the Maldives.
- Works produced by authors protected under any international convention ratified by the Maldives or under any international agreement entered into by the Maldives.
- Audio-visual works made by producers who are resident in the Maldives or by regional offices established in the Maldives.
- Architectural and artistic works produced in the Maldives.

### *Artists*

The Copyrights Act protects the following artists.

- Artists who are citizens.
- Non-citizen artists whose:
  (a) performance was made within the territory of the Maldives;
  (b) performance has been included in an audio recording protected under the Copyrights Act; or
  (c) performance was not a fixation in an audio recording, but is still a performance included in a broadcast protected under the Copyrights Act.

### *Audio recordings*

The Copyrights Act protects audio recordings:

- produced by citizens;
- first produced at a fixed location in the Maldives: and
- first published in the Maldives.

### *Broadcasts*

The Copyrights Act protects:

- broadcasts of organisations that have established regional offices in the Maldives; and
- broadcasts from transmitters installed in the Maldives.

In addition, the Copyrights Act will afford the same protection as that afforded to works, artists, producers of audio recordings and broadcasting organisations under international conventions and agreements to which the Maldives is a party.

### *Protection*

The following types of works are protected under the Copyrights Act.

- Original literary works original musical works and original artistic works, particularly:
  (a) books, pamphlets, articles and other writings;
  (b) academic, literary and artistic speeches and addresses;
  (c) drama, musicals, stage performances, choreography, steps and other presentations and other works for stage productions;
  (d) poems, songs, tunes and other musical products;
  (e) feature films, documentary films, drama, video songs and other video-visual presentations and works;
  (f) works of art and architecture;
  (g) photographic works;
  (h) works of applied arts;
  (i) illustrations, charts, plans, sketches and 3D works related to geography, topography, architecture or science; and
  (j) computer programmes (without considering how the programme was written or the format of the programme).
- Audio recordings.
- Broadcasts made via satellite, the internet and cable.
- Derivative works such as translations, adaptations, arrangements and other transformations or modifications of works, as well as collections of works, collections of data (databases) in whatever form and collections of expressions of folklore that are original by selection or arrangement.

Under the Copyrights Act, works are protected by the sole fact of their creation, irrespective of their mode or form of expression or their content, quality and purpose. Protection under the Copyrights Act will only extend to originally created products or works. The following are not protected:

- any idea, procedure, system, method of operation, concept, principle, discovery or mere data, even if expressed, described, explained, illustrated or embodied in a work; and
- any official text of a legislative, administrative or legal nature, as well as any official translation of those documents.

### Copyright Duration

The economic and moral rights over works are generally protected for the life of the author plus 70 years after the death of the author.

In the case of co-authorship or joint authorship, the economic and moral rights are protected for the life of the last surviving author plus 70 years after the death of the last surviving author.

For collective works (other than works of applied art) and audio-visual works, the economic and moral rights are protected for 70 years from the date on which the work was either made, first made available to the public or first published, whichever date is latest.

For works published anonymously or under a pseudonym, the economic and moral rights are protected for 70 years from the date the work was made, first made available to the public or first published, whichever is the latest.

For works of applied art, the economic and moral rights are protected for 35 years from the date of creation.

### Registration of Copyright

Under the Copyright Act, it is not compulsory to register works with the relevant government authority to gain protection. However, parties may apply to the Ministry to register the works. Registration helps a copyright holder in legal proceedings prove that the work in question is their creation.

Copyrights may be registered after an application is submitted via oneGov and the prescribed fee is paid. A non-refundable fee of MVR1,000 is currently payable. The registration process is usually completed within seven business days.

Changes to the registration process are expected with the introduction of new laws. Please see **9.1 Upcoming Legal Reforms**.

### Remedies

#### *Right to file an action in court to protect rights*

A copyright owner has the right to file for legal action in a relevant court of law if the owner's rights protected under the Copyrights Act have been infringed or if it is reasonably believed the rights will be infringed. In an action of this nature, the copyright owner may request the court make orders to stop the infringement, compensate the copyright owner for losses suffered or to be suffered or protect the ownership rights of the copyright owner. In this regard, the court has the power to make:

- orders against the infringing party or any party with the power to do so, to either take or refrain from taking action(s) in order to stop the infringing activity;
- other lawful orders under applicable laws and regulations;
- orders against the infringing party to compensate the copyright owner for costs incurred in seeking compensation, for the benefit gained by the infringing party from the infringement and for direct and indirect loss of income or reputation suffered by the copyright owner;
- fines of between MVR10,000 and MVR100,000 as a penalty against the infringing party, depending on the gravity of the action and wilful action or negligence of the infringing party and to award the amount of the fine to be paid to the copyright owner;
- orders either to return to the copyright owner or destroy or remove from the business market, all infringing works and copies; or
- orders against the alleged party to take or refrain from taking action(s) in order to stop the infringement of a copyright owner's rights in the future.

In the event of infringement of moral rights granted under the Copyrights Act, the author granted with the moral rights or any person lawfully representing the author may claim damages for loss of reputation or income.

In addition, unless an exclusive licence agreement states otherwise, exclusive licensees enjoy the same rights afforded to copyright owners under the Copyrights Act against infringement of rights protected by the Copyrights Act.

#### *Criminal responsibility*

If any action infringing a right granted under the Copyrights Act has been considered a criminal offence under the Copyrights Act or the Maldives Penal Code (Law 9/2014), any party has the right to submit the infringing action to the competent investigating authorities for investigation. Upon receiving such a report or becoming aware of such activity, they must thoroughly investigate the matter and take action in line with the applicable law.

If any action prohibited under the Copyrights Act has been considered a criminal offence under the Copyrights Act or the Maldives Penal Code (Law 9/2014), in addition to civil sanctions permitted under the Copyrights Act, the Copyrights Act does not prevent criminal proceedings from being brought against the infringing party under the Maldives Penal Code (Law 9/2014).

*Criminal sanctions under the Copyrights Act*

A party taking any action that negatively affects any right protected under the Copyrights Act or takes action knowing that it would result in loss to the copyright owner is committing an offence, which is punishable by the imposition of a penalty between MVR50,000 and MVR 300,000, depending on the gravity of the action. When imposing the penalty, the court must take into account the loss incurred or that may be suffered by the owner of the protected right. If a party convicted of an offence repeats the offence, the court has the right to double the penalty for each instance of repetition.

### 7.5 Others

As explained in **7.4 Copyright**, software and databases are already protected under the Copyrights Act. Except for the Trademark Act, there are currently no laws in the Maldives that cover other forms of IP.

## 8. Data Protection

### 8.1 Applicable Regulations

Section 24 of the Constitution of the Maldives states that everyone has the right to have their personal and family life, their home and their private communications respected. It also states that everyone must respect these rights. The Maldives has not enacted general legislation on privacy and personal data protection to date. However, please see **9.1 Upcoming Legal Reforms**.

### 8.2 Geographical Scope

See **8.1 Applicable Regulations**.

### 8.3 Role and Authority of the Data Protection Agency

See **8.1 Applicable Regulations**. No legal entity currently has responsibility for data protection regulation.

## 9. Looking Forward

### 9.1 Upcoming Legal Reforms

The government of the Maldives has proposed a bill to replace the existing Civil Aviation Act (Law 2/2001). The bill is currently being reviewed at the committee stage and, if approved, it will introduce a comprehensive and modern legal framework to ensure effective regulation and oversight of all aspects of civil aviation in the Maldives.

As part of the government of the Maldives 2.0 initiative to transform the Maldives into a digital Maldives, a Personal Data Protection Bill and a Cyber Security Bill have been submitted to the Parliament.

The Maldives Intellectual Property Office Act (Law 12/2025) (the "MIPO Act") came into force on 1 January 2026, pursuant to which registration of intellectual property rights is to be transferred to the Maldives Intellectual Property Office. Regulations with new procedures are expected to be issued under the new MIPO Act and the Trademark Act.

**Venture Law** is a leading independent firm that has been established in Mauritius for nearly ten years. The firm was amongst the first few law firms to be registered in 2008 under the Law Practitioners Act of Mauritius. Its ability to respond quickly and efficiently has earned it a reputation for innovative and flexible advice on cross-jurisdictional matters. Venture Law has a broad client base, including FTSE 100 and Fortune 500 companies, international financial institutions, development financial institutions and fund managers. The firm's experienced team advises clients on matters including corporate/commercial; corporate structuring; M&A; banking and finance; funds; capital markets; asset finance, including shipping and aircraft finance; litigation and dispute resolution; insolvency and restructuring; private client and trust; and insurance and reinsurance. The team regularly acts for institutional and non-institutional clients based around the globe on a wide range of transactions, including structuring investments involving the emerging markets of Africa and Asia.

## Authors

**Sameer K. Tegally** is a partner at Venture Law whose practice covers corporate, banking and finance (including Islamic finance), and trusts/foundations. He advises leading multinationals and international banks on their cross-border investments, financing and trading, particularly with Asia, Africa and the Middle East. Sameer also advises institutional and private clients on all aspects of non-contentious Mauritius trusts and foundations law. He has contributed several articles in renowned global publications in the fields of corporate law, Islamic finance and trusts. Sameer earned an Islamic finance qualification from the UK Chartered Institute for Securities & Investment in 2009 and is admitted to the Bar in Mauritius and Bermuda.

**Sonia Xavier** is a partner at Venture Law who advises major institutional clients as well as global business companies, private equity firms and investment funds, amongst others. She has a broad corporate and commercial practice that covers M&A, joint ventures, private equity, capital markets and corporate finance. Sonia's expertise extends to assisting in the structuring, formation and management of private equity funds, and she has acted for a range of investment managers, from well-established to start-up managers. Sonia also has extensive experience with project financing, private placements and public offerings, as well as securitisation. She was admitted to the Bar in Mauritius in 1997.

**Ashvan Luckraz** is a partner at Venture Law whose practice covers civil/commercial litigation and arbitration, with an emphasis on insolvency, contractual matters, shareholder disputes and urgent interim relief. He is experienced in all aspects of corporate and commercial law, particularly finance, M&A and investment funds. He advises a wide variety of clients, including financial institutions, corporate service providers, international and local businesses, and high net worth individuals. Ashvan, who earned an LLM from the London School of Economics and Political Science in 2005, has experience as a legal counsel at an international wealth management group, as an associate at a major US law firm in London and as an English barrister.

# 1. Legal System

## 1.1 Legal System and Judicial Order

### Type of Legal System

Originally a French and a British colony, Mauritius has developed a unique legal system that is a hybrid of civil and common law traditions.

### The Basic Organisation of the Judicial Order

#### *Sources of Mauritian law*

The primary sources of law in Mauritius emanate from:

- the written Constitution, which is the supreme law of the country;
- the legislature – ie, the Parliament, which enacts laws in accordance with its power to make laws under the Constitution;
- the executive, which administers the laws enacted by Parliament;
- the judiciary, which interprets the laws; and
- judicial precedent, legal customs, equity and doctrine.

#### *The Mauritian court system*

The Mauritian judicial system consists of two tiers: the Supreme Court and the subordinate courts. At the apex of the Mauritian court system is the Supreme Court. Under the Constitution, the Supreme Court has been empowered to declare any other law that is found to be inconsistent with the Constitution as null and void, and has been conferred with the power to determine any civil or criminal proceedings, with complete independence and impartiality.

When sitting in its original jurisdiction as a court of first instance, the Supreme Court is composed of various divisions, such as the Family Division, the Master's Court, the Commercial Division, the Financial Crimes Division, the Criminal Division and the Mediation Division.

When sitting in its jurisdiction as an appellate jurisdiction, the Supreme Court hears appeals from subordinate courts and from decisions of the Supreme Court sitting in its original jurisdiction. Hence, the Appellate Division of the Supreme Court sits as the Court of Civil Appeal or the Court of Criminal Appeal.

Additionally, any appeal against a decision of the Court of Civil Appeal or the Court of Criminal Appeal must be lodged with the Judicial Committee of the Privy Council in England.

The subordinate courts comprise various courts, such as the Intermediate Court, the Industrial Court, the District Courts, the Bail and Remand Court, and the Court of Rodrigues.

The main rules regulating proceedings before the Supreme Court and the subordinate courts are contained in several pieces of legislation, including the Courts Act, the Court of Civil Appeal Act, the Criminal Procedure Act and the Supreme Court Rules 2000.

#### *The Supreme Court*

The Supreme Court is a superior court of record that has original jurisdiction to hear and determine civil and criminal matters, to interpret the Constitution, to act

as a court of equity and to exercise general powers of supervision over all the subordinate courts.

Recently, the Judicial and Legal Provisions (Amendment No 2) Act 2018 (the "2018 Act"), which came into force on 3 January 2019, has amended the jurisdictions of the Supreme Court, the Intermediate Court and the District Courts in civil matters. Hence, when sitting in its original jurisdiction, the Supreme Court has jurisdiction to hear and determine the following civil matters, where the value of the claim exceeds MUR2 million:

- divorce and matrimonial proceedings;
- petitions for insolvency;
- all matters of a commercial nature;
- admiralty matters; and
- claims for Constitutional relief.

#### *The Commercial Division of the Supreme Court*

The Commercial Division of the Supreme Court was set up by the Chief Justice by way of an administrative notice in 2009. It has jurisdiction to hear and determine matters arising under the Insolvency Act 2009 and the Companies Act 2001; disputes relating to banking, bills of exchange, offshore business, patents and trade marks or passing off; and disputes between traders and related matters. In addition, it generally deals with anything that is of a commercial nature.

#### *The Intermediate Court*

Following recent legislative amendments, the Intermediate Court now has jurisdiction in all civil cases where the claim or matter in dispute ranges between MUR250,000 and MUR2 million.

#### *The District Court*

Under the 2018 Act, the District Court now has jurisdiction to hear civil cases where the claim or matter in dispute does not exceed MUR250,000.

#### *The Children's Court*

There is now a specialised court known as the Children's Court, which consists of a protective and criminal division. This court ensures that appropriate arrangements are made in the best interest of children. Proceedings are conducted in simple and comprehensible language, taking into account the age and level of maturity of any child.

## 2. Restrictions on Foreign Investments

### 2.1 Approval of Foreign Investments

Foreign investors may invest in a number of fields, such as:

- agro-industry;
- aqua-culture and ocean economy;
- education;
- financial services;
- healthcare;
- hospitality;
- property development and smart cities;
- ICT-BPO (information and communications technology, and business process outsourcing);
- life sciences;
- logistics;
- manufacturing; and
- media and creative industries.

Depending on the nature of the field, most activities would require prior approval from the Economic Development Board (EDB) and/or other relevant authorities.

Businesses engaged in unregulated activities may start operations immediately after registering with the Corporate and Business Registration Department. Investors should ensure that they hold the appropriate licence before starting a regulated activity.

#### Investing in Certain Regulated Activities

For certain regulated activities, specific licences/permits are required:

- banking – a licence from the Bank of Mauritius;
- freeport activities – a Freeport Certificate, issued by the EDB;
- tourism-related activities – a licence from the Tourism Authority;
- telecommunications operations – a licence from the Information and Communication Technologies Authority;
- education and training – a certificate of registration/licence from the Early Childhood Care and

Education Authority, the Private Secondary Education Authority and/or the Tertiary Education Commission;
- healthcare activities – a licence from the Ministry of Health and Wellness;
- gambling and gaming activities – a licence from the Gambling Regulatory Authority; and
- offshore petroleum activities – a licence/permit from the Department for Continental Shelf, Maritime Zones Administration and Exploration.

### Investing in Financial Services

Entities intending to carry out financial services in Mauritius must, as a rule, obtain the relevant licences from the Financial Services Commission (FSC) or the Central Bank (in the case of banking activities) to be able to carry out such services.

### Investing in Property Development

Under the Non-Citizens (Property Restriction) Act 1975, a non-citizen cannot hold immovable property, including leasehold or freehold property, without an authorising certificate from the Prime Minister's Office (PMO).

However, no authorisation is required in the following cases:

- when holding immovable property for industrial and commercial purposes under a lease agreement not exceeding 20 years;
- where there is a deed of concession under the Fisheries and Marine Resources Act 2007;
- when purchasing luxury villas, apartments, penthouses or other similar properties under the Invest Hotel Scheme, Property Development Scheme (PDS) and Smart City Scheme (SCS);
- where an investor has approval from the EDB to acquire property for use in business; and
- when purchasing or otherwise acquiring an apartment used, or available for use, as a residence, in a building of at least two floors above the ground floor level, provided the purchase price is not less than MUR6 million or its equivalent in any other hard convertible foreign currency with prior authorisation of the EDB after approval from the Minister of Internal Affairs.

The law is more flexible for non-citizens who are residents in Mauritius. Such residents are eligible to acquire a residential property of a minimum value of USD500,000 for personal residence.

The resident non-citizens who are eligible are as follows:

- a main holder of a Permanent Residence Permit;
- a main holder of a residence permit issued by virtue of the purchase of an immovable property under the Integrated Resort Scheme (IRS), Real Estate Scheme (RES), PDS, Invest Hotel Scheme (IHS) or SCS, or through the purchase of an apartment located in a ground +2 building;
- a main holder of an occupation permit as an investor, professional or self-employed person;
- a main holder of a short-term occupation permit;
- a main holder of a family occupation permit; and
- a main holder of a residence permit as a retired non-citizen

### Investing in Securities

Foreign investors may invest in any securities listed on a securities exchange. However, the Securities (Investment by Foreign Investors) Rules 2013 provide that a foreign investor cannot acquire interests in a Mauritian sugar company listed on a securities exchange without prior written consent from the FSC where, as a result of such investment, 15% would be held by foreign investors.

## 2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance

### Other Regulated Activities

An application for authorisation has to be made to the relevant authority.

### Financial Services

An application for a licence must be made to the FSC prior to setting up and must be accompanied by:

- a business plan;
- fees, as specified in the FSC Rules;
- other information required by the Commission to determine the application; and

- particulars and information relating to promoters, beneficial owners, controllers and proposed directors.

### Property Development

An application on the prescribed form must be filled in and submitted to the EDB.

### Consequences of Investing Without Approval

*Financial services*

Any person who operates without securing an FSC licence shall commit an offence and shall, on conviction, be liable to a fine of up to MUR500,000 and to imprisonment for a term of up to five years.

*Property development*

In the case of a property that is acquired by a foreigner, without an authorising certificate, the curator shall take possession of the property and cause it to be sold.

## 2.3 Commitments Required From Foreign Investors

### Conditions Attached to an FSC Licence for Financial Services

The FSC shall not grant an application unless it is shown to its satisfaction that:

- the application complies with the provisions of the law;
- the criteria for the licence are met;
- the applicant has adequate resources, staff with appropriate competence and experience to carry out the activity for which the licence is sought;
- the applicant and each of its controllers and beneficial owners are fit and proper persons to carry out the business for which the licence is sought; and
- the applicant has adequate arrangements for proper supervision of everything done under the licence to ensure compliance with the law.

### Conditions Attached to an Acquisition of Property

Conditions attached to an acquisition under the Non-Citizens (Property Restriction) Act are as follows:

- the non-citizen shall not use the apartment for any purposes other than those for which the authorisation has been granted;
- the non-citizen shall not transfer or dispose of the apartment without authorisation and under such conditions as may be imposed;
- the non-citizen shall not engage in any property speculation whatsoever, and an authorisation shall be valid for six months;
- any non-citizen acquiring an apartment shall not be eligible to make an application for the status of resident in Mauritius;
- the land duties and taxes shall be paid on the present market value of the immovable property, which may be subject to review by the Registrar General; and
- the shares of the company (where applicable) shall not be disposed of, in any manner, without prior approval under the Non-Citizens (Property Restriction) Act.

Conditions attached applicable to resident non-citizens in Mauritius are as follows:

- the residential property may be used as a personal residence only and not for any other purpose;
- only one residential property may be purchased or acquired;
- the property purchased should not exceed 0.5276 hectare (1.25 arpent);
- where a plot of serviced land/bare land is acquired, the residential property must be built on the land within a period of five years from the date of its acquisition;
- the property cannot be disposed of without the authorisation of the PMO, and in accordance with the applicable legislation and upon such conditions as may be imposed; and
- the non-citizen shall not engage in any property speculation whatsoever.

## 2.4 Right to Appeal

### EDB

There is no review on non-authorisation from the EDB. An authorisation will be granted if the criteria are met.

### FSC

A Review Panel conducted by the FSC has been established; however, it shall not hear an application relating to a decision on not granting a licence,

approval or authorisation for the conduct of a financial services activity.

### Immovable Property

An action can be brought before the Supreme Court on disputes relating to immovable property.

## 3. Corporate Vehicles

### 3.1 Most Common Forms of Legal Entity

The corporate vehicles available in Mauritius include:

- companies;
- partnerships (*sociétés*);
- limited partnerships;
- trusts; and
- foundations.

### Companies

Companies may be private or public. A company is deemed to be a public company unless it is stated otherwise in its application form for incorporation or its constitution. A private company cannot have more than 50 shareholders and cannot offer its shares to the public.

A company may be set up as follows:

- limited by shares (most common);
- limited by guarantee;
- limited by shares and guarantee;
- unlimited; or
- limited life (common for private equity funds and suitable for joint ventures or projects).

Except for the fourth point in the foregoing list, the liability of the shareholders is limited to the amount payable on the shares issued to them; for the second point, liability of the members is limited by the constitution to such amount as the members may undertake to contribute to the assets of the company in the event of it being wound up.

A company set up as a limited life company has an initial life not exceeding 50 years, subject to the alteration of its constitution extending the duration of the company to such period or periods not exceeding an aggregate of 150 years. A limited life company may have categories of interests in the company, such as an interest in the profits of the company, an interest in the capital of the company or an interest in the management of the company.

A company limited by shares may be incorporated with one shareholder and with one share (no minimum share capital amount); typically, share capital would start at MUR1.00 or USD1.00 (or any foreign currency in the same amount).

### Partnerships (Sociétés)

Partnerships in Mauritius are referred to as *sociétés* and are governed by the Commercial Code and Civil Code. The life of a partnership is limited to a maximum of 99 years.

The liability of each partner in a general partnership (*sociétés en nom collectif*) is unlimited, whereas in a limited partnership (*sociétés en commandite simple*), there are two categories of partners: limited partners (*les associés commanditaires*) and unlimited, or general, partners (*les associés commandités*). Limited partners enjoy the benefit of liability limited to the extent of their contributions to capital, whereas unlimited partners are liable to contribute, in full, to the debts and liabilities of the limited partnership.

### Limited Partnerships

Whilst limited partnerships may be formed under the Commercial Code and Civil Code, they may also be created under the Limited Partnerships Act 2011 (LPA). A distinguishing feature is that at the time that the limited partnership is registered, the partners of the limited partnership may elect that the partnership have legal personality.

Similar to partnerships organised under the Commercial Code and Civil Code, the partners in a limited partnership under the LPA are of two types: general partners or limited partners. General partners are jointly and severally liable for all the debts of the limited partnership without limitation, whilst limited partners (subject to the partnership agreement) are not liable for any debts of the limited partnership beyond the amounts contributed or agreed to be contributed.

### Trusts

Trusts are governed by the Trusts Act 2001. A trust (other than a purpose trust) is limited to a duration of 99 years from the date of its creation. In the case of a purpose trust, an enforcer and a successor to the enforcer must be appointed when the trust is established, the duty of the enforcer/successor to the enforcer being the enforcement, if necessary, of the terms of the purpose trust. A trust is governed by the terms of its trust deed and the Trusts Act 2001.

### Foundations

Foundations may be set up under the Foundations Act 2012. Contrary to popular belief that foundations are for charitable purposes only, foundations are increasingly used for non-charitable purposes; for example, wealth management, estate planning or purely business purposes. A foundation is run by a council (similar to the board of a company). The foundation is governed by its charter (and articles, if applicable), subject to the Foundations Act 2012.

### Variable Capital Company

A variable capital company (VCC) is set up as a company under the Companies Act 2001 and needs to be authorised by the FSC, the regulator for financial services in Mauritius, to operate. The VCC's primary object is to operate as a fund; it can be set up as a standalone fund or may conduct its business through different sub-funds or special purpose vehicles (SPVs). The sub-funds and SPVs may choose to have a separate legal entity from the main fund.

The VCC has many advantages for the fund industry as different types of fund structures can be regrouped under one entity – both collective investment schemes (CISs) and closed-end funds can be set up under the same VCC. A VCC further allows for cross sub-fund and SPV investment in that a sub-fund of a VCC is also allowed to invest in other sub-funds of the same VCC, provided such sub-fund or SPV has not previously invested in it. In terms of the protection of its investment portfolios, the assets and liabilities of the sub-funds and SPVs are segregated and ring-fenced, and are thus protected in the event of a winding-up, administration or receivership of the sub-funds, SPVs or the VCC.

## 3.2 Incorporation Process

Application for incorporation is made to the Registrar of Companies in a prescribed form, signed by the applicant and accompanied by the following documents:

- consent to act as director or secretary;
- a certificate showing that the director/secretary is not disqualified to act as such;
- in the case of a company having a share capital, consent to being a shareholder and to taking the class and number of shares noted in the application, as well as a statement of the consideration for the issue of those shares;
- in the case of a company limited by guarantee, a guarantee document signed by each member;
- notice of reservation of name, if any;
- the constitution of the company, if one is being specifically adopted; and
- under certain circumstances, a declaration regarding the beneficial ownership.

## 3.3 Ongoing Reporting and Disclosure Obligations

The Companies Act 2001 prescribes several filings to be made with respect to a private company, including filing in relation to changes in directors, secretary and shareholding. Filing is also required with respect to:

- a constitution (ie, equivalent to the memorandum and articles of association) adopted by the company or any amendment made thereto;
- a charge created over any asset of the company;
- change in registered office;
- financial statements (with an auditor's report, if applicable) or financial summary;
- annual report, if applicable; and
- annual return, if applicable.

## 3.4 Management Structures

Companies in Mauritius commonly have a unitary board structure. The business and affairs of a company are managed by, or under the direction or supervision of, the board.

Subject to modifications, adaptations, exceptions or limitations to the extent contained in the Companies Act 2001 or in the constitution of the company, the

board has all the powers necessary for managing, directing and supervising the management of the business and affairs of the company.

The amendments to the Companies Act 2001 introduce the requirement of the board of directors of a public company to include, at all times, at least two independent directors and ensure that a minimum of 25% of the board members are women.

### 3.5 Directors', Officers' and Shareholders' Liability

A director is liable, whether to the company or a shareholder, for breach of any statutory duty set out in the Companies Act 2001. Furthermore, there may be instances where a director may be liable to third parties such as creditors. The Act also imposes personal liability on directors in certain circumstances; for example, continuing to trade whilst the company is insolvent.

The duties of directors have been extended to include the duty to act in a manner that is not oppressive, unfairly discriminatory or unfairly prejudicial to shareholders.

There are limited circumstances where the courts may lift the corporate veil – ie:

- when the court is construing a statute, contract or other document;
- when the court is satisfied that a company is a "mere facade" concealing the true facts; and
- when it can be established that the company is an authorised agent of its controllers or its members, corporate or human.

## 4. Employment Law

### 4.1 Nature of Applicable Regulations

In Mauritius, the employment relationship is governed mainly by legislation, case law, employment agreements and collective agreements within certain industries. The main laws governing the employment relationship in Mauritius are the Workers' Rights Act 2019 (WRA) and the Employment Relations Act 2008 (ERA).

The WRA regulates the employment relationship of workers and employers, where a worker is defined as a person whose basic wage or salary is at a rate not exceeding MUR600,000 per annum. Notwithstanding the foregoing, the WRA applies to all employees, irrespective of their salary threshold in relation to matters such as discrimination, work-from-home, equal pay, payment of remuneration in specific circumstances, deduction of salary, juror's leave, leave to participate in an international sports or cultural event, maternity/paternity leave and benefits, medical facilities, allowance for petrol, complaints by workers, termination of employment including reduction of workforce, the portable retirement gratuity fund, eligibility to the Workfare Programme Fund compensation and violence at work.

### 4.2 Characteristics of Employment Contracts

Under the laws in Mauritius, a contract of employment may be for a determinate or indeterminate duration, subject to the nature of the work. An agreement made verbally will also be considered a duly formed agreement.

However, every employer has to provide to every worker engaged for more than one month a written statement of particulars of employment within 14 days of the completion of the first calendar month, a copy of which has to be submitted to the supervising officer of the ministry responsible for labour and employment relations within 30 days. The WRA lays down the main features of a contract of employment as follows:

- name of the employer;
- national pension registration number of the employer;
- business registration number of the employer;
- address of the employer;
- nature of activity carried out by the employer;
- name of the worker;
- gender of the worker;
- national identity card number/passport number of the worker;
- date of birth of the worker;
- address of the worker;
- date of commencement of agreement;
- place of work;
- grade, class or category of employment;

- rate and particulars of remuneration;
- interval at which remuneration is to be paid; and
- normal hours of work.

Note that these conditions are not exclusive; several other conditions may be agreed upon between the employer and the employee in accordance with the specificities of the business.

### 4.3 Working Time

Employees may be employed on a full-time or part-time basis in Mauritius. The normal working hours for a full-time worker (other than a caregiver (*garde malade*) and a part-time worker) are 45 hours of work, excluding time allowed for meal and tea breaks, allocated as follows.

- Where the worker is required to work five days a week:
  (a) nine hours' work on any five days of the week, other than a public holiday.
- Where the worker is required to work six days a week:
  (a) eight hours' work on any five days of the week other than a public holiday; and
  (b) five hours' work on one other day of the week other than a public holiday.

No worker, other than a caregiver, shall, except in special circumstances and subject to any other enactment, be required to work for more than 12 hours per day.

Under the WRA, where a worker works on a public holiday, the employer shall remunerate him/her in respect of any work done:

- during normal working hours, at not less than twice the rate at which the work is remunerated when performed during the normal hours on a weekday; or
- after normal working hours, at not less than three times the rate at which the work is remunerated when performed during the normal hours on a weekday.

The WRA was amended in 2023 to introduce the concept of a four-day work week. An employer may now, with the consent of a worker, require the worker to work for the stipulated hours, in any week, on a four-day week basis, provided a notice of at least 48 hours is given to the worker ahead of the new compressed hours. On the other hand, a worker may make a request to his/her employer to work for the stipulated hours on a four-day week basis, and the employer must, subject to their operational requirements, grant the request.

The WRA also provides for certain qualifications in the conversion of work from full-time to part-time.

In line with climate change, the law now recognises that, during periods of extreme weather conditions, where an order is issued by the National Crisis Committee (NCC) requiring any person to remain indoors, or a state of disaster is declared, and any direction for the purpose of assisting and protecting the public is issued, an employer must not require a worker to work or continue to work, as such situations could place the worker in danger.

Recently, in May 2026, the Cabinet agreed to the adoption of the National Protocol on Heavy and Torrential Rain for Mauritius. Under the Protocol, which applies to both the public and private sectors irrespective of whether employees work on a full-time, part-time or shift basis, if the Mauritius Meteorological Services (MMS) issues a heavy rain warning, employees must normally continue working unless the NCC issues an Order or communiqué to evacuate workplaces, remain indoors or not report to work. However, if a torrential rain warning is issued, employees, except those in emergency services, are not required to report for duty or continue working, and employers must not wait for an Order or communiqué to release their employees. Work may resume only after the NCC issues an Order or communiqué that it is safe to go outside and report to work.

### 4.4 Termination of Employment Contracts

In the case of a fixed-term contract, the contract comes to an end on the last day of the agreement.

An employment contract may also be terminated by the employer for the employee's poor performance or misconduct (including misconduct subject to criminal

proceedings). In such cases, the employer needs to provide the employee with an opportunity to answer any charge that has been levelled against the employee within the statutory timeline. Moreover, a notice of termination not less than 30 days must be given to the employee. Alternatively, the employee may be paid remuneration in lieu of said notice.

The employee, on the other hand, may treat the employment agreement as terminated if they have been ill-treated by the employer, in cases of non-payment of remuneration under the agreement, where the employer fails to provide work and to pay remuneration under an agreement or if the employee is made to resign by fraud or duress – or is made to sign a letter of resignation or such document in writing.

Collective redundancies are implemented in cases of economic, technological, structural or any other similar reasons. The Redundancy Board (the "Board") is the entity that deals with all cases of reduction of the workforce and closure of enterprises. Where the Board finds that the reasons for the reduction of the workforce or the closing down are unjustified, the Board shall order the employer to pay the worker severance allowance at the rate of three months' remuneration per year of continuous service. The employee may, however, consent to be reinstated in his/her former employment with payment of remuneration from the date of termination of his/her employment to the date of his/her reinstatement.

The Social Contribution and Benefits Act of 2021 has repealed the *Contribution Sociale Généralisée* Regulations, which were introduced in 2020. These contributions, which are now called "social contributions", are calculated on the monthly remuneration of the employee, and self-employed people are now required to contribute in accordance with their income level instead of the flat rate that was originally applicable.

The mandatory end-of-year bonus section in the WRA now applies exclusively to those workers who draw a monthly basic wage or salary of not more than MUR100,000.

## 4.5 Employee Representations

Employee representation occurs at two levels: employee representation by the employee's representative in the event of a disciplinary hearing and employee representation at the level of trade union and collective bargaining with regard to the employer's management.

### Representation in the Event of a Disciplinary Hearing

An employee must, prior to the termination of his/her agreement, be given the opportunity to answer and explain any charge that has been levelled against him/her. This opportunity may take the form of a disciplinary hearing, in which case the employee may be accompanied by a representative of their trade union and/or a legal representative.

The employee may also have recourse to representation by a labour officer. Such labour officer is an officer designated by the permanent secretary of the Ministry of Labour, Industrial Relations, Employment and Training, whose main role is to look into labour complaints and disputes.

### Employee's Representation at the Level of Trade Union in the Employer's Management

An employee's representation at the level of trade union is a constitutional right insofar as, except with his/her own consent, he/she shall not be hindered in the enjoyment of his/her freedom of assembly and association. An employee's representation at this level is governed by the ERA, which focuses on the right of employees to freedom of association with a view to promoting good employment relations, granting negotiating rights to employees through their union representatives and assisting employers and union representatives to bargain effectively.

According to the ERA, an employer cannot interfere with the establishment, functioning or administration of a trade union of workers or promote or give assistance to a trade union of workers in order to place or maintain the trade union under their control. Union representatives are responsible for negotiating the rights of employees as per employment legislation and rights to participate in collective bargaining; that

is, in relation to the terms and conditions of employment or rights pertaining to any procedure agreement.

## 5. Tax Law

### 5.1 Taxes Applicable to Employees/ Employers

Resident individuals are subject to Mauritian income tax on their worldwide income from all sources except that income derived from outside Mauritius is taxable only to the extent that it is remitted in Mauritius. Income from employment duties performed in Mauritius is deemed to have been derived from Mauritius.

A non-resident is taxable on income derived from Mauritius; for instance, income derived from any business carried on wholly or partly in Mauritius.

#### Employees

Currently, individuals' incomes are taxed incrementally; ie, the chargeable incomes are divided into different revenue brackets. Each bracket has a specific tax rate starting at 0% and is capped at a maximum of 20%.

The progressive tax bands are as follows:

- 0% on the first MUR500,000 of chargeable income;
- 10% on the next MUR500,000; and
- 20% on the remaining income.

Moreover, individuals aged 18–28 earning up to MUR1 million/year are exempt from income tax on salary or business income.

An individual (employed or self-employed) has to file income tax returns for the preceding income year, declaring their income and deductions to the Mauritius Revenue Authority (MRA).

Employers are required to operate a cumulative system of pay as you earn (PAYE) whereby tax withheld from emoluments that are made available to an employee has to be remitted to the MRA within 20 days. If tax is underpaid under the PAYE system, the unpaid balance becomes payable on or before 30 September following the end of the income year. If tax is overpaid, a refund of the excess tax is made to the taxpayer.

Every month, every employer shall pay the amount of contribution to the MRA in respect of every employee who was employed during the preceding month. Currently, the CSG and National Solidary Fund (NSF) contributions are payable at the prescribed rate on an employee's basic wage/salary.

An employer is required to contribute 2.5% of remuneration to the NSF and to pay a monthly rate of 1.5% of the basic salary of every employee.

Under the CSG:

- employees earning MUR50,000 or less monthly will be subject to a contribution of 1.5%, and 3% for the employers;
- employees earning more than MUR50,000 monthly will be subject to a contribution of 3%, and 6% for the employers;
- a public sector employee earning MUR50,000 or less monthly will not be subject to the contribution, and 4.5% for the employers;
- a public sector employee earning more than MUR50,000 monthly will not be subject to the contribution, and 9% for the employers; and
- an employee who is in domestic service earning MUR3,000 or less monthly, from one or more employers, shall not be subject to the contribution, and 3% for the employers.

#### Fair Share Contribution (Individuals)

Every individual whose fair share contribution income threshold exceeds MUR12 million in an income year shall, in addition to income tax, be liable to pay a fair share contribution to the Director-General. The contribution is computed at the rate of 15% on leviable income exceeding the threshold of MUR12 million.

The measure applies to income derived for the income year commencing 1 July 2025 and will remain in force for the following two income years, up to 30 June 2028. The fair share contribution income threshold comprises an individual's net income, dividends received from resident companies and co-operatives,

as well as attributable dividend shares from *sociétés* or successions, subject to specified exclusions.

Similarly, leviable income includes the individual's chargeable income together with qualifying dividends and attributable dividend shares, but excludes dividends from global business entities and certain exempt lump sums, including pension commutations, death gratuities and compensation payments.

### Fair Share Contribution (Companies)

Every company whose supplies exceed Rs 24 million in an accounting year or which is required to be registered under the VAT Act, and whose chargeable income exceeds MUR24 million, is liable to pay a fair share contribution in respect of income derived for the period 1 July 2025 to 30 June 2028. The contribution applies in addition to income tax and is calculated on chargeable income.

The rate of contribution is 2% of chargeable income for companies subject to the 3% income tax rate, and 5% of chargeable income for companies subject to the 15% income tax rate, including banks. Banks are also subject to an additional fair share contribution of 2.5% on chargeable income arising from transactions with residents (excluding global business entities).

Companies must submit quarterly statements and make corresponding payments during the year, with a final reconciliation in the fourth quarter based on annual chargeable income. Late payment attracts a penalty of 2.5% of unpaid tax and interest at 0.25% per month or part thereof.

## 5.2 Taxes Applicable to Businesses

A corporation resident in Mauritius is subject to tax on its worldwide income. A non-resident corporation is liable to tax on any Mauritius-source income, subject to any applicable tax treaty provisions. Corporations are liable to income tax on their net income, currently at a flat rate of 15%.

### Partnerships

Limited partnerships are tax transparent and are therefore not taxable under the laws of Mauritius, unless they hold a global business licence (GBL), in which case they can elect to be taxpayers. Where a limited partnership is tax transparent, only the partners who are residents of Mauritius are liable to pay tax in Mauritius at the rate of 15% (subject to any available tax credit or exemption). Limited partners who are non-residents of Mauritius are only liable to 15% tax on income that is derived in Mauritius but have no tax liability on foreign-source income.

### Trusts and Foundations

The income tax laws make a distinction between resident and non-resident trusts and between a resident foundation and a non-resident foundation. A non-resident trust is a trust of which the settlor and the beneficiaries are not resident in Mauritius, or in the case of a purpose trust, where such purpose is carried out wholly outside Mauritius. Such trusts are not subject to taxation in Mauritius.

A foundation will be non-resident when the founder is a non-resident and all the beneficiaries appointed under the terms of a charter or a will are, throughout an income year, non-resident in Mauritius. A non-resident foundation is exempt from taxation in Mauritius. A non-resident trust or foundation has to file a declaration of "nonresidency" on an annual basis with the MRA.

Charitable trusts and foundations are also exempt from income tax in Mauritius. A non-charitable trust, a non-charitable foundation or a non-charitable institution that is tax resident in Mauritius is taxable on its chargeable income at the rate of 15% per annum, although it will be entitled to tax credits on foreign tax paid or a partial exemption of 80% of the Mauritius tax liability on certain specific types of income.

### Export of Goods

Companies engaged in the export of goods are liable to be taxed at the rate of 3% on the chargeable income attributable to that export based on a prescribed formula. The benefit of the reduced income tax rate of 3% has been extended to freeport operators and private freeport developers engaged in the re-treating of used tyres and recycling of waste meant for the local market.

### Société

#### *Resident société*

A resident *société* is not liable to tax. Instead, every associate of the *société* is liable to tax on his/her share of income, whether distributed or not.

#### *Non-resident société*

A non-resident *société* shall be liable to income tax as if the *société* were a company and shall pay income tax on its chargeable income at a rate of 15%.

### Companies Holding a GBL

GBL-holding companies are taxed at the normal rate of 15%, except for an income tax exemption of 80%, which applies to foreign dividends, foreign-source interest income, profit attributable to a permanent establishment of a resident company in a foreign company, foreign-source income derived from a CIS, closed-end funds, CIS managers, CIS administrators, investment advisers or asset managers licensed or approved by the FSC and income derived by companies engaged in ship and aircraft leasing.

### Qualified Domestic Minimum Top-up Tax (QDMTT)

The QDMTT has been introduced in Mauritius effective from the year of assessment commencing on 1 July 2025. The QDMTT is applicable to Mauritius resident entities forming part of a multinational enterprise (MNE group) with a minimum annual consolidated revenue of EUR750 million or more in at least two of the last four fiscal years.

Every member of an in-scope MNE group shall pay QDMTT where the combined effective tax rate for group members in Mauritius is less than 15%. The QDMTT return and payment will be due within 15 months from the end of the fiscal year.

Each relevant resident company must notify the MRA of the designated Mauritius resident person responsible for the filing of the QDMTT return. This notification is due within six months from the end of the MNE group's fiscal year.

Investment funds, pension funds and real estate investment vehicles, amongst others, are excluded from the QDMTT regime.

### Corporate Social Responsibility (CSR)

Every year, a company has to set up a CSR fund equivalent to 2% of its chargeable income of the preceding year. For CSR funds set up on or after 1 January 2026, the proportion required to be remitted to the MRA has been reduced to 50%, with the remaining 50% available for CSR implementation, reflecting a more flexible regime while maintaining a mandatory State contribution.

### VAT

VAT shall be charged at the standard rate of 15% on all taxable goods and services, except certain food items that are zero-rated. A person who makes taxable supplies in the course of their business and whose annual turnover exceeds or is likely to exceed MUR6 million is required to register for VAT on a compulsory basis.

Following the measures announced in the 2025–26 Budget, the government proposes to amend the applicable legislation to reduce the threshold for mandatory VAT registration from MUR6 million to MUR3 million in annual turnover, with effect from 1 October 2025. Additionally, certain service providers (eg, accountants and auditors, attorneys and solicitors, consultants, surveyors, valuers) must be VAT registered irrespective of their turnover.

The Finance Act introduced the arm's-length principle to VAT. The reverse charge provision on supply of services received from abroad has been amended such that it is now applicable only if:

- the taxable supply performed or utilised in Mauritius is made by a person who does not belong in Mauritius and is not VAT registered; and
- the recipient of the supply is a VAT-registered person.

The supply of digital or electronic services by a foreign supplier to a person in Mauritius will be subject to VAT.

Where a VAT-registered person is engaged in a project spanning several years and the MRA is of the opinion that the apportionment of input tax between taxable supplies and exempt supplies on a prorated basis is not appropriate, it may require the registered

person to apply an alternative basis of apportionment for input tax.

### Local Income Taxes

Local income taxes levied by a local administration, such as urban councils, do not exist in Mauritius.

### Corporate Withholding Taxes (WHTs)

There are no withholding taxes (WHTs) in Mauritius for payments made by GBL companies to non-residents not carrying out any business in Mauritius. There is no WHT on dividends received from resident companies or on payments made by a company having an annual turnover of less than MUR6 million.

The following WHT rates are applicable to certain other income streams:

- interest payable by any persons (other than banks or non-bank deposit-taking institutions operating under the Banking Act) to individuals and non-resident companies – 15%;
- royalties payable to (i) residents (10%) and (ii) non-residents (15%);
- rent payable to (i) residents (5%) and non-residents (10%);
- payments to contractors and subcontractors (0.75%); and
- payments to providers of services (accountant/accounting firm, architect, attorney/solicitor, barrister, dentist, doctor, engineer, land surveyor, legal consultant, project manager in the construction industry, quantity surveyor, property valuer, and tax adviser or representative) (3%).

## 5.3 Available Tax Credits/Incentives

Mauritius has a credit system of taxation whereby foreign tax credit is given on any foreign-source income declared in Mauritius on which foreign tax of a similar character to Mauritian tax has been imposed.

No actual foreign tax credit is allowed on foreign-source income derived from a corporation issued with a GBL on or before 16 October 2017, if they have claimed the 80% exemption.

### Tax Credit for Small Businesses

Small enterprises with an annual turnover not exceeding MUR10 million shall be entitled to a tax credit of 5% per annum, for a period of three consecutive years (aggregating to 15%), in respect of capital expenditure incurred on the acquisition of new equipment, up to a maximum of MUR500,000 per year. This incentive shall exclude expenditure on motor vehicles. Any unutilised tax credit may be carried forward for a period not exceeding five years.

A qualifying small business or service provider is one whose annual turnover does not exceed MUR10 million and which carries on specified professional or service activities, including architects, engineers, estate agents, land, marine or motor surveyors, opticians, project managers, property valuers, interior designers/decorators and medical, health, wellness and personal care service providers (including hairdressers and barbers).

### Partial Exemption for Virtual Asset Service Providers (VASPs)

Licensed VASPs shall be eligible to claim an 80% partial exemption on income derived from virtual asset-related activities, subject to compliance with prescribed economic substance requirements.

### Restriction on Exemption for Banks

Banks shall no longer be entitled to the 80% partial exemption in respect of foreign-source dividend income.

## 5.4 Tax Consolidation

There are no group taxation provisions in the Mauritian tax legislation other than the transfer of losses by tax incentive companies, sugar factory operators, subsidiaries in Rodrigues and manufacturing companies upon their takeover.

## 5.5 Thin Capitalisation Rules and Other Limitations

Mauritius does not have specific thin capitalisation legislation; however, it does have other anti-avoidance provisions, as described in the following.

If a company has issued debentures to each of its shareholders, subject to the number, nominal value or

paid-up value of the shares in that company, any interest paid on debentures and claimed as a deductible expense may be disallowed and treated as a dividend.

### 5.6 Transfer Pricing

Mauritius does not have any specific transfer pricing legislation. However, it does contain an arm's-length provision requiring transactions between related parties to reflect a commercially objective value, which would be the amount charged for the services were the parties not connected.

### 5.7 Anti-Evasion Rules

There are no controlled foreign company rules under Mauritian tax legislation. Additionally, the Income Tax Act 1995 provides for certain measures relating to anti-avoidance provisions in relation to interest on debentures issued by reference to shares, excess of remuneration or share of profits, excessive remuneration to shareholders or directors, benefit to shareholders and excessive management expenses.

### 5.8 Tariffs

No response has been provided in this jurisdiction.

## 6. Competition Law

### 6.1 Merger Control Notification

Under the Competition Act 2007 (the "Act"), a merger situation is defined as "the bringing together under common ownership and control of two or more enterprises of which one at least carries its activities, in Mauritius, or through a company incorporated in Mauritius".

Whilst there is no statutory obligation for parties to a merger to inform, notify or seek the approval of the Competition Commission of Mauritius (CCM), they are entitled under the Act to voluntarily inform and notify the CCM of a merger situation and to seek the CCM's guidance as to whether:

- the proposed transaction has created, or is likely to create, a merger situation;
- the enterprises that are party to the merger situation meet the statutory market share threshold in order to be subject to review by the CCM; and
- the existing or proposed merger situation has resulted in, or is likely to result in, a substantial lessening of competition in Mauritius.

Besides voluntary notification, the Act provides that merger situations shall systematically be subject to review by the CCM in any of the following circumstances:

- where all the parties to the merger, following the merger, will together supply or acquire 30% or more of all the goods and services on the market;
- where one of the parties to the merger alone and prior to the merger supplies or acquires 30% or more of the goods or services of any description on the market; or
- where the CCM has reasonable grounds to believe that the creation of a merger situation has resulted in, or is likely to result in, a substantial lessening of competition within any market for goods and services.

Hence, where a merger situation does not fall under the market share thresholds set under the Act and does not lead to a substantial lessening of competition, there is a possibility for enterprises to proceed with the merger without involving the CCM at all. On the other hand, the commissioners of the CCM may take action if they find that the merger results, or is likely to result, in a substantial lessening of competition. This includes the power to require divestments or to block the merger if need be.

Although it is not mandatory for merger parties to notify their anticipated merger, merger parties are strongly encouraged to conduct a self-assessment to ascertain if it is necessary to apply for such guidance. Businesses considering a merger would be well advised to seek the CCM's advice and possibly even undergo an investigation before going ahead with the merger, to avoid the costs of subsequently having to reverse the merger. The Act currently provides the possibility for any one of the enterprises that intends to be in a merger situation to apply to the CCM for guidance as to whether the proposed merger situation is likely to result in a substantial lessening of competition within any market for goods or services. An application for

guidance usually contains the details laid down in the Competition Commission Rules of Procedure 2009.

### 6.2 Merger Control Procedure

Applications for guidance in relation to merger notifications are made by completing and filing the form known as "Form 1" with the CCM. Form 1 requires detailed information on the merger situation to be submitted to the CCM. This includes:

- the full name and address of the joint representative of the merger parties (where appointed) in a joint application or the full name and address of all merger parties where a joint representative is not appointed;
- the nature of the merger, such as whether it is an anticipated merger, an acquisition of sole or joint control, a full-function joint venture, or a contract or other means of conferring direct or indirect control;
- the value of the transaction – ie, the purchase price or the value of all the assets involved, depending on the circumstances; and
- for each of the merger parties, the area of activity and turnover, worldwide and in Mauritius, for the financial year, and the parts of the business subject to the merger.

Prior to the lodging of the merger notification with the CCM, parties are encouraged to carry out pre-notification consultations with the CCM, as the latter may refuse to accept an application if it is incomplete, not accompanied by the relevant supporting documents, not substantially in the prescribed form or not in compliance with the Act. Pre-notification consultations with the CCM are usually carried out promptly, subject to the availability of the parties, and do not affect the timeframe for the assessment of the merger notification once it is submitted to the CCM.

Upon receipt of the complete merger notification, the CCM will conduct a preliminary assessment to determine whether there are reasonable grounds to believe that the merger situation results in, or is likely to result in, a substantial lessening of competition. The preliminary assessment may be completed within 30 working days, depending on the nature and complexity of the merger situation. In the affirmative, parties are informed of these concerns within 30 working days, and an in-depth assessment is triggered. Otherwise, if the preliminary assessment demonstrates no substantial lessening of competition, the parties are informed accordingly, and the matter is closed. On the other hand, in-depth assessments are usually carried out by the CCM over a period of six months.

Where the commissioners of the CCM determine, after review, that the creation of a merger situation has led, or is likely to lead, to a substantial lessening of competition, they may give the enterprise such directions as they consider necessary, reasonable and practicable to (i) remedy, mitigate or prevent the substantial lessening of competition; and (ii) remedy, mitigate or prevent any adverse effects that have resulted from, or are likely to result from, the substantial lessening of competition.

### 6.3 Cartels

Under the Act, "Agreement" means "any form of agreement, whether or not legally enforceable, between enterprises which is implemented or intended to be implemented in Mauritius or in a part of Mauritius, and includes an oral agreement, a decision by an association of enterprises, and any concerted practice". "Concerted practice" is also defined in the Act as a "practice involving contacts or communications between competitors falling short of an actual agreement, but which nonetheless restricts competition between them".

The Act regulates various forms of agreements and practices, and prohibits collusive agreements and practices that have the object or effect of preventing, restricting or distorting competition. This includes restrictive practices such as horizontal agreements, non-collusive horizontal agreements, bid rigging, vertical agreements involving resale price maintenance and other vertical agreements.

It is not open to enterprises engaged in these practices to argue that they have no adverse effects, nor do the "off-setting benefits" provisions of the Act apply to such agreements to allow any argument that they have beneficial effects resulting in specific gains, which may outweigh the adverse effects caused by the said agreement or practice. Unlike the other breaches under the Act, collusive agreements and practices are

the only breaches for which financial penalties can be levied by the CCM.

### 6.4 Abuse of Dominant Position

Section 46 of the Act relating to monopoly situations states that the CCM will have regard to whether a monopolist's actions "have or are likely to have an adverse effect on the efficiency, adaptability and competitiveness of the economy of Mauritius, or are or are likely to be detrimental to the interests of consumers". This clause relates only to adverse effects arising from the monopolist's actions.

Under Sections 60 and 61 of the Act, the CCM may also take action to remedy, prevent or mitigate detrimental effects on consumers and users. Where it is necessary to consider such adverse and detrimental effects, the CCM will generally seek to protect and promote consumer interest by fostering greater competition. The CCM will not, in general, intervene to provide consumers with a better product offering or price than might reasonably be expected to arise in a competitive market. The CCM can intervene only when there is a competition problem – and only to promote the interests of affected consumers and users.

## 7. Intellectual Property

### 7.1 Patents

The Industrial Property Act 2019 (IPA) came into operation on 31 January 2022. Under the IPA, a patent will be registered if it relates to an invention that is new, involves an inventive step and is industrially applicable.

The length of statutory protection granted to registered patents is 20 years, after the filing date of the application, subject to payment of the annual prescribed fee.

The application for a patent has to be filed with the Director of the Industrial Property Office in the form set out in the administrative procedures, and accompanied by the payment of a non-refundable fee. The application has to include:

- the name, address and nationality of the applicant;
- the name and address of the inventor;
- the name and address of the agent of the applicant (if any) and the signature of the applicant or their agent (if any), or a common representative where it is a joint application;
- the title, a description of the invention and the claims, including any drawing and an abstract;
- where the applicant is not the inventor, a statement justifying the applicant's right to the patent; and
- where the applicant's ordinary residence or principal place of business is outside Mauritius, an address within Mauritius for service of any document.

Mauritius acceded to the Patent Cooperation Treaty (PCT) on 15 March 2023. Applicants and inventors in Mauritius can now file patent applications under the PCT to secure patent protection in PCT contracting states. Similarly, foreign innovators and companies can now use the PCT system to obtain patent protection for their inventions in Mauritius.

The Customs Act 1988 was amended to provide that any owner or authorised user of a patent may apply in writing to the Director-General of the MRA to suspend the clearance of any goods imported or being exported and detain any goods on the local market on the grounds that his or her patent, industrial design, collective mark, mark, copyright, utility model, lay-out design, breeder's right, trade name or geographical indication is being or is likely to be infringed.

For enforcement, please see **7.3 Industrial Design**.

### 7.2 Trade Marks

A mark is a distinctive sign that differentiates particular goods and services provided by one entity from those of its competitors. In practice, any sign that helps distinguish one's goods or services from another may amount to a mark. This includes words, letters, numerals, drawings, pictures, audible signs, three-dimensional signs and olfactory marks as well as a combination of colours, the shape of the goods or parts of the goods, or the packaging or other conditioning of the goods.

The length of statutory protection granted to registered marks is ten years, starting from the filing date

of the application and subject to the payment of an annual fee.

Applications for registration of marks must be filed with the director of the Industrial Property Office in the form set out in the administrative procedures, and accompanied by the payment of a non-refundable fee of MUR6,000 for the first class and MUR2,000 for each additional class. The application for registration of a mark must include:

- the name, address, nationality and place of registration of the applicant, and where the applicant is represented by an agent, the name and address of the agent;
- where applicable, a statement indicating the type of mark and any specific requirements applicable to that type of mark;
- a representation of the mark; and
- a list of the goods or services for which registration of the mark is sought, grouped in accordance with the applicable class or classes of the International Classification.

The application shall also specify the goods and/or services in respect of which the registration of the mark is sought and has to be signed by the applicant or their agent (if any), or a common representative where it is a joint application.

Mauritius has joined the World Intellectual Property Organization (WIPO)-administered Madrid system, which has allowed for the worldwide registration and management of trade marks since 2023. Local businesses can now file a single international trade mark application and pay one set of fees to apply for protection in more than 130 countries covered by the Madrid system. Globally, other adherents to the Madrid system can designate Mauritius when filing their international applications.

For enforcement, please see **7.3 Industrial Design**.

## 7.3 Industrial Designs

Industrial design means the appearance of a product resulting from its features, particularly the shape, lines, contours, colours, texture or materials of the product, or its ornamentation. The length of statutory protection granted to registered industrial designs is five years, starting from the filing date of the application, and is renewable for three further consecutive periods of five years, subject to payment of a renewal fee.

An application for the registration of a design has to be filed with the director of the Industrial Property Office in the form set out in the administrative procedures and must contain a graphic representation of the design, and be accompanied by a non-refundable fee of MUR4,000. The application has to be signed by the applicant or their agent (if any), or a common representative where it is a joint application. The application may contain a brief description, not exceeding 100 words, of the characteristic features of the design, including any colours, and the features characterising the design in accordance with its filed representation or specimen, but shall not refer to technical particulars related to the operation of the product incorporating the industrial design, its possible uses or the manufacturing material.

Mauritius also joined the WIPO-administered Hague System in 2023. Mauritian businesses are thus able to register up to 100 designs in approximately 100 countries by filing a single international application for the protection of their designs in the countries covered by the Hague System and can also benefit from its streamlined mechanism for the management and maintenance of their rights.

The performance of any act under the IPA in Mauritius by any person other than the owner of the title of protection or the licensee, and without the agreement of the owner, constitutes an offence, punishable on conviction by a fine not exceeding MUR250,000 and imprisonment for a term not exceeding five years. Acts of unfair practice may also give rise to a claim in damages, and the Mauritius court may, in addition to damages, grant such other remedy or relief as it may consider appropriate. Any claim arising out of an unfair practice shall be prosecuted in accordance with the Protection against Unfair Practices (Industrial Property Rights) Act 2002 (the "Unfair Practices Act").

## 7.4 Copyright

For the purposes of the Mauritius Copyright Act 2014 (the "CA 2014"), a copyright consists of the econom-

ic and moral rights subsisting in a work. "Work" is defined as "an artistic, literary or scientific work or a derivative work".

Hence, copyright law in Mauritius covers work transmitted by way of mass public communication, such as paintings, drawings, films, performances, music, literary works and even computerised systems for storage and retrieval of information.

Copyright protection is obtained automatically, without the need for registration, as soon as the work becomes fixed in some material form, irrespective of its mode or form of expression. There are specific durations for the protection of copyright under the CA 2014. For instance, authors enjoy protection for their whole lifetimes and 40 years after their death.

In the event of breach of copyright, a civil action may be initiated with the Supreme Court for an order granting any such remedies as the Court thinks fit. This covers remedies such as damages, injunction or forfeiture of any infringing copy and/or any apparatus, article or thing used for the making of the infringing copy.

A copyright owner may also apply to a judge in chambers for an injunction or a *mesure conservatoire*, as is appropriate in the circumstances. A copyright fee is now leviable in respect of every user of a work.

### 7.5 Others

Intellectual property such as trade secrets, software and databases may be protected under the Protection against Unfair Practices (Industrial Property Rights) Act 2002.

According to Sections 5 to 9 of the Unfair Practices Act, any act that is contrary to honest commercial practice and that (i) causes confusion with respect to another's enterprise or activities; (ii) damages another's goodwill or reputation; (iii) misleads the public; (iv) discredits another's enterprise or activities; or (v) creates unfair competition with respect to secret information will be considered unlawful and will amount to a criminal offence leading to a fine not exceeding MUR250,000 and a term of imprisonment not exceeding five years.

The term "contrary to honest commercial practice" includes "breach of contract, a breach of confidence, an inducement to breach or the acquisition of undisclosed information by third parties who knew, or were grossly negligent in failing to know, that any such practice was involved in the acquisition".

Moreover, causing confusion with respect to another's enterprise or activities, or damaging another's goodwill or reputation in relation to a trade mark, whether registered or not; a trade name; a business identifier other than a trade mark or trade name; the appearance of a product; the presentation of products or services; or a celebrity or a well-known fictional character is penalised under the Unfair Practices Act.

## 8. Data Protection

### 8.1 Applicable Regulations

The governing piece of legislation for data protection in Mauritius is the Data Protection Act 2017 (the "Act"), enacted on 8 December 2017 and in force since 15 January 2018, to align with the EU General Data Protection Regulation 2016/679 (GDPR).

Two other pieces of legislation also provide additional safeguards to the right to privacy and data protection in Mauritius:

- Article 22 of the Mauritian Civil Code provides that "*Chacun a droit au respect de sa vie privée*" (ie, every person is entitled to the protection of their private life).
- Article 300 of the Mauritian Criminal Code makes it a criminal offence for certain categories of professionals to disclose confidential information obtained in the course of their duties.

The Act imposes strict duties on data controllers and processors to ensure that all personal data is processed in compliance with the Act.

Every data controller or processor must be able to demonstrate that personal data are:

- processed lawfully, fairly and in a transparent manner in relation to any data subject;

- collected for explicit, specified and legitimate purposes;
- adequate, relevant and limited to what is necessary;
- accurate and, where necessary, kept up to date, with all reasonable steps being taken to ensure that inaccurate personal data are erased or rectified; and
- retained only for as long as necessary.

In addition, data controllers and processors must:

- adopt policies to implement appropriate data security and organisational measures to protect personal data;
- designate an officer responsible for data protection; and
- ensure that processing is carried out in line with the data subject's rights.

A data controller is defined as "any person who or public body which, alone or jointly with others, determines the purposes and means of the processing of personal data and has decision-making power with respect to the processing".

On 20 February 2025, the Mauritius Data Protection Office (DPO) issued a communiqué specifying that, among other things, all public and private organisations, *sociétés*, partnerships, professionals such as doctors, lawyers, engineers, architects, notaries and sole traders such as jewellers, bookmakers and any other entity processing and collecting personal data of living individuals, are required to register themselves as a controller with the DPO.

The Act provides that it is a criminal offence for a data controller to personal data without any lawful excuse or where it is incompatible with the purposes for which the data was collected. Lawful excuses include:

- compliance with a legal obligation;
- performance of a contract with the data subject; and
- protection of the vital interests of the data subject or another person.

Consent constitutes one of the key lawful bases for processing personal data under the Act. On the one hand, data controllers and processors must seek and obtain the consent of persons whose data they wish to process and, on the other hand, data subjects may give or withdraw their consent at any time.

A data subject is defined as a person who may be identified or may become identifiable by reference to features, including their name, identification number, location data and physiological, genetic, mental, economic, cultural or social identity.

Consent must be free, specific, informed and unambiguous and can be in the form of a statement or a clear affirmative action.

Under the Act, any local or foreign individual or organisation handling or processing the personal data of a Mauritian data subject is required to register with the DPO in order to act as a data controller or processor in Mauritius and must comply with the applicable legal requirements for processing, including consent where required.

Transfers of personal data outside Mauritius are permitted, subject to the following:

- proof that appropriate safeguards for an adequate level of protection have been provided to the DPO;
- the data subject has given explicit consent;
- the transfer is necessary (i) for the performance of a contract with the data subject; (ii) for reasons of public interest as provided by law; (iii) for the establishment, exercise or defence of legal claims; or (iv) to protect the vital interest to the data subject; and
- there are compelling legitimate interests of the controllers or processors.

Mauritius also launched its National Data Strategy 2025–29 in January 2026, aimed at strengthening data governance, cybersecurity and the protection of personal data.

### 8.2 Geographical Scope

The Act applies to any data controllers or processors established in Mauritius and any data controller

or processor not established in Mauritius but using equipment in Mauritius for processing personal data of Mauritian residents. In other words, the Act not only applies to organisations located within Mauritius but also to organisations located outside Mauritius if they offer goods or services to, or monitor the behaviour of, Mauritian data subjects.

Within that framework, the Act imposes an obligation on such foreign controllers and processors to explain to Mauritian data subjects how their personal data will be processed, give details on the purposes of the processing and inform them of the right to withdraw their consent at any point in time.

### 8.3 Role and Authority of the Data Protection Agency

The Act has established the DPO in Mauritius, which is empowered to act with complete independence and impartiality.

The main roles and functions of the DPO are to ensure compliance with the Act, issue codes of practice and guidelines, maintain a register of controllers and processors, investigate complaints and co-operate with supervisory authorities of other countries.

The DPO is headed by the commissioner, who is given wide powers under the Act to:

- carry out periodical audits of information systems and security measures used by data controllers or processors;
- exercise control of all data processing operations, either of his/her own motion or at the request of data subjects;
- promote self-regulation among controllers and processors;
- undertake research into, and monitor developments in, data processing, and ensure that there is no significant risk or adverse effect of any developments on the privacy of individuals;
- examine any proposal for automated decision-making or data linkage that may involve interference with, or otherwise have an adverse effect on, the privacy of individuals and ensure that any adverse effect of the proposal on the privacy of individuals is minimised;
- investigate any complaint or information that gives rise to a suspicion that an offence may have been, is being or is about to be committed under the Act;
- order any person to attend a hearing at a specified time and place for the purposes of being orally examined in relation to a complaint;
- apply to the judge in chambers in the Supreme Court for a preservation order where they believe the data is vulnerable to loss or modification;
- enter and search any premises with a warrant issued by a magistrate for the purpose of discharging any functions or exercising any powers under the Act;
- serve an enforcement notice when they believe that a data controller or processor has contravened, is contravening or is about to contravene the provisions of this Act, requiring them to take such steps within such periods as may be specified in the notice; and
- take such measures as may be necessary to bring the provisions of the Act to the knowledge of the general public.

The registration as a controller or processor with the DPO will be for a period not exceeding three years, and on the expiry of such period, the relevant entry will be cancelled unless the registration is renewed within three months of expiry of the licence.

Any controller who knowingly supplies false information while applying for registration will commit an offence and shall, on conviction, be liable to a fine of up to MUR100,000 and to imprisonment for a term of up to five years.

Any person or organisation who fails to attend a hearing or to produce a document when required to do so shall be liable to a fine of up to MUR50,000 and, in the case of a person, to a term of imprisonment of up to two years. Additionally, in order to enforce the rules established under the Act, the commissioner of the DPO has been empowered with enhanced powers with regard to the handling of complaints, such as the power to call the parties and encourage an amicable resolution of the dispute wherever possible.

Any person who considers themselves aggrieved by the decision of the commissioner may, within 21 days

of the date of the decision, appeal to the Information and Communication Technologies Appeal Tribunal (the "Tribunal"), and the appeal will not be heard after the expiry of the period unless the aggrieved person demonstrates sufficient cause for not lodging same within that period.

Once an appeal is lodged, the Tribunal will endeavour to dispose of the appeal within six months of the date upon which the appeal was lodged.

## 9. Looking Forward

### 9.1 Upcoming Legal Reforms

#### Certificate of Character Reform

A new Certificate of Character Bill is set to replace the Certificate of Character Act 2012, aimed at easing employment and social reintegration for ex-offenders. Certain minor or old convictions will no longer appear on a person's certificate after specified time periods, while serious offences will still be disclosed. The Bill also prohibits employers from discriminating against applicants for unrelated past convictions, unless the offence poses a serious risk to the employer's reputation.

#### The Electronic Transactions (Amendment) Bill

This Bill seeks to amend the Electronic Transactions Act to modernise and broaden the legal framework for electronic transactions in Mauritius. It introduces technology-neutral rules for electronic signatures, recognises contracts concluded through automated systems, and establishes a legal framework for electronic transferable records based on principles of reliability and functional equivalence. The amendments aim to strengthen legal certainty, support paperless trade and cross-border digital transactions, and facilitate business in the digital economy.

**Basham, Ringe y Correa S.C.** is one of Latin America's leading full-service law firms. Founded in Mexico in 1912, the firm has over a century of experience advising clients on doing business in Mexico and internationally. What sets Basham apart is its unique ability to combine decades of legal tradition with a forward-thinking, international outlook. The firm offers strategic legal solutions that not only ensure compliance but also identify business opportunities. The firm has a multidisciplinary team of over 150 lawyers across four strategic offices in Mexico City, Monterrey, León and Querétaro, providing seamless nationwide coverage. Basham's teams work in full integration, allowing for cross-practice collaboration and industry-specific insight. Basham's integrated legal services go beyond compliance – they identify risks, unlock opportunities and provide tailored solutions that meet the demands of a rapidly evolving business and regulatory landscape. The firm is a trusted partner to multinational corporations, financial institutions, emerging companies and high net worth individuals.

## Authors

**Luis Álvarez Cervantes** is a partner at Basham with outstanding experience in labour litigation and advisory for both domestic and international clients. He is widely recognised for his deep expertise in labour audits, collective and individual labour relations, and complex employment structuring. His practice includes the design of compensation schemes, implementation of hiring and disciplinary policies, and execution of high-level executive terminations. Luis represents clients in individual and collective disputes nationwide, including strike procedures and amparo actions before federal courts. He also regularly provides tailored legal training to corporate clients, positioning him as a trusted adviser in Mexico's labour law landscape.

**Alejandro Barrera** is a senior tax partner at Basham with over 31 years of experience advising clients on tax planning, audits, compliance, transfer pricing, controversy, litigation and dispute resolution. His professional background includes positions at the Federal Tax Prosecution Agency and a New York-based brokerage firm, providing him with a strong perspective on cross-border taxation. A recipient of the prestigious Fulbright Scholarship, Alejandro earned his LLM in International Taxation from New York University. He is also a professor at some of Mexico's leading law schools, where he teaches Tax Law and International Taxation. Alejandro is fluent in Spanish, English, and Portuguese.

**Adolfo Athié Cervantes** is a partner at Basham with deep expertise in intellectual property, particularly litigation, strategic counselling and patent enforcement. He led the legal strategy behind Mexico's first patent term adjustment precedent (Bayer case) before the Supreme Court, benefiting the pharmaceutical sector. Adolfo represents clients in complex administrative and constitutional proceedings, including data protection, privacy and amparo actions. He is highly experienced in anti-counterfeiting, unfair competition and domain disputes, including WIPO cases. He is a member of INTA, IAPP, AMPPI and PTMG, and serves on the Constitutional Rights Committee of the Mexican Bar Association.

**Jesús Colunga** is a partner at Basham specialising in corporate law and M&A, with extensive experience advising foreign investors on cross-border transactions and corporate structures in Mexico. He regularly handles complex M&A deals, joint ventures, shareholder agreements, secured transactions and real estate investments. Jesús has deep expertise in the hospitality industry, including management and franchise agreements for international hotel groups. He is also active in academic circles, having taught constitutional law and contributed to leading publications on corporate governance and cross-border transactions. His practice combines legal precision with strategic insight for both domestic and international clients.

**Contributed by:** Luis Álvarez Cervantes, Adolfo Athié Cervantes, Alejandro Barrera, Jesús Colunga, Eduardo Kleinberg, Juan José López de Silanes, Carlos Martínez-Betanzos and Amílcar Peredo, **Basham, Ringe y Correa S.C.**

**Eduardo Kleinberg** is a senior partner and managing partner of Basham, with over 30 years of experience in intellectual property and franchising. He leads the firm's Trade Mark, Franchising and Licensing practice, advising Mexican and international clients on complex IP strategies, portfolio management, licensing and cross-border trade mark protection. Eduardo has played a key role in shaping IP policy in Mexico, representing the private sector in TPP negotiations and leading several major IP associations. His vast experience includes negotiating high-profile licensing and franchise agreements, managing global filings, and advising on e-commerce and digital rights. He is widely regarded as a leading IP expert in Latin America.

**Juan José López de Silanes** is a senior partner at Basham and one of Mexico's most experienced M&A corporate lawyers, with over 30 years of experience and a distinguished career advising leading national and multinational companies. He specialises in complex corporate governance, joint ventures, M&A, restructurings and foreign investment matters. His practice is deeply rooted in strategic transactional work, providing legal guidance across a wide range of industries. Juan José is known for his sharp business acumen and ability to lead multi-disciplinary teams on high-value, cross-border deals. His deep understanding of Mexican corporate law has positioned him as a key adviser for clients navigating sophisticated legal and regulatory environments.

**Carlos Martínez-Betanzos** is a partner at Basham with more than two decades of experience in Mexico City and New York, specialising in dispute resolution, particularly complex litigation (cross-border and domestic) and international arbitration (commercial and investor-state). He represents public and private clients across sectors such as energy and infrastructure, construction, telecoms, pharma and automotive, among others, including post-M&A, financial and other types of transactional disputes. Carlos has acted in proceedings under ICC, ICSID, LCIA ICDR/AAA, and other major international and domestic arbitral rules. His deep knowledge of public international law and commercial arbitration, coupled with his bicultural legal background, makes him a strategic adviser for high-stakes crisis management and dispute resolution matters.

**Amílcar Peredo** is a senior partner at Basham with nearly 30 years of experience and is widely regarded as one of Mexico's foremost antitrust lawyers. He advises national and international clients on all aspects of economic competition law, with a focus on high-impact, complex matters. Amílcar represents clients before the Antitrust Agency (COFECE) across multiple industries, including automotive, energy, pharma, tech, logistics and media. His practice spans merger control, cartel investigations, abuse of dominance, barriers to competition and immunity programmes. Known for his strategic insight and deep knowledge of regulatory trends, Amílcar is a trusted adviser in shaping competition law compliance and enforcement strategies in Mexico.

## 1. Legal System

### 1.1 Legal System and Judicial Order

The Mexican legal environment operates under a civil law system; where the law follows codified rules created and inspired by Roman law, the napoleon code system and finally Anglo-Saxon law.

Compared to other systems, such as common law, where precedents are fundamental, Mexico's legal system is mostly based on codes, laws and regulations that guide the behaviour of individuals and institutions. The Mexican legal system is strongly based on several core principles that support the application and interpretation of codes and laws; and jurisprudence comprised of decisions issued by authorities who determine the application and interpretation of principles through rulings. Even though the Mexican system is based on codes, principles and jurisprudence, it also relies on a system of precedents. Contrary to the precedent system used in common law, legal precedents in Mexico are used by judges to strengthen criteria rather than to reapply decisions used in previous binding case law. Despite the fact that most courts have their own criteria for ruling, precedents are used to guide the courts in a certain direction on the ruling based on how other courts have ruled in similar matters. Unfortunately, this does not mean that judges will or are forced to rule the same way as in previous cases, rather that they can be persuaded to consider previous criteria that should be applied directly, by analogy or by major reasoning.

The Mexican judicial branch consists of a hierarchical structure of state and federal courts, which have their own jurisdiction and responsibilities. The highest court in the Mexican judicial branch is the Supreme Court of Justice of the Nation, which has an important role in interpreting the Mexican Constitution, as well as hearing significant cases including local and federal laws, regardless if they concern constitutional issues or not.

On the one hand, the federal courts include district courts, collegiate circuit courts and specialised courts. These courts are responsible for adjudication cases that are related to federal matters, they manage cases that involve violations of federal laws, administrative disputes and issues between individuals, states or individuals and the federal government.

On the other hand, state courts are responsible for enforcing laws that are reserved to the states by the Constitution, such as civil, criminal and administrative laws that fall under the state's jurisdiction. Although the organisation of state courts can vary depending on the state, they are usually organised by municipal courts, trial courts and appellate courts.

## 2. Restrictions on Foreign Investments

### 2.1 Approval of Foreign Investments

The regulatory framework for foreign investment in Mexico is regulated by the Foreign Investment Law (FIL) and its regulations, which impose some restrictions on foreign investment in Mexico, which, while

considerably relaxed in recent years, still have an impact.

In accordance with the FIL, there are certain activities reserved exclusively for the state and reserved for Mexicans or Mexican companies with foreigner exclusion clauses, and other activities under specific regulations as follows.

- Activities reserved for the state – set forth in Article 5 of the FIL, as exploration and extraction of oil and other hydrocarbons in accordance with the Political Constitution of Mexico; planning and control of the national electricity system, as well as the public transmission and distribution of electrical energy, in terms of the provisions of the Political Constitution of Mexico; generation of nuclear energy, radioactive minerals, telegraphs, radiotelegraphy, postal service, bank note issuing, minting of coins, control, supervision and surveillance of ports, airports and heliports.
- Activities reserved exclusively to Mexicans or to Mexican companies with exclusion of foreigners' clause – set forth in Article 6 of the FIL, as domestic land transportation of passengers; tourism and freight not including messenger or courier services; development banking institutions; and rendering of certain professional and technical services expressly indicated in legal provisions, among others.
- Activities and acquisition subject to specific regulation – set forth in Article 7 of the FIL in which the foreign investment participation limits in activities and companies may not be surpassed directly, neither by trusts, agreements or partnerships, nor by-law agreements, pyramiding schemes or other mechanisms granting any control or a higher participation than the one established.

As provided in Section 8 of the FIL, a favourable resolution by the National Foreign Investment Commission (the "Commission") is required for foreign investment to participate in a percentage higher than 49% in activities with specific regulation including, among others, port services, in order to allow ships to conduct inland navigation operations, such as towing, mooring and barging; shipping companies engaged in the exploitation of ships solely for high-seas traffic; concessionaire or permissionaire companies of air fields for public service; legal services; construction, operation and exploitation of general railways, and public services of railway transportation.

In addition, pursuant to Section 9 of the FIL, a favourable resolution of the Commission is required for the foreign investment to participate in a Mexican company, either directly or indirectly, in more than 49% of the capital stock, solely when the value of the assets of the involved entities exceed the amount determined by the Commission.

It is important to take into consideration that the approvals need to be obtained prior to completing the investment.

### 2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance

If approval is required, the process can be completed electronically through the Legal Affairs System for Foreign Investment or by submitting the application in person before the Commission, by appointment. For the electronic procedure, applicants must have a valid email address, create an account with the Legal Affairs System for Foreign Investment and a hold a current e-signature.

In this regard, the following documentation must be prepared and submitted with the Commission.

- Official Questionnaire SE-02-007 (in Spanish) including information identifying how the project will be beneficial to Mexico's economy, as well as name and nationality of the investor, description of the project, percentage to be acquired, estimated value of the investment, sector or activity of the company, among other information, executed by the legal representative or person acting on behalf of the applicant.
- Written request comprising the corporate name or name of the person requesting the favourable resolution, name of the legal representative or the person acting on behalf of the applicant, an address and/or email for service of notices and the individuals authorised to receive them on behalf of the applicant, facts or reasons that motivated the request, details of the project's main features,

specifications concerning its plans to have subsidiary offices or branches, company activity in Mexico and the activity that such company carries out abroad, as well as the corporate group to which it belongs, indicating the Mexican companies in which the foreign investment participates directly or indirectly, and the activities in which it participates directly or indirectly, or in which the investment intends to participate, among others, which must be signed by the legal representative.
- Power of attorney granted before a notary public in favour of the individual acting on behalf of the applicant, duly formalised.
- Receipt evidencing payment of governmental fees.
- Corporate and legal documents, including, in case the investor is a:
  (a) person – updated resume or summary;
  (b) foreign legal entity – deed, articles of incorporation, certificate or any other document of incorporation, current by-laws, and annual report or description of the activities of the last fiscal year; and/or
  (c) Mexican legal entity – articles of incorporation, as well as those of its shareholders, and the financial statements of the last year or fiscal year.

If the investor has undergone changes in its corporate name, mergers or any other amendments to its by-laws, the documents evidencing such modifications will be needed.

The documents must be submitted in original and copy. After verification, the originals – except for the written application and proof of payment of fees – will be returned to the applicant at the time of submission.

The Commission has 45 business days from the day the application is filed to issue its ruling, counted from the date the documentation is filed. It should be noted that the Commission may request additional information prior to issuing its resolution.

If the request is approved, the applicant can proceed with the investment as authorised.

### 2.3 Commitments Required From Foreign Investors

If the authorisation is granted, the terms and conditions to be fulfilled will be set out in the authorisation.

In certain cases, the Commission may require investors to comply with certain obligations or commitments to guarantee national interest, security and development of the country.

Mexican companies with foreign investment, directly or indirectly, in their corporate capital, are obliged to be registered in the Section 2 of the National Registry of Foreign Investments (the "Registry") and comply with periodic reporting obligations (annual and quarterly reports).

Foreign investment is understood to include the participation of legal entities with a nationality other than Mexican, as well as foreign individuals or individuals who, although Mexican, hold or acquire another nationality and have their domicile outside the national territory.

The registration must be submitted within 40 business days following the date on which the foreign investment enters the Mexican company.

### 2.4 Right to Appeal

A new request may be made, or a means of appeal may be filed, either through an administrative review appeal or a nullity trial, before the Federal Court of Fiscal and Administrative Justice.

## 3. Corporate Vehicles

### 3.1 Most Common Forms of Legal Entity

The *Sociedad Anónima* (SA) and *Sociedad de Responsabilidad Limitada* (S de RL) are the most common vehicles used for business and investment purposes in Mexico.

#### SA

- Liability of shareholders is limited to the amount of their contributions.
- Requires a minimum of two shareholders, with no maximum limit.

- No minimum capital required by law; however, shareholders must subscribe the authorised capital in full within one year.
- May be incorporated as a variable capital entity (SA de CV) for added flexibility in capital increases or reductions without amending the by-laws.
- Governance is managed by a sole administrator or a board of directors.
- Shareholders' meetings are the supreme authority.

Furthermore, if the company is seeking capital contributions while maintaining operational control, SA can adopt the modality of a *Sociedad Anónima Promotora de Inversión* (SAPI) which is more flexible for joint ventures and may allow the shares to be offered to the public if registered with the National Securities Registry.

*Suitability*
- Greenfield projects requiring growth and potential capital raising.
- Holding companies for corporate group structuring.
- Public companies, including those listed on the Mexican Stock Exchange.
- Businesses with diverse shareholder bases or plans to attract investors.

### S de RL or S de RL de CV
- Liability is also limited to capital contributions.
- Requires at least two and no more than 50 members (partners).
- No minimum capital required by law.
- Capital is divided into equity quotas (not shares), which are not freely transferable.
- May be also incorporated as a variable capital company (S de RL de CV).
- Governance is conducted by one or more managers.
- Certain decisions require unanimous consent of the partners.

*Suitability*
- Joint ventures, where control over partner admission is crucial.
- Closely held companies or family-owned businesses.
- Entities with a limited number of partners seeking simplified governance.

Finally, the SAS (*Sociedad por Acciones Simplificada*) is a company structure designed to simplify the incorporation process for micro and small businesses. It allows one or more individual shareholders, with liability limited to their contributions. The regime establishes an administrative process with full legal effects, and the total annual income cannot exceed MXN7,398,448.74 (approximately USD407,000), which is updated annually.

## 3.2 Incorporation Process
The main steps for incorporation are the following.

### Choice of Corporate Vehicle
Both the SA and the S de RL offer limited liability and a flexible governance structure.

### Corporate Name
Before incorporating a company, it is necessary to obtain a name authorisation permit from the Ministry of Economy, which typically takes between seven and 14 business days.

### Incorporation Procedure
The process involves the following key steps:

- drafting and approval of the by-laws;
- issuance of a notarised and apostilled or legalised power of attorney by shareholders/partners for incorporation;
- appointment of directors, managers, officers and statutory auditor (commissary); and
- granting of powers of attorney for daily operations.

### Execution and Issuance of Articles of Incorporation and Post-Incorporation Obligations for Operation of Company
Once all previous steps are completed, the notary will execute the articles of incorporation and proceed to register the company before (i) the Public Registry of Commerce, (ii) the Federal Taxpayers' Registry (including obtaining a tax ID and tax e-signature), and (iii) the National Foreign Investment Registry.

This stage may take between ten and 60 business days to complete.

### 3.3 Ongoing Reporting and Disclosure Obligations

Private companies in Mexico are subject to various reporting and disclosure obligations, including:

- modifications to articles of incorporation – any amendments must be formalised through a notarial public deed and registered with the Public Registry of Commerce;
- to the National RNIE:
  - (a) quarterly updates – companies must file updates with the RNIE for significant changes; and
  - (b) annual report – companies must submit a detailed report to the RNIE if their assets, liabilities or revenues exceed MXN110 million. This report is mandatory and failure to comply results in penalties;
- to the Secretariat of Economy:
  - (a) reports on capital and shareholder changes;
  - (b) notice of transfers and constitution of rights over shares;
- beneficial owner (UBO) registration – Tax Authority:
  - (a) notice of changes in shareholders; and
- SHCP (Secretariat of Finance and Public Credit):
  - (a) ultimate beneficiary registration.

### 3.4 Management Structures

Management structures available in the most common legal entities are the following.

#### One Individual

In an SA, this person is called the sole administrator and in an S de RL, they are called the single manager. A single individual is appointed to manage and represent the company. The sole administrator or manager has the authority granted by the incorporation deed and the law. This structure allows the individual to act independently, unless limitations are specified in the company's by-laws. This structure is ideal for companies that require quick decision-making, greater control and a simplified structure.

#### Board of Directors (SA) or Board of Managers (S de RL)

In an SA or S de RL, the company is typically managed by two or more individuals who make decisions collectively as a board. If there are three or more administrators, the by-laws will determine the rights of the minority in the appointment process. The minority holding at least 25% of the share capital has the right to appoint one board member. This threshold is reduced to 10% for companies with shares listed on the Stock Exchange. This structure is better suited for larger companies where diverse perspectives, shared responsibility, and supervision are necessary. Typically, a minimum of three directors/managers are assigned.

### 3.5 Directors', Officers' and Shareholders' Liability

The General Law of Commercial Companies requires administrators to act in the best interests of the company, ensuring proper management of financial and legal obligations, and protecting shareholder rights. Administrators are jointly responsible with the company for maintaining accurate financial records, ensuring compliance with legal requirements, and executing shareholder resolutions. If administrators are aware of any irregularities committed by previous administrators and fail to report them, they can be held liable for any resulting damages.

The corporate veil protects the company's assets and operations from external claims, separating the company's responsibilities from those of its shareholders. Administrators can also be held liable for favouring certain shareholders, gaining personal financial benefits or spreading false information. Shareholders cannot waive this responsibility through the company's by-laws, but the company can take out insurance or bonds to cover potential indemnifications, excluding cases of fraud or bad-faith actions.

## 4. Employment Law

### 4.1 Nature of Applicable Regulations

Employment relationships in Mexico are governed by a comprehensive framework rooted in constitutional principles and developed through statutory law, regulations, case law (jurisprudence) and other binding sources. This framework reflects Mexico's strong tradition of labour protection and the public policy nature of labour law.

The foundation of Mexican labour law lies in Article 123 of the Mexican Constitution, which enshrines fundamental labour rights such as fair wages, maximum working hours, rest periods and the right to unionise.

Additionally, international treaties signed by Mexico serve as another source of law and play a significant role in shaping domestic labour standards, particularly the conventions of the International Labour Organization (ILO) and the labour provisions of the United States–Mexico–Canada Agreement (USMCA).

The Federal Labour Law (FLL) is the principal statute that regulates employment in Mexico. It governs both individual and collective employment relationships, establishing minimum benefits, termination standards, and mechanisms for dispute resolution. As a matter of public order, most of its provisions are mandatory and protective of employees.

Specific regulations, known as Mexican Official Standards, are issued by the federal government to complement the FLL, covering areas such as occupational health and safety, telework, psychosocial risk prevention and workplace inclusion of people with disabilities, among others.

All terms and conditions of employment must be set out in writing, as the burden of proof for demonstrating them rests with the employer.

## 4.2 Characteristics of Employment Contracts

Individual employment contracts are governed by the FLL, which establishes the minimum requirements for these documents.

The terms and conditions of employment must be set in writing and must include the following.

- Name, nationality, age, gender, marital status, Unique Population Registry Code (CURP), Federal Taxpayer Registry (RFC) and address, of both the employee and the employer.
- The type of employment relationship and whether it is subject to a probationary period or initial training.
- The service(s) to be provided.
- The place or places where the work will be performed.
- The duration of the workday.
- The method and amount of salary payment.
- The day and place of salary payment.
- An employee training clause.
- Other working conditions, such as rest days, vacation entitlements and any other terms agreed upon by the employer and the employee.
- The designation of beneficiaries for payment of accrued benefits upon the employee's death or disappearance resulting from a criminal act.

Since offer letters are not expressly regulated under the FLL, if a written employment contract is not executed, the offer letter will be considered as such.

The FLL regulates the permissible duration of employment contracts and recognises the following types:

- indefinite period;
- fixed term; and
- specific work or seasonal.

As a general rule, indefinite period contracts prevail in Mexico. Fixed-term, specific work and seasonal agreements are exceptions and must be duly justified to avoid reclassification as indefinite period contracts.

Employment contracts may include probationary period or initial training clauses under certain conditions.

## 4.3 Working Time

There is no distinction between types of employees regarding working hours and overtime eligibility. All employees are subject to the same maximum weekly working hours and are entitled to overtime pay when these limits are exceeded.

The FLL sets out three types of shifts.

- Day shift – 6:00 am to 8:00 pm – maximum 8 hours per day.
- Night shift – 8:00 pm to 6:00 am – maximum 7 hours per day.
- Mixed shift – combination of day and night periods; if the night portion exceeds 3.5 hours, it is deemed a night shift – maximum 7.5 hours per day.

Employees must have at least one paid day of rest for every six consecutive days worked.

Currently, the standard workweek is 48 hours. However, on 3 March 2026, a constitutional reform was enacted to gradually reduce the workweek under the following terms:

- 2026 – 48 hours (transition year);
- 2027 – 46 hours;
- 2028 – 44 hours;
- 2029 – 42 hours; and
- 2030 – 40 hours

Employees are entitled to a daily rest break of at least 30 minutes per shift. If taken on the employer's premises, the break is counted as part of working time.

Any hours exceeding the statutory weekly maximum are considered overtime and must be paid accordingly. Overtime cannot be substituted with other benefits. All employees, regardless of position, rank or classification, are entitled to overtime pay for hours actually worked beyond the legal maximum. Overtime must be performed voluntarily, under extraordinary circumstances, and compensated according to the law.

## 4.4 Termination of Employment Contracts

Mexico's labour law framework provides strong protections for employees, and the concept of "employment at will" does not exist.

Although employers may end the employment relationship at any time, it is important to distinguish between termination with cause and termination without cause.

### Termination With Cause

Article 47 of the FLL specifies the causes that justify termination without liability for the employer, such as gross misconduct, material damages and unjustified absences, among others.

The employer must have solid evidence to support the cause of termination. In the event of a dispute before labour authorities, employers have full burden of proof and lack of evidence may result in the dismissal being considered without cause, entitling the employee to full severance, including lost wages (capped at one year) plus legal interest.

If termination with cause is properly substantiated, the employee is entitled only to accrued benefits up to the termination date. The employer must initiate a specific termination process within 30 days from when it became aware of the grounds for dismissal.

### Termination Without Cause

If the employer terminates the employment relationship without just cause as defined by law, the employee is entitled to receive:

- a constitutional severance payment equal to 90 days of daily integrated salary;
- 20 days of daily integrated salary for each year of service;
- a seniority premium equivalent to 12 days' salary per year worked, capped at twice the minimum wage; and
- accrued salaries and benefits.

The integrated salary is comprised of the employee's base salary plus any benefits received for their work during the past 12 months prior termination.

No prior notice is required for termination.

All terminations must be documented in writing either through a mutual employment termination agreement or, depending on the type of termination, with the corresponding notices or supporting documentation.

### Collective Redundancies

The FLL defines collective redundancies as the termination of employment relationships resulting from the closure of companies or establishments, or from the permanent reduction of their operations.

The law recognises the following as valid grounds for termination in such cases: force majeure or fortuitous events, the physical or mental incapacity or death of the employer, evident infeasibility of continuing operations, depletion of the natural resource in extractive industries, and legally declared insolvency or bankruptcy.

In these situations, a specific legal process must be followed.

### 4.5 Employee Representations

There are specific circumstances and legal frameworks that trigger employee representation and require management to inform or consult with employees through their representatives.

The most common form of employee representation is through labour unions, which are voluntary organisations formed by employees to defend their collective interests. When a union is legally recognised by the labour authorities, it acts as the representative body for its members in collective bargaining agreements (CBAs), dispute resolution and other labour matters.

Employee representation is also required to form the mandatory joint committees established by the FLL, which include:

- Safety and Hygiene Joint Committee;
- Joint Committee for the Preparation of the General Seniority Chart;
- Joint Committee for Annual Profit Sharing;
- Training, Teaching, and Productivity Joint Committee (for employers with more than 50 employees); and
- Joint Committee for the Drafting of the Internal Work Regulations (if the company opts to have Internal Work Regulations).

All the committees mentioned above must have an equal number of employee and employer representatives.

## 5. Tax Law

### 5.1 Taxes Applicable to Employees/ Employers

#### Employee Contributions

An employee is subject to two types of contributions – income tax and social charges, which, in turn, are integrated into social security fees and a retirement fund (AFORE).

##### *Income tax*

Income tax is calculated according to the gross income of the employee based on a progressive tax rate, which goes from 1.92% up to 35%. For this purpose, the employee must be a Mexican tax resident.

##### *Social charges*

*Social security fees*

While the employer is responsible for paying most of the social security fees, the employee is responsible for contributing part of this fee.

The social security fee is calculated based on a progressive rate but limited to 25 UMA's (UMA is the acronym for *Unidad de Medida y Actualización*, which is a daily quota used in Mexico for economic calculations adjusted by inflation on a yearly basis. Currently a UMA equivalent is about USD6.80).

*AFORE*

Part of the AFORE supported by the employee.

#### Employer Contributions

##### *Income tax*

While the employer is not the taxpayer for the employee's income tax, it is responsible for the calculation, withholding and payment of the portion of the employee's salary which constitutes income tax.

##### *Social charges*

*Social security fees*

The employer is the taxpayer of most of the social security fee, and it is also responsible for calculating and withholding the employee's social security fee.

*AFORE*

The employee discounts and contributes the retirement fee from the employee salary, but they are not considered a taxpayer to the retirement fund.

*Housing fund (INFONAVIT)*

The employer is responsible for the housing fund, which is approximately 5% of the salary paid.

*Payroll tax*

This is a local tax levied upon the payroll. Ordinarily it ranges from 2% to 3% of the salary paid to the employee and it is paid on a monthly basis.

It is important to mention that there might be other fees that the employer could pay such as union fees, profit sharing, etc, but they do not qualify as tax contributions; rather as labour obligations of the employer.

## 5.2 Taxes Applicable to Businesses

Mexican tax resident entities are subject to pay the following taxes.

### Income Tax

Mexican tax resident entities are subject to income tax on their profits at a 30% tax rate. Profit in general terms in calculated by deducting from gross income the allowed deductions such as investments, costs of goods sold, etc. Taxpayers should file an estimated tax return on a monthly basis based on the monthly income received and applying a profit coefficient to this monthly income. In addition, taxpayers should file annual tax returns no later than the third month to the end of the fiscal calendar year (ordinarily running from January 1st until December 31st).

#### *Dividends*

When distributing dividends, there are two taxes to consider.

- Corporate dividend tax – in Mexico, dividends paid out of profits on which the company has already paid the relevant tax are tax free from the corporate dividend tax. For this purpose, companies have to keep a record of the after profits account or *Cuenta de Utilidad Fiscal Neta* (CUFIN).
- Individual or foreign resident dividend tax – 10% withholding applies to dividends paid to individuals or foreign residents. However, in the case of foreign residents, this tax could be reduced depending on the double tax treaties executed by Mexico.

#### *Interest*

Interest is a deductible item in Mexico, but there are several limitations and requirements to observe.

- General requirements – interest would be deductible as long as it is used for strictly indispensable activities of the company.
- Net interest limit deduction – interest is deductible up to 30% of the adjusted taxable income.
- Preferential tax regime limit – interest paid to a related party that is a taxpayer in a preferential tax regime (tax haven) will not be deductible unless the taxpayer provides evidence that the transaction is at fair market value and it has a business purpose.
- Hybrid transaction – if a transaction is considered as an interest in Mexico, but it is not taxed abroad, it will not be deductible in Mexico.
- Back-to-back – if certain conditions are not met, interest paid to the creditor of a debt will not be deductible as it will be recharacterised as a dividend.
- Transfer pricing – interest paid should be at fair market value, otherwise the excess will not be deductible.

### Value Added Tax

Taxpayers are required to pay 16% VAT when, in national territory, they (i) transfer goods, (ii) render independent services, (iii) grant temporary use or exploitation of goods, or (iv) import goods or services. However, 0% VAT would apply if any of these activities are deemed to be exported. The taxpayer should pay the VAT on the difference between the VAT charged to its clients and the VAT charged by its suppliers. If the VAT paid to suppliers exceeds the VAT paid by the taxpayer to third party, then the difference shall be paid to the authorised offices.

## 5.3 Available Tax Credits/Incentives

Mexican Income Tax Law allows the following incentives.

- Individual taxpayers can deduct certain deposits in personal savings accounts, retirement insurance premiums, and qualifying mutual fund investments from taxable income, subject to an annual cap of MXN213,973.20 and 15% of the total income of the taxpayer, whichever is the lowest.
- Income tax deduction equal to 25% of salary paid to employees with qualifying disabilities or to elderly employees (65+).
- Special tax treatment for real estate investment trusts in Mexico that acquire, build or finance leased properties, or acquire rights to lease income.

- Income, gains, early disposals and capital returns are taxed or deferred for qualifying real estate trusts.
- A tax credit will be available to income taxpayers for contributions to domestic film production or distribution projects. The credit equals the contributed amount, up to 10% of the prior year's income tax. This can be used to offset annual and estimated tax; unused amounts may be carried forward for up to ten years.
- A tax incentive for cultural investment projects (theatrical productions, visual arts, dance, music, and literary works). The tax credit can be used to offset annual and estimated income tax capped at 10% of the prior year's tax. Unused credit can be carried forward for up to ten years.
- Real estate developers can deduct land acquisition costs in the purchase year if 85% of income is from developments. Upon sale, the full value is taxable, plus an additional 3% per elapsed year (inflation-adjusted). If not sold within three years, the updated cost becomes taxable. The rule applies to all current land assets for at least five years.
- Venture capital investments in unlisted Mexican companies can receive special tax treatment if made through qualifying Mexican trusts. These trusts must invest at least 80% of assets in the equity or loans of such companies, hold shares for a minimum of two years, distribute at least 80% of annual income within two months after year-end, and meet SAT regulatory requirements. Remaining assets must be in low-risk government or debt instruments.
- Production co-operatives composed solely of individuals may opt to calculate income tax under individual rules, with tax payment deferred until profits are distributed. If profits remain undistributed for over two years, tax must be paid. Co-operatives must maintain an updated taxable profit account, invest undistributed profits in employment- or membership-generating assets, and treat yields/advances to members as employment income. No estimated income tax payments are required.
- Taxpayers conducting R&D projects in Mexico may claim a 30% tax credit on incremental annual R&D expenses and investments versus the prior three-year average against income tax.
- Taxpayers may claim a tax credit for contributions to high-performance sports infrastructure and athlete programs in Mexico, capped at 10% of the prior year's income tax.
- Taxpayers can claim a tax credit equal to 30% of investments in publicly accessible, fixed electric vehicle charging equipment, applied against income tax for the year of investment. Unused credits can be carried forward for up to ten years but are lost if not applied in the eligible year. The credit is not to be included as taxable income.
- Foreign fiscally transparent entities managing private equity investments in Mexican companies may maintain tax transparency if specific requirements are met. These include: registering and documenting all members' tax residency with the SAT, being created in jurisdictions with broad information exchange agreements with Mexico, ensuring members are effective income beneficiaries, and requiring members to report related income. Non-compliance by any member results in loss of transparency proportional to their participation. This applies only to income from interest, dividends, capital gains or real estate leases.

Fiscal Incentives for Development Poles (PODEBIS) provides for an income tax exemption as follows: 0% ISR for the first three years; 50–90% reduction for the next three years if job creation goals are met. No VAT payable for four years. In addition, 100% immediate deduction of new fixed assets available until 2030; and 25% deduction for training and innovation on the increase in expenses in these areas, also valid until 2030.

### 5.4 Tax Consolidation

As of 2014, the Traditional Tax Consolidation regime disappeared and it was substituted with what it is known as the Optional Regime for Group Companies. Under this regime, losses are not consolidated but rather taxpayers may defer income tax for three years at the most.

### 5.5 Thin Capitalisation Rules and Other Limitations

Interest deductions are limited to net interest exceeding three times its adjusted tax profit when annual

accrued interest surpasses MXN20 million for the taxpayer and related group entities.

### 5.6 Transfer Pricing

Mexico's transfer pricing rules require that related-party transactions (domestic or cross-border) be carried out at arm's length under conditions that would have been agreed between independent parties in comparable transactions. Mexico must apply OECD-recognised methods (CUP, resale price, cost plus, profit split, residual profit split and TNMM), selecting the most appropriate.

### 5.7 Anti-Evasion Rules

There are anti-evasion rules in Mexico, such as back-to-back, thin capitalisation rules, principal purposes test, disclosure of reportable schemes, beneficial ownership rules, anti-hybrid mismatch rules, the EBDITA rule, CFC rules and transfer pricing rules.

### 5.8 Tariffs

In Mexico, the tariff system primarily consists of the general import tax, which must comply with the maximum levels set by the World Trade Organization (WTO). Additionally, there are preferential tariffs for goods coming from countries with which Mexico has free trade agreements (FTAs). Mexico has a network of trade agreements with approximately 50 countries.

Mexico imposes low tariffs; however, as noted in its most recent Trade Policy Review at the WTO, the tariffs on agricultural products are higher than those on non-agricultural products.

The recent policies and actions of the US government have had significant effects on global trade, including in Mexico. In the coming months, Mexico, Canada and the United States will conduct the USMCA review. The outcome of this review will be crucial for Mexico's international trade, as it may lead to regulatory adjustments and provide greater certainty for regional trade.

## 6. Competition Law

### 6.1 Merger Control Notification

Under the Federal Economic Competition Law (LFCE), mergers and acquisitions are deemed as concentrations and must be notified to the competition authority – the National Antitrust Commission (CNA) which succeeded the Federal Economic Competition Commission (COFECE) in October 2015 – when they meet the monetary thresholds set by the LFCE. Pre-merger notification is mandatory once any of the below thresholds are exceeded.

- Transaction value – when the transaction, or series of transactions, irrespective of the place of execution, result in a direct or indirect amount in Mexico of more than 16 million measurement units (UMA), currently equivalent to MXN1,876,960,000 (approximately USD108,196,476 at an exchange rate of MXN17.3477 per US dollar, according to the Bank of Mexico exchange rate on 18 Mat 2026).
- Size of the target – when the transaction or series of transactions result in the accumulation of 30% or more of the assets or shares of an economic agent whose assets or annual sales in Mexico exceed 16 million UMAs, currently equivalent to MXN1,876,960,000 (approximately USD108,196,476).
- Size of the parties – when the transaction or series of transactions imply an aggregation in Mexico of assets or share capital that exceed 7.4 million UMAs, currently equivalent to MXN868,094,000 (approximately USD50,040,870), and the parties involved, either individually or combined, have assets or annual sales in Mexico exceeding 40 million UMAs, equivalent to MXN4,692,400,000 (approximately USD242,529,474).

#### Types of Transactions Covered

The LFCE defines concentration as the merger, acquisition of control, or any act through which companies, associations, shares, partnership interests, trusts or assets in general are joined together, and carried out among competitors, suppliers, clients or any other economic agents. It includes acquisition of shares, equity interests, assets and joint venture agreements, among others.

#### Additional Considerations

- Gun-jumping prohibition – the transaction cannot be closed, and no control or influence can be transferred until clearance is granted. Failure to notify a transaction that exceeds any of the statu-

tory thresholds may result in fines of up to 8% of the economic agent's revenues, and the CNA may order the reversal of the transaction.
- Effects doctrine – under the effects doctrine, a transaction abroad must be notified in Mexico if it meets the monetary thresholds and has effects in Mexico. Although there is no explicit "local effects" test, the thresholds require a Mexican nexus (eg, Mexican assets, equity or sales). Thus, foreign-to-foreign deals trigger filing if they involve Mexican assets or equity, or if the parties' sales in Mexico exceed the thresholds. No filing is required if the target has no

## 6.2 Merger Control Procedure

The following are the main procedural steps and typical timing for merger notifications.

### Pre-Filing Preparation

The notifying parties must first assess whether the transaction falls within the definition of "concentration" under the LFCE and whether any of the statutory thresholds are triggered.

### Filing and Completeness Review

The notification must be submitted electronically, including all documentation required under the LFCE and its Regulations. Upon receipt, the CNA conducts a completeness review, typically within ten business days. If the authority determines that the filing is incomplete, it may issue an initial information request, commonly referred to as the Basic RFI. Once the Basic RFI is responded to, should the CNA's merger department conclude that additional data or clarification is required, a second request, known as the Additional RFI, may follow within 15 business days. These RFIs are common and extend the review process, though they do not signal a negative outcome. The 30-day term to issue a final resolution does not begin until all requested information has been provided in full and the notification is deemed complete by the CNA.

### Substantive Review

Once the notification is deemed complete, the CNA has 30 business days to issue a decision. In complex cases, this period may extend by up to 20 additional business days.

### Decision and Clearance

The CNA may authorise concentration unconditionally, approve it subject to remedies, or prohibit the transaction if it determines that it would substantially lessen competition. The decision issued by the CNA is valid for six months, extendable for an additional six months upon request.

Until clearance is granted and throughout the entire review process, the parties are prohibited from closing or implementing the transaction.

### Timing

Simple transactions are generally cleared within two to three months for straightforward cases. Cases requiring additional data or market analysis typically take three to four months to account for economic evidence, market definition and responses to the authority. More complex transactions involving remedies or in-depth reviews may extend to six to eight months or longer.

## 6.3 Cartels

Cartels are classified as absolute monopolistic practices and are prohibited per se. The LFCE prohibits any contract, agreement, arrangement, combination or exchanges of information between actual or potential competitors that have the object or effect of: fixing or manipulating prices; restricting output or supply; allocating markets, customers or suppliers; or co-ordinating bids or abstaining from bidding in public procurements.

### Sanctions

Sanctions for cartel conduct in Mexico are severe and aim to deter and remedy anti-competitive behaviour. The CNA may impose administrative fines of up to 15% of an economic agent's annual revenues and order the immediate cessation of the conduct. Individuals involved can face five to ten years of imprisonment, while officers and directors may be disqualified from serving as managers, board members or similar roles for up to five years.

Additional penalties include exclusion from public procurement and civil liability. The CNA can directly bar companies involved in cartel practices from par-

ticipating in public procurement processes for up to five years.

### Leniency Programme

Mexico's leniency programme allows any participant to voluntarily disclose its involvement in an absolute monopolistic practice in exchange for significant benefits, including reduced fines, immunity from criminal prosecution, protection against disqualification sanctions, and exemption from collective legal actions brought by the CNA. Applicants must cease participation immediately and fully assist the CNA throughout the case.

The first applicant providing sufficient evidence before the investigation formally begins may receive the minimum fine (as low as USD19), while subsequent applicants filing before the third extension can obtain reductions of 50%, 30% or 20%, depending on their order. All successful applicants are granted full immunity from criminal prosecution, disqualification sanctions and collective civil actions.

### Jurisdiction and Effects Doctrine

Although not frequently invoked, the CNA may apply an effects-based standard, asserting jurisdiction over cartel conduct regardless of where it occurs. Practices carried out within or outside Mexico can fall under its authority when they produce, or can produce, actual or potential effects in Mexican markets.

## 6.4 Abuse of Dominant Position

The LFCE prohibits abuses of dominance, also known as relative monopolistic practices. These provisions apply to unilateral behaviour by one or more economic agents with substantial market power that has the object or effect of unduly displacing competitors, impeding their access to the market, establishing exclusive advantages or unduly restricting the ability of other economic agents to compete.

### Determining Dominance in Mexico

Holding a dominant position is not in itself illegal. It is the abuse of that dominant position that is prohibited. The CNA determines whether a company holds a dominant position – referred to as substantial market power – through a structured, case-specific analysis.

A company is deemed to have substantial market power when it can unilaterally influence market conditions in a relevant market, by setting prices or restricting supply, without facing effective competitive constraints.

### Relevant Market

Defining the relevant market requires considering both product and geographic dimensions. The product market covers goods or services that consumers see as interchangeable based on features, price and use, while the geographic market identifies the area where these substitutes are offered under comparable price and access conditions.

### Types of Conduct Deemed as Abuse of Dominance

Restricted practices include exclusive dealing or distribution arrangements, resale price maintenance, tying, exclusive supply obligations, refusals to deal, collective boycotts, predatory pricing, loyalty rebates, cross-subsidisation, unjustified price discrimination, denial of access to essential inputs, margin squeezes, and raising rivals' costs or foreclosing competition.

### Sanctions

The CNA may impose fines of up to 10% of the economic agent's revenues, as well as any measures necessary to eliminate or remedy the anti-competitive conduct.

### Remedies

When a company with substantial market power engages in unilateral conduct that violates antitrust laws, the CNA can impose behavioural or structural remedies to restore competition and prevent future infringements.

The LFCE also allows companies under investigation for abuse of dominance to offer voluntary remedies, known as Commitments, to address the concerns identified by the Investigative Authority. Commitments are designed to cease or correct the conduct and can significantly reduce fines. They may be submitted during the investigation phase, where viable commitments can lead to a full fine reduction and even closure of the case without liability, or during the trial-like stage, where acknowledging the infringement may result in up to a 50% fine reduction.

## 7. Intellectual Property

### 7.1 Patents

In Mexico, inventions are defined as any human creation that allows the transformation of the matter or energy in nature for their use by humanity and the satisfaction of specific needs. New inventions resulting from an inventive activity and susceptible to industrial exploitation may be subject to a patent.

Patents protect technical solutions to a problem and confer on their holders the exclusive right to exploit the invention and to prevent others, without authorisation, from making, using, selling, offering for sale, or importing the patented product, as well as from using the patented process or importing into Mexico products directly obtained from such process. Certain subject matter is excluded from patentability, such as discoveries, scientific theories, mathematical methods, surgical or therapeutic methods, and inventions contrary to public order or morality.

A patent is an exclusive right granted by the state to an inventor over their invention, granting them the right to prevent third parties from manufacturing, using or selling the invention without their consent.

#### Grant Procedure

A right arises with a granted patent/registration through the filing of a patent application before the Mexican Institute of Industrial Property (*Instituto Mexicano de la Propiedad Industrial*, or IMPI). The application must contain all relevant information regarding the inventor and, if the right has been assigned, the relevant information of the assignee. It must also contain formal documents such as the assignment and the power of attorney document. In addition, it is possible to claim priority from a previous application filed in a different country that is a member of the Paris Convention for the Protection of Industrial Property,

The application may also be filed as a National Phase of a Patent Co-Operation Treaty (PCT) Patent Application, in terms of which Mexico is a 30-month term country. The application is studied by a formal examiner at IMPI, who will determine if there are any formal documents missing and if all documents are in good order. The application must contain the invention's specification, claims and drawings, in Spanish. The application must be published in the Mexican Industrial Property Gazette as soon as possible following the expiry of a period of 18 months from the national filing date for Convention applications, provided that all formalities are deemed complete. After the publication has taken place and a two-month period for third-party observations has passed, the application is studied as soon as possible by a technical examiner at IMPI and, if deemed necessary, an official action is issued, requesting clarification or changes to the application. This may be done up to four times.

#### Timeline for Grant Procedure

The grant procedure currently takes three to five years from the filing date.

A patent grants a right of exclusive use over an invention for 20 years counted from the filing of the patent application. For PCT applications, the effective filing date in Mexico is the date of filing of the international patent application.

#### Term Extensions

When, during the prosecution of a patent application, there was an unreasonable delay attributable to IMPI, a supplementary certificate can be sought for IMPI to adjust the term of the patent.

According to the former North American Free Trade Agreement (NAFTA), now replaced by the United States-Mexico-Canada Agreement (USMCA), the owner of a patent could seek compensation for lost patent term time if IMPI took more than three years to grant the patent. The NAFTA treaty is enforced on all patent applications filed before 1 July 2020. In this regard, the authors' firm has successfully obtained a favourable decision in which, according to NAFTA, the lost enforceable time of a patent filed before 1 July 2020 was compensated with three additional years. This new precedent has already been published in the Official Gazette dated 8 January 2021 as a relevant case entitled: "Patents. When there are delays attributable to the administrative authority in a patent's approval, its validity may not be less than 17 years counted from the date of its granting." The precedent was issued by the Supreme Court of Justice in the

Bayer case handled by the authors' firm, and is in full force and effect for all patents filed before 1 July 2020.

### Rights

The patent holder has the right to an injunction and may claim damages from third parties even if the illegitimate use of their patent was made before granting, provided that the application had already been published.

### Damages

A rights-holder may claim damages through two different procedures: directly before the judiciary (either federal or state), by means of a civil or commercial action and without the need to obtain a definite infringement ruling to make the claim, or through IMPI, through a motion.

If a counterclaim for the annulment of the respective patent, registration or publication is filed, the court shall suspend the procedure until the respective judgment is entered.

To warrant the damages before the judiciary or IMPI, it is necessary to demonstrate wrongful conduct, the harm caused and a direct causal relationship between the two.

## 7.2 Trade Marks

Trade marks are defined in Mexican law as any signs perceptible through the senses, susceptible of being represented so as to determine the object of protection and identify products or services. This includes letters and numbers, designs, three-dimensional shapes, sounds, scents, trade dress and combinations thereof.

### Registration Process

To obtain a right of exclusive use over a trade mark, it is necessary to register it before the IMPI by submitting an application form and making a payment of government fees. The IMPI will take approximately ten days to publish the trade mark application in the Industrial Property Gazette. This will start a period of one month for any third party to oppose the application. With opposition or without it, the examiner of the Mexican Trade Mark Office will take approximately four to six months to conduct an examination.

### Use

Once a trade mark is registered, the owner has a duty to use it in Mexico. Unlike other jurisdictions, use is not necessary to obtain the registration, only to maintain it.

Upon the third year of the registration of the trade mark, a period of three months will run in which the owner of the registration must submit a statement under oath listing the specific products or services in which the trade mark is used. The coverage of products or services covered by the trade mark registration will be limited to only those for which use is timely declared. If no use is declared at all, the registration will be lost.

In addition, use needs to be declared with every renewal.

Use means that the products or services identified by the trade mark must be available to consumers in Mexico.

### Term

A trade mark registration will last ten years from its grant. It can be renewed for identical periods of time, provided that the owner files the renewal forms in time and declares under oath that the trade mark is in use.

### Assignments and Licences

A trade mark registration may be assigned. However, it is necessary to record the assignment with the IMPI in order for the new owner to be able to act against third parties.

### Enforcement

The owner of a registered trade mark has a right of exclusive use over it. The unauthorised use of identical or confusingly similar trade marks for identical or similar goods and services constitutes infringement and allows the owner of the registration to initiate a proceeding before the IMPI to have the infringer punished with a substantial fine. In addition, preliminary injunctions can be sought to halt the alleged infringing conduct. The injunctions can become permanent in the final decision of the case.

To obtain an injunction, a prima facie current or imminent infringement must be shown.

In addition, awards for damages can be sought in two ways. First, upon the successful completion of a trade mark infringement proceeding, the plaintiff can ask the IMPI to initiate an ancillary proceeding to award damages. Alternatively, the plaintiff may resort directly to a civil judge and ask for damages to be awarded.

Lastly, certain forms of trade mark infringement, particularly those performed on a commercial scale, are federal crimes punishable by fines and up to ten years of imprisonment. It is possible for the owner of the infringed trade mark registration to also submit a criminal complaint to initiate an investigative process by the General Attorney's Office that may culminate in a criminal conviction.

It is important to consider that ambush marketing has been codified as a specific form of trade mark infringement in a recent legal reform.

## 7.3 Industrial Designs

An industrial design in Mexico is understood as any combination of shapes, lines, colours, or three-dimensional forms incorporated into a product that give it a special appearance without altering its function. The law recognises two categories: industrial drawings, which are combinations of figures, lines or colours incorporated into a product to give it a distinctive appearance, and industrial models, which are three-dimensional shapes that serve as patterns for manufacturing a product, giving it a special appearance.

The term of protection for an industrial design is five years from the filing date, renewable for successive periods of the same duration up to a maximum of 25 years. Renewal fees must be paid within the established time limits, and a six-month grace period is available subject to a surcharge.

Registration is carried out before the IMPI. The process begins with the filing of an application, either electronically or in person, which must include the applicant's information, drawings or photographs of the design, a description and proof of payment of fees.

The registration of an industrial design grants its holder the exclusive right to use it and to prevent third parties from manufacturing, selling or importing products incorporating the design without authorisation. Enforcement is handled through IMPI, which has authority to conduct inspections, order the seizure of infringing goods, impose administrative sanctions, and issue precautionary measures to stop infringing acts.

Remedies available to the holder of a registered industrial design include injunctions, the seizure and destruction of infringing goods, the imposition of administrative fines, and the possibility of claiming damages before the courts once IMPI's infringement resolution is final, with the law establishing a minimum compensation equivalent to 40% of the retail price of each infringing product.

## 7.4 Copyright

Mexico protects all works of original creation and is party to the Berne Convention. As such, all productions in the literary, scientific and artistic fields can be subject to copyright protection in Mexico.

### Term of Protection

Copyright protection in Mexico will last for the life of the author plus 100 years. The author in Mexico is always an individual and it can never be a legal entity, though a legal entity could own the copyright through an assignment or a work-for-hire agreement.

### Ownership

In principle, the author of the work is the original owner of the copyright. For works made for hire under a written agreement, the owner will be the party that commissions the work.

### Assignments

Copyright assignments in Mexico must be made invariably in writing. Verbal assignments are null. The assignment must foresee a payment in favour of the assignor.

### Registration

Mexico is a party to the Berne Convention and protects works from the moment of fixation. However, it is possible to record works and agreements related

to copyright with the National Copyright Institute. The facts mentioned in certificates issued by this government agency are presumed to be true, which facilitates enforcement by giving the potential plaintiff a document that can attest to the existence and ownership of the copyright. Registration is simple and the analysis is just on the proper filling of the forms and the submission of the appropriate documents. Usually registration takes four to eight weeks at most.

### Moral Rights

Mexico recognises moral rights of the author. These are perpetually bound to the author and their heirs, and they cannot be assigned or waived.

### Related Rights

Mexico recognises related rights of performers and interpreters, producers of sound recordings, producers of video recordings, book editors and broadcasters.

### Enforcement

The owner of a copyright can initiate proceedings before the IMPI to have an infringer punished with a fine. Preliminary injunctions can be sought by showing a prima facie infringement is occurring or is imminent and posting a bond to cover the damages caused to the defendant if the plaintiff does not prevail on the merits. Similarly to the enforcement of a trade mark, the defendant is allowed to contest the injunction by posting a bond. The injunction may become permanent in the final decision of the case.

In addition to the fine, the plaintiff may seek an award for damages from a civil judge.

Certain infringements made for profit can also constitute federal crimes.

### Limitations and Defences

Mexico does not have the “fair use” defence which is available in other jurisdictions. The cases in which a work may be reproduced or communicated without authorisation from the copyright holder are very limited.

### Monuments and Indigenous Communities

Works declared as monuments by the Mexican government, including those of Diego Rivera and Frida Kahlo cannot be reproduced without authorisation from either the National Institute of Anthropology and History or the National Institute of Fine Arts, even if the copyright term has expired.

The legal landscape for works originating from indigenous communities has changed substantially in recent years. Today, works that incorporate elements from the identity or culture of indigenous communities cannot be legally used without authorisation of the respective community, even if they do not have an identifiable author.

## 7.5 Others

### Reservations of Rights

Mexico has a sui generis form of protection that can be granted over the following:

- titles of periodical publications, both printed and electronic;
- titles of periodic broadcasts such as television shows and radio shows;
- names and characteristics of characters;
- artistic names or stage names for individuals or groups; and
- novel mechanisms for promoting products or services.

This form of protection is a reservation of rights which is granted by the National Copyright Institute by filing an application. The protection will last five renewable years for characters and artistic names, five non-renewable years for mechanisms for promoting products or services and one year for titles.

In the particular case of printed publications such as magazines, the reservation of rights is a requirement to obtain the ISSN number.

### Databases and Software

Software is protected just as any other copyrighted work. Non-original databases are protected for five years. Databases that are original due to the selection of the contents or disposition are protected just like any other work.

### Industrial Secrets

Mexico recognises industrial secrets as any information with an industrial or commercial application that is kept confidential, and which provides an economic or competitive advantage in performing economic activities. Appropriate measures to protect its confidentiality and avoid unauthorised accesses must have been taken.

If information meets this definition, it will enjoy enhanced legal protection in several ways. Misappropriation of an industrial secret is punishable by a fine imposed by the IMPI. Misappropriating or disclosing an industrial secret constitutes a federal crime punishable by up to six years in prison and a fine.

When an industrial secret is presented to a judge or other government authority as part of a legal process, they are bound to adopt measures to avoid disclosure.

Several criminal codes in Mexico forbid the disclosure of information that an individual may come to know as part of their professional activities. Therefore, even if unduly disclosed information does not meet the definition of industrial secret, it may still be possible to take legal action against such disclosure.

## 8. Data Protection

### 8.1 Applicable Regulations

Mexico has undergone significant legal and institutional reforms that have reshaped its data protection framework and supervisory structure. These changes reflect a transition from constitutionally autonomous authority to a model integrated within the federal public administration.

The most relevant development is the Constitutional Reform published in December 2024, pursuant to which the National Institute of Transparency, Access to Information and Protection of Personal Data (INAI), formerly an autonomous constitutional body, was dissolved. Its functions were reassigned to the *Secretaría Anticorrupción y Buen Gobierno* (Ministry of Anti-Corruption and Good Governance), which now acts as the competent authority for the enforcement of personal data protection laws in the private sector.

Following this institutional reform, the updated Federal Law on the Protection of Personal Data Held by Private Parties (LFPDPPP), entered into force on 21 March 2025. The law maintains the core principles of the prior regime (including lawfulness, consent, information, purpose limitation, proportionality, and accountability), while introducing adjustments aligned with the new supervisory model and enforcement structure.

The LFPDPPP is complemented by secondary regulation, including the Privacy Notice Guidelines (*Lineamientos del Aviso de Privacidad*), which remain in force and continue to govern transparency and information obligations toward data subjects.

It should be noted, however, that following the entry into force of the 2025 LFPDPPP, no updated implementing regulation has yet been issued. While the 2011 Regulations of the LFPDPPP (*Reglamento de la Ley Federal de Protección de Datos Personales en Posesión de los Particulares*) have not been formally abrogated, their applicability must be assessed on a provision-by-provision basis, as certain provisions may be incompatible with or superseded by the current statutory framework. Accordingly, reliance on the 2011 Regulations as a primary compliance reference warrants caution.

The Executive Branch has been granted authority to issue updated secondary regulation, and the competent authority has publicly indicated that further regulatory developments – including potential legislative and regulatory updates – are expected.

### 8.2 Geographical Scope

Mexican data protection legislation applies to the processing of personal data carried out by private entities established in Mexico, as well as to processing activities subject to Mexican law under applicable jurisdictional criteria. As further developed below, the territorial reach of the LFPDPPP extends beyond Mexico's borders in specific circumstances expressly defined under the law and its implementing provisions.

The LFPDPPP, as amended and currently in force since 21 March 2025, constitutes the primary statutory framework governing the processing of personal

data by private individuals and entities in Mexico. The law is of public order and general observance throughout Mexican territory.

While the LFPDPPP's principal field of application encompasses private entities established and operating in Mexico, its scope is not strictly limited to domestic processing activities. Article 4 of the 2011 Implementing Regulations – to the extent applicable under the current statutory framework, as further discussed below – sets out four specific circumstances under which the law applies regardless of where the data controller is domiciled: (i) where processing is carried out through an establishment of the controller located in Mexico; (ii) where processing is performed by a processor, irrespective of its location, on behalf of a controller established in Mexico; (iii) where a controller not established in Mexico is nonetheless subject to Mexican law by virtue of international law or through the execution of a contract; or (iv) where a controller not established in Mexico uses means located in Mexican territory to process personal data, except where such means are used solely for transit purposes.

It follows that the mere fact that personal data is stored or processed outside Mexico does not, in and of itself, exempt an entity from compliance with the LFPDPPP, provided that one of the above jurisdictional nexuses is present. Entities operating in cross-border contexts are accordingly advised to conduct a careful analysis of their data processing activities considering these criteria.

Entities falling within the scope of the LFPDPPP are subject to a comprehensive set of obligations, including – among others – the duty to provide a privacy notice (*aviso de privacidad*) to data subjects and, where required, to obtain their consent prior to processing. The applicable form of consent varies depending on the nature of the data and the specific processing purpose: tacit consent operates as the general rule for ordinary personal data; express consent is required for financial personal data and certain specific processing activities; express written consent is mandated in particular circumstances and when processing involves sensitive personal data. Consent requirements are not, however, absolute: the LFPDPPP expressly provides for exceptions under which personal data may be processed without the data subject's consent, including – among others – where processing is necessary for the performance of a legal obligation incumbent upon the controller, where the data has been made manifestly public by the data subject, or where processing is required for the maintenance or fulfilment of a legal relationship between the controller and the data subject. In addition, controllers must observe the core principles of lawfulness, loyalty, purpose limitation, data quality, proportionality, accountability, and transparency throughout the entire lifecycle of processing.

### 8.3 Role and Authority of the Data Protection Agency

Following the institutional reform described in **8.1 Applicable Regulations**, the *Secretaría Anticorrupción y Buen Gobierno* (SABG, Ministry of Anti-Corruption and Good Governance) assumed, as of 21 March 2025, the functions previously held by the INAI as the competent authority for the enforcement of personal data protection legislation in the private sector.

Unlike its predecessor, the SABG is not an autonomous constitutional body – it operates within the federal public administration and reports directly to the Executive Branch. This structural change has drawn attention from privacy practitioners and civil society organisations, who have raised concerns regarding the institutional independence of the supervisory authority and its capacity to act impartially in cases involving government-related entities. These concerns are relevant context for any assessment of enforcement risk and regulatory predictability under the current framework.

The SABG's functions in data protection matters include, among others: receiving and resolving complaints filed by data subjects in connection with the exercise of their access, rectification, cancellation and objection rights (*derechos ARCO*); investigating potential violations of the LFPDPPP; imposing administrative sanctions on controllers found to be in breach of applicable obligations; issuing guidelines, recommendations, and best practice frameworks; and promoting awareness of data protection rights among both private entities and the general public.

## 9. Looking Forward

### 9.1 Upcoming Legal Reforms

The following upcoming legal reforms should be considered by foreign nationals concerning their investments and business in Mexico.

#### Reform to the Judiciary

President Sheinbaum's reform to the judiciary was enacted in September 2024, and the first round of elections for Supreme Court justices, federal and state court judges and magistrates took place in June 2025. The public participation for this first round of elections was very low – between 12–13% of the List of Registered Voters, nationwide, and it is expected that the second round of elections (scheduled for the summer of 2027) will have a similar result. Considering this, there is a legitimacy issue surrounding the results of the elections.

The full impact of the reform remains to be seen; however, parties are already responding by favouring arbitration clauses over choice of court provisions to avoid the uncertainty of litigating before domestic courts.

#### Electoral Reform

On 26 March 2026, President Sheinbaum presented to the Mexican Congress her second attempt of the new electoral reform project, which was approved in its majority by the Mexican Congress and the majority of the Mexican states in April 2026, and is scheduled to be published in the coming days.

The reform amends Articles 115, 116 and 134 of the Mexican Constitution. Key changes include: (i) a 15% reduction of the INE's budget for local electoral campaigns; (ii) reduction of pensions for senior government officials so they do not exceed the President's; (iii) reduction of officials in local municipalities; and (iv) stricter limits to prevent nepotism and indefinite tenure within electoral bodies.

The electoral reform is expected to be published imminently.

#### Reform to the Mexican Antitrust Law

In July 2025, the Mexican Congress approved a comprehensive reform of the antitrust legal framework in Mexico, including, among others: (i) the creation of the National Antitrust Commission (CNA), which formally began acting in October 2025, (ii) the confirmation and appointment of new commissioners, (iii) lowering thresholds for merger notification, (iv) the recognition of compliance programs as mitigating factors, (v) the establishment of a procedure to protect attorney-client communications, and (vi) the increase of certain sanctions, including higher maximum fines for absolute monopolistic practices, relative monopolistic practices, unlawful concentrations, unauthorised concentrations and failure to notify reportable transactions.

Proceedings initiated before the former Federal Economic Competition Commission (COFECE) and the Federal Telecommunications Institute (IFT), limited to matters of economic competition, preponderance and cross-ownership, other than the investigations conducted by the investigative authority, will continue to be heard under the legislation in force at the time of their initiation. This includes, among others, trial-like proceedings, merger notifications and review procedures.

In addition, on 19 December 2025, a new tariff regime for merger filings was enacted. Under this regime, filing fees are determined based on the estimated maximum transaction value in Mexico and range from MXN882,158 to MXN6,015,098, excluding VAT.

#### Reform to the Mexican Intellectual Property Law

In April 2026 a decree was published amending the Federal Law for the Protection of Industrial Property. Key changes include the following.

- Faster deadlines for IMPI decisions – the reform sets maximum timeframes for IMPI to resolve applications and proceedings, including patents, trade marks and geographical indications, reducing delays and improving certainty for applicants.
- New types of trade marks, including:
  (a) position marks
  (b) motion marks; and
  (c) multimedia marks.

- Stronger bad-faith controls – applicants filing or renewing trade marks must declare under oath that the filing is not deceptive and not made in bad faith.
- Protection of indigenous and Afro-Mexican cultural heritage – marks connected to the cultural heritage, traditional knowledge or expressions of indigenous and Afro-Mexican communities may be refused unless proper authorisation exists.
- New patent tools – the reform adds:
  (a) provisional patent applications, allowing an early filing date with minimal requirements;
  (b) restoration of priority rights in some missed-deadline cases;
  (c) reinstatement mechanisms when certain deadlines are missed; and
  (d) supplementary protection certificates for pharmaceutical patents, compensating for unjustified delays in COFEPRIS marketing authorisations.
- Ownership claims instead of nullity – a new administrative procedure allows a rightful owner to claim ownership of a patent or registration granted to the wrong person, rather than only seeking invalidation.
- Technology transfer focus – the law now expressly promotes technology transfer.
- Artificial intelligence liability – industrial property infringements committed through AI tools remain sanctionable.
- Ambush marketing becomes an infringement – creating a false appearance of sponsorship or official association with major events is now expressly classified as an infringement.
- Expanded digital enforcement – IMPI may process and resolve infringement proceedings electronically, which should streamline enforcement actions.

### Proposed Law for the Promotion of Investment in Strategic Infrastructure for Development With Well-Being

In April 2026, President Sheinbaum submitted to the Mexican Chamber of Deputies a bill to enact the Law for the Promotion of Investment in Strategic Infrastructure for Development with Well-Being and amend the Federal Budget and Fiscal Responsibility Law.

The proposed law seeks to facilitate the planning, financing, construction, modernisation and operation of strategic infrastructure projects that contribute to national development, economic growth and social well-being. It is designed as a nationwide framework for co-ordinated participation by the public, private and social sectors.

The bill promotes collaboration between government and private investors through (i) long-term contracts; (ii) joint investment schemes; (iii) risk-sharing models; and (iv) flexible participation structures (majority, minority, or equal public/private stakes). Projects may be structured through special purpose vehicles, such as trusts, corporations, or other investment vehicles dedicated exclusively to financing strategic infrastructure and may access capital markets.

## Mexico's Labour Law Reforms: Working Hours, Gender Equality and Workplace Wellbeing

### *Introduction*

Mexico's labour market is in the middle of one of the most far-reaching transformations in its modern history and every company operating in the country needs to be ready.

In just 12 months, three landmark legislative changes have redefined what it means to employ people in Mexico. These reforms are not happening in isolation: they are the result of a deliberate policy shift driven by trade commitments, international labour standards, and a domestic agenda focused on raising the floor for workers' rights.

The United States-Mexico-Canada Agreement (USMCA, known in Mexico as the T-MEC), which entered into force in 2020, was the turning point. For the first time, a major trade agreement binding Mexico required not just declarations about labour rights, but concrete, verifiable reforms – backed by dispute-resolution mechanisms with real commercial consequences. Freedom of association, collective bargaining, the elimination of workplace discrimination, and occupational health standards all became conditions of trade access, not aspirations.

The result has been a cascade of reforms to the Federal Labour Law (*Ley Federal del Trabajo* or LFT) and, in 2026, to the Mexican Constitution itself. For companies operating in Mexico, the message is clear: adapt proactively, or face the cost of reactive, last-minute compliance. These reforms do not just raise costs – they create real opportunities for businesses that invest in modern, efficient and equitable workplaces.

Three reforms, in particular, demand immediate attention.

- The 40-hour workweek reform – a constitutional change reducing maximum working hours – Mexico's biggest labour reform in decades.
- Gender equality and workplace violence reform – new legal duties for employers on discrimination and workplace violence, effective January 2026.
- The Ergonomic Seating Regulation (*Ley Silla*) – new rights for workers who stand during their shifts, in force since July 2025.

### *The 40-hour workweek: Mexico's biggest labour reform in decades*

#### *What changed – and why it matters*

On 3 March 2026, Mexico made constitutional history. A decree published in the Official Gazette of the Federation (DOF) amended Article 123 of the Mexican Constitution to establish a maximum workweek of 40 hours – down from the 48-hour limit that had been in place for nearly a century. This was followed on 1 May 2026 by the corresponding amendment to the Federal Labour Law, giving the reform full operational effect.

To put this in perspective: Mexico had one of the longest statutory maximum workweeks among OECD nations. The reform aligns the country with ILO standards and brings it closer to France (35 hours), Ger-

many (34–37 hours average), and comparable economies such as Chile and Colombia, which have already made similar moves with phased reductions.

*The phased timeline – what your business needs to know now*

The reduction does not happen overnight. The Constitution establishes a clear, year-by-year schedule that gives businesses time to prepare:

- 2026 – 48 hours per week (no change yet – the current limit remains in force);
- 2027 – 46 hours per week (effective 1 January 2027);
- 2028 – 44 hours per week (effective 1 January 2028);
- 2029 – 42 hours per week (effective 1 January 2029); and
- 2030 – 40 hours per week (the final constitutional target).

One rule is absolute: no worker's wages, salaries or benefits may be reduced as a result of the shorter workweek. This protection cannot be waived by any contract or agreement.

*Overtime – the new rules*

The reform also overhauled the rules on overtime, and they are significantly more expensive for employers who rely on extra hours. The new framework is:

- weekly cap – a maximum of 12 hours of overtime per week;
- daily limit – no more than four hours of overtime per day, across no more than four days per week;
- double pay – overtime within the 12-hour weekly limit must be paid at double the regular rate;
- triple pay – overtime exceeding 12 hours per week must be paid at triple the regular rate, though this excess may not exceed four additional hours per week;
- daily maximum – combined regular and overtime hours may never exceed 12 hours in a single working day; and
- workers under 18 – the absolute prohibition on overtime work remains fully in force.

*What this means for your business*

The financial impact is real and, for some sectors, significant. Because wages cannot be reduced, companies in labour-intensive industries will effectively pay the same salary for fewer regular hours, increasing the cost per hour worked. By 2030, this could represent an increase of up to 25% in hourly labour costs for businesses that do not offset the change with productivity improvements.

The sectors most affected include manufacturing, logistics, retail, food and beverage, and hospitality, industries where workweeks of 48 hours are common and where more than 13 million workers will be directly affected. For service and technology companies already operating on shorter weeks, the immediate financial impact is more limited, but compliance obligations apply to all.

The new overtime cost structure, at double or triple the regular rate, simultaneously makes the systematic use of overtime as a low-cost operational tool unviable. Businesses that have relied on overtime as a flexible buffer will need to redesign their workforce models.

Key actions for employers:

- audit your working hours – map actual hours worked by department, contracted hours versus real working time, and overtime patterns;
- model the financial impact – run scenarios for each phased reduction to plan budgets ahead of each January deadline;
- review all contracts – update individual employment contracts, collective bargaining agreements and internal work regulations to align with the new constitutional limits;
- implement electronic time-tracking – the LFT reform makes it mandatory to electronically record the start and end of every working day, subject to government inspection; and
- build a productivity strategy – invest in process improvement, automation and results-based management. The businesses that will navigate this reform best are those that produce the same output in fewer hours, not those who just comply on paper.

The international evidence is encouraging. Microsoft Japan and Unilever New Zealand reported productivity gains of 20-40% in shorter workweek pilots. Less time does not have to mean less output, but only if the transition is managed proactively.

### *Gender equality and workplace violence: new legal duties for employers*

#### *The reform in plain terms*

On 15 January 2026, a further decree published in the DOF amended the LFT to strengthen protections against workplace discrimination and gender-based violence. The reform is part of Mexico's obligations under the USMCA and ILO Convention No 190 on violence and harassment, both of which require concrete, enforceable action, not just policy statements.

The core change is clear: employers are no longer simply encouraged to maintain respectful, inclusive workplaces. They are now legally required to do so and training staff on these topics is a legal obligation, not an optional initiative.

#### *What the law now requires from companies*

Under the amended Article 16 of the LFT, both employers and workers have new legal obligations. For employers, the key duties are:

- update internal policies – explicitly address and prohibit discrimination and gender-based violence across all company procedures;
- incorporate a gender perspective – in all aspects of labour management, hiring, promotion, pay, access to training and dismissal decisions;
- establish confidential reporting mechanisms – workers must be able to safely report incidents without fear of retaliation;
- implement clear action protocols – with defined timelines, investigation procedures and corrective measures for every complaint;
- provide mandatory training – for all staff on preventing discrimination, identifying gender-based violence, and applying equality principles at work; and
- foster an inclusive organisational culture – built on dignity, respect and equal opportunity for all workers.

Workplace discrimination is broadly defined under the law. It covers any act or deliberate omission, that limits a person's labour rights because of gender, age, pregnancy, marital status, sexual orientation, gender identity, ethnic origin, religion, disability or social status. This means pay inequities, unequal promotion, biased hiring decisions and exclusionary workplace behaviour all fall within scope.

#### *The cost of doing nothing*

Employers who fail to act face consequences on multiple fronts. On the legal side:

- economic fines that can be significant depending on the nature and severity of the violation;
- extraordinary labour inspections triggered by complaints or non-compliance patterns;
- court-ordered corrective measures including mandatory policy changes and public reporting; and
- criminal proceedings in the most serious cases involving violence or systematic harassment.

Beyond legal risk, companies with poor records on gender equality are increasingly disadvantaged when competing for top talent, winning contracts with international partners, or attracting foreign investment. ESG performance is no longer a reputational "nice to have", it is a business necessity for any company with cross-border ambitions.

#### *Where Mexico stands – and where it is heading*

Compared to leading international frameworks, Mexico's reform moves in the right direction but remains less prescriptive than the most advanced models. Spain requires mandatory gender equality plans and pay equity audits for medium and large companies. EU Directive 2023/970 on pay transparency requires employers to publicly report gender pay gaps and gives workers the right to know salary criteria. Chile's *Ley Karin* mandates specific investigation timelines and procedures for harassment complaints.

Mexico's reform is broader in scope but lighter on specifics. That is both an opportunity and a risk: companies that go beyond the legal floor and build substantive, measurable equality frameworks now will be well ahead of any future tightening of requirements –

and will benefit from the commercial and reputational advantages that come with it.

### *The right to sit: a simple rule with real consequences*

#### *What the regulation says*

On 17 July 2025, the Ministry of Labour and Social Welfare (STPS) published new regulations in the DOF establishing the right to rest during the working day for employees who perform their duties in a standing position. The rules apply across the service, retail, industrial and comparable workplace sectors, covering millions of workers in stores, factories, restaurants and service centres across the country.

The regulation, known informally as the *Ley Silla* (Chair Law), is both practical and symbolic. It reflects Mexico's broader commitment to dignified working conditions and occupational health standards aligned with international norms and it sends a clear signal that worker wellbeing is a compliance priority, not just a corporate responsibility aspiration.

#### *What employers must provide*

The requirements are straightforward. Employers in affected sectors must:

- provide appropriate seating – each worker who stands during their shift must have access to a chair or seat with a backrest, either at their workstation or in a clearly designated nearby area;
- meet ergonomic standards – seating must support healthy posture, include wheels or a swivel mechanism to allow easy movement, and be stable enough to prevent unintentional movement;
- inform and train workers – employees must be told about the health risks associated with prolonged standing and the measures the company has adopted to address them;
- mark seating areas – if seats are not at the worker's usual workstation, their location must be clearly signposted; and
- refer workers to medical attention – any worker showing signs of discomfort or health issues related to standing work must be directed to appropriate care.

Workers also have duties under the regulation: they must use their seating appropriately, participate in ergonomic training, report any issues with equipment and attend required medical check-ups. The STPS is responsible for monitoring compliance and has the authority to interpret and enforce the provisions.

#### *Practical steps for compliance*

- Conduct a workplace risk assessment to identify which roles and areas require seating provision.
- Procure compliant ergonomic seating for all affected workstations and designated rest areas.
- Update internal training programmes to include ergonomic health information and proper use of seating.
- Establish a medical referral protocol for workers who experience discomfort or symptoms related to standing work.
- Document your compliance steps, as STPS inspections are expected to verify adherence to these provisions.

### *Strategic outlook: three reforms, one direction*

#### *The common thread*

These three reforms did not emerge in isolation. They are part of a coherent and continuing direction in Mexican labour policy: raising standards, reducing exploitation, and aligning with the international norms that Mexico's trade partners, particularly the United States and Canada, increasingly require as a condition of economic partnership.

For businesses, the key insight is this: these are not the last reforms. The USMCA review process, the ongoing ILO ratification agenda and the domestic political momentum behind labour rights all point to further legislative change ahead. Companies that treat each reform as a one-off compliance event will find themselves perpetually reactive. Those that build adaptive, resilient HR and compliance frameworks now will be ready for what comes next.

#### *What to do now across all three reform areas*

For the working hours reform:

- start productivity diagnostics now, before the first reduction takes effect in January 2027;

- invest in electronic time-tracking technology and reliable attendance management systems;
- explore alternative work models: compressed weeks, flexible schedules and hybrid arrangements; and
- engage your workforce in the transition, particularly those who currently supplement their income with overtime.

For gender equality and anti-discrimination:

- conduct an internal audit of pay equity, promotion rates and the effectiveness of existing harassment reporting mechanisms;
- train managers and HR teams now, ahead of any regulatory enforcement action; and
- publish internal commitments on gender equality. Transparency builds trust with employees, partners and investors.

For the ergonomic seating regulation:

- treat compliance as an opportunity, not just a legal requirement, better working conditions improve productivity and reduce absenteeism;
- combine seating compliance with a broader occupational health and wellbeing review; and
- document everything – assessment results, procurement records and training completion.

### *Conclusion*

Mexico's labour law landscape is changing faster than at any point in recent memory. The constitutional reform on working hours is the most significant change in decades. The gender equality reform closes gaps that international partners and investors have long noted. The ergonomic seating regulation is a practical step toward a broader standard of workplace dignity.

Together, these three reforms represent a clear message to the business world: Mexico is serious about aligning its labour market with international standards and it is willing to use binding trade obligations, constitutional amendments and enforcement mechanisms to get there.

For companies doing business in Mexico, the window for strategic preparation is open right now. Those who use it well, investing in productivity, compliance infrastructure and workplace culture will not just survive these reforms. They will use them to build a stronger, more competitive, and more sustainable operation in one of Latin America's most dynamic and promising markets.

**Dr. Weder, Kruger & Haikali Inc.** (WKH Inc.) is a full-service law firm based in the Republic of Namibia, with offices situated in Windhoek (Head Office), Ongwediva, Swakopmund, Walvis Bay, and Grootfontein. It was founded through a merger of leading legal practices with roots dating back to 1949 and rebranded in 2025 to reflect a modern, forward-looking legal identity. The firm has a team of 16 directors, 19 associates, 12 conveyancers and 117 support personnel across its national operations. The firm provides guidance to both local and international clients on a broad range of legal and commercial matters, including litigation, labour law, commercial and corporate law, tax law, conveyancing, banking and finance, mining, energy, emerging oil and gas matters, infrastructure, and dispute resolution. The firm has provided advice on legal representation in major property and business deals in Namibia involving independent power producer projects, financial services regulations, commercial and banking matters, amongst others.

## Authors

**Nadine van Schalkwyk** is a director of Dr. Weder, Kruger & Haikali Inc. and an admitted legal practitioner and Notary Public of the High Court of Namibia, with 13 years of experience. Her practice focuses on conveyancing, property development, estate planning and commercial drafting. She regularly advises clients on mortgage bond registrations, sectional title developments, antenuptial contracts, wills, deceased estates and liquor licensing matters. Nadine holds an LLB from the University of South Africa (UNISA) and is a member of the Law Society of Namibia.

**Ralph Strauss** is a director of Dr. Weder, Kruger & Haikali Inc. and an admitted legal practitioner of the High Court of Namibia, with extensive experience in tax law, civil litigation, and the administration of deceased and insolvent estates. His practice focuses on tax law, civil litigation, insolvency and deceased estate administration. He advises corporate and individual clients on tax disputes, regulatory compliance, succession planning, estate recovery and litigation matters before the Namibian courts. He is a member of the Law Society of Namibia.

**Bonita R de Silva** is a consultant at Dr. Weder, Kruger & Haikali Inc.. She holds a BCom (PPE) and LLB from UCT and a Masters of Laws in Business Law from UC, Berkeley. Admitted in Namibia and South Africa, she is a notary public, mediator and estates, trust, and insolvency practitioner in addition to holding several professional memberships, directorships and trusteeships. Bonita's transactional experience of almost 20 years spans major banking, mining and energy due diligences, finance and security advice in respect of lending transactions, regulatory and compliance advice relating to corporate restructurings, mergers and acquisitions, capital markets and stock exchanges, exchange control, funds and collective investment schemes, tax and antitrust opinions and filings.

**Ivo dos Santos** is a senior associate at Dr. Weder, Kruger & Haikali Inc. and an admitted legal practitioner of the High Court of Namibia, with 20 years of experience. His practice focuses on corporate and commercial law, energy and infrastructure projects, banking and finance, mining law, private equity transactions and mergers and acquisitions. He advises local and international clients on transactional, regulatory and investment matters across Namibia's commercial and natural resources sectors. He is a member of the Law Society of Namibia.

**Contributed by:** Nadine van Schalkwyk, Ralph Strauss, Bonita R de Silva, Ivo dos Santos, Chrissie Turck, Jané Louw, Nicole Freygang and Natasha Nekuta, **Dr. Weder, Kruger & Haikali Inc.**

**Chrissie Turck** is a senior associate at Dr. Weder, Kruger & Haikali Inc. and an admitted legal practitioner of the High Court of Namibia, with five years of experience, and is awaiting registration as a conveyancer. Her practice focuses on civil litigation, commercial disputes, insurance law, medical negligence claims, debt recovery, family law and matrimonial matters. She advises clients on litigation proceedings, contractual disputes and recovery matters across a range of sectors. Chrissie holds an LLB from the University of South Africa and is a member of the Law Society of Namibia.

**Jané Louw** is a junior associate at Dr. Weder, Kruger & Haikali Inc. and an admitted legal practitioner of the High Court of Namibia, with three years of experience. Her practice focuses on corporate and commercial law, mergers and acquisitions, competition law, corporate governance, regulatory compliance and intellectual property matters. She advises clients on transactional, corporate and regulatory issues across a range of industries. She holds BSc (Molecular Biology and Biotechnology), BCom Law and LLB degrees from Stellenbosch University and is a member of the Law Society of Namibia.

**Nicole Freygang** is a junior associate at Dr. Weder, Kruger & Haikali Inc. and an admitted legal practitioner of the High Court of Namibia, with one year of experience. Her practice focuses on civil litigation, corporate and commercial disputes, insurance law, corporate governance and mining-related matters. She advises clients on commercial disputes, regulatory issues and litigation proceedings across a range of sectors, including the mining industry. She holds an LLB from the University of Namibia and an LLM from Stellenbosch University. She is a member of the Law Society of Namibia.

**Natasha Nekuta** is an associate designate at Dr. Weder, Kruger & Haikali Inc., with experience in corporate and commercial law, tax law, labour law and civil litigation. She advises on regulatory compliance, transactional matters, labour disputes and corporate due diligence exercises, and has experience assisting with mining and agricultural sector transactions. She holds a BCom Law from Eduvos and an LLB from the University of Pretoria, and is currently pursuing an LLM in Tax Law at the University of Pretoria. She is a member of the Golden Key International Honour Society.

# 1. Legal System

## 1.1 Legal System and Judicial Order

The Constitution of the Republic of Namibia, which came into force upon independence her on 21 March 1990, is the supreme law of the country. In terms of Article 1 (6) of the Constitution, any law or conduct inconsistent with the Constitution is invalid to the extent of such inconsistency. The judiciary is established as an independent judicial authority under Article 78 of the Constitution and is responsible for the interpretation, protection, and enforcement of the Constitution and the laws of Namibia.

Namibia operates under a mixed legal system reflects its historical development. Prior to independence, the territory, then known as South West Africa, was administered by South Africa, resulting in the application of South African law in Namibia. Consequently, Namibia inherited Roman-Dutch common law principles, together with procedural and evidentiary rules influenced by English common law. Following independence, Article 66 of the Constitution preserved the common law and customary law that existed immediately before independence, subject to their consistency with the Constitution and any applicable legislation.

The Namibian judiciary follows a hierarchical structure. The Supreme Court of Namibia is the highest appellate court, and its decisions are binding on all lower courts. The High Court of Namibia exercises inherent jurisdiction in civil and criminal matters, as well as appellate jurisdiction over lower courts. Lower courts, including Magistrates' Courts, determine the majority of civil and criminal matters at first instance. In addition to the formal judicial structure, community courts, established under the Community Courts Act, 2003 (Act No 10 of 2003), exercise jurisdiction over customary law disputes within their statutory mandate, subject to the Constitution and applicable laws.

# 2. Restrictions on Foreign Investments

## 2.1 Approval of Foreign Investments

The primary and generally applicable legislation governing foreign investment in Namibia is the Foreign Investment Act 27 of 1990 (FIA).

The FIA is slated for repeal upon the coming into operation of the Namibia Investment Promotion Act 16 of 2016.

In terms of the FIA, a foreign national (being (i) an individual who is not a Namibian citizen, (ii) a company incorporated under the laws outside of Namibia, or (iii) a Namibian-incorporated company in which the majority of the issued share capital is beneficially owned by non-citizens) may, subject to any requirements imposed by other applicable laws:

- engage in and invest in any business activity in Namibia that is open to Namibian citizens;
- be treated on an equal footing with Namibian persons, except where the Act provides otherwise; and
- operate without any obligation to include the government or any Namibian party as a shareholder or partner; however, in respect of licences, authorisations, or agreements involving the exploitation of natural resources, it may be stipulated as a condition that the government is entitled to acquire or participate in an ownership interest in the relevant enterprise.

The FIA empowers the minister (appointed to administer the FIA) to specify any business or category of business primarily engaged in the provision of services or the production of goods which can be provided or produced adequately by Namibians in respect of which a foreign national shall not become engaged in nor invest in by way of foreign assets. At present, the only services reserved under this power are (i) public transport services (taxi and shuttle services within Namibia and between towns) and (ii) hair salon, hairdressing and beauty treatment services.

Certain sector-specific legislation limits or prevents investment by foreign nationals. Examples of such legislation are:

- (i) the Minerals (Prospecting and Mining) Act of 1992, which reserves the right to hold mining claims (which relate to small-scale mining) exclusively for Namibian citizens or an incorporated entity beneficially owned by Namibian citizens;

- (ii) the Agricultural (Commercial) Land Reform Act 6 of 1995, which limits the acquisition of a controlling interest (directly or indirectly) in commercial land by a foreign national; and
- (iii) the Communications Act 8 of 2009, which prevents a foreign national from controlling a licensee to whom a licence has been issued, without the prior consent of the relevant minister.

Notwithstanding what has been stated in paragraphs (i) to (iii) above, it is a common phenomenon that licences/authorisations (especially in relation to natural resources) and agreements with public enterprises, may be subject to local content conditions. Examples of such legislation are:

- the Marine Resources Act 27 of 2000, which permits the minister to have regard to whether an applicant for rights to harvest marine resources is a Namibian citizen, or where the applicant is a company, the extent to which beneficial control thereof vests in Namibian citizens; and
- the Minerals (Prospecting and Mining) Act of 1992, which vests the minister with broad discretionary power to impose conditions, which is often used to limit the extent of foreign ownership; the current policy is that a minimum of 15% of the equity in a licence holder (which must be a Namibian registered company) must be beneficially owned by Namibian citizens.

## 2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance

There are no generally applicable steps and/or requirements to be adhered to by a foreign national to obtain approval for an investment in Namibia or to overcome any investment limitations/restrictions established by legislation.

The common feature is for each relevant piece of legislation (and/or the regulations published in terms thereof) to stipulate the steps and requirements that must be fulfilled.

It is also a common feature of most relevant legislation that, notwithstanding the fulfilment of the stipulated steps and/or requirements, the relevant decision-making authority is still vested with a discretionary power in respect of:

- the granting or refusal of the approval; and
- the imposition of conditions upon any such approval.

Where a foreign national undertakes investment activities that are subject to prior approval without first obtaining the required approval, those activities will generally be regarded as unauthorised and/or void on the grounds of their unlawfulness, unless the relevant legislation expressly provides for a different consequence.

In addition to the foregoing, unlawful activities are usually criminalised and, upon conviction, can attract financial and/or imprisonment sanctions as stipulated by the relevant legislation.

Save for a few exceptions, Namibian legislation does not ordinarily prescribe timelines for the processing of applications for approval. Certain departments within the various ministries do occasionally provide non-binding timeline estimations for the processing of the type of applications they administer.

This position is consistent with Section 2 of the FIA, in terms of which a foreign national may generally invest and engage in business activities in Namibia on substantially the same basis as a Namibian, subject to compliance with any other applicable law. Accordingly, approvals or licences required for foreign investment activities in Namibia are ordinarily regulated by sector-specific legislation rather than the FIA itself.

## 2.3 Commitments Required From Foreign Investors

It is a common feature of legislation to vest the person authorised to consider applications for authorisations/licences/approvals with the discretionary power to impose conditions on the granting of the authorisation/licence/approvals.

In most instances the relevant legislation will stipulate the nature of the conditions that may be imposed. However, it is also common that legislation affords the decision-maker with a general discretion to impose

such conditions as the decision-maker may determine or deem fit.

In practice, foreign investors are commonly expected to commit to measures promoting Namibia's socio-economic development objectives. The following conditions (in addition to those that are directly related to the type of licence/authorisation/approval) are common across many sectors: (i) participation by Namibian citizens in the ownership structure of the applicant; (ii) local content participation in management structures of the applicant; (iii) preferential procurement by the applicant from Namibian suppliers of goods and services; (iv) skills transfer and training obligations; and (v) the preferential employment of previously disadvantaged Namibians.

### 2.4 Right to Appeal

The Namibian Constitution requires the government (and all its administrative agents) to act administratively fair and reasonably in respect of its administration of legislation and the powers arising therefrom. Therefore, any person who is dissatisfied with the outcome of any application may seek legal redress if the action or omission by the decision maker is perceived to be unjust and/or unreasonable.

The ordinary grounds for the review of an administrative decision are:

- procedural unfairness, due to the failure of giving the applicant a fair hearing or following the correct procedure;
- irrationality, due to the decision not being supported by the evidence or facts presented;
- illegality, where the administrative functionary acted outside of its powers granted by the relevant legislation or common law; and
- unreasonableness, if the decision was so grossly unreasonable that no fair-minded person could have made the decision.

It is also common for legislation to establish an internal appeal procedure. In the event of the existence of such a procedure, a dissatisfied applicant must first exhaust that procedure before approaching the High Court of Namibia for legal redress through the process of a judicial review of the decision.

It is a common feature for legislation (or the regulations published in terms thereof) to set forth the internal appeal process and timelines to be adhered to.

A judicial review application to the High Court generally needs to be submitted without unreasonable delay from the date on which the decision was communicated to the applicant. What would constitute an unreasonable delay must be determined on the facts of each case. However, the High Court has indicated in a number of judgments that a delay of more than four to six months is regarded as unreasonable. A longer delay may nevertheless be condoned where good cause is shown.

The High Court rules stipulate certain timelines for the prosecution and finalisation of a review application once submitted. Although there are no fixed timelines within which a court must decide on a review application, an opposed review application can take 8 to 12 months from the submission thereof.

## 3. Corporate Vehicles

### 3.1 Most Common Forms of Legal Entity

Namibia's principal corporate vehicles are governed by the Companies Act 28 of 2004 and the Close Corporations Act 26 of 1988, and include the following.

#### Private Company (Pty) Ltd

This is the most commonly used corporate vehicle in Namibia. There may be from one to fifty shareholders in a private company. There is no statutory minimum share capital requirement. Shareholders' liability is limited to any unpaid amount on their shares. It is managed by directors and shares are not allowed to be offered to the public. It is commonly used for greenfield projects, holding structures, joint ventures, and general trading.

In practice, private companies (Pty) Ltd are by far the preferred investment vehicle for foreign investors due to their flexibility, limited liability structure and suitability for joint ventures, holding structures and operational subsidiaries.

### Public Company (Ltd)

A public company requires a minimum of seven shareholders and at least two directors. There is no statutory minimum share capital requirement. Shareholders generally enjoy limited liability, and shares may be offered to the public. It is generally used for larger operations seeking public investment or stock exchange listings.

### Close Corporation (CC)

There may be between one and ten members and there is no issuing of shares. Ownership is held through percentage-based members' interests. Only natural persons may be members. Members enjoy limited liability, subject to specific statutory exceptions. Members manage operations directly without a board of directors. Close corporations are widely used by local small-to-medium enterprises.

### Section 21 Company

This company is incorporated under Section 21 of the Companies Act 28 of 2004 for charitable, educational, or public benefit purposes. It is structured as a public company limited by guarantee without share capital, and requires a minimum of seven members and two directors. Members enjoy limited liability up to their guaranteed amount. Paying dividends to members is statutorily prohibited.

### External Company

Establishing an external company allows a foreign business to register and operate under Chapter 13 of the Companies Act 28 of 2004 as a local branch. The foreign parent company keeps its offshore identity and carries unlimited liability for all debts incurred by its Namibian operations. It requires a local auditor and a resident administrative agent to accept legal service, and it is best suited for short-term, specialised infrastructure or resource exploration subcontracts.

## 3.2 Incorporation Process

Corporate registrations in Namibia are administered by BIPA under the Companies Act 28 of 2004 and the Close Corporations Act 26 of 1988.

All structures require initial name reservation using Form CM5 for companies and Form CC8 for close corporations.

For a private company (Pty) Ltd, applicants must lodge a memorandum and articles of association in triplicate (including two notarised copies), director details, and beneficial ownership disclosures. Fees scale with authorised share capital. Following approval, BIPA issues the certificate of incorporation on Form CM1. BIPA generally takes around 25 working days to process an application, although in practice the full incorporation process, including NAMRA tax registration and local municipal licensing, typically takes between four and eight weeks.

A public company (Ltd) follows the same basic registration process but requires at least seven founders. It is designed for public capital or stock exchange (NSX) listings, and is subject to strict Chapter 6 rules. Importantly, it may not commence trading or borrowing solely upon incorporation. Instead, it must register a prospectus and obtain a separate Section 180 Certificate to Commence Business using Form CM46. The incorporation process typically takes between eight and sixteen weeks.

A close corporation (CC) provides a simpler framework for up to ten members, replacing share capital with members' percentage interests. Registration requires the submission of a Founding Statement (Form CC1), details of the members, beneficial ownership information, and a mandatory consent letter from an accounting officer. BIPA generally processes applications within five working days, with the complete incorporation process typically taking between one and three weeks.

A Section 21 company utilises the public company registration framework and is incorporated without share capital for non-profit purposes. It requires at least seven founders, must use the suffix "non-profit association incorporated under Section 21", and must file Form CM4 containing absolute asset-lock provisions. Registration with BIPA generally takes between four and eight weeks. Any exemption from NAMRA taxation must be applied for separately.

An external company (foreign branch) must register under Section 328 once it establishes a place of business in Namibia. Registration requires the submission of a notarised copy of the foreign constitu-

tional documents in triplicate (together with certified English translations where applicable), the appointment of a local service representative, and the filing of Form CM49. The incorporation process typically takes between four and eight weeks.

### 3.3 Ongoing Reporting and Disclosure Obligations

Private companies in Namibia face strict statutory reporting and disclosure mandates under the Companies Act 28 of 2004. Independent entities retain significantly greater financial confidentiality than public corporations or foreign branches.

- Changes in Management: Alterations to directorates or officers must be recorded internally and filed with BIPA on Form CM 29 within 14 working days. Director removals require a 28 working day special notice prior to the meeting. Changing a registered office requires 21 working days' advance notice on Form CM 22.
- Amendment of Articles of Incorporation: Modifying a company's name or articles of association requires a special resolution passed by a 75% majority, filed using Form CM 26 within one month. Unregistered special resolutions automatically lapse and become void after six months under Section 210.
- Financial Statements and Approvals: Private companies must compile audited financial statements, obtain board approval, and hold an AGM within nine months of the financial year-end. Independent private companies are exempt from publicly filing statements. Annual returns (Form CM 23) must be lodged, and the annual duty must be paid within a month of the year-end.
- Ultimate Beneficiary Transparency: Under anti-money laundering amendments, companies must maintain a beneficial ownership register. Any changes must be lodged with BIPA on Form BO1 within seven working days. Non-compliance may result in fines of up to NAD50,000, daily penalties, and/or up to ten years' imprisonment.
- Fiscal and Operational Mandates: Companies must register a public officer with NAMRA, submit two annual provisional tax estimates and file an annual tax return. Taxable turnover exceeding NAD1,000,000 requires VAT registration and bi-monthly reporting. Under the Financial Intelligence Act 2012, accountable institutions must report cash transactions over NAD99,999.99 and file suspicious activity reports within three days. Employers must register with the Social Security Commission within one month of hiring staff, and file monthly returns.

### 3.4 Management Structures

Namibia does not prescribe a two-tier board structure for corporate entities. The most common entities operate under either a mandatory one-tier board model or a decentralised member-managed structure, depending strictly on the entity type under domestic legislation.

Private companies (Pty) Ltd operate under a one-tier board structure in terms of the Companies Act 28 of 2004. Statutory management authority vests collectively in the single board of directors, subject to shareholder voting rights and the company's constitutional documents. A statutory minimum of one director must form a valid board.

Public companies (Ltd) are subject to a mandatory one-tier board structure and must have at least two directors. Namibian law does not recognise a separate supervisory board. Oversight is handled internally by separating roles between executive and non-executive directors sitting together on the single board.

Non-profit associations incorporated under Section 21 are formed as public companies limited by guarantee. They adopt the mandatory one-tier framework with at least two directors. The management is subject to non-distribution constraints. All assets and income must solely advance their public interest objectives.

Close corporations, governed by the Close Corporations Act 26 of 1988, have a flat member-managed structure. Ownership and operational control are legally fused. Every member has the power to bind the corporation to third parties acting in good faith. Internal management boundaries may be outlined in an association agreement.

External companies operating as registered foreign branches remain governed by their global parent

structures. However, they must register locally under Section 322 of the Companies Act 28 of 2004 and appoint a resident person authorised to accept service of process and ensure domestic filing compliance.

### 3.5 Directors', Officers' and Shareholders' Liability

The liability of directors and officers of a company is primarily governed by the Companies Act 28 of 2004 and common law.

In terms of the common law, the following general duties are imposed upon directors:

- the duty to act with care, skill and diligence; and
- the fiduciary duty to conduct the company's affairs honestly and in the interest of the company.

The duty of care requires a director to exercise appropriate caution and demonstrate due consideration when exercising the company's powers, while also taking reasonable steps to safeguard the company's assets.

The duty of skill requires directors to exercise a reasonable level of skill in the performance of their duties. Where a director is appointed on the basis of a particular skill set or expertise, the required standard of skill will be measured against that reasonably expected of a person possessing such knowledge and experience.

The duty of diligence requires a director to remain attentive, careful, and conscientious, applying consistent effort towards carrying out the business responsibilities entrusted to them.

The fiduciary duties of a director fall into two general categories, namely (i) to exercise the powers vested in the director in good faith and (ii) to avoid a conflict of interest between the personal interest of the director and those of the company.

The particular duties that arise from the general duty to act in good faith are:

- to exercise the vested powers independently and not limit or restrict them;
- to exercise the vested powers for the purposes for which they were conferred;
- to exercise the vested powers within the limits of the authority; and
- to act within the scope of the powers of the company.

The particular duties that arise from the general duty to avoid conflicts of interests are:

- to act bona fide in the interest of the company;
- to account for profits;
- not to misappropriate opportunities proposed or pursued by the company;
- not to compete improperly with the company; and
- to disclose any interest in contracts with the company.

Namibian law recognises the concept of "piercing the corporate veil" and the Namibian courts will do so under specific circumstances as recognised under the common law or stipulated in the Companies Act.

## 4. Employment Law

### 4.1 Nature of Applicable Regulations

Employment relationships in Namibia are primarily regulated by two main sources: statutory law and common law contracts. The Labour Act 11 of 2007 is the principal legislation governing most aspects of the employment relationship, including employment contracts, working conditions, employee rights, and dispute resolution. The Act strongly promotes the protection of employees' rights. In addition, employment contracts concluded between employers and employees regulate the specific terms and obligations of the employment relationship, provided that these terms comply with the Labour Act and other applicable laws, including the common law of contracts. Where disputes cannot be resolved through contractual or statutory mechanisms, case law becomes important during mediation, arbitration, and litigation processes. Courts and labour tribunals interpret legislation and contractual provisions, thereby providing legal clarity and establishing precedents for future cases.

### 4.2 Characteristics of Employment Contracts

In Namibia, employment contracts are governed by both common law and the Labour Act 11 of 2007 (the "Labour Act"). Under common law, a contract concluded verbally is considered legally valid. However, the Labour Act requires employers to give employees written particulars of their employment, which shows a strong preference for written contracts. Written agreements are clearer and help prevent disputes about the terms that were agreed upon between the parties. The Labour Act also regulates the duration of contracts of employment. Contracts may be set for a fixed term, such as for a specific project or time period, or they may be indefinite, continuing until either the employer or employee legally ends the agreement.

### 4.3 Working Time

The Labour Act does not expressly prescribe minimum working hours and only provides for the maximum number of working hours applicable in terms of Section 16 (1) of the Labour Act. Ordinary hours in terms of this Section may not exceed forty-five (45) hours per week. Employees who work five days a week may work a maximum of nine hours per day, while employees who work more than five days a week may work a maximum of eight hours per day.

Different limits apply to essential service employees, such as security guards and emergency healthcare workers, who may work up to sixty (60) hours per week, with twelve (12) hours per day for employees who work for five days a week and ten hours per day for employees who work for more than five days per week. Employees engaged in continuous operations may work twelve (12-) hour shifts, subject to approval by the Minister of Justice and Labour Relations.

Overtime work is regulated by Section 17 of the Labour Act. An employer may only require or permit overtime by agreement with the employee. Overtime may not exceed ten (10) hours per week or three (3) hours per day. Employees must be paid at least one and a half times their hourly basic wage for overtime worked and at least double their hourly basic wage for overtime worked on Sundays and public holidays, should they ordinarily work on Sundays and public holidays.

### 4.4 Termination of Employment Contracts

Namibia is not an "employment at will" jurisdiction, meaning employment contracts may only be terminated lawfully, for a valid reason, and in accordance with fair procedure, failing which termination may amount to unfair dismissal or breach of contract.

Employment may be terminated through the expiry of a fixed-term contract, resignation, dismissal (for misconduct, incapacity, or operational requirements), or constructive dismissal, and in most cases, notice must be given except where a fixed term expires.

Upon termination, employees are entitled to payment of all outstanding remuneration and accrued but unused annual leave, and may also qualify for severance pay under Section 35 of the Labour Act, which provides for one week's remuneration for each completed year of continuous service for employees with more than twelve (12) months' service, subject to statutory requirements.

Collective redundancies are regulated by Section 34 of the Labour Act, which requires employers to give at least four weeks' written notice to trade unions, employee representatives, or affected employees, as well as the Labour Commissioner, and to engage in good-faith consultation on the reasons for retrenchment, alternatives to dismissal, measures to minimise job losses, selection criteria, timing and conditions of dismissal, and ways to address adverse effects. Employers must disclose all relevant information for meaningful consultation, and while consultation is mandatory, agreement with unions is not required, provided that selection criteria are fair and objective, and retrenched employees may also be entitled to severance pay where the statutory requirements are met.

### 4.5 Employee Representations

Employee representation is not automatically mandatory in all workplaces in Namibia. However, the Labour Act grants employees the right to organise, be represented, and be consulted through elected representatives and registered trade unions. Employee representation is generally triggered where employees are members of a registered trade union operating within the workplace.

In such circumstances, employees may elect workplace union representatives. The number of representatives depends on the number of union members employed at the workplace and, in some cases, the size of the workforce. Workplace union representatives are responsible for representing employees in disciplinary and dismissal proceedings, raising concerns relating to working conditions, and engaging with management on labour and employment matters.

Employers are required to allow reasonable access to the workplace and provide representatives with relevant information necessary to perform their functions effectively. In addition, employees may elect health and safety representatives in terms of the Labour Act. Employers are required to consult these representatives on workplace safety matters, employee welfare policies, and operational changes that may affect employees' health or safety.

## 5. Tax Law

### 5.1 Taxes Applicable to Employees/ Employers

The Namibian tax system is source-based. Therefore, employees are liable to pay tax on all income earned in Namibia. PAYE income tax as a fixed amount in addition to a percentage on a sliding scale that ranges from 0% to 37% per tax bracket is payable by employees, while both the employee and the employer must contribute 0.9% each of the employee's basic income to the Social Security Commission, subject to a cap.

Employers, on the other hand, must pay Employees' Compensation Fund contributions depending on the industry risk category, with PAYE being withheld and remitted by the employer to the Namibia Revenue Agency (NAMRA). Employers are also required to pay the Vocational Education and Training (VET) Levy, which is levied at 1% of the total annual payroll of Namibian-registered employers whose annual payroll amounts to NAD 1 million or more. The levy is used to fund national vocational education and training programmes.

### 5.2 Taxes Applicable to Businesses

Namibia has a source-based tax system, taxing all income earned within the country.

Corporate entities, including companies and close corporations, are subject to corporate income tax, VAT, employee tax (PAYE), annual duties, and withholding taxes on dividends, interest, service fees, royalties and transfer tax. As at May 2026, Namibia has not enacted legislation implementing Pillar Two of the OECD's Two-Pillar Solution, however active preparations and assessments are underway. Namibia also does not appear on the OECD's central record of jurisdictions that have implemented a qualified domestic minimum top-up tax (QDMTT) or a recognised safe harbour regime.

### 5.3 Available Tax Credits/Incentives

Namibia provides a range of tax credits and incentives aimed at encouraging manufacturing, exports, youth employment and foreign investment and promoting economic growth.

The main incentives are the foreign tax credit, youth internship allowance, manufacturing incentives, and export processing zones.

The Foreign Tax Credit applies only to countries with a double tax treaty with Namibia and exempts taxpayers from Namibian tax on passive or cross-border income already taxed abroad, capped at Namibia's tax liability, with proof of taxes paid required.

The youth internship allowance allows employers to deduct intern stipends from corporate tax liability, provided they are tax-compliant, pay corporate taxes, and have certified internship agreements. Interns must be Namibian citizens or hold valid study visas, aged 18–35, unemployed school leavers or graduates, and seeking work experience or completing work-integrated learning.

Manufacturing incentives apply to businesses registered with the Ministry of Industrialisation and Trade and approved by the Receiver of Revenue, with a viable business plan showing employment creation for Namibians. Namibia's former export processing zone regime has been succeeded by the special economic

zones framework established under the Special Economic Zones Act 24 of 2018. Qualifying enterprises benefit where they undertake manufacturing, assembly, packaging, or break-bulk operations primarily focused on exports outside the Southern African Customs Union, subject to requirements to generate foreign exchange earnings and create employment opportunities in Namibia.

### 5.4 Tax Consolidation

Under the Income Tax Act 24 of 1981, each registered or incorporated entity must file its own tax return independently. This framework operates strictly on a separate-entity basis, thereby prohibiting tax consolidation in Namibia.

### 5.5 Thin Capitalisation Rules and Other Limitations

Since 1 January 2024, Namibia has applied thin capitalisation and interest limitation rules to certain entities, in terms of Section 95A of the Income Tax Act 24 of 1981. These rules restrict excessive leveraging by foreign, cross-border and related-party financing arrangements to prevent erosion of the domestic tax base. Namibia currently uses a fixed limitation on interest deductions rather than the traditional 3:1 debt-to-equity ratio.

### 5.6 Transfer Pricing

Namibia's transfer pricing framework is contained in the Income Tax Act 24 of 1981. In September 2006, the Directorate of Inland Revenue issued Practice Note 2 of 2006 (PN 2/2006), which provides guidance on the application of the arm's length principle to related-party transactions and the interpretation of the transfer pricing provisions.

Namibian transfer pricing legislation is broadly based on guidance of the Organisation for Economic Co-operation and Development (OECD) Transfer Pricing Guidelines for Multinational Enterprises and Tax Administrations.

NAMRA may impose penalties where a taxpayer's taxable income is understated as a result of prices that were charged in affected transactions, which were not carried out at arm's length.

Enforcement of transfer pricing laws is a priority for the Ministry of Finance, which works with, amongst others, the Finnish Revenue Authority and the African Tax Administration Forum.

Taxpayers should maintain transfer pricing documentation showing how prices are determined in line with arm's length standards and documentation must be available to NAMRA upon request. A transfer pricing study can reduce the risk of adjustment, shift the burden of proof, and protect against penalties.

NAMRA may reprice transactions to arm's length values and impose severe penalties of underpaid tax interest, together with interest on unpaid amounts. The Commissioner may issue additional assessments at any time.

Investors should take cognisance of the following risks:

- Transfer pricing, thin capitalisation, and anti-avoidance rules carry heavy penalties.
- Complex procedures in mining, agriculture, and manufacturing can delay projects.
- Cross-border exchange payments are closely monitored by the Bank of Namibia and NamRA.
- Mining (diamonds, uranium) contributes more or less 50% of export earnings. Global price swings directly impact profitability.
- Agriculture and tourism are vulnerable to climate shocks and global downturns.
- Namibia's population is around 3.5 million, which limits consumer demand.
- High interest rates and inflation volatility are additional risks: Financing costs can erode margins.
- Namibia's dollar is pegged to the South African rand, exposing businesses to rand volatility.
- 37% of Namibians avoid investment risks, preferring low return savings products, which limits domestic capital formation.
- Reliance on energy imports from South Africa makes Namibia vulnerable to regional power shortages.
- While ports (Walvis Bay) are strategic, inland transport costs remain high.
- Limited broadband penetration affects modern business operations.

- Shifts in mining and land reform policies can affect investor confidence.

### 5.7 Anti-Evasion Rules

Namibia has anti-tax evasion and anti-avoidance rules in the Income Tax Act, 1981 (as amended), and related regulatory frameworks, enforced by the Namibia Revenue Agency (NAMRA). The framework empowers authorities to disregard artificial transactions, impose penalties, and monitor cross-border dealings to protect the tax base.

The following are sources of anti-evasion rules in the Republic of Namibia:

- the Income Tax Act, 1981 (Act 24 of 1981), which provides the legal foundation for tax collection and anti-avoidance measures;
- Section 95A (General Anti Avoidance Rule – GAAR), which introduces interest limitation and anti-avoidance measures applicable to certain financing arrangements; and
- Practice Note 2 of 2006: Guidance on transfer pricing and arm's length principles.

The following are core measures that are taken into consideration:

- General Anti-Avoidance Rule (GAAR): NAMRA can disregard artificial schemes or reprice transactions. The objective is to prevent tax avoidance through contrived structures.
- Transfer Pricing Rules: The arm's length principle for related-party cross-border transactions applies. The purpose is to stop profit shifting and base erosion.
- Thin Capitalisation Rules: Prior to 2024, Namibia applied a 3:1 debt-to-equity thin capitalisation ratio. From 2024 onwards, interest deductions are restricted where net interest exceeds both NAD3 million and 30% of Tax EBITDA. The purpose of the rule is to prevent excessive debt financing being used to shift profits and erode the domestic tax base.
- Penalties and Interest: Significant penalties may be imposed on underpaid tax, together with interest charged at 20% per annum. The high rates are a strong deterrent against evasion.
- Exchange Control Oversight: Bank of Namibia and NAMRA monitor cross-border payments. The purpose is to detect illicit transfers and base erosion.
- Audit Powers: The Inland Revenue can demand documentation and impose adjustments to ensure compliance and transparency.

There are compliance risks to consider as there can be severe sanctions for non-compliance (including penalties and interest).

Namibia's audit focus on cross-border related-party transactions means that taxpayers are generally expected to maintain appropriate transfer pricing documentation demonstrating that transactions are conducted on an arm's length basis.

Boards of directors and audit committees integrate anti-avoidance compliance measures into governance policies, while corporate advisory support and regular transfer pricing health checks remain essential components of effective compliance management.

Namibia's framework combines specific rules, including transfer pricing and thin capitalisation provisions, with general anti-avoidance powers. Compliance therefore requires robust documentation, transparent structures, and proactive governance oversight.

### 5.8 Tariffs

Namibia applies the Southern African Customs Union (SACU) Common External Tariff (CET), meaning its tariff regime is harmonised with Botswana, Eswatini, Lesotho, and South Africa. Imports are classified under the Harmonised System (HS) codes. Namibia also grants tariff preferences under regional and international trade agreements such as Southern African Development Community (SADC), European Union Economic Partnership Agreement (EU EPA), European Free Trade Association (EFTA), Mercosur, African Continental Free Trade Area (AfCFTA), and the UK SACU Mozambique FTA.

Namibia's Tariff Regime is governed by the Customs and Excise Act, 1964 (schedules adopted from SACU), and administered by the Namibia Revenue Agency (NamRA). The tariff book contains scheduled regulating customs duties, excise duties, anti-dump-

ing and safeguard measures, industrial rebates and drawbacks or refunds of duties and fuel levies.

Correctly classifying goods under the proper Harmonised System (HS) code is very important as it determines the amount of duty payable, whether an import permit is required, whether the goods qualify for rebates and whether preferential tariffs apply.

Namibia's highest tariffs generally apply to agricultural products, processed foods, textiles, clothing, motor vehicles, transport equipment, and certain petroleum products. Maize, sugar, dairy products, and processed food products frequently attract tariffs above 10%, while petroleum products such as light oils may face tariffs of approximately 15%. Protective tariffs on textiles and vehicles are intended to support domestic industries.

By contrast, imports from SACU and many SADC partners often enjoy duty-free or preferential access. Tariffs are therefore more commonly imposed on imports from non-preferential trading partners such as China, India, the United States, and the UAE. Chinese imports, in particular, are generally subject to Most Favoured Nation (MFN) tariffs.

Namibia's applied MFN average tariff is approximately 7.9%, while its bound World Trade Organization (WTO) average tariff is about 19%. Around 60% of tariff lines carry zero MFN duty. Industrial inputs such as ores, metals, and diamonds generally face lower tariffs, reflecting Namibia's export-oriented mining sector. Businesses importing into Namibia therefore benefit from accurate tariff classification and preferential sourcing within SACU and SADC markets.

For businesses importing to Namibia, it is important to consider that preferential sourcing from SACU/SADC partners reduces tariff exposure. Imports from Asia and the United States are more likely to attract MFN tariffs.

## 6. Competition Law

### 6.1 Merger Control Notification

The Competition Act 2 of 2003 stipulates that no proposed merger, which does not fall within an excluded class of mergers, may be implemented by any person, either individually or jointly or in concert with another person, unless such merger has been approved by the Competition Commission in accordance with the applicable provisions of the Competition Act and implemented in accordance with the conditions attached to such approval.

For purposes of the Competition Act, a merger occurs when one or more undertakings directly or indirectly acquire or establish direct or indirect control over the whole or part of the business of another undertaking. An "undertaking" includes any business carried on for gain or reward by an individual, a body corporate, an unincorporated body of persons or trust in the production, supply or distribution of goods (excluding agricultural commodities which have not undergone a process of manufacture and excluded goods) or the provision of services (excluding the performance of work under a contract or service and exempted services).

A merger can be achieved by, inter alia, the purchase or lease of shares, interest, or assets, or through amalgamation or other combination (which may include joint venture arrangements).

For purposes of merger control, a person is deemed to control an undertaking if that person:

- (i) beneficially owns more than one half of the issued share capital of the undertaking;
- (ii) is entitled to vote a majority of the votes that may be cast at a general meeting of the undertaking, or has the ability to control the voting of a majority of those votes, either directly or through a controlled entity of that undertaking;
- (iii) is able to appoint, or to veto the appointment, of a majority of the directors of the undertaking;
- (iv) is a holding company, and the undertaking is a subsidiary of that company;
- (v) in the case of the undertaking being a trust, has the ability to control the majority of the votes of the

trustees or to appoint the majority of the trustees or to appoint or change the majority of the beneficiaries of the trust;
- (vi) in the case of a close corporation, owns the majority of the members' interest or control directly or has the right to control the majority of members' votes in the close corporation; or
- (vii) has the ability to materially influence the policy of the undertaking in a manner comparable to a person who, in ordinary commercial practice, can exercise an element of control referred to in paragraphs (i) to (vi).

Accordingly, the concept of "control" under the Competition Act is broad and may extend beyond majority shareholding or formal ownership rights.

The notification and prior approval obligation does not apply to a merger if:

- the annual turnover in, into or from Namibia, of the transferred undertaking is equal to or valued below NAD15 million; and
- the asset value of the transferred undertaking in Namibia is equal to or valued below NAD15 million.

If the NAD15 million thresholds described above are exceeded, a proposed merger may still be exempted if:

- the combined annual turnover in, into or from Namibia of the acquiring undertaking and transferred undertaking is equal to or valued below NAD30 million;
- the combined assets in Namibia of the acquiring undertaking and transferred undertaking are equal to or valued below NAD30 million;
- the annual turnover in, into or from Namibia of the acquiring undertaking plus the assets in Namibia of the transferred undertaking are equal to or valued below NAD30 million; and
- the annual turnover in, into or from Namibia of the transferred undertaking plus the assets in Namibia of the acquiring undertaking are equal to or valued below NAD30 million.

Both thresholds must be met for the exemption to apply.

For purposes of the merger exemptions above, the "acquiring undertaking" includes:

- (i) any undertaking that would, as a result of the transaction, acquire or establish direct or indirect control over the whole or part of the business of another undertaking;
- (ii) any other undertaking that has direct or indirect control over the whole or part of the business of an undertaking referred to in paragraph (i); and
- (iii) any other undertaking that is controlled by, or direct or indirect control over the whole or part of its business is held by, an undertaking referred to in paragraph (i) or (ii); and the "transferred undertaking" includes any undertaking, or the business or assets of the undertaking, that as a result of a transaction:
  - (a) would become controlled by another undertaking; and
  - (b) any other undertaking that is controlled by, or the direct or indirect control over the whole or part of its business is held by, an undertaking referred to in paragraph (i).

The methodology for the valuation of assets and calculation of annual turnover for purposes of the merger exemptions has been prescribed by a determination issued by the applicable minister.

Accordingly, parties to mergers and acquisitions involving Namibian businesses should carefully assess whether a transaction constitutes a notifiable merger under the Competition Act prior to implementation.

### 6.2 Merger Control Procedure

The conclusion of the formal transaction documents/agreements is not a prerequisite for the submission of a merger notification. The parties to an intended merger may submit other documentation or information which sufficiently sets forth the intended merger.

The submission for merger approval requires each undertaking participating in the intended transaction to participate in the preparation of the prescribed forms (being Forms 38 and 39), a competitiveness report and relevant supporting documents and information relating to the intended transaction.

The Competition Commission, upon receipt of the notification, must make a determination thereon within 30 days. The Competition Commission may, within the 30-day period, request additional information, which results in the extension of the period for determination with another 30 days from the receipt of the information. In addition to the foregoing, the Competition Commission may extend the period with a further period not exceeding 60 days if the complexity of the matter justifies such an extension.

As part of the review process the Competition Commission may call for a stakeholder conference at which the stakeholders can make submissions.

Where the Competition Commission believes that a proposed merger may have negative competition or public interest implications, it is not uncommon for the Competition Commission to offer the relevant undertaking an opportunity to engage with the Competition Commission to canvas the Competition Commission's concerns and/or propose solutions thereto.

The Competition Commission will issue a notice setting forth its determination and, if applicable, any conditions that it imposes upon an approval of the intended merger.

Undertakings that are dissatisfied with the determination of the Competition Commission may, within 30 days of the decision, apply to the relevant minister for a review of the determination. The minister has the power to confirm, amend or overturn the determination by the Competition Commission. The ministerial review process entails a notice to the public of the receipt of the appeal and invites the public to make submissions thereon. The minister must complete the review and publish a determination within four months of receipt of the appeal.

In the event that the undertakings are not satisfied with the outcome of the ministerial review, they may approach the High Court of Namibia within a reasonable time to review that determination.

### 6.3 Cartels

The main statute governing competition in Namibia is the Competition Act 2 of 2003, which aims to protect and promote competition. It prohibits anti-competitive conduct, including agreements, practices and decisions between businesses that have as their object or effect the prevention or substantial lessening of competition, unless specifically exempted under the Act. The Act applies to anti-competitive conduct that has an effect within Namibia, irrespective of where the conduct or agreement originated.

Anti-competitive conduct generally prohibited by the Act includes:

- fixing prices;
- dividing markets;
- collusive tendering;
- limiting or controlling production, market outlet or access, or investment;
- resale price maintenance;
- placing businesses at a competitive disadvantage; and
- making contracts subject to acceptance by other parties of additional obligations that, by their nature or commercial usage, are unrelated to the subject of the contracts.

The Act targets agreements/practices/conduct that occur between parties in a horizontal relationship, competitors operating on the same level of the supply chain. From a practical outlook, this relationship involves an agreement between competitors to eliminate competition with the objective of capturing sales. These horizontal agreements significantly and directly affect the consumer markets as they result in higher prices, lower choices, and poorer quality of services and goods.

The Act also addresses anti-competitive practices in vertical relationships which are between a business and its suppliers, customers, or both. For example, a supplier may require a retailer to purchase exclusively from it and bar the retailer from dealing with competing suppliers. The Competition Commission may investigate such conduct where it is likely to substantially lessen competition in the relevant market. This type of exclusive dealing can prevent rival suppliers from accessing distribution channels and limit the range of brands available to consumers.

### 6.4 Abuse of Dominant Position

In Namibia, unilateral conduct is mainly regulated through the prohibition against the abuse of a dominant position under the Competition Act 2 of 2003 ("the Act"), which is enforced by the Namibian Competition Commission. Namibia does not currently have separate legislation specifically dealing with "economic dependency". Instead, situations involving economically dependent businesses are generally considered under the broader rules dealing with market dominance and restrictive business practices.

The Competition Act aims to promote fair competition, protect consumers, and create equal opportunities for smaller businesses to participate in the economy. In terms of Section 26 of the Act, a business is prohibited from abusing a dominant position in a market in Namibia, or any part of the Namibian market. The law does not prohibit a business from being dominant or successful, but it does prohibit the unfair use of that power in a way that harms competition.

Examples of conduct that may amount to an abuse of dominance include:

- selling goods or services at unfairly low prices to force competitors out of the market;
- charging excessive or unfair prices;
- refusing to supply goods or services without proper justification;
- unfairly discriminating between customers or competitors; and
- engaging in conduct that excludes competitors from the market.

Whether conduct amounts to an abuse of dominance will depend on the specific facts of each case and its effect on competition within the relevant market.

Namibian law does not currently recognise "economic dependency" as a separate legal basis for liability. Accordingly, where one business is heavily dependent on another, the main legal question will generally be whether the stronger business has sufficient market power or dominance and whether its conduct amounts to an abuse under the Act.

Economic dependency may therefore be relevant when determining whether a business has market power or whether its conduct has anti-competitive effects, but dependency on its own is not a separate cause of action under Namibian law.

Namibia follows an "effects-based" approach in competition law. This means that the important consideration is not necessarily where the conduct occurred, but whether the conduct has anti-competitive effects in Namibia. Therefore, if abusive conduct occurs within Namibia, the Competition Act applies directly, and if conduct occurs outside Namibia, but negatively affects competition within Namibia, the Act may nevertheless apply.

## 7. Intellectual Property

### 7.1 Patents

A patent is the title granted under the Industrial Property Act No 1 of 2012 to protect an invention. An invention is an idea of an inventor in the form of new knowledge of a technical nature.

A patent expires 20 years after its filing date. A prescribed annual fee is, however, payable for each year starting one year after the filing date of the application.

An application for a patent must be filed with the Registrar and must contain a written request; a specification comprising a description, one or more claims, and one or more drawings; and an abstract.

The Registrar must examine the application as to form and substance and determine whether the claimed invention is patentable. If the application does not comply with the requirements of the Industrial Property Act No 1 of 2012, the Registrar must notify the applicant, setting out the reasons for the finding.

The applicant may, within the specified period of receipt of the notification, submit arguments as to why the application should be granted, or submit changes to the description, claims or drawings to address the findings of the Registrar, failing which the application will be refused.

If the Registrar grants or refuses to grant a patent, they must notify the applicant in writing. In the case of a decision to grant a patent, the applicant must pay the registration, publication, and annual fees within 90 days. The Registrar must, on payment of these fees, grant the patent. A patent is considered granted on the date of publication of a reference to the grant in the Industrial Property Bulletin.

The patent owner has the right to exploit the patent and to exclude others from exploiting the patented invention without their authority, so that the owner enjoys the full profit and advantage of the invention. Exploitation of a patented invention without the authority of the owner constitutes an infringement.

Infringement proceedings may be instituted in the Tribunal by the patent owner. Where a patent has been infringed and the owner has instituted proceedings, the Tribunal may grant an interdict, an order for any infringing product or process article or product to be delivered up, damages, or in lieu of damages, a reasonable royalty. Appeals can be made to the High Court of Namibia.

### 7.2 Trade Marks

A trade mark is defined in the Industrial Property Act No 1 of 2012 as a mark used or proposed to be used in relation to goods or services to distinguish those goods or services from the same kind of goods or services connected in the course of trade with any other person. A mark is any sign capable of being represented visually, including a device, name, signature, word, letter, numeral, figurative element, shape, colour or container for goods, or any combination of such signs.

The registration of a trade mark is valid for a period of ten years from the date of the application for registration. The registration may be renewed for consecutive periods of ten years, subject to the registered owner paying the prescribed renewal fees.

An application for the registration of a mark as a trade mark must be filed with the Registrar and must contain a request for registration on the prescribed form, a representation of the mark, a specification of the goods or services for which registration is requested, and an indication of the applicable class or classes of the International Classification of Goods and Services.

The Registrar must examine the application as to form and substance and determine whether the mark is registrable. The Registrar may accept the application with or without conditions or refuse the application.

The Registrar must advise the applicant of their decision in writing within a reasonable period. The applicant will have 30 days to respond to the Registrar's notification, addressing any issues raised, failing which the application will be deemed abandoned.

The applicant must, following receipt of confirmation of acceptance of the application by the Registrar, cause the application to be published in the Industrial Property Bulletin.

Should no person oppose the registration of the mark within 60 days of publication, the mark may be registered as a trade mark, and the applicant may obtain a registration certificate.

The owner of a trade mark has the right to exclude others from unauthorised use thereof in the course of trade.

Trade mark rights may be enforced by means of opposition proceedings where an opposing mark is published in the Industrial Property Bulletin, or Tribunal proceedings in the case of infringement.

Available remedies for infringement include an interdict, an order for the removal of the infringing mark from infringing goods (or that such goods be delivered up), damages, or in lieu of damages, a reasonable royalty. Appeals can be made to the High Court of Namibia.

### 7.3 Industrial Designs

A design is defined in the Industrial Property Act No 1 of 2012 as any features of form or shape or configuration, or any features of pattern or ornamentation, including any composition of lines or colours, applied to an article to give it an appearance discernible by the eye, but does not include any feature serving only to obtain a functional or technical result.

The registration of a design expires 15 years after the filing date. A prescribed annual renewal fee must, however, be paid, starting one year after the filing date, failing which the design registration will lapse.

An application for the registration of a design must be filed with the Registrar and must contain a written request for registration, graphic representations of the article embodying the design, a written statement of the type of products in respect of which the design is to be used, the class or classes of the International Classification in which the design is to be registered, and the prescribed application fee.

The Registrar must examine the application as to form and substance. Where the Registrar finds that the requirements set out in the Industrial Property Act No 1 of 2012 have been satisfied, either initially or after changes have been made, the Registrar must register the design. Where the Registrar finds that the requirements have not been satisfied, the Registrar must notify the applicant, setting out the reasons for the finding and inviting the applicant to make such changes as may be necessary to satisfy the requirements within 60 days, failing which the Registrar will refuse the application.

If the Registrar grants the application, the Registrar must request the applicant to pay the prescribed registration and publication fees within 90 days. The design is then recorded in the register, and the applicant is issued a certificate of registration. After the design has been registered, it must be published in the Industrial Property Bulletin.

The owner of a design registration has, subject to certain limitations, the right to exclude others from making, importing, using or disposing of or offering to dispose of any article in the class or classes in which the design is registered and bearing or embodying the registered design or a design not substantially different from the registered design, when such acts are undertaken for commercial purposes.

The registered owner of a design has the right to institute legal proceedings against any person who infringes the design registration by performing, without written consent, any of the acts referred to above for commercial purposes, or who performs acts which make it likely that infringement will occur. Infringement proceedings may be instituted in the Tribunal by the design owner. Where a design has been infringed and the owner has instituted proceedings, the Tribunal may grant an interdict, an order for any infringing product or process article or product to be delivered up, damages, or in lieu of damages, a reasonable royalty. Appeals can be made to the High Court of Namibia.

### 7.4 Copyright

The Copyright and Neighbouring Rights Protection Act No 6 of 1994 does not set out a definition for copyright, but provides that the original works of the following descriptions are eligible for copyright: literary works, musical works, artistic works, cinematograph films, sound recordings, broadcasts, programme-carrying signals, published editions, and computer programs.

Copyright protection generally endures for the following periods:

- a literary, musical or artistic work, other than a photograph, for the life of the author plus 50 years from the end of the year in which the author dies, but if such work or an adaptation thereof has not been made publicly available during the author's life through publication, public performance, offer for sale to the public, or broadcasting thereof, then for a period of 50 years from the end of the year in which the work is first made publicly available;
- a cinematograph film, photograph or computer program, for a period of 50 years either from the end of the year in which the film, photograph or program is made available to the public with the owner's consent or, if such film, photograph or program was not made publicly available within 50 years of its making, the end of the year in which the film, photograph or program was made;
- a sound recording or published edition, for a period of 50 years from the end of the year in which it is first published;
- a broadcast, for a period of 50 years from the end of the year in which the broadcast is made;

- a programme-carrying signal, for a period of 50 years from the end of the year in which the signal is emitted to a satellite.

Copyright subsists automatically in eligible works which meet the requirements set out in the Copyright and Neighbouring Rights Protection Act No 6 of 1994, and no formal registration process is required. However, in practice, the Business and Intellectual Property Authority (BIPA) may issue registration certificates for copyright.

Copyright is infringed by a person who, without the licence of the owner, does or causes any act which the owner has the exclusive right to do or authorise.

Infringement proceedings are brought before the court, and the copyright owner may seek remedies including damages, an interdict, delivery up of infringing copies, or the delivery of plates used or intended to be used for the production of infringing copies. Such remedies are available to the owner in the same manner as those available to a plaintiff in corresponding proceedings concerning the infringement of other proprietary rights. At the option of the owner, damages may be calculated on the basis of a reasonable royalty that would, in the circumstances, have been payable by a licensee or sub-licensee in respect of the copyright concerned.

### 7.5 Others

When reference is being made to "other" IP rights, a distinction should be drawn between software and databases, and trade secrets.

The distinction arises from the different forms of protection applicable to these rights. Software and databases qualify for protection under copyright and are defined as such in the Copyright and Neighbouring Rights Protection Act 6 of 1994. Under the Copyright and Neighbouring Rights Protection Act 6 of 1994, "software" is classified as a computer program and a "database" as a literary work.

Trade secrets, on the other hand, enjoy no specific legislative protection in Namibia. Protection is however found in the common law. The common law position and protection vest if three requirements are met. These requirements are:

- The information must relate to trade or industry and be capable of practical application.
- It must be secret or confidential, meaning it must not be public knowledge or property.
- The information must have economic or business value to the person claiming rights over it.

Trade secrets, if the above requirements are met, cannot be registered, as with other IP rights, as the registration would defeat the purpose of secrecy. In practice, trade secrets are mostly protected through the use of confidentiality agreements. This may also include clauses in employment agreements that bind employees to the non-disclosure obligations.

Enforcement may take different forms, although disputes are ultimately determined by the courts of Namibia. The forms of enforcement include action proceedings for damages, in cases of unauthorised disclosure, interdictory relief on application in cases of unfair competition, or specific performance on application in the enforcement of contractual obligations, in cases in which the obligation exists.

It must be borne in mind that disclosure of the trade secret would disqualify the trade secret from further common law protection, as the requirement of secrecy would no longer be met.

## 8. Data Protection

### 8.1 Applicable Regulations

Namibia currently does not have comprehensive general data protection legislation in force. Namibia relies on the constitutional privacy rights in terms of Article 13 and sector-specific laws that address individual data protection.

The right to privacy is a fundamental human right that is limited to what is required by law. This right consists of protecting national security, public safety, economy, health, morals and protection against crimes.

Sector-specific laws affecting data privacy through specific regulations include banking sector, telecommunications, and the legal sector.

The Namibian government has published the Draft Data Protection Bill. The aim of this draft Bill is to create and establish a data protection supervisory authority and determine the authorities' powers, duties, and functions. The Bill further establishes obligations of data controllers, processors and obtaining information relating to any individual and how it should be protected as a fundamental right. The Bill further provides for the rights of individuals, provides restrictions and exceptions under provisions of the Bill and lastly provides codes of conduct of processors.

Namibia's Data Protection Bill, 2023, remains in the early stages of the legislative process and must undergo further parliamentary review before it is passed into law. The absence of effective data protection law has created major regulatory gaps in the use and governance of personal data. As a result, individuals are left vulnerable to privacy breaches, unauthorised data collection, and potential exploitation by both public and private entities. This regulatory gap has raised concerns, especially with the increasing collection and use of personal data across both the public and private sectors.

If enacted, the Bill is expected to require transparent, fair, and lawful data processing primarily focused on individual consent. The Bill is not industry-specific, and its wide application will have a profound effect on both public and private entities.

Although the Bill is not yet in force, from the experience of neighbouring countries and other jurisdictions which have active privacy laws, organisations in Namibia must take initiative-taking steps to anticipate such laws. The proposed legislation will introduce significant changes to our data privacy laws and the manner in which organisations process and manage personal data.

## 8.2 Geographical Scope

Namibia currently only has sector-specific regulations for data protection, which are the following:

- Banking and Financial Services: These sectors are governed by the Financial Intelligence Act 13 of 2012, which mandates strict client identification, record-keeping, reporting of suspicious transactions and protection of individuals confidential information.
- Telecommunications: This sector is regulated under the Communications Act of 2009, which includes provisions about the interception of communications and protection of user information.
- Public Sector and Surveillance: Data collection by the government, for example identification card numbers, and biometric voter registration, is governed by the Namibia Central Intelligence Service Act of 1997.
- Health Sector: While there is no specific patient data privacy law, general medical ethics is sensitive to personal data such as health records.
- Legal Sector: This sector is subject to confidentiality rules under the Legal Practitioners Act, 1995.
- General Privacy and Access: The Access to Information Act 2022 establishes the right to access information held by public and private entities while allowing exemptions to protect personal privacy.

All national or international businesses and companies who look to target a market or customers in Namibia's jurisdiction must abide by the sector-specific laws of Namibia and the constitutional right to privacy. This is because of extraterritorial jurisdiction, meaning the laws applicable to the location of the data subject or customer wherever the business is located.

Foreign companies seeking to provide goods or services to Namibian consumers are therefore required to comply with applicable international and regional laws, insofar as these relate to the nature of their business, while simultaneously adhering to both the laws of their own jurisdiction and the laws of Namibia.

Namibia has entered into the African Union Convention on Cyber Security and Personal Data Protection, which requires Namibia to establish legal frameworks for cybersecurity, electronic transactions, and personal data protection in alignment with its national strategy.

What does this mean for Namibians and potential foreign businesses targeting Namibian customers? Namibia now has a binding commitment to implement the provisions of the Convention, align its domestic legislation with international data protection standards, and actively combat cybercrime. In fulfilment of these obligations, Namibia is actively advancing the development of its data protection legislation, which is expected to be promulgated by the end of 2026.

### 8.3 Role and Authority of the Data Protection Agency

Namibia does not currently have an active standalone data protection authority. Instead, sector-specific legislation provides for its own regulatory authorities or bodies, each of which has powers to impose fines, penalties, and accountability measures within their respective areas of jurisdiction.

Under the Financial Intelligence Act, the primary authority responsible for administering and enforcing the Act in Namibia is the Financial Intelligence Centre. The Financial Intelligence Centre operates within the Bank of Namibia. The officer responsible for heading the institution and managing its statutory duties is the Director of the Centre, who may issue directives to investigating officers, the police, or anti-corruption officials.

The Communications Act authorises the Communications Regulatory Authority of Namibia (CRAN), which is responsible for regulating, supervising, and promoting the provision of telecommunications services and networks, broadcasting, and postal services, while also protecting consumer rights.

The Namibia Central Intelligence Service Act of 1997 ultimately vests authority in the President of the Republic of Namibia. However, the Director-General also has powers to uphold and implement the Act, including ensuring the protection of personal data such as identification numbers, names, and surnames.

The Legal Practitioners Act of 1995 is administered and enforced by several bodies, including the Law Society of Namibia, the Ministry of Justice and Labour Relations, and the High Court of Namibia.

The forthcoming Data Protection Bill, once promulgated, will provide for the establishment of a Data Protection Supervisory Authority, which will become Namibia's dedicated supervisory body responsible for data protection across all sectors of the country.

## 9. Looking Forward

### 9.1 Upcoming Legal Reforms

Namibia has not introduced any sweeping legislative overhaul in the areas of employment, taxation, or judicial structure; however, there are notable ongoing developments and proposed reforms, particularly in the fields of taxation and labour law, which are relevant to employment relationships.

From a taxation perspective, a number of amendments have been proposed in the Income Tax Amendment Bill 2025, which has been tabled before Parliament and is expected to be enacted in the near future. Key proposals in the Bill include improvements to the tax treatment of lump-sum retirement benefits, most notably the increase of the single commutation threshold from NAD50,000 to NAD375,000. In addition, the Bill introduces new caps on housing-related benefits, including a proposed annual limit of NAD400,000, thereby providing greater certainty on the tax-exempt portion of such allowances. The Bill further contemplates adjustments to the taxation of dividend income derived from preference shares, which may have broader implications for remuneration structuring and employee incentive schemes.

Further administrative clarification has been issued by the Namibia Revenue Agency. Practice Note 1 of 2024 (effective 9 December 2024) provides that subsistence allowances paid to employees required to work away from their ordinary place of work will not be subject to income tax, provided they do not exceed United Nations International Civil Service rates. These amounts are also not required to be reflected on PAYE certificates. In addition, travel reimbursements calculated on a per-kilometre basis will be tax-exempt up to a prescribed rate, which has not yet been formally determined, with any excess remaining taxable.

In the labour law sphere, there are ongoing policy discussions concerning potential amendments to the Labour Act 11 of 2007. These include efforts to enhance dispute resolution mechanisms, improve the efficiency of collective bargaining frameworks, and strengthen protections for vulnerable employees. Particular attention has been given to improving the functioning of labour institutions and reducing delays in dispute resolution.

These developments do not yet amount to comprehensive reform; however, they reflect a measured process of legislative refinement and administrative clarification, requiring employers to monitor developments closely to ensure continued compliance.

# Trends and Developments

**Dr. Weder, Kruger & Haikali Inc.**

**Dr. Weder, Kruger & Haikali Inc.** (WKH Inc.) is a full-service law firm based in the Republic of Namibia, with offices situated in Windhoek (Head Office), Ongwediva, Swakopmund, Walvis Bay, and Grootfontein. It was founded through a merger of leading legal practices with roots dating back to 1949 and rebranded in 2025 to reflect a modern, forward-looking legal identity. The firm has a team of 16 directors, 19 associates, 12 conveyancers and 117 support personnel across its national operations. The firm provides guidance to both local and international clients on a broad range of legal and commercial matters, including litigation, labour law, commercial and corporate law, tax law, conveyancing, banking and finance, mining, energy, emerging oil and gas matters, infrastructure, and dispute resolution. The firm has provided advice on legal representation in major property and business deals in Namibia involving independent power producer projects, financial services regulations, commercial and banking matters, amongst others.

## Authors

**Tshuka Luvindao** is co-managing director of Dr. Weder, Kruger & Haikali Inc. and an admitted legal practitioner and notary public of the High Court of Namibia, with over twelve years of post-admission experience. His practice spans commercial litigation and arbitration, administrative and regulatory law, emerging oil and gas, property development disputes, and banking and insurance law. He advises a broad range of clients on complex dispute resolution in the High and Supreme Court of Namibia, regulatory compliance, and commercial litigation matters across multiple sectors. Tshuka holds a B Juris and LLB from the University of Namibia and a M Eng. from École des Mines de Paris.

**Azaria Wallace** is an associate designate at Dr. Weder, Kruger & Haikali Inc. Her practice focuses on general civil law, corporate and commercial law, emerging oil and gas, energy and mining sectors. She advises on commercial agreements, mergers and acquisitions, corporate due diligence, regulatory compliance, dispute resolution, public procurement, and cross-border transactions. Azaria holds a LLB from the University of Namibia and an LLM in Oil and Gas Law from the University of Aberdeen. She is a member of the Association of International Energy Negotiators (AIEN) and also volunteers with the UN Association Scotland and UN House Scotland in support of initiatives relating to the Conference of the Parties (COP) process.

## Arbitration and Administrative Law at the Wellhead: A Tri-Modal Framework for Resolving Disputes in Namibia's Upstream Petroleum Sector

### *Introduction*

Final investment decisions on the Orange Basin discoveries are expected by 2026. These developments are likely to increase the importance of an effective dispute-resolution framework for Namibia's upstream petroleum sector. When production starts, so will the disputes – and Namibia is not ready for them. The legal architecture for resolving upstream disputes has received limited attention. Most of what passes for debate is about institutional placement, not dispute resolution.

Two arguments dominate. The first, advanced by writers like Kovimariva Mungunda, calls for a dedicated Petroleum Tribunal. The second, embodied in the Petroleum (Exploration and Production) Amendment Bill [B.12 – 2025], now at Committee Stage, proposes amendments to the executive locus of regulatory power. However, both approaches leave broader dispute-resolution questions unresolved.

Upstream disputes in Namibia already run through three parallel forums: contractual arbitration under Section 13 of the Petroleum (Exploration and Production) Act 2 of 1991 (PEPA); the Ancillary Rights Commission under Part IX; and Article 18 judicial review in the High Court. Each was designed for a different purpose, in a different era, and none of them speaks to the others. A single set of facts can yield three proceedings, three standards of review, and three potentially inconsistent outcomes. This creates procedural fragmentation and potential uncertainty for investors, regulators and affected stakeholders. A new tribunal will not fix that. Neither will the Amendment Bill. Accordingly, Namibia may benefit from integrated dispute architecture, imposed by statute, enforceable in practice. The rest of this article makes that case.

### *Statutory architecture: a tri-modal framework*

Take each in turn. First, contractual arbitration. Section 13 (2)(i) of PEPA lets the minister write into any petroleum agreement a clause for "arbitration in the event of any dispute which may arise in the application of any term or condition contained in such agreement, whether in terms of the provisions of the Arbitration Act, 1965 (Act 42 of 1965), or by way of any international arbitration tribunal specified in such agreement". Section 16 (3)(b) goes further: where a licence holder and a landowner cannot agree on the price for land they are forced to sell because of petroleum operations, "the price and mode of payment shall be fixed by arbitration". The Arbitration Act 42 of 1965 governs domestically. The Recognition and Enforcement of Foreign Arbitral Awards Act 40 of 1977 governs enforcement of foreign awards.

Second, the Ancillary Rights Commission. Part IX of PEPA (Sections 54 to 61) sets it up. There are three members appointed by the President. Although its powers are limited in scope, they remain significant in practice. Under Section 56, the Commission can grant a licence holder rights of entry, pipeline laying, water sourcing, and disposal of waste – the operational rights without which an exploration or production licence is so much paper. Under Section 59 it fixes compensation where parties cannot agree. Its orders bind (Section 57 (4)). Appeals lie to the High Court (Section 61). In everything but name this is a specialist statutory tribunal with quasi-judicial powers. The petroleum-tribunal debate has somehow overlooked it.

Third, administrative law. Article 18 of the Namibian Constitution requires every administrative body and every administrative official to act fairly and reasonably and to comply with the requirements imposed by common law and any relevant legislation. Article 25 makes those rights enforceable. Almost every ministerial decision under PEPA, to issue, renew, transfer or cancel a licence (Sections 11, 19, 27 and 34); to direct good oilfield practices (Section 21); and to declare a petroleum field (Section 42), is an administrative action subject to review on Article 18 grounds.

Before turning to the silo problem, one further instrument complicates the picture. Regulations made under Section 4A(2)(b) of the Petroleum Products and Energy Act 13 of 1990 (GN 93 of 2003, Government Gazette 2970, 29 April 2003) set up a detailed arbitration regime for downstream disputes between wholesalers and operators. Regulation 19 allows consolidation where the dispute "is substantially related to the dispute being arbitrated and involves a common

question or questions of fact or law" and the other party consents. It is the only Namibian petroleum-specific instrument with explicit consolidation language. Anyone drafting an upstream reform should read it closely.

Each forum was carefully designed to address specific categories of disputes. None is necessarily defective in isolation. The problem is that nothing connects them. An investor whose exploration licence is cancelled may simultaneously face a land-access dispute before the Ancillary Rights Commission and a royalty dispute under Section 62 PEPA before an arbitral tribunal, all arising from the same operational facts. Three sets of pleadings. Three different standards of review. Three potentially inconsistent outcomes. No statute, no regulation, no rule of court addresses how these proceedings should be sequenced or harmonised. That is the silo problem.

### *The forum cascade problem*

International arbitral practice has thought about fragmentation, but only within a single mode. Haigh and Beke, writing in the Global Arbitration Review Guide to Energy Arbitrations, set out the standard analysis. In *Cambodia Power Company v Kingdom of Cambodia*, *Electricité du Cambodge* (ICSID Case No ARB/09/18) the tribunal identified three independent grounds on which related energy agreements could be consolidated: clause-precedence, collective-agreement, and consolidation-provision grounds. The Karah Bodas award – *Karah Bodas Co LLC v Perusahaan Pertambangan Minyak Dan Gas Bumi Negara* (2004) 364 F 3d (5th Cir), survived enforcement challenge in the United States Court of Appeals for the Fifth Circuit in part because the underlying Indonesian geothermal contracts cross-referenced each other. But all of that addresses co-ordination within arbitration. It does nothing for the harder problem: co-ordination across arbitration, statutory tribunal, and constitutional review. That is the problem Namibia has.

The practical consequences are familiar to any litigator who has run parallel proceedings. Costs may increase significantly. Each forum demands its own counsel, its own evidence, its own preparation. Awards conflict, a compensation order from the Ancillary Rights Commission can sit awkwardly against an arbitral award between the licence holder and the State on the same facts. The asymmetry between parties may widen. International investors can fund parallel tracks; the State and local participants typically cannot.

The Dutco problem makes this worse. In *Siemens AG and BKMI Industrieanlagen GmbH v Dutco Construction Co* (French Court of Cassation, 7 January 1992), the Cour de Cassation set aside a multi-party arbitral appointment because the principle of equal treatment in tribunal constitution had been compromised. In France, that principle cannot be waived before a dispute arises. Namibia currently has no comparable domestic jurisprudence and, for the reasons addressed next, no New York Convention framework to absorb the blow if a Namibian-seated multi-party award is challenged on similar grounds. Cascade risk plus weak enforcement is a real exposure.

### *The enforcement gap*

Namibia has not acceded to the New York Convention. It signed the ICSID Convention on 26 October 1998 and never ratified it. Forty-two of Africa's fifty-four states are now party to the New York Convention. Namibia is in the dwindling minority that is not.

The domestic substitute is the Recognition and Enforcement of Foreign Arbitral Awards Act 40 of 1977, inherited from South Africa at independence. It provides for enforcement in the High Court, but on narrower grounds than Article V of the Convention and without the harmonised refusal-of-enforcement framework that international investors expect. Section 13 (2)(i) of PEPA invites international arbitration. The enforcement architecture does not back the invitation. That is the gap.

### *The Petroleum Tribunal debate and the Amendment Bill*

The argument for a specialist Petroleum Tribunal is the strongest case for reform currently in print, and I should be candid about it: a Petroleum Tribunal was the model I started with myself. The High Court bench cannot, without serious resourcing, develop the technical fluency that production sharing arrangements, cost recovery audits, abandonment liability under Part XA, and fiscal-stability claims demand. The intuition

that Namibia needs specialised forum capacity is right.

What changed my mind is what the Bill actually does. The Petroleum (Exploration and Production) Amendment Bill [B.12 – 2025], introduced by the Minister of Industries, Mines and Energy on 4 February 2026 and now at Committee Stage, is not a dispute resolution reform. It primarily restructures institutional authority. It moves upstream regulatory authority from the Ministry to the Office of the President, sets up an Upstream Petroleum Unit, and replaces "Minister" with "President" across the operative provisions. The Director-General and Deputy Director-General will be appointed and removable by the President. A residual clause in the proposed Section 3A(3)(j) authorises the Unit to perform "any other function as required by law or the President". That clause has rightly attracted commentary from the profession.

Limited attention has been paid to examining what these changes mean for dispute resolution. It deserves closer scrutiny. Relocating regulatory decision-making to the Presidency (which given our history we support) does not remove it from Article 18 review; a presidential decision in execution of a statute remains administrative action. But the political weight of suing the Office of the President is not the same as the political weight of suing a minister. Licence holders will likely think twice before instituting proceedings. This may have practical implications for administrative-law litigation as Mode Three becomes harder to use. The Bill says nothing about consolidation, the qualifications of Ancillary Rights Commissioners, or Namibia's posture toward the New York Convention. Adding a separate Petroleum Tribunal to this picture, without addressing those silences, creates a fourth silo rather than providing a meaningful solution.

### *A proposed integrated architecture*

The reform Namibia needs is not a new tribunal. It is a statutory dispute architecture, compulsory in every petroleum agreement and every licence, that tells the parties in advance how related disputes will be sequenced, where they will be heard, and on what enforcement footing. The individual elements are interdependent and only function effectively when implemented together.

The process begins with a mandatory pre-arbitral evaluation, modelled in regulation 3 of GN 93 of 2003. The evaluation panel should comprise three experts: one nominated by each party and a third appointed by mutual agreement or, failing agreement, by the Law Society. The process could within a 60-day period and culminate in a non-binding recommendation. Structured early evaluation will not resolve every dispute, but it can clarify the issues, distinguish genuine disagreements from tactical posturing, and reduce the parties' appetite for the cascade to follow.

Disputes that survive evaluation should proceed to consolidated arbitration seated in Windhoek, under bespoke rules that borrow the Cambodia Power consolidation grounds, the LCIA-style multi-party joinder provisions, and the Dutco safeguard of party equality in tribunal constitution. The carve-out must be explicit: purely regulatory decisions issue, renewal, cancellation, and field designation remain reviewable under Article 18 and cannot be displaced into private arbitration. Some choices the State makes affect more than the contracting parties. Those choices should remain subject to public-law oversight.

Enforcement comes next and is the hardest piece. Namibia should accede to the New York Convention. That is the cleanest fix and should be a national priority. Until accession, the Recognition and Enforcement of Foreign Arbitral Awards Act 40 of 1977 should be amended to align with Article V of the Convention and to add petroleum-specific provisions. Arbitral awards in petroleum disputes should be enforceable as orders of the High Court on registration, subject only to the narrow grounds for setting aside in Section 33 of the Arbitration Act 42 of 1965.

Finally, the Ancillary Rights Commission should do the work a Petroleum Tribunal would have done. Part IX of PEPA should be amended to expand the Commission's jurisdiction over all operational disputes – land access, compensation, abandonment liability under Part XA, and decommissioning trust fund disputes under Section 68B. Its appointment architecture under Section 55, its procedural footing under the Commissions Act 8 of 1947, and its appeal route to the High Court under Section 61 already provide the institutional bones. Consideration should also be given to

renaming the Commission the Petroleum Disputes Commission, and the legal, technical, and environmental qualifications of its members should be prescribed by statute.

### *Conclusion*

Three forums, no co-ordination, and no enforcement backstop. That is the architecture Namibia is taking into its first production cycle. The Petroleum Tribunal debate has often framed the question as one of forum creation. It is not. Adding a fourth forum to three uncoordinated ones makes the silo problem worse. Real reform runs through the existing forums, not around them: pre-arbitral evaluation, consolidated arbitration with administrative-law carve-outs, enforcement reform tied to accession to the New York Convention, and a renamed and expanded Ancillary Rights Commission.

The Amendment Bill is the legislative vehicle. Whether Parliament uses it to address the dispute architecture or merely to relocate the regulatory office will tell us what kind of upstream sector we are building. The choice is being made now.

**BUREN** is an independent, internationally oriented firm of lawyers, tax advisers and civil-law notaries with offices in Amsterdam, Beijing, The Hague, Luxembourg, and Shanghai. It has more than 80 legal professionals providing a full range of legal services to domestic and international business clients who conduct business nationally and globally. The firm offers sound legal solutions combined with business acumen, which ensures a holistic perspective to every legal and tax challenge faced by clients. BUREN works closely with its clients to tailor solutions in alignment with clients' business goals. It has carefully established a global network with premier and reputable law firms and other service providers. It also has dedicated regional practices (China, Germany, Hong Kong, India, Japan, Kazakhstan, and Spanish-speaking Latin America) staffed by native speakers and professionals that have a profound knowledge of local business and culture.

## Authors

**Friederike Henke** studied law in Maastricht (the Netherlands) and Saarbrücken (Germany) and has been a lawyer in the Netherlands since 2006. In 2010, she was admitted to the German Bar, following which she joined the Cologne Bar as a Rechtsanwältin (lawyer). At BUREN, Friederike is a partner and specialises in international corporate law, M&A, financing, reorganisation, and restructuring. Friederike advises both multinationals and mid-sized companies in international transactions and procedures, and in their daily legal work. She is a member of the German-Dutch lawyers association, the German lawyers association DAV (Deutscher Anwaltverein) and the DAV Niederlande of which she is the president. She is also a member of the International Bar Association.

**Ingrid Cools** obtained her master's degree in law and her bachelor's degree in biomedical sciences from Vrije University Amsterdam in 2016 and joined BUREN in 2020. Ingrid specialises in assisting in mergers and acquisitions, joint ventures, and restructuring. She advises both national and international companies in cross-border transactions and assists both strategic and private-equity parties. Ingrid regularly works with international law firms in cross-border transactions.

**Philip ter Burg** completed his studies in Dutch business law at Leiden University in 1988 and received an LLM in international business law from Queen Mary College, University of London, in 1989. He specialises in international trade, intellectual property, and litigation, and has a wealth of experience in international litigation, representing companies with regard to distribution and agency agreements. Philip is a partner at BUREN and a member of the IBA, the Dutch Transport Law Association, the Corporate Litigation Association and is a former board member of the International Trade Chapter of the Dutch Bar Association.

**IJsbrand Uljée** graduated in tax law from the University of Groningen in 2011, and has been working as a tax adviser in international tax since 2012. Prior to BUREN, he was employed by one of the "big four" firms and at an international tax boutique firm. IJsbrand advises clients on the Dutch tax aspects of domestic and international transactions such as mergers, acquisitions, and restructuring of investments and debt. He is a member of the Dutch Association of Tax Advisers.

**Suzan van de Kam** obtained her degree in Dutch law from Radboud University Nijmegen and completed the Grotius specialisation course on employment law. She joined BUREN in 1999 and is now a partner at the firm. Suzan advises on the full spectrum of complex employment issues, including litigation and dispute resolution, European works councils and unions, and the employment aspects of all types of corporate transactions. She advises and represents national and international companies on dismissals, collective dismissals, reorganisations, outsourcing, downsizing, national and European co-determination, health and safety, and other topics. Suzan is a member of the Dutch Employment Law Association (VAAN) and The Hague chapter of the Employment Law Association (VHA).

**Epke Spijkerman** graduated in Dutch law from Leiden University in 2000 and completed the post-academic course in employment law (PALA) at Erasmus University Rotterdam in 2008. He joined BUREN in 2020 as a partner. Epke specialises in employment and the employee participation law aspects of international M&A, business transfers, reorganisations, and dismissal proceedings (collective and individual). He has extensive experience in advising and litigating for national and international companies, including listed multinationals. Epke is a member of the European Employment Lawyers Association (EELA), the Amsterdam Employment Lawyers Association, the Dutch Employment Lawyers Association, the Dutch Labour Law Association, the Association for Sports and Law, and the People Committee of AmCham.

# 1. Legal System

## 1.1 Legal System and Judicial Order

Like in many other EU countries, the legal system of the Netherlands is a civil law system. While legislation is the primary source of law, precedents developed in case law play an important role, as do the principles of reasonableness and fairness. In addition to its own domestic legal system, the legal framework of the EU applies in the Netherlands.

### Judicial System for Civil and Criminal Cases

Eleven district courts (*rechtbanken*) deal with civil and criminal cases, and there are four courts of appeal (*gerechtshoven*). For civil and criminal cases, the Supreme Court of the Netherlands (*Hoge Raad der Nederlanden*) is the highest instance, but it can overturn judgments of the courts of appeal on limited and specific legal grounds only, without reviewing the facts of a case.

Ranking high in The World Bank's Rule of Law Index, the Dutch legal system is considered one of the most efficient civil law systems in the world. Urgent matters may be heard in summary proceedings, in which judgments are rendered in a timeframe of a few weeks or even a few days. For certain areas of law, the Netherlands has established courts with specific expertise. The following courts are most relevant in an international business law context:

- the Netherlands Commercial Court, which allows parties to litigate in the English language entirely (from writ of summons to court hearing to judgment) in any international commercial dispute;
- the Enterprise Court (*Ondernemingskamer*) of the Amsterdam court of appeal, which has exclusive jurisdiction over certain matters relating to corporate law;
- the Maritime Court of the Rotterdam district court, which allows parties to litigate partly in English; and
- a chamber of the district court of The Hague, specialised in intellectual property law, which allows parties to litigate partly in English.

### Judicial System for Administrative Cases

As in civil and criminal cases, district courts have jurisdiction in administrative cases, in principle, provided that the applicable complaints procedure with the respective administrative body has been completed first. There are a number of competent courts for appeals – which court has jurisdiction to handle the appeal depends on the type of case. Most appeals are heard by the Administrative Jurisdiction Division of the Council of State (*Afdeling bestuursrechtspraak van de Raad van State*), which in most cases is the highest court for matters of administrative law in the Netherlands. A final appeal to the Supreme Court is only possible in tax cases.

Unlike in other countries, judicial bodies in the Netherlands do not pass judgment on the constitutionality of legislation. Based on a recent decision in the Dutch parliament, the constitutionality of legislation will in the future be dealt with by a separate commission of the parliament.

# 2. Restrictions on Foreign Investments

## 2.1 Approval of Foreign Investments

### Approval

The approval requirements in the Netherlands have always been rather limited. As a consequence of the EU FDI Screening Regulation (Regulation (EU) 2019/452), which entered into force in 2019 this changed. Certain sectors and industries are regulated regardless of the nationality or home state of the investor.

### Electricity, Gas, Drinking Water and Telecommunications Act

The Electricity Act, the Gas Act and, since 1 October 2020, the Telecommunications Act require notification to the Dutch Ministry of Economic Affairs (and Climate Policy) of any change of control with respect to an electricity, gas or telecommunications company. This screening obligation applies to any change of control that leads to a change of "predominant control" in any of the above sector-specific (electricity, gas or telecommunications) companies, regardless of the identity of the investor. A transaction triggering a change of control may be prohibited or be subject to certain conditions for reasons of public safety or

supply security. If parties fail to notify the Ministry, a transaction is voidable.

Drinking water companies are by law required to be directly or indirectly held by Dutch public persons.

#### Financial Supervisions Act

Certain changes of control in companies and institutions that are subject to the Financial Supervisions Act are to be reported to the Authority for Financial Markets (*Autoriteit Financiële Markten*) or the Dutch Central Bank (*De Nederlandsche Bank*).

#### Dutch Implementation of Screening Mechanisms: Security Test Act

On 1 June 2023, the Investments, Mergers and Acquisitions Security Test Act (*Wet Veiligheidstoets investeringen*, *fusies en overnames*) (Security Test Act, also referred to as Vifo-Act) entered into force. The Security Test Act requires a change of control in certain Dutch companies to be notified to and approved by the Bureau for Investment Screening (*Bureau Toetsing Investeringen* – BTI). Companies that are active in the Netherlands in supplying vital infrastructure or undertakings, or that are active in sensitive technology, as well as companies that operate business campuses, fall under the scope of the Security Test Act.

The term "control" refers to the ability to exercise decisive influence on a target company, either through shareholding or on a de facto basis once the investment has taken place. Thresholds apply depending on the type of target company involved. Upon receipt of the notification, the BTI will examine whether the transaction can lead to a risk to national security, particularly the continuity of vital processes, the prevention of undesirable strategic dependencies and the integrity and exclusivity of knowledge and information.

In principle, the approval time is within eight weeks of receipt of the notification. If a formal assessment is required, the BTI has an additional eight weeks for further investigation. Each phase can be extended separately. Pending BTI approval of the transaction, a standstill obligation applies to the parties involved.

Based on Article 6 (1) of the EU FDI Screening Regulation, the European Commission will have to be informed about the transaction and both the European Commission and other EU member states may ask questions about a transaction.

### 2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance

On the basis of current legislation, a transaction is voidable if parties to a foreign investment in the electricity, gas, or telecommunications sector fail to notify the Ministry.

Failure to comply with the notification obligations under the Security Test Act may lead to a direct suspension of all voting rights of the investor, pursuant to the transaction. The company will be obliged to make all efforts to co-operate.

Furthermore, the BTI may require the parties to make a certain notification within three months of the transaction becoming known. In the meantime, the rights of the investor will be suspended. The BTI may also impose an administrative fine, with the maximum being 10% of the turnover.

If the transaction has taken place without the approval of the BTI, the Security Test Act stipulates that the acquisition shall be declared null and void.

### 2.3 Commitments Required From Foreign Investors

Foreign investors are required to fulfil the notification requirements described in **2.1 Approval of Foreign Investments**.

### 2.4 Right to Appeal

This section is not applicable in the Netherlands.

## 3. Corporate Vehicles

### 3.1 Most Common Forms of Legal Entity

The legal entities most commonly used in the Netherlands are the private company with limited liability (*besloten vennootschap met beperkte aansprakelijkheid* – BV) or the public limited company (*naamloze vennootschap* – NV), both of which have legal personality, and the (limited or general) partnership (*person-*

*envennootschap*), which is a contractual arrangement without legal personality.

### BVs

The key characteristics of a BV are as follows:

- capital is divided into shares;
- privately owned (ie, with a closed circle of shareholders);
- no minimum capital is required; and
- different types of shares can be created, which makes it possible to vary with regard to (among others) voting rights and profit-sharing rights.

A BV is more flexible than an NV and is the most frequently used corporate entity form in the Netherlands. BVs are popular as holding companies in (international) group structures and as operational and financing companies, and are also considered suitable for structuring joint ventures.

### NVs

The key characteristics of an NV are as follows:

- a minimum share capital of EUR45,000;
- all shareholders have voting rights and profit rights;
- different types of shares are possible; and
- there are specific rules with regard to the proper functioning of the general meeting.

In general, an NV is subject to stricter capital and creditor protection rules than a BV. The NV is designed primarily as a public company, the shares of which can be listed on a stock exchange. Until 2019, an NV's capital could consist of individual bearer shares. Since then, bearer shares can only be issued by way of a global certificate. Any (individual) bearer shares that were not converted into registered shares by 1 January 2020 are considered to have been converted by operation of law. Until 2 January 2026 shareholders of bearer certificates are entitled to acquire a replacement share in the form of a registered share from the respective company.

### Partnerships

The two most common forms of Dutch partnerships are the general partnership (*vennootschap onder firma* – VOF), which is a partnership between two or more general partners, and the limited partnership (*commanditaire vennootschap* – CV), which is a partnership between one or more managing partners and one or more limited partners.

A Dutch partnership does not have legal personality.

## 3.2 Incorporation Process

The incorporation of a BV requires few formalities and can be carried out very quickly and easily.

BVs and NVs are incorporated by the execution of a notarial deed of incorporation (*akte van oprichting*) by a Dutch civil-law notary (*notaris*). This deed of incorporation contains the initial articles of association and must be in the Dutch language. An English translation is commonly provided. Since 1 January 2024, it is possible to digitally incorporate a BV.

The incorporation of an NV requires a bank statement providing evidence of the payment of the minimum paid-up capital (if in cash) or a description of the contribution drawn up and signed by the incorporators, and an auditor's certificate attesting to such payment (if in kind).

The founders of an NV or a BV may be one or more individuals or legal entities, of any nationality and domiciled anywhere.

The Dutch civil-law notary (*notaris*) is required by law to register persons who will have an interest of at least 25% in the newly incorporated company (the Ultimate Beneficial Owner(s) – UBO) with the UBO register.

A partnership under Dutch law is set up by the execution of a partnership agreement between one or more partners. The partnership agreement must provide for a durable co-operation between the partners, and must be governed by Dutch law. The partners may be either individuals or legal entities.

A VOF must have at least two general partners, whereas a CV must have at least one managing partner and one limited (or "silent") partner. Each partner must contribute to the partnership.

### 3.3 Ongoing Reporting and Disclosure Obligations

Private companies must be registered with the trade register of the Dutch Chamber of Commerce within eight days of incorporation. The trade register holds publicly available information on companies, such as the names of the managing directors, supervisory directors and proxy holders (including the scope of their powers), if any, and the articles of association.

Amendments to the articles of association and certain amendments to the limited partnership agreement must be filed and registered with the trade register, as must certain changes in the company/partnership.

If all issued and outstanding shares in the company are held by one individual or legal entity, certain basic data regarding this sole shareholder must also be registered.

All companies and legal entities must register the ultimate beneficial owner(s) with the UBO register.

Companies must maintain accounting records and prepare financial statements. Additional accounting, auditing and publication requirements apply to small, medium, and large companies, based on certain thresholds.

Dutch law contains no special requirements for the contents of the annual accounts of partnerships, unless all managing partners are corporations incorporated under foreign law, in which case that partnership is subject to the Dutch financial reporting requirements.

### 3.4 Management Structures

Dutch corporate law provides that a Dutch company must have at least a management board consisting of managing directors, and a general meeting of shareholders. Dutch companies may also have a supervisory board, although this is not required for most Dutch companies. The management board is the executive body of the company, charged with the company's day-to-day management.

The management board may consist of just one managing director, who can be a natural person or a legal entity. There are no requirements regarding the nationality or the place of residence of managing directors (although this may be a highly relevant issue for tax purposes).

Dutch corporate law offers companies a choice between a one-tier board consisting of executive and non-executive directors, and a two-tier board consisting of a management (executive) board and a supervisory (non-executive) board. Large companies that meet certain statutory criteria must have a one-tier board (with non-executive directors) or a supervisory board with considerable powers (as prescribed by law).

As for partnerships, VOFs are, in principle, managed by and may be represented by all partners. CVs are managed by the managing partner(s) who is/are responsible for the day-to-day affairs of the CV.

### 3.5 Directors', Officers' and Shareholders' Liability

A distinction should be made between the internal and external liability of managing directors: internal liability exists towards the company, while external liability exists towards third parties, such as creditors of the company or the tax authorities.

As a general rule, managing directors are jointly and severally liable for mismanagement only in cases of serious culpability (*ernstig verwijt*).

Mismanagement can consist of acting (or failing to act) in violation of the law or the articles of association, or acting in a clearly unreasonable way.

Managing directors who enter into a contract on behalf of a company while knowing (or having reason to know) that the company will not be able to fulfil its contractual obligations or will not have sufficient assets against which to take recourse may be held liable (externally) for any resulting damages. The burden of proof rests with the prejudiced creditor.

As a general rule, shareholders are not personally liable for acts performed in the name of the company, and are under no obligation to contribute to the losses of the company in excess of the amount to be paid on

their shares. However, Dutch case law has recognised that there may be exceptional circumstances that allow the "corporate veil" to be lifted and shareholders to be held jointly liable for the company's debts and obligations.

Partners in VOFs are jointly and severally liable for all obligations of the partnership. The liability of general partners in a CV is unlimited, while the liability of limited partners is limited to the amount of their capital contributions, provided they have not performed any acts of management or representation of the partnership.

## 4. Employment Law

### 4.1 Nature of Applicable Regulations

The legal framework governing employment contracts is set out in the Dutch Civil Code (DCC). Additional terms and conditions may be agreed in an individual employment contract, provided they do not contradict the mandatory statutory provisions of the DCC. Furthermore, the legal relationship between an employer and employee may be governed by collective labour agreements between the trade unions and employers (or organisations of employers). Multiple other laws and regulations are also of influence – eg, the Equal Treatment Act.

In addition, case law, especially rulings of the High Court, provides an important series of precedents and principles, which often help to clarify ambiguous statutory or contractual provisions. The laws of the European Community and other international treaties and regulations form another important source of law.

### 4.2 Characteristics of Employment Contracts

Dutch employment law does not require employment contracts to be made in writing. Certain provisions, however, need to be in writing to be valid, such as non-competition clauses or probation period clauses. Therefore, in practice employment agreements are concluded in writing.

No legal provision dictates the language in which employment contracts should be concluded; they do not necessarily have to be in Dutch, with international companies commonly offering employees employment contracts in English. Most important is that the employee understands the content of the document.

Employment contracts can be concluded for a definite period of time (fixed-term contracts) or an indefinite period of time (indefinite contracts). Consecutive fixed-term employment contracts, if extended, are automatically converted into indefinite contracts, once certain criteria are met. This applies if the number of consecutive contracts exceeds three, or if the aggregate term of the consecutive contracts exceeds 36 months.

### 4.3 Working Time

Under the Dutch Working Hours Act, employees are generally allowed to work a maximum of 12 hours per day and a maximum of 60 hours per week. Over a period of 16 consecutive weeks, employees may not work more than 48 hours per week on average. Over a period of four consecutive weeks, the weekly average may not be more than 55 hours.

Collective labour agreements or employee handbooks may contain provisions on the standard working hours in a company.

### 4.4 Termination of Employment Contracts

The dismissal of employees is governed by mandatory statutory dismissal provisions. The system differs substantially from most other EU countries.

Fixed-term contracts end by operation of law on the agreed end date.

Employers may terminate indefinite contracts by giving notice of termination. The most striking difference to other jurisdictions is that employers must, in principle, first apply for a dismissal permit from the governmental agency called UWV Werkbedrijf before they can give such notice, or they must request the court to terminate the contract. The manner of termination for employers is prescribed by law, depending on the reason for termination: termination for economic reasons or due to long-term incapacity for work must be effected through the UWV procedure, while dismissal on other grounds has to take place through termination by the court.

Unlike employers, employees do not require a permit from the UWV nor have to go to court to terminate their employment contract. The statutory notice period for employees is one month. The statutory notice period for employers is between one and four months, depending on the duration of the employment relationship. Deviating contractual notice is possible to some extent.

Several dismissal prohibitions apply. For example, sick employees are protected against termination of employment during the first two years of their sickness and also pregnant employees benefit from dismissal protection.

Both fixed-term contracts and indefinite contracts can be terminated by mutual consent between the employer and the employee. Employers usually offer financial compensation, based on (at least) the "transition payment" (see below), and it is common to confirm the termination in a settlement agreement, by which the parties grant each other full and final discharge.

Indefinite contracts and fixed-term contracts longer than six months may include a probationary period during which each party may terminate the employment contract with immediate effect, without the prior permission of the UWV or the court.

Employment contracts may be terminated with immediate effect and without prior permission from the UWV or the court if there is an "urgent cause" to do so. The DCC provides a non-exhaustive list of acts that may qualify as an "urgent cause", such as fraud and theft.

Employers are required to make a "transition payment" to employees if one of the following applies:

- the employment contract is terminated by the employer by giving prior notice of termination;
- the court terminates the employment contract at the employer's request; or
- the employer decides not to renew the employment contract after the expiration of the agreed fixed term.

Transition payments are equal to one third of a monthly gross salary for every full year of employment, regardless of the employee's age or years of service and calculated pro rata, depending on the exact duration of employment. The payment never exceeds EUR98,000 (as of 2025), or one annual salary for employees earning more than EUR98,000. Only employees who are seriously culpable for termination are not entitled to a transition payment. If the court rules that an employer has demonstrated serious culpable behaviour towards an employee the court can grant the employee additional severance.

Employers who intend to dismiss at least 20 employees within a period of three months (in one region) are subject to the Collective Redundancy (Notification) Act. Under that legislation, employers must notify the UWV and the relevant trade unions of the intended dismissals, and must first discuss the proposed decision and its social consequences with these trade unions.

### 4.5 Employee Representations

Under the Dutch Works Council Act (WCA), companies employing at least 50 persons must establish a works council for the purpose of consultation with and representation of the employees. The employees elect the members of the works council directly from amongst themselves. The number of members depends on the number of employees within the company, and varies from a minimum of three to a maximum of 25.

The WCA provides a number of rights for the works council, including the right to advise on certain matters and the right of approval. Companies must request the prior advice of the works council on certain decisions (and their implementation) about significant business matters, such as the transfer of control over the company or any part thereof, the establishment, takeover or disposal of control over another company, or the termination of operations or a substantial part thereof. In addition, companies must request the prior approval of the works council in respect of certain decisions concerning the introduction, modification or repeal of "social" regulations within the enterprise, such as regulations on:

- pension schemes;

- profit-sharing or saving plans;
- working hours or leave; and
- salary or job classification systems.

Furthermore, trade unions often represent their members in discussions about a collective labour agreement and in collective dismissals.

## 5. Tax Law

### 5.1 Taxes Applicable to Employees/Employers

#### Taxes Paid by Employees

*Personal income tax*

Personal income tax is levied on Dutch tax residents (on income from various worldwide sources) and non-Dutch tax residents (on income from Dutch sources).

Personal income tax is levied on three different categories of income, referred to as "boxes":

- box 1 concerns income from work and home, and includes income from past and current employment, sole proprietorship, and an owner occupied home;
- box 2 concerns taxable income from, in short, (share) interests of 5% or more in companies; and
- box 3 concerns income from savings and investments.

Wage tax is withheld by employers, and functions as a pre-tax to personal income tax (and employee social security contributions). Income from past and current employment (realised by Dutch and non-Dutch tax residents) is determined by the Dutch Wage Tax Act 1964. Except in certain specific cases (for instance, if the individual functions as a board member or supervisory board member of a Dutch company), individuals who work (almost) entirely outside the Netherlands are generally not considered "employees" for Dutch wage tax purposes.

Personal income tax for box 1 is levied at progressive rates on income, minus personal deductions and allowances.

In 2026, the applicable rates for non-retired persons are:

- 35.75% for income up to and including EUR38,883 (8.10% excluding social security contributions levied from employees);
- 37.56% for income ranging between EUR38,883 and EUR78,426; and
- 49.50% for income exceeding EUR78,426.

Box 2 is levied at a progressive rate on income. In 2026, the applicable rates are:

- 24.50% for income up to and including EUR68,843; and
- 31.00% for income exceeding EUR68,843.

In 2026 box 3 income tax is levied at a rate of 36% on three categories based on a deemed return on assets minus liabilities. The deemed return for 2026 will be announced at the start of the year 2026, except for the "other assets" which is already known (deemed return: 6.00%).

The effective rates applied in the preliminary 2026 personal income tax assessments are as follows.

- Bank balances (including savings) and cash: 0.4608% (flat rate of return of 1.28 * 36%).
- Other assets: 2.16% (flat rate of return of 6,00 * 36%).
- Debt: -/- 0.972% (flat rate of return of -/- 2.70 * 36%).

In 2026, the first EUR59,357 (EUR118,714 for taxpayers with a tax partner) of net box 3 assets are tax-exempt.

Subject to certain conditions, employees hired outside the Netherlands can apply for a ruling allowing employers to pay 30% of the wage tax-free, including allowances. This scheme may be applied up to the maximum amount under the Standards for Remuneration Act (EUR262,000 in 2026).

Furthermore, the 30% facility will be scaled back to 27% from 1 January 2027 onwards. The limitations

will not apply to applicants who already applied the 30% ruling before 1 January 2024.

*Employee social security contributions*

Individuals are subject to social security contributions levied on income up to and including EUR38,883. The applicable rate is 27.65%.

### Taxes Paid by Employers

*Wage tax*

Employers qualifying as "withholding agents" must withhold wage tax and social security contributions (levied at the level of employees) in respect of wages paid to employees for Dutch wage tax purposes.

*Employer social security contributions*

In summary, the rates of employer social security contributions in 2026 are as follows.

- General unemployment insurance (*Algemeen werkloosheidsfonds* – AWF) – 2.74% for contracted workers with an indefinite term and 7.74% for flex workers and temporary workers.
- Occupational disability insurance (*Wet op de arbeidsongeschiktheidsverzekering* – WAO or *Wet werk en inkomen naar arbeidsvermogen* – WIA) – 7.61% for large employers and 6.26% for small employers.
- Health Insurance Act contribution (*Zorgverzekeringswet* – ZVW) – 6.10%.
- Childcare allowance contribution (*Werkgeversbijdrage Kinderopvang*): 0.5%.
- Government unemployment insurance (*Uitvoeringsfonds voor de overheid* – UFO) – 0.68%.
- The Return to Work Fund (*Werkhervattingskas* – Whk) – 1.52% (approximate amount).

Only income up to and including EUR79,409 is subject to the above contributions.

## 5.2 Taxes Applicable to Businesses

### Corporate Income Tax

Dutch tax-resident companies (or companies deemed to be tax residents) are subject to Dutch corporate income tax based on their worldwide income.

Non-Dutch tax-resident companies are subject to corporate income tax from certain Dutch sources, including:

- Dutch permanent establishments or permanent representatives;
- shareholdings of at least 5% in Dutch companies that cannot pass certain anti-abuse tests; and
- other specific sources, including Dutch real estate, directorship services and the exploration of natural resources.

The Dutch corporate income tax rate in 2026 is 19% for taxable profits up to and including EUR200,000, and 25.8% for taxable profits exceeding this amount.

Under the Dutch participation exemption, income (eg, dividends and capital gains) derived by Dutch resident corporate taxpayers from qualifying subsidiaries is exempt from Dutch corporate income tax.

In 2026, the term of the loss carry forward facility is an unlimited period. The carry back period is one year. Profits of up to EUR1 million can be fully deducted under the application of the loss carry forward and backward facility. For profits exceeding EUR1 million, only 50% of the profit can be reduced under these facilities.

### Minimum Profit Tax

In line with EU regulation, the Netherlands has introduced a Minimum Profit Tax Act: Wet Minimumbelasting 2024. The act requires large multinational enterprises with an annual turnover exceeding EUR750 million to be subject to (at least) 15% minimum tax due to the so-called OECD Pillar 2 project.

### Dividend Withholding Tax

Shareholders of Dutch tax-resident companies are generally subject to 15% Dutch dividend withholding tax in respect of dividends (and other payments treated as dividends) paid by Dutch tax resident companies (or companies deemed to be tax residents). In principle, distributing companies should withhold and pay any Dutch dividend withholding tax due.

An exemption applies to dividends distributed to corporate shareholders owning a share interest of at least

5% in the relevant distributing company if, in short, the corporate shareholder is a tax resident of the EU or a Dutch tax treaty jurisdiction, and is the beneficial owner of the dividend, provided it is not a hybrid transaction and certain other anti-abuse tests are met.

Application of the extensive Dutch tax treaty network may result in a reduction or refund of Dutch dividend withholding tax.

### Conditional Withholding Tax

The Netherlands does not currently levy withholding tax on interest and royalty payments, with the exception of a specific levy in intragroup abusive situations.

In 2026, a conditional withholding tax at a rate of 25.8% is due on intra-group dividend, interest and royalty payments by Dutch resident companies to related entities residing in jurisdictions that are either on the blacklist issued by the Dutch Ministry of Finance (including low tax jurisdictions (less than 9%) and jurisdictions that are on the EU blacklist of non-co-operative jurisdictions) or in abusive situations.

### VAT

The Netherlands levies Value Added Tax (VAT) on the supply of goods and services as part of the domestic implementation of the EU VAT Directive (Directive 2006/112/EC). The current Dutch VAT system, therefore, is comparable to the VAT systems of other EU member states, although the Netherlands uses certain optional measures to facilitate trading.

Under Dutch VAT law, in principle any person or entity can qualify as an "entrepreneur" (taxable person) if they act independently and perform (preparatory acts to) economic activities on a continuing basis, whatever the purpose or result of those activities. Entrepreneurs acting as such are, in principle, required to file VAT returns and are entitled to a refund of (input) VAT charged, provided they are engaged in VAT taxable transactions within the territory of a member state of the European Union.

In the Netherlands, the following VAT rates apply to supplies of goods and services in 2026.

- General rate: 21%.
- Reduced rate: 9%.
- Zero rate (0%).

Furthermore, entrepreneurs must meet certain administrative obligations when rendering VAT taxable or exempt transactions (eg, invoicing, keeping proper accounts, filing VAT returns, and EU Sales Listing reporting).

## 5.3 Available Tax Credits/Incentives

### Innovation Box Regime

Dutch taxpayers can apply an "innovation box regime" to qualifying profits from certain self-developed intangible fixed assets.

Under the innovation box regime, profits are included in the tax base of a taxpayer only for 9/25.8 part, resulting in an effective tax rate of 9%.

Qualifying profits are benefits from qualifying self-developed intangible fixed assets multiplied by a nexus ratio. The nexus ratio consists of 130% of the taxpayers' operating expenses and third-party outsourcing expenses incurred in relation to the creation of the relevant asset, divided by any expenses incurred in relation to the creation of the relevant assets, with a maximum of 100%.

For small taxpayers, qualifying assets are intangible fixed assets developed by research and development (R&D) activities for which a so-called R&D certificate was issued.

Taxpayers are considered small if their net group turnover is less than EUR250 million in the respective financial year and the four preceding years combined, and the benefits derived from the intangible assets are less than EUR37.5 million in the respective financial year and the four preceding financial years combined.

For large taxpayers, qualifying assets are intangible fixed assets developed by R&D activities falling within the scope of certain specific categories.

### R&D Wage Tax Credit Regime

The R&D wage tax credit regime enables companies that engage in R&D activities to pay less wage tax and social security contributions than they withhold

from their employees. The amount of the reduction is limited to the total amount of wage costs and social security contributions. R&D costs may include both wages and other costs related to self-developed R&D.

In order to qualify for the R&D wage tax credit regime, companies have to apply for a permit from the Netherlands Enterprise Agency (RVO).

The granting of this permit is subject to the following conditions:

- the R&D activities (eg, development of a product, production process, software or technical research) will be performed in-house by the applicant;
- the innovation is new to the organisation of the applicant;
- the applicant seeks to solve technical difficulties of the development process;
- the R&D activities are performed within the EU; and
- the R&D permit is requested in advance.

In addition, the granting of the permit is subject to the available funding.

### Business Incentives

The small-scale investment incentive provides for tax deductions for corporate income tax and personal income tax purposes in connection with the acquisition of one or more new qualifying business assets.

The investment incentive for environment improving assets provides for tax deductions in connection with the acquisition of one or more new environment-improving assets. The deduction generally amounts to 40.0% of the amount of the investment, which should be included on a list published by the RVO, and requires the issuance of a notification from the RVO.

Under conditions similar to those of the investment incentive for environment-improving assets, it is possible to apply the random depreciation regime to environment-improving assets or energy-improving assets. Under this regime, taxpayers can randomly depreciate 75% of the investment made in the qualifying asset.

Some investments are excluded from the application of the above-mentioned incentives.

## 5.4 Tax Consolidation

### Fiscal Unity for Dutch Corporate Income Tax Purposes

Companies that are part of a "fiscal unity" for Dutch corporate income tax purposes may file a consolidated tax return, and are taxed on a consolidated basis as if they were just one company. As a result, transactions between companies belonging to the fiscal unity are, in principle, ignored and not subject to taxation on profits or gains.

However, for purposes of certain anti-abuse rules (eg, for the anti-base erosion rules included in article 10a of the Dutch Corporate Income Tax Act 1969), transactions between entities within a fiscal unity are considered.

The Dutch fiscal unity rules include other anti-abuse rules, which can be triggered by the formation or dissolution of a fiscal unity, for example. Companies belonging to the fiscal unity are jointly and severally liable for payments of corporate income tax over the period of the fiscal unity. Parent companies and their subsidiaries can, upon request, form fiscal unities if a number of requirements are met, including the following.

- Ownership requirement – the parent company must hold the economic and legal ownership of at least 95% of the shares in the nominal paid-up capital of its subsidiary, which provides entitlement to at least 95% of the statutory voting rights in that subsidiary and to at least 95% of the profits, and represents at least 95% of the capital of the subsidiary.
- Residency requirement – the applying companies should be residents of the Netherlands for tax treaty purposes.

In addition to the above, a parent company can form a fiscal unity with an indirectly held subsidiary if both companies are tax residents of the Netherlands and the intermediate company (or companies) between the parent company and the indirectly held subsidiary resides in another EU or EEA member state. Further-

more, two Dutch tax-resident subsidiaries can form a fiscal unity if their joint parent resides in another EU or EEA member state. A new tax consolidation system is under discussion already for a long time but does not seem to have much traction.

### Fiscal Unity for Dutch VAT Purposes

A VAT group can be created by two or more persons established within an EU member state, who, while legally independent, are closely bound to each other by financial ties (ie, more than 50% shareholding), organisational ties (ie, central management) and economic ties (ie, same or related activities or suppliers). A VAT group is treated as one VAT entrepreneur.

Transactions between the members of a VAT group are not subject to VAT. The right to deduct input VAT is based on the activities of the VAT group as a whole. The VAT group regime only applies if each member of the VAT group qualifies as a VAT entrepreneur.

## 5.5 Thin Capitalisation Rules and Other Limitations

The Dutch earning stripping rules limit the deduction of excessive interest expenses related to intra-group and third-party payables for Dutch corporate income tax purposes.

Under these rules, the starting point is to determine the Dutch taxpayers' so-called interest expense excess, which is the amount by which the Dutch taxpayers' tax-deductible interest expenses exceed their taxable interest income. The deductibility of the interest expense excess is limited to 24.5% of the taxpayers' EBITDA (carving out tax-exempt income) or a safe harbour threshold of EUR1 million, whichever is higher.

Interest disallowed under the earnings stripping rule can be carried forward to later years without any time limitations. Dutch corporate income tax law includes several other rules based on which deduction of interest may be denied, including the anti-tax base erosion rules – see **5.7 Anti-Evasion Rules**.

## 5.6 Transfer Pricing

For Dutch tax purposes, transactions between affiliated entities must be performed under the same terms and conditions as would be agreed between non-affiliated entities under similar circumstances (the so-called "arm's length principle"). If the terms and conditions of an affiliated party transaction are not at arm's length, the transaction is taxed as if they had been.

For Dutch transfer pricing purposes, companies are considered to be affiliated if one entity participates (directly or indirectly) in the management, control or capital of another entity, or if the same person participates (directly or indirectly) in the management, control or capital of two entities.

Dutch taxpayers must have documentation available showing that the conditions of affiliated party transactions are at arm's length. In addition, multinationals with a consolidated group turnover of at least EUR750 million in the preceding year are required to file country-by-country (CbC) reports containing detailed information on the transfer pricing policy and the allocation of assets and personnel within the group. CbC reports are exchanged automatically with the tax authorities of all countries in which the multinational group operates.

Furthermore, Dutch taxpayers that are part of a multinational group with a consolidated turnover of at least EUR50 million in the preceding year must prepare both so-called "master files" and "local files".

In addition, rules apply based on which hybrid mismatches that arise under the application of the arm's length principle are neutralised. Based on these rules, downwards fiscal profit adjustments, recognition of losses and value increases of assets acquired from affiliated parties (the value increases are also referred to as "informal capital contributions" or "deemed dividend distributions") under the application of the arm's length principle will be denied if, in short, the taxpayer cannot reasonably prove that a corresponding upwards adjustment will be included in the tax base in the jurisdiction of the affiliated party.

## 5.7 Anti-Evasion Rules

Dutch corporate income tax law includes various rules targeting tax evasion, such as limitation of interest deduction rules preventing tax base erosion, con-

trolled foreign companies (CFC) legislation, exit taxation and the non-resident corporate income tax rules (see **5.2 Taxes Applicable to Businesses**).

Furthermore, there are various Dutch dividend withholding tax rules targeting tax evasion, such as anti-dividend stripping rules and certain other anti-abuse rules (see **5.2 Taxes Applicable to Businesses**).

Finally, Dutch tax law includes an unwritten general anti-abuse rule (fraus legis). Some of these anti-evasion rules are listed below.

### Limitation of Interest Deduction Rules – Anti-Tax Base Erosion Rules

Under the Dutch anti-tax base erosion rules, the deduction of interest expenses (including currency results and other costs) is limited to related party loans that have been used to finance:

- profit distributions or repayments of capital to related parties;
- capital contributions to related parties; or
- the acquisition of certain share interests.

There are, however, exceptions under which the interest deduction limitation rule does not apply (eg, if the loan and the transaction are based primarily on business reasons).

### CFC Legislation

Under the CFC rules, undistributed "tainted" (passive) income derived from subsidiaries or permanent establishments that are tax resident in certain blacklisted jurisdictions (ie, the jurisdictions referred to in **5.2 Taxes Applicable to Businesses** under "Conditional Withholding Tax") is, in principle, annually included in the taxable basis of the Dutch taxpayer (subject to certain conditions). Only interests of 50% in direct or indirect subsidiaries or permanent establishments of Dutch taxpayers together with related companies are targeted.

### Exit Taxation

If Dutch resident corporate taxpayers transfer their tax residencies to other jurisdictions or transfer assets to non-Dutch permanent establishments, the assets and liabilities must be stated at fair market value. Any gains (ie, hidden reserves, goodwill and/or currency exchange gains) will, in principle, be subject to corporate income tax. Under certain conditions, it is possible to apply an extended payment deadline.

### General Anti-Abuse Rule (Fraus Legis)

Under the legal concept of fraus legis, transactions can be eliminated for Dutch tax purposes or replaced by other transactions. Fraus legis can be applied if the Dutch tax authorities prove that the sole or predominant motive for a transaction is tax avoidance, and that the envisaged tax consequences of a transaction conflict with the purposes and rationale of the relevant law. As per 1 January 2025, the General Anti-Abuse Rule (GAAR) from the first EU anti-tax avoidance Directive (ATAD1) has been incorporated into Dutch tax law on request from the European Commission. The interpretation of the GAAR is similar to fraus legis and it is not intended to make any substantial changes to the current legal practice.

### Anti-Hybrid Rules

Dutch tax law includes anti-hybrid rules implementing the amended Anti-Tax Avoidance Directive (ATAD2). These rules include limitation of deduction rules under which hybrid mismatches between "associated enterprises", head offices and their permanent establishments or between two or more permanent establishments of an entity and mismatches under a so-called "structured arrangement" are neutralised. A hybrid mismatch is generally present if there is a double deduction of costs or a deduction of costs without inclusion of the corresponding benefit. These rules apply for the following hybrid mismatches.

- Hybrid entity mismatches – an entity is treated as non-transparent in one jurisdiction and transparent in another jurisdiction.
- Hybrid financial instruments – an instrument that includes debt and equity is treated as non-transparent in one jurisdiction and transparent in another jurisdiction.
- Hybrid financial transfers – an arrangement to transfer a financial instrument causes a hybrid mismatch.
- Imported hybrid mismatches – a hybrid mismatch situation between parties in non-EU jurisdictions is

shifted to an EU member state through the use of a non-hybrid instrument.
- Hybrid PEs – a permanent establishment is treated differently between jurisdictions as regards the presence or attribution of profit to business activities in the jurisdictions.
- Dual resident mismatch – a payment made by a dual resident company may be deductible in multiple jurisdictions.

A separate anti-mismatch rule applies to "reversed hybrid situations", which concern entities that are treated as transparent in the jurisdiction of incorporation or registration, and that are treated as non-transparent in the jurisdictions of their participants. Reverse hybrid entities are subject to corporate income tax in the Netherlands. Furthermore, a reverse hybrid entity may also be subject to dividend withholding tax and conditional withholding tax.

Taxpayers are required to have information in their administration substantiating whether or not any hybrid mismatch rules are met. If such information is not present, the tax inspector could request the provision of such documentation and the taxpayer would have the burden of proof that no hybrid situation would be present.

### 5.8 Tariffs

The Netherlands is part of the EU customs union. This implies that the Dutch tariff regime is equal to the tariff regimes of other EU member states and that no tariffs are imposed on intra EU transactions. The applicable rates on import of goods with non-EU origin differ depending on the kind of goods and their origination. The EU has a huge number of trade agreements in place with third countries and regions. A considerable number of trade agreements are under renegotiation.

## 6. Competition Law

### 6.1 Merger Control Notification

Mergers can be subject to either EU or Dutch merger control rules. The rules in the Dutch Competition Act are based on and essentially resemble the EU competition rules.

The European Commission must be notified of any merger with an EU dimension prior to its implementation. If the Dutch notification thresholds are met, then companies must comply with the Dutch notification requirements.

In principle, the Commission only examines larger mergers with an EU dimension if the merging firms reach certain turnover thresholds. There are two alternative ways to reach turnover thresholds.

- The first alternative requires:
  (a) a combined worldwide turnover of all the merging firms of more than EUR5 billion; and
  (b) an EU-wide turnover for each of at least two of the firms of more than EUR250 million.
- The second alternative requires:
  (a) a worldwide turnover of all the merging firms of more than EUR2.5 billion;
  (b) a combined turnover of all the merging firms of more than EUR100 million in each of at least three member states;
  (c) a turnover of more than EUR25 million for each of at least two of the firms in each of those three member states; and
  (d) an EU-wide turnover of each of at least two firms of more than EUR100 million.

In both alternatives, the EU dimension requirement is not met if each of the firms achieves more than two thirds of its EU-wide turnover within one and the same EU member state.

Mergers without an EU dimension are subject to Article 29 of the Dutch Competition Act, under which the Dutch Authority for Consumers and Markets (*Autoriteit Consument en Markt* – ACM) must be notified of a concentration if both the combined turnover of the firms involved is more than EUR150 million in the calendar year before the concentration and at least two of the companies involved earned at least EUR30 million in the Netherlands.

According to Article 27 (1) of the Dutch Competition Act, the following types of transactions (concentrations) are subject to merger control:

- the merger of two or more previously independent companies; and
- the acquisition of direct or indirect control by:
  (a) one or more natural persons or legal entities that already control one company; or
  (b) one or more companies of the whole or parts of one or more other companies, through the acquisition of a participating interest in the capital or assets, under an agreement or by any other means.

Control is defined as the ability to exercise decisive influence on the activities of a company on the basis of factual or legal circumstances.

Long-term joint ventures performing all functions of an autonomous economic entity are seen as concentrations under Section 27 (b)(1) of the Dutch Competition Act.

Sector-specific thresholds apply to pension funds, banks, financial institutions, energy, telecoms, transport and postal services.

The Dutch Competition Act is enforced by the ACM, which is an autonomous administrative authority that operates independently of the Ministry of Economic Affairs. The ACM is also the local competent authority for matters relating to Regulation (EC) 139/2004 on the control of concentrations between undertakings (the "Merger Regulation").

## 6.2 Merger Control Procedure

Transactions meeting the thresholds of the Dutch Competition Act must be notified to the ACM. The intended transaction must be notified before its completion, and the concentration may not be effected before four weeks have passed after the notification (Article 34 (1) of the Dutch Competition Act).

The ACM assesses concentrations in two phases. During Phase I, which starts with the notification, the ACM must decide within four weeks whether the transaction requires a licence. If no licence is required, the parties can execute the transaction.

If the ACM decides that a licence is required, the parties can apply for the licence at their own discretion and timing. However, the transaction cannot be completed without a licence. Phase 2 is initiated with the submission of a licence application, after which the ACM conducts a more in-depth analysis of the effects of the concentration. The ACM must decide on the application within 13 weeks, failing which the concentration is deemed approved. However, the Phase 2 procedure often takes more time, mainly due to stop-the-clock requests for additional information. If the ACM decides not to grant a licence, the applicants are not allowed to execute the transaction.

If the proposed concentration involves a healthcare company employing 50 or more healthcare providers in the Netherlands, the companies involved must first notify the Dutch Healthcare Authority (*Nederlandse Zorgautoriteit* – NZa) of the intended transaction so that it can assess the possible effects of the concentration.

Two or more concentrations taking place between the same persons or undertakings within a period of two years shall be regarded as one concentration effected on the day of the last transaction.

## 6.3 Cartels

The rules in the Dutch Competition Act governing anti-competitive agreements, decisions and concerted practices essentially resemble the EU rules. Agreements between companies, decisions by associations of companies and concerted practices that restrict competition or aim to do so are prohibited; this includes both horizontal and vertical restrictions of competition.

Under certain conditions, anti-competitive agreements are exempted from this prohibition. The respective national provisions again reproduce the conditions required under EU law. Exemptions include agreements that serve to improve the production of goods or promote technical progress while allowing consumers a fair share of the resulting benefit. The European Commission's block exemptions, such as the EU Vertical Agreements Block Exemption Regulation, apply mutatis mutandis. Agreements or concerted practices in violation of rules governing anti-competitive agreements and practices are, in principle, null and void.

A new Vertical Block Exemption Regulation 2022/720 (VBER) entered into effect on 1 June 2022, replacing Regulation 330/2010 which applied until 31 May 2022. The new VBER has narrowed the scope of certain safe harbours, especially for online intermediation services (platforms), with a specific focus on dual distribution and parity obligations, but also introduced new flexibility for both exclusive and selective distribution systems and online sales restrictions.

Also, on 1 July 2023 the horizontal block exemption regulations (BERs) on research and development (R&D) and specialisation agreements, as well as revised guidelines on horizontal co-operation entered into effect.

The cartel prohibition is enforced by the ACM, which can impose fines of up to EUR900,000 or 10% of a company's worldwide group turnover in the past calendar year, whichever is higher. In addition, the amount of the fine can be multiplied by the number of years that the violation lasted, up to a maximum of four years. Therefore, for infringements that have lasted four years or more, the maximum fine can be as high as 40% of the undertaking's worldwide group turnover. In case of recidivism within five years, the maximum fine can be doubled and can therefore be as high as 80% of the undertaking's worldwide group turnover. The maximum fine that the ACM can impose on natural persons who have played a leading role in a cartel is EUR900,000, which can be doubled if that person committed a similar violation in the preceding five years.

Under EU Council Regulation No 1/2003, the ACM is required to apply EU rules (ie, Article 101 of the TFEU) if an agreement or concerted practice can affect trade between member states. Conduct allowed under EU rules cannot be prohibited under Dutch national law under such circumstances.

### 6.4 Abuse of Dominant Position

Under Article 24 of the Dutch Competition Act and Article 102 of the TFEU, companies that have a position of economic strength are prohibited from abusing that dominant position. Article 1 (i) of the Dutch Competition Act defines a dominant position as a position in which one or more companies are able to prevent effective competition from being maintained on the Dutch market or part thereof, by giving them the power to behave to an appreciable extent independently of their competitors, their suppliers, their customers or end users. As a rule of thumb, a market share of less than 40% does not constitute a dominant position, but a rebuttable presumption of dominance exists above 50%.

Market shares are not decisive by themselves; other relevant factors may include the existence of intellectual property rights, the level of concentration of the market and barriers to entry. Abuse is not defined, and may consist of charging unreasonably high prices, refusing to supply, or charging extremely low prices ("predatory pricing") to force competitors out of the market.

## 7. Intellectual Property

### 7.1 Patents

Under Dutch patent law, technical inventions (defined as products or operating procedures in any technological field) are eligible for patent protection if they meet three material criteria.

- Novelty – the product or process may not have been made public anywhere in the world before the date of submitting the patent application, not even through the activities of the inventor themselves.
- Inventive step – the invention must not seem obvious to a professional.
- Industrial application – the invention must relate to a technically demonstrable functioning product or production process.

Patents can be applied for in the following ways:

- by filing a national application with the Netherlands Patent Office (*Octrooicentrum Nederland*);
- by filing a European application with the European Patent Office (EPO) designating the Netherlands as a country for which patent protection is desired (as one of more than 30 possible countries in the EU);
- by filing for a Unitary Patent, ie, a European patent with unitary effect; or

- by filing an application with the WIPO under the Patent Cooperation Treaty.

On 1 June 2023 the EU regulations establishing the Unitary Patent system (No 1257/2012 and No 1260/2012) became applicable.

There are 24 EU member states, which have signed the Agreement on a Unified Patent Court (UPCA). The EU member states Croatia, Poland and Spain have not signed the UPCA but may still accede to it at any time. Currently, the UPCA is in force in the 18 member states which have ratified the UPCA, ie, Austria, Belgium, Bulgaria, Denmark, Estonia, Finland, France, Germany, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Portugal, Romania, Slovenia and Sweden. Additional EU member states are expected to ratify the UPC Agreement in the coming years, so that eventually Unitary Patents will make it possible to get patent protection in up to 24 EU member states by submitting a single request to the EPO.

Once the EPO grants a European patent application, the applicant can choose between: (i) a European patent with chosen countries; or (ii) a Unitary Patent for the European countries that have ratified the UPC Agreement.

Through the UPC Agreement, a ruling can be obtained from a single authority regarding the validity or infringement of a Unitary Patent for all EU member states that ratified the UPC Agreement. The UPC (Unified Patent Court), has headquarters in Munich and Paris. In The Hague, there will be a local division at The Hague Hearing Centre. Companies can litigate European patent cases there in Dutch and English.

For a transitional period (initially of seven years) for classic European patents the patentee can choose whether or not to use the UPC. If it is chosen not to use the UPC, then litigation will continue to go through the national courts. This is called “opting out” of the UPC.

Dutch patents and Unitary Patents are valid for a maximum of 20 years from the filing date, provided that the annual fees are paid. If certain requirements are met, the term of protection for medicinal and plant protection products can be extended by up to five years through a supplementary protection certificate.

Patent owners can prevent others from unlicensed use of the patented technology. In addition, patent owners can demand information, the disclosure of records, the destruction of infringing products and damages from infringers. Damages can be calculated on the basis of lost profits of the patent owner, a licence analogy or the profits of the infringer. Punitive damages cannot be claimed in the Netherlands.

The District Court of The Hague has a specialised patent division, and has exclusive jurisdiction in patent litigation regarding Dutch patents. It is possible to appeal judgments of The Hague District Court to the Appeal Court in The Hague, which will review the dispute in full and has specialised IP justices. Appeal judgments can be reviewed by the Supreme Court of the Netherlands, albeit only on issues of law, not fact.

### 7.2 Trade Marks

The Netherlands has three different systems for trade mark protection:

- the Benelux Convention on Intellectual Property (trade marks and designs);
- Regulation (EU) 2017/1001 of the European Parliament and of the Council of 14 June 2017 on the EU trade mark; and
- the Protocol Relating to the Madrid Agreement Concerning the International Registration of Marks (Madrid Protocol).

Trade marks can consist of any signs, particularly words, including proprietary names, or designs, letters, numerals, colours, the shape of goods or of the packaging of goods, or sounds, provided that such signs are capable of:

- distinguishing the goods or services of one business from those of other businesses; and
- being represented in the register in a manner that enables the competent authorities and the public to determine the clear and precise subject matter of the protection afforded to its proprietor.

Benelux trade marks offer protection in Belgium, the Netherlands and Luxembourg, and may be applied for at the Benelux Office for Intellectual Property (BOIP). European trade marks that provide protection for all EU member states have to be applied for at the EU Intellectual Property Office (EUIPO).

Dutch trade marks are initially protected for ten years. Protection may be prolonged for an indefinite number of times upon the timely payment of the extension fees.

The unlicensed use of registered trade marks is forbidden, and taking "unfair advantage" of the reputation of trade marks also constitutes an infringement. To enjoy the exclusivity rights of trade marks, trade mark owners must put the trade marks to genuine use for the goods or services for which they have been registered within five years of filing. In the event of trade mark infringements, trade mark owners may claim injunctive relief, rendering of account, damages, product recall, and even destruction of the infringing goods.

Benelux trade marks are enforceable through the civil courts. Both Dutch district courts and courts of appeal have broad experience in IP issues.

The district court of The Hague (the EUTM court in the Netherlands) has a chamber of judges specialising in IP law, and has exclusive jurisdiction for litigation related to EU trade marks.

### 7.3 Industrial Designs

As with trade mark protection, the Netherlands has three different systems for the protection of industrial design:

- the Benelux Convention on Intellectual Property (trade marks and designs);
- Regulation (EC) No 6/2002 of 12 December 2001 on Community Designs, in December 2024 amended by Regulation (EC) No 6/2002 on Community designs ("the Amending Regulation"); and
- The Hague System for the International Registration of Industrial Designs.

The terms "design" or "drawing" relate to the appearance of products or parts of products. To claim a design right, the design must be novel and have an individual character.

Benelux designs offer protection in Belgium, the Netherlands, and Luxembourg, and may be applied for at the BOIP. European designs that provide protection for all EU member states have to be applied for at the EUIPO. The Hague System for the International Registration of Industrial Designs allows for the international registration of industrial designs across 82 members (including the EU) covering 99 countries by filing one single international application with the WIPO.

Design registrations are initially valid for five years from the date of filing and can be renewed in blocks of five years up to a maximum of 25 years.

Unregistered designs are protected against copying for a period of three years from the date on which the design was first made available to the public within the territory of the European Union. After the expiry of these three years, protection cannot be extended. Further to the Amending Regulation, member states are no longer able to provide unregistered design protection on a national level. Unregistered design protection will now only be available across the EU in the form of a Unregistered European Union Design. At a national level, only registered design protection will be available.

In the case of design right infringements, the owners can claim injunctive relief, rendering of account, damages, product recall and even destruction of the infringing goods.

Benelux design protection is enforceable through civil courts. The district court of The Hague has a chamber of judges specialising in IP law, and has exclusive jurisdiction for litigation related to EU designs.

Simultaneously with the Amending Regulation, Directive (EU) 2024/2823 on the legal protection of designs came into force. EU member states have 36 months, until 9 December 2027, to transpose the Directive into their national legislation, ie, in the Benelux in the Benelux Convention on Intellectual Property (trade marks and designs). The Amending Regulation and Directive aim to:

- modernise, clarify and strengthen design protection;
- improve accessibility of design protection in the EU;
- ensure enhanced interoperability of design protection systems in the EU; and
- harmonise the diverging spare parts protection regime across the EU.

The Regulation will make it possible to combine multiple designs within the same European Union Design application (to a maximum of 50), regardless of whether they fall under the same Locarno Class, effectively allowing for a "bulk discount" on registration fees.

## 7.4 Copyright

The Dutch Copyright Act (*Auteurswet*) implements the harmonised standards set forth by EU copyright law. Many of the EU directives reflect EU member states' obligations under the Berne Convention and the Rome Convention, as well as the obligations of the EU and its member states under the World Trade Organisation "TRIPS" Agreement and the two 1996 World Intellectual Property Organisation (WIPO) Internet Treaties (the WIPO Copyright Treaty and the WIPO Performances and Phonograms Treaty). The Copyright Act automatically protects the copyright of works of literature, science or art from the moment the work is created, on the condition that the work in question is an original work. The term "work" embraces many materials, such as books, brochures, films, photographs, musical works, works of visual art and geographical maps. Software is also protected under the Copyright Act. A work must be "the author's own intellectual creation" in order to qualify for copyright protection.

Upon the death of the author, the copyright automatically devolves to the heirs.

Copyright ends 70 years after the death of the work's creator. Copyright owners have the exclusive right to publish and copy the copyrighted works, including translations.

The Dutch Copyright Act stipulates that employers own the copyrights in works created by employees in the course of their employment.

Copyright owners have the right to take legal action against persons infringing their copyrights. Dutch civil law and Dutch copyright law provides, among other things, for the possibility of injunctions, full damages, the surrender of profits made on the infringement, to be accounted for by the infringing party, the transfer or destruction of infringing products, cost orders and withdrawal from the market, or the destruction of materials predominantly used for the manufacturing of the infringing products.

In addition to copyright, there are "neighbouring rights", which are also known as "related rights" and protect the work of performers, music and film producers, and broadcasting companies.

## 7.5 Others

### Plant Breeders' Rights

Under EU Regulation (EC) No 2100/94 of 27 July 1994 on community plant variety rights and the Dutch 2005 Seeds and Planting Materials Act, plant breeders can invoke plant breeders' rights to protect new plant varieties. The Board for Plant Varieties (*Raad voor Plantenrassen*) is responsible for granting plant breeders' rights in the Netherlands.

### Database Rights

Databases consisting of collections of ordered data can be protected by database rights under the Dutch Database Act.

### Semiconductor Topography Rights

Semiconductor topography rights protect the design of electronic circuits on computer chips (also known as the topography of semiconductor products). These rights protect circuits designed to perform specific functions.

### Trade Name Law

Trade name law protects the names under which enterprises operate. Trade names come into being automatically, as soon as enterprises start operating; owners do not have to register trade names in the commercial register. The protection of trade names is regulated in the Trade Names Act. Trade name law has been of growing importance recently due to the use of trade names in internet domain names.

### Trade Secrets

The Dutch Trade Secrets Act (*Wet bescherming bedrijfsgeheimen*) implements the EU Trade Secrets Directive (Directive 2016/943/EU), which sets out rules for the protection of trade secrets. Trade secrets refer to any information that:

- is not generally known or readily accessible to persons in the circles who normally deal with this type of information and is therefore of economic value;
- is subject to appropriate confidentiality measures by the lawful holder; and
- the holder has a legitimate interest in the confidentiality thereof.

An owner of trade secrets must enforce "appropriate measures" and establish the confidentiality of said trade secrets in order to ensure protection.

The Dutch Trade Secrets Act stipulates the actions allowed for discovering trade secrets: so-called reverse engineering is permissible, provided it does not violate contractual obligations or other mandatory statutory law.

In the case of infringements, trade secrets owners can demand the cessation or prohibition of the use or disclosure of the trade secret, and even product recalls regarding the infringing goods and/or their destruction, as well as damages.

## 8. Data Protection

### 8.1 Applicable Regulations

The main regulations applicable to personal data protection in the Netherlands are:

- Regulation (EU) 2016/679 of 27 April 2016 on the protection of natural persons with regard to the processing of personal data and on the free movement of such data (GDPR); and
- the Dutch GDPR Implementation Act (*Uitvoeringswet AVG*) of 16 May 2018.

### The GDPR

The GDPR is a uniform and unitary data protection law applicable throughout the EU and EEA, and is directly applicable in the Netherlands. It allows EU member states to enact additional implementing provisions – eg, in relation to special categories of personal data as referred to in Article 9 (1) of the GDPR, and providing for certain exemptions for scientific or historical research or statistical purposes, for authentication and security purposes, etc. The Netherlands has exercised this right by introducing the GDPR Implementation Act. The GDPR defines "personal data" as any data that can be traced back to specific individuals (the data subjects), either directly or indirectly. Health data, genetic data, data about race or ethnicity, and other special categories of personal data, as well as personal data relating to criminal convictions and offences, enjoy additional protection.

The GDPR defines a controller as the party who determines the purpose and means of processing, and a processor as the party who processes personal data on behalf of a controller. Both controllers and processors are subject to the rules in the GDPR.

The GDPR stipulates that, in order to be able to demonstrate compliance, controllers must adopt internal policies and implement measures that satisfy the principles of data protection by design and data protection by default.

The processing of personal data (including disclosure to third parties) must be lawful, transparent and fair. It must be limited to specific purposes and to the data necessary for these purposes (data minimisation). Other principles are that the data must:

- be accurate;
- be kept secure; and
- not be stored for any longer than needed (storage limitation).

The GDPR also requires businesses to inform data subjects of how their data is used and to document their compliance with the GDPR. Data subjects have the right to access their personal data, to request corrections, and to have their data deleted (or restricted) under certain conditions.

Controllers and processors must designate data protection officers (DPO's) in the following circumstances:

- if they are public authorities;
- if their core activities consist of the regular and systematic monitoring of data subjects on a large scale; or
- if their core activities consist of processing sensitive personal data on a large scale (including processing information about criminal offences).

### The ePrivacy Directive and the Dutch Cookie Act

Additional provisions regarding data protection and privacy in the context of telecommunications are set out in Directive 2002/58/EC of the European Parliament and of the Council of 12 July 2002 concerning the processing of personal data and the protection of privacy in the electronic communications sector in the EU (ePrivacy Directive) and in the Dutch Cookie Act.

The ePrivacy Directive has been implemented in the Dutch Telecommunications Act, which prohibits unsolicited communication by email (as well as faxes and automated communication systems) for commercial, non-commercial or charitable purposes, unless senders can demonstrate the recipient's prior consent.

Under the Cookie Act, informed consent is required for the use of cookies, unless the cookies are:

- needed to facilitate communication;
- strictly necessary for the service requested by users; or
- aimed at obtaining information about the quality and/or effectiveness of the services provided and have little or no impact on the users' personal lives.

These rules apply to both first-party cookies and third-party cookies.

## 8.2 Geographical Scope

Pursuant to Article 3 (1), the GDPR applies to the processing of personal data in the context of the activities of an establishment of a controller or a processor in the EEA, regardless of whether or not the processing takes place in the EEA. The term "establishment" extends to any real and effective activity – even a minimal one – exercised through stable arrangements in the EEA.

Businesses not established in the EEA will also be subject to the GDPR if they offer goods and services to individuals in the EEA, or if they monitor the behaviour of data subjects who are in the EEA. Non-EEA businesses that do this on a regular basis or in combination with certain high-risk activities will have to designate a representative in the EEA. Under these rules, websites directed at an EEA audience or tracking visitors from the EEA must comply with the GDPR.

No special requirements apply to data transfers from the Netherlands to other EEA countries. Transfers of personal data to countries outside the EEA, however, require – with just a few exceptions – either a decision of the European Commission that the destination country ensures an adequate level of protection (this is the case for the UK, Switzerland, Canada, Israel and Japan, for example), or appropriate safeguards to protect the data subjects' rights (such as the Commission's standard contractual clauses (SCCs) or binding corporate rules approved by a supervisory authority).

On 16 July 2020, the Court of Justice of the European Union (CJEU) issued its decision in *Data Protection Commissioner v Facebook Ireland*, *Maximillian Schrems*, commonly referred to as "*Schrems II*". The decision invalidated the EU–US Privacy Shield Framework, which was designed to provide companies on both sides of the Atlantic with a mechanism to comply with data protection requirements when transferring personal data from the European Union to the United States in support of transatlantic commerce.

Following the Executive Order on "Enhancing Safeguards for United States Signals Intelligence Activities" by US President Biden on 7 October 2022 and a Regulation issued by the US Attorney General on 10 July 2023, the European Commission adopted its adequacy decision for the EU–US Data Privacy Framework. The decision concludes that the United States ensures an adequate level of protection – comparable to that of the European Union – for personal data transferred from the EU to US companies under the framework.

The EU–US Data Privacy Framework introduces new binding safeguards to address all the concerns raised by the European Court of Justice, including limiting

access to EU data by US intelligence services to what is necessary and proportionate, and establishing a Data Protection Review Court (DPRC), to which EU individuals have access. If the DPRC finds that data was collected in violation of the new safeguards, it will be able to order the deletion of the data. The new safeguards in the area of government access to data will complement the obligations that US companies importing data from EU will have to subscribe to.

In order to be able to receive personal data transferred from the EU on the basis of the EU–US Data Privacy Framework, US companies must certify, and then re-certify on an annual basis, with the US Department of Commerce, its adherence to a detailed set of privacy obligations, for instance, the requirement to delete personal data when it is no longer necessary for the purpose for which it was collected, and to ensure continuity of protection when personal data is shared with third parties.

The functioning of the EU–US Data Privacy Framework is subject to periodic reviews, to be carried out by the European Commission, together with representatives of European data protection authorities and competent US authorities. The first review took place in July 2024. Based on the information gathered during this first review, the European Commission concluded that the US authorities have put in place the necessary structures and procedures to ensure that the Data Privacy Framework functions effectively. At the moment of the first review more than 2,800 US Companies were certified under the Data Privacy Framework. The Trump administration, however, has taken an aggressive stance against the EU's GDPR, viewing it as a restriction on digital trade and a burden on US tech companies, with US firms receiving 83% of total GDPR fines. While the US administration supports the EU–US Data Privacy Framework (DPF) as of early 2026, future threats to weaken or roll back the framework could endanger the free flow of data, potentially leading to its invalidation by the EU.

On 4 June 2021, the European Commission modernised the SCCs for data transfers from controllers or processors in the EU/EEA (or otherwise subject to the GDPR) to controllers or processors established outside the EU/EEA (and not subject to the GDPR). These modernised SCCs replace the three sets of SCCs that were adopted under the previous Data Protection Directive 95/46. On 27 December 2022, the grace period for using contracts incorporating these earlier sets of SCCs expired. The European Commission is in the process of developing additional sets of SCCs for data transfers to third countries by EU institutions and bodies, and for data transfers to controllers or processors outside the EU whose processing operations are directly subject to the GDPR.

### 8.3 Role and Authority of the Data Protection Agency

The Dutch Data Protection Authority (*Autoriteit Persoonsgegevens*) was established by the GDPR Implementation Act as an independent supervisory authority, as referred to in Article 51 (1) of the GDPR. The Authority is charged with supervising the processing of personal data in accordance with the provisions of the GDPR and the law.

The functions of the Dutch Data Protection Authority include:

- providing guidance to individuals and organisations in the form of information and advice;
- supporting organisations by offering practical tools;
- reviewing requests for prior consultations and licence applications for processing data relating to criminal convictions and offences; and
- promoting the creation of codes of conduct.

It has the power to investigate violations, to issue orders to stop violations and to impose fines of up to EUR20 million or 4% of the worldwide annual turnover, whichever is higher.

## 9. Looking Forward

### 9.1 Upcoming Legal Reforms

No information has been provided in this jurisdiction with respect to upcoming legal reforms concerning doing business in the Netherlands.

# Trends and Developments

**Contributed by:**

**ACG International**

**ACG International** is an Amsterdam-based law firm advising companies, entrepreneurs, investors and family-owned businesses on corporate, commercial, employment and dispute-related matters, with a strong focus on international business and cross-border transactions. The firm is particularly recognised for its extensive international reach and business network. Through its leadership roles in international business organisations, including the Netherlands India Chamber of Commerce & Trade (NICCT) and the Swiss Dutch Business Council (SDBC), ACG International maintains close relationships with CEOs, business leaders, investors and policymakers across multiple industries and jurisdictions. This enables the firm to understand not only the legal aspects of a matter, but also the commercial, strategic and cultural considerations that influence business decisions. Many of the firm's mandates involve co-ordinating complex cross-border projects, disputes and investments. Clients value ACG International's ability to combine legal expertise, commercial insight and international connectivity to deliver practical solutions that support business growth and protect long-term interests.

## Authors

**Edith Nordmann** is managing partner at ACG International and has over 20 years of experience in corporate, employment and international business law. She advises companies on cross-border transactions, market entry, corporate governance and compliance, with a particular focus on business between Europe and India. Edith is chair of the Netherlands India Chamber of Commerce & Trade, president of the Swiss Dutch Business Council and an active member of international business and policy taskforces, including B20 initiatives linked to the G20. She is also a regular speaker at international conferences and a guest lecturer at universities in Europe and India.

**Thomas Klaarenbeek** is an associate and attorney-at-law at ACG International. He advises and litigates in commercial and corporate disputes, contractual matters, corporate governance issues and civil liability cases. His practice also covers financial regulatory and compliance-related matters, including banking duties of care, integrity risks, sanctions compliance and anti-money laundering obligations. In addition to his legal practice, Thomas works as a compliance officer at a financial institution. This operational background gives him practical insight into governance, client due diligence, risk management and regulated business processes. He regularly shares this expertise in internal and external presentations on AML, compliance and integrity risks.

## How Indian Companies Can Structure Their European Expansion Through the Netherlands

India and the Netherlands have entered a new phase in their bilateral relationship. With the elevation of their relationship to a Strategic Partnership for 2026–2030 and the conclusion of negotiations on the India–EU Free Trade Agreement, the commercial case for Indian companies expanding into Europe has become stronger than ever.

In that context, the Netherlands is increasingly becoming India's gateway to Europe. Its position is not based on geography alone: the Netherlands combines world-class logistics, a highly international business environment, legal certainty, English-language dispute resolution and direct access to the European internal market.

For Indian companies, this makes the Netherlands a practical platform from which to structure, manage and grow their European operations.

For businesses, however, market access is only one part of the equation. Successful expansion into Europe requires a sound legal structure, clear contracts, reliable dispute resolution, compliance with EU regulations and a realistic understanding of employment, tax, customs and governance requirements.

The key question is therefore not only whether the Netherlands can serve as a gateway to Europe, but how that gateway should be structured. Incorporation alone is not enough. Companies should determine at an early stage which entity will enter into contracts with European customers, who will bear liability, which law will apply, how disputes will be resolved and how EU regulatory obligations will be managed within the wider group.

This article discusses why the Netherlands is increasingly used as a European hub for Indian businesses and highlights the main legal, economical and practical considerations for companies seeking to use the Netherlands as their entry point into Europe.

### *A new phase in India–Netherlands relations*

The relationship between India and the Netherlands has developed into a modern economic partnership built on trade, investment, innovation and institutional co-operation.

The commercial relationship is already substantial. In the financial year 2023–2024, the Netherlands was India's 11th-largest merchandise trading partner worldwide and its largest merchandise trading partner in the European Union. Total merchandise trade between India and the Netherlands stood at USD27.341 billion, accounting for 2.46% of India's total merchandise trade.

The Netherlands was also India's largest merchandise export destination in Europe and its third-largest worldwide, after the United States and the United Arab Emirates. In the same financial year, India exported goods worth USD22.367 billion to the Netherlands, representing 5.12% of India's total merchandise exports. The Netherlands is also a major investment partner, ranking as the fourth-largest source of cumulative foreign direct investment into India.

The relationship is reflected not only in trade and investment figures, but also in corporate presence: more than 300 Dutch companies are active in India, while more than 300 Indian companies have established a presence in the Netherlands. These include major Indian IT, pharmaceutical, manufacturing and food businesses, as well as several significant Indian acquisitions of Dutch companies in sectors such as steel, mobility, software, life sciences and hospitality.

In recent years, however, the relationship has become broader and more strategic. It now covers not only trade in goods, but also technology, innovation, sustainability, water management, agriculture, semiconductors, pharmaceuticals, maritime co-operation, cyber security and the energy transition.

The Strategic Partnership Roadmap for 2026–2030 reflects this broader development. It identifies areas of co-operation with direct relevance for businesses, including renewable energy, telecommunications, maritime, infrastructure, urban development, electronics, semiconductors, agriculture, pharmaceuticals, medical technology, textiles, metals and innovation.

For Indian companies, this matters because the Netherlands is no longer merely a convenient European location. It is becoming a legal and commercial platform through which Indian businesses can build a structured European presence. That presence may involve sales, distribution, warehousing, contracting, intellectual property management, employment and strategic partnerships.

The India–EU Free Trade Agreement adds further momentum.

While the practical benefits will differ by sector, the broader message is clear: trade and investment between India and Europe are moving towards deeper integration. Indian companies that prepare their European structure in time may be better placed to benefit from that development.

### *Why the Netherlands is India's gateway to Europe*

The expression "gateway to Europe" is often used in a commercial sense. In the case of the Netherlands, however, it has a concrete practical meaning. The country offers direct access to the EU internal market, a central geographic position, highly developed infrastructure and a business environment that is deeply accustomed to international trade.

The human and cultural connection is also relevant. The Netherlands hosts the largest Indian diaspora community on mainland Europe, including a substantial Indian community and a growing community of Indian professionals and students. This creates a broader social and business environment in which Indian companies may find cultural familiarity, local networks and practical support when entering the European market. The Netherlands also offers language and business-culture advantages. English is widely used in Dutch business, legal and professional services, and the Dutch commercial culture is generally international, direct and pragmatic. For Indian companies negotiating with European customers, suppliers, banks, advisers and regulators, that can make the Netherlands a more accessible starting point than jurisdictions where language and local business customs create higher entry barriers.

For Indian businesses, the attraction is straightforward. A Dutch entity can serve as the European contracting party, import hub, distributor, employer or holding company. From the Netherlands, companies can serve customers and business partners across the EU while maintaining a single and coherent European base.

The Port of Rotterdam and Amsterdam Schiphol Airport are important parts of this proposition. The Port of Rotterdam remains Europe's largest seaport and handled 428.4 million tonnes of cargo in 2025. Schiphol handled 66.8 million passengers in 2024, 473,815 air transport movements and 1.49 million tonnes of cargo, underlining its position as one of Europe's major passenger and cargo hubs.

From the Netherlands, goods can also be moved efficiently by road, rail and inland waterways into key North-Western European markets, including Germany, Belgium and France. Together, this infrastructure allows companies to manage both high-volume goods and time-sensitive products efficiently. This logistics function is visible in trade flows. Statistics Netherlands has reported that the Netherlands is the largest EU importer of goods from India and the second-largest EU importer of goods and services from India after Germany.

However, the Dutch gateway function is not only logistical. It is also legal and regulatory. Indian companies entering the European market must consider where to incorporate, which entity will enter into contracts, how liability will be allocated, which law will govern their agreements and how disputes will be resolved. The Netherlands allows these issues to be organised within one commercially practical and legally predictable framework.

### *Incorporation is not enough*

For many businesses, European expansion starts with a simple question: should we incorporate a Dutch company? That question is important, but it is not sufficient.

Incorporation creates the legal shell. It does not, by itself, create a functioning European operating model. The more important questions are operational and

legal: who contracts, who imports, who employs, who owns the intellectual property, who bears product liability, who manages compliance and who controls the European business?

This is where market-entry structures can become vulnerable. A company may incorporate a Dutch private limited company but continue to contract from India. Or it may use a Dutch entity for sales while customs, logistics, data protection and customer support are managed elsewhere. In other cases, the Dutch company is created without clear governance, tax alignment, employment planning or contract templates.

That can create uncertainty. European customers, banks, insurers and regulators will often want to know which entity is responsible for performance, payment, compliance and liability. If the legal structure does not match the commercial reality, the company may face unnecessary risk, inefficient negotiations and internal confusion.

Indian companies should therefore treat incorporation as the beginning of the structuring process, not the end. The Dutch entity should have a clearly defined role within the wider group. It may function as a sales company, distributor, contracting hub, employer, importer of record, holding company or regional headquarters. Each role has different legal and practical consequences.

### *Structuring a European presence*

One of the first decisions for an Indian company entering Europe is how to structure its presence. Some companies start with a representative office or local sales support. Others immediately establish a Dutch private limited company, a branch or a wider group structure.

The right choice depends on the company's activities, risk appetite, tax position and commercial objectives. A Dutch entity may act as the European sales company, the contracting party for EU customers, the employer of local staff, the importer of record or the distributor for multiple EU markets. In more complex structures, it may also act as a holding company for European subsidiaries or joint ventures.

One common model is to use the Dutch entity as the European contracting hub. In that structure, the Dutch company contracts with European customers, suppliers, distributors, logistics providers and service partners, while the Indian parent company remains responsible for production, technology, financing or group-level strategy. This can create a European counterparty for customers and business partners. It may also simplify invoicing, payment, enforcement and dispute resolution.

At the same time, the model must be implemented carefully. The Dutch company should not be a purely formal entity if it is expected to carry real commercial responsibilities. Its role should be reflected in contracts, governance documents, insurance arrangements, tax planning, intercompany agreements and operational decision-making.

From a legal perspective, this structure should not be an afterthought. It determines which entity assumes contractual obligations, which balance sheet carries risk, where management decisions are made and which courts or authorities may become relevant in case of a dispute or investigation. Poor structuring at the start can create unnecessary liability, tax complexity and governance issues later.

Indian businesses should therefore consider the following questions at an early stage.

- Which entity will contract with European customers, suppliers and distributors?
- Will the Dutch company act as a sales office, distributor, importer or holding company?
- Where will management decisions be taken?
- How will liability be allocated between the Indian parent company and the Dutch or European entity?
- Will the company use agents, distributors, employees or independent contractors?
- Which regulatory obligations apply to the products or services offered in Europe?

A well-designed structure helps avoid uncertainty. It also makes negotiations with European customers, banks, insurers and regulators more efficient.

### *Contracts, legal certainty and dispute resolution*

Contracts are central to any European expansion strategy. Indian companies entering the EU through the Netherlands will usually need a range of agreements, including customer contracts, distribution agreements, agency agreements, supply agreements, warehousing and logistics agreements, employment contracts, confidentiality agreements, general terms and conditions and, in some cases, joint venture or shareholder agreements.

These contracts should be adapted to the European context. Standard terms used in India or other markets may not always work well under Dutch or EU law. Certain provisions may be unenforceable, incomplete or commercially unsuitable when applied to European counterparties.

Key contractual issues include payment terms, delivery obligations, limitation of liability, termination rights, intellectual property, confidentiality, data protection, sanctions compliance, product liability and dispute resolution.

For distribution and agency structures, particular attention should be paid to mandatory rules that may protect commercial agents or affect termination compensation. Choice of law and jurisdiction clauses are equally important. A contract may appear clear, but if it does not properly identify the governing law and forum, enforcement may become more difficult. For businesses operating across several EU member states, a coherent contract framework can prevent fragmented and costly disputes.

The Netherlands offers a strong environment for this. Dutch law is generally considered predictable, commercially oriented and suitable for international transactions. Dutch courts are experienced in dealing with complex commercial disputes, and Dutch judgments can generally be recognised and enforced within the EU more efficiently than judgments from outside the EU.

The Netherlands Commercial Court is particularly relevant for international businesses. It allows certain international commercial disputes to be litigated in English before specialised Dutch courts, with proceedings and judgments in English. This can be attractive where parties already negotiate and contract in English and want to avoid the cost and uncertainty of translating large volumes of documentation. A further practical advantage is that the judgment remains a Dutch court judgment, which can generally be recognised and enforced within the EU more efficiently than a judgment from outside the EU.

### *Supply chain resilience and the Green and Digital Sea Corridor*

Supply chain resilience has become a strategic priority for many companies. Geopolitical tensions, transport disruptions, energy price volatility and changing trade policies have encouraged businesses to rethink their dependence on single markets, single suppliers or single transport routes. In that context, India is increasingly seen as an important partner for diversification, while the Netherlands offers the infrastructure and legal environment to connect Indian production with European demand.

The Netherlands is well placed to support that shift. Its ports, customs infrastructure, logistics providers and digital supply chain systems allow companies to manage European distribution efficiently. For Indian manufacturers and exporters, a Dutch hub can reduce fragmentation and improve control over stock, delivery times, customs processes and customer service.

This development is also reflected in the India–Netherlands agenda. The Strategic Partnership Roadmap for 2026–2030 refers to the further development of a Green and Digital Sea Corridor between India and the Netherlands, aimed at creating an environmentally sustainable, digitally integrated and economically efficient maritime corridor. For businesses, this points to a future in which logistics, sustainability, digital documentation, customs efficiency and maritime cooperation are increasingly connected.

Legal issues will follow from that development. Companies will need to consider customs compliance, transport documentation, insurance, liability for delay or damage, product conformity, sanctions controls, ESG obligations and data exchange across the supply chain. The more complex the supply chain, the more important it becomes to allocate responsibilities

clearly between suppliers, carriers, logistics providers, distributors and customers.

For Indian companies using the Netherlands as a European distribution base, logistics contracts should therefore be reviewed carefully. Warehousing, fulfilment, transport, customs representation and delivery obligations should be aligned with the company's commercial model and regulatory responsibilities. The legal structure should support the supply chain, rather than merely follow it.

### *Compliance, ESG and regulated sectors*

European market access increasingly requires more than product quality and competitive pricing. Companies must also meet regulatory, compliance and sustainability expectations. This is particularly relevant for Indian companies supplying European customers, participating in EU value chains or operating in regulated sectors.

Compliance obligations may arise in several areas. Depending on the sector, companies may need to address sanctions, export controls, anti-money laundering requirements, data protection, cybersecurity, product safety, consumer protection, environmental rules, customs requirements and supply chain due diligence. European customers may also impose contractual compliance standards that go beyond minimum legal requirements.

ESG is becoming particularly important. European companies increasingly require suppliers and business partners to provide information about sustainability, labour standards, environmental impact and supply chain transparency. For Indian companies, this means that ESG is not only a reporting topic. It may directly affect access to customers, financing and public procurement.

This is particularly relevant in the strategic sectors that are driving the India–Netherlands relationship. Semiconductors, technology, maritime co-operation, green hydrogen, agriculture, water management, healthcare and defence all offer significant opportunities, but they also carry legal and regulatory complexity.

Technology collaborations may require careful treatment of intellectual property, licensing, confidentiality, data rights, research results and ownership of improvements. In semiconductors, AI and cybersecurity, companies may need to consider export controls, security standards, data governance and restrictions on the transfer of sensitive technology. In pharmaceuticals and medtech, product approvals, quality systems, distribution authorisations and liability risks may be central.

The objective is not to overcomplicate expansion, but to avoid preventable legal and reputational risks once the business starts operating in Europe. Companies that build compliance into their European structure from the start will usually be better positioned than companies that try to correct gaps later.

### *Employment, mobility and talent*

European expansion often requires people on the ground. Indian companies may need a local managing director, sales team, technical support staff, compliance officer or logistics co-ordinator. They may also wish to transfer Indian employees to the Netherlands or hire international talent locally.

Dutch employment law is protective, but it is also structured and predictable. Employment contracts should be prepared carefully, particularly on role description, remuneration, confidentiality, intellectual property, restrictive covenants, termination and applicable policies.

Employers should also be aware that termination of employment in the Netherlands is more regulated than in some other jurisdictions.

For businesses expecting rapid growth, employment planning should be part of the market entry strategy. The use of independent contractors, payroll arrangements or temporary workers may be useful in some situations, but these structures must be assessed carefully. Misclassification can create legal and tax risks.

The India–Netherlands agenda also recognises the importance of fair mobility for students, academics, researchers, highly skilled professionals and young

professionals. For Indian companies, this is relevant where European operations depend on specialised talent or knowledge transfer from India. Employment and immigration issues should therefore be addressed together.

### *Practical takeaways for Indian companies*

Indian companies considering the Netherlands as a European hub should approach the decision strategically. The choice is not only about where to incorporate or where to store goods. It is about designing a European operating model that is commercially efficient and legally robust.

The most important practical takeaways are the following.

- Treat the Netherlands as both a logistics and legal gateway to Europe.
- Decide early which entity will contract with European customers and suppliers.
- Do not treat incorporation as a substitute for a proper European operating structure.
- Align corporate structure, tax, customs, employment and governance decisions.
- Use clear governing law and dispute resolution clauses in commercial contracts.
- Consider whether Dutch courts, the Netherlands Commercial Court or arbitration are/is most appropriate.
- Review distribution, agency and logistics agreements before entering the market.
- Prepare for EU compliance requirements, including ESG, sanctions, data, cyber and product regulation.
- Address employment and immigration issues before hiring or transferring staff.
- Ensure that IP and technology rights are clearly protected in collaborations.
- Build compliance into the structure from the start rather than correcting it later.

These steps are practical, not merely legal. They help companies avoid disputes, reduce uncertainty and build confidence with European customers, partners and regulators.

### *Conclusion: the gateway must be structured*

The Netherlands is increasingly India's gateway to Europe. That position is supported by strong trade and investment flows, logistics, the largest Indian diaspora community in mainland Europe, an English-language business culture, legal certainty and the broader India–Netherlands Strategic Partnership. The conclusion of negotiations on the India–EU Free Trade Agreement adds further momentum to this development.

For Indian companies, the opportunity is significant. The Netherlands can serve as a platform for European sales, distribution, contracting, innovation, employment and strategic partnerships. It offers access not only to the Dutch market, but to the wider EU internal market.

At the same time, successful expansion requires more than commercial ambition. Companies should structure their European presence carefully, document their arrangements clearly and prepare for the regulatory standards that come with doing business in Europe.

The gateway is open. The companies that benefit most will be those that combine commercial speed with legal discipline.

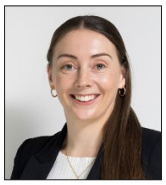
**Tompkins Wake** is one of New Zealand's leading full-service commercial law firms, known as "the law firm at the centre of New Zealand's economic and commercial heartland". Located in Hamilton, Auckland, Rotorua and Tauranga with more than 200 staff (including 29 partners and approximately 120 lawyers), the firm is globally connected as the New Zealand member of elite global law network MultiLaw, with alliances in over 100 countries. The firm advises major businesses, iwi organisations, infrastructure providers and public sector bodies across corporate and commercial, banking and finance, property, construction, employment, dispute resolution, environment, and Māori business law, and regularly advises foreign investors entering New Zealand, including on Overseas Investment Office approvals. Recent work includes advising Grant Thornton New Zealand Ltd on a strategically significant and highly complex cross-border transaction, supporting its agreement to join the Grant Thornton Advisors global platform.

## Authors

**Fiona Ashby** joined Tompkins Wake in 2018. She has a broad range of corporate and commercial experience across a diverse range of industries and sectors in New Zealand and overseas, assisting corporate and business clients and, where appropriate, liaising with in-house counsel. Fiona has worked in the commercial legal teams of firms in Auckland and London, and has particular experience of advising in the pharmaceutical, health and technology sectors.

**Luke Bowers** is a corporate and commercial lawyer with more than 14 years' experience. Advising domestic and international clients on a wide range of corporate and commercial transactions, Luke specialises in mergers and acquisitions, private equity, joint ventures, corporate restructuring and capital raisings. He also has particular expertise in New Zealand's overseas investment regime. Luke started his career with global law firm White & Case, in its London and Johannesburg offices. Prior to joining Tompkins Wake in 2021, he spent almost seven years with Chapman Tripp in Auckland.



**Daniel Erickson** leads Tompkins Wake's employment and health and safety practice group, and is an employment law specialist with a reputation for providing pragmatic, timely and easy-to-understand advice. He represents employers of all sizes across a wide range of industries, including manufacturing, freight and logistics and retail, and has assisted senior executives and CEOs in negotiating the start or end of their employment. If disputes cannot be resolved by negotiation or mediation, Daniel is a skilled litigator who regularly appears in the Employment Relations Authority and the Employment Court. He also has deep expertise in health and safety.

**Jessica Phillips** is a specialist commercial and regulatory litigator with particular experience in commercial, competition and property disputes. She has acted for clients in a wide range of sectors, including education, construction and sports administration, and is experienced in managing large-scale litigation. Clients appreciate her responsive, strategic advice and clear understanding of their commercial position. Jessica regularly appears in the District and High Courts, and resolves matters by arbitration. Prior to joining Tompkins Wake in 2024, she was a senior associate at a large New Zealand law firm, and previously spent six years in London at Hausfeld and Clifford Chance.

**Contributed by:** Fiona Ashby, Luke Bowers, Daniel Erickson, Jessica Phillips, Natalie Foster, Shelley Slade-Gully, Tina Liu and Theresa Le Bas, **Tompkins Wake**

**Natalie Foster** is a senior associate in Tompkins Wake's dispute resolution and litigation team. Prior to joining the firm in 2025, she worked at a large Australian law firm and a specialist litigation firm in Auckland, and as a judges' clerk in the High Court of New Zealand. Natalie was admitted in New Zealand in 2016 and in Victoria, Australia in 2021. She advises clients on a broad range of commercial and regulatory disputes, and has experience in managing large-scale litigation and investigations. She has appeared in the High Court and District Court, and as junior counsel in the Court of Appeal.

**Shelley Slade-Gully** is a specialist in intellectual property law and education law. She joined Tompkins Wake in 2018 and became a partner in 2020. She leads the firm's IP practice and specialises in trade mark law, with expertise in multi-jurisdictional trade mark portfolio management and cross-border IP strategies. Shelley regularly advises on trade mark strategy, IP licensing and dispute matters, including opposition and revocation proceedings, and copyright and design disputes. She has significant experience in dealing with agribusinesses, particularly those involved in primary production.

**Tina Liu** is a partner at Tompkins Wake and leads the firm's life science, biotechnology and food and beverage practice groups. Her expertise encompasses a wide range of legal areas, including commercial contracts, complex regulatory matters and substantial projects within these sectors. She regularly advises global and local clients on all aspects of the sale, distribution and marketing of innovative therapeutic and food and beverage products, including product categorisation, pre-market approval, advertising, pharmacovigilance, licensing, commercialisation, data protection and joint ventures. Tina has negotiated pharmaceutical supply arrangements with Pharmac, New Zealand's government drug purchasing organisation.

**Theresa Le Bas** is a partner at Tompkins Wake and an expert in resource management and local government law, with nearly 30 years' experience in New Zealand and Australia. She joined the firm in 2011 and is a senior partner in Tompkins Wake's environmental and local government practices. Theresa has extensive experience in large-scale infrastructure, mining, energy and industrial projects, performing legal due diligence for national and international acquisitions, and has guided a number of local authorities through significant plan reviews, changes and variations. She is a member of the Tompkins Wake Board of Partners.

# 1. Legal System

## 1.1 Legal System and Judicial Order

New Zealand is a common law jurisdiction. Its legal framework developed from English law, with judicial decisions playing an important role in the development and interpretation of the law alongside legislation enacted by Parliament. New Zealand does not have a single written constitutional document. Instead, its framework draws on a combination of statutes, constitutional conventions, judicial decisions and important constitutional documents, including the Constitution Act 1986, the New Zealand Bill of Rights Act 1990, and the Treaty of Waitangi, which together provide a framework for representative democracy. This framework provides flexibility while maintaining legal certainty and stability.

### Organisation of the Judicial Order

The court hierarchy comprises four principal tiers.

- The District Court is the court of first instance for most criminal prosecutions and civil disputes up to NZD350,000. It also exercises jurisdiction over family and youth matters through its Family Court and Youth Court divisions.
- The High Court has unlimited civil jurisdiction and hears cases involving claims that exceed the District Court's jurisdictional threshold. It also has exclusive first instance jurisdiction over certain matters, including judicial review proceedings, serious criminal trials and various statutory matters, and hears appeals from the District Court.
- The Court of Appeal serves as the intermediate appellate court, hearing appeals from the High Court and, in certain circumstances, from specialist courts and tribunals. Most cases conclude at this level, and further appeal requires leave.
- The Supreme Court is the highest court in New Zealand, and serves as the final appellate authority. It focuses on cases of national significance, substantial miscarriages of justice or significant legal interpretations. Leave to appeal is required and is not granted merely to correct error.

### Specialist Courts and Tribunals

In addition to these general courts, New Zealand has several specialised courts and tribunals that deal with specific categories of dispute, to ensure that disputes in particular areas are determined by decision-makers with the relevant expertise. These include:

- the Employment Relations Authority and Employment Court for employment-related disputes;
- the Environment Court for matters related to the Resource Management Act;
- the Māori Land Court, which has jurisdiction over matters relating to Māori land;
- the Waitangi Tribunal, which investigates claims by Māori that Crown actions or omissions are inconsistent with the principles of the Treaty of Waitangi;
- the Taxation Review Authority for tax disputes; and
- the Family Court, which deals with a broad range of family law matters including care of children, adoption, domestic violence, relationship property and care of vulnerable adults.

### Judicial Independence

The judiciary functions as an independent branch of government responsible for interpreting and applying the law. Judges are appointed based on their legal expertise and experience, and the system is designed to insulate judicial decision-making from political influence. The principle of judicial independence is regarded as being fundamental to the rule of law, protecting individual rights and maintaining public confidence in the administration of justice.

# 2. Restrictions on Foreign Investments

## 2.1 Approval of Foreign Investments

### The Overseas Investment Framework

New Zealand's foreign investment framework is governed by the Overseas Investment Act 2005 (OIA) and the associated Overseas Investment Regulations 2005, which aim to ensure that overseas investment benefits the country while protecting sensitive assets, such as land and strategic businesses. The Overseas Investment Office (OIO) administers the regime, overseeing applications for investments that meet the criteria set out in the OIA, with applications decided by the OIO and final approval sometimes made by the relevant Government Ministers.

### Investments Requiring Consent

Consent is generally required for investments involving an "overseas person" in the following categories.

- For significant business assets: where the acquisition involves consideration or assets valued over NZD100 million. Investors from countries covered by the Comprehensive and Progressive Agreement for Trans-Pacific Partnership (CPTPP) or from Australia may benefit from higher thresholds, reflecting New Zealand's commitment to facilitating trade relationships.
- Sensitive land: any acquisition of land classified as "sensitive" requires consent. This covers:
  (a) residential land;
  (b) land adjoining bodies of water (including coastal and marine areas and lakes);
  (c) land held for conservation purposes;
  (d) historical, cultural or heritage sites;
  (e) land associated with strategic infrastructure; and
  (f) rural land above a certain size threshold.
- Fishing quotas: overseas investors must obtain consent to acquire fishing quotas, to ensure sustainable management of New Zealand's marine resources.

Separate to the consent regime, the government can exercise a "call-in" power to review certain transactions involving strategically important businesses, unless those transactions are pre-notified and cleared.

### Criteria for Consent

Since March 2026, the primary consent pathway for most consent applications imposes a national interest risk assessment on the transaction. The OIO conducts an initial analysis to assess whether there may be a national interest risk and, if so, a more detailed assessment process is undertaken. If the OIO concludes that the transaction may be contrary to New Zealand's national interest, the application is escalated to the Minister of Finance to determine. There are different consent pathways for investments in residential land and farm land, as noted below. For the notification and clearance regime involving strategically important businesses, the OIO or Minister will assess if the transaction results in any national security or public order risks.

### Specific Land Types

Farm land must be advertised on the open market before a sale to an overseas person, unless exemptions apply. Overseas investors in farm land must satisfy an Investor Test (assessing character and capability) and the Benefit to New Zealand Test, under which they must show that the investment will deliver significant benefits, such as job creation, export growth or technological innovation. Acquisitions of residential land that is not otherwise sensitive may require meeting one of the following criteria:

- committing to reside in New Zealand;
- contributing to increased housing supply;
- using the land for non-residential purposes; or
- incidental residential use.

## 2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance

### The Application Process

The OIO application process involves providing detailed information about the investor and the proposed investment. The application process can be complex, but investors who seek expert advice can generally navigate it successfully.

### Processing Timeframes

Under the primary consent pathway, most applications will be determined within five to 15 working days of submission. If a full national interest assessment is required, a further 55 working day timeframe applies. For other types of consent application, the OIO has made significant improvements to its processing timeframes over the past couple of years, with average decision times of between four weeks and four months, depending on the consent pathway. However, for farm land acquisitions, consent applications should account for around five to six months' processing time, and sometimes longer). Investors should factor these timeframes into their transaction planning to avoid being unable to complete within anticipated timelines.

### Sanctions for Non-Compliance

The OIA establishes a mandatory consent regime. The notification regime for transactions involving strategically important businesses is mandatory in some circumstances. Completing a transaction that requires

consent or notification and clearance without first obtaining the consent or clearance can expose investors to significant legal risk, including the potential for the relevant Ministers or the OIO to require unwinding of the transaction and impose fines. Investors who are uncertain whether their transaction requires consent or notification should seek specialist legal advice before completing any transaction.

### 2.3 Commitments Required From Foreign Investors

#### National Interest

If the assessment of a transaction identifies a risk to New Zealand's national interest, the OIO or Minister of Finance has broad discretion to impose conditions to manage that risk.

#### The Investor and Benefit to New Zealand Tests

Where the Investor Test applies, the OIO can grant consent even if certain disqualifying factors are present, provided it is satisfied that the investor remains suitable to own or control sensitive assets.

The OIO has broad discretion to impose conditions to manage disqualifying factors, plus standard conditions it will typically impose to ensure future issues are captured. For transactions where the Benefit Test applies, the investment must demonstrate substantial benefits, such as job creation, export growth, technology introduction or environmental protection. These commitments are assessed as part of the consent process and may be reflected in conditions attached to any approval granted. The nature and extent of required commitments will depend on the type of investment and the consent pathway under which the application is made.

#### Conditions on Consent

Where consent is granted conditionally, investors must satisfy any imposed conditions relating to, for example, ongoing employment levels, environmental stewardship or the purpose for which land is used; failure to comply with such conditions may result in enforcement action. Investors should engage early with the OIA process to understand and plan for any conditions that are likely to be imposed.

### 2.4 Right to Appeal

#### Challenging OIO Decisions

Where the OIO or the relevant Government Ministers decline to grant consent, investors may seek to challenge the decision through judicial review in the High Court. New Zealand's administrative law framework permits affected parties to challenge government decisions on the basis that the decision-maker failed to follow correct procedures, applied the wrong legal test, or acted unlawfully.

#### Scope and Timing

Judicial review focuses on the legality of the decision-making process rather than the substantive merits of the decision, meaning the reviewing court considers whether the correct process was followed and the law correctly applied. Applicants considering a challenge must act promptly, as judicial review proceedings are subject to timing requirements. Specialist legal advice should be sought immediately upon receipt of an adverse OIO decision, to assess the grounds for challenge and the prospects of success.

## 3. Corporate Vehicles

### 3.1 Most Common Forms of Legal Entity

#### Limited Liability Company

The most common business structure for foreign investors is the limited liability company, which provides a separate legal entity status and limits shareholders' liability to their investment. At least one director must live in New Zealand or Australia (if they are also a director of an Australian company), and a minimum of one shareholder is required, with no residency requirements. The limited liability company is well suited to a broad range of purposes, from day-to-day trading operations to greenfield investments and holding structures.

#### Subsidiary and Branch

A subsidiary offers local incorporation, enhanced market credibility, and liability protection, though it involves higher compliance costs and more complex regulatory requirements. A branch provides lower operational costs and easier management integration with the parent company, but exposes the parent company to liabilities in New Zealand and requires

consolidated financial reporting. The choice between a subsidiary and a branch will depend on the investor's risk tolerance, tax position and operational preferences.

### Limited Partnership and Joint Venture

A limited partnership offers pass-through taxation and limited liability for passive investors, though it requires clear agreements on partner roles and responsibilities. A joint venture provides resource sharing and flexibility tailored to specific projects, though it carries the risk of conflicts between partners, and robust agreements are necessary. Both structures are commonly used by overseas investors participating in specific projects or co-investing with local partners.

## 3.2 Incorporation Process

### Registration Steps

New Zealand is renowned for its business-friendly environment, making the process of forming and registering a company relatively straightforward, though it involves several important steps and considerations, particularly for overseas investors.

The company registration process is user-friendly, with most steps completed online through the New Zealand Companies Office, as follows:

- reserve a company name through the Companies Office website (valid for 20 working days);
- submit information about directors, shareholders and the registered office; and
- upload the required documents, provide a physical address in New Zealand, and pay the registration fee.

If all details are correct, registration can be completed within a few hours.

### Post-Registration Requirements

For tax purposes, the company will need an IRD number, and GST registration is required if its annual turnover will exceed NZD60,000. The IRD and GST registrations can be submitted as part of the incorporation process, but for overseas owned companies will only be processed once an AML-CFT reporting entity (such as a law firm or accountant) has completed KYC checks or the company has opened a bank account. Opening a bank account for a New Zealand company can be challenging for non-residents, as many banks require an in-person visit or a local director, and stringent anti-money laundering checks are also part of the process. Overseas investors should factor these practical steps into their planning timeline.

## 3.3 Ongoing Reporting and Disclosure Obligations

### Core Compliance Obligations

After registration, companies must meet ongoing requirements, including:

- filing annual returns with the Companies Office;
- maintaining accurate financial records and meeting tax obligations;
- notifying the Companies Office of any changes to company information; and
- preparing audited financial statements for larger companies.

Companies whose turnover exceeds NZD33 million, or NZD11 million if they are a subsidiary of an overseas company, are required to file audited financial statements. These obligations are designed to maintain transparency and public accountability in the operation of New Zealand companies.

### Tax Filing Obligations

GST returns must be filed regularly, either monthly, two-monthly or six-monthly, depending on the company's annual turnover. Most individuals do not need to file tax returns where income is taxed at source through PAYE, but those with additional income must file an Individual Tax Return. Companies must also ensure that any changes to shareholding or control that engage the OIA are approved by the OIO.

## 3.4 Management Structures

### One-Tier Board Structure

New Zealand companies typically operate under a one-tier board structure, in which the board of directors is responsible for governance and strategic oversight of the company. Day-to-day management may be delegated to officers and managers appointed by the board, but ultimate accountability for the company's affairs rests with the directors. There is no man-

datory two-tier supervisory structure as found in some civil law jurisdictions.

### Director Residency Requirements

Overseas investors who do not have a resident director available should consider engaging a professional director or a corporate service provider to fulfil this role.

## 3.5 Directors', Officers' and Shareholders' Liability

### Limited Liability for Shareholders

The limited liability company structure provides a separate legal entity status and limits shareholders' liability to their investment. This means that, in the event of the company's insolvency or other adverse events, shareholders are not personally liable for the company's debts or obligations beyond what they have invested. The limited liability company thus provides an important layer of protection for overseas investors participating in the New Zealand market.

### Director and Officer Liability

Directors owe statutory duties to the company under the Companies Act 1993, including duties to:

- act in good faith and in the best interests of the company;
- exercise reasonable care, diligence and skill; and
- avoid reckless trading.

Where these duties are breached, directors may face personal liability in proceedings brought by the company or its liquidators. Significant fines can also apply for breaches of health and safety legislation, with penalties of up to NZD3 million for companies. Company directors may face personal liability, including fines and imprisonment, for failing to meet their health and safety obligations.

### Piercing the Corporate Veil

New Zealand courts have the power to disregard the separate legal personality of a company, commonly described as "piercing the corporate veil", in circumstances where the corporate structure is being used to perpetrate fraud, evade legal obligations or otherwise achieve an unlawful purpose. This is an exceptional remedy, applied narrowly by the courts. Investors should be aware that relying solely on the corporate form to shield against liability will not be effective where there is clear evidence of improper conduct.

# 4. Employment Law

## 4.1 Nature of Applicable Regulations

### Statutory Framework

New Zealand's employment and health and safety framework is a combination of legislation and established case law, and is intended to protect workers' rights, promote fair treatment and ensure safe workplaces. The key pieces of legislation are:

- the Employment Relations Act 2000;
- the Holidays Act 2003 (note this Act has now been repealed and replaced with the Employment Leave Bill which commences two years after receiving Royal Assent (save for some provisions)); and
- the Health and Safety at Work Act 2015.

The Employment Relations Act 2000 is the cornerstone of New Zealand's employment law, and sets out:

- a statutory duty of good faith – all parties in employment relationships must act honestly, openly and without misleading one another;
- minimum requirements for written employment agreements (individual and collective); and
- a personal grievance procedure – all employees who earn less than NZD200,000 per annum may access this procedure, which provides a mechanism to challenge dismissals or other actions the employee considers unjustifiable.

The Employment Relations Act 2000 applies to all employment relationships, including senior and executive roles. It excludes independent contractors, although courts or Inland Revenue may reclassify certain arrangements as employment if necessary.

### Other Key Legislation

The Holidays Act 2003 provides for:

- four weeks of paid annual leave after 12 months of continuous service;

- 12 public holidays annually, with time-and-a-half pay for those who work on those days;
- ten days of paid sick leave per year after six months; and
- minimum entitlements to bereavement leave and family violence leave.

The Human Rights Act 1993 prohibits discrimination in employment based on personal characteristics such as age, race, sex, religious belief or disability, and promotes equal employment opportunities. There are also statutes dealing with minimum wage rates, wages protection (eg, prohibition on certain deductions from wages) and parental leave entitlements.

### Case Law and Collective Bargaining

Case law plays an important role in interpreting employment rights and obligations, with the Employment Relations Authority and Employment Court developing New Zealand employment law through their decisions. In cases involving questions of law of public importance, cases may also be heard by the Court of Appeal and the Supreme Court.

## 4.2 Characteristics of Employment Contracts

### Written Agreement Requirement

Employment agreements, whether individual or collective (negotiated by unions), must be in writing, and employers must keep signed copies. Employment agreements must comply with minimum statutory entitlements, and any terms that purport to undercut those minimum standards will be of no effect. The statutory duty of good faith applies to bargaining for employment agreements (individual and collective).

### Fixed-Term and Ongoing Employment

Employment agreements can be for a fixed term or on an ongoing (indefinite) basis, but the Employment Relations Act 2000 provides specific safeguards to ensure that fixed-term arrangements are not used inappropriately to avoid protections afforded to permanent employees. Where a fixed-term agreement is used, there must be genuine reasons based on reasonable grounds for the fixed term. Employers cannot use fixed-term agreements simply to circumvent employees' access to personal grievance rights or to assess suitability for employment.

## 4.3 Working Time

### Working Hours

Working time arrangements and overtime are generally agreed between employer and employee in the individual employment agreement, subject to compliance with minimum statutory entitlements. New Zealand does not impose a strict statutory maximum on working hours, though health and safety obligations require employers to ensure workloads do not compromise employees' well-being.

### Minimum Wage

The adult minimum wage remains at NZD23.95 per hour from 1 April 2026, with the starting-out and training minimum wage at NZD19.16 per hour. The Minimum Wage Act 1983 establishes the legal minimum wage, which is reviewed annually to reflect living costs.

## 4.4 Termination of Employment Contracts

### Not an Employment at Will Jurisdiction

New Zealand is not an "employment at will" jurisdiction. Employees have significant legal protections against unjustified dismissal, and employers must follow both a substantively fair and procedurally fair process before terminating an employment relationship. Both parties are required to communicate openly, particularly where significant employment changes are proposed, such as redundancies and restructuring.

### Personal Grievances

Employees may raise personal grievances within 90 days, except in cases of sexual harassment where the timeframe is extended to 12 months. Disputes are often resolved through mediation, with unresolved issues taken to the Employment Relations Authority. Remedies available to employees who succeed in a personal grievance claim include reinstatement, compensation for lost wages, and damages for humiliation and injury to feelings.

From February 2026, an income threshold applies to personal grievances, subject to a 12-month transitional arrangement. Employees paid NZD200,000 or above will not be able to access the personal grievance procedure.

### Collective Redundancies

Where collective redundancies are required, employers must consult in good faith with employees and, where applicable, their union representatives. This includes:

- providing affected employees with details of any proposal that may impact the continuation of their employment;
- proactively sharing relevant information;
- giving employees the opportunity to respond to the proposal; and
- genuinely considering employee feedback before finalising decisions.

There is no fixed statutory redundancy payment in New Zealand; entitlements will depend on what is agreed in the employment agreement or any applicable collective agreement.

## 4.5 Employee Representations

### Union Representation

Union membership is voluntary, but unions are required for negotiating collective agreements, and the right to strike is protected in specific conditions, particularly during collective bargaining. Employers must bargain in good faith with unions that have initiated bargaining on behalf of their members in the workplace. The Employment Relations Act 2000 sets out detailed requirements for collective bargaining. Good faith obligations apply regardless of whether or not there is formal union representation in the workplace.

# 5. Tax Law

## 5.1 Taxes Applicable to Employees/ Employers

The authors are grateful to Murray Brewer, Alejandro Ces and Simon Taylor of Grant Thornton for reviewing and providing expert input on the tax sections of this chapter.

### Income Tax and PAYE

New Zealand's tax system is overseen by the Inland Revenue Department (IRD), which administers tax laws and ensures compliance. The tax regime is generally straightforward, with relatively low rates and a focus on transparency. Individuals are taxed on a progressive scale depending on their annual income, with rates for 2026–2027 set to:

- 10.5% on income up to NZD15,600;
- 17.5% on income from NZD15,601 to NZD53,500;
- 30% on income from NZD53,501 to NZD78,100;
- 33% on income from NZD78,101 to NZD180,000; and
- 39% on income above NZD180,000.

Residents are taxed on their worldwide income, while non-residents are only taxed on New Zealand-sourced income.

### Employer Payroll Obligations

Employers in New Zealand use the Pay as You Earn (PAYE) payroll tax system, with responsibilities including:

- deducting PAYE from employees' pay;
- making KiwiSaver contributions for eligible employees;
- paying Accident Compensation Corporation (ACC) levies for workplace injury coverage; and
- making other deductions such as student loan repayments or child support if required by the IRD.

Fringe Benefit Tax (FBT) is levied on non-cash benefits provided to employees, such as company vehicles or subsidised loans.

## 5.2 Taxes Applicable to Businesses

### Corporate Income Tax

A company is treated as tax-resident in New Zealand if it is incorporated there, or if its head office, centre of management or director control is located in New Zealand. Resident companies are taxed on their worldwide income, while non-resident companies are taxed only on income sourced from New Zealand. The corporate income tax rate is 28% on taxable income. New Zealand operates a full imputation system, which allows companies to attach tax credits to dividends paid to shareholders, reducing or eliminating double taxation of corporate profits.

### Non-Resident Withholding Tax

Non-residents receiving passive income from New Zealand are subject to Non-Resident Withholding Tax (NRWT). The domestic rates are as follows:

- dividends: 30% (unfranked) or in many cases 0% (fully imputed with tax credits attached);
- interest: 15%; and
- royalties: 15%.

These rates are frequently reduced by New Zealand's extensive network of double tax agreements. As an alternative to NRWT on interest, an approved issuer may pay a reduced 2% Approved Issuer Levy on interest paid on registered securities.

### Transfer Taxes

New Zealand does not impose stamp duty or transfer taxes on the transfer of real property, shares or other assets.

### Other Taxes

Employers are liable for Fringe Benefit Tax (FBT) on non-cash benefits provided to employees, with rates of up to 63.93% depending on the calculation method chosen. Customs and excise duties apply to the importation of certain goods, including alcohol, tobacco and fuel.

### OECD Pillar Two

New Zealand has enacted comprehensive Pillar Two legislation through the Taxation (Annual Rates for 2023–24, Multinational Tax, and Remedial Matters) Act 2024. The Income Inclusion Rule applies for fiscal years beginning on or after 1 January 2025, while the Undertaxed Profits Rule and a Qualified Domestic Minimum Top-up Tax (QDMTT) apply from 1 January 2026. These rules ensure that large Multinational Enterprises (MNEs) with consolidated revenue of at least EUR750 million pay an effective tax rate of at least 15% in each jurisdiction where they operate.

As at the date of writing, New Zealand's QDMTT has not yet been confirmed as having been granted safe harbour status on the OECD Inclusive Framework's central record, though the assessment process remains ongoing.

Local taxpayers are responsible for registering MNEs subject to the Pillar Two rules, with registration required within six months of the first financial year in scope. For the initial cohort, this means registration should be completed by 30 June 2026 for MNEs with a 31 December 2025 year-end.

## 5.3 Available Tax Credits/Incentives

### Research and Development Tax Credit

The principal tax incentive is the Research and Development Tax Incentive (RDTI), which provides a 15% tax credit on eligible R&D expenditure up to NZD120 million per annum. To qualify, a business must spend at least NZD50,000 on core R&D activities conducted using a systematic approach with a material purpose of resolving scientific or technological uncertainty, and with the intention of creating new knowledge or new or improved processes, services or goods. The claimant must carry on business through a fixed establishment in New Zealand. Unused credits may be carried forward, and refundability may be available for eligible companies meeting wage intensity criteria to the extent that the current year credit exceeds the current year tax liability.

### Research and Development Loss Tax Credit

A separate Research and Development Loss Tax Credit (RDLTC) is available to non-listed entities in a tax loss position, whereby the loss can be "cashed-out" instead of being carried forward. There are various requirements for this, including the need to spend at least 20% of salaries on R&D, a cap of NZD560,000 and the intellectual property (IP) needing to be owned by the claimant. There are also various clawback events available, such as sale of the IP.

### Investment Boost

Introduced in 2025, this incentive allows businesses an additional 20% deduction on the cost of new depreciable assets in the year the asset first becomes available for use. The asset must never previously have been used in New Zealand. Excluded assets include dwellings and fixed-life intangible property.

### Loss Grouping

Companies within a group of companies with at least 66% common ownership may transfer tax losses

between profitable and loss-making group members, reducing the overall tax burden of the corporate group.

### Foreign Tax Credits

Resident companies deriving foreign-sourced income may claim a credit for foreign income tax paid, preventing double taxation and supporting international operations.

## 5.4 Tax Consolidation

### Tax Consolidation

New Zealand does not operate a full tax consolidation regime in the same way as Australia or the United States. However, eligible wholly-owned groups of New Zealand-resident companies may form a consolidated group under the Income Tax Act 2007, under which income, losses and tax credits are determined on a single-assessment basis and one nominated company files a group return.

### Loss Grouping

Where full consolidation is not available or chosen, the loss grouping rules permit the transfer of losses between profitable and loss-making group members. Businesses structuring their New Zealand operations across multiple entities should obtain specialist tax advice to determine which approach best suits their circumstances.

## 5.5 Thin Capitalisation Rules and Other Limitations

### Thin Capitalisation Rules

New Zealand applies thin capitalisation rules under subpart FE of the Income Tax Act 2007, to limit the deductibility of interest expenses where a New Zealand entity is excessively debt-funded relative to its worldwide group. The rules are designed to prevent multinational groups from artificially reducing their New Zealand taxable income by loading disproportionate levels of debt into their New Zealand operations and claiming large interest deductions.

### Scope

The thin capitalisation rules apply to New Zealand entities that are controlled by a non-resident, are members of a wholly-owned group that includes a non-resident, or are New Zealand branches of non-resident companies. A de minimis exemption applies where the entity's net interest deductions do not exceed NZD250,000.

### How the Rules Work

Where the rules apply, interest deductions may be limited if the entity's New Zealand debt exceeds permitted safe harbour thresholds calculated by reference to the entity's worldwide group debt ratio. Excess interest is effectively treated as income, denying the deduction. Businesses with significant related-party debt should carefully consider these rules when structuring their New Zealand operations, and should seek specialist tax advice.

### Restricted Transfer Pricing Rules

These rules apply where inbound related-party borrowings reach NZD10 million or more during the year. In addition to standard transfer pricing, interest deductions may be limited based on borrower credit ratings or denied for features such as subordination or contingent interest.

## 5.6 Transfer Pricing

New Zealand's transfer pricing rules require cross-border transactions between associated persons to be conducted on an arm's length basis, and are generally applied consistently with the OECD transfer pricing guidelines. Under certain circumstances, Inland Revenue has the ability to recharacterise or disregard a transaction where the OECD guidelines regarding non-recognition are met. Under local legislation, the onus of proof in connection with transfer pricing matters remains with taxpayers; therefore, businesses engaged in cross-border intra-group transactions should maintain contemporaneous documentation commensurate with the materiality and complexity of the covered arrangements, addressing the reasonableness of the arrangements under consideration from a local perspective to support their transfer pricing positions, as shortfall penalties may be imposed where adequate documentation has not been kept.

## 5.7 Anti-Evasion Rules

### General Anti-Avoidance Rule

New Zealand has a broad general anti-avoidance rule that applies to any arrangement entered into for the purpose or effect of avoiding tax, regardless of its legal form. Where the rule applies, Inland Revenue has

wide discretion to reconstruct the taxpayer's income to counteract the tax advantage obtained. This is one of the most frequently litigated areas of New Zealand tax law.

### Controlled Foreign Company Rules

The CFC rules in subpart EX of the Income Tax Act 2007 attribute certain types of income earned by foreign subsidiaries to their New Zealand-resident controllers. These rules prevent New Zealand residents from sheltering passive or highly mobile income in overseas entities located in low-tax jurisdictions. Where a New Zealand resident holds an income interest of 10% or more in a CFC, attributable income is taxed in New Zealand in the year it is earned, regardless of whether it has been distributed.

Together with the thin capitalisation and transfer pricing rules, the general anti-avoidance rule and the CFC regime form New Zealand's broader framework for ensuring that international tax obligations are met and profits are not diverted from the New Zealand tax base.

## 5.8 Tariffs

### Tariff Regime

New Zealand maintains a comparatively liberal tariff regime. Tariff duties are imposed under the Tariff Act 1988 and collected by the New Zealand Customs Service under the Customs and Excise Act 2018. The majority of goods enter New Zealand at a zero or very low rate of duty.

Residual tariffs of up to 10% apply to a limited range of goods, primarily in the textiles, clothing, footwear and carpet sectors. These are the only sectors where tariffs are specifically designed to provide ongoing protection to domestic manufacturers.

### Preferential Trade Agreements

New Zealand has an extensive network of free trade agreements, including the CPTPP, RCEP, AANZFTA, PACER Plus, and bilateral agreements with countries including China, Australia, the Republic of Korea and the United Kingdom. Goods originating in preferential countries attract reduced or zero rates under the Preferential Tariff. An agreement with the European Union entered into force in May 2024.

### Trade Remedies

Anti-dumping and countervailing duties may be imposed under the Trade (Anti-dumping and Countervailing Duties) Act 1988 where dumped or subsidised imports cause material injury to a domestic industry. Safeguard measures are available under the Trade (Safeguard Measures) Act 2014 where increased imports cause serious injury. The current global environment of escalating trade tensions, including retaliatory tariff measures between major trading blocs, has heightened awareness of these tools, though New Zealand has historically used trade remedies sparingly.

# 6. Competition Law

## 6.1 Merger Control Notification

The Commerce Commission has regulatory oversight of mergers and acquisitions in New Zealand, and has the ability to issue clearances for proposed mergers and take regulatory enforcement action in respect of proposed or concluded mergers.

New Zealand does not have a mandatory notification regime, neither in respect of all transactions nor for transactions meeting specific criteria; rather, parties may voluntarily choose to seek clearance from the Commerce Commission. Clearance will be granted if the Commerce Commission is satisfied that the merger or acquisition is unlikely to have the effect of substantially lessening competition in the market. The Commission may also grant an authorisation in respect of a merger if it will be likely to substantially lessen competition but the public benefit is such that the Commission considers it should be permitted.

Clearance and authorisations remain effective for 12 months from the date issued.

If the parties to a transaction choose not to seek voluntary clearance or authorisation, they may be subject to court proceedings by the Commerce Commission or a third party. The court has the power to grant prohibitory injunctions or order damages, divestiture or pecuniary penalties where an acquisition would have the effect or likely effect of substantially lessening competition. Businesses should be aware that sig-

nificant amendments to the merger control regime are expected following the anticipated passage of the Commerce (Promoting Competition and Other Matters) Amendment Bill in mid-to-late 2026, as discussed in the New Zealand Trends and Development chapter in this guide.

## 6.2 Merger Control Procedure

The Commerce Commission operates a voluntary clearance process with the following stages and indicative timeframes, where available:

- pre-notification engagement with the Commerce Commission by the applicant;
- registration of clearance application;
- day five: Commerce Commission publishes "Statement of Preliminary Issues" and draft investigation timeline;
- day 30: Commerce Commission completes initial interviews and information gathering;
- day 40: Commerce Commission either issues Notice of Clearance or sends a "Statement of Issues";
- applicant responds to Statement of Issues;
- Commerce Commission issues a "Statement of Unresolved Issues"; and
- final decision to issue either a Notice of Clearance or a Decline of Clearance.

The timeframes are indicative only and subject to extension by the Commerce Commission. This procedural framework is also expected to be subject to amendment following the passage of the Commerce (Promoting Competition and Other Matters) Amendment Bill, anticipated in mid-2026.

## 6.3 Cartels

The Commerce Act 1986 contains prohibitions against "cartel provisions" – ie, provisions in a contract, arrangement, understanding or covenant that have the purpose, effect or likely effect of price fixing, restricting output and/or market allocation.

Conduct can be caught if any act or omission that forms part of that conduct takes place in New Zealand, including agreements formed outside New Zealand where that conduct affects a market in New Zealand.

A breach of the prohibition against agreeing to, requiring or giving effect to a cartel provision gives rise to a pecuniary penalty and criminal liability. In addition, cartel provisions are unenforceable.

The prohibition against cartel provisions has the following exceptions:

- where the parties to the provision are engaged in "collaborative activity" and the cartel provision is reasonably necessary for the purpose of that collaborative activity – a "collaborative activity" is an activity in trade that is not carried out for the dominant purpose of lessening competition between the parties;
- vertical supply contracts where the provision relates to the maximum price of resupply and does not have the dominant purpose of lessening competition; and
- price fixing provisions relating to:
  (a) the collective acquisition of goods or services;
  (b) advertising of the price of the resupply of goods or services collectively acquired;
  (c) collective price negotiation; or
  (d) the purchase and resupply of goods or services by an intermediary who is a party to the contract.

Businesses should note that the cartel regulation regime is also expected to be amended following the passage of the Commerce (Promoting Competition and Other Matters) Amendment Bill, anticipated in mid-2026.

## 6.4 Abuse of Dominant Position

Section 36 of the Commerce Act 1986 prohibits a person with a "substantial degree of power" in a market from engaging in conduct that has the purpose, or is likely to have the effect of, substantially lessening competition either in that market or in another market where that person, or an interconnected person, supplies or acquires goods.

The Act does not define when a person has a substantial degree of power in the market, but the requirement for a "substantial degree of power" is a lower threshold than "dominance" and was introduced to align the New Zealand regime with that in Australia.

Conduct can be caught if any act or omission that forms part of that conduct takes place in New Zealand, including conduct outside New Zealand where that conduct affects a market in New Zealand.

Pecuniary penalties may be ordered not only for breaching Section 36, but also for attempts to breach, and for aiding, abetting, counselling, procuring, being knowingly concerned in or being a party to a contravention.

The maximum penalty that may be ordered in respect of each contravention is NZD500,000 in the case of an individual, or the higher of the following for a body corporate:

- NZD10 million;
- three times the value of any commercial gain resulting from the contravention; or
- if the commercial gain cannot readily be ascertained, 10% of the turnover of the person and all its interconnected bodies corporate (if any) in each accounting period in which the contravention occurred.

## 7. Intellectual Property

### 7.1 Patents

#### Definition and Duration

New Zealand's intellectual property laws protect the rights of creators, brand owners and innovators, aligning with international standards through agreements such as the TRIPS Agreement and obligations under the World Trade Organization. The Patents Act 2013 grants inventors the right to control the use of their inventions, with protection lasting for 20 years from the filing date.

#### Registration Requirements

To be patentable, an invention must be novel (it must be new) and must involve an inventive step (it must not be obvious to a skilled person in the field). Certain categories are excluded from patent protection, including methods of medical treatment for humans, diagnostic methods on humans, and inventions contrary to public order or morality. Embedded software that is integral to a technological innovation can be patented, and Swiss-type claims (the use of known substances for new medical treatments) are recognised for pharmaceuticals. Patents are registered through the Intellectual Property Office of New Zealand (IPONZ).

#### Enforcement and Remedies

Re-examination and opposition procedures allow third parties to challenge the validity of a granted patent. Enforcement of patent rights is pursued through the courts, with available remedies including injunctions to prevent ongoing infringement, damages, and an account of profits made from the infringing activity.

### 7.2 Trade Marks

#### Definition and Duration

Under the Trade Marks Act 2002, a trade mark gives its owner exclusive rights to use a mark in connection with the goods or services for which it is registered. Registrable marks include distinctive words, logos, shapes, symbols, colours, sounds and smells, or combinations of these elements. Owners can prevent others from using confusingly similar marks in relation to the same or similar goods or services. Trade mark protection lasts for ten years and is renewable indefinitely.

#### Registration Process

Registration is through IPONZ. Trade marks incorporating Māori language or symbols are reviewed by a special committee to ensure that use of the mark would not be likely to offend Māori. The Madrid Protocol allows for the international registration of trade marks through a single application, facilitating global protection.

#### Enforcement and Remedies

Comparative advertising using registered trade marks is allowed if it does not unfairly damage the reputation of the mark, and anti-dilution provisions protect well-known trade marks from being used on unrelated goods or services. Enforcement is through the courts, with remedies including injunctions, damages and an account of profits. In New Zealand, registering a company name does not automatically confer the right to use it as a trade mark, and businesses should ensure their company name does not infringe on existing trade marks, to avoid legal conflicts.

## 7.3 Industrial Designs

### Definition and Duration

The Designs Act 1953 protects new and original industrial designs that have visual appeal, such as shapes, patterns or ornamentation. Registered designs are protected for an initial five-year period, with the option to renew twice for additional five-year periods, giving a maximum protection period of 15 years. Registration is through IPONZ.

### Enforcement

While copyright protects artistic works, registered design protection offers distinct legal advantages for enforcement and commercialisation. Enforcement of registered design rights is pursued through the courts, with remedies including injunctions and damages. Rights holders whose designs have been copied should act promptly to protect their position, as delays can complicate enforcement efforts.

## 7.4 Copyright

### Definition and Duration

The Copyright Act 1994 grants creators exclusive rights over their works, allowing them to:

- reproduce and distribute the work;
- publicly perform, show or communicate the work;
- create adaptations; and
- authorise any of these activities.

Copyright covers literary, dramatic, musical and artistic works, as well as sound recordings, films and broadcasts. Works must be original to qualify for protection. As a signatory to the Berne Convention, New Zealand does not require registration for copyright protection, which begins automatically upon creation. Literary, dramatic, musical and artistic works are protected for the life of the author plus 50 years; films, sound recordings and broadcasts for 50 years; typographical arrangements for 50 years; and industrially applied artistic works for 16 years, or 25 years for works of artistic craftsmanship. Moral rights (including the right to be recognised as the author and to prevent derogatory treatment of works) cannot be transferred.

### Registration and Enforcement

No registration is required for copyright in New Zealand. Enforcement is through the courts, with remedies including injunctions, damages and an account of profits. The Copyright (Parody and Satire) Amendment Bill was introduced to Parliament in November 2024, containing a "fair dealing" exception to copyright infringement for parody and satire, which if passed will bring New Zealand's law into line with the United Kingdom, United States and Australia.

## 7.5 Others

### Plant Variety Rights

The Plant Variety Rights Act 2022 grants breeders of new plant varieties exclusive rights over their varieties for a specified period, and is particularly relevant for New Zealand's significant horticulture sector, including the kiwifruit, apple and wine industries.

### Domain Names

Domain names can be registered in New Zealand, particularly regional ones like ".co.nz" or ".govt.nz" (restricted to government use). Courts have acted against cybersquatting in certain cases to protect businesses. The Domain Name Commission offers a dispute resolution service for conflicts over domain name registrations.

### Software, Databases and Trade Secrets

Software constitutes a literary work under the Copyright Act 1994. Copyright will subsist in software on creation, provided the work is original, with no formal registration required. The same applies to databases. The original compilation may qualify for copyright protection as a literary work. Trade secrets are not governed by specific legislation in New Zealand. Protection can instead be achieved through the equitable law of confidence and contractual arrangements (including employment agreements, contractor agreements and other confidentiality obligations binding the relevant parties).

# 8. Data Protection

## 8.1 Applicable Regulations

New Zealand's Privacy Act 2020 governs the collection, disclosure and use of personal information, and applies to public and private sector "agencies".

The Act is principles-based and regulates the full information life cycle through 13 Information Privacy Principles (IPPs), covering:

- the purpose and source of collection;
- transparency at collection;
- the collection of information from third parties;
- storage and security;
- access and correction rights;
- accuracy, retention, use and disclosure;
- overseas transfer; and
- use of unique identifiers.

The Act also contains a mandatory notifiable privacy breach regime. Agencies must notify the Privacy Commissioner and affected individuals where a privacy breach has caused serious harm, or is likely to do so.

The Privacy Commissioner may issue codes of practice, which form part of New Zealand's data protection framework, and may modify the IPPs for particular sectors, activities or types of personal information.

The codes of practice that are currently in force are:

- Health Information Privacy Code 2020;
- Credit Reporting Privacy Code 2020;
- Telecommunications Information Privacy Code 2020;
- Biometric Processing Privacy Code 2025;
- Civil Defence National Emergencies (Information Sharing) Code 2020;
- Justice Sector Unique Identifier Code 2020; and
- Superannuation Schemes Unique Identifier Code 2020.

## 8.2 Geographical Scope

The Privacy Act has express extraterritorial application. It applies not only to New Zealand companies, but also to overseas companies that are "carrying on business" in New Zealand, regardless of where the personal information is or was collected or held by the overseas company.

A foreign company targeting New Zealand customers may therefore be required to comply with the Act if it is "carrying on business" in New Zealand in respect of personal information collected or held by the foreign company. "Carrying on business in New Zealand" is not defined in the Act, but a foreign company may be treated as "carrying on business in New Zealand" without necessarily:

- being a commercial operation;
- having a place of business in New Zealand;
- receiving any monetary payment for the supply of services; or
- intending to make a profit from its business in New Zealand.

When assessing whether the test is satisfied, the Privacy Commissioner would consider a range of factors, including whether the foreign company:

- offers goods or services to New Zealanders;
- has ongoing New Zealand-facing activities involving personal information on a repeated or systematic basis;
- operates through a NZ-facing website or app;
- has activities that are carried out in or have effect in New Zealand; or
- uses New Zealand domain names or trade marks (including where it holds relevant registrations).

Where the Act applies, the foreign company must comply with the IPPs or any code of practice that is applicable to either the relevant sector that the foreign company operates in or the type of personal information being collected. It must also appoint a privacy officer.

The Act also regulates international transfers of personal information. Under Information Privacy Principle 12, the New Zealand or foreign company (that is subject to the Privacy Act) may generally disclose personal information to an overseas recipient only if the recipient is subject to the Privacy Act, comparable privacy laws, a prescribed binding scheme or other comparable safeguards, such as contractual protections. Alternatively, the individual must authorise the overseas transfer after being expressly informed that the overseas recipient may not provide comparable protection to the Privacy Act.

### 8.3 Role and Authority of the Data Protection Agency

#### The Office of the Privacy Commissioner

Data protection in New Zealand falls under the oversight of the Office of the Privacy Commissioner (OPC), which holds broad powers to promote and protect individual privacy rights. The Privacy Commissioner receives and investigates complaints from individuals who believe their personal information has been mishandled, and may also initiate its own investigations where systemic concerns are identified, without waiting for a complaint to be lodged. Where a serious breach is established, the Commissioner may refer the matter to the Director of Human Rights Proceedings (appointed under the Human Rights Act 1993), who has discretion to bring proceedings in the Human Rights Review Tribunal (an independent judicial body with the power to make binding orders and award compensation to affected individuals). Complainants may also apply directly to the Tribunal.

#### Rule-Making and Enforcement

A particularly significant aspect of the Commissioner's authority is the power to issue binding privacy codes of practice under the Privacy Act 2020. These codes allow the OPC to extend and sharpen the Act's baseline obligations in response to emerging risks. The Biometric Processing Privacy Code 2025, issued by the Commissioner and in force from 3 November 2025, demonstrates the OPC's willingness to exercise this power proactively, including in response to emerging technologies. Non-compliance with the Act or an applicable code may result in investigation by the Commissioner, compliance notices, proceedings before the Human Rights Review Tribunal and, in some circumstances, statutory offences and financial penalties (including for company directors).

The Act also imposes mandatory notification obligations where a privacy breach has caused or is likely to cause serious harm, requiring affected organisations to notify both the Commissioner and affected individuals as soon as practicable. These mechanisms support the OPC's ability to monitor compliance and respond to significant privacy incidents.

#### Educational and Advisory Role

Alongside its enforcement functions, the OPC performs an important educational and advisory role, including by issuing detailed guidance to assist organisations in understanding and meeting their obligations. Although the guidance does not have the force of law, it provides important insight into the Commissioner's expectations regarding privacy governance and regulatory compliance. This function is particularly valuable for overseas investors establishing New Zealand operations who are unfamiliar with the local privacy framework.

## 9. Looking Forward

### 9.1 Upcoming Legal Reforms

#### Resource Management Reform

The government is currently progressing a comprehensive reform of New Zealand's environmental law regime, replacing the Resource Management Act 1991 (RMA) with two new statutes. The Planning Bill regulates land use, development and subdivision, while the Natural Environment Bill regulates the use of natural resources and effects on the environment. The two Bills, once enacted, will replace the RMA in its entirety.

Both Bills were introduced to Parliament on 9 December 2025 and passed their First Reading on 16 December 2025. The Environment Select Committee has concluded hearing submissions on the Bill and is scheduled to release its report and recommendations to Parliament on 20 July 2026. The government is targeting enactment of both Bills in September 2026. A three to five-year transition period is anticipated. Investors in land development, infrastructure and primary industries should closely monitor the progress of these Bills and the transitional regime, as they are likely to materially change the resource consenting landscape in New Zealand.

#### Employment Law Changes

The Holidays Act 2003 is expected to be repealed and replaced by legislation that, if enacted in 2026, will come fully into force approximately two years after Royal Assent. The Employment Leave Bill passed its third reading on 29th July and is awaiting Royal assent.

It provides simpler replacement, changing how annual leave, sick leave, family violence leave, bereavement leave and alternative leave will be earned, taken and paid. Businesses should begin reviewing their leave calculation systems and payroll processes now, as replacement legislation is likely to introduce new calculation methods and entitlements that will require operational changes.

### Competition Law Reform

The Commerce (Promoting Competition and Other Matters) Amendment Bill is expected to be brought into force by mid-2026 and introduces a package of reforms modernising and strengthening New Zealand's competition settings. The Bill addresses:

- complexity, cost and delays in supporting pro-competitive collaboration;
- limitations in enforcement tools; and
- gaps in the merger control framework.

Key changes include the following.

- Merger control: the Bill clarifies the substantial lessening of competition test to cover the creation, strengthening or entrenchment of market power, and allows the Commerce Commission to assess serial acquisitions. It introduces "call-in" and "hold-separate" powers, and sets new statutory time-frames for complex merger decisions.
- Collaborative conduct: a new statutory notification regime is introduced, enabling firms to notify the Commission and proceed with arrangements unless the Commission objects, along with streamlined cartel clearance provisions.
- Enforcement: the Bill strengthens enforcement by introducing corrective action orders for contraventions of Part 2 of the Commerce Act 1986.
- Predatory pricing: a new objective test for predatory pricing is introduced, removing the previous requirement to prove recoupment.
- Confidentiality and whistle-blowers: the Bill enhances protections for confidential information, and introduces whistle-blower protections.

Businesses involved in mergers and acquisitions, or that are party to collaborative arrangements with competitors, should monitor the progress of this Bill closely, as it may alter the thresholds, procedures and substantive rules that currently apply under the Commerce Act 1986.

### Intellectual Property

The Copyright (Parody and Satire) Amendment Bill, introduced to Parliament in November 2024, proposes to introduce a "fair dealing" exception to copyright infringement for parody and satire. If passed, this will bring New Zealand's copyright law into line with the approach taken in other countries, including Australia, the United States, Belgium, France, the Netherlands, Spain and Germany. Businesses and content creators operating in the media, advertising or entertainment sectors should be aware of this development and its potential implications for how their content and brand assets may be used by others.

### Data Protection

The Biometric Processing Privacy Code 2025 came into force on 3 November 2025, introducing specific compliance obligations for organisations processing biometric information. Businesses with existing biometric systems have until 3 August 2026 to achieve full compliance – a deadline that is now imminent. Businesses should treat this deadline as an urgent priority and conduct a thorough compliance review of all biometric systems in use across their operations.

# Trends and Developments

**Contributed by:**
Briar Shaw, Julia MacGibbon, Kate Hatwell, Tina Liu, Jessica Phillips and Natalie Foster
**Tompkins Wake**

**Tompkins Wake** is one of New Zealand's leading full-service commercial law firms, known as "the law firm at the centre of New Zealand's economic and commercial heartland". Located in Hamilton, Auckland, Rotorua and Tauranga with more than 200 staff (including 29 partners and approximately 120 lawyers), the firm is globally connected as the New Zealand member of elite global law network MultiLaw, with alliances in over 100 countries. The firm advises major businesses, iwi organisations, infrastructure providers and public sector bodies across corporate and commercial, banking and finance, property, construction, employment, dispute resolution, environment, and Māori business law, and regularly advises foreign investors entering New Zealand, including on Overseas Investment Office approvals. Recent work includes advising Grant Thornton New Zealand Ltd on a strategically significant and highly complex cross-border transaction, supporting its agreement to join the Grant Thornton Advisors global platform.

## Authors

**Briar Shaw** is a senior associate in Tompkins Wake's commercial property team. She specialises in commercial property and commercial leasing transactions, overseas investment and large rural transactions, assisting both corporate and private clients in all aspects of property transactions. Briar joined Tompkins Wake in 2017 as a graduate and has since assisted the firm's commercial property, corporate, resource management and property teams, developing a broad range of knowledge across property and real estate law.

**Julia MacGibbon** is a senior associate in Tompkins Wake's Auckland-based employment team and an experienced litigator, having assisted both local and international clients with all aspects of dispute resolution in health and safety and employment matters. She regularly advises clients on Holidays Act 2003 issues and audits, disciplinary processes and organisational restructuring, and her experience extends to acting as an independent investigator. Before joining the firm, Julia spent close to a decade at a leading international law firm, where she built a strong practice in employment and workplace health and safety.

**Kate Hatwell** is a partner in Tompkins Wake's property team, specialising in property and local government law, with extensive experience in leasing (retail, commercial and industrial), commercial property transactions (sales and acquisitions) and development (development agreements, mixed-use and large-scale developments). She acts for private and public sector clients across the retail, commercial, office, industrial and residential property sectors. Kate has practised law since 2004, joining Tompkins Wake in 2013 and becoming a partner in 2018. Of Ngāti Maniapoto descent, she is deputy chair and trustee of the South Waikato Investment Fund Trust.

**Tina Liu** is a partner at Tompkins Wake and leads the firm's life science, biotechnology and food and beverage practice groups. Her expertise encompasses a wide range of legal areas, including commercial contracts, complex regulatory matters and substantial projects within these sectors. She regularly advises global and local clients on all aspects of the sale, distribution and marketing of innovative therapeutic and food and beverage products, including product categorisation, pre-market approval, advertising, pharmacovigilance, licensing, commercialisation, data protection and joint ventures. Tina has negoti-

ated pharmaceutical supply arrangements with Pharmac, New Zealand's government drug purchasing organisation.

**Jessica Phillips** is a specialist commercial and regulatory litigator with particular experience in commercial, competition and property disputes. She has acted for clients in a wide range of sectors, including education, construction and sports administration, and is experienced in managing large-scale litigation. Clients appreciate her responsive, strategic advice and clear understanding of their commercial position. Jessica regularly appears in the District and High Courts, and resolves matters by arbitration. Prior to joining Tompkins Wake in 2024, she was a senior associate at a large New Zealand law firm, and previously spent six years in London at Hausfeld and Clifford Chance.

**Natalie Foster** is a senior associate in Tompkins Wake's dispute resolution and litigation team. Prior to joining the firm in 2025, she worked at a large Australian law firm and a specialist litigation firm in Auckland, and as a judges' clerk in the High Court of New Zealand. Natalie was admitted in New Zealand in 2016 and in Victoria, Australia in 2021. She advises clients on a broad range of commercial and regulatory disputes, and has experience in managing large-scale litigation and investigations. She has appeared in the High Court and District Court, and as junior counsel in the Court of Appeal.

## Introduction

New Zealand enters 2026 in a stage of legal and regulatory transformation. After years of economic turbulence driven by post-pandemic cost pressures, strained global supply chains and rapidly rising interest rates, business conditions are beginning to stabilise. At the same time, a wave of legislative reform is reshaping the environment for both domestic operators and international investors, touching everything from the rules governing foreign capital to the fundamentals of employment relationships, competitive markets and commercial property.

This article identifies five areas of significant change that anyone doing business in New Zealand needs to understand.

## Opening the Door Wider: Reforming the Overseas Investment and Investor Immigration Regimes

New Zealand's government has moved on multiple fronts simultaneously to attract international capital. Two distinct but complementary reform streams are now in place: a change to the overseas investment consenting regime, and a suite of new immigration pathways designed to bring high net worth individuals and experienced business operators into the New Zealand economy.

### *The Overseas Investment Act reform*

Since the 1970s, acquiring a business or significant asset in New Zealand as an overseas person has required navigating a complex and often protracted consent process. The government has recently made further amendments to the Overseas Investment Act 2005, with the reforms in force from 6 March 2026. The reforms mark a significant step in its "Going for Growth" strategy to attract international capital and stimulate economic development.

The changes to the Act aim to streamline New Zealand's overseas investment framework by simplifying the approval process for lower-risk investments, while maintaining strong protections for the more sensitive assets (ie, farmland and residential land). The centrepiece of the reform is the replacement of multiple existing approval tests with a single, consolidated national interest test. Previously, overseas investors had to demonstrate that their investment would provide a net benefit to New Zealand. The question (for most investments) is now more focused: does the investment pose a risk to New Zealand's national interest?

The new national interest test introduces a structured, three-stage process.

- Stage 1: the Overseas Investment Office (OIO) considers whether the transaction may pose a risk to New Zealand's national interest, and therefore whether a full national interest assessment is required. If no concerns are identified, consent can be granted. This stage must be completed within 15 working days.
- Stage 2: if concerns arise, the OIO undertakes a full national interest assessment, considering national security, public order and whether risks can be managed under other regulatory regimes. The OIO cannot decline consent at this stage.
- Stage 3: if the OIO considers that there are significant risks, the assessment is escalated to the Minister for Finance, who ultimately decides whether to decline consent if the investment is deemed contrary to New Zealand's national interest, or to grant consent if the risk can be managed through conditions or other means.

To accompany the changes, the government has issued a new directive to the OIO to keep compliance obligations "no broader than necessary", to concentrate resources on genuinely higher risk transactions and to use existing domestic regulation to control risk rather than imposing conditions, wherever possible. With the reforms now in force, investors approaching the New Zealand market will have a much more streamlined process available to them when engaging with the overseas investment regime. Most applications for consent will be processed under the new national interest assessment pathway, but investments in residential land and farmland will still be subject to the previous tests (ie, proving a benefit to New Zealand).

### *The Active Investor Plus Visa: attracting high net worth investors*

Running alongside the OIA reforms is a revamped immigration pathway for significant investors. On 1

**Contributed by:** Briar Shaw, Julia MacGibbon, Kate Hatwell, Tina Liu, Jessica Phillips and Natalie Foster, **Tompkins Wake**

April 2025, New Zealand launched changes to the Active Investor Plus Visa, including the introduction of two investment categories. This is intended to attract investors who take an active role in helping companies access global knowledge networks, capital and markets, and is designed to generate higher business productivity and job growth.

The two categories offer genuine flexibility:

- the Growth Category focuses on higher-risk investments, including managed funds and direct investments in New Zealand businesses, and requires a minimum investment of NZD5 million for a minimum period of three years; and
- the Balanced Category focuses on mixed investments, with the ability to choose lower-risk options, and requires a minimum investment of NZD10 million over five years.

Other changes include reducing the minimum investment amount from NZD15 million (or weighted equivalent) to NZD5 million for Growth and NZD10 million for Balanced Category investors. The scope of acceptable investments has also been broadened to include bond and property-type investments for Balanced Category investors, removing the English language requirement, and imposing fewer immigration requirements for migrants who choose more active investments.

For the Growth Category, investors must spend at least 21 days in New Zealand over the three-year investment period. For the Balanced Category, investors must spend 105 days in New Zealand over five years, with that requirement reducing for larger investments: 91 days for NZD11 million, 77 days for NZD12 million, and 63 days for NZD13 million.

The results since launch have been striking. As of 11 June 2026, Immigration New Zealand had received 734 applications under the new settings, amounting to a potential total minimum investment of NZD4.29 billion. Of those, 294 applications have been approved, with the total committed investment from these applications amounting to NZD1.72 billion. The average time for an application to be approved in principle under the new settings is 36 working days, which is a significant improvement on the delays that characterised the previous instructions.

### *The Business Investor Work Visa: a pathway for hands-on operators*

New Zealand has also introduced a route for experienced business operators. The Business Investor Work Visa (BIV) opens a fresh pathway to residence for experienced business professionals, with applications opening on 24 November 2025. The visa is designed to attract investors to established businesses across the country.

The BIV offers two investment tiers:

- a NZD1 million investment, which provides a three-year work-to-residence pathway; and
- a NZD2 million investment, which enables a fast-tracked residence pathway after just 12 months.

Both options require investment into a New Zealand business that has been operating for at least five years, and the visa is valid for up to four years, with provisions for the applicant's partner and dependent children.

The eligibility criteria are meaningfully substantive. Applicants must:

- invest in a qualifying New Zealand business with a five-year-plus operating history and meet minimum investment thresholds of NZD1 million or NZD$2 million;
- hold at least NZD500,000 in reserve funds for personal and family support;
- demonstrate credible business experience, such as ownership of a business with at least five full-time employees or annual business turnover of NZD1 million or more; and
- be aged 55 or younger, and satisfy English language, health and character requirements.

The path to residence is earned, not automatic. Those who meet the initial criteria and successfully manage their investment may become eligible for residence under the Business Investor Resident Visa, provided they remain actively involved in managing their business, retain their ownership stake, demonstrate

tangible economic impact by employing at least five full-time equivalent staff, and create at least one new lasting job for a New Zealand citizen or resident. Physical presence is also required, with applicants needing to have spent a minimum of 184 days in the country in each of the previous three years.

The business invested in must have been trading for at least five years, must be lawfully operating in New Zealand, and must have a purchase price of at least NZD1 million (not including property value or GST), resulting in the investor owning at least 25% of the business.

Taken together, these two investor immigration pathways and the OIA reforms send an unmistakable signal: New Zealand is actively competing for international capital and business talent. For offshore investors and business owners weighing their options, the combination of streamlined regulatory approval and clear immigration pathways removes barriers that have historically made New Zealand a difficult market to enter.

### The Gig Economy After Uber: Rewiring Employment Relations

In late 2025, New Zealand's Supreme Court delivered a landmark ruling: the four Uber drivers who are party to the case are employees, not independent contractors. The decision had profound implications for tens of thousands of workers across ride-sharing, food delivery, courier services and other platform-based industries. However, the government moved swiftly in its legislative response.

The Employment Relations Amendment Act 2026 introduced a new framework for "specified contractor" where, if five criteria are met, the person is deemed to be a specified contractor rather than an employee and is thereby excluded from the protections of the Employment Relations Act 2000. The intent is to give platform businesses and their workers contractual certainty, but the reform has attracted criticism from unions and worker advocates, who argue that it allows businesses to opt out of the protections the Uber ruling was designed to provide. The government's position is that flexibility and worker choice should be valued alongside formal protection, which is a debate that will continue to play out politically and in the courts.

For businesses operating in or entering the gig economy, the practical implications are significant.

- Platform businesses should urgently review their contractor arrangements and assess whether the new specified contractor provisions apply to their operating models. If they do not meet the specified contractor test, the common law test to determine the true nature of the relationship applies.
- Traditional employers need to recognise that the legal test for employment status has been clarified for all industries, not just app-based platforms. The distinction between employee and contractor is now more carefully scrutinised across the economy.

Beyond the gig economy, 2026 brings a raft of other potential employment law changes. The Employment Leave Bill is set to reform the Holidays Act 2003 after years of controversy about how leave entitlements are calculated. Now awaiting Royal Assent, it will deliver long-awaited simplification for employers and payroll providers. A new high-income threshold has been introduced, under which employees earning at or above that threshold will be barred from bringing a personal grievance in respect of their dismissal. For existing employees (prior to 21 February 2026), there is a transition period, with the law not taking effect until 21 February 2027. Together, these reforms represent a substantial reshaping of New Zealand employment law, and any business operating in this market should undertake a thorough review of its people practices without delay.

### The 2026 Election: Government Policy and Tax in Focus

New Zealand's general election is confirmed for November 2026, and the political landscape is already shaping investment decisions and business planning. The National-led coalition government has spent its term pursuing a pro-growth agenda centred on regulatory and planning reform, fiscal discipline and tax relief. Budget 2026, released by the current government, reinforces this agenda.

For property investors, the government has reinstated interest deductibility for residential investment properties and adjusted the bright-line test for residential property disposals, decreasing it from ten years to two years. These settings create a more favourable environment for residential property investment than has existed for several years.

More recent changes under the current government include changes to the foreign investment fund (FIF) rules. Budget 2026 has raised the FIF de minimis threshold from NZD50,000 to NZD100,000, and expanded the revenue accounts method for unlisted shares to all New Zealand tax residents rather than just recent migrants.

Budget 2026 also demonstrates the government's commitment to returning the Crown's accounts to surplus in 2028/29 (a year earlier than forecast), while prioritising capital expenditure in infrastructure, particularly in transport, defence and health. For businesses in the construction, engineering and professional services sectors, the public infrastructure pipeline remains a critical source of activity, although the pace and sequencing of major projects will be closely watched as the election approaches.

Key policy areas to monitor include the following.

- Taxation: Budget 2026 includes proposals to simplify the way fringe benefit tax applies to motor vehicles and to improve the Research and Development Tax Incentive to ensure it remains well targeted to increase business investment in R&D. Changes to the Goods and Services Tax Act are also on the horizon, as Inland Revenue is seeking feedback on a range of current GST issues.
- Resource Management Act reform: the RMA reform is underway, and the RMA replacements – the proposed Planning Bill and Natural Environment Bill – are expected to create a faster, more predictable consenting regime, with direct implications for property development and infrastructure delivery. Budget 2026 has provided the first major investment into the foundations that would underpin the new planning systems, including a centrally managed platform for planning, consenting and monitoring.
- Immigration settings: ongoing adjustments to work visa categories and skill shortage lists affect workforce planning across a number of industries. The introduction of the two new investment categories under the Active Investor Plus Visa is intended to attract high net worth investors to the country.
- Foreign investment: the overseas investment reforms and investor immigration pathways are positive signals to the international investment community that New Zealand is still open for business.

For businesses with a medium to long-term horizon for the New Zealand market, it is worth stress-testing strategic plans against policy scenarios once they are available.

## Construction and Commercial Property: Finding the Floor

New Zealand's property and construction markets enter 2026 in a period of careful reset. After several years of cost escalation, rising interest rates and subdued occupier demand, conditions are stabilising, although recovery is measured. For international investors and businesses assessing their exposure to the New Zealand market, two areas are particularly worth understanding:

- the commercial property leasing and investment environment; and
- the significant infrastructure pipeline that continues to underpin construction sector activity.

### *Commercial property: stabilisation and the case for optimism*

Auckland's commercial property market has faced pressure over the past two years. Across office, retail and industrial sectors, the forward development pipeline has thinned markedly compared with the last decade, as development and funding costs have exceeded rents required for feasibility, with many occupiers remaining cautious. Whilst face rents have remained stable, higher incentives have become more common in negotiations, so headline rents have not always reflected the net economics of new leases.

The market is showing signs of improvement. Total investment returns improved materially in 2025 and

are expected to strengthen further in 2026. Vacancy levels in key sectors, including the Auckland office and retail markets, appear close to a cyclical high, and conditions are expected to improve through 2027 if supply remains restrained while occupier demand gradually firms up.

The office sector warrants close attention. For much of the past decade, employment growth has not translated consistently into additional office take-up, but that relationship now appears to be narrowing. Increasing employment, particularly in professional and financial services, is expected to translate more directly into demand for quality space. Investors who have maintained positions through the softer period are well placed to benefit from this re-rating as it takes hold.

Looking further ahead, the government's ongoing reform of the Resource Management Act has direct implications for the commercial development pipeline. A faster, more certain consenting regime will reduce cost and time risks facing developers, and is expected to improve the feasibility of projects that have stalled at the planning stage. For investors with a development horizon beyond 2027, the cumulative effect of the RMA reform on pipeline delivery will be positive.

For businesses considering their real estate strategy in New Zealand, the current environment offers opportunities that were not available 12 months ago. With incentives still elevated and landlords motivated to secure quality tenants on longer terms, the negotiating dynamic favours occupiers. Those entering the market or renewing leases in 2026 should expect to achieve materially better commercial terms than tenants who transacted at the peak.

### *Infrastructure: a durable pipeline*

While the commercial development market has been cautious, the public infrastructure pipeline has provided a consistent and substantial source of construction activity. Budget 2026 committed NZD7 billion of capital investment to infrastructure, reinforcing the government's focus on physical infrastructure as a driver of long-term economic growth. This commitment has kept major contractors active and sustained a significant portion of the construction workforce through the market downturn.

This pipeline is not simply a short-term stimulus measure. Many of the projects currently in delivery or procurement represent multi-year programmes that will provide forward workload well into the next electoral cycle, regardless of the outcome of the 2026 election. For businesses in engineering, professional services and specialist construction, positioning for this pipeline is a strategic priority. Here too, the RMA reform is a relevant factor: a streamlined consenting regime will shorten the lead time from project approval to construction commencement, making the overall pipeline more predictable and reducing the holding costs that have historically eroded project returns.

One structural risk, however, deserves attention. Capability in the construction sector has become increasingly concentrated around large infrastructure and health projects, and there are real questions about how the market adapts as that work eventually shifts geographically or phases down. The risk is that capacity has left the system and when broader demand returns, cost pressure will follow very quickly. International investors and developers with a medium to long-term horizon in New Zealand should factor this dynamic into their project planning and procurement strategies, particularly if they are targeting delivery windows beyond 2027.

## A New Competitive Landscape: Commerce Act Reform

Changes to New Zealand's competition law are aimed at strengthening the merger regime, addressing concentrated markets and predatory pricing, and streamlining Commerce Act processes and reducing uncertainty. The Commerce (Promoting Competition and Other Matters) Amendment Bill was introduced to Parliament in December 2025 and was reported back from Select Committee in June 2026.

The changes likely to be brought into force by mid-to-late 2026 are directed at improving legal certainty for businesses, reducing unnecessary compliance costs, and ensuring that regulatory tools are targeted, proportionate and fit for purpose. The headline reforms include the following.

- Clarifying the merger test: the "substantial lessening of competition" (SLC) test for mergers will be amended to include creating, strengthening or entrenching a substantial degree of market power in a market, bringing the New Zealand test into alignment with the Australian standard. A new principle-based merger clearance test using the same SLC threshold will also be introduced.
- A new predatory pricing test: an objective, economic-based test for predatory pricing will be introduced. Pricing below average variable cost or average avoidable cost over a sustained period will be treated as predatory. Short-term promotional pricing, one-off specials and de minimis discounts are not captured unless they are part of a sustained pattern of below-cost behaviour.
- Corrective action orders: courts will have the power to order corrective action where a person has breached anti-competitive conduct prohibitions. These orders can include making goods, services or information available for supply, or requiring businesses to act in a non-discriminatory manner.
- Behavioural undertakings in mergers: the Commerce Commission will be able to accept behavioural undertakings from merging parties as a condition of merger clearance, such as commitments to supply goods on certain terms or maintain investment in specified areas. Previously, the Commission could only require divestiture, which meant some efficiency-enhancing mergers were blocked unnecessarily.
- Collaborative activities notification: a new statutory notification regime will allow businesses to notify the Commission of proposed collaborative activities that might otherwise breach the cartel prohibition, and to proceed unless the Commission objects.

Another amendment bill, the Commerce (Commerce Commission Reform) Amendment Bill, was introduced to Parliament in March 2026. It follows an independent review of the Commerce Commission and includes changes to the Commission's structure, to separate its governance and decision-making functions, bringing the Commission in line with other Crown entities such as the Reserve Bank.

Beyond structural reform, the Commerce Commission has signalled a sharpened enforcement focus. Unconscionable conduct is one of six Commission priorities for 2025/2026, defined as business activity which is a substantial departure from New Zealand's generally accepted or expected standards of business conduct. There has so far been only one sentencing decision under this provision. However, businesses that have relied on their market position to impose one-sided terms on suppliers, customers or smaller business partners should review their commercial practices carefully.

### Looking Ahead

New Zealand is a jurisdiction in motion. The reforms collectively represent a significant reshaping of the environment for doing business here. Some of these changes are already in force; others will take effect during the course of 2026.

For offshore investors and businesses considering New Zealand, the overall direction of travel is encouraging. The government has a clear intent to attract international capital and business talent, reduce regulatory friction, and position the economy for growth after a difficult few years. For businesses already operating in this market, the immediate priority is to understand how these changes interact with existing structures, contracts, workforce arrangements and compliance programmes.

The common thread running through each of these reforms is a desire to make New Zealand a more dynamic, competitive and internationally connected economy. Whether this strategy succeeds will depend not only on the quality of the legislation, but also on how businesses, advisers and investors respond to the opportunities these changes create. The window to engage and shape how these new regimes will bed in is now open.

**LexOslo** is a Norwegian boutique business law firm based in Oslo. The firm advises corporates, investors, banks and other financial undertakings on business law matters in Norway, with a particular focus on finance law and international business in Norway. Its work includes transactions, regulatory questions, commercial matters and disputes, often where Norwegian law must be understood in a broader commercial or cross-border context. LexOslo was founded by attorney Harald Sætermo and reflects a practice developed over more than 25 years in private practice and senior in-house legal roles in the banking sector. The firm's boutique format allows for direct senior involvement, continuity and close attention to the client's business and legal position. For international clients, LexOslo provides advice grounded in Norwegian law, market practice and practical commercial judgement. The firm's approach is focused and personal, with an emphasis on clear responsibility, efficient execution and legal advice that supports sustainable business growth.

## Author

**Harald Sætermo** is a Norwegian attorney and partner at LexOslo. He advises Norwegian and international clients on business law, with particular experience in finance law, corporate and commercial advisory, transactions, restructuring and insolvency, and disputes arising within these areas. Harald has more than 25 years of experience from leading Norwegian law firms and senior in-house roles in the banking sector, including work for one of Northern Europe's largest financial institutions. He has advised on financing and M&A transactions, financial regulatory matters, restructuring and insolvency matters, and corporate law issues. His approach combines legal precision with commercial understanding, direct senior involvement and practical advice suited to clients doing business in Norway.

# 1. Legal System

## 1.1 Legal System and Judicial Order

Norway is a civil law jurisdiction. Legislation, including Acts of Parliament and secondary regulations, is the primary source of law, but preparatory works, case law and treaty obligations are also important legal sources. Although Norway is not a common law jurisdiction, Supreme Court judgments carry significant precedential weight and are generally followed by lower courts.

The ordinary courts are organised in three tiers. The Supreme Court is Norway's highest court and serves as the final court of appeal in civil and criminal matters. It consists of 20 justices and is headed by the Chief Justice. Together with the Norwegian Parliament (the *Storting*) and the government, the Supreme Court is one of Norway's highest constitutional bodies.

The courts of appeal hear appeals in civil and criminal cases from the district courts and land consolidation courts within their respective geographical jurisdictions. There are six courts of appeal in Norway.

The district courts are the ordinary courts of first instance. Norway has 28 district courts, operating across a total of 59 court locations. They hear both civil and criminal cases. In 2025, the average case processing time for civil disputes before the district courts was 5.3 months.

For many civil disputes, Norway's Conciliation Boards serve as the first step and primarily function as mediation bodies.

Norway also has certain specialised courts and court-like bodies, such as the Labour Court, which handles disputes between parties to collective agreements concerning such agreements, and the land consolidation courts, which deal with matters relating to property boundaries and rights in real property. Norwegian courts are independent, and judges cannot be instructed on how to decide individual cases. The courts may also review the constitutionality of legislation and the legality of administrative decisions in cases brought before them.

In addition, there are administrative appeals boards, such as the Immigration Appeals Board and the Tax Appeals Board, as well as private, industry-based dispute resolution bodies, such as the Norwegian Financial Services Complaints Board.

Although Norway is not a member of the EU, EU law has a substantial practical impact through the Agreement on the European Economic Area (the "EEA Agreement"). The EEA Agreement extends the EU internal market to Norway, Iceland and Liechtenstein and covers areas such as the four freedoms, establishment rights, competition law and a substantial body of EU secondary legislation. EEA-relevant EU acts are incorporated into the EEA Agreement and implemented in Norwegian law, typically through legislation or regulations. Norwegian provisions implementing EEA obligations prevail over conflicting Norwegian provisions regulating the same matter. Norwegian courts place considerable weight on relevant case law from both the Court of Justice of the European Union and the European Free Trade Association (EFTA) Court. A distinctive feature of the EEA system is its two-pillar structure: Norway remains outside the EU institutions but is subject to parallel EEA supervision through the EFTA Surveillance Authority and judicial oversight by the EFTA Court.

# 2. Restrictions on Foreign Investments

## 2.1 Approval of Foreign Investments

Norway does not currently have a general foreign investment approval regime applying to all acquisitions of Norwegian businesses. Foreign investors may generally establish companies, acquire shares and operate in Norway on the same basis as Norwegian investors, subject to ordinary corporate, tax, employment, competition and sector-specific rules.

### The Norwegian Security Act

The main investment screening rules are found in the Norwegian Security Act. These rules are directed at national security risks and apply to acquisitions of qualified ownership interests in undertakings that are subject to ownership control under Chapter 10 of the Act, typically because their activities, information, infrastructure or systems are important to fundamen-

tal national functions or national security interests. The scope is target-specific and may include businesses in areas such as defence, telecommunications, digital infrastructure, energy, transport, finance, space or other critical infrastructure, depending on the target's role.

Under the current ownership control rules, notification is required where an acquirer obtains a qualified ownership interest in an undertaking subject to the Security Act, generally at least one third of the share capital, ownership interests or voting rights, or significant influence by other means. The filing is made to the competent ministry or, where the undertaking does not fall within any ministry's area of responsibility, to the Norwegian National Security Authority. The regime applies to both Norwegian and foreign acquirers, although foreign ownership, state links, connections to high-risk jurisdictions and access to sensitive assets will often be relevant to the assessment.

The authorities may approve the transaction, impose conditions or prohibit it if it presents a not insignificant risk to national security interests. They may also intervene outside the mandatory filing regime where a transaction or activity threatens national security.

Amendments to the Security Act adopted in 2023 have partly entered into force. In particular, the basis for making undertakings subject to the Act, or to the ownership control rules in Chapter 10, has been expanded to include undertakings of decisive or significant importance to national security interests, even without a direct link to a fundamental national function. However, key Chapter 10 changes to the ownership control regime – including a 10% filing threshold, additional filing triggers, notification obligations for sellers and target undertakings in certain cases, a standstill obligation and restrictions on sharing sensitive information before closing – have not yet entered into force at the time of writing (July 2026). Investors should therefore verify the current position before signing and closing sensitive transactions.

### Proposed Investment Control Act

A government-appointed committee has also recommended that Norway consider introducing a separate Investment Control Act, noting that the current Norwegian system is relatively narrow and fragmented. If pursued, such reform may result in a broader and more systematic sector-based screening regime for foreign investments, more closely aligned with European FDI screening developments.

### Regulated Sectors

Separate approval or licensing requirements may apply in regulated sectors, including financial services, petroleum, energy and hydropower, fisheries and aquaculture. Norway is not an EU member state but participates in the EU internal market through the EEA Agreement. This supports a generally open investment regime, subject to proportionate restrictions based on national security or sector-specific regulatory objectives.

## 2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance

Norway does not have a single foreign investment authority for all foreign acquisitions. The investor must first determine whether the target is subject to the Norwegian Security Act or to sector-specific approval rules. This is normally assessed through due diligence into the target's activities, licences, public-sector contracts, security classifications, customers, ownership structure and assets.

For acquisitions covered by the ownership control rules in the Security Act, the notification is submitted to the ministry responsible for the relevant sector or, if no ministry is responsible, to the Norwegian National Security Authority. The filing should describe the acquirer, the target, the transaction, the ownership chain and the security relevance of the target's activities. The authority may request further information.

The review is based on national security considerations. The authority considers whether the acquisition may create a not insignificant risk that national security interests will be threatened. Under the current rules, the authority must normally inform the acquirer within 60 working days whether the acquisition is approved or referred to the government for further consideration. If further information is requested within the statutory period, the timeline may be suspended until the acquirer's response is received.

The authorities may approve the transaction, impose conditions or prohibit it. Investors should confirm the rules in force at signing and closing and, where applicable, make approval a closing condition.

If a transaction is completed without required approval, or if it gives rise to national security concerns, the authorities may order remedial measures and, in serious cases, require the transaction not to be implemented or impose conditions. Criminal liability may apply for breach of orders or prohibitions issued under the Security Act, including under Sections 2-5 or 10-3. Adopted amendments, not yet fully in force, will introduce administrative fines for intentional or negligent breaches of the notification obligation once the relevant provisions enter into force. Sector-specific regimes, for example in financial services, petroleum, hydropower, fisheries and aquaculture, have their own procedures and sanctions.

### 2.3 Commitments Required From Foreign Investors

The Norwegian authorities may approve a transaction subject to commitments where identified risks can be mitigated. In the foreign investment context, such commitments are most relevant under the Norwegian Security Act and in regulated sectors requiring licences or ownership approvals.

Under the Security Act, commitments are directed at national security concerns. They are not normally used to require foreign investors to give broad economic undertakings, such as maintaining a particular level of employment or investment in Norway merely because the acquirer is foreign.

Possible commitments may include restrictions on access to classified or sensitive information, requirements for Norwegian or security-cleared personnel in certain functions, ring-fencing of sensitive business areas, restrictions on information flows to the acquirer or its affiliates, enhanced cybersecurity and physical security measures, governance arrangements limiting influence over sensitive operations, and reporting obligations to the authorities.

Where the target operates critical infrastructure or provides services important to fundamental national functions, the authorities may also focus on continuity of supply, localisation of key systems or functions, resilience arrangements, emergency preparedness and the ability of Norwegian authorities to exercise supervision.

In sector-specific regimes, commitments depend on the relevant legislation. Financial-sector approvals may include requirements relating to the suitability and financial strength of the owner, governance and group structure. Energy, petroleum, hydropower, fisheries and aquaculture approvals may include licence-specific obligations, ownership limitations or conditions designed to safeguard resource management, security of supply or regulatory oversight.

If the authority considers that the risk cannot be adequately mitigated through commitments, the transaction may be prohibited.

### 2.4 Right to Appeal

The available remedies depend on the legal basis for the decision and the authority making it. Where an administrative appeal is available under general Norwegian administrative law, the ordinary appeal deadline is three weeks from receipt of the decision. The appeal is normally submitted to the authority that made the decision, and the written decision should state the applicable appeal route and deadline.

Under the current ownership control regime in the Norwegian Security Act, decisions are made within the sector-based administrative structure. Decisions may be made by the relevant sector ministry, with any administrative appeal generally handled by the government. Where the final decision is made by the government, administrative appeal will be limited in practical terms.

The validity of administrative decisions may generally be challenged before the ordinary courts. Norway does not have separate administrative courts for this type of case. Judicial review generally concerns the legal and factual basis for the decision, rather than the administration's discretionary assessment. The courts decide whether the decision is valid or invalid, but do not make a new decision on the merits. In cases involving national security, classified information or

sensitive state interests, access to evidence and the intensity of review may be affected by ordinary procedural rules on protected information.

## 3. Corporate Vehicles

### 3.1 Most Common Forms of Legal Entity

The most common corporate vehicle in Norway is the private limited liability company, or *aksjeselskap* (AS). An AS is a separate legal entity, and the shareholders' liability is limited to their contribution to the share capital. The minimum share capital is NOK30,000, which makes the AS accessible and flexible for most commercial purposes.

An AS may be established by one or more shareholders. Its main corporate bodies are the general meeting and the board of directors. The general meeting exercises shareholder authority, while the board is responsible for the management and supervision of the company. A general manager may be appointed and is common in operating companies. The AS is the standard form for Norwegian subsidiaries of foreign groups, holding companies, greenfield projects, private M&A transactions and many joint ventures.

A public limited liability company, or *allmennaksjeselskap* (ASA), is also a separate legal entity with limited shareholder liability, but is subject to more extensive governance and capital rules. The minimum share capital is NOK1 million. A Norwegian company whose shares are admitted to listing on a regulated market in Norway must be organised as an ASA. It is therefore normally used for listed companies, companies preparing for an IPO, or businesses requiring access to the public equity capital markets. For ordinary private investments, an ASA is usually unnecessary.

Foreign companies may also operate in Norway through a Norwegian branch of a foreign enterprise, commonly referred to as an NUF. An NUF is not a separate legal entity from the foreign company. The foreign company remains liable for the branch's obligations, and the branch is registered in Norway to obtain a Norwegian organisation number and conduct business. Foreign companies carrying on commercial activity in Norway are generally required to register in the Register of Business Enterprises, and there is no Norwegian equity requirement for establishing an NUF. An NUF may be suitable for temporary activity, early-stage market entry or projects where the investor does not wish to incorporate a Norwegian subsidiary, but it is less commonly used for acquisitions or substantial local operations.

Norwegian law also recognises partnerships. A general partnership, *ansvarlig selskap* (ANS), involves unlimited joint and several liability for the partners. In a partnership with divided liability, *selskap med delt ansvar* (DA), each partner has unlimited pro rata liability for an agreed share of the obligations. A limited partnership, *kommandittselskap* (KS), has at least one general partner with unlimited liability and one or more limited partners whose liability is limited to their committed contribution. KS structures are specialised and may be used in investment, shipping, real estate or project structures where tax, accounting or investor allocation considerations make a partnership vehicle appropriate.

For most foreign investors, the practical choice is between incorporating an AS and registering an NUF. The AS is normally preferred where the investor intends to conduct continuing business in Norway, employ personnel, hold assets, enter into local contracts or acquire a Norwegian target.

### 3.2 Incorporation Process

#### Procedure

The incorporation process in Norway is relatively straightforward and largely digital. For most foreign investors, the relevant vehicle will be a private limited liability company, or AS.

An AS may be founded by one or more individuals or legal entities. The company must have a Norwegian business address. The main steps are to choose a company name, prepare and sign the incorporation document, including the articles of association, appoint the board of directors, and subscribe for the shares. An AS must have share capital of at least NOK30,000. The share capital must be fully paid before the company is registered.

Where the contribution is made in cash, payment will normally be confirmed by a bank, auditor, lawyer or authorised accountant. If all or part of the contribution consists of assets other than cash, additional documentation is required, including a statement on the contribution and auditor confirmation, and the process will usually take longer.

The company is incorporated when the incorporation document has been signed and the shares have been subscribed for. It must, however, be registered in the Norwegian Register of Business Enterprises before it can operate as a fully registered company. Registration is normally submitted electronically through Altinn (an online portal for communication between businesses, private individuals and public agencies) to the Register Centre in Brønnøysund and signed electronically by the relevant signatories. Where foreign founders or role holders lack Norwegian electronic identification or D-numbers (which are temporary Norwegian identification numbers issued to those who do not qualify for a permanent one), additional steps or alternative filing procedures may be required. Once registration has been processed, the company receives a Norwegian organisation number, which is required for most practical purposes, including banking, tax registrations, contracts and employment.

The registration notification must be received by the Register of Business Enterprises within three months after the incorporation document has been signed. Registration is not a validity requirement for incorporation, but before registration the company has only limited capacity to acquire rights or incur obligations, except for obligations arising from the incorporation document or by law.

The process for incorporating a public limited liability company, or ASA, follows the same broad structure, but an ASA must have share capital of at least NOK1 million and its name must include the designation "ASA" or "*allmennaksjeselskap*". ASA incorporations are more formalised and will normally be relevant only where the company is intended for listing, an IPO or public equity capital market access.

Partnerships are established on the basis of a partnership agreement and must have at least two partners. Both individuals and legal entities may be partners, and the partnership must have a Norwegian business address. A general partnership (ANS) or partnership with divided liability (DA) must be registered to obtain a Norwegian organisation number.

A Norwegian branch of a foreign enterprise, or NUF, is not incorporated as a separate Norwegian legal entity. The process consists of registering the Norwegian branch of the foreign company. This normally requires documentation from the foreign company's home jurisdiction, including evidence of registration, together with the Norwegian registration form and any required documentation for persons holding registered roles.

#### Timing

For a simple AS with Norwegian electronic IDs or D-numbers for the relevant signatories and cash share capital, incorporation can often be completed within a few working days after the documents and capital confirmation are ready. For foreign investors, timing often depends less on the corporate registration itself and more on practical steps such as applying for Norwegian D-numbers, where required, and providing supporting identity documentation for foreign individuals who will sign filings or hold registered roles, completing bank KYC procedures, documenting foreign corporate founders and arranging capital payment. Contributions in kind, regulated activities, ASA incorporations or complex governance arrangements may also extend the timeline. As a practical matter, a straightforward AS is often established within one to two weeks, but more complex or cross-border establishments should allow additional time.

### 3.3 Ongoing Reporting and Disclosure Obligations

#### Corporate Registration and Governance

Private Norwegian companies are subject to several ongoing filing and reporting obligations, but they are not subject to the continuous market disclosure rules that apply to listed companies. For ordinary private companies, the key obligations relate to registration matters, annual accounts, annual tax returns, shareholder reporting and beneficial ownership. Additional VAT, payroll, employer, sector-specific and event-based reporting obligations may apply depending on

the company's activities, registrations, employees, industry and specific events.

A private limited liability company, or AS, must keep its registered information up to date in the Norwegian Register of Business Enterprises. Changes to the board of directors, general manager, business address, auditor, signature rights, powers of procuration and other registered matters must be filed. Amendments to the articles of association must also be registered. Certain corporate events, such as share capital increases or reductions, mergers, demergers, dissolutions and liquidations, require registration before they take effect or as part of the implementation process.

### Accounts, Shareholder and Beneficial Ownership Reporting

An AS must prepare annual accounts. The annual accounts, and any directors' report and auditor's report where applicable, must be approved by the general meeting no later than six months after the end of the financial year and submitted to the Register of Company Accounts within one month after approval. For companies with a financial year corresponding to the calendar year, 31 July is normally the final filing date for avoiding late filing penalties. Filed annual accounts are publicly available, and failure to file on time may result in late filing penalties.

The company must also maintain a shareholder register. This is not the same as a public central securities register, unless the company's shares are registered with such a system. In addition, private limited companies must submit an annual shareholder register statement to the Norwegian Tax Administration by 31 January each year, providing information about shareholders and relevant share transactions during the preceding year.

Norwegian companies subject to the beneficial ownership rules must identify and register their beneficial owners in the Norwegian Register of Beneficial Owners. The board is responsible for ensuring that the company obtains, maintains and registers correct information. Registration must generally be made within 14 days after the company is registered in a public register and within 14 days after new beneficial owners are identified or other changes occur. Failure to comply may result in coercive fines.

### Tax, Employment and Other Reporting Obligations

Other ongoing reporting obligations depend on the company's activities. Companies carrying on business in Norway must generally report financial information through annual tax returns. VAT-registered businesses must submit VAT returns, and companies that pay salaries must submit monthly employer reports covering salary, employer's national insurance contributions and tax withholding. Certain events, such as workplace accidents, share transfers or changes to the board or articles of association, may also trigger reporting or filing obligations. Regulated businesses and certain industries may be subject to additional sector-specific reporting, filing or publication requirements, including supplementary reporting to supervisory authorities.

In practice, most routine filings are made electronically through Altinn and the Brønnøysund Register Centre, although alternative procedures may be available. Foreign owners should ensure that the company has appropriate access arrangements, procedures to identify reportable changes, and personnel or advisers familiar with Norwegian accounting, tax and corporate filing requirements.

## 3.4 Management Structures

Norwegian private and public limited liability companies do not fit neatly into either a pure one-tier or a classic two-tier board model. The structure is best described as a board-based model, with a general meeting, a board of directors and, where appointed or required, a general manager.

For both private limited liability companies (AS) and public limited liability companies (ASA), the general meeting is the company's supreme shareholder body. It elects the board of directors, unless this power lies with a corporate assembly or other special arrangement. It also approves the annual accounts, elects the auditor where applicable, adopts amendments to the articles of association and decides other matters reserved to the shareholders. The general meeting does not manage the company's business.

The board of directors is responsible for the overall management and supervision of the company. The board also represents the company externally and may assign signatory powers or powers of procuration to board members, the general manager or named employees. The board is therefore not merely a supervisory body; it has both managerial and oversight functions.

An AS must have a board of directors, which may consist of one or more members. A general manager may be appointed, but is not required. Where a general manager is appointed, he or she is responsible for day-to-day management within the framework set by the board.

An ASA is subject to stricter governance requirements. It must have a board of directors with at least three members, a general manager and an auditor. Where the company has a corporate assembly, the board must have at least five members. The ASA form is therefore more formalised and is generally used for listed companies or companies seeking access to the public capital markets.

A corporate assembly is mainly relevant in companies with more than 200 employees, unless validly waived. Where a corporate assembly exists, it sits between the general meeting and the board for certain purposes, including election of the board in many cases. In practice, however, many private companies do not have a corporate assembly.

Partnerships have more flexible management structures, depending on the partnership agreement and the type of partnership. A Norwegian branch of a foreign company (NUF) is managed by the foreign legal entity, although the foreign company may appoint a local general manager or establish a Norwegian branch board.

For most foreign investors using an AS, the practical governance structure is simple: shareholders act through the general meeting, the board has overall responsibility, and the general manager handles daily operations if appointed.

### 3.5 Directors', Officers' and Shareholders' Liability

A Norwegian private or public limited liability company is a separate legal entity. As a starting point, shareholders are not personally liable for the company's obligations beyond their contribution to the share capital. This limited liability is one of the main reasons why the AS is the standard corporate vehicle for foreign investors in Norway.

Board members and the general manager may, however, incur personal liability. The basic rule is fault-based. A board member, general manager, member of the corporate assembly, investigator or shareholder may be liable for loss that they have intentionally or negligently caused to the company, a shareholder or a third party in that capacity. The same may apply to a person who has intentionally or negligently contributed to such damage. Liability requires the ordinary conditions for damages to be met, including fault, financial loss and causation.

The board is responsible for the overall management and supervision of the company, while the general manager is responsible for day-to-day management within the framework set by the board. The board must also keep itself informed of the company's financial position and ensure that the company has adequate equity and liquidity, assessed in light of the risks and scope of its business. If the equity or liquidity position becomes inadequate, the board must consider the matter and take appropriate action.

In practice, liability risk often arises where the board or management fails to act with sufficient care in financial distress, enters into obligations when the company has no realistic ability to perform, makes unlawful distributions, provides misleading information, fails to maintain proper accounts or internal controls, or disregards statutory requirements or creditors' interests. Passivity may be problematic where the company's financial position has deteriorated and the board fails to investigate, propose or implement corrective measures.

Shareholders are generally protected by limited liability, but they are not immune from personal liability for their own conduct or contribution to wrongful con-

duct. A shareholder may be liable where it has acted intentionally or negligently and caused or contributed to loss, for example by participating in unlawful distributions, giving improper instructions, abusing its influence over the company, misleading creditors or otherwise contributing to conduct that gives rise to liability. Mere ownership, ordinary group-level contact or ordinary exercise of shareholder rights will not normally be sufficient.

### "Piercing the Veil"

Norwegian law does not recognise a broad or clearly defined doctrine of "piercing the corporate veil" in the same sense as some common law jurisdictions. The question has been debated, and the courts are generally reluctant to disregard the separate legal personality of a limited liability company. Any such liability would be exceptional and would typically require circumstances making it unjustifiable to uphold limited liability, such as abuse of the corporate form, serious misconduct, commingling of interests, or a company structure that does not deserve protection. In practice, similar results are more commonly analysed under statutory liability rules, contribution liability or general tort law, particularly where a shareholder or other controlling person has acted culpably and caused or contributed to a specific loss.

Damages liability under the Norwegian Companies Acts may be reduced in exceptional cases under the general statutory rules on mitigation of damages. For foreign investors, however, the practical point is that passive share ownership in an AS or ASA normally gives strong limited liability protection. Personal liability risk increases where an owner, director or officer takes an active role in management, gives instructions, extracts value from a distressed company or allows the company to continue trading when it is no longer responsibly capitalised or liquid.

## 4. Employment Law

### 4.1 Nature of Applicable Regulations

The legal framework governing employment relationships in Norway is based on statutory law, case law, collective agreements and individual employment contracts.

Statutory law is the primary source of regulation, in particular the Working Environment Act, which is the central protective statute in Norwegian employment law. The Act applies broadly to undertakings that employ workers, subject to certain statutory exemptions and sector-specific rules. Its provisions are generally mandatory and may not be derogated from to the detriment of the employee.

Other statutes regulate specific aspects of employment, including holidays, collective labour law, non-discrimination, pensions and data protection. State employees are also subject to specific rules under the State Employees Act, although large parts of the Working Environment Act also apply to employment in the state sector.

Collective labour law plays a central role in the Norwegian model. Collective agreements at different levels supplement statutory legislation and may set binding wage and working conditions for employment relationships falling within their scope. Such agreements are concluded between trade unions and employers or employers' organisations. The Labour Disputes Act governs collective labour disputes and the legal framework for collective agreements.

Individual employment contracts constitute a further layer of regulation, operating within the framework established by mandatory legislation and any applicable collective agreements.

Norwegian employment law is also developed and interpreted through case law. Disputes concerning individual employment relationships are heard by the ordinary courts, while the Labour Court has jurisdiction over disputes of a collective nature.

International and European legal sources are significant. Under the EEA Agreement, Norway is required to implement relevant EU legal acts as adapted within the EEA framework. Many provisions of the Working Environment Act implement EU directives incorporated into the EEA Agreement, which may be relevant when interpreting the Act.

### 4.2 Characteristics of Employment Contracts

Norwegian law requires a written employment contract in all employment relationships, regardless of duration or scope. However, under general contract law principles, verbal agreements are generally binding. The requirement is therefore that the agreed terms of employment must be documented in writing.

As a general rule, employment is permanent. Permanent employment means that the employment is ongoing and time-unlimited, that the statutory rules on termination apply, and that the employee has predictability as to work in the form of a genuine scope of employment. Part-time employment is permitted. Fixed-term employment contracts are subject to stricter conditions and may only be used where statutory requirements are met.

The written employment contract must include information on matters of material importance to the employment relationship, including the identity of the parties, place of work, position or work description, start date, salary, working time, breaks, holiday and holiday pay, notice periods, any probationary period, any applicable collective agreements, and, for fixed-term employment, the expected duration and legal basis for the fixed-term arrangement. Additional information requirements apply where relevant, including in relation to variable working hours, overtime arrangements, training rights, employer-paid social security benefits and agency work.

Several of these requirements may be satisfied by reference to applicable legislation, regulations or collective agreements.

### 4.3 Working Time

As a general rule, normal working hours must not exceed nine hours in a 24-hour period and 40 hours in a seven-day period. Specific rules apply to shift work, on-call duties and work of a passive nature.

Working time may be calculated on an average basis over a period of up to 52 weeks, subject to statutory limits and procedural requirements. In such cases, working hours may be higher in certain periods, provided the statutory average limits are observed.

Overtime requires a specific and time-limited need. Work exceeding the statutory limits on normal working hours qualifies as overtime. Overtime must be compensated by a salary supplement of at least 40% in addition to the employee's ordinary pay. The parties may agree in writing that overtime hours are compensated by time off, but the statutory overtime supplement must generally be paid.

There is currently legal uncertainty regarding overtime compensation for part-time employees. Under Norwegian law, part-time workers are generally not entitled to overtime pay until they exceed the statutory threshold applicable to full-time employees. However, two judgments from the Court of Justice of the European Union indicate that this may constitute unequal treatment. Similar reasoning has been adopted in two non-final district court judgments.

The Norwegian government has therefore appointed a working group to assess potential legislative amendments aimed at preventing differential treatment between full-time and part-time employees. The group is expected to submit its recommendations by September 2026, and legislative clarification or amendments may follow.

Collective agreements and individual agreements may provide for alternative working time arrangements, provided they comply with mandatory statutory requirements and are not to the detriment of the employee.

### 4.4 Termination of Employment Contracts

Norway is not an employment-at-will jurisdiction. Termination of employment is regulated by the Working Environment Act, which sets a high threshold for an employer's right to dismiss an employee. Any dismissal must be objectively justified on the basis of circumstances relating to the undertaking, the employer or the employee. The requirement of objective justification has been developed through case law, and the courts have full jurisdiction to review both the factual and legal basis for dismissal.

Before any decision is made, the employer must normally hold a consultation meeting with the employee. A concrete assessment must be carried out, balanc-

ing the interests of the employer and the employee. Termination must be reasonable and appropriate in light of the circumstances.

In redundancy situations, the employer must consider whether other suitable work is available and apply objective selection criteria. There is no general statutory principle requiring selection by seniority alone; selection must be based on an overall objective assessment.

Formal requirements apply to notices of termination, including requirements as to written form and proper delivery. The notice must include information on the employee's right to request negotiations, initiate legal proceedings and remain in the position in certain circumstances. It must also include information on the applicable time limits and identify the employer and the correct defendant in any dispute. Where termination is based on circumstances relating to the undertaking, the notice must include information on any statutory preferential rights.

Fixed-term employment relationships normally terminate at the expiry of the agreed period or completion of the agreed work, unless otherwise agreed in writing. During the fixed-term period, the ordinary rules on termination and dismissal apply.

For other employment relationships, the length of the notice period is primarily governed by statute. As a general rule, the statutory notice period is mutual and must be at least one month. For employees with longer periods of continuous service, the statutory minimum notice period is extended in accordance with the thresholds set out in the Working Environment Act. Longer notice periods may also follow from the employment contract or an applicable collective agreement.

Certain categories of employees enjoy enhanced dismissal protection, including employees who are pregnant, on parental leave, on sick leave or performing military service.

Disputes concerning unfair dismissal are heard by the ordinary courts and may result in the dismissal being declared invalid or in compensation being awarded. Compensation is assessed on a discretionary basis, taking into account the employee's financial loss, the conduct of the parties and the circumstances of the case.

Collective redundancies are subject to additional information and consultation requirements where at least ten employees are dismissed within 30 days for reasons not related to the individual employees. The employer must consult employee representatives as early as possible and provide relevant information, including the reasons for the redundancies, the number of employees affected, the timeframe and the selection criteria.

### 4.5 Employee Representations

The Working Environment Act contains provisions on the employer's duty to provide information and consult with employee representatives. The general obligation applies to undertakings that regularly employ at least 50 employees, with both full-time and part-time employees included in the calculation.

In matters of significance for employees' working conditions, the employer must inform and consult employee representatives. Norwegian law also requires information and consultation in a number of specific situations, including significant changes affecting employees, collective redundancies and transfers of undertakings.

The obligation covers information concerning the current and anticipated development of the undertaking's activities and financial situation. It also extends to the current and expected staffing situation and to decisions that may lead to significant changes in work organisation or employment conditions. In such cases, information and consultation must take place as early as possible.

Exceptions apply where disclosure or consultation would clearly cause significant harm to the undertaking. Employee representatives may also be subject to a duty of confidentiality where necessary.

## 5. Tax Law

### 5.1 Taxes Applicable to Employees/ Employers

Employees working in Norway are generally taxable on salary earned for work performed in Norway. Individuals who are tax resident in Norway are generally taxable in Norway on worldwide income and wealth, subject to applicable tax treaty relief. An individual becomes tax resident in Norway if he or she stays in Norway, over one or more periods, for more than 183 days during a 12-month period, or more than 270 days during a 36-month period. Non-residents may still be subject to limited tax liability in Norway on Norwegian-source employment income, including salary for work performed in Norway.

Employment income is taxed through ordinary income tax, bracket tax and employee national insurance contributions. For 2026, the employee national insurance contribution on salary is 7.6%, and the maximum effective marginal tax rate on salary income, excluding employer's national insurance contributions, is 47.4%.

Employers must withhold tax from salary payments and report salary, benefits and withholding on a monthly basis through the "A-melding" system. From 2026, withholding tax must generally be paid no later than the first working day after salary payment.

Employers must also pay employer's national insurance contributions. The rate is geographically differentiated by municipality; the ordinary rate in central areas is 14.1%, but lower rates apply in certain regions. Employer's contributions are calculated on gross salary and relevant benefits.

Foreign workers may, in some cases, be taxed under the simplified PAYE scheme. For 2026, the PAYE rate is 25%, or 17.4% where the employee is exempt from Norwegian national insurance contributions. PAYE is mainly relevant for shorter stays or the first year of Norwegian tax residence, subject to an income threshold of NOK725,050 (2026) and other conditions.

### 5.2 Taxes Applicable to Businesses

#### Corporate Income Tax

A company incorporated in Norway or effectively managed from Norway is generally tax resident in Norway and taxable on its worldwide income. A foreign company may be subject to limited tax liability in Norway on Norwegian-source business income, including income from business carried on in or managed from Norway, subject to applicable tax treaty rules, including permanent establishment requirements. The ordinary corporate income tax rate is 22%. Certain financial-sector companies are taxed at 25%, while special tax regimes apply to sectors such as petroleum, hydropower, aquaculture and shipping.

#### Value Added Tax (VAT)

Norway has a value added tax system. The standard VAT rate is 25%, with reduced rates of 15% for foodstuffs and water and wastewater services, and 12% for certain services including passenger transport, accommodation and admission to certain cultural and leisure activities. Businesses must register for VAT when turnover of taxable goods and services exceeds NOK50,000 within a 12-month period. Registered businesses generally charge output VAT on taxable supplies and may deduct input VAT on purchases used in the VAT-liable business. VAT is therefore normally intended to be borne by the final consumer rather than by VAT-registered businesses.

#### Withholding Tax

Dividends distributed from a Norwegian company to a foreign shareholder are generally subject to 25% withholding tax, unless reduced under a tax treaty or exempt under domestic rules, including exemptions for qualifying corporate shareholders within the EEA. Norway does not generally levy withholding tax on ordinary arm's length interest or royalty payments, but a 15% withholding tax applies to interest, royalties and certain lease payments to related parties resident in low-tax jurisdictions, subject to treaty relief and EEA exemptions for genuine establishments.

#### Transfer Taxes and Stamp Duty

Norway does not have a general capital duty or stamp duty on share transfers. Acquisitions of shares in Norwegian companies are therefore not subject to transfer tax.

Registration of a transfer of title to Norwegian real estate is normally subject to stamp duty of 2.5% of the property's sale value at registration. The duty is calculated on the higher of the purchase price and market value at the time of registration and is payable upon registration with the Norwegian Mapping Authority. Certain exemptions apply, including transfers carried out as part of qualifying mergers or demergers under the Companies Act. Share deals involving property-owning companies are commonly used because the transfer of shares does not trigger stamp duty, although other tax and commercial implications should be assessed.

### Pillar Two

Norway has implemented Pillar Two through the Global Minimum Tax Act, effective from 1 January 2024, for groups within the OECD/GloBE scope. Norway has introduced a domestic minimum top-up tax. The OECD central record lists Norway's domestic minimum top-up tax as having QDMTT safe harbour status, effective 1 January 2024.

## 5.3 Available Tax Credits/Incentives

Norway has relatively few broad tax incentives. The main generally available tax incentive is the SkatteFUNN research and development scheme. Norwegian companies and Norwegian branches of foreign companies may apply for a tax deduction of 19% of qualifying R&D project costs approved by the Research Council of Norway. The deduction applies to qualifying project costs, subject to the applicable annual cost cap, currently NOK25 million. If the company has no taxable income, the tax value may be refunded.

The scheme is rights-based and available across sectors, provided the project qualifies as research and development and the applicant is subject to Norwegian tax. Where R&D services are purchased from a third-party provider, the deduction only applies to costs incurred with providers established in the EEA or in countries with which Norway has concluded a tax treaty or tax information exchange agreement.

Norway also has a special tonnage tax regime for qualifying shipping companies. Companies within the regime are not taxed under the ordinary corporate income tax rules. Tax liability is instead calculated based on the net tonnage of relevant vessels and days in operation, irrespective of actual profits or losses. The regime is intended to provide predictable taxation for qualifying shipping activities.

There are also favourable tax rules for employee share options in qualifying start-up and growth companies, intended to support recruitment and retention of key personnel. The scheme generally defers taxation until the shares are sold, at which point any gain is normally taxed under the rules for share income rather than as salary. The scheme is subject to detailed conditions, including requirements relating to the company, the employee, the option terms and the timing of exercise and sale.

## 5.4 Tax Consolidation

Norway does not have a formal tax consolidation or fiscal unity regime under which group companies are taxed as a single taxpayer. Each company is taxed separately.

In practice, tax equalisation within Norwegian groups may be achieved through group contributions. A Norwegian company may generally deduct a group contribution to another Norwegian group company, provided the recipient includes the contribution as taxable income. The rules require, broadly, more than 90% common ownership and voting control, directly or indirectly, at the end of the income year.

Group contributions are commonly used to offset taxable profits and losses within Norwegian groups. The contribution must be lawful under company law, including rules on distributable equity, and must be properly approved and documented.

The rules also contain limited EEA-related exceptions, but the practical scope is significantly narrower than for domestic Norwegian group contributions and depends on detailed conditions. For most foreign investors, the key point is that Norwegian subsidiaries are taxed separately, but Norwegian group companies can often achieve tax equalisation through deductible group contributions.

## 5.5 Thin Capitalisation Rules and Other Limitations

Norway does not have traditional thin capitalisation rules based on a fixed debt-to-equity ratio. Instead, interest deductions may be limited under statutory interest limitation rules and general transfer pricing principles.

The interest limitation rules are complex, but in simplified terms they apply where net interest expenses exceed statutory thresholds. For companies that are not part of a group, the threshold is NOK5 million and only net interest expenses on debt to related parties may be restricted. For group companies, the ordinary threshold is NOK25 million, calculated on a combined basis for the Norwegian part of the group, and the limitation may apply to both related-party and third-party interest.

Deductible net interest expenses are generally capped at 25% of tax EBITDA. Group companies may, in certain circumstances, rely on an equity escape rule, broadly where the equity ratio at company level or for the Norwegian part of the group is sufficiently aligned with the equity ratio in the consolidated group. However, the equity escape rule does not necessarily protect against limitation of interest paid to related parties outside the consolidated group.

Disallowed net interest expenses may be carried forward for up to ten years. Related-party financing must also comply with the arm's length principle under the transfer pricing rules, and withholding tax may apply to certain interest payments to related parties in low-tax jurisdictions.

Foreign investors should assess acquisition financing and intra-group debt carefully, particularly where the Norwegian borrower has material related-party debt or a weaker equity position than the group as a whole.

## 5.6 Transfer Pricing

Norwegian tax law applies the arm's length principle to transactions between parties in a community of interest, including related-party transactions. The rules allow the tax authorities to adjust income, deductions and other tax positions where the prices or conditions agreed between such parties differ from those that would have been agreed between independent parties under comparable circumstances.

The Norwegian rules refer to, and generally follow, the OECD Transfer Pricing Guidelines. They are particularly relevant for cross-border controlled transactions, including sales of goods and services, intra-group financing, guarantees, royalties, management fees, cost-sharing arrangements and business restructurings.

Norwegian companies and permanent establishments may be required to prepare transfer pricing documentation if they meet the relevant size thresholds. The documentation should describe the group, the Norwegian entity, the controlled transactions and the comparability analysis, including functional analysis, method selection and benchmarking or other support for the pricing applied. Large multinational groups may also be subject to country-by-country reporting.

Transfer pricing is an important audit area for the Norwegian Tax Administration, particularly in relation to intra-group services, financing, intangibles and restructurings. Foreign investors with Norwegian subsidiaries or branches should ensure that intra-group arrangements are documented and implemented consistently with the arm's length principle.

## 5.7 Anti-Evasion Rules

Norway has both a statutory general anti-avoidance rule and several specific anti-avoidance or protective rules. The general anti-avoidance rule may apply where, viewed objectively, the main purpose of a transaction or arrangement appears to be to obtain a tax advantage and, after an overall assessment, it would be contrary to the purpose of the tax rules to respect the arrangement for tax purposes.

The rule is aimed at tax avoidance rather than ordinary commercial tax planning. In practice, the assessment will consider the commercial rationale and non-tax effects of the arrangement, the size of the tax advantage, the degree of tax motivation, the legal and economic effects of the transaction, and whether the arrangement produces a tax result inconsistent with the relevant legislation.

Norway also has specific anti-avoidance or protective rules in areas such as interest limitation, transfer pricing, controlled foreign companies, withholding tax, loss utilisation, reorganisations and dividend taxation. Tax treaties may also include limitation-on-benefits provisions or principal purpose tests.

Taxpayers are subject to general disclosure obligations, and the tax authorities may request information and documentation. Incorrect or incomplete reporting may result in additional tax, interest and administrative penalties. Serious cases involving intentional or grossly negligent tax evasion may result in criminal liability.

For foreign investors, the practical point is that Norwegian structures should have commercial substance and be supported by contemporaneous documentation, particularly in cross-border financing, holding, IP and reorganisation structures.

### 5.8 Tariffs

Norway has a relatively liberal tariff regime. Most goods imported into Norway are duty-free, and customs duties are now mainly imposed on agricultural products, clothing and certain other textile products.

Customs duties are payable on importation into the Norwegian customs territory and are calculated by reference to the Norwegian Customs Tariff, which is adopted annually on the basis of Parliament's customs duty resolution. Preferential treatment may apply under the EEA Agreement, Norway's free trade agreements, including agreements concluded together with the other EFTA States, and the Generalized System of Preferences for developing countries, provided that the relevant product coverage and origin requirements are satisfied.

The most significant tariff protection applies to agricultural products that compete with Norwegian production, including meat, dairy products, grain and certain plants, vegetables and fruit. Agricultural tariff protection is an important element of Norwegian agricultural policy. Agricultural imports may, however, benefit from tariff reductions, tariff quotas or preferential arrangements, and processed agricultural products may be subject to special rules.

Importers should verify tariff classification, origin, quota availability and any applicable end-use or administrative reduction requirements before import. Norway's tariff regime is shaped by WTO commitments and free trade agreements. While Norway has not recently adopted broad-based tariff increases, global trade tensions and security-related trade measures may increase the practical importance of origin documentation and supply-chain planning.

## 6. Competition Law

### 6.1 Merger Control Notification

Under the Norwegian Competition Act, mergers and acquisitions may constitute concentrations subject to merger control.

A concentration must be notified to the Norwegian Competition Authority (NCA) if the undertakings concerned have combined annual turnover in Norway of NOK1 billion or more, and at least two of the undertakings concerned each have annual turnover in Norway of NOK100 million or more.

The NCA may require notification of a concentration below the Norwegian thresholds if there are reasonable grounds to assume that competition may be affected, or if particular considerations indicate that the transaction should be examined more closely. Transactions below the thresholds may also be notified voluntarily to clarify whether intervention may be relevant.

Concentrations with an EEA dimension may be subject to the EEA merger control rules.

### 6.2 Merger Control Procedure

A notifiable concentration is subject to a standstill obligation and must not be implemented before the Norwegian Competition Authority has received the notification and completed its review.

The statutory review periods start to run only once the notification requirements have been satisfied, including requirements relating to confidential information. In Phase I, the NCA must, within 25 working days after receiving a complete notification, inform the parties

if intervention may be relevant. If no such notice is issued, the NCA may not intervene.

If the NCA proceeds with further review, it must, as soon as possible and no later than 70 working days after receiving the notification, either adopt a decision accepting remedies proposed by the notifying parties or issue a reasoned preliminary decision to prohibit the transaction. The parties have 15 working days to respond to a preliminary prohibition decision. The NCA must then adopt its final decision within 15 working days after receiving the parties' response. If remedies are proposed after the preliminary prohibition decision, the deadline for the final decision may be extended by 15 working days.

The NCA may intervene where a concentration would significantly impede effective competition, in particular as a result of the creation or strengthening of a dominant position. Remedies may extend the statutory deadlines. An intervention decision may be appealed within 15 working days.

### 6.3 Cartels

Section 10 of the Norwegian Competition Act prohibits anti-competitive co-operation between undertakings. The provision corresponds to Article 53 of the EEA Agreement and Article 101 of the TFEU, and covers agreements, decisions by associations of undertakings and concerted practices that have as their object or effect the prevention, restriction or distortion of competition.

The prohibition applies to both horizontal co-operation between competitors and vertical co-operation between undertakings at different levels of the supply chain. It covers, among other things, price-fixing, market-sharing, limitations on production, markets, technical development or investment, discriminatory trading terms and tying obligations.

The Norwegian Competition Act applies to conduct carried out in Norway, as well as conduct that has, or is capable of having, effects in Norway. The Act does not require an effect on trade between EEA states. Where conduct may affect trade within the EEA, Article 53 of the EEA Agreement applies in parallel.

Restrictive co-operation may nevertheless be exempt where the relevant conditions for exemption are met, including where the co-operation produces efficiencies, allows consumers a fair share of the benefits, does not impose unnecessary restrictions and does not eliminate competition for a substantial part of the relevant products.

Intentional or negligent infringements may be sanctioned by administrative fines. Leniency may be available in cartel cases.

### 6.4 Abuse of Dominant Position

Section 11 of the Norwegian Competition Act prohibits the abuse by one or more undertakings of a dominant position. The provision corresponds to Article 54 of the EEA Agreement and Article 102 of the TFEU, and EEA and EU law provide guidance when the rule is applied.

Holding a dominant position is not unlawful in itself. The prohibition concerns abusive conduct by a dominant undertaking. Examples include imposing unfair prices or trading conditions, limiting production, markets or technical development to the prejudice of consumers, applying dissimilar conditions to equivalent transactions, and tying unrelated obligations to contracts.

The Norwegian Competition Act applies where the conduct has, or is capable of having, effects in Norway. Where the conduct may affect trade within the EEA, Article 54 of the EEA Agreement applies in parallel.

Intentional or negligent infringements may be sanctioned by administrative fines. The NCA may also order the infringement to cease or impose necessary measures.

## 7. Intellectual Property

### 7.1 Patents

Norwegian patent law is governed by the Patents Act. Patent protection is available for inventions that provide a practical solution to a technical problem. The invention must have technical character and effect, be

reproducible, be novel and involve an inventive step. Mere discoveries, scientific theories, mathematical methods, aesthetic creations, business methods and computer programs "as such" are not patentable.

Patent rights are obtained by application. National patents are granted by the Norwegian Industrial Property Office, while European patents may be granted by the European Patent Office and made effective in Norway. The application must include a description of the invention and patent claims defining the scope of protection sought. The invention must be disclosed sufficiently clearly and completely for a person skilled in the art to carry it out.

A granted patent may normally be maintained for up to 20 years from the filing date, subject to payment of annual fees.

Patent rights are enforced before the ordinary courts. Remedies for patent infringement may include injunctions, reasonable compensation, damages and measures to prevent further infringement. In serious cases, patent infringement may also give rise to criminal liability.

### 7.2 Trade Marks

A trade mark may consist of any sign capable of distinguishing the goods or services of one undertaking from those of others. Trade mark rights are governed by the Trademarks Act and may be established by registration or through use.

National trade mark rights may be obtained by registration in the Norwegian trade mark register. To be registrable, the mark must be capable of distinguishing the applicant's goods or services and must have distinctive character. Descriptive or generic signs should generally remain available for use by others. The Norwegian Industrial Property Office examines whether the statutory conditions for registration are met, including both absolute and relative grounds for refusal.

Trade mark rights may also be established without registration where the mark has become established through use. A mark is established through use where, and for as long as, it is well known in the relevant Norwegian market as a distinctive sign for particular goods or services. If the mark is established only in part of Norway, protection is limited to that area.

Trade mark protection gives the holder an exclusive right to use the mark as a sign for goods or services in the course of trade. The right covers use of identical signs for identical goods or services and use of identical or similar signs for identical or similar goods or services where there is a likelihood of confusion. Well-known marks may enjoy broader protection against unfair exploitation or impairment of their goodwill.

A registered trade mark is protected for ten years at a time and may be renewed indefinitely, subject to payment of renewal fees. Registered marks may be vulnerable to cancellation if they are not put to genuine use for a continuous five-year period without proper reason.

Trade mark rights are enforced before the ordinary courts. Infringement may give rise to reasonable compensation, damages or an account of profits, depending on the circumstances. In serious cases, trade mark infringement may also give rise to criminal liability.

### 7.3 Industrial Designs

Design rights are governed by the Design Act. Design protection covers the appearance of a product or part of a product, including features such as lines, contours, colours, shape, texture, materials or ornamentation.

A design must be new and have individual character to qualify for protection. A design is new if no identical design has been made available to the public before the filing date or priority date. Individual character depends on whether the overall impression produced on the informed user differs from that produced by earlier designs, taking into account the designer's freedom in developing the design.

Design rights are obtained by registration. Applications must be filed in writing with the Norwegian Industrial Property Office and must identify the applicant, the product or products to which the design relates, and include images clearly showing the design. The application fee must be paid.

The Norwegian Industrial Property Office examines formal filing requirements, whether the application concerns a design within the meaning of the Design Act, and certain public interest grounds for refusal. It does not generally examine whether the design is new or has individual character before registration. A registered design may therefore later be challenged and declared invalid or revoked if the substantive requirements are not met.

A registered design is protected for five years from the filing date and may be renewed in five-year periods for a maximum term of 25 years, subject to payment of renewal fees.

Design rights are enforced before the ordinary courts. Remedies for design infringement may include injunctions, reasonable compensation, damages and measures to prevent further infringement. In serious cases, design infringement may also give rise to criminal liability.

### 7.4 Copyright

Copyright is governed by the Copyright Act and protects original literary and artistic works. Protection arises where the work is the result of an individual creative effort, regardless of its form of expression.

Copyright gives the author an exclusive right to exploit the work by making copies and by making the work available to the public.

As a general rule, copyright lasts for the lifetime of the author and for 70 years after the end of the year of the author's death. Special rules apply to certain categories of works, including films, anonymous and pseudonymous works and works of unknown authorship.

No registration is required to obtain copyright protection. Protection arises automatically when an original work is created.

Copyright is enforced before the ordinary courts. Infringement may give rise to reasonable compensation and damages. In certain circumstances, infringement may also result in criminal liability, including fines or imprisonment.

### 7.5 Others

Computer programs may be protected as copyright works under the Copyright Act, provided that the general requirements for copyright protection are met.

Databases may be protected by copyright where they qualify as original works. Databases that do not qualify for copyright protection may nevertheless benefit from separate database protection where substantial investment has been made in obtaining, verifying or presenting their contents.

Trade secrets are not registered. They may be protected under trade secrets legislation against unlawful acquisition, use and disclosure, including industrial espionage and unauthorised disclosure of confidential business information.

## 8. Data Protection

### 8.1 Applicable Regulations

The main data protection framework in Norway is the EU General Data Protection Regulation (GDPR), as incorporated into Norwegian law through the Norwegian Personal Data Act. Norway is not an EU member state, but participates in the EU internal market through the EEA Agreement. The GDPR was incorporated into the EEA Agreement and has applied in Norway since 20 July 2018. Norway is therefore bound by the GDPR in substantially the same way as EU Member States.

The Norwegian Personal Data Act supplements the GDPR with national provisions where the GDPR allows local regulation, including certain rules on processing in employment relationships, research, freedom of expression, access to documents, children's consent and administrative fines. It does not replace the GDPR; it makes the GDPR applicable in Norway and adds limited national rules.

The Norwegian Data Protection Authority, Datatilsynet, is the national supervisory authority. It supervises compliance, handles complaints, issues guidance and may impose corrective measures and administrative fines. Datatilsynet participates in the European Data Protection Board, although Norway's EEA status

means that it does not have the same voting position as EU supervisory authorities.

Other rules may also be relevant. Electronic marketing is regulated by the Marketing Control Act, and cookies and similar technologies are regulated through electronic communications rules. Sector-specific confidentiality, security and record-keeping rules may also apply, for example in financial services, healthcare, telecoms and employment.

In practice, businesses operating in Norway should treat GDPR compliance as the core data protection requirement, supplemented by Norwegian national rules and Datatilsynet guidance.

### 8.2 Geographical Scope

The geographical scope of Norwegian data protection law follows the GDPR. The rules apply to controllers and processors established in Norway where personal data is processed in the context of that establishment's activities, regardless of whether the processing itself takes place in Norway.

The rules may also apply to a foreign company with no establishment in Norway or the EEA if it offers goods or services to individuals in Norway or monitors their behaviour in Norway. Relevant indicators may include use of Norwegian language, pricing in Norwegian kroner, delivery to Norway, marketing directed at Norwegian customers, or tracking and profiling of users in Norway.

A non-EEA controller or processor subject to the GDPR under these rules may need to appoint an EU/EEA representative, unless an exemption applies. The representative may be contacted by supervisory authorities and data subjects on GDPR matters.

International transfers of personal data from Norway to countries outside the EEA are subject to Chapter V of the GDPR. Transfers may take place on the basis of an adequacy decision, or, in the absence of such a decision, where appropriate safeguards are provided, such as the EU Standard Contractual Clauses or Binding Corporate Rules, unless a specific derogation applies. For transfers to the United States, the EU–US Data Privacy Framework currently permits transfers to US organisations certified under the framework, while transfers to non-certified US recipients require another valid transfer mechanism. Businesses using non-EEA service providers should map relevant data flows, including remote access, cloud services, sub-processors and onward transfers, and assess whether the chosen transfer mechanism is effective in practice. Where necessary, supplementary technical, contractual or organisational safeguards must be implemented.

For practical purposes, a foreign business actively targeting Norwegian customers should assume that GDPR compliance may be required even without a Norwegian subsidiary or branch.

### 8.3 Role and Authority of the Data Protection Agency

The Norwegian Data Protection Authority, Datatilsynet, is the supervisory authority responsible for enforcing data protection rules in Norway. It is an independent administrative authority and supervises compliance with the GDPR and the Norwegian Personal Data Act.

Datatilsynet's role includes providing guidance, handling complaints from individuals, conducting investigations and inspections, assessing data breach notifications, and supervising controllers and processors. It may also issue opinions and guidance on new legislation, technology and processing practices.

Datatilsynet has the enforcement powers provided by the GDPR. It may order a controller or processor to bring processing into compliance, require information, impose temporary or permanent processing bans, order rectification or deletion of personal data, issue reprimands and impose administrative fines. The maximum GDPR fines are the same as in the EU: up to EUR 20 million or 4% of worldwide annual turnover, depending on the nature of the infringement.

Datatilsynet also co-operates with other European supervisory authorities through the GDPR co-operation and consistency mechanisms. As Norway is part of the EEA, Datatilsynet participates in the European Data Protection Board system, although Norway is not an EU member state.

Decisions by Datatilsynet may generally be appealed to the Norwegian Privacy Appeals Board and may ultimately be challenged before the ordinary courts.

## 9. Looking Forward

### 9.1 Upcoming Legal Reforms

There are several legal developments that foreign investors should monitor, although Norway is not currently undergoing a single comprehensive business law reform.

The most important development is in foreign investment control. Norway already has ownership control rules under the Norwegian Security Act, and amendments adopted in 2023 are expected to enter into force with supplementary regulations in 2026. These changes are expected to broaden the scope of the regime, lower notification thresholds and introduce a clearer standstill obligation for notifiable transactions. In addition, the government has announced work on a possible new Investment Control Act, with a consultation paper expected in 2026. If adopted, this would represent a more general Norwegian FDI screening regime alongside the existing Security Act rules.

In tax, the 2026 budget contains relatively limited structural changes. The government has indicated that the 2026 tax programme is focused on simplification, closing loopholes and adapting the system to other regulatory developments. Norway has already implemented Pillar Two rules, including an income inclusion rule and domestic minimum top-up tax from 2024, so further developments are expected mainly through guidance and technical adjustments rather than a new primary regime.

In data and digital regulation, Norway is expected to continue aligning with EU digital legislation through the EEA Agreement. The EU AI Act is expected to be implemented in Norway, and a Norwegian consultation on draft AI Act implementation was published in 2025. Businesses using or providing AI systems in Norway should monitor the timing of EEA incorporation and Norwegian implementation.

Corporate compliance has also become more transparent. The obligation to register beneficial owners is now in force, and the register is a practical compliance point for Norwegian companies and branches. This is not a future reform in itself, but enforcement and practical implementation remain relevant for foreign-owned Norwegian structures.

Overall, the main near-term reform risk for foreign investors is not ordinary company law, but investment screening, security-related regulation, digital regulation and continued tax compliance developments.

**Said Al Shahry & Partners** (SASLO) is a leading Omani full-service law firm, notable as the only top-tier firm in Oman that is fully owned by Omani nationals. For over 33 years, it has provided expert legal services to domestic and international clients, earning recognition for practical, commercially-focused advice firmly grounded in Omani regulatory and legal requirements. This depth of experience and local insight has cemented SASLO's reputation in Oman's legal market as a go-to firm for both local and foreign businesses. SASLO operates seamlessly across three offices in Oman's major hubs – Muscat, Sohar, and Salalah. These fully integrated offices enable the firm's legal team – the largest in the country – to provide clients with specialist local knowledge and around-the-clock support. The firm has advised on some of the most complex corporate, financing and infrastructure deals in Oman and has been involved in significant litigation and arbitration. Through this extensive experience, SASLO offers its clients practical and commercially sound counsel tailored to the local context.

## Authors

**Said Al-Shahry** is a managing partner at SASLO and one of Oman's most prominent legal professionals. He has more than 30 years of experience as both a legal adviser and an advocate at all courts throughout Oman at the primary and appellate levels, including before the Supreme Court. He has significant experience in dealing with high-profile cases, representing various clients, including government-owned entities as well as local and international corporates. He is an expert in handling complex disputes across a range of sectors and is well-known in arbitration and alternative dispute resolution, with particular expertise in construction arbitration. Said is a member of the International Arbitration Centre – GCC and the International Bar Association.

**Thamer Al-Shahry** is a partner and head of SASLO's dispute resolution practice. He is an experienced Omani lawyer specialising in banking, finance, capital markets, commercial agreements and corporate structures, with a particular focus on M&A, projects and energy (IPP/IWP and Sector Law), including PPP projects. He has extensive practical experience in a wide range of projects and landmark deals requiring a thorough knowledge of regulatory matters in Oman, as well as dealing with ministries and other authorities. Thamer is an increasingly prominent practitioner in dispute resolution and is experienced in high-profile international arbitrations and a wide range of general commercial, labour and banking disputes.

**Jeremy Pooley** is a special counsel and head of SASLO's corporate and commercial practice and an international corporate lawyer of over 25 years' standing. He specialises in mergers, acquisitions and divestments, joint ventures, PE/VC/buyouts, banking and finance, fund formation and asset management, capital markets, power and water projects, oil and gas projects (upstream and downstream), other greenfield and brownfield projects, and corporate and commercial law. His practice has focused on the Middle East for almost 15 years, and he has closed transactions across the GCC and wider MENA region.

**Maria Mariam Rabeaa Petrou** is a special counsel in SASLO's corporate and commercial team. She is a Cypriot-qualified lawyer and holds an LLB from the University of Central Lancashire and an LLM in International Business and Commercial Law from the University of Manchester. She is also a fellow of the Chartered Institute of Arbitrators (FCIArb) and holds a diploma in international arbitration. Maria has practised law in Cyprus, the UAE and Oman, and has been based in the Middle East for the last nine years. She advises clients on a variety of corporate and commercial matters, including advising consortia and lenders on independent water projects in Oman.

# 1. Legal System

## 1.1 Legal System and Judicial Order

Oman is a civil law jurisdiction. Legislation is the primary source of its laws, not judicial precedent.

Royal Decrees form the bedrock of Oman's legislative framework and are often supplemented by secondary/delegated legislation in the form of Ministerial Decisions. Royal Decrees are identified in this chapter of the guide with the initialisation "RD".

Oman's Civil Transactions Law RD 29/2013 (the "Civil Code") regulates all matters not addressed by other specific laws. Under the Civil Code, commercial arrangements between parties are governed by the contract between them unless the law imposes a contrary requirement. The principles of Islamic jurisprudence, the principles of sharia and customary practices may also be relevant when interpreting a contract (in that order of descending authority).

The courts take a purposive approach to the construction of contracts and will seek to identify the parties' intention to a contract. Broadly speaking, a party exercising rights under a contract will be expected to act reasonably and in good faith.

The Basic Law of the State RD 6/21 (the "Basic Law") essentially serves as Oman's constitution. Under the Basic Law, judicial power is independent and vested in the courts, which operate in accordance with the rule of law.

The judiciary consists of the Primary Courts (the Courts of First Instance), the Appeal Courts and the Supreme Court (Oman's highest court). In March 2025 RD 35/2025 was issued establishing the Court of Investment and Commerce (CIC), which came into force in October 2025. The CIC has exclusive jurisdiction to hear all commercial disputes apart from disputes pertaining to administrative, labour and rental issues. The CIC has hierarchy similar to other courts in Oman.

On 12 January 2026, Oman established the International Financial Centre of Oman (IFCO) through RD 8/2026. The IFCO will have its own legal framework. The executive regulations under the RD 8/2026 are yet to be issued.

# 2. Restrictions on Foreign Investments

## 2.1 Approval of Foreign Investments

### General Principles

Non-Omanis may only conduct business in Oman through a locally registered entity. In practice, this means that non-Omanis must either establish a presence in Oman or conduct their business through a local commercial agent in order to invest in Oman.

#### *Establishing a presence in Oman*

Oman's Foreign Capital Investment Law RD 50/2019 (FCIL) came into force and effect in January 2020, and its impact has been to relax Oman's foreign ownership restrictions significantly.

Oman's Ministry of Commerce, Industry and Investment Promotion (MOCIIP) has issued, pursuant to Ministerial Decision 209/2020, as amended, a list of activities subject to foreign ownership restrictions (the restricted activities list). The restricted activities list includes activities such as automotive repair, translation/interpretation services and labour recruitment offices; it may be updated from time to time by a decision of the Minister of the MOCIIP.

Certain industry sectors do not appear on the restricted activities list, despite historically requiring a higher level of local ownership. Oman's engineering law, for instance, requires engineering consultancy offices to have a minimum of 35% local ownership. The MOCIIP is expected to continue to apply any such industry sector restrictions.

Even prior to the introduction of the FCIL, foreigners establishing a presence in Oman's "free zones" or "special economic zones" or under the US–Oman free trade agreement or certain reciprocal arrangements implemented within the GCC (Gulf Cooperation Council), were able to take advantage of less onerous foreign ownership restrictions. However, the restricted activities list also applies to non-Omanis establishing a presence under these routes.

Ministerial Decision 412/2023 prohibits the engagement in concealed trading, that is engaging in an activity which is restricted by laws, and violators can be fined between OMR5,000 to OMR15,000. This restriction applies to both Omanis and non-Omanis.

#### *Conducting business through a local commercial agent*

Any arrangement under which a foreigner conducts business through a local commercial agent must be registered with the MOCIIP. Commercial agents must be duly licensed by the MOCIIP.

### 2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance

Companies, partnerships, branches and representative offices must be registered with the MOCIIP. Where the entity being established is owned in whole or part by non-Omanis, the application for registration will need to be processed through the investment services centre of the MOCIIP. MOCIIP registration is required before any of these types of entities can commence operations.

Contractual joint ventures (see **3.1 Most Common Forms of Legal Entity**) are the exception to this general rule: although they are treated as legal entities formed under the Commercial Companies Law RD 18/2019 (CCL 2019), they do not require registration with the MOCIIP. However, at least one of the parties to the contractual joint venture will need to have an appropriately licensed presence in Oman.

A foreigner undertaking investment activity in Oman other than in compliance with the FCIL may be fined between OMR20,000 and OMR150,000, as may an Omani who participates with a foreigner in an investment project other than in accordance with the FCIL.

### 2.3 Commitments Required From Foreign Investors

The FCIL's executive regulations were issued in June 2020 and amended further in March 2022. The FCIL's executive regulations set out the types of investment projects that may apply for preferential treatment (eg, projects established in Oman's less developed regions) and the financial and non-financial conditions that must be satisfied for an investment project to qualify. Ministerial Decision 411/2025 amended the FCIL's executive regulations, requiring establishments and companies established by a foreign investor to appoint at least one Omani worker within one year of commencing their commercial activities.

### 2.4 Right to Appeal

There is no formal procedure to challenge a decision by the MOCIIP to reject a foreign investment (eg, where the MOCIIP declines to issue the necessary licence or approval of the necessary registration). If an investor believes an application has been unreasonably rejected, the first response should be to open a dialogue through the appropriate channels at the MOCIIP. It is prudent to appoint local counsel with an understanding of the MOCIIP's structures, practices and ethos to assist with these discussions. If that approach is unsuccessful, an investor may challenge any such decision in court. Oman's legal system operates in accordance with the rule of law.

## 3. Corporate Vehicles

### 3.1 Most Common Forms of Legal Entity

The types of legal entities available in Oman are companies established under the CCL 2019, branches and representative offices. For new entrants to Oman, a presence is typically established by incorporating a limited liability company/single-person company or by establishing a branch.

Entities may be established either "onshore" in Oman or in one of Oman's industrial free zones (free zones) or special economic zones (SEZs). A company established in a free zone or an SEZ may not undertake commercial activities onshore in Oman.

#### Companies Established Under the CCL 2019

These may be formed as:

- joint stock companies (JSCs), which may be established as:
  - (a) public joint stock companies (SAOGs); or
  - (b) closed joint stock companies (SAOCs);
- holding companies (Holdcos);
- limited liability companies (LLCs);
- single person companies (SPCs);

- contractual joint ventures (CJVs);
- general partnerships (GPs); or
- limited partnerships (LPs).

### *JSCs*

A JSC must have at least three shareholders. The minimum share capital of an SAOG is OMR2 million, and the minimum share capital of an SAOC is OMR500,000. Higher share capital requirements may be required, depending on the activities undertaken by the JSC. A JSC must allocate 10% of its net profits to a legal reserve until the legal reserve reaches one third of the JSC's share capital.

The liability of a JSC is limited to the amount of its share capital, and a shareholder's liability is limited to its shareholding in the JSC's share capital.

SAOGs and SAOCs are subject to considerably more onerous regulatory requirements under the CCL 2019 than LLCs. SAOGs must also be listed. As a listed company, an SAOG is regulated by the Financial Services Authority (FSA) and subject to its rules and regulations.

A JSC is managed by its board of directors. Subject to the CCL 2019 and the JSC's Articles of Association, a JSC's board of directors has all authority necessary to manage its affairs; its board also has a duty to implement any resolutions passed by the JSC's shareholders in general meetings. An SAOG must have between five and 11 directors, and an SAOC must have between three and 11 directors. In each case, the number of directors (which must be uneven) will be specified in the JSC's Articles of Association. A JSC's directors are listed in its commercial registration (a document maintained by the MOCIIP and available for public inspection), which will also set out the authorised signatories of the JSC and any limits on their powers.

Ministerial Decision 245/2025 provides that an authorised signatory/manager of a company may be appointed from any of the following categories:

- any of its partners;
- any owner of its capital;
- any of its directors;
- any of its managers or any of its financial or administrative workers.

The key advantage of JSCs over LLCs is that shares in JSCs may be mortgaged as security (this may be necessary in order for a company to procure debt financing). Unlike SAOCs and LLCs, SAOGs may also raise equity finance in the capital markets, as they are able to offer their shares to the public. LLCs may now procure funding through crowdfunding platforms, subject to the rules and regulations issued by the FSA. Some regulated activities in Oman may only be undertaken by SAOGs.

### *Holdcos*

A Holdco is a JSC that exercises financial and administrative control over one or more JSCs and/or LLCs by holding at least 51% of the shares of each such company. Holdcos are generally subject to the same regulation as JSCs.

### *LLCs*

An LLC must have at least two shareholders. An LLC must allocate 10% of its net profits to a legal reserve until the legal reserve reaches one third of the LLC's share capital.

The liability of an LLC is limited to the amount of its share capital, and a shareholder's liability is limited to its shareholding in the LLC's share capital.

LLCs are managed by one or more managers. Subject to the CCL 2019 and the LLC's constitutive documents, an LLC's managers have all the authority necessary to manage its affairs. An LLC's managers are listed in its commercial registration (also available for public inspection), which will also set out the authorised signatories of the LLC and any limits on their powers.

LLCs are subject to a considerably less onerous regulatory regime than JSCs and are considerably more prevalent.

### *SPCs*

An SPC must have only one shareholder. SPCs are subject to the same regulation as LLCs under the CCL 2019, to the extent such regulations are not inconsist-

ent with the nature of an SPC. SPCs were introduced for the first time under the CCL 2019, and are likely to be a popular alternative to LLCs going forward.

### *CJVs*

A CJV is formed (typically pursuant to a written joint venture contract) by two or more partners. It is described in the CCL 2019 as a "concealed company," and is the only legal entity in Oman that is not subject to registration with the MOCIIP.

CJVs are not subject to any minimum share capital requirement. A CJV does not have a separate legal personality. Each of its partners therefore contracts only in its own name and has unlimited liability for the obligations and liabilities it assumes under that contract.

If a CJV partner discloses the existence of the CJV to a third party who deals with that partner in the context of the CJV's activities, then the CJV will become a general partnership. This will result in all of the CJV's partners assuming unlimited liability for the liabilities and obligations of the CJV.

Investors tend to favour LLCs over CJVs because of the limited liability that LLCs confer. CJVs can, however, offer a quick route into the market and are subject to considerably less onerous regulation under the CCL 2019 than LLCs. Historically, foreign investors have sometimes adopted the CJV structure where they have a single contract to perform (eg, as a contractor on a project) and do not intend to remain in Oman following its completion. As a consequence of the liberalisation of Oman's foreign ownership restrictions, however, some contractors that would previously have adopted the CJV structure may view an LLC as a more attractive option in the future.

### *GPs and LPs*

A GP is formed of two or more general partners, each of whom must be a natural person. The partners of a GP are jointly and severally liable for the GP's liabilities and obligations.

An LP is formed of at least one general partner and at least one limited partner. The general partners of an LP are jointly and severally liable for the LP's liabilities and obligations, whereas the liability of a limited partner in an LP is limited to the amount of its contribution.

GPs and LPs have constitutive contracts that regulate their management and operation. Subject to its constitutive documents, all partners of a GP and all general partners of an LP are considered managers of the GP/LP. The limited partners of an LP may not be involved in its management.

Neither GPs nor LPs are subject to a minimum capitalisation requirement, and neither structure has a legal reserve requirement. However, the unlimited liability of general partners means that GPs and LPs rarely attract investors when structuring their investments.

## Branches

Previously, branch structures could only be established where a foreign company entered into a "qualifying contract" with the Omani government or a company in which the Omani government has a material interest. The CCL's executive regulations issued by the MOCIIP on 14 October 2021 override this requirement, and a "qualifying contract" with a government entity is no longer one of the prerequisites to establishing a branch in Oman.

## Representative Offices

The permitted activities of a representative office are limited to the following:

- contacting customers to promote the products or services of the foreign company or institution it represents;
- contacting exporters and sellers of raw, manufactured and semi-manufactured materials required by the foreign company or institution it represents and removing any obstacles hindering quick access to them; and
- notifying the foreign company or institution it represents of any complaints it receives in relation to the products or services and overcoming difficulties related to the distribution of such products or the provision of services.

A representative office is prohibited from engaging in any of the following activities:

- import, export or sale, except for the importation of commercial samples of goods produced by the foreign company or institution it represents for the purpose of promotion;
- promotion of products or services other than those produced or offered by the foreign company or institution it represents; or
- contacting consumers directly.

### Features Common to Branches and Representative Offices

There are no foreign ownership restrictions on branches/representative offices and, accordingly, the parent company of a branch/representative office can be a foreign company.

Branches/representative offices do not have a share capital or legal reserve requirement, but their parent companies are required to guarantee their obligations. This guarantee is the letter of undertaking referred to under **3.2 Incorporation Process**.

Both branches and representative offices are regulated by the constitutional documents of their parent companies. They are managed by a general manager, who will have the powers and authorities granted under a power of attorney issued by the parent company.

## 3.2 Incorporation Process

This section focuses on the formation process for LLCs and branches, as these are the usual alternatives for a foreign investor entering Oman for the first time. The process for establishing an SPC is the same as for an LLC.

### LLCs

In some cases, pre-approval must first be sought for the LLC's proposed name. In most circumstances, however, the process to incorporate/register an LLC is initiated by submitting an application to the MOCIIP.

The application will need to be made by the LLC's founding shareholders and must be accompanied by all necessary supporting documents, including:

- the LLC's new constitutive contract;
- certain resolutions of the LLC's founding shareholders;
- a foreign investment form (where applicable); and
- copies of the passports of the LLC's first authorised signatories/managers.

Preparation of these supporting documents can involve considerable lead time because some will need to be notarised (or, in the case of foreign shareholders, apostilled) before submission to the MOCIIP. The constitutive contract must either be in Arabic or be provided with an Arabic translation (dual-language constitutive contracts are permissible). The licensing process will involve seeking approval for the specific activities to be undertaken by the LLC.

The steps following incorporation include registration with the Chamber of Commerce and Industry and application for a municipality licence. To apply for a municipality licence, the LLC will need to submit a copy of its tenancy agreement.

### Branches

An application can be made to the MOCIIP for registration of a branch. The supporting documents that will need to be provided include the following:

- the commercial registration certificate of the foreign company in its principal place of business, which includes the foreign company's commercial activities;
- the incorporation documents of the foreign company (ie, the Articles of Association, Memorandum of Association or the Constitutive Contract, as the case may be);
- the authorisation document issued from the foreign company to the manager(s) of the branch to carry out the management of the branch;
- a letter of undertaking from the foreign company to bear liability in relation to the acts of the branch; and
- copies of the passports/Omani identity cards of the authorised managers.

Preparing these documents can take time for the same reasons given in relation to LLCs above. All documents (except for copies of passports/Omani identity cards) must be translated into Arabic and duly

notarised, legalised, or apostilled, as the case may be. As with an LLC, the branch's activities will need to be specifically licensed.

The MOCIIP usually registers a branch within one week of the application.

As with LLCs, the steps following incorporation include registration with the Chamber of Commerce and Industry and application for a municipality licence. The LLC must submit a copy of its tenancy agreement to apply for a municipality licence.

## 3.3 Ongoing Reporting and Disclosure Obligations

Any change to the constitutional documents or commercial registration certificate of an entity registered with the MOCIIP needs to be approved by the MOCIIP before it takes effect.

As noted in **3.1 Most Common Forms of Legal Entity**, all companies established under the CCL 2019 (other than CJVs), all branches and all representative offices must be registered with the MOCIIP. Accordingly, MOCIIP approval and registration are needed for any change to any such entity's constitutional documents (eg, its constitutive contract or Articles of Association) or commercial registration certificate, including in relation to its managers/authorised signatories or its share capital/shareholders.

Most entities registered with the MOCIIP are required to file approved financial statements with the MOCIIP (although exceptions apply).

JSCs are subject to considerably more stringent reporting requirements than LLCs. Analysis of these requirements falls outside the scope of this chapter of the guide.

## 3.4 Management Structures

LLCs are managed by one or more managers, who are appointed in accordance with Ministerial Decision 245/2025. Subject to the CCL 2019 and the LLC's constitutive documents, an LLC's managers have all the authority necessary to manage its affairs. The CCL 2019 and the LLC's constitutive documents specify the matters that are reserved to be decided by its shareholders.

Branches are regulated by the constitutional documents of their parent companies. They are managed by a general manager, who will have the powers and authorities granted under a power of attorney issued by the parent company.

## 3.5 Directors', Officers' and Shareholders' Liability

The rules governing the liability of management and shareholders will depend on the type of Omani legal entity in question. The comments below are confined to an overview of the main rules applicable to LLCs and branches.

### LLCs

#### *General principles*

The managers of an LLC are jointly or severally liable to the LLC and third parties for, inter alia, their violation of the CCL 2019 and/or the LLC's constitutive documents and their negligence in the management of the LLC.

The CCL 2019 also provides that the managers of an LLC are subject to the same liability as the directors of a JSC, regardless of any provision to the contrary in the LLC's constitutive documents.

#### *Conflicts of interest*

The CCL 2019 contains several provisions that subject a manager to liability where the CCL 2019's provisions requiring a manager to avoid conflicts of interest have been contravened.

#### *Piercing the corporate veil*

The general rule is that the liability of an LLC is limited to the amount of its share capital, and a shareholder's liability is limited to its shareholding in the LLC's share capital.

There is, however, the potential in certain limited circumstances for the corporate veil to be pierced in the event of an LLC's bankruptcy, and managers can also become liable where they act outside their authority. In certain limited circumstances, managers may also become criminally liable under the Penal Code RD

7/2018, as amended (the "Penal Code") in the event of an LLC's bankruptcy.

### Branches

The liability of a branch's directors/managers and officers will, generally speaking, be determined based on the laws applicable in the jurisdiction of incorporation of its parent company and the constitutional documents of its parent company.

The general manager of a branch will also be personally liable if the authority granted in their power of attorney is exceeded (as will any other authorised signatory of the branch who exceeds their authority).

The parent company of a branch is required to guarantee the obligations and liabilities of the branch pursuant to the letter of undertaking referred to under **3.2 Incorporation Process**. Therefore, the liability of a branch is not ring-fenced.

## 4. Employment Law

### 4.1 Nature of Applicable Regulations

The employer/employee relationship in Oman is regulated by the Labour Law RD 53/2023 (the "Labour Law"). Regulations are issued from time to time by the Ministry of Labour to regulate particular aspects of the employment relationship further.

The Labour Law prescribes an employee's minimum benefits and entitlements, such as maximum working hours, annual leave and sick leave entitlements. The employment contract may include benefits and entitlements that exceed these minimum requirements.

Employee unions are recognised in Oman. Collective negotiations may take place between the employer and the employees' trade union to improve the terms and conditions of work, enhance productivity and settle disputes. Employees have a right to strike peacefully, provided certain procedures are followed.

### 4.2 Characteristics of Employment Contracts

The Labour Law requires a contract of employment to be in writing; it must be in Arabic and must be translated into a language that both employer and employee can understand, where applicable. A contract of employment must include certain specified information and may be for a fixed or unlimited term.

### 4.3 Working Time

Employees may not be required to work more than eight hours a day or 40 hours a week, provided that the working hours are interspersed with but do not include an hour's lunch break per day. The continuous period of work must not exceed six hours. An employee is entitled to at least 48 consecutive hours of rest per week after five continuous working days.

If an employee is required to work overtime, then the employer must pay the employee overtime equivalent to the employee's basic salary for the extra work hours, plus at least 25% of such salary (for day-time work) and 50% of such salary (for night-time work); if the employee agrees in writing, the employer may grant the employee leave from work in lieu of the overtime.

Employees who work on an official holiday are entitled to salary for such day plus additional overtime pay equal to 100% of the daily basic wage or to an additional rest day for each day.

### 4.4 Termination of Employment Contracts

An employment contract will terminate under the following circumstances:

- upon the expiry of the term of the contract or completion of the work agreed upon;
- termination of the contract by the employer or employee in accordance with the Labour Law;
- upon the employee's death or permanent disability; and
- illness of the employee that necessitates absence from work for a consecutive or intermittent period of no less three months within one year, provided that the sick leave period set out in the Labour Law and the employee's balance of annual leave is exhausted.

Although an employer may terminate an employment contract by notice, the Supreme Court has held that termination should be based on a legal justification. If the termination of an employee's employment con-

tract is arbitrary or without legal justification in accordance with the Labour Law, then an employee may file a claim for unfair dismissal. In such circumstances, the court may order the employee's reinstatement or the payment of not less than three months' salary as compensation. There are no definitive guidelines for the courts to consider in determining unfair dismissal claims or how compensation for unfair dismissal is calculated.

The employer may, in the event that an economic cause exists and after obtaining the approval of the committee as stipulated in Article 45 of the Labour Law, reduce the number of workers in the company to the extent required to maintain the continuity of the business and to avoid the risks of bankruptcy. The employer must comply with the following requirements if the approval of the committee is obtained:

- follow a fair standard in the selection of employees whose contracts will be terminated, such as employees with the lowest performance scores or any other standard;
- grant the employees whose contracts will be terminated a notice period of no less than three months; and
- give the employees whose contracts will be terminated priority to be reappointed if there is a job opportunity that matches their qualifications.

### 4.5 Employee Representations

The Labour Law does not expressly include provisions relating to employee representations.

## 5. Tax Law

### 5.1 Taxes Applicable to Employees/Employers

#### Personal Income Tax

Although Omani citizens and residents are not currently subject to personal income tax unless they solely own an establishment (as defined in **5.2 Taxes Applicable to Businesses**), Oman has introduced a 5% personal income tax (PIT) on individuals with annual income exceeding OMR42,000 effective from 1 January 2028, under Royal Decree No 56/2025.

#### Social Insurance

The following taxes apply.

- Insurance for old age, disability and death – Omani employees must contribute 7.5% of their gross salary to the Social Protection Insurance (SPI). The employer is also required to contribute an amount equal to 11% of the gross salary of an Omani employee. The gross salary is capped at OMR3,000 per month for the purpose of calculating these contributions.
- Insurance for work injuries and occupational diseases – the employer is required to contribute an amount equal to 1% of the gross salary of an Omani employee. The gross salary is capped at OMR3,000 per month for the purpose of calculating these contributions.
- Insurance for employment security – Omani employees must contribute 0.5% of their gross salary to the SPI. The employer is also required to contribute an amount equal to 0.5% of the gross salary of an Omani employee. There is no cap for calculating these contributions.
- Insurance for maternity/paternity leave – the employer is required to contribute an amount equal to 1% of the gross salary of all employees (Omani and expatriates). The gross salary is capped at OMR3,000 per month for the purpose of calculating these contributions.
- Insurance for sick/extraordinary leave – with effect from July 2025, the employer is required to contribute an amount equal to 1% of the gross salary of an Omani employee. The gross salary is capped at OMR3,000 per month for the purpose of calculating these contributions.

Contributions for the three types of insurance referred to above are deducted from the employee's salary on a monthly basis and remitted by the employer to the SPI.

### 5.2 Taxes Applicable to Businesses

#### Income Tax

The following categories of persons (Omani taxpayers) are liable to income tax in Oman:

- enterprises;
- establishments;

- Omani company; and
- permanent establishments.

The tax rate is generally 15% of taxable income, although a lower rate of 3% applies to certain small taxpayers where prescribed conditions are met.

For these purposes:

- "Person" means a natural or juristic person and includes joint ventures and non-Omani partnership agreements that do not assume the form of a company.
- "Enterprise" includes:
  (a) an individual enterprise owned by a natural Omani person which exercises in Oman any of the specific activities specified in Article 159 (bis) of RD 28/2009 (the "Income Tax Law"). The owner of the enterprise shall be determined from the commercial or industrial registers or other fiscal records or documents.
  (b) Omani company that takes the form of partnership, limited partnership or limited liability company and exercises the activities specified in Article 159 (bis) of the Income Tax Law.
- "Establishment" means an establishment solely owned by a natural person who independently carries on a commercial, industrial or professional activity in Oman. The owner of the establishment shall be determined from the commercial or industrial registers or other fiscal records or documents.
- "Omani company" means any person established in Oman as a company under the legislations of Oman, whether it is commercial, civil or any other company, and whatsoever be the legal form of the company, the nationality of the partners, the purpose of its incorporation or the nature of its activity.
- "Permanent establishment" means a fixed place of business through which a business is wholly or partly carried out in Oman by a foreign individual or entity either directly or through a dependant agent. A permanent establishment also includes consultancy service or any other services where such foreign person provides such service in Oman for a period or periods of not less than 90 days in the aggregate in any 12 months.

Special provisions apply to the taxation of income derived from the sale of petroleum. In addition, excise duties were introduced in Oman in 2019 on certain specific goods.

### Economic Stimulus Plan

The Ministry of Finance has published an Economic Stimulus Plan (ESP) as part of its efforts to mitigate the effects of COVID-19 on the economy. The plan addresses the following key areas:

- taxes and fee incentives;
- stimulating business and investment through, for example, the simplification of procedures and the relaxation of regulations for foreign companies;
- SMEs, including a temporary reduction of income tax rates and the postponement of loan repayments due for Al Raffd Fund until year 2021;
- the labour market/employment, including a reduction in fees for hiring ex-pats; and
- banking – the postponement of loan instalments.

The ESP introduced several tax measures, including the introduction of certain provisions relating to the carrying forward of losses.

The ESP also exempts all companies whose main activity is operating in the economic diversification sectors from income tax for five years. Only activities which commenced between 1 January 2021 and 31 December 2022 are eligible for this exemption (subject to the rules and conditions set out by the Oman Tax Authority).

### Amendment to Income Tax Law

The Income Tax Law was amended in 2020 by RD 118/2020. Key amendments include:

- residency provisions to enable the authorities to determine the residential status of both individuals and corporates; and
- submission of only one tax return (which must be submitted within four months from the end of the financial year of the taxpayer).

### Value Added Tax (VAT)

VAT was introduced in Oman pursuant to RD 121/2020, promulgating the Value Added Tax Law. The standard

VAT rate is 5% and is generally applicable to most goods and services. Other supplies – such as food, medicine and medical equipment – are charged at a 0% rate. In addition, certain other services, such as education and healthcare, are generally exempt from tax.

### Withholding Tax

Omani taxpayers are required to withhold tax on any of the following types of payment to foreign entities that do not have a permanent establishment in Oman but which derive income from Oman:

- royalties;
- consideration for carrying out research and development;
- consideration for the use or right of use of computer programs;
- management fees; and
- the provision of services, whether the services are rendered in Oman or outside (subject to certain exceptions).

Withholding tax applies to foreign entities conducting business in Oman through a permanent establishment and does not consider the amount paid or credited to them as part of their income on which tax is levied in Oman.

Withholding tax is applied at 10% of the gross income from the above sources, as modified by any Double Tax Treaties entered into by Oman.

Pursuant to a Royal Directive announced in January 2023, it is understood that dividends and interest will no longer be subject to withholding tax.

Article 4 (bis) (1) of the Executive Regulations of the Income Tax Law sets out the services which do not fall under the purview of withholding tax.

### Pillar Two of the OECD

On 31 December 2024, RD 70/2024 was issued, promulgating the Law of the Top-Up Tax on Constituent Entities of Multinational Groups (the "Top-Up Tax Law"). This Law implements Pillar 2 of OECD's Base Erosion and Profit Shifting (BEPS) framework. The Top-Up Tax Law introduces a 15% domestic minimum top-up tax (DMTT) on entities, including companies, branches and permanent establishments of multinational enterprises (MNEs) situated in Oman.

The Top-Up Tax Law came into force on 1 January 2025. It applies to MNEs operating in Oman with a consolidated annual revenue amounting to or exceeding EUR750 million in two of the last four financial years. The executive regulations to the Top-Up Tax Law are yet to be issued.

## 5.3 Available Tax Credits/Incentives

### Tax Credits

The worldwide income of an entity formed in Oman is taxed in Oman. Tax credits are available to Omani taxpayers (as defined in **5.2 Taxes Applicable to Businesses**) who are subject to foreign taxes on income that is also taxed in Oman. The credit is limited to the amount of tax incurred in Oman.

### Tax Incentives

The FCIL's executive regulations set out the types of investment projects that may be exempt from tax, customs and other charges.

The income of existing companies established in the Salalah free zone, the Al Mazunah free zone and the Duqm SEZ is exempt from tax for a period of 30 years and 25 years for companies established in the Sohar free zone.

Royal Decree 38/2025 establishing the Law of Special Economic Zones and Free Zones (the "Freezone Law") was issued in April 2025, introducing a ten-year income tax exemption for qualifying enterprises, renewable for two similar periods for activities of a special nature, while streamlining the processes for approvals, permits and licensing. The executive regulations to the Freezone Law are yet to be issued. Decisions will also be issued to facilitate the Freezone Law's implementation.

RD 87/2025 established an SEZ in the Governorate of Dhahirah and RD 88/2025 established an SEZ in Rawdah. An Artificial Intelligence Special Zone is also established in the Governorate of Muscat vide RD 50/2026. All these zones enjoy same incentives,

advantages, exemptions and facilities as those provided under the Freezone Law.

### Tax Exemptions

Exemptions from tax are given in two ways: (i) exempt activities and (ii) exempt income.

#### *Exempt activities*

Tax exemptions are available for industrial (manufacturing) activities; the exemption is for five years and cannot be renewed. Tax exemptions are also available to establishments/Omani companies engaging in shipping and specific investment funds. The ESP has exempted certain commercial activities from income tax – see 5.2 Taxes Applicable to Businesses (Economic Stimulus Plan).

#### *Exempt income*

Examples of income exempt from tax include:

- dividends received from Omani companies;
- profits or gains on the disposal of securities listed on the Muscat Securities Market (currently known as Muscat Stock Exchange);
- the income of foreign marine companies conducting activities in Oman through an authorised agent, but only where the country of the foreign company affords reciprocal treatment;
- the income of foreign airlines carrying on business through permanent establishments in Oman to the extent of the income from operating aeroplanes for international transport, but only where reciprocal treatment is afforded in the airline's home country; and
- the income of a special purpose company established in Oman under the Capital Market Law.

While taxable under law, foreign companies engaged in oil and gas exploration activities normally have their liability to tax discharged by the government under the terms of their oil and gas concession agreements.

Foreign companies working for the government on projects deemed to be of national importance may be able to negotiate a tax protection clause whereby the government reimburses any tax paid by them.

## 5.4 Tax Consolidation

Oman does not have a regime of tax consolidation. Each taxable entity is required to file its own Annual Return of Income.

## 5.5 Thin Capitalisation Rules and Other Limitations

If the debt-to-equity ratio exceeds 2:1 in the case of related party debt, interest on the excess debt is not deductible for tax purposes. This rule applies to all Omani taxpayers other than banks and insurance companies, permanent establishments of foreign companies or proprietary (Omani-owned) establishments. Interest paid to related parties is allowed only to the extent the loan terms are at arm's length.

## 5.6 Transfer Pricing

Transactions between related parties must be valued at arm's length. There is no specific guidance on acceptable methods for determining an arm's-length price. In practice, the Oman tax authorities apply transfer pricing rules in accordance with OECD guidelines.

## 5.7 Anti-Evasion Rules

Oman has stringent anti-evasion rules. Where a taxpayer fails to declare the correct income in their income return, the Chairman of the Tax Authority may impose a fine between 1% and 25% of the difference between the tax value of the taxpayer's actual taxable income and the tax value as per the return submitted.

Subject to any harsher punishment specified in the Penal Code or any other law, the following offences are punishable by imprisonment for a period of between six months and three years and/or by a fine of between OMR5,000 and OMR50,000:

- intentional refusal by the tax manager to submit the actual taxable income;
- intentional abetment or assistance of the person subject to tax to submit incorrect tax declarations, accounts, records, lists of assets or debits or other documents relating to the tax return of the person subject to tax;
- intentional destruction, concealment or disposal of any documents, records, accounts or lists required by the Tax Authority to be submitted if such

destruction, concealment or disposal takes place within two years of the date of receipt of the Tax Authority's notice; or
- intentional violation of the obligations to, among other things, provide data, information or documents regarding taxation-related international treaties or failure to do so as a result of gross negligence.

### 5.8 Tariffs

Oman's tariff regime is primarily governed by the Gulf Cooperation Council (GCC) Common External Tariff, under which most imports are subject to a standard customs duty of 5%. However, higher tariffs - sometimes reaching up to 100% - are applied to selected goods in line with cultural, health and economic objectives. These include products such as tobacco, alcohol, energy drinks and pork, largely due to public health and religious considerations. In contrast, essential goods such as basic foodstuffs, medicines and humanitarian items are typically exempt from customs duties.

While tariff rates are generally not country-specific, Free Trade Agreements (FTAs) play a key role in reducing or eliminating customs duties. Imports from GCC member states benefit from duty-free access, provided they meet the applicable rules of origin. The US-Oman Free Trade Agreement also provides near-complete tariff exemption for qualifying goods from the United States, while the GCC-Singapore FTA offers preferential terms for eligible imports from Singapore.

Oman's tariff policy seeks to balance trade liberalisation with the protection of key domestic industries. In 2025, the country adopted the GCC Unified 12-digit Tariff Code, standardising product classification across the region and enhancing regulatory transparency without altering existing duty rates.

Oman's active engagement in new FTA negotiations is expected to have a significant impact on its future tariff landscape. Through its participation in GCC-level negotiations with partners such as the United Kingdom, Turkey, and Japan, Oman is working to expand preferential access for its exports while further liberalising imports from key trading partners.

## 6. Competition Law

### 6.1 Merger Control Notification

Anti-competitive practices in Oman are regulated by the Competition Law RD 67/2014 (as amended – the "Competition Law") and its executive regulations. Any person intending to take any action resulting in an "economic concentration" must submit a written application to the MOCIIP.

An "economic concentration" is defined in the Competition Law as "any act that results in the transfer of the ownership of all or part of the assets, shares, stocks, use, rights or obligations of one person to another person or establishing consortiums or amalgamations or combining two or more managements under one joint management, which is likely to cause a person or a group of persons directly or indirectly to be in a dominant position." Joint ventures are, therefore, potentially caught by this definition.

Any action that would lead to an economic concentration resulting in the acquisition of more than 50% of the market concerned may not be approved by the MOCIIP, which has the discretion to approve or reject applications falling below this 50% threshold.

The scope of the Competition Law is broad. It applies to all activities of production, commerce, services and any other economic or commercial activities practised in Oman and to any economic or commercial activities performed outside Oman that would have consequential effects inside Oman.

The Competition Law also regulates the abuse of IP rights, where this would have an adverse effect on competition. It does contain limited exemptions, however, including for public utility companies and certain R&D activities.

### 6.2 Merger Control Procedure

The MOCIIP will examine any application for clearance of an economic concentration (see **6.1 Merger Control Notification**) and issue a decision within 90 days (and will be deemed to have approved the application if it does not respond within such timeframe).

## 6.3 Cartels

The Competition Law provides that any agreement, arrangement or practice (whether concluded inside or outside Oman) that has the object of preventing, limiting or weakening competition is prohibited.

Express examples of prohibited practices include collusion in bids or tenders among persons, or drawing up provisions in the conditions of tenders such as the inclusion of the trade mark of the commodity or specification of its type (ie, cartels).

The Competition Law contains a non-exhaustive list of practices that would be treated as having the object of preventing, limiting or weakening competition.

## 6.4 Abuse of Dominant Position

The abuse of a dominant position is prohibited under the Competition Law. Any person who enjoys a dominant position is prohibited from carrying out any practice likely to prejudice, restrict or prevent competition. The Competition Law also contains a non-exhaustive list of practices that would be caught by this prohibition on abusing a dominant position.

The Competition Law defines a dominant position as the ability of a person or a group of persons who directly or indirectly work jointly to control or influence the market concerned, including the acquisition of more than a 35% share of that market. The "market concerned" is also defined in the Competition Law, and has two key elements: relevant product and the geographical scope. Identifying and applying the scope of the "market concerned" to the activity/practice in question is key to determining whether a dominant position has arisen.

Agreements and arrangements (whether concluded inside or outside Oman) that aim to secure the monopoly of the import, production, distribution, sale or purchase of any goods or circulation thereof are also prohibited, as is performing any monopolistic act that would affect the market. For these purposes, a "monopoly" is defined in the Competition Law as the control by a person or a group of persons directly or indirectly of the quantity and prices of a kind of goods or service in a manner that would result in a restriction or cause an adverse effect on the freedom of competition.

### The Executive Regulations

In January 2021, the executive regulations of the Competition Law were issued pursuant to MOCIIP Ministerial Decision No 18/2021 (the "Regulations"). The Regulations aim to remove uncertainty and provide clear guidance in determining whether or not an arrangement would fall within the scope of the Competition Law.

In doing so, the Regulations provide further guidance on the meaning of dominance, relevant products and geographical scope. They should therefore be consulted when assessing whether or not an arrangement would fall within the scope of the Competition Law (ie, whether or not an arrangement would be considered a prohibited practice or whether a transaction would require MOCIIP pre-approval).

The Regulations also set out clear guidance as to when market dominance could be triggered, as follows:

- where a person or persons acquire shares exceeding 35% of the relevant market; and
- where a person is able to influence product prices, or the volume of the supply of products, even if that person's share is less than 35% of the relevant market.

The Regulations set out the process to apply for MOCIIP approval for an economic concentration and provide that the application must be accompanied by several documents, including information determining the nature and structure of the economic concentration. Justification for the economic concentration, copies of reports, studies and questionnaires prepared for the purpose of assessing the economic concentration must also be provided. It is important to note that the Regulations provide that all documents submitted as part of the economic concentration application must be in Arabic; if they are in a foreign language, an attested and certified Arabic translation must be attached.

The MOCIIP has 90 days from the date of receiving all the required information and documents to consider the application and make its decision. The MOCIIP may approve (subject to conditions) or reject the application. A rejected or conditioned application can be appealed to the Minister of the MOCIIP.

## 7. Intellectual Property

### 7.1 Patents

Under the Industrial Property Rights Law RD 67/2008 (as amended – the "IPR Law"), an invention is patentable if it is new, involves an innovative step, and is capable of industrial application.

Broadly speaking, the procedure to register a patent is as follows.

- The procedure is commenced by submitting an application to the Directorate of Intellectual Property at the MOCIIP (the Registrar) in the prescribed form, accompanied by a petition (containing all the data concerning the applicant, the inventor and the title of the invention, and a statement proving the applicant's right to the patent if they are not the inventor) and a description of the invention.
- Eighteen months after the filing date, the Registrar will open the patent application for public examination. Upon payment of the prescribed fee at any time between the filing date and the expiry of such 18-month period, the applicant may request the Registrar to open the application for public examination.
- If the Registrar considers that the requirements set out in the IPR Law are not satisfied, they will notify the applicant to submit their observations and amend or divide the application within three months of the date of the notice.
- If the Registrar grants the patent, the applicant will be required to pay the prescribed fee within 90 days.
- The patent will be considered to be granted on the date of publication of such grant by the Registrar, and a certificate of grant signed by the Registrar will be issued.

A patent generally expires 20 years after the filing date.

### 7.2 Trade Marks

The IPR Law also regulates trade marks. A trade mark is any sign capable of being represented graphically in a manner that distinguishes the goods or services of one supplier from those of another supplier.

Broadly speaking, the procedure to register a trade mark is as follows.

- The procedure is commenced by submitting a trade mark application in the prescribed form along with the relevant documents (such as details of the applicant and a power of attorney) to the Registrar.
- The Registrar will then examine the application to ensure that it complies with the prescribed requirements and is capable of being registered.
- Once the Registrar establishes that the application for registration meets all the legal requirements, the application will be published, and any interested party may submit a written objection to the registration to the Registrar after payment of the prescribed fees within 90 days of the publication date.
- If no objection is raised, the Registrar shall register the trade mark, publish it and issue a registration certificate to the applicant.
- Alternatively, the application for registration of the trade mark may be refused by the Registrar if it does not meet the requirements; the applicant would be notified of the decision and its reasons.
- The applicant may oppose the decision refusing the application for registration of the trade mark within 60 days of the date of notification. The applicant can also appeal to the competent court against the decision to refuse the application.

The protection period for a trade mark registered in Oman is ten years from the filing date (which may be renewed).

### 7.3 Industrial Designs

Industrial design is defined under the IPR Law as "any combination of lines, colours or any three-dimensional form whether connected with lines or colours or not, provided that such combination or form gives a distinctive appearance to an industrial or a handicraft

product forming a sign of an industrial or a handicraft product which is visually perceptible with an unaided eye." For the industrial design to be eligible for registration, it must be:

- new;
- not disclosed to the public; and
- be industrially applicable.

The term of protection for an industrial design registered in Oman is five years, which may be renewed for two consecutive periods of the same duration upon the owner's request and after payment of the prescribed fees.

Broadly speaking, the procedure to register an industrial design is as follows.

- The procedure is commenced by submitting an application for registration to the Registrar in the prescribed form, signed by the applicant or the applicant's lawyer.
- The application must be accompanied by drawings, photographs and a petition that sufficiently describes the goods incorporating the industrial design and indicates the type of products for which the industrial design is used.
- The Registrar will then evaluate the application and notify the applicant of the decision to accept or reject the application. The applicant must pay the prescribed fees within 90 days of the date of such notification.
- The Registrar will publish the industrial design in the Official Gazette.
- Upon successful completion of the no objection period, the Registrar will issue the registration certificate for the industrial design.

An industrial design expires five years from the filing date and is renewable for two consecutive periods of the same duration upon the owner's request.

### 7.4 Copyright

The Law for the Protection of Copyright and Neighbouring Rights RD 65/2008 (as amended – the "Copyright Law") regulates copyright law in Oman. Oman ratified the Berne Convention for Protection of Literary and Artistic Works in July 1999.

Protection under the Copyright Law is provided to original literary, technical and scientific works, regardless of their value, nature, method of expression, or the purpose of their authorship. Computer programs and databases read from a computer or elsewhere are protected by copyright. Mere ideas, procedures, methods of work, mathematical concepts, principles, inventions and data are not protected by copyright.

Before the author's work is published, an author or their representative may deposit an application for protection of their work to the MOCIIP in the prescribed form, together with three copies of the work. The Copyright Law considers such a deposit tantamount to ownership. The applicant will be provided with a deposit number, and the deposit will then be published in the Official Gazette. Thereafter, an application is submitted to the Ministry for the data deposit certificate for the work.

The financial rights of an author of a literary work, including computer programs, are protected during their life and for 70 years starting from the commencement of the calendar year following the year of their death.

Registration of title to the authorship of a work acts as proof of ownership to the work (Registered Owner), and the onus to prove that the work does not belong to the Registered Owner is on the infringer. In addition to the civil and penal remedies available, a title-holder is entitled to remedies at borders and interim/ex parte remedies. Civil remedies include orders to prevent the export/import of the goods involved in the infringement, orders to cease the infringement, and claims for compensation based on losses incurred and profits made by the infringer. If copyright infringement is established, the court must pass a judgment to confiscate any assets resulting from the infringement. Except in exceptional cases, the court must also order the confiscation of all the commodities involved in the infringement and the material and equipment used to commit the act of infringement and order their destruction at the expense of the judgment debtor or their disposal outside the trade channels if the destruction is liable to undermine public health or the environment.

### 7.5 Others

Under the Penal Code, a person who becomes acquainted with a secret by virtue of their profession, occupation or work and (without the consent of the concerned person) discloses it other than in the circumstances permitted by law, or uses it for their personal benefit or the benefit of another person, may be imprisoned for between one month and one year.

## 8. Data Protection

### 8.1 Applicable Regulations

Oman has issued its first comprehensive personal data protection law, enacted by RD 6/2022 (DPL). The DPL came into force on 13 February 2023 and was further supplemented by the Executive Regulations issued by the Ministry of Transport, Communications and Information Technology (the MOTCIT) pursuant to Ministerial Decision 34/2024 (the "Regulations").

The DPL introduces matters such as the rights of the data subject and the obligations of controllers and processors of personal data.

The DPL applies to any processing of personal data, which is defined in the DPL as data that makes a natural person identifiable, directly or indirectly, by reference to one or more identifiers. Identifiers include but are not limited to an individual's name, civil identification number or other data related to an individual's genetic, physical or mental identity.

Article 3 of the DPL sets out certain circumstances in which the provisions of the DPL will not apply to the processing of personal data. These circumstances include but are not limited to the following:

- the protection of national security or public interest;
- the execution by the units of the Administrative Apparatus of the State and other public legal persons of their functions prescribed to them under law;
- compliance with a legal obligation imposed on a controller under any law, judgment or court decision; and
- the protection of the economic and financial interests of the State.

#### Rights of the Data Subject

##### *Consent*

Under the DPL, personal data may only be processed with the data subject's express consent. This is to ensure that any processing of personal data is done within the framework of transparency, honesty and respect for human dignity. Any request to process personal data must be in writing, in a clear and understandable manner.

##### *Sensitive personal data*

The DPL provides for a general restriction on the processing of certain data, including:

- genetic and biometric data;
- health data;
- data relating to an individual's ethnic origin, sexual life, political or religious opinions or beliefs, criminal convictions; and
- data relating to security measures.

The processing of such data will require authorisation from the MOTCIT.

##### *Other rights*

Data subjects enjoy several other rights under the DPL, including the right to:

- obtain a copy of their processed personal data;
- transfer personal data to another controller;
- revoke their consent in respect of the processing of their personal data;
- amend, update and withhold personal data; and
- be notified of any breach or violation of their personal data and measures taken in this regard.

### 8.2 Geographical Scope

The DPL applies to any processing of data in Oman. Similarly, the transfer of data outside Oman may only be done in accordance with the controls specified in the Regulations.

### 8.3 Role and Authority of the Data Protection Agency

The MOTCIT is the authority responsible for implementing the DPL and has the right to do the following:

- prepare the controls related to the protection of personal data, including specifying the necessary safeguards and measures required to protect personal data;
- issue procedures for processing personal data and ensure the compliance of controllers and processors with such procedures;
- receive complaints filed by the data subject and decide on them within the period specified in the Regulations;
- co-operate with competent entities in other countries with respect to the protection of personal data;
- provide advice and support to units of the administrative apparatus of the State and other public legal persons in matters related to personal data protection;
- draft guidelines for implementing the DPL whenever necessary; and
- maintain a register of controllers and processors meeting the conditions in accordance with the regulation.

To protect the rights of data subject, the MOTCIT may:

- issue warnings to controllers and processors who violate the provisions of the DPL;
- order the correction or removal of personal data;
- suspend the processing of personal data, either temporarily or permanently;
- suspend the transfer of data to another country or an international organisation; and
- take any other measures it deems necessary for the protection of personal data.

#### Sectoral Laws

To the extent they do not contradict the DPL and the Regulations, certain sectoral laws containing limited data and privacy protection provisions will continue to apply. These include the Telecommunications Regulatory Law and the Banking Law, for example.

## 9. Looking Forward

### 9.1 Upcoming Legal Reforms

#### Securities Law Executive Regulations

The Securities Law came into force on 20 June 2022, repealing Royal Decree No 80/1998 promulgating the Capital Market Law, except for Articles 46–58, which shall remain in force. A draft of the executive regulations of the Securities Law has been published by the Financial Services Authority. The final executive regulations are yet to be issued.

The executive regulations are expected to regulate matters such as the conditions and procedure for establishing and licensing entities that are subject to the Securities Law, activities which require a licence to be undertaken and those which do not, and the prohibited activities.

#### Regulation of Virtual Assets

It is understood that the FSA and other regulators in Oman intend to promote and develop fintech products. The FSA is currently preparing the regulatory framework for the regulation of virtual assets, including the licensing, regulation and supervision of Virtual Asset Service Providers.

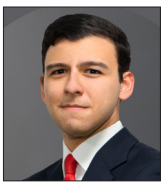
**BDO Legal Panama** is a leading professional services firm with over 35 years of experience in the Panamanian market. As a member of the BDO international network, present in over 160 countries, BDO Legal Panama offers a comprehensive suite of services including audit and assurance, tax, legal, advisory, and business outsourcing. The firm is known for combining global standards with extensive local expertise, providing tailored solutions to clients across various industries such as construction, technology and consumer goods. The firm is recognised for its client-centric approach, multidisciplinary teams, and commitment to innovation and efficiency.



## Authors

**Rafael Rivera** is the managing partner at BDO Legal Panama and leads the firm's legal and tax division. With extensive experience in tax consulting, planning and litigation, he advises on complex mergers and acquisitions, including cross-border transactions under Double Taxation Avoidance Agreements. Rafael holds a Master's in International Taxation from the University of Leiden, The Netherlands, and a Law degree from the University of Panama. He is a published author in international tax journals and a recognised voice in the region's tax landscape. His leadership continues to drive BDO Panama's strategic growth and innovation in legal and tax advisory services.

**Javier José Vallarino** is a partner of legal services at BDO Legal Panama. He holds a Bachelor's degree in Law and Political Science from Universidad Católica Santa María la Antigua in Panama and a Postgraduate degree in Labour Law. He has extensive experience in labour law, as well as in matters related to the social security regime, providing comprehensive labour advisory services to construction companies, ports, banks, insurance companies, hotels, restaurant chains, and supermarket chains, among others. He previously served as labour counsel to the Panama Chamber of Commerce, Industries and Agriculture. He is a member of the board of directors of ANREH. He is a professor of Labour Law and Social Security I, II, and III at the Faculty of Law and Political Science of Universidad Santa María la Antigua.

**Juan Vallarino** is a senior associate at BDO Legal Panama, specialising in corporate and tax law. He holds a Bachelor's degree in Law and Political Science from Universidad Católica Santa María la Antigua in Panama, as well as a Master's in Law (LLM) from Tulane University. Juan provides legal advice on M&A transactions, contract drafting, due diligence and compliance, the establishment of companies in special economic zones, the application of international double taxation treaties, the preparation of appeals before the Panamanian Tax Authorities, and other tax-related matters. Juan is a member of the International Fiscal Association (IFA).

**Karen Y. Tejeira** is a senior associate at BDO Legal Panama, specialising in labour, immigration and social security law. She holds a Bachelor's degree in Law and Political Science from Universidad Católica Santa María la Antigua in Panama, as well as a Bachelor's degree in International Trade and Logistics. She also holds a Master's in Labour Law from Universidad Católica Santa María la Antigua in Panama. She has extensive experience in labour law, immigration and social security matters, providing comprehensive legal advice to clients across various sectors, including construction companies, ports, banks, insurance companies, hotels, restaurant chains, and supermarket chains.

**Carolina Lino** is a senior associate at BDO Legal Panama, specialising in tax law. She holds a Bachelor's degree in Law and Political Science from the University of Panama. Carolina has furthered her expertise with a postgraduate diploma in Tax Law, with a focus on tax audits and fraud typologies, from the Instituto de Estudios e Investigación Jurídica (INEJ). She also earned a Master's degree in Tax Law from the same institution. Her academic background and practical experience position her as a key advisor in complex tax matters, offering strategic legal support to both national and international clients.

# 1. Legal System

## 1.1 Legal System and Judicial Order

Panama has a civil law legal system, ie, it is primarily based in written laws and legal codes. The highest norm is the Political Constitution of Panama, enacted in 1972. Panama recognises conventionality control; hence ratified international treaties are recognised at the same level as the Constitution.

After the Constitution, Panamanian law recognised the legal codes, law, decrees, executive decrees, resolutions and ordinances as binding laws.

Judicial order in Panama is structured as follows, from highest to lowest dependency:

- the Supreme Court of Panama;
- superior courts; and
- lower courts.

Each of these hears cases in accordance with its specific faculties and area of law.

# 2. Restrictions on Foreign Investments

## 2.1 Approval of Foreign Investments

Generally, foreign direct investment in Panama does not require prior governmental authorisation. The country maintains a liberal and investor-friendly legal framework that encourages foreign participation across most sectors of the economy. Foreign investors are generally granted the same rights and protections as domestic investors.

Nevertheless, certain sector-specific restrictions and regulatory exceptions may apply, depending on the nature of the activity or industry in which the investment is made. These limitations are typically related to national security, public interest or activities reserved exclusively for Panamanian nationals under applicable laws.

## 2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance

In Panama, foreign investors are generally not required to obtain prior authorisation to conduct business. However, certain regulated sectors do require specific approvals or licences, including financial services, banking and insurance, public utilities such as telecommunications, electricity and broadcasting.

If a foreign investor engages in a regulated activity without obtaining the necessary authorisation from the competent Panamanian authorities, they may be subject to administrative sanctions, including fines and the potential closure of their business operations. The applicable procedures and timelines for enforcement vary depending on the nature of the activity and the regulatory body overseeing the sector, as not all industries fall under the jurisdiction of the same authority.

## 2.3 Commitments Required From Foreign Investors

Panamanian legislation imposes certain nationality-based restrictions on foreign investment in specific sectors. For example, only Panamanian nationals are permitted to practise liberal professions, such as law and medicine, in accordance with constitutional and regulatory provisions.

Although a foreigner may own a business in Panama, it is important to note that the Political Constitution of the Republic of Panama reserves retail trade to Panamanian nationals or to legal entities whose shareholders are Panamanian nationals. Retail trade is understood as the sale to consumers or the representation or agency of manufacturing or commercial companies, or any other activity that the law classifies as falling within such trade.

Furthermore, foreign investors seeking to operate in regulated sectors - such as financial services, banking and insurance - must obtain the appropriate licence from the relevant supervisory authority, such as the Superintendency of Banks or the Superintendency of Insurance and Reinsurance.

In the case of public utility services, including telecommunications, electricity, and broadcasting, investors are required to obtain a licence from the Public Services Authority (ASEP) prior to commencing operations.

Failure to comply with these licensing and regulatory requirements may result in administrative sanctions, including fines and the potential suspension or closure of business operations.

### 2.4 Right to Appeal

Foreign investors will have the opportunity to challenge the decisions made by the authority. At first instance, the foreign investor can appeal and request that the authority reconsider its decision. The next steps will depend on which authorities are responsible for authorising the investment.

## 3. Corporate Vehicles

### 3.1 Most Common Forms of Legal Entity

Panama offers a flexible and investor-friendly legal framework for the incorporation of business entities. The two most commonly used corporate structures are Limited Liability Companies (LLCs or S. de R.L.) and Corporations (S.A.).

#### Limited Liability Companies

Governed by Law No 9 of 2009, LLCs require a minimum of two partners, who may be natural or legal entities. Contributions may be made in cash, in kind, or through services, with in-kind contributions required to be fully paid. While no minimum capital is mandated, a recommended amount of USD10,000 is suggested for registration purposes.

In an LLC, partners' liability is limited to the amount of their contributions. LLCs may engage in any lawful civil or commercial activity. The Partners' Assembly is the supreme governing body and may delegate authority to an Administrator or designated officers.

#### Corporations

Regulated by Law No 32 of 1927, corporations require at least two subscribers, three directors, and the appointment of officers and a legal representative. A minimum of one shareholder is required. While no minimum capital is mandated, USD10,000 is recommended for registration; this amount does not need to be paid to any entity or deposited in a bank.

Corporations are favoured for their shareholder anonymity, which may only be lifted by court order in cases involving unlawful activity. They are widely used for holding structures, real estate investments and cross-border operations, offering advantages in governance, tax planning and liability separation.

The Board of Directors manages the company's affairs, while the Shareholders' Meeting serves as the highest decision-making body.

### 3.2 Incorporation Process

Before proceeding with the incorporation of an entity in Panama, it is necessary to understand the purpose and the operation of the company, for example whether it will be an operative or non-operative entity and whether it will be an onshore or offshore entity. The incorporation of a legal entity in Panama follows the following steps.

#### Due Diligence (KYC)

In accordance with Law No 23 of 2015 and its modifications, it is mandatory to conduct KYC procedures to verify client identity and ensure compliance with anti-money laundering and counter-terrorism financing regulations, prior to the incorporation of the entity.

#### Notarisation and Registration

After completing the KYC with positive results, the articles of incorporation must be formalised before a Notary Public and registered with the Public Registry of Panama, along with payment of the corporate annual tax and registration fees. The process typically takes two to three business days.

#### Tax Registration

Once the company is registered in the Public Registry of Panama, a Tax Identification Number (RUC) must be obtained from the Panamanian Tax Authority (DGI). This obligation must be complied with by all entities governed by Panamanian law, regardless of whether the entity conducts operations in the country.

#### Commercial Licence

To operate commercially, a Notice of Operation or Commercial Licence must be obtained, depending on the business activity, in accordance with the International Standard Industrial Classification (ISIC). Cer-

tain activities are exempt, such as liberal professions. A Commercial Licence is only mandatory for those companies that will operate within or from Panamanian territory.

### Municipal Registration

All operative companies must register with the Municipality where they are domiciled. Companies will pay the municipality annual taxes for the activities rendered, as well as taxes for publicity purposes.

After complying with this process, a company could be registered in Panama in four to seven business days.

## 3.3 Ongoing Reporting and Disclosure Obligations

Panamanian companies are legally required to report any changes to their corporate structure - such as modifications to share capital, corporate purpose, registered address, board of directors, or legal representation - by formalising such changes through a public deed and registering them with the Public Registry of Panama.

Entities operating in regulated sectors (eg, banking, securities) must disclose financial and shareholder information in accordance with sector-specific laws. In contrast, companies in non-regulated sectors (eg, real estate) are only required to disclose such information upon request by a competent authority during formal investigations.

Regarding beneficial ownership, Limited Liability Companies disclose their partners by default. Corporations, while benefiting from shareholder anonymity, must still report their ultimate beneficial owners through their resident agent to the Beneficial Ownership Registry, managed by the Superintendency of Non-Financial Entities, pursuant to Law No 23 of 2015 and Law No 129 of 2020.

This Registry is confidential and accessible only to competent authorities under specific legal circumstances, such as investigations related to money laundering or terrorism financing. Failure to comply with the disclosure of the beneficial owner, whether during the incorporation procedure or after any subsequent modifications, can lead to penalties as well as the resignation of the registered agent.

## 3.4 Management Structures

### Corporate Governance in Panamanian Entities

In Panama, Corporations are governed by two main bodies: the Shareholders' Meeting, which is the supreme authority, and the Board of Directors. Both bodies are required to issue prior notices for meetings, although such notice may be waived before or after issuance. These bodies typically operate independently, with the Shareholders' Meeting issuing directives or delegating authority to the Board.

Each shareholder is entitled to one vote per share, whether the shares are registered with or without par value, or bearer shares - provided the bearer presents the share certificate or complies with the bylaws.

The Board of Directors, composed of at least three individuals, is responsible for the management and administration of the company. It appoints officers (President, Secretary, Treasurer, etc) and may amend the bylaws unless otherwise restricted.

Corporations also designate a Legal Representative, who holds judicial and extrajudicial authority to represent the company before third parties.

In Limited Liability Companies, the supreme body is the Partners' Assembly, which may adopt resolutions in writing, whether the partners are present or not. This body directs the company, appoints or removes managers, and may amend the bylaws.

The Manager, who may be one or more individuals appointed by the partners, is responsible for the company's administration, convening partner meetings, and maintaining the partners' registry and corporate minutes.

## 3.5 Directors', Officers' and Shareholders' Liability

Under Panamanian law, directors are subject to limited liability but remain personally and jointly responsible for the diligent and lawful administration of the company. This duty applies both to the company and to third parties and is recognised in the legal frame-

work governing both corporations and limited liability companies.

The piercing of the corporate veil is an exceptional legal mechanism, applicable only by court order and following due legal process. It allows authorities to disregard the company's separate legal personality in cases of fraud or abuse, potentially extending liability to include criminal sanctions.

For instance, fraudulent insolvency or liquidation intended to defraud creditors may constitute a criminal offence under the Panamanian Criminal Code, punishable by five to ten years of imprisonment and disqualification from commercial activity.

These provisions reinforce the importance of transparency, good faith and legal compliance in corporate governance.

## 4. Employment Law

### 4.1 Nature of Applicable Regulations

Panama's labour law is protective of employees, as established in the Political Constitution, which recognise labour as both a right and a duty.

The legal system acknowledges the employee as the more vulnerable party in the employment relationship, warranting safeguards to ensure fair treatment.

Collective bargaining agreements require prior union recognition and aim to balance employer-employee relations.

While employment contracts are typically formalised in writing, Panamanian law presumes the existence of an employment relationship in favour of the employee even in the absence of a written agreement, where one person provides a service to another providing there is legal subordination and economic dependence.

### 4.2 Characteristics of Employment Contracts

The key characteristics of employment contracts include the following.

- Written form: employment contracts must be in writing, with certain exceptions such as domestic or agricultural work. Nevertheless, it is strongly recommended that all employment relationships be formalised in writing. This is particularly important considering that the Labour Code provides that, in the absence of a written contract, the facts alleged by the employee are presumed to be true. This legal presumption may be used by the employee to distort the facts, potentially placing the employer at a disadvantage - or conversely, allowing the employer to impose excessive service obligations on the employee.
- Content requirements: the employment contract must include general information about both the employee and the employer, as well as details regarding the employee's dependents or family members. It must clearly define the services to be rendered, the place of work, the type of employment term (fixed-term, indefinite, or for a specific project), the work schedule, and the date and place of execution. The contract must be signed by both parties.
- Formality: employment contracts must be submitted for endorsement to the Ministry of Labour and Workforce Development, or to the corresponding Regional Labour Directorate based on the place of execution. This process ensures that the contract complies with all legal requirements and is duly stamped by the relevant authority.

It is important to note that failure to comply with a written contract may trigger legal presumptions in favour of the employee. While an employment contract always governs and formalises a labour relationship, the existence of such a relationship does not depend on a written contract in order to be legally recognised.

### 4.3 Working Time

Panamanian labour legislation does not establish a minimum number of working hours, which allows employers the flexibility to hire employees on a part-time or reduced-hour basis. However, the law does set a maximum working schedule, reflecting the principle that work must be compatible with the rest and well-being every human being requires. Maximum hours depend on the type of work schedule, as follows.

- Daytime work shifts: a maximum of eight hours per day and 48 hours weekly.
- Nighttime work shifts: a maximum of seven hours per day and 42 hours weekly.
- Mixed work shifts: a maximum of seven and a half hours per day and 45 hours weekly.

Nighttime and mixed work shifts are paid for as a daytime work shift.

### Overtime Regulation

Overtime refers to any hours worked beyond the employee's regular schedule. Overtime is regulated as follows.

- Voluntariness: overtime must be voluntary. While the employer may request additional hours, the employee must agree to provide the service beyond their regular schedule. The employee is not obligated to accept unless specific exceptions apply - such as emergencies, imminent risks to human life, or threats to the existence of the company or project. Collective bargaining agreements may also impose mandatory overtime in certain cases.
- Employer authorisation: overtime must be expressly/or tacitly authorised or requested by the employer. If an employee continues working beyond their regular hours without such authorisation, the employer could impose disciplinary measures on the employee.
- Meal breaks must be respected: employees are not required to work during their designated meal or rest breaks. If an employee is on a lunch break, the employer cannot demand that this time be used for overtime work.
- Recordkeeping and compensation: overtime hours must be recorded and compensated according to the time of day they are worked. Examples include:
  (a) day shift overtime: a 25% surcharge on the regular hourly wage up to 6.00pm;
  (b) night or extended mixed shift overtime: a 50% surcharge;
  (c) extension of the night shift or mixed shift that begins during the night period: 75%; and
  (d) holiday or mandatory rest day overtime: a 150% surcharge applies.

### Humanitarian Limits

For humanitarian reasons, there are limits to the number of overtime hours an employee may work: a maximum of three hours per day and nine hours per week. If these limits are exceeded, the employer must pay an additional 75% surcharge

There are also restrictions on overtime for minors under the age of 16, pregnant employees and for jobs that are inherently hazardous or unhealthy.

## 4.4 Termination of Employment Contracts

Termination of individual employment contracts is strictly regulated under the Labour Code and must fall within specific legal grounds, including death of the employee or employer, expiration of a fixed term, completion of a specific project, mutual consent, legal impediment, justified dismissal, or unjustified dismissal.

### Justified Dismissal

Justified dismissal is permitted for disciplinary, non-attributable or economic reasons. Employers must follow due process, which includes a written notice to the employee clearly describing the circumstances of the manner, time, and place of the alleged fault committed by the employee.

### Unjustified Dismissal

Unjustified dismissal is allowed under the Panamanian Labour Law; however, in addition to the acquired labour rights and severance, the following must be paid:

- for permanent employees with less than two years of service, one month of salary in lieu of notice; and
- for permanent employees with more than two years of service, three months of accrued wages, and 25% in compensation if the company is not up to date with contributions to the unemployment fund.

### Mutual Consent

Mutual consent must be in writing and cannot involve the waiver of acquired rights. Coercion is not acceptable, and the employee has the right to refuse the employer's offer.

### Resignation
Resignation can be voluntary or justified. In the case of resignation, the employee must issue a letter of resignation duly stamped by the Ministry of Labour; for voluntary resignation, 15 days' notice must be given to the employer.

### Severance and Seniority Premium
All employees with an indefinite employment contract are entitled to receive a seniority premium of one week's salary per year of service or its proportional amount, regardless of the reason for termination.

Severance compensation for employees with an indefinite employment contract who started employment after 14 August 1995 is calculated as follows:

- 3.4 weeks for every year worked or its proportional amount, during the first ten years; and
- every year thereafter shall be compensated with one week's wages for every year of service.

Severance compensation for employees with an indefinite employment contract who started employment before 14 August 1995 is calculated as follows.

- For less than one year of service, compensation is equivalent to one week's salary for every three months worked. Compensation must not be, in any case, less than one week's salary.
- For a labour relationship of one to two years, compensation is equivalent to one week's salary for every two months worked.
- For a labour relationship of two to ten years, compensation is equivalent to three weeks' salary for each year worked.
- For a labour relationship exceeding ten years, compensation is equivalent to one week's salary for each year worked.

For employees hired under a fixed-term contract, when the employment relationship is terminated without justified cause before the expiry of the employment contract, the employer will be legally obliged to pay the employee severance equivalent to the remaining salaries due until the end of the employment term.

### Collective Dismissal
Collective dismissal is permitted for economic reasons such as bankruptcy, reduced production, or depletion of resources, but requires prior authorisation from the Ministry of Labour. If no decision is issued within 60 days, the dismissal is deemed justified by law. The Ministry may intervene to protect employees and ensure business continuity.

If company assets are insufficient to cover labour obligations, the Ministry is responsible for determining and overseeing the liquidation of assets to satisfy employee claims.

## 4.5 Employee Representations
In Panamanian labour law, employees are not required to be represented by any individual or entity. However, if a labour union exists and the employee is affiliated with it, the union is authorised to represent the employee before the employer and/or the administrative labour authority.

If an employer intends to make decisions that collectively affect the workforce and a union is present, such matters must be submitted to the union for review. Furthermore, if the employer wishes to modify any terms previously established in a collective bargaining agreement, such changes must be negotiated with the union(s) representing the employees.

The union also has the right to negotiate a new collective bargaining agreement with the employer. The union, or a unified group of workers seeking to negotiate employment conditions or a collective agreement, must submit a written request addressed to both the employer and the administrative labour authority. If no agreement is reached, the labour authority may intervene to facilitate conciliation. Should conciliation fail, the workers have the legal right to initiate a strike. If both parties reach an agreement, a collective bargaining agreement will be executed.

## 5. Tax Law

### 5.1 Taxes Applicable to Employees/ Employers

Based on their employment relationship, both the employee and the employer, are subject to income tax, social security's contributions and educational tax.

#### Income Tax

The employer is obligated to withhold income tax on behalf of the employee and remit it to the Panamanian Tax Authorities. The Panamanian legislation establishes that individuals will be subject to income tax at a progressive rate, as follows.

- An employee earning a salary of up to USD11,000 is exempt from paying income tax.
- An employee earning a salary ranging from USD11,000 to USD50,000 is subject to a 15% tax rate on the surplus.
- An employee earning a salary exceeding USD50,000 will be subject to a tax of USD5,850 for the first USD50,000 and a 25% rate on the surplus.

#### Social Security

The employer and employee are subject to the paying social security. Employers must contribute 13.25% of the salary of each employee, and employees must contribute 9.75%. With the recent change in law, the percentage of contribution by the employer will rise to 15.25% of the salary of each employee.

Additionally, the law provides for the payment of professional risk insurance which must be paid by the employer at a rate of 0.56% up to 5.67%.

#### Educational Tax

The educational tax is divided between the employer and the employee, with the employer being obliged to contribute 1.50% of the employee's salary and the employee contributing 1.25% of their salary.

Both social security and educational tax contributions should be withheld by the employer.

### 5.2 Taxes Applicable to Businesses

Companies operating in Panama may be subject to several taxes, including the following.

- Corporate Income Tax: companies must pay a 25% tax on their net taxable income.
- Dividend Withholding Tax: when a company distributes dividends or profit shares to its shareholders or partners, it must withhold:
  (a) 10% if the income is from Panamanian sources; and
  (b) 5% if the income is from foreign or tax-exempt sources (eg, export activities).
- Complementary Tax: if a company is subject to dividend tax but does not distribute at least 40% of its after-tax income, it must pay a 4% complementary tax on its net earnings. If the applicable dividend withholding rate is 5%, and the company distributes less than 20% of its after-tax income, the complementary tax is 2%.
- Withholding Tax on Payments to Non-Residents: payments made by Panamanian companies to non-residents for services, royalties, licences, or similar charges are subject to a 12.5% withholding tax, provided the expense is deductible for income tax purposes in Panama.
- Value Added Tax (VAT): VAT applies to imports, transfers of tangible goods located in Panama, and services rendered within Panama, regardless of where the contract is signed or where the payment originates. The standard VAT rate is 7%.
- Passive foreign-source income: Law No 526 of 2026 introduces an exceptional tax regime applicable to certain categories of passive foreign-source income when such income is received by entities incorporated under Panamanian law, which are members of multinational groups, and which fail to demonstrate that they possess adequate economic substance in the Republic of Panama. It provides for the application of a 15% rate on the net taxable income for the relevant fiscal period, without giving rise to any additional tax, without prejudice to the provisions contained in Article 733 of the Fiscal Code.

### 5.3 Available Tax Credits/Incentives

Panama has a number of special regimes which offer a variety of tax credits and incentives designed to

attract foreign investment, promote economic development and support specific industries. Some of these regimes are outlined below.

### Free Trade Zones

Free Trade Zones are designated areas within Panama where domestic and foreign companies can establish operations in different sectors, including higher education centres, scientific research centres, specialised centres for the provision of health services, high-tech enterprises, assembly enterprises, finished or semi-finished product processing enterprises, service enterprises, environmental service companies, general service companies, logistics service companies, and manufacturing companies.

Currently, there are 16 Free Trade Zones in Panama and six in development, focusing on various industries. Companies established in the Free Trade Zones can benefit from tax, immigration and labour incentives.

### Colón Free Zone

The Colón Free Zone is a free trade zone located at the Atlantic entrance of the Panama Canal. Companies established in the Colón Free Zone are primarily dedicated to the international purchase and sale of merchandise, forming a distribution centre from Asia to countries in South America, the Caribbean and Central America.

The most common activities of companies established in the Colón Free Zone are the import, export and re-export of merchandise received in large, duty-free volumes, which is subsequently repackaged, labelled, assembled, manufactured and reshipped in smaller quantities to customers.

The Colón Free Zone offers tax, immigration, labour and corporate advantages to companies establishing themselves in this zone. Some of the tax benefits are tax exemption on imports, re-exports, and manufacturing goods, tax exemption on re-export income, etc.

### Panama Pacifico Regime

The Panama Pacifico Regime supports the development of an international business centre, attracting large multinational companies, logistics services companies, various commerce and general industries. The main objective of this regime is to attract foreign direct investment and create jobs in Panama. The Panama Pacifico Regime offers customs, immigration, labour and tax benefits to companies involved in logistics, maritime and airport services, high technology, call centres and shared services, among others.

The development of economic activities under the Panama Pacifico Regime will be open to nationals and foreigners. The requirements, criteria and review procedures for registration applications will be applied in a fair, transparent and equitable manner to all applicants, through non-discriminatory commercial treatment, respecting the principles of free competition and free market access.

### Multinational Companies Headquarters (SEM) Regime

The SEM regime aims to encourage multinational business groups to establish their reginal and global operations centres in Panama. The Multinational Companies Headquarters is an office with management control in the region, providing services from Panama to related companies (parent, subsidiaries or affiliates) in other countries.

To apply to this regime, the company's business group must have assets equal to or greater than USD200 million; or must provide services to at least seven subsidiaries of the group. The SEM regime offers tax, immigration and labour benefits. In terms of immigration and labour benefits, there is no limit on the hiring of foreigner workers under the SEM regime. Expatriates will be exempt from income tax, mandatory social security affiliation and are eligible for a special SEM visa. Moreover, the SEM regime grants a fixed income tax rate of 5%, services provided to business groups are exempt from VAT, and there is an exemption from paying withholding dividend tax and complementary tax.

### Multinational Companies for the Provision of Services Related to Manufacturing (EMMA)

Companies, whether foreign or domestic, can apply to the EMMA regime, provided they operate from Panama to provide services to their parent company or to

their subsidiaries, affiliates, or companies associated with entities of the same group.

These companies must provide services related to:

- manufacturing, assembly, maintenance and conditioning products, machinery and equipment, product development, research, or innovation;
- analysis, laboratories, testing, or other services related to manufacturing; and
- logistics such as storage, deployment, and distribution centres for components or parts.

Any company interested in applying for the benefits granted by this special regime must apply for the relevant licence from the Technical Secretariat of the Multinational Enterprise Licensing Commission.

By holding a licence under the special regime for the establishment and operation of multinational companies for the provision of manufacturing-related services, the company enjoys a series of immigration, labour and tax benefits. Moreover, the SEM regime grants a fixed income tax rate of 5%, services provided to business groups are exempt from VAT, and there is an exemption from paying withholding dividend tax and complementary tax.

### City of Knowledge

The City of Knowledge is an international community made up of academic organisations, technology companies, and non-governmental organisations. The City of Knowledge is a knowledge platform focused on enhancing the innovative and competitive capabilities of the conglomerate's users. It also facilitates access to a series of benefits and services tailored to user needs.

This regime grants tax benefits such as:

- exemption from all taxes, contributions, rates, or import duties on machinery, equipment, furniture, vehicles, artifacts, and supplies necessary for the development of the project;
- exemption from the Tax on the Transfer of Personal Property (local VAT) on machinery, equipment, vehicles, artifacts, and supplies acquired and necessary for the development of the project;
- exemption from the Real Estate Tax on property of this nature owned by City of Knowledge;
- exemption from any tax, fee, duty, or levy levied on the remittance of funds abroad, when such remittance or transfer of funds is carried out for the purposes of the project; and
- innovative companies that produce, assemble, or process high-tech goods or provide similar services in technology parks that may be destined for sale in the local or international market will enjoy the following benefits:
  (a) their activities, operations, transactions, procedures, and transfer of movable and immovable property, the purchase and import of construction equipment and materials, raw materials, equipment, machinery, tools, accessories, supplies, and all goods or services required for their operations, including capital, will be exempt from direct national taxes, including taxes on patents or licences.

## 5.4 Tax Consolidation

In Panama, tax consolidation is not available or applicable, as it is in order jurisdictions. In Panama, each operative company is obliged to prepare and file the income tax return and pay the corresponding taxes.

## 5.5 Thin Capitalisation Rules and Other Limitations

Currently, in Panama there are no capitalisation rules or exact equivalent rules. However, Panama has adopted Transfer Pricing rules, under the local legislation. There is also a restriction on the interest deductibility, ie, only interest related to the operation of the business is deductible. If the loan is used for investments outside of Panama, the interest will not be deductible.

## 5.6 Transfer Pricing

Panama applies transfer pricing rules. Cross-border intercompany transactions conducted by Panamanian taxpayers are subject to transfer-pricing obligations if the transactions result in income, costs or expenses that are considered in the determination of taxable income.

The transfer pricing rules are based in the arm's length principle established in the Organization for Economic

Co-operation and development (OECD) Transfer Pricing Guidelines for Multinational Enterprises and Tax Administrations.

An annual statement of transactions (Form 930) with related parties must be submitted to the tax authorities within six months of the end of the fiscal year. In addition, taxpayers must prepare a transfer pricing study and make it available to the tax authorities. If the Form 930 is not filed, a 1% fine capped at USD1 million applies to the gross amount of the transactions with related parties.

### 5.7 Anti-Evasion Rules

According to the Tax Procedure Code, the Panamanian Tax Authorities may disregard the adoption of legal forms when premeditated acts are carried out with the sole purpose of avoiding the payment of taxes or obtaining some type of tax advantage, thereby violating the obligation to contribute with sufficient will and knowledge.

Moreover, Panamanian legislation defines tax avoidance as the performance of acts or transactions for a purpose other than that established by law, and with no justification other than to reduce the tax burden of the person performing them, including to obtain undue tax credits, or, in general, some tax benefit in violation of the tax law.

### 5.8 Tariffs

Currently, Panama uses the Harmonized System (HS) to classify goods, and a large portion of products have low or zero tariffs. Panama participates in free trade agreements, such as the Trade Promotion Agreement with the USA and the Agreement with the EU, allowing for preferential tariffs.

In Panama, the highest tariffs apply to agricultural products and some industrial goods, and the tariffs applicable can range from 15% to 30%.

## 6. Competition Law

### 6.1 Merger Control Notification

Under the Consumer Protection and Competition Defense Law, mergers and acquisitions must be notified in cases that qualify as an economic concentration. To be considered as such, the merger or acquisition must occur between suppliers or potential suppliers, customers or potential customers, or other economic agents that are actual or potential competitors.

When assessing the impact, consideration may be given to whether the merger or acquisition promotes or includes, as part of its objectives, the increase in production or distribution of goods and/or services in the local or global market, stimulates technical or economic progress, or fosters the competitive development of an industry or sector. In such cases, the benefits must be verifiable.

Economic concentrations whose effects are or may be detrimental to free economic competition in the country are prohibited.

However, the notification system in Panama is voluntary and not mandatory to complete a transaction. Nevertheless, if an economic concentration has not been the subject of prior verification, the Authority might initiate an investigation within three years following the closing date of the transaction.

### 6.2 Merger Control Procedure

In Panama, there is no specific statutory deadline for the notification of mergers and acquisitions under the framework of competition and consumer protection law.

The economic agent may submit a notification of the economic concentration to the authority prior to its entry into effect - that is, before the merger or acquisition is completed.

The interested party must submit the notification in writing, accompanied by a copy of the relevant legal instrument, whether it concerns a merger or an acquisition.

Within 20 days of receiving the notification, the Consumer Protection and Competition Defense Authority may request additional documentation. The Authority then has 70 days from the date of receipt of the notification - or from the date on which additional infor-

mation or documents are received, as applicable - to issue its resolution.

As part of the review process, the competent authority will examine the financial statements of the parties involved in the transaction, copies of relevant business valuation or investment projection documents, and a description of the goods and/or services produced or offered by each economic agent, among other requirements, to ensure that the economic concentration does not adversely affect the market.

In this regard, the authority will assess the market share of the participating agents within the relevant market in relation to their competitors and customers, the likelihood that the concentration may restrict free competition, or whether it may facilitate unilateral price increases without current or potential competitors being able to effectively counteract such market power.

### 6.3 Cartels

Anti-competitive practices are regulated under Law No 45 of 2007 and include the following:

- any intentional or wilful act that creates confusion regarding the services or commercial or industrial activities of a competitor;
- any false statement made during trade that discredits the commercial or industrial activities of a competitor;
- any deceptive action intended to divert, for personal benefit or that of another, the clientele of a business or industry;
- any misleading indication that may confuse or deceive consumers regarding the origin, characteristics, production process, method of use, or the quality, quantity, or cost of a seller's goods or services; and
- any other act that, by any means, results in a restriction of trade, a reduction in production aimed at increasing prices, or the establishment of uniform prices or rates for products and services, to the detriment of fair competition and consumer welfare.

### 6.4 Abuse of Dominant Position

Article 16 of Law No 45 of 2007 prohibits unilateral acts, combinations, arrangements, or agreements that have the purpose of unreasonably displacing other competitors or preventing their access to the market, in the following cases:

- between economic agents that are not competitors, the fixation, imposition, or establishment of the exclusive distribution of goods or services, by reason of the subject, geographic location, or for a determined period of time;
- the imposition or fixing of prices;
- the sale or transaction conditioned upon the purchase, acquisition, sale, or provision of another additional good or service;
- the sale or transaction being subject to the condition of not using or acquiring, selling, or providing goods or services produced, processed, distributed, or marketed by a third party;
- unilateral conduct consisting of refusing to sell or provide to certain people goods or services that are available and normally offered to third parties;
- any act that unreasonably damages or impedes the process of free economic competition and free market participation in the production, processing, distribution, supply, or commercialisation of goods or services; and
- any other cases set forth and regulated under Panamanian law.

## 7. Intellectual Property

### 7.1 Patents

Patents are granted to those inventions that are patentable subject matter and meet with the requirements of novelty and non-obviousness. The procedure is requested before the General Directorate of Intellectual Property (DIGERPI) accomplishing with all the required documents which, if the documents are issued abroad, must be duly apostilled and translated into Spanish by an authorised public translator.

Panama is a member of the Patent Cooperation Treaty (PCT), therefore international applications are allowed. During the national phase from a PCT application, the same requirements and procedure as with any other

PCT member state will apply. There is no extension to the deadline for entering the national phase in Panama.

### Protection Term and Supplementary Protection

Patents are granted for 20 years. This term is not extendible, unless the DIGERPI has incurred an imputable delay in the application process and the applicant files a request for supplementary protection within the six months of obtaining the patent.

If the application procedure lasts more than five years from the filling date or three years from the date of the request for a substantive examination, this will be considered an imputable delay to the PTO. Supplementary protection will depend on the specific case and delay and, in any case, will not be granted for more than seven years and six months.

### Remedies

Patents grant the right to the rightsholder to prevent third parties from:

- manufacturing the product;
- promoting, offering for sale, using, importing or storing the product for any of these purposes, including when patented procedures are used to obtain a product; and
- use the patented process.

Panamanian law establishes civil and criminal remedies in the case of patent infringement. The civil procedure for patent infringement is handled under a special procedure established in the Industrial Property Law. The Criminal Code establishes a penalty of four to six years for patent infringement. While cease and desist letters are not binding or recognised by law, they are commonly used in practice and are acceptable.

## 7.2 Trade Marks

Industrial property law has a wide scope when classifying distinctive signs that might be protected by trade marks such as words, images, 3D forms, colours, sounds, colours or flavours, indication of origin and geographical indications.

### Application Process

Trade mark application is handled at the Directorate of Intellectual Property (DIGERPI). Since Panama is a member of the Trademark Law Treaty, the process does not require major formalities, for example a soft copy without any legalisation of the power of attorney is sufficient for the application. Availability searches are not mandatory, but are highly recommended.

After submitting application, it usually, takes between nine to 12 months to obtain a trade mark in Panama. The application will first undergo an examination of the form and subject matter requirements, during which the examiner can issue a request to amend the application or a rejection if there is a lack of subject matter or if the trade mark incurs one of the causes that impedes protection. In the case of a rejection, the applicant can request a reconsideration before the same examiner or appeal to the decision to the Minister of Commerce and Industry.

If no rejection or request to amend is filed, the application will be published for two months, which commences the opposition procedure. After publication, any third party that considers their right, whether registered or not, is affected by the application, has the right to file an opposition. Once an opposition is filed, this procedure will be resolved in the Judicial branch in the Commerce and Competition Courts. Opposition proceedings may take a minimum of one year to be resolved.

If there is no opposition within the opposition term, the trade mark will be granted for a period of ten years, renewable for the same period. Renewal must be done before the expiration date, if not a grace period of six months is granted. Failure to comply with this period will result in the expiration of the trade mark.

It is important to note that applicants might apply for a trade mark for a period of five years instead of ten years.

### Special Registrations

Even though the trade mark registration is given by the PTO, it is important to also register the trade mark in key zones and authorities to proactively tackle coun-

terfeit products within the commerce or importation, exportation or transit throughout Panama.

Registration of the trade mark title, as well as specimens of the products, with the Trade Zones and the National Authority of Customs enables entities to promptly identify counterfeit products and to stop them before they reach their destination or enter Panamanian commerce. Once the products are seized, the trade mark owner can start a counterfeit procedure in Panama. It is important to note that not having registered the trade marks in these authorities will not affect the ability of the trade mark owner to take measures against counterfeits, however, such a measure provides another source of enforcement.

### Remedies

All remedies in Panama are resolved in the judicial branch in the Commerce and Competence Courts. Cease and desist letters are commonly used but not recognised by law. Trade mark owners are able to start procedures such as infringement procedures, cancellation actions for non-use and nullity procedures. Also, non-authorised use of a trade mark and/or copying constitute a crime under the Criminal Code, which could be subject to prosecution.

## 7.3 Industrial Designs

In Panama, industrial designs and models are recognised and protected under the Industrial Property Law.

These two categories differ primarily in their dimensional characteristics. Both are eligible for legal protection provided they meet the statutory requirements.

An industrial model refers to any three-dimensional form that serves as a prototype or pattern for the manufacture of an industrial product, giving it a distinctive appearance. Meanwhile, an industrial design, on the other hand, consists of any combination of figures, lines or colours incorporated into an industrial product for ornamental purposes.

To qualify for protection, both must meet the criteria of novelty and industrial applicability. If these conditions are met and the design or model has been disclosed without prior registration, it will be granted a protection period of three years from the date of its first disclosure in Panama, what is known as unregistered industrial designs.

Additionally, protection may be obtained through formal registration, which grants exclusive rights for a period of ten years from the filing date in Panama. Upon request by the rights holder, this term may be renewed for an additional five years.

## 7.4 Copyright

Copyright law is primarily focused on works of a literary, scientific or artistic nature. It is a declarative process rather than a constitutive one, meaning that rights arise from the creation of the work itself and not from its registration.

The duration of copyright protection depends on the type of work; however, as a general rule, it is recognised for the lifetime of the author and for 70 years following their death.

All remedies in Panama are resolved in the judicial branch in the Commerce and Competence Courts. Cease and desist letters are commonly used but not recognised by law. Copyright owners are permitted to start infringement proceedings in the civil and criminal branch.

## 7.5 Others

The intellectual property protection applicable to software in Panama is governed by Law No 64 of 10 October 2012. This statute regulates copyright and related rights. Chapter II of the Law specifically addresses computer programs (software) and provides that they are protected under the same terms and conditions applicable to literary works. Furthermore, the Law establishes that such protection extends to any successive versions of the software, as well as to any derivative works created from it.

In addition, Law No 35 of 10 May 1996, which establishes provisions relating to industrial property, provides in Article 1 that one of its purposes is the protection of, among other rights, industrial and trade secrets.

In this regard, Title IV of said Law, entitled “Industrial and Trade Secrets,” provides that an industrial

or trade secret is any information of an industrial or commercial nature that is maintained as confidential by a natural or legal person, which enables such person to obtain or maintain a competitive or economic advantage over third parties in the conduct of business activities, and with respect to which sufficient measures or mechanisms have been adopted to preserve its confidentiality and restrict access thereto.

## 8. Data Protection

### 8.1 Applicable Regulations

Data protection is regulated under Law 81 of 2019, which is further regulated by the Executive Decree 285 of 2021. Data privacy laws in Panama describe data as any source of information that identifies or makes identifiable a natural person. The scope of application applies either to public and private entities, whether they are lucrative or not, as well as any other person involved in data treatment.

#### Scope of Application of the Data Privacy Law

The Data Privacy Law applies to all databases domiciled in the Republic of Panama, as well as to any processing activities carried out by data controllers domiciled in Panama. The Law establishes the guiding principles, data subject rights, lawful bases for processing, rules on data transfers, and exceptions applicable to the processing of personal data.

#### Lawful Bases for Data Processing

The processing of personal data shall be deemed lawful if it is based on one of the following legal grounds:

- the data subject expresses consent;
- processing is necessary for the performance of a contract to which the data subject is a party;
- processing is necessary for compliance with a legal obligation to which the data controller is subject; or
- processing is authorised by a special law or by regulations issued pursuant thereto.

#### Data Subject Rights (ARCO Rights)

Panamanian legislation recognises the following rights of data subjects, commonly referred to as ARCO rights.

- Right of Access – to obtain confirmation as to whether personal data concerning them is being processed and to access such data.
- Right to Rectification – to request the correction of inaccurate or incomplete data.
- Right to Erasure (Cancellation) – to request the deletion of data when it is no longer necessary or is being processed unlawfully.
- Right to Object – to object to the processing of their data on legitimate grounds.
- Right to Data Portability – to receive their personal data in a structured, commonly used, and machine-readable format and to transmit it to another controller.

The data controller must ensure that the exercise of these rights is facilitated in a free and easily accessible manner. Depending on the nature of the request, the controller must respond within five to ten business days.

#### Data Transfers

The transfer of personal data, whether domestic or cross-border, is permitted if it is carried out under one of the lawful conditions established by law. These include, among others:

- the data subject's consent;
- the recipient country ensures an adequate or higher level of data protection; and
- the transfer is made to an entity within the same corporate group as the data controller, provided that the purpose of the processing remains the same.

In the case of intra-group transfers, it is essential to implement appropriate safeguards to ensure compliance with data protection regulations. Such measures may include maintaining records of transferred databases, adopting Binding Corporate Rules (BCRs), or implementing other enforceable self-regulatory mechanisms.

### 8.2 Geographical Scope

Unlike other jurisdictions, Panamanian data protection regulations apply exclusively to databases domiciled within the territory of the Republic of Panama or in

cases where the data controller is domiciled in Panamanian territory.

However, it is important to note that the protection of personal data is also enshrined at the constitutional level, through the recognition of the right of access to information, the inviolability of correspondence, and the constitutional remedy of habeas data.

Failure to comply with personal data protection provisions may result in administrative fines ranging from USD1,000 to USD10,000.

### 8.3 Role and Authority of the Data Protection Agency

In Panama, the competent authority responsible for overseeing compliance with data protection regulations is the National Authority for Transparency and Access to Information (*Autoridad Nacional de Transparencia y Acceso a la Información* – ANTAI), acting through its Directorate for the Protection of Personal Data.

This entity plays a fundamental role in monitoring adherence to data protection laws and holds administrative sanctioning powers to enforce compliance.

## 9. Looking Forward

### 9.1 Upcoming Legal Reforms

By means of Law No 508, dated 12 February 2026, the approval of the agreement between the government of the Republic of Panama and the government of the Republic of Ecuador for the exchange of information on tax matters (hereinafter, "Law No 508 of 2026") was enacted.

Among the information contained in Law No 508 of 2026 that the authors consider to be of relevance, the following may be noted.

- All information that is foreseeably relevant for the determination, assessment, and collection of taxes, the recovery and enforcement of tax claims, or the investigation or prosecution of tax-related matters.
- The applicable taxes in accordance with each jurisdiction are as follows:
  - (a) Republic of Panama: all national taxes. Notwithstanding the foregoing, this shall not apply to taxes imposed by municipalities or other political subdivisions.
  - (b) Republic of Ecuador: Income Tax and other taxes whose collection is the responsibility of the Central Government.
- This Agreement shall have effect with respect to tax matters for all fiscal periods commencing on or after 1 January of the calendar year immediately following its entry into force. Notwithstanding the foregoing, the contracting states may request information relating to the six fiscal years preceding the date of entry into force of the Agreement.

## The New Tax Framework for Foreign-Source Passive Income

### *Background*

On 30 April 2026, the Ministry of Economy and Finance of the National Government of Panama (MEF) filed Bill No 641 of 2026, before the National Assembly of Deputies, entitled "Which Modifies and Adds Provisions to the Fiscal Code Regarding Income Tax, Establishes Economic Substance Requirements for Certain Categories of Passive Foreign-Source Income, and Provides Other Provisions" (hereinafter "Bill 641").

The proposed reform was subject to multiple exchanges, debates, and contributions at the level of the Public Finance Committee of the National Assembly of Deputies during its first debate and represents a significant structural change to the traditional principle of territoriality, considering that such income has historically not been subject to taxation in Panama. It introduces a differentiated regime based on the demonstration of adequate economic substance in the country.

Likewise, Bill 641 was discussed, analysed, amended, and approved in its second debate, where, primarily, various economic sectors were included as excluded from the special regime applicable to passive income, considering that, in theory, they are subject to prudential supervision by other governmental regulatory entities, such as the Superintendency of Banks, the Superintendency of Insurance and Reinsurance, and the Superintendency of the Securities Market. Similarly, an exclusion was established for the Panamanian merchant marine, which is subject to supervision by the Panama Maritime Authority. The Bill was subsequently approved in the third debate before the Plenary of the National Assembly of Deputies on 27 May 2026.

Finally, Bill 641 was sanctioned by the Executive Branch on 28 May 2026, resulting in its enactment in the Official Gazette of the Republic of Panama as Law No 526 of 28 May 2026, "Which Modifies and Adds Provisions to the Fiscal Code Related to Income Tax and Economic Substance for Certain Passive Foreign-Source Income" (hereinafter "Law 526")

### *What does the exceptional tax regime on passive foreign-source income consist of?*

Law 526 introduces an exceptional tax regime applicable to certain categories of passive foreign-source income when such income is received by entities (corporations, limited liability companies, or private interest foundations) incorporated under Panamanian law, which are members of multinational groups and which fail to demonstrate that they possess adequate economic substance in the Republic of Panama. It provides for the application of a 15% rate on the net taxable income for the relevant fiscal period, without giving rise to any additional tax, without prejudice to the provisions contained in Article 733 of the Fiscal Code.

For purposes of determining net taxable income for the relevant fiscal period, costs and expenses necessary for the generation, preservation, and maintenance of income - duly documented and directly related to the generation of passive foreign-source income - shall be deductible from gross income, in accordance with general rules

### *What income is subject to the new tax regime established under Law 526?*

The following categories of passive income are subject to this tax: "dividends, interest, royalties, capital gains, real estate capital income, and other movable capital income, provided that such income is derived from assets located or rights economically used outside the national territory," that is, what has historically been referred to as extraterritorial or offshore activities. Law 526 defines the principal activities of these entities as "the generation, administration, control, acquisition, preservation, exploitation or disposition of passive foreign-source income, the execution, direction or effective control of which must be carried out in the Republic of Panama by the entity itself or through outsourcing," in accordance with the conditions provided therein.

Failure to demonstrate economic substance shall result in the classification of the entity as a "non-qualified entity." Consequently, such income shall be subject to the exceptional tax regime provided in Law 526.

*What are the special rules applicable to income derived from intangible assets?*

With respect to income derived from the transfer or exploitation of intangible assets - such as patents, trademarks, copyrights, or similar rights - registered in accordance with Panamanian law but economically exploited outside the national territory, the reform introduces a technical mechanism allowing a portion of the net income to be classified as non-taxable or extraterritorial. Such partial exclusion shall be subject to compliance with specific registration, documentation, and proper accounting traceability requirements allowing for the reasonable substantiation of the determination made.

Failure to comply with these obligations shall result in the automatic classification of the entity as non-qualified, triggering the application of the exceptional tax regime to the entirety of the relevant passive income.

*What is the definition of a multinational group adopted for purposes of Law 526?*

For purposes of this new regulation, qualified or non-qualified entities, depending on whether they demonstrate the economic substance requirements set forth in Law 526, must belong to multinational groups, defined as a group of two or more entities, related through ownership or control (understood as distinct concepts), which are tax residents in different jurisdictions. This definition includes the parent company, its subsidiaries, and permanent establishments.

Certain specific rules are established for this determination:

- the entity is included in the consolidated financial statements of the group for reporting purposes under the accounting principles applied by its parent company;
- it would have been included had the parent company been required to prepare such financial statements; or
- it would be included in consolidated accounts if its participations were traded on a public securities market.

If the Panamanian entity is excluded from such consolidation due to size or materiality, it shall still be considered part of the multinational group for purposes of this regulation.

*Is it possible to demonstrate economic substance through outsourcing of certain functions and services?*

Law 526 allows the outsourcing of relevant functions for demonstrating economic substance, meaning that Panamanian entities may subcontract functions and activities to comply with this requirement.

However, this possibility is limited and subject to specific rules:

- activities related to maintaining adequate human resources; and
- operational costs and expenses necessary for the development of the entity's activities may be carried out by third parties, provided that such services are rendered within the territory of the Republic of Panama (ie, resources or means located outside the national territory shall not qualify).

For these purposes, the resources used by the provider to demonstrate adequate substance for an entity may not result in overlapping hours of such resources where services are provided to multiple recipients. The contracting entity must maintain effective supervision and control over the outsourced activities, duly supported by sufficient contractual, operational, and accounting documentation, and outsourcing outside the territory of Panama is expressly prohibited.

Non-compliance with this prohibition shall result, by operation of law, in the loss of qualified entity status and the application of the exceptional tax regime to the relevant passive income.

*What method to eliminate or mitigate double taxation does Law 526 provide with respect to taxes paid abroad?*

Panamanian entities within a multinational group that obtain passive foreign-source income may credit income tax or similar taxes paid abroad against the tax payable in Panama arising from the application of this special regime. Such foreign tax credit is limited to the maximum amount that would have been payable in Panama upon applying the 15% rate established

in Law 526. This credit shall not be subject to refund, assignment, or transfer under any title whatsoever.

*Which entities are excluded from the application of this special regime applicable to passive income?*
The regime excludes entities belonging to a multinational group that qualify as financial entities subject to supervision by:

- the Superintendency of Banks of Panama;
- the Superintendency of the Securities Market of Panama;
- the Superintendency of Insurance and Reinsurance of Panama; and
- any other competent financial supervisory authority in the Republic of Panama.

Likewise, entities engaged in the commercial operation of ships or vessels under Panamanian registry governed by the special merchant marine legislation, including ship owners, operators, and administrators, are also excluded. Such entities must demonstrate economic substance by complying with the following three conditions:

- being registered before the competent authority or authorised by the Panama Maritime Authority (AMP);
- carrying out activities supervised by the AMP; and
- foreign-source passive income subject to this exclusion must be directly and effectively linked to the regulated maritime activity, including returns derived from the placement of surplus cash, reserves, or guarantees associated with the operation of vessels or ships.

The regulation contemplates the possibility that the Ministry of Economy and Finance, in co-ordination with these supervisory authorities, may verify, at any time, compliance with the economic substance requirements applicable to these entities.

These exclusions are based on the premise that the aforementioned regulatory authorities have access to information regarding economic substance, personnel, assets, risks, resources, and expenses incurred by their regulated entities. However, it is clear that the supervisory approach of each sector differs, and in no way resembles the tax information upon which taxable net income is determined in accordance with the provisions of the Tax Code.

Therefore, it is highly likely that this exception rule may be challenged when Panama's status as a non-cooperative jurisdiction is reassessed at the European Union level. This is a specific technical tax matter, either the Panamanian Tax Administration has access to the information necessary to conduct an adequate audit of the taxation of such passive income, or it does not. To avoid this outcome, all exempt entities must comply with the same standard of inclusion and annual reporting of information, and such information must be made available in a uniform manner across each regulated sector.

*What are the new rules applicable to companies operating under special regimes and legal stability in Panama?*
Entities and companies incorporated under Panamanian law that are members of multinational groups, benefit from preferential tax regimes, and are required to file annual economic substance returns must also report to the General Directorate of Revenue (*Dirección General de Ingresos*- DGI), within their sworn income tax return, all income derived from foreign-source passive income and evidence their status as qualified entities.

Such substantiation shall require demonstrating adequate economic substance with respect to each asset generating foreign-source passive income, as an indispensable condition for such income not to be subject to taxation in Panama. Failing this, such income shall be subject to income tax as provided under Law 526.

*Why is an anti-abuse clause included in Law 526?*
A general anti-abuse clause is introduced, granting the Ministry of Economy and Finance the authority to disregard, through a duly reasoned resolution, any structure, arrangement, or legal form whose principal purpose, or one of its principal purposes, is to obtain a tax advantage that is contrary to the object and purpose of the regime applicable to foreign-source passive income.

In such cases, foreign-source passive income shall be subject to the 15% tax rate applicable to the fiscal period in which it was generated, without prejudice to the application of penalties, surcharges, and interest in accordance with the provisions of the Tax Code.

### *Why are the rules applicable to intermediaries and the permanent establishment regime in the Tax Code being modified?*

In line with the most recent amendments to the OECD Model Tax Convention, certain activities - such as the provision of services, the execution of works, the exploitation of resources, the use of equipment, or the performance of professional activities - may constitute a permanent establishment when carried out in Panama through an agent or representative authorised to contract in the name or on behalf of a foreign entity. Likewise, situations that previously did not constitute a permanent establishment due to the contractual status of an "independent agent" may now give rise to such status where such agent plays the principal role in the conclusion of contracts, provided that the economic substance and operational elements - such as assets, functions, and risks - indicate that these are effectively assumed by a contracting entity domiciled abroad.

### *What does the new obligation to file a foreign-source passive income return consist of?*

To strengthen audit and traceability mechanisms, entities or companies that are members of multinational groups, as defined under the new regulations, and that earn foreign-source passive income will be required to file an annual sworn return including such income. This obligation applies regardless of whether such income is deemed to be sourced within Panamanian territory, that is, even where no tax payment obligation arises, the obligation to report such income to the DGI remains.

Additionally, such entities must submit the necessary information to evidence compliance with the conditions demonstrating adequate economic substance for the relevant entity or company.

### *Final considerations*

In general terms, Law 526 entails a profound modification of the regime applicable to passive foreign-source income in Panama by introducing a substantial departure from the traditional principle of territoriality. These new rules shall become effective as of fiscal year 2027.

This new scenario effectively signals the end of the incorporation of shell entities with no real economic activity or role and will require companies with international corporate structures to comprehensively review their structures, outsourcing schemes, models for holding and exploiting intangible assets, as well as their compliance and documentation systems, in an environment characterised by a higher level of tax scrutiny and exchange of information.

In this context, preventive tax planning technically supported and aligned with these new legislative provisions, which respond to international standards on tax co-operation and exchange of information, will be essential.

## Legal Framework and Investment Landscape in the Philippines

### *Introduction*

The Philippines has emerged as one of South-East Asia's dynamic investment destinations, driven by a sustained programme of economic liberalisation, infrastructure modernisation, energy transition, and digital transformation. Over the past several years, the government has undertaken a series of legislative and regulatory reforms designed to enhance the country's competitiveness within the ASEAN region and position it as a strategic destination for foreign direct investment.

These reforms have coincided with broader geopolitical and economic developments that continue to reshape global investment flows. As multinational corporations reassess supply chains, and diversify manufacturing locations, the Philippines has increasingly attracted attention as an alternative investment hub. The country's large domestic market, strategic location, English-speaking workforce, and expanding middle class provide compelling fundamentals for long-term growth.

The Philippines also benefits from strong demographic advantages. With a population exceeding 110 million and a young, digitally connected labour force, the country offers both a substantial consumer market and a competitive talent pool for regional operations. At the same time, the government's continued focus on infrastructure development, energy security and digital connectivity has significantly improved the investment environment.

Most significantly, the Philippines has moved away from the traditionally restrictive approach that characterised many sectors of its economy for decades. Recent reforms have opened key industries to greater foreign participation, reduced regulatory barriers, and introduced a more commercially oriented framework for cross-border investment.

The Philippines is also beginning to position itself within the rapidly evolving artificial intelligence (AI) and digital infrastructure landscape. Policymakers have expressed growing interest in developing domestic AI capabilities, strengthening cloud and computing infrastructure, and supporting technology-driven innovation. While many of these initiatives remain at an early stage, they reflect a broader policy direction towards enhancing the country's role in the regional digital economy and attracting investment into technology infrastructure, data services and advanced computing capabilities.

As a result, the Philippine investment landscape in 2026 is defined not merely by market size and growth potential, but by a broader transformation towards liberalisation and integration with regional and global markets.

### *The Philippines' shift towards investment liberalisation*

The central feature of the Philippines' current investment story is its deliberate shift towards investment liberalisation. Long regarded as one of the more restrictive jurisdictions in South-East Asia with respect to foreign ownership, the country has undertaken a series of reforms aimed at expanding foreign participation in strategic sectors while maintaining safeguards for areas considered critical to national interest.

One of the most important reforms has been the amendment of the Public Service Act (PSA). Historically, an expansive interpretation of the constitutional concept of public utilities subjected numerous industries to a 40% foreign equity limitation. This framework constrained foreign participation in sectors that in many jurisdictions are open to international investment.

The amended PSA fundamentally altered this landscape by narrowing the definition of public utilities to a limited category of essential monopoly services. As a result, several industries previously subject to foreign ownership restrictions, including telecommunications, airports, railways, tollways, expressways and domestic shipping, may accommodate greater levels of foreign ownership, subject to applicable regulatory requirements and national security safeguards.

The reform significantly expanded foreign participation opportunities in infrastructure, transport, logistics and communications sectors. It has also created new possibilities for mergers and acquisitions, public-pri-

vate partnerships, greenfield developments and long-term institutional investments that were previously constrained by ownership limitations.

The liberalisation trend extends beyond infrastructure. The renewable energy sector has experienced a major transformation following policy clarifications allowing full foreign ownership of renewable energy projects. Historically, uncertainties surrounding constitutional restrictions on natural resource utilisation created practical barriers for foreign investors seeking to participate in renewable energy development.

The Department of Justice issued DOJ Opinion No 21, Series of 2022, which clarified that solar, wind, hydro and biomass energy projects may be wholly foreign-owned, opening the sector to international developers, infrastructure funds and institutional investors seeking opportunities in the energy transition. This reform is particularly significant given the Philippines' substantial renewable energy potential and growing demand for sustainable power generation.

The retail sector has likewise benefited from liberalisation. Amendments to the Retail Trade Liberalization Act lowered capitalisation requirements for foreign-owned retail enterprises, reducing barriers to entry for international brands and facilitating greater competition within the domestic consumer market. These reforms are expected to support continued growth in consumer spending while enhancing product availability and market efficiency.

Telecommunications has also undergone significant reform. Regulatory changes have facilitated greater foreign participation and increased competition in a sector that serves as a critical foundation for economic development and digital transformation. Although sector-specific licensing and regulatory requirements remain applicable, recent reforms have contributed to increased investment in telecommunications infrastructure and digital connectivity.

Complementing these ownership reforms is the government's continuing effort to improve the fiscal attractiveness of the Philippines as an investment destination. The CREATE MORE Act represents an important development in the country's investment incentive framework by enhancing fiscal predictability, streamlining the administration of incentives, and strengthening support for export-oriented and high-value industries. The reforms are intended to provide investors with greater certainty regarding long-term incentive availability while improving the competitiveness of the Philippines relative to other jurisdictions in the region.

A significant policy development reinforcing the Philippines' investment liberalisation agenda is the approval of the 2026 Strategic Investment Priority Plan (SIPP) under Memorandum Order No 47 issued in May 2026. As the government's principal roadmap for the grant of fiscal incentives under the CREATE MORE Act, the revised SIPP reflects a more targeted approach towards attracting high-value and innovation-driven investments. The 2026 SIPP places particular emphasis on sectors aligned with infrastructure modernisation, energy transition, advanced manufacturing, digital transformation, supply chain resilience, and emerging technologies. By identifying these areas as national investment priorities, the government has provided investors with greater visibility regarding the sectors expected to benefit from long-term policy support and incentive availability. The inclusion of advanced technology and digital infrastructure projects among the priority investment areas further underscores the Philippines' intention to position itself as a competitive destination for future-oriented industries and foreign direct investment.

For investors, these reforms collectively signal a broader policy direction. Rather than treating foreign participation as an exception, the Philippines increasingly views foreign capital, expertise and technology as essential components of long-term economic development.

### *Infrastructure and energy as key investment drivers*

Infrastructure and energy have emerged as two of the most important drivers of foreign investment activity in the Philippines. The government's infrastructure modernisation agenda continues to generate significant opportunities across transport, logistics, utilities and digital connectivity. Liberalisation measures under the PSA have expanded the range of sectors that may

attract substantial foreign participation, allowing global investors to pursue opportunities that were previously unavailable.

Transport infrastructure remains a priority area. Investments in airports, seaports, rail systems, toll roads and logistics networks continue to attract interest from infrastructure funds, strategic operators and institutional investors. These projects play a critical role in addressing historical connectivity constraints while supporting domestic commerce and regional integration.

Global supply chain diversification strategies have further enhanced the Philippines' attractiveness as an investment destination. As multinational companies continue to reassess production and distribution networks in response to geopolitical developments, supply chain resilience concerns and evolving trade dynamics, ASEAN jurisdictions have emerged as important beneficiaries of new investment flows. While countries such as Vietnam and Indonesia remain major recipients of manufacturing investment, the Philippines is increasingly positioning itself as a complementary location for electronics, logistics, technology-enabled services, and regional support operations.

The expansion of logistics infrastructure has become particularly important as global supply chains evolve. Manufacturers and distributors increasingly require integrated transportation, warehousing, cold-chain and distribution capabilities. The Philippines' growing role within regional supply chains has consequently increased demand for logistics investments that support both domestic consumption and export-oriented production.

Energy security and energy transition have likewise become central themes in the investment landscape. The Philippines faces the dual challenge of meeting growing electricity demand while reducing dependence on imported fuel and enhancing sustainability. Renewable energy development therefore occupies a central position within the country's long-term economic strategy.

The opening of the renewable energy sector to full foreign ownership has significantly increased investor interest in utility-scale solar, onshore and offshore wind, hydroelectric and biomass projects. International developers and infrastructure funds are actively evaluating opportunities across the country as demand for clean energy continues to rise.

Several factors support this momentum. First, multinational corporations increasingly seek access to renewable power as part of broader decarbonisation commitments and environmental, social and governance (ESG) objectives. Second, growing electricity consumption driven by industrial expansion, urbanisation and digital infrastructure creates substantial demand for new generation capacity. Third, government policy continues to prioritise renewable energy deployment as a means of enhancing energy security and reducing exposure to external supply shocks.

Infrastructure and energy investment are increasingly interconnected. Large-scale industrial developments, technology parks, manufacturing facilities and data centres require reliable power and transport infrastructure. As a result, investors frequently evaluate opportunities across these sectors as part of integrated development strategies rather than standalone projects.

The convergence of infrastructure modernisation and energy transition has therefore created a broad ecosystem of investment opportunities extending well beyond traditional public works projects. For many investors, these sectors represent the clearest manifestation of the Philippines' broader liberalisation agenda.

### *The growth of technology-enabled and digital businesses*

The rapid growth of the digital economy represents another defining feature of the Philippine investment landscape. Over the past decade, digital adoption has accelerated across virtually every sector of the economy. Consumers increasingly rely on digital platforms for payments, commerce, transportation, entertainment and financial services. Businesses have similarly embraced digital tools to improve efficiency, expand market reach and support innovation. This transfor-

mation has attracted substantial domestic and foreign investment.

Fintech remains one of the most active segments of the digital economy. Digital wallets, electronic payments, online lending, embedded finance solutions and alternative credit platforms continue to expand their presence in both consumer and commercial markets. Increasing financial inclusion and widespread mobile adoption provide significant opportunities for further growth.

Digital banking has also gained momentum as technology-driven financial institutions seek to expand access to financial services while improving customer experience. Foreign investors continue to participate through strategic partnerships, venture capital investments and technology collaborations.

At the same time, investment interest increasingly extends beyond consumer-facing applications towards the underlying infrastructure supporting the digital economy.

Data centres have emerged as a particularly significant area of growth. Rising demand for cloud services, digital content, enterprise technology solutions and AI-related applications has increased the need for local data storage and processing capacity. The Philippines' strategic location, growing digital economy and improving infrastructure have strengthened its attractiveness as a destination for data centre investment.

Cloud computing and hyperscale infrastructure have likewise become increasingly important components of the digital economy. As businesses continue to digitise operations and migrate workloads to cloud environments, demand for reliable digital infrastructure continues to expand. International technology companies increasingly view South-East Asia as a critical growth region, creating opportunities for investment across the broader digital infrastructure ecosystem.

The growing policy focus on artificial intelligence further reinforces this trend, with the government's interest in developing domestic AI capabilities. Recent policy discussions concerning AI infrastructure, advanced computing capacity and digital innovation reflect a broader effort to strengthen the country's competitiveness in emerging technology sectors. These developments underscore the increasing importance of computing infrastructure as a strategic asset within the broader digital economy.

From an investment perspective, initiatives such as Pax Silica highlight the increasing importance of computing infrastructure as a strategic asset. The development of AI capabilities requires substantial investments in data centres, high-performance computing facilities, cloud infrastructure, cybersecurity systems, fibre connectivity and reliable energy supply. Consequently, investors evaluating opportunities in the Philippines are increasingly examining the entire digital infrastructure value chain rather than focusing solely on software or platform-based businesses.

Telecommunications investment remains essential to supporting these developments. Continued expansion of fibre networks, mobile broadband coverage and digital connectivity infrastructure enhances the country's ability to participate in increasingly technology-driven economic activity.

However, the growth of technology-enabled businesses also creates regulatory challenges. Digital business models frequently blur traditional sectoral boundaries. A single platform may simultaneously provide financial services, technology services, marketplace functions, advertising services and data-driven products. Determining the applicable regulatory framework can therefore require careful analysis.

Cybersecurity and data privacy have become increasingly important considerations. Organisations that collect, process and store personal information must comply with the requirements of Philippine data protection laws while implementing appropriate governance and security measures.

As digital ecosystems become more sophisticated, investors must assess not only commercial opportunities but also the evolving regulatory environment governing technology, data and digital platforms.

### *Increased regulatory sophistication and compliance expectations*

As the Philippines becomes more attractive to international capital, regulatory expectations have become increasingly sophisticated. The investment environment is no longer characterised primarily by licensing requirements and administrative filings. Instead, regulators increasingly focus on transparency, accountability, risk management, and alignment with international standards.

One of the most notable developments has been the growing emphasis on beneficial ownership transparency. Corporate entities are subject to enhanced disclosure obligations designed to identify ultimate beneficial owners and improve transparency within corporate structures. These measures form part of broader efforts to combat money laundering, terrorism financing, tax evasion and other forms of financial crime.

Data privacy and cybersecurity have likewise become increasingly important areas of regulatory focus. As businesses collect and process growing volumes of personal and commercial data, regulators continue to emphasise compliance with data protection requirements, cybersecurity governance and responsible data management practices. For investors operating technology-driven businesses, data governance has become a key component of both compliance and enterprise risk management.

The continued growth of AI-enabled technologies and digital infrastructure is also expanding the regulatory conversation beyond traditional data protection concerns. Policymakers are increasingly examining issues relating to AI governance, algorithmic accountability, cybersecurity resilience, cross-border data flows and responsible deployment of emerging technologies. Investors participating in technology-intensive sectors should therefore anticipate continued regulatory development as the Philippines seeks to balance innovation objectives with consumer protection and public trust.

Anti-money laundering compliance continues to evolve alongside international standards and recommendations. Businesses operating in regulated sectors must increasingly implement comprehensive compliance programmes, conduct customer due diligence and maintain appropriate governance frameworks.

Competition regulation has also become a significant consideration for investors. The Philippine Competition Commission has established itself as an active regulator responsible for reviewing transactions that meet applicable notification thresholds. Competition analysis now forms an important component of transaction planning, particularly for large mergers, acquisitions and joint ventures. Early assessment of potential competition issues has become increasingly important, as regulatory review may affect transaction timelines, conditions and execution strategies.

ESG considerations likewise play an increasingly prominent role in investment decision-making. Institutional investors, lenders, multinational corporations and regulators are placing greater emphasis on sustainability, responsible business conduct, climate-related risks and stakeholder accountability. ESG considerations increasingly influence project financing, investment approvals, corporate governance practices and reporting obligations.

Regulatory co-ordination has also become more complex. Many investments require interaction with multiple government agencies, each possessing distinct mandates and regulatory priorities. Successful projects often depend upon comprehensive regulatory mapping conducted at an early stage of the investment process.

Consequently, compliance is no longer viewed solely as a legal obligation. Increasingly, it represents a strategic component of investment planning and risk management.

### *Strategic structuring considerations for investors*

As foreign participation opportunities expand, investors continue to place significant emphasis on transaction structuring and operational design. For long-term commercial operations, foreign investors frequently favour domestic subsidiaries. This structure provides operational flexibility, facilitates local contracting and asset ownership, and generally limits the exposure of

the foreign parent to liabilities arising from Philippine operations.

Although branch offices remain available and may be appropriate for certain business models, many investors prefer the flexibility and risk allocation advantages offered by a locally incorporated subsidiary.

Structuring decisions also require careful consideration of foreign investment regulations, capitalisation requirements, tax implications, incentive availability and sector-specific restrictions. While liberalisation has expanded investment opportunities, certain industries continue to be subject to ownership limitations or special regulatory requirements.

Export-oriented enterprises, technology-driven businesses and enterprises qualifying for investment incentives may benefit from regulatory and fiscal frameworks designed to encourage investment and job creation. Investors therefore increasingly evaluate structure, incentives and operational objectives as interconnected considerations rather than isolated decisions.

Transaction planning has also become more sophisticated. Investors routinely assess competition law implications, beneficial ownership disclosure requirements, tax considerations, data privacy obligations and ESG expectations during the structuring phase rather than after implementation.

In addition, businesses increasingly recognise the importance of workforce governance. Labour compliance, contractor arrangements, immigration requirements and employment practices remain important operational considerations, particularly for multinational employers establishing significant local operations.

The most successful investments are typically characterised by comprehensive planning that integrates commercial objectives with regulatory, tax, operational and governance considerations from the outset.

### *Conclusion*

The Philippines in 2026 presents a markedly different investment landscape from that of previous decades. A sustained programme of liberalisation has expanded foreign participation opportunities across infrastructure, energy, telecommunications, retail and other strategic sectors. At the same time, improvements in investment incentives, digital connectivity and regulatory modernisation have strengthened the country's competitiveness within South-East Asia.

Infrastructure development, energy transition and digital transformation continue to generate substantial opportunities for foreign capital. These trends are reinforced by favourable demographics, a growing consumer market, increasing regional integration, and evolving global supply chain strategies that position the Philippines as an attractive destination for long-term investment.

At the same time, investors must navigate an increasingly sophisticated regulatory environment characterised by heightened transparency requirements, competition oversight, ESG expectations, and cross-agency co-ordination. Success therefore depends not only on identifying commercial opportunities but also on implementing effective structuring, governance and compliance strategies.

Looking forward, the Philippines is well positioned to capitalise on regional growth, technological transformation and the global transition towards sustainable development. While constitutional and regulatory restrictions remain relevant in selected sectors, the overall direction of policy is increasingly clear: the Philippines is pursuing a more open, competitive and internationally integrated investment environment. For foreign investors seeking long-term exposure to South-East Asia's next phase of growth, the Philippines offers a compelling combination of market opportunity, liberalisation momentum and economic potential.

**Clifford Chance** opened its Warsaw office in 1992 and today has a team of more than 110 lawyers, including ten partners. Most of its lawyers are qualified in Polish law, several are dual qualified, and all are fluent in Polish and English. The firm has close working relationships with major banks, financial institutions and corporates, and works with domestic and international clients. Polish companies value how the team uses the firm's resources on their behalf, and international companies rely on its local capability to deliver results. Clients can rely on the firm's technical excellence, pragmatic advice and client-focused approach.

## Authors

**Agnieszka Janicka** is managing partner of Clifford Chance's Warsaw office and head of its corporate and M&A practice. She has worked for the firm since the establishment of its Warsaw office in 1992 and has over 30 years of corporate experience in many industry sectors, with a special focus on energy and resources, TMT, financial services, consumer goods and healthcare. In particular, she has advised on some of Poland's largest M&A transactions, privatisations and international equity offerings.

**Krzysztof Hajdamowicz** is a counsel at Clifford Chance and has extensive experience in M&A transactions and cross-border corporate reorganisations in the CEE region. He also co-ordinates the team advising on intellectual and industrial property, data protection and new technologies laws. Krzysztof focuses particularly on consumer goods and retail, TMT, energy and infrastructure, and the private equity sectors, and is a member of the relevant Clifford Chance global sector focus groups.

# 1. Legal System

## 1.1 Legal System and Judicial Order

Poland's legal system is based on the civil law tradition. The Polish legal system underwent substantial changes between 1989 and 2004, to accommodate the transition to a free-market economy and the implementation of EU legislation, and has continued to evolve.

The basic legislative framework for business activities in Poland is currently provided by the Civil Code of 1964, the Commercial Companies Code of 2000 and the Act on Entrepreneurs of 2018. The Act on Rules of Foreign Entrepreneurs' and Other Foreign Persons' Involvement in Trading in Poland of 2018 covers foreign investment.

### Courts

The Polish Constitution of 2 April 1997 vests judicial powers in:

- the Supreme Court;
- the common courts (district, regional and appeal courts);
- the administrative courts (provincial administrative courts and the Supreme Administrative Court); and
- military courts.

The judicial order is based predominantly on the common courts. The role of the administrative courts is to control the activity of the public administration.

Proceedings before a common court generally consist of two stages (although extraordinary cassation appeals to the Supreme Court are available in certain circumstances). The first stage of civil proceedings is conducted in a district court, whose rulings may be appealed before a regional court. However, where a case is heard by a regional court in the first instance, it is appealed before an appeal court.

The Supreme Court's role is to ensure uniformity and accuracy of interpretations of the law, and to issue opinions on statutes.

# 2. Restrictions on Foreign Investments

## 2.1 Approval of Foreign Investments

In general, foreign investment in Poland does not require special approval from the authorities. As a member state of the EU, Poland applies the principles of free movement of capital and non-discrimination. Therefore, investors from EU, European Economic Area (EEA) or European Free Trade Association (EFTA) member states may invest according to the same principles as Polish citizens, and are not treated as foreigners.

However, in order to enjoy the same rights as Polish citizens, foreign investors need to meet certain criteria, such as obtaining a residence permit in Poland. Otherwise (save for where international treaties provide differently), an investor may only participate in a limited liability company, joint stock company, limited partnership or partnership limited by shares.

Moreover, there are limitations on foreign equity participation with regard to some sectors of the economy, such as aviation and radio and television broadcasting.

### Limitations

Certain limitations apply regardless of the investor's origin, with regard to certain regulated activities where a concession, licence or registration in the register of regulated activities may be required. If so, the relevant regulatory bodies may be authorised to revoke licences for state security interest reasons. In some sector regulations, the regulators have the express right to revoke a licence upon change of control.

### Consents

Some consents may be required (eg, antitrust approval or consent of the Polish Financial Supervisory Authority to acquire certain stakes in a bank or certain other, regulated financial institutions), regardless of whether the investor is foreign or domestic.

The government may also veto investment in specific strategic Polish companies in protected sectors (the regulation currently applies to 23 named companies but may change at the government's discretion). The same restrictions apply to domestic investors invest-

ing in strategic Polish companies on the list, so this is not a typical foreign direct investment (FDI) regime.

### FDI Regime

The FDI regime was introduced in response to the COVID-19 pandemic and applies to the following foreign investors:

- in the case of natural persons – persons who are not citizens of an EU/EEA/OECD country; or
- in the case of other entities – entities that do not have their registered office in an EU/EEA/OECD country and/or entities that have not had their registered office in an EU/EEA/OECD country for at least two years.

This regime also applies to indirect acquisitions by foreign investors. The list extending the application of the rules is broad and includes the following in particular:

- acquisitions made through subsidiaries;
- acquisitions made at the request of a foreign investor (including acquisitions by investment portfolio managers made for their clients); and
- acquisitions made by entities acting in concert with a foreign investor.

An FDI transaction is one that results in a foreign investor acquiring:

- a stake equal to or greater than 20% or 40% of the total number of votes in a Polish company or, in the case of a Polish partnership, making a contribution to a Polish partnership equal to or greater than 20% or 40% of the total contributions in the partnership;
- a participation in the profit of a Polish company equal to or greater than 20% or 40%; or
- a significant participation in, or a dominant position over, a Polish company – eg, via the acquisition or lease of an organised part of the enterprise from a Polish company, through entering into a control (management) agreement and/or a profit transfer agreement in relation to a Polish company, or via the acquisition of a majority of votes in a Polish company.

If the FDI transaction concerns a company that operates in any "strategic" sectors or conducts "strategic" activities, it is subject to the FDI regime and requires prior clearance from the ministry responsible for economic affairs.

The regime affects the following:

- companies that conduct economic activity across a wide range of sectors, including energy, science, technology, telecommunications, medicine and food produce;
- companies active in the development or modification of software across sectors including energy, water, science, technology and commerce, food supply, and all software – regardless of sector – that is used for data gathering and processing;
- companies that own "critical infrastructure" (as defined in a separate act); and
- all Polish public companies listed on the Warsaw Stock Exchange, regardless of the sector in which they operate.

A de minimis exemption applies for Polish target companies with Polish revenue below EUR10 million in both of the two financial years preceding the notification. Furthermore, the Polish government is entitled to introduce additional exemptions.

### Permit to Acquire Real Property

The acquisition of real property (including the so-called perpetual usufruct right in real property) by foreigners requires a permit from the minister of the interior and administration. This restriction also applies to the acquisition of shares by a foreigner where this results in the takeover of control over a company owning real property and to the purchase of shares in a company owning real property that is a controlled entity. In general, agricultural land may only be purchased by individual farmers; all other entities must first obtain permission from the president of the National Agriculture Support Centre, and this is subject to the fulfilment of strict requirements.

Therefore, regulatory requirements, if any, must always be double-checked at an early stage of the preparations for a proposed investment.

## 2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance

### General

Where a permit issued by the minister of the interior and administration is required for the acquisition of real property or shares in companies that own real properties, acquisition without such a permit will be null and void. It may take several months to obtain a permit; the actual duration of the proceedings may vary depending on the circumstances.

In respect of certain sectors, where the formal consent of the regulator is not required but a change in the shareholding would trigger certain rights for the regulator, it is usually recommended, where feasible and practicable, for the proposed investor to introduce itself to the regulator before making the investment in order to determine whether the investment would raise any concerns for the regulator.

In addition, a failure to notify the acquisition of a dominant/significant participation in protected Polish companies listed by name in the governmental regulation could lead to both criminal sanctions (from six months to five years of imprisonment) and financial penalties (PLN100 million).

### FDI Regime

#### *Procedure*

The approval of the relevant authority is generally required prior to the completion of an FDI transaction (although in some instances the filing can be made only by the target entity after completion of the acquisition). The notification procedure should be commenced prior to:

- entering into any agreement resulting in an obligation to acquire or achieve a significant participation/dominance;
- the announcement of a tender offer for the acquisition of a Warsaw Stock Exchange-listed company; or
- any other event resulting in the acquisition or achievement of a significant participation/domination.

However, in a multi-stage transaction, notifications are accepted before the signing of the last agreement resulting in the acquisition or achievement of a significant participation/domination, on the basis of, for example, a conditional/preliminary agreement or a letter of intent.

Following the notification, the authority has 30 business days to complete the initial proceedings and approve the FDI transaction or initiate additional control proceedings, which may last up to 120 calendar days. However, the authority may extend this deadline substantially by asking questions, as the clock stops ticking each time the authority sends out its question, to resume only when the response is actually delivered to it. There is no pre-notification procedure.

### Sanctions

Any FDI transaction made in breach of the FDI regime will be null and void, and the investor will not be able to exercise its rights attached to the acquired shares (including any voting rights).

Non-compliance with the FDI regime constitutes a criminal offence subject to a penalty of imprisonment from six months to five years and a fine of up to PLN50 million. A penalty of imprisonment from six months to five years and a fine of up to PLN5 million may also be imposed on managers of target companies who fail to notify the authority of the shareholders' non-compliance with the FDI regime, and on those who attempt to exercise voting rights in breach of the FDI regime.

## 2.3 Commitments Required From Foreign Investors

While the authorities do not make approval conditional upon certain commitments, some commitments will usually be required if an investor (whether foreign or domestic) applies for state aid for its investment.

Certain regulators (eg, the Polish Financial Supervisory Authority) expect various specific commitments from both foreign and domestic investors who wish to acquire large stakes in regulated financial institutions.

## 2.4 Right to Appeal

There is no specific authorisation procedure; however, where licences, concessions and permits are required, they are granted in administrative proceedings, and any unsatisfactory decision may be challenged.

In contrast to regular competition law proceedings before the Polish Competition Authority (PCA) (where one may appeal to a special court), the FDI regime will follow the standard administrative appeal route; appeals will be decided by administrative courts.

## 3. Corporate Vehicles

### 3.1 Most Common Forms of Legal Entity

Foreign investors usually operate in Poland through one of the available domestic entities. However, it is not uncommon for investors (especially from the EEA) to register an overseas company as having a branch or representative office in Poland, without incorporating a new Polish legal entity.

The choice of an appropriate legal form usually depends on the nature of the contemplated business.

#### Most Common Forms of Legal Entities in Poland

*Limited liability company*

A limited liability company (*spółka z ograniczoną odpowiedzialnością*, or sp. z o.o.) is the most popular form of corporate vehicle in Poland, which can be established for nearly all business purposes, except in situations where the applicable law requires another form of legal entity (only a joint stock company can be listed on the stock exchange). The minimum share capital of a limited liability company is PLN5,000, and the nominal value of one share may not be less than PLN50. There is no minimum number of shareholders, so the company may have only one shareholder. However, the company may not be formed by another sole-shareholder limited liability company.

The governance structure includes the following corporate bodies.

*Management board*

The management board manages the affairs of the company and consists of at least one member appointed from among the shareholders or outsiders. Unless the articles of association provide otherwise, the members of the management board are appointed and dismissed by way of a resolution passed by the shareholders' meeting.

*Shareholders' meeting*

The shareholders' meeting makes the decisions on the company's most crucial affairs, as stipulated in the articles of association or in the Commercial Companies Code, which distinguishes between "ordinary" and "extraordinary" shareholders' meetings. The first must be held within six months of the end of each financial year and should adopt resolutions to approve:

- the management board report;
- the financial statement for the previous financial year;
- the distribution of profits or financing of losses; and
- the discharge of duties by members of the company's corporate bodies.

*Supervisory board*

A supervisory board or audit committee is optional as long as the company's share capital does not exceed PLN500,000 and there are no more than 25 shareholders; if appointed, it must be composed of at least three persons. The role of the supervisory board is to exercise day-to-day supervision over all areas of the company's activity. It may give the management board instructions, but they are not binding. The audit committee's duties are limited to reviewing the financial statements and the management board's motions to distribute profit and cover loss.

The shareholders of a limited liability company are not personally liable for the company's liabilities. The company is treated as a legal entity separate from its shareholders, so the shareholders may lose only their investment in the company.

A limited liability company is quite a flexible vehicle, suitable for numerous purposes.

*Joint stock company*

In general, a joint stock company (*spółka akcyjna*, or S.A.) is quite similar to a limited liability company in its three corporate bodies (the general meeting, the management board and the supervisory board), which share most characteristics and competences. The fundamental difference is that a joint stock company may raise its capital by public subscriptions and issue shares in the form of securities, so the form is usually used by businesses intending to raise capital through

an IPO or when Polish law requires this form of company (eg, in the case of financial institutions, banks, pension funds and insurers).

*Boards*

The management board deals with the company's affairs, and members are appointed and removed by the supervisory board, unless the statutes provide otherwise. Some issues listed in the Commercial Companies Code or the statutes require resolutions adopted by the general meeting.

A supervisory board is a requirement in a joint stock company. Its role is to monitor the company's activities and review the financial statement and management report on company activity. Its members are appointed by the general meeting, but the statutes may provide otherwise. In principle, the supervisory board acts collegially, but it may also delegate certain activities.

*Shareholders*

Shareholders are not liable for the company's liabilities. The minimum share capital of a joint stock company is PLN100,000, and the nominal value of one share may not be less than PLN0.01. All shares in joint stock companies are dematerialised (ie, no share certificates are in place). Each share transfer becomes effective upon registration in the shareholders' register, and shareholders are no longer able to remain anonymous.

There is no minimum number of shareholders, so the joint stock company may have only one shareholder. However, it may not be formed by a sole-shareholder limited liability company.

### *Simple joint stock company*

A simple joint stock company (*prosta spółka akcyjna*, or P.S.A.) is a new type of corporate vehicle. It is intended to be suitable for start-ups, as the founder will not be obliged to obtain the amount needed for share capital and the shares can be subscribed for in exchange for any contribution that has economic value, in particular the provision of labour or services (prohibited for other companies). It cannot, however, undergo an IPO.

*Governing bodies*

Corporate governance in a simple joint stock company may be based on either the two-tier model (similar to a limited liability company) or the one-tier model (only a board of directors is appointed, on which there are executive and non-executive directors).

*Shareholders*

The minimum share capital is PLN1 and all shares are dematerialised (ie, there are no share certificates). The shares have no par value, do not form part of the share capital and are indivisible. There is no minimum number of shareholders, so the simple joint stock company may have only one shareholder. However, similar to other Polish companies, it may not be formed by a sole-shareholder limited liability company. The shareholders are not liable for the company's liabilities.

Subject to a few exceptions (eg, a change in the statutes, mergers and demergers), shareholders' meetings may take place outside Poland, and minutes do not need to be drawn up by a notary public. Therefore, holding a shareholders' meeting is less burdensome than for joint stock companies.

## Less Common Types of Corporate Vehicles in Poland

### *General partnership*

A general partnership (*spółka jawna*, or sp.j.) is a basic type of partnership. Although it does not have a legal personality, it has the capacity to acquire rights, incur debts, sue and be sued.

It is managed and represented by its partners. In principle, each of the partners is entitled to deal with the general partnership's affairs and represent it; however, the partnership deed or a resolution of the partners may provide that the partnership is managed by one or several partners. Moreover, the management of the partnership may be entrusted to third parties, but not in a way that excludes all the partners.

Decisions on matters beyond the ordinary scope of the partnership's business require the consent of all the partners (including those with a limited right to manage it). Regardless of such limitations, all the partners have the unlimited right to be informed of the state of the partnership's assets and its business, and

the right to review its books and documents. All the partners are jointly and severally liable for the general partnership's debts, but this liability is subsidiary – ie, the partnership's creditors should first seek satisfaction from the partnership's assets. If that proves ineffective, they may institute enforcement against a partner's assets. The partners' liability may not be limited.

There is no minimum share capital requirement in a general partnership, but it must have at least two partners. Most often, a general partnership is used when a large amount of capital is not required, the partners wish to have a personal impact on the business and the business itself is not risky.

### *Professional partnership*

A professional partnership (*spółka partnerska*, or sp.p.) is designed for certain groups of freelancers (such as lawyers, doctors, tax advisers and architects) for the purpose of exercising their professions in a partnership. Only natural persons licensed to practise their professions may be partners in a professional partnership, which must have at least two partners.

Each partner has the right to manage the partnership's affairs individually. In addition, the professional partnership may be managed and represented by a management board, modelled on the one in a limited liability company. At least one of the partners must sit on the board.

The partners' liability is similar to that in a general partnership, but the partners are not liable for the partnership's obligations arising in relation to the practice of professions by the other partners or resulting from acts or omissions of the partnership's employees who are supervised by another partner. As in a general partnership, there is no minimum share capital requirement.

### *Limited partnership*

In a limited partnership (*spółka komandytowa*, or sp.k.), there are two groups of partners:

- general partners, who have unlimited liability; and
- limited partners, whose liability is limited.

The status of the general partners is similar to the status of partners in a general partnership; they represent the limited partnership and manage its affairs. Limited partners may represent the partnership only on the basis of a power of attorney granted by the partnership; although management of the partnership is the general partners' right and duty, decisions on matters exceeding the ordinary scope of the partnership's business activity require the consent of the limited partners as well.

The general partners are liable for the partnership's obligations to the extent of all their personal assets, whereas the limited partners are liable up to the declared limited contribution (*suma komandytowa*). There is no minimum share capital requirement. A limited partnership must have at least one partner who is the general partner and at least one partner who is the limited partner.

### *Partnership limited by shares*

A partnership limited by shares (*spółka komandytowo-akcyjna*, or S.K.A.) is a combination of a joint stock company and a limited partnership, and has two corporate bodies:

- the general meeting; and
- the supervisory board.

A partnership limited by shares does not have a management board; instead, it is managed and represented by the general partners. However, certain matters listed in the Commercial Companies Code or partnership deed require the resolution of a general meeting.

Both the general partners and the shareholders participate in the general meeting, but only the latter are entitled to vote. A supervisory board is not mandatory unless the partnership has more than 25 shareholders, and such board must have at least three members. Once appointed, the supervisory board exercises permanent supervision over the partnership's activities.

The general partners' liability is unlimited, whereas the shareholders are not liable for any of the partnership's debts and may lose only their investment in the partnership. The minimum share capital of a partnership limited by shares is PLN50,000, and the nominal value

of one share may not be less than PLN0.01. All shares in a partnership limited by shares are dematerialised. A partnership limited by shares must have at least one general partner and at least one shareholder. Most often, a partnership limited by shares is used in atypical venture capital/private equity investments.

#### *Other forms*

Other forms are also available, such as a co-operative (*spółdzielnia*), a European company (*Spółka Europejska*, or *Societas Europea*) or foundations (*fundacja*).

The family foundation (*fundacja rodzinna*) is a mechanism of succession by owners of medium and large family businesses or owners of private assets of significant value. A family foundation may carry out business activities such as joining commercial companies, taking out loans or buying and selling shares or securities.

### 3.2 Incorporation Process

All legal entities must be registered in the National Court Register. There are two ways of establishing the companies – ie, traditional and electronic. Family foundations are registered in a separate register.

#### Traditional Establishment

The process begins with signing the articles of association or deed of formation. For companies and limited partnerships or partnerships limited by shares, the articles of association or statutes must be executed before a Polish notary public in the form of a notarial deed.

The next step is to file an application to enter the company in the National Court Register, which usually takes several weeks. A partnership is established upon registration. Companies come into existence upon the conclusion of the articles of association, but receive legal personality upon registration.

#### Electronic Establishment

General partnerships, limited partnerships and companies may be established electronically through a special internet portal, in which case there is no requirement to draft the articles of association in the form of a notarial deed. Instead, they are concluded based on the template provided in the system.

However, the template has basic wording, and any amendments to it must be in the form of a notarial deed and must be registered with the court. This method of incorporation is usually simpler and faster than the standard procedure, especially for SPVs, but it is not always suitable for more complex investments.

### 3.3 Ongoing Reporting and Disclosure Obligations

Polish private companies and partnerships are subject to disclosure obligations, which are of an informational nature.

Companies are obliged to notify the registry court of any changes to information disclosed in the register, such as:

- the composition of their decision-making bodies;
- rules of representation;
- registered office and address;
- the amount of share capital; and
- the names of their shareholders or partners.

Companies must also report any amendments made to the articles of association. Applications to the registry court are filed electronically.

After the end of each financial year, a company must file approved financial statements, the management board's report on the company's activity and the auditor's opinion (if required). Currently, these financial documents are only filed electronically.

Companies are obliged to electronically file declarations with the Central Register of Beneficial Owners to record or update the company's beneficial owners.

#### Reporting Duties

Ongoing tax and employment-related reporting duties will also apply (eg, in respect of taxes and various social security contributions). Certain additional reporting duties vis-à-vis the National Bank of Poland may apply regarding foreign exchange transactions and other financial matters, for example. The company will usually be expected to provide certain data to the statistical authorities, on a periodic basis.

Depending on the type of business, certain other ongoing duties will apply (eg, waste disposal or other duties related to the environment). If regulated, other regulatory duties may also apply.

### 3.4 Management Structures

Under Polish law, there is a two-tier management structure. The management board manages a company's affairs and has executive directors, whereas the supervisory board (with non-executive directors) or, less commonly, the audit committee monitors its activities. Please see **3.1 Most Common Forms of Legal Entity** for more details.

### 3.5 Directors', Officers' and Shareholders' Liability

Each officer of the company is obliged to act in the company's interests and is liable to the company for any damage caused by acts or omissions in breach of the law or articles of association. Members of the corporate bodies are liable for any damage caused by lack of required diligence in the course of performance of their functions or a breach of the duty of loyalty towards the company, resulting in the damage.

The members of the management board (and directors of the simple joint stock company) may be jointly and severally liable for the company's debts in terms of all their assets if enforcement against the company proves ineffective (ie, if the company's assets are insufficient to cover the claims). However, a member of the management may be released from this liability in certain circumstances – for example, if they can prove that a petition to have the company declared bankrupt was filed in due time (or was delayed without their fault).

As the burden of proof will rest entirely with the management board member, it may sometimes be very difficult for the member to succeed in being released from liability. Similar rules regarding the personal liability of management board members apply to taxes and certain other public charges. Finally, a breach of certain duties (eg, reporting duties) may also trigger criminal liability.

In practice, the members of the management board (as executive directors) are more exposed to each type of liability than the members of the supervisory board (as non-executive directors), which is worth considering when deciding on the structure and composition of the boards. Polish law does not currently recognise the concept of "piercing the corporate veil", and attempts to introduce the concept have so far been unsuccessful. As it stands, shareholders are liable to the company only to the extent that they fail to make agreed contributions or that they receive unlawful distributions, or under the general principles of tort law.

A major amendment to the Commercial Companies Code came into force on 13 October 2022, changing the rules on the liability of members of the corporate bodies and introducing a regulated group concept and related holding company law. A member of the management board or supervisory board is not liable for damage caused to the company when acting within the limits of a justified economic risk on the basis of information, analyses and opinions that should be taken into consideration in the relevant circumstances. However, this does not override the duty to act with professional due diligence and loyalty to the company, which applies to the members of the management board and supervisory board of a limited liability company and a joint stock company.

The right of a parent company to issue a binding instruction to a subsidiary was also introduced. However, under certain circumstances, a subsidiary is entitled to refuse to carry out the instruction issued. The members of the management board, the supervisory board or audit committee and the liquidators of a subsidiary and a parent company are exempt from liability for damage caused by the execution of a binding instruction if they acted in the interest of the group. Accordingly, the liability of the parent company is correspondingly enhanced, creating the possibility of holding a parent company liable for damage caused by its binding instructions given to a subsidiary, the minority shareholders of a subsidiary or the creditors of a subsidiary. Establishment of the group and, therefore, application of these regulations is not mandatory.

## 4. Employment Law

### 4.1 Nature of Applicable Regulations

Employment regulations are contained in a number of legal sources, including statutes of law, collective bargaining agreements and other collective arrangements based on statutes and regulations issued by the employer. Statutory employment laws are of a semi-imperative nature, which means that other provisions regulating terms of employment – such as collective bargaining agreements, other collective arrangements and internal regulations – may modify statutory provisions, but only for the benefit of employees. Modifications to the employees' detriment will be ineffective. The same applies to individual employment contracts.

### 4.2 Characteristics of Employment Contracts

An employment contract should be signed in wet ink or with a qualified electronic signature (QES), although failure to satisfy this requirement does not result in the invalidity of the contract – an employment contract is also valid and enforceable when concluded orally or even per facta concludentia. However, where the contract has not been signed in wet ink or with a QES, the employer is obliged to confirm to the employee the arrangements regarding the parties to the contract, the type of contract and the conditions of the contract in writing prior to admitting the employee to work.

Any change to the terms of employment should also be made in writing. A unilateral change that is detrimental to the employee requires notice of change to conditions of work and pay (in writing or signed with a QES). If the proposed new conditions are rejected by the employee, this results in the termination of the employment contract.

Polish law provides for three types of employment contracts, based on whether the contract is concluded for:

- a probationary period;
- a fixed term; or
- an indefinite term.

The purpose of a probationary period contract is to verify an employee's suitability for the given position. It may be concluded for a maximum period of one, two or three months, with the maximum period depending on the type and duration of contract the parties intend to conclude subsequently. It is possible to contractually extend the probationary period by periods of holidays and any other justified absences. The contract for a probationary period can, in principle, be concluded only once in relation to a specific position.

A fixed-term contract can be concluded for a maximum of 33 months. The duration of subsequent fixed-term contracts concluded with the same employer is calculated in aggregate for that purpose. At the same time, no more than three subsequent fixed-term contracts may be concluded; if these limits are exceeded, the contract automatically becomes a contract for an indefinite term. The law provides for certain exceptions where the limits may be exceeded without the contract becoming a contract for an indefinite term, including the conclusion of a contract for a term of office or a situation where the employer can objectively justify exceeding the limit.

### 4.3 Working Time

Employees may work full-time or part-time, and there are no minimum working hours. The standard full-time working hours system provides for eight hours of work a day and 40 hours a week. These limits may be modified based on the system and work time schedule adopted. However, in any case the average weekly working time must not exceed 48 hours, including overtime, in a settlement period. The employer must also ensure minimum periods of uninterrupted rest – ie, a minimum of 11 hours per day and 35 hours once a week.

Overtime work is, in principle, permitted for the employer's justified needs or the need to carry out a rescue action. Overtime should not exceed 150 hours annually, but the employer may modify this limit to up to 416 hours per annum.

Employees are entitled to their regular remuneration plus an addition of 50% or 100% of their salary for overtime work, depending on the moment when overtime work takes place: the higher addition applies if overtime work is performed at night, on a Sunday or a holiday, or on a day off granted to the employee for work on a Sunday or holiday, and also for every

hour of overtime exceeding the weekly limit of working hours (ie, 48 hours). Instead of an addition to remuneration, employees may be compensated for overtime work by time off in lieu.

## 4.4 Termination of Employment Contracts

Employment contracts may be terminated with or without notice or by a termination agreement. The length of the notice period depends on the type of contract and the duration of employment. For employment contracts for a fixed or indefinite term, the notice period is:

- two weeks if the period of employment lasted less than six months;
- one month if the period of employment lasted at least six months but less than three years; and
- three months if the period of employment lasted at least three years.

### Termination by the Employer

To terminate a fixed-term or an indefinite contract unilaterally, the employer must state the reason for termination in the termination notice signed in wet ink or with a QES. The reason must be real, specific and serious enough to justify termination. Moreover, the employer must consult the trade union representing the relevant employee (if present) on the intention to terminate the contract, although the employer is not bound by the opinion of the trade union.

Some categories of employees are protected from termination – eg, employees who are of pre-retirement age or pregnant. It is also generally not admissible (with some limited exceptions) to give notice of termination while an employee is on holiday or on sick leave.

There is no obligation to make any additional payments to an employee whose contract is being terminated with notice (apart from regular remuneration until the end of the notice period and payment in lieu of holiday leave), except where the termination takes place due to redundancy (organisational reasons on the part of the employer), in which case the employer is required to pay statutory severance pay of one, two or three months' remuneration (depending on tenure). The statutory severance rules apply only to employers with 20 employees or more.

The employer may terminate an employment contract without notice through the fault of the employee in the following circumstances:

- severe violation of basic employee duties;
- committing a crime that makes it impossible to continue employment in a given position; and
- loss of qualifications to perform work in a given position through the fault of the employee.

The employer may also terminate the contract without notice without the fault of the employee if the employee remains on sick leave for a certain period (longer than three or nine months, depending on the duration of employment) or where the employee's justified absence for other reasons lasts longer than one month. There is no obligation to make any additional payments to the employee in the case of termination without notice.

### Termination by the Employee

An employee can terminate an employment contract with or without notice. Termination without notice can take place where a doctor diagnoses a detrimental effect of work on the health of the employee and they are not transferred to another position by the employer, or where the employer severely breaches its basic duties to the employee. In the latter case, the employee is entitled to compensation in the amount of their remuneration for the notice period applicable to their contract or, in the case of a contract for a fixed term, for the remainder of the term of the contract, but for no more than the notice period.

### Termination by Mutual Agreement of the Parties

The terms of termination agreements are agreed by the parties, and it is common for the employer to make an additional severance payment to the employee, although this is not a legal requirement.

### Collective Redundancies

If an employer with at least 20 employees terminates employment contracts for reasons not attributable to the employees, it is referred to as "collective redun-

dancy" if the redundancies are made during 30 consecutive days and the termination involves:

- ten or more employees, where the employer has fewer than 100 employees;
- 10% or more of the employees, where the employer has at least 100 employees but fewer than 300 employees; or
- at least 30 employees, where the employer employs 300 employees or more.

The employer is obliged to consult the trade unions (if present) regarding the intention to carry out collective redundancies, and must also notify the trade unions of the reasons for the planned redundancies, the number of employees to be made redundant and the period during which the redundancies will take place, among other things. This information must be submitted to the relevant labour office. If there are no trade unions at the employer's establishment, the relevant rights are exercised by elected employees' representatives.

Within 20 days of the date of notification, the employer must conclude an agreement with the trade unions regulating the collective redundancy process. If an agreement cannot be reached, the employer unilaterally regulates the process in the relevant by-laws. If there are no trade unions at the employer's establishment, the employer issues the by-laws after consulting the employees' representatives. The relevant labour office must be notified of the agreement concluded or the by-laws issued.

Employees whose contracts are terminated in a collective redundancy procedure are entitled to additional statutory severance pay of one, two or three months' remuneration, depending on the duration of their employment (respectively: less than two years, from two to eight years, or longer than eight years).

### 4.5 Employee Representations

In principle, there is no legal requirement to have any kind of employee representation. However, a company that has more than 50 employees is obliged to inform employees that they may (but are not obliged to) set up a works council. Works councils have consultation and information rights, but they do not participate in the management of the company.

Employees of privatised companies have certain rights of representation on the supervisory board. If the company has more than 500 employees on average over the year, the employees have the right to elect one member of the management board.

Trade unions, if present at the company, retain significant influence; negotiations with trade unions may be required in some situations, particularly if there is a planned collective redundancy. In general, under Polish law, there are no requirements to negotiate or consult with trade unions or works councils when a Polish company or its assets are being acquired. However, such negotiations or information obligations are common when the company being sold is state-owned.

If there are no trade unions, in some situations the law requires the employer to inform/consult employee representatives. Employee representatives can be elected ad hoc for this purpose, or a permanent employee representation may be formed at the employer.

## 5. Tax Law

### 5.1 Taxes Applicable to Employees/Employers

#### Personal Income Tax (PIT)

In principle, employees in Poland are subject to PIT at the rate of 12%, provided that a 32% rate applies on the portion of the taxable profit exceeding PLN120,000 in the tax year. Certain incomes are taxable at 19% or 20% flat PIT rates. Incomes from different sources are not mixed, and tax is calculated for each source of income separately.

Tax-reducing amounts apply, ranging from PLN3,600 (if the annual income is PLN120,000) to PLN10,800 (if the annual income exceeds PLN120,000). No tax is effectively payable on an annual income of up to PLN30,000.

Income of up to PLN85,528 received by a person under the age of 26 is exempt from PIT.

A limited number of reliefs and allowances may be available to employees – eg, for the use of the internet

and for certain donations made to charity and/or if they have children who are:

- under 18;
- under 25 and continuing their education without having their own income; or
- disabled and receiving special benefits.

From 2022, health insurance contributions are no longer tax-deductible costs for employees. However, certain employees who create IP rights as part of their duties may be eligible for lump-sum costs at the rate of 50% of the portion of their remuneration allocated to such IP rights (provided that such costs do not exceed PLN120,000 in total).

### Social Security Contributions

Health insurance contributions are paid by the employee at the rate of 9%. Social security contributions (to finance retirement, disability pensions and sick leave benefits) may total up to 29.97% – ie, 13.71% payable by the employee (as a non-deductible cost) and 16.26% payable by and tax-deductible for the employer. The basis for calculation of the retirement and disability pensions contributions is capped at PLN282,600 for 2026.

Additional occupational accident contributions and some other social security contributions payable by and tax-deductible for employers may apply, depending on the circumstances and the type of business and work carried out, and the number of employees employed by the employer. Generally, the contributions amount to the following:

- for retirement – 19.52% of the basis of assessment;
- for disability pensions – 8% of the basis of assessment; and
- for sick leave benefits – 2.45% of the basis of assessment.

Social security contributions may differ slightly from the above (eg, for accident contributions, the rate varies from 0.67% to 3.33%, with the accident contribution for a small company employing up to nine people being 1.67%).

### Payment of Tax and Reporting Duties

The employer is obliged to calculate and remit the tax advances to the relevant tax office, and the health insurance and other social security contributions to the Social Security Office (ZUS).

Employees are obliged to make annual tax filings (which may be done electronically). Employees who do not intend to take advantage of any allowances or deductions and who settle under the general rules (tax scale at 12% and 32% rates) and only receive income settled through a remitter (eg, employer or principal) may leave the tax settlement to the tax office.

## 5.2 Taxes Applicable to Businesses

### Company Income Tax (CIT)

Legal entities in Poland are obliged to pay CIT on their income in Poland, at the rate of 19%. A reduced 9% rate applies to taxpayers in the first year of starting a business and to those taxpayers whose annual income (including VAT) does not exceed EUR2 million.

In respect of partnerships that are tax-transparent, tax is payable by partners (CIT for partners that are legal entities; PIT for individuals). Partnerships limited by shares and limited partnerships are treated as CIT payers (ie, non-tax-transparent entities), with special tax reliefs for limited partners.

The CIT Act provides for specific rules to determine whether or not an item may count as a tax-deductible cost, and expressly identifies a list of items that cannot constitute tax-deductible costs. Certain allowances and reliefs may be available (eg, a 50% allowance in respect of the acquisition of new technologies).

The tax basis is calculated separately for capital gains (as defined in the CIT Act) and other incomes.

"Minimal" CIT of 10% came into force in 2024. Therefore, an entity that has incurred an income loss (other than capital gains source) or whose tax yield in the basket of so-called operating profits does not exceed 2% is taxed at 10% of the taxable base. The CIT Act also provides for a number of other exemptions from the "minimal" tax for certain entities.

Polish CIT provides for several tax reliefs and exemptions for specific business types.

In addition, tax capital groups and entities whose revenues exceed EUR50 million are obliged to prepare and publish information about their tax strategy.

Poland implemented the Pillar 2 directive on 1 January 2025 and introduced three new taxes: a global minimum tax, a domestic minimum tax and a top-up tax on undertaxed profits. The purpose of the global minimum tax is to level the tax rules for the largest multinational companies. New obligations will be applied to domestic and international companies that are part of capital groups and had a total annual revenue amounting to at least EUR750 million in two of the last four financial years. Such companies will need to calculate their effective tax rate for this timeframe, and will face additional taxes if it will fall below the 15% minimum level of taxation. The top-up tax will be the difference between the minimum rate and the effective tax rate in a particular jurisdiction.

JPK-CIT (Poland's Standard Audit File for Corporate Income Tax) is a mandatory annual digital tax report that companies must file with the tax authorities, along with their corporate income tax returns. It requires businesses to submit a standardised electronic extract of their financial records (accounting books) for the tax year, making corporate tax filings easier to review and verify by the tax office.

### Taxation of Sole Traders

Individuals running businesses as sole traders (for which certain requirements need to be met) may elect whether to pay taxes in the following manners:

- according to the same rules and rates as employees (except the actual tax-deductible costs, subject to statutory limitations similar to those applicable to CIT payers, would apply instead of lump sums);
- at a flat rate of 19%; or
- according to special rules, in respect of some types of smaller businesses (eg, a lump sum of 2% to 17% of gross income or by means of the so-called tax card, where the amount of tax is a lump sum payable irrespective of income or profit).

From 1 January 2022, the basis of assessment for health insurance contributions is determined depending on what type of business activity the remitter conducts and what form of taxation is applied to the income from that activity. Any person conducting business activity who pays social contributions for their own insurance was required to submit an annual health insurance contribution return for the first time in 2023. For example, for an individual running a business as a sole trader who settles tax based on a tax scale for January 2026, the lowest contribution assessment basis is PLN5,652, and the minimum contribution is PLN432.54.

The new amount of the minimum wage (PLN4,806) will be the lowest contribution base only for the contributions due for January 2026, and will be in effect until January 2027.

### Withholding Tax

Polish income tax laws provide for withholding tax on payments made to non-Polish residents at the rate of:

- 20% on interest, royalties and certain services (eg, legal, advisory, management, data processing, HR and financial services); and
- 19% on dividends and other capital gains and interest payable to individuals on some debt instruments.

Lower rates or exemptions from withholding tax may apply if provided for under bilateral treaties. Moreover, under the provisions of the Parent-Subsidiary Directive and the Interest and Royalties Directive (which have been implemented into the Polish tax system), dividends, interest and royalties payable to a company with its registered office in an EU country are, in principle, exempt from withholding tax, provided that the company receiving the interest (its beneficial owner) holds at least 10% (in the case of dividends) or 25% (in the case of interest and royalties) of the shares in the company making such payments for at least two years. This holding period may end after the payments have been made.

The tax remitter is obliged to act with due care when verifying the requirements to apply such lower rates

or exemptions on payments to a single entity of up to PLN2 million per annum.

Under the withholding tax pay-and-refund mechanism, if the total amount of "passive" payments (ie, dividends, interest and royalties) to a single taxpayer that is a related party exceeds PLN2 million in the relevant tax year, the tax remitters will be obliged to collect withholding tax on said payments on the day they are made, at the standard Polish rates (ie, 19% in the case of dividends and 20% in the case of interest and royalties) on the surplus over PLN2 million, without the possibility of waiving collection of the tax under the relevant double tax treaty and without taking into account the exemptions or reduced rates as determined under special provisions or double tax treaties.

In such a case, the taxpayer or the tax remitter (if it paid the withholding tax from its own funds and bore the economic burden of the withholding tax) may claim a withholding tax refund. However, a tax remitter may apply reduced withholding tax rates or withholding tax exemptions if:

- the tax remitter provides the tax authority with a written statement confirming (under threat of tax criminal liability for breach) that all the requirements for a lower rate or an exemption have been fulfilled; or
- a tax remitter or a withholding tax payer receives an opinion on the applicability of the withholding tax exemption from the tax authority, valid for three years.

Significant fines apply if, in the absence of an exemption, a tax remitter does not collect the statutory withholding tax.

### Value Added Tax

In principle, anyone whose total sales of goods and/or services (with some sector exceptions) in the previous year exceeded PLN240,000 must register as a VAT payer (such threshold shall be reduced pro rata if the activity was conducted only for part of the previous year). The basic VAT rate is 23% (reduced rates of 8%, 5% or 0% may apply to some goods and services).

VAT rules are fairly strict and under some circumstances provide for the joint and several liability of members of the supply chain for its payment. Under certain circumstances, additional penalty rates of 15%, 20%, 30% or 100% may apply. An electronic accounting ledger detailing all VAT-able transactions must be submitted to the tax authorities on a monthly basis, or quarterly in some cases (VAT return).

The split payment mechanism applies to some B2B transactions, whereby the payment that corresponds to the VAT amount of the invoice is paid into a special bank account of the supplier – the VAT subaccount. This mechanism is compulsory in the case of payments for certain goods and services.

The reverse charge in VAT for the supplies of certain energy products came into force on 1 April 2023 and will remain in force until 31 December 2026.

From 1 April 2026, entrepreneurs are required to use a National e-Invoice System (minor exceptions apply).

### Other Taxes

Other taxes may apply from time to time, depending on the type of business, such as property tax, excise duty, tax on civil law activities, tax on means of transport or tonnage tax.

## 5.3 Available Tax Credits/Incentives

Subject to the restrictions and limitations resulting from EU state aid laws, some tax incentives (such as income and property tax reliefs) may be available to investors that obtain a permit to invest in so-called Special Economic Zones.

Some tax relief may also be available for the purposes of restructuring.

## 5.4 Tax Consolidation

A tax group that enables a participating company to be treated as a single CIT payer (and to consolidate the profits and losses of the group members) is available to Polish companies that meet the following criteria:

- the registered share capital per participating company in the group is not lower than PLN250,000 on average;
- a parent company directly holds at least 75% of the shares in the remaining group members;
- no group member is in arrears in respect of taxes;
- no group member may benefit from any tax exemptions or reliefs; and
- all transactions between the tax group members and their affiliates outside the tax group must be on an arm's length basis.

A written agreement to form a tax group for a period of no less than three tax years must be concluded and registered with the tax office. Members of the tax group are jointly and severally liable for the CIT liabilities of the group for the period during which the tax group agreement remains in force. If the status of a tax group is lost as a result of a breach of the applicable obligations, each participating company will have to adjust its tax filings for the three most recent tax years (as if the tax group did not exist) and, where applicable, settle any outstanding taxes.

From 1 January 2026, Poland significantly improves the stability and attractiveness of tax capital groups (PGKs) under the CIT Act. The most important change is the abolition of the automatic loss of PGK status for non-arm's length transactions with related parties outside the group. While the arm's length principle and transfer pricing controls still apply, a dispute over pricing no longer triggers the extreme sanction of dissolving the entire PGK (including retroactively). This change also applies to past cases where no final decision on deregistration had been issued before 2026, greatly reducing tax risk and increasing legal certainty for existing and new PGKs.

In addition, 2026 brings greater flexibility and transparency. PGKs can be re-established more smoothly after a regular expiry of the group agreement (without breaches), and the rules no longer force unnecessary waiting periods in such cases. At the same time, digital reporting obligations (JPK-CIT) now fully apply: each company within a PGK must submit its own electronic accounting files, giving tax authorities deeper insight into intra-group data. Finally, special rules ensure that higher CIT rates for banks cannot be avoided by placing banking income inside a PGK – only PGKs that include banks are affected, while non-financial PGKs continue to be taxed at the standard 19% rate.

### 5.5 Thin Capitalisation Rules and Other Limitations

Since 2022, taxpayers are obliged to exclude from tax-deductible costs the costs of debt financing for the part in which the excess of the costs of debt financing exceeds PLN3 million (this does not apply to debt financing costs associated with obtaining funding from a family foundation, directly or indirectly) or 30% of taxable EBITDA. In addition, the costs of debt financing obtained from affiliated entities are not regarded as a tax-deductible expense for the part in which they were earmarked directly or indirectly for capital transactions, particularly the purchase or acquisition of shares (stock), the acquisition of all rights and obligations in a partnership without legal personality, additional contributions, share capital increases or the purchase of own shares for redemption. Costs that are not deducted in a given year due to the above mechanism may be carried forward for up to five consecutive tax years.

### 5.6 Transfer Pricing

In Poland, transactions between related parties (defined on the principle of a 25% ownership stake interpreted broadly, including not only shares but also, for example, certificates in investment funds or similar instruments) should be done on an arm's length basis. Where applicable, transfer pricing documentation must demonstrate that all relevant transactions have been executed on terms that would have been applicable to unrelated parties.

The requirement to prepare the transfer pricing documentation applies in respect of transactions with a value of:

- PLN10 million for commodity and financial transactions; and
- PLN2 million for services and other transactions not included above.

Lower thresholds of PLN2.5 million in the case of a financial transaction and PLN500,000 in cases other than a financial transaction apply to transactions with

related parties based in countries that would be tax havens under the OECD rules. The transfer pricing rules include a simplification whereby a mark-up of 5% is applied to certain low-value services, such as accounting, human resources, IT services and general services of an administrative and office nature, in recognition that these services are provided at arm's length.

It is possible to obtain an advance pricing arrangement from the tax authorities.

An updated list of tax havens came into force on 1 January 2025, according to which the Principality of Andorra is no longer classified as a tax haven.

### 5.7 Anti-Evasion Rules

In 2016, Poland introduced rules on counteracting tax avoidance, covering any act that satisfies both of the following conditions:

- it was effected primarily for the purpose of obtaining a tax advantage that, in the given circumstances, is an advantage contrary to the subject and purpose of tax law; and
- the party that carried out the act acted in an artificial manner.

The tax consequences of an act identified as having been effected primarily with the aim of achieving a tax advantage are determined based on the state of affairs that would have existed if an "appropriate act" had been effected. Where circumstances indicate that the achievement of a tax benefit was the only purpose of carrying out the act, the tax consequences are determined in such a way as if the act had not been carried out.

To obtain protection against the application of anti-avoidance rules in respect of a transaction in the future, a company or individual may apply for a so-called security ruling. The authority decides on the application over six months, and may refuse to issue a ruling if the application relates to a case of tax avoidance.

#### Mandatory Disclosure Rules

The Polish law provisions adopting mandatory disclosure rules implementing the DAC6 Directive have a broader scope than those under the DAC6 Directive, and also include some specific local Polish hallmarks mainly applicable to distributions from Poland.

### 5.8 Tariffs

As an EU member state, Poland applies the EU common customs policy, which means that all member states apply the same rules and tariff rates to countries outside the EU.

As of 2025, the EU has increased tariffs on a wide range of goods imported from Russia and Belarus, as part of EU sanctions in response to Russia's continued aggression against Ukraine and Belarus's support for the conflict, with the aim of reducing the revenue streams that could support military operations. On 17 June 2025, the European Parliament adopted a modification of customs duties applicable to imports of certain goods originating in or exported directly or indirectly from Russia and Belarus. The modification focuses on fertilisers, to which a 6.5% base tariff will be applied, plus a fee that will increase from EUR40–45 per ton to EUR315–430 per ton by 2028. The changes are planned from July 2025 to July 2028 but it is difficult to predict further changes in tariffs, due to the ongoing conflict in Ukraine.

Trade relations between Poland and China have recently become more strained. The European Commission has imposed anti-subsidy tariffs of up to 35.3% on electric vehicles imported from China. In response, China has introduced retaliatory tariffs targeting various European exports. Reports of negotiations between the EU and China appeared when trade tensions initiated by US President Donald Trump escalated.

## 6. Competition Law

### 6.1 Merger Control Notification

The following transactions are subject to mandatory merger control by the PCA:

- mergers;

- acquisitions of direct or indirect control (be it sole or joint) over one or more undertakings and/or assets; and
- the creation of a joint venture (including non-full-function joint ventures).

The PCA must be notified of a transaction if the following occur in the financial year preceding the concentration:

- the combined global turnover of the parties exceeds EUR1 billion; and/or
- the combined turnover of the parties exceeds EUR50 million in Poland.

Turnover includes the turnover of each party's capital group and part of the turnover of their jointly controlled entities (but the seller's turnover is excluded). The notification obligation is triggered if either of these thresholds is met; the thresholds may be met by one party only.

### Exemptions

A transaction does not have to be notified if any of the following exemptions applies:

- in the case of the acquisition of control and/or assets – if the target's turnover in Poland did not exceed EUR10 million in either of the two financial years preceding the concentration;
- in the case of mergers or the creation of a joint venture – if the turnover of any party (their capital group) to the merger or joint venture did not exceed EUR10 million in Poland in either of the two financial years preceding the concentration; and
- in the case of inter-related transactions (simultaneous or subsequent acquisitions from one and the same capital group of assets and/or control over an undertaking or undertakings that occur within a two-year period) – if the combined turnovers of all the acquired targets and targeted assets generated in Poland did not exceed EUR10 million in either of the two financial years preceding the most recent concentration.

In addition, there is a soft law exemption from the notification obligation in the case of extraterritorial joint ventures with no operations in a relevant market covering Poland (eg, Polish/EU-wide/global market), no plans to conduct such operations within the next three years and no vertical links with companies operating in Poland.

### Other Transactions

The following transactions fall outside the merger control system:

- intra-group transactions;
- acquisitions of shares, on a temporary basis, by a financial institution or by an undertaking for the purpose of securing liabilities; and
- acquisitions of control or assets in bankruptcy proceedings (if the target does not compete with the buyer's capital group).

## 6.2 Merger Control Procedure

There is no formal pre-notification procedure in Poland, although consultations with the PCA prior to a transaction are possible. There is no statutory deadline by which a notification must be made to the PCA. However, the parties may not close the transaction until the PCA's clearance has been obtained or the statutory period for a decision to be issued by the PCA has lapsed (the standstill obligation).

As a general rule, the PCA should examine the transaction within one month of the date the merger control proceedings are instituted (Phase 1). The PCA may extend the proceedings for an additional four months (Phase 2) if:

- the case is complex;
- the transaction raises competition concerns; or
- a market survey is required.

The statutory time limit for issuing a clearance decision is suspended each time the PCA requests additional information and/or documents, and resumes only when the response is actually delivered to it.

When a proposed concentration threatens to significantly limit effective competition, the PCA informs the parties in writing of its objections to the concentration. In order to enable clearance to be given, the PCA may accept a party's proposed commitments (remedies) – eg, divestment.

### Sanctions

The PCA may impose a fine on an undertaking taking part in a concentration (only on the buyer in the case of the acquisition of control and/or assets) of up to 10% of its turnover for a breach of the standstill obligation or failure to notify the transaction. The PCA may also impose a fine of up to 50 times the average wage in Poland on managers who have failed to give notification of an intended concentration.

## 6.3 Cartels

Like EU competition law, the Polish Act on Competition and Consumer Protection prohibits agreements/concerted practices between undertakings (or associations of undertakings) that have as their object or effect the elimination, restriction or other infringement of competition (Article 6). The non-exhaustive statutory list of infringements includes the following in particular:

- price fixing;
- limiting or controlling production/sales/investments;
- market sharing;
- imposing onerous/discriminatory contract terms;
- restricting access to the market; and
- collusive tendering (between tender participants or with the awarding entity).

The PCA also has the right to apply EU competition law directly (Article 101 of the TFEU) if the infringement affects trade between EU member states.

The PCA may impose a fine on undertakings and individuals for involvement in anti-competitive agreements. An undertaking may be fined up to 10% of the turnover of the entire capital group generated in the year preceding the year the fine is imposed. The PCA may also impose a fine of up to PLN2 million on managers who allow the undertaking to conclude a prohibited anti-competitive agreement through their deliberate actions or omissions (except in the case of bid-rigging).

Under Polish law, leniency (immunity or reduction of a fine) is available for both horizontal and vertical agreements.

An agreement that violates competition law is invalid in its entirety or in the anti-competitive part. The PCA may also enforce abandonment of the practice, or order the offending undertaking to remedy its effects.

## 6.4 Abuse of Dominant Position

Like EU competition law, the Polish Act on Competition and Consumer Protection prohibits abuse of a dominant position within a relevant market (Article 9). The abuse may consist of the following in particular:

- imposing unfair prices or trading conditions;
- limiting production, market sale or technical development;
- applying onerous/discriminatory contract terms to third parties;
- preventing the development of competition; and
- market sharing.

A dominant position is held by an undertaking if it is able to prevent effective competition in the relevant market and to act independently of competitors, contracting parties and consumers to a significant degree. In Poland, there is a presumption of a dominant position if an undertaking has a market share exceeding 40%. However, this presumption may be challenged by the undertaking involved.

The PCA may impose a fine for abuse of a dominant position only on undertakings (not individuals), which are liable to a fine of up to 10% of the turnover of the entire capital group generated in the year preceding the year in which the fine is imposed.

Any legal transactions that constitute abuse of a dominant position are invalid in their entirety or in the relevant part. The PCA may also enforce abandonment of the practice, or order the offending undertaking to remedy its effects.

Significant amendments to the Polish competition law (implementing the ECN+ Directive) came into force on 20 May 2023, relating in particular to the leniency programme, liability for infringement (introduction of parental liability), levels and methods of the calculation of fines, the dawn raids procedure, legal professional privilege and international co-operation of the PCA with other national competition authorities.

## 7. Intellectual Property

### 7.1 Patents

In addition to the rights registered with the Polish Patent Office (see below, as well as **7.2 Trade Marks** and **7.3 Industrial Design**), it is possible to apply for protection over inventions, trade marks and other industrial properties through international channels. For trade marks and industrial designs, it is possible to obtain protection throughout the EU with a single application.

Patents protect inventions that:

- are new;
- have an inventive step – ie, the invention is not obvious to a person skilled in the given field; and
- are capable of industrial application – ie, based on the invention, a product may be obtained or a method used in any industrial activity.

Patent protection lasts up to 20 years (subject to the payment of annual maintenance fees).

To obtain a patent, the application must be filed with the Patent Office and must contain a motion, a description of the invention, claims and an abstract of the invention. If the application is not filed by the creator, it is necessary to ensure the acquisition of the right to obtain a patent by the entity applying for patent protection (future patent holder). If statutory requirements are met, the Patent Office then issues a relevant decision, provided that the fee for the first protection term is paid. When a patent is granted, this is entered in the patent register.

Claims concerning infringement of a patent are heard before a court in civil proceedings. The patent holder may demand cessation of the infringement or the surrender of any unlawfully obtained benefits. If the infringement is culpable, the patent holder may also demand reparation of damage in accordance with general principles or by the payment of a sum of money in the amount of a licence fee or other relevant remuneration that would be due and payable to the patent holder for consenting to use of the invention. In addition, the patent holder may demand that the ruling concerning the infringement be made public.

### 7.2 Trade Marks

A trade mark is any mark capable of distinguishing the products (or services) of one entity from those of another, and enables determination of the scope of protection in a clear and precise manner. A word (including a name), picture, letter, digit, colour, object (eg, the shape of a product or its packaging) or sound may constitute a trade mark.

Upon registration, trade mark protection rights last ten years and may be extended for subsequent ten-year periods, provided that the fee is paid. However, a protection right over a trade mark expires (and the trade mark is eligible for invalidation) if the registered trade mark is not in genuine use within five years of the date protection was granted.

#### Protection Rights

To obtain a protection right, a relevant application describing the trade mark and listing the products (or services) it covers (based on the classes of goods and services set out in the Nice Classification) must be filed with the Patent Office. The Patent Office examines the content of the application and the capability of registering the trade mark, but at this stage it will not examine any potential conflict with prior registrations or other third-party rights. If the statutory requirements are met, the Patent Office publishes notification of the application in the Patent Office Bulletin.

Third parties have three months to file an opposition to a trade mark application on the basis of their earlier trade marks or other rights. The opposition may be brought in respect of one, some or all of the classes of the Nice Classification. If successful, the Patent Office may grant protection for those classes that have not been challenged, unless the opposition has been proved to be unfounded, or it may refuse protection.

Claims concerning infringement of a protection right over a trade mark are heard before a court in civil proceedings. In addition to the remedies available in the case of infringement of a patent, the trade mark holder may demand that the infringing party ceases placing a mark identical or similar to the registered trade mark on packaging, labels and tags, or ceases offering, marketing, importing, exporting and storing such packaging, labels and tags.

## 7.3 Industrial Designs

Industrial design is a new and original appearance of a product, or part thereof, resulting from the features of the lines, contours, shape, colours, texture and/or materials of the product itself and/or its ornamentation. The right conferred by the registration of an industrial design is granted for 25 years, divided into five-year periods.

To register an industrial design, an application containing an illustration of the industrial design must be filed with the Patent Office. If the industrial design meets the statutory requirements for granting protection, the Patent Office issues a decision granting protection.

Claims concerning an infringement of a right conferred by registration of an industrial design are heard before a court in civil proceedings. The remedies are the same as in the case of an infringement of a patent.

## 7.4 Copyright

Copyright protects any manifestation of human creative activity of an individual nature in any form, regardless of its value, purpose or manner of expression.

Copyright consists of economic rights and moral rights. Economic rights entitle the copyright holder to use and dispose of a work and receive fair and appropriate remuneration for the use of it, and these rights may be transferred or assigned. Along with the economic rights, there is also the exclusive right of the author to authorise the use of derivative rights to the original work (eg, translation).

Moral rights entitle the author to sign the work with their name, decide on its first publication and allow modification thereof. Moral rights cannot be transferred, assigned or licensed, but it is common practice to oblige the author in contracts transferring economic copyrights not to exercise the moral rights. Economic rights are generally protected until 70 years after the death of the author of the work; moral rights last indefinitely.

Economic rights may be transferred (or licensed) only within the fields of exploitation explicitly specified in an agreement. A field of exploitation means any manner of exploitation considered technically and economically independent in trading practice. Omitting a field of exploitation in the agreement deprives the acquirer (or licensee) of the rights to exploit a field not listed therein. The fields of exploitation make it possible to seek remuneration for each of them.

Copyright protection does not depend upon a registration process or satisfaction of any formal requirements. Once the work is established (even if not completed), it automatically receives protection.

In the event of an infringement of economic rights, the author may demand cessation of the infringement, remedy of the results of the infringement, damage compensation and the surrender of any unlawfully obtained benefit. The author may also request publication of an announcement in the press or payment of an appropriate sum of money to the copyright holder, determined at twice the amount of remuneration that would be required for a licence to use the work.

## 7.5 Others

### Software and Databases

There is no special regime for the protection of software, which is primarily protected under copyright law (with certain specific provisions applicable to computer programs), with minor differences compared to the works described in **7.4 Copyright**.

Databases that are collected in a way that requires substantial investment of effort to compile, verify or present their content, in terms of quality or quantity, are protected by the Act on the Protection of Databases. Such protection does not depend on registration and lasts for 15 years. Regardless, databases may be protected by copyright if they can be considered a “work”.

### Business Secrets

Business secrets are protected under the Polish Act on Combatting Unfair Competition, and may be violated if unlawfully disclosed, used or obtained. In the violation of a business secret, the entrepreneur may demand:

- cessation of the violation;
- removal of the effects of the violation;
- a relevant statement;

- redress of damage;
- the surrender of any unlawfully obtained benefits; or
- the award of an appropriate sum of money for social purposes associated with supporting Polish culture or protecting the national heritage.

In addition, the entrepreneur may demand that the ruling concerning the violation of the business secret is made public.

## 8. Data Protection

### 8.1 Applicable Regulations

Data protection issues are principally regulated by the EU General Data Protection Regulation (Regulation 2016/679 – the GDPR). The following local acts, among others, supplement the GDPR:

- the Personal Data Protection Act of 2018;
- the Act Amending Certain Acts in Relation to Ensuring Compliance with Regulation 2016/679;
- the Act on the Rules of Obtaining Information of a Clean Criminal Record of Persons Seeking Employment and Persons Employed in Financial Sector Entities; and
- the Labour Code (which regulates the processing of employees' data).

It is worth noting that, in some cases, local employment laws provide for stricter rules than those of the GDPR – eg, with regard to the scope of data and the admissibility of monitoring. In particular, background screening of employees and candidates (especially regarding criminal record) is substantially restricted, except in the financial sector, where a dedicated act applies, and for some specific positions in other sectors where not having a criminal record is a legal requirement.

### 8.2 Geographical Scope

Local law does not modify the applicability of the GDPR; the geographical scope of application stems directly from the GDPR.

### 8.3 Role and Authority of the Data Protection Agency

The local data protection agency is the President of the Data Protection Office (*Prezes Urzędu Ochrony Danych Osobowych*), whose main role is to:

- control and monitor the processing of personal data;
- review complaints of data subjects;
- conduct inspections;
- issue decisions and impose fines;
- oversee accreditation;
- grant certifications; and
- issue interpretations and guidelines.

## 9. Looking Forward

### 9.1 Upcoming Legal Reforms

#### Employment Law

##### *Pay transparency*

In December 2025, an Act amending the Labour Code came into force, introducing some amendments to pay transparency in the recruitment process, but its practical importance is very limited. The adopted provisions require employers to provide job applicants with information about remuneration offered (its initial amount or range) and about relevant provisions of collective bargaining agreements or remuneration regulations concerning remuneration terms. Employers are also required to ensure that job advertisements and job titles are gender-neutral.

The Act does not address any other substantive requirements of the Pay Transparency Directive, such as reporting on pay gap, restrictions on pay secrecy clauses or ensuring transparent and non-discriminatory remuneration systems.

In order to implement some further requirements, a new draft bill on strengthening the right to equal pay for men and women for equal work or work of equal value was published on 29 April 2026. The draft includes the following, in particular:

- rules and procedures for assessing the value of work;

- rules and procedures for creating remuneration structures;
- measures to ensure transparency of remuneration; and
- rules and procedures for monitoring employers' compliance with the principle of equal pay.

The content of the draft is still under intense discussions and it is not known when the final act will be adopted.

### *New powers granted to the State Labour Inspectorate*

Risk related to reclassifying civil law contracts into employment contracts (if, in practice, work is performed in conditions meeting the characteristics of employment contracts) may potentially increase in near future, as an act was adopted in April 2026 granting new powers to the State Labour Inspectorate and entitling it to issue administrative decisions on the reclassification of civil law contracts (including contracts of mandate, contracts for the performance of specific work, and B2B contracts) as employment contracts without the need to obtain a court judgment, which was required previously. This change will materially speed up the reclassification process and will likely increase the number of reclassified civil law contracts. The act will come into effect on 8 July 2026.

## Tax Law

### *Mandatory Disclosure Rules (MDR)*

The government intends to simplify the MDR regulations in alignment with DAC6, with the aim of harmonising Polish and EU provisions in this area.

**LVP Advogados** assists international clients with investment, residence, and citizenship matters in Portugal. Its clients, from over 150 countries, include high-net-worth individuals and families, family offices, businesses and institutions. Its legal team supports foreign clients throughout the entire process, from initial planning to ongoing operations. Where needs extend beyond legal services, it connects clients with trusted third-party professionals and coordinates matters on their behalf, offering a single point of contact for all matters related to Portugal. It makes extensive use of advanced, integrated software to enhance client experience, ensure data security and confidentiality, improve efficiency, and minimise the risk of human error. At the same time, it maintains a personalised approach, taking the time to understand each client's specific circumstances.

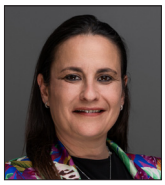
## Authors

**Joana Torres Fernandes** is a lawyer and founding and managing partner of LVP Advogados. A member of the Portuguese Bar Association since 2011, she heads the firm's Immigration and Private Clients practice. With over 15 years of legal experience, Joana advises international clients, families, investors and high-net-worth individuals on residency, nationality, relocation, real estate and corporate matters in Portugal. Before founding LVP Advogados in 2020, she worked as a senior associate lawyer and gained in-house experience at General Motors. Joana is closely involved in strategic, cross-border matters requiring coordination between immigration, private client, corporate and real estate aspects.

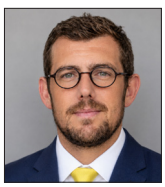
**José Manuel Pereira da Costa** joined LVP Advogados in 2022, focusing on civil law, litigation and corporate law, while specialising in assisting companies within the energy sector. Previously, he spent 12 years at JGSA Advogados (formerly AMJG), where he completed his internship and built a multidisciplinary foundation in Litigation and Tax Law. He holds a post-graduate degree in Taxation from Universidade Católica Portuguesa and studied Maritime Law at the University of Lisbon. Admitted to the Portuguese Bar Association in 2014, he has also represented the Bar on the CCBE Tax Committee.

**Danielle Avidago** is a lawyer at LVP Advogados specialising in immigration law, with three years of professional experience in the field. She began her legal career at LVP Advogados as an intern and has since progressed to a fully qualified lawyer, gaining nearly two years of direct experience working with clients and public entities. Her practice focuses on advising and assisting individuals with residence and visa matters, including residency and short-stay visas, temporary and permanent residence permits, and Portuguese citizenship applications of all kinds. Danielle is also experienced in representing clients before the competent administrative courts when public authorities fail to meet statutory deadlines or their legal obligations of transparency.

**Javier Mateo** is a lawyer at LVP Advogados, with over ten years of professional experience and a practice focused on immigration and nationality law, residence in Portugal, Portuguese nationality and administrative litigation before AIMA and IRN. Before joining LVP Advogados, he practised at AVCO Legal, advising on immigration, nationality, corporate law and related matters, and previously worked in consultancy for international organisations. He studied law in Spain, completed advanced academic training in France and, in Portugal, completed a postgraduate programme in Foreigners and Nationality Law at NOVA School of Law, as well as training in tax aspects of international mobility.



**Contributed by:** Joana Torres Fernandes, José Manuel Pereira da Costa, Danielle Avidago, Javier Mateo, António Pratas Nunes, Joana Loureiro Veríssimo, Madalena Mourão and David Serras Pereira, **LVP Advogados**



**António Pratas Nunes** is a lawyer at LVP Advogados with a practice focused on tax law. He advises private clients relocating to or already residing in Portugal on their personal and corporate tax position, helping them define the most suitable tax strategy at the time of relocation, including through the analysis of income sources, tax residency planning, double taxation agreements and applicable tax benefits and incentives. He has been a member of the Portuguese Bar Association since 2024.

**Joana Loureiro Veríssimo** is a lawyer with over six years of professional experience, practising in the areas of nationality and immigration law, as well as corporate and real estate law. She is a member of the Portuguese Bar Association. Her professional activity focuses on advising international clients on residency and citizenship matters, as well as on corporate and real estate transactions. Joana holds postgraduate qualifications in corporate governance and in nationality and immigration law, supporting her practice across both private client and business-related matters.

**Madalena Mourão** is a lawyer at LVP Advogados with more than ten years of experience in employment and social security law. She developed her professional career in mid-sized law firms, working within specialised employment departments, and has also acted as counsel to trade unions. She later worked in-house within a Portuguese corporate group, in close coordination with the human resources department. She has experience in legal advisory work, as well as in the design and implementation of HR processes and employment litigation. She is a member of the Portuguese Bar Association, the employment law committee of JALP and APODIT.

**David Serras Pereira** is a lawyer at LVP Advogados whose practice focuses on intellectual property, copyright and related rights, data protection, technology and entertainment law. He advises companies, creators, rights holders and cultural-sector entities on copyright licensing, digital exploitation, trade marks, contractual arrangements, GDPR compliance and regulatory matters. His work includes experience with collective management organisations in Europe and Africa, as well as with artists, labels, publishers, managers and projects in the electronic music sector and wider creative industries. David is admitted to the Portuguese Bar Association and is a member of IAPP, APDPO and DENAE.

# 1. Legal System

## 1.1 Legal System and Judicial Order

Portugal follows a civil law system, rooted in the continental European legal tradition and primarily based on codified statutes rather than judicial precedent.

The legal framework is strongly influenced by Roman law and legislative codes, with the Constitution as the supreme source of law. Other key sources include statutes enacted by parliament, decree laws approved by the government, regulations, international treaties and European Union law, which has particular relevance in areas governed by EU competence. Although court decisions are not generally binding as precedent, case law, especially from the higher courts, is influential in the interpretation and application of legal rules.

The judicial system is organised into separate jurisdictions, mainly judicial courts, which hear civil and criminal matters, and administrative and tax courts, which decide public law disputes involving public authorities, administrative acts, public contracts, taxation and related matters. In addition, there are specialised bodies, including the Constitutional Court, which reviews constitutional matters, and the Court of Auditors, which supervises public expenditure and financial legality.

The judicial courts operate under a three tier hierarchical structure:

- first instance courts, known as *Tribunais de Comarca*, which hear cases initially;
- courts of Appeal, known as *Tribunais da Relação*; and
- the Supreme Court of Justice, which is the highest court within the ordinary judicial jurisdiction.

Similarly, the administrative and tax jurisdiction is structured around first instance administrative and tax courts, the Central Administrative Courts, divided between North and South, and the Supreme Administrative Court. Appeals are generally available subject to procedural rules, thresholds and admissibility requirements, depending on the type of proceedings and the value or legal relevance of the case.

Overall, the Portuguese legal system is characterised by judicial independence, codification, specialised court jurisdictions and a clear hierarchical appeal structure. Proceedings are mainly conducted in writing, although oral hearings and trial sessions play an important role in evidentiary matters, particularly in civil, criminal and certain administrative cases.

Alternative dispute resolution mechanisms are also widely used. Arbitration is common in commercial disputes and certain administrative and tax matters, particularly through the Administrative Arbitration Centre (CAAD). Peace Courts (*Julgados de Paz*) provide simplified procedures for lower-value civil disputes and place particular emphasis on mediation and consensual resolution.

# 2. Restrictions on Foreign Investments

## 2.1 Approval of Foreign Investments

Foreign investment in Portugal, in general, does not require approval from the authorities. However, a screening mechanism applies specifically to non-EU/EEA investors (including EU entities controlled by third-country persons) who seek to acquire control (direct or indirect) over strategic assets. These assets are essential for national defence, security and the supply of essential services.

The Portuguese government evaluates investments based on whether they pose a real and sufficiently grave threat to national security or the continuity of essential services, namely if:

- it affects physical security and operational availability of the assets;
- the investor has the ability to fulfil public service obligations;
- it affects the protection of sensitive data and technological assets; and
- it is linked to third-country governments that do not respect the rule of law, connections to criminal organisations or a history of disrupting public services in other countries.

Approval does not necessarily need to be obtained prior to completion of the investment.

The government has 30 working days from the signing of the deal (or its public disclosure) to initiate an evaluation. During this period, the authorities may request any information or documentation deemed necessary from the involved parties and other public bodies. If an evaluation is opened, the government has 60 days to decide. Absence of a decision within this timeframe acts as a "tacit approval." If the government opposes the deal, all legal acts related to the transaction are deemed null and void.

The screening rules are focused on sectors critical to the national interest, such as energy, transportation and communications.

In addition to this general screening, specific industries like banking and insurance require prior authorisation from their respective regulators (Bank of Portugal and ASF) regardless of the investor's nationality.

Furthermore, in addition to national law, foreign investments in Portugal are also governed by European Union regulations that impose specific restrictions within the single market. Notably, Regulation (EU) 2019/452 establishes a framework for the screening of foreign direct investments on grounds of security or public order, while the Foreign Subsidies Regulation (FSR) addresses distortions caused by non-EU subsidies. These European instruments are applicable and operate alongside domestic legislation, creating an additional layer of scrutiny that significantly impacts how foreign capital enters and operates within the Portuguese jurisdiction.

### 2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance

Investors may either wait for an ex-officio evaluation from the government as outlined in **2.1 Approval of Foreign Investments** or proactively seek prior confirmation. In this case, investors can request a "safe harbour" confirmation, which is granted if the government fails to initiate an evaluation within 30 days of the request.

The consequences of proceeding with an investment that is subsequently vetoed are severe, given that a decision of opposition renders all related legal acts and transactions null and void, stripping them of any legal effect. This sanction is extensive, as it prohibits the economic exploitation of the assets and prevents the investor from exercising any corporate or voting rights over the strategic entities involved, effectively neutralising the investment.

### 2.3 Commitments Required From Foreign Investors

The legal framework does not explicitly provide a formal mechanism to bypass an opposition decision through negotiated commitments or mitigation agreements that provide a precise timeline. As a result, the government either opposes the transaction or allows it to proceed.

However, any approved investment is inherently bound by the operational and regulatory requirements already applicable to all market participants. Especially in highly regulated strategic sectors, investors must comply with strict conduct standards and public service obligations overseen by sectoral regulators, ensuring that the investment remains aligned with the national interest regardless of the absence of specific ad hoc commitments.

### 2.4 Right to Appeal

The entity affected by a decision of opposition may challenge its legality by filing an appeal before the Portuguese administrative courts. While the law grants this right of judicial review, providing a precise timeline for a final ruling is difficult. However, it is widely recognised that Portuguese administrative courts are generally subject to significant delays, often resulting in lengthy litigation periods that may span several years.

## 3. Corporate Vehicles

### 3.1 Most Common Forms of Legal Entity

In Portugal, the most common corporate vehicles are private limited liability companies (eg, *sociedades por quotas*, Lda) and public limited companies (eg, *sociedades anónimas*, SA).

A private limited liability company (Lda) is the most widely used structure for small and medium-sized businesses. It requires at least one shareholder, with

a minimum share capital of EUR1. Shareholders' liability is limited to their contributions to the share capital.

The governance model of a Portuguese private limited liability company (Lda) is characterised by its simplicity and flexibility, primarily consisting of two mandatory bodies: the general meeting of shareholders (eg, a *ssembleia geral*) and the management (eg, *gerência*). The general meeting is the supreme sovereign body where shareholders exercise their voting rights to approve annual accounts, elect directors and amend bylaws, while the management, composed of one or more directors (eg, g *erentes*), handles the day-to-day operations and legal representation, making it suitable for closely held businesses and family-owned structures. The appointment of a statutory auditor (ROC) becomes mandatory if the company exceeds two of the following three thresholds for two consecutive fiscal years:

- a balance sheet total of EUR1.5 million;
- net turnover of EUR3 million; and
- or an average number of 50 employees during the fiscal year.

A public limited company (SA) is generally used for larger projects, investment structures or companies seeking external funding. It requires a minimum of five shareholders (unless fully owned by a single entity) and a minimum share capital of EUR50,000.

Governance is more structured and may include different management and supervisory models. Typically, it is governed by a mandatory three-tier structure regardless of its size:

- the general meeting, led by a chairman and a secretary;
- the board of directors (eg, c
- *onselho de administração*), which may be replaced by a sole director (eg, *administrador unico*) if the share capital does not exceed EUR200,000; and
- a supervisory body, typically a sole supervisor (eg, *fiscal unico*) who must be a statutory auditor (ROC).

Unlike the more flexible Lda companies, an SA requires these permanent governance bodies and mandatory account auditing to ensure legal compliance and institutional transparency.

### 3.2 Incorporation Process

The incorporation of a company in Portugal is relatively straightforward and can be completed within a few days, depending on the chosen procedure.

The main steps include:

- obtaining Portuguese tax numbers (NIF) for all shareholders and directors;
- defining the company structure, including corporate purpose, share capital and management;
- executing the incorporation deed (which may be done online or through a pre-approved template);
- registering the company with the Commercial Registry; and
- obtaining a corporate tax number and completing tax and social security registrations.

In practice, incorporation can be completed within one to five business days, particularly where standard procedures are used.

### 3.3 Ongoing Reporting and Disclosure Obligations

Private companies in Portugal are subject to several ongoing reporting and disclosure obligations. These obligations are primarily aimed at ensuring transparency and compliance with corporate and tax regulations.

Key obligations include:

- filing annual accounts and financial statements with the Commercial Registry;
- updating the commercial registry in case of changes to directors, shareholders or articles of association;
- maintaining updated records of the ultimate beneficial owner (UBO) in the central register; and
- complying with tax reporting obligations, including periodic tax filings.

Failure to comply with these obligations may result in fines and restrictions on the company's activity.

### 3.4 Management Structures

Portuguese law provides for different management structures, particularly in public limited companies (SA), while private limited companies (Lda) follow a simpler model.

In an Lda, management is carried out by one or more directors who are responsible for the day-to-day operations of the company. There is no requirement for a supervisory body, although one may be established voluntarily.

In an SA, companies may adopt one of several governance models:

- a one-tier model, consisting of a board of directors and a statutory auditor;
- a two-tier model, with a management board and a supervisory board; or
- a model combining a board of directors with an audit committee.

These structures allow flexibility depending on the size and complexity of the business.

### 3.5 Directors', Officers' and Shareholders' Liability

Directors and officers are subject to duties of care, loyalty and compliance with the law.

They must act in the best interests of the company and may be held liable for damages resulting from breaches of these duties.

Liability may arise towards the company, shareholders or third parties, particularly in cases of negligent management, unlawful acts or failure to comply with statutory obligations. In certain circumstances, directors may also incur criminal or administrative liability.

Portuguese law recognises the principle of separate legal personality, meaning that shareholders are generally not liable beyond their capital contributions. However, in exceptional cases, courts may disregard this separation (piercing the corporate veil), particularly where there is abuse of the corporate structure, fraud or misuse of the company to harm creditors.

## 4. Employment Law

### 4.1 Nature of Applicable Regulations

Employment relationships in Portugal are governed by a structured set of legal sources, including the Labour Code, supplementary legislation, collective bargaining agreements, case law and individual employment contracts.

Labour rules are predominantly mandatory in nature, reflecting the protective function of employment law. As a general principle, they establish minimum standards that cannot be waived or reduced by agreement. However, Portuguese labour law also recognises an important role for collective bargaining, allowing collective bargaining agreements, in specific matters expressly provided for by law, to derogate from statutory rules within the limits established by the Labour Code.

Collective bargaining agreements play a central role in shaping working conditions and may be extended to non-signatory employers and employees through administrative extension orders, ensuring consistency within sectors and preventing distortions of competition.

Case law, particularly from higher courts, contributes to the interpretation and consistent application of labour rules.

In an international context, under the Rome I Regulation, the parties may choose the law applicable to the employment contract. However, such choice cannot deprive the employee of the protection afforded by the mandatory rules of the country where the work is habitually carried out. As a result, employees working in Portugal will generally benefit from Portuguese labour law protections, even when employed by foreign entities.

Individual employment contracts give effect to the employment relationship and must comply with the applicable legal and collective framework, allowing deviations only where more favourable to the employee.

### 4.2 Characteristics of Employment Contracts

In Portugal, employment contracts are not generally subject to a written form and may be concluded verbally. However, written form is required in specific cases, including fixed-term contracts, temporary work, part-time work, telework and other regulated arrangements.

Regardless of form, employers are subject to information obligations regarding the essential terms of the employment relationship.

Permanent contracts are the standard form of employment. Fixed-term contracts are only permitted where a genuine temporary business need exists and must be properly justified in the contract. The stated reason must correspond to an actual temporary need, and improper use may result in the contract being reclassified as a permanent contract from the outset, representing a significant legal risk.

Fixed-term contracts are subject to maximum duration limits of two years, including renewals, while open-ended fixed-term contracts (of uncertain duration) may not exceed four years in general.

The law also provides for very short-term contracts, mainly for seasonal activities, which do not require written form provided they do not exceed 35 days, with a maximum of 70 days per year with the same employer.

Overall, contractual terms are heavily influenced by mandatory rules and collective agreements, limiting individual negotiation.

### 4.3 Working Time

Working time is subject to statutory limits and may not, in general, exceed eight hours per day and 40 hours per week. Employees are also entitled to minimum rest periods, including 11 consecutive hours of daily rest and a weekly rest.

The legal framework provides for flexibility mechanisms, including adaptability arrangements, working time banks and compressed working schedules, allowing companies to adjust working time to operational needs within defined limits.

Adaptability allows working time to be calculated on an average basis, enabling longer working periods in certain phases balanced by shorter periods, provided the applicable average is respected.

Working time banks allow additional working hours to be performed and compensated at a later stage, either under collective agreements or group-based arrangements subject to employee approval and labour authority oversight. Compressed working schedules allow the weekly working time to be performed over fewer days, resulting in longer daily working periods within legal limits.

The law also provides for working time exemption regimes applicable to managerial or high-trust roles, allowing increased flexibility while maintaining essential protections. Overtime work is exceptional in nature and subject to legal limits and increased pay rates. In practice, this results in higher labour costs for employers and acts as a disincentive to its regular use.

### 4.4 Termination of Employment Contracts

Termination of employment in Portugal does not follow an “employment at will” model and is subject to statutory grounds and formal procedures.

Employer-initiated termination is only permitted in legally defined situations, including disciplinary dismissal, collective dismissal, redundancy (elimination of position) and dismissal for unsuitability.

Termination may also occur through expiry, mutual agreement, termination by the employee (with or without cause) or other legally established forms.

From an economic perspective, a distinction is made between compensation and indemnity. Compensation is payable in lawful terminations based on objective grounds, while indemnity arises in cases of unlawful dismissal, where the employee may choose reinstatement or compensation.

Collective dismissal is based on economic, structural or technological reasons and involves a formal, phased procedure. This includes initial communication to employee representatives and to the Directorate-General for Employment and Labour Relations,

the definition of objective selection criteria, and a mandatory information and consultation phase aimed at assessing the grounds and exploring alternative measures. Following this phase, the employer may issue a final decision, which must be individually communicated to the affected employees and takes effect after the applicable notice period.

Employees affected by collective dismissal are entitled to statutory compensation, outstanding payments and, generally, access to unemployment benefits.

Termination by mutual agreement may, in certain cases, allow access to unemployment benefits under Decree-Law No. 220/2006, where it occurs in a context comparable to redundancy or collective dismissal.

All termination mechanisms are subject to judicial review, and employees may challenge the legality of dismissal.

### 4.5 Employee Representations

The Portuguese system is based on the principle of freedom of association, meaning that employees are not required to join or be represented by collective bodies.

Employee representation depends on workers' initiative and is not mandatory in all companies. Nevertheless, the legal framework provides for information and consultation mechanisms that ensure employee participation.

The main forms of representation include workers' committees, trade union structures and union representatives, which exercise information, consultation and participation rights.

Workers' committees play a particularly relevant role, especially in matters such as company activity, restructuring processes and collective dismissals. These structures are also involved in health and safety matters, including risk assessment and the implementation of preventive measures.

Even in the absence of representative bodies, employers remain subject to information and consultation obligations in certain situations. Employee representatives benefit from enhanced protection, particularly against dismissal.

Overall, the Portuguese system combines freedom of association with structured participation mechanisms, ensuring employee involvement without imposing rigid representation models.

## 5. Tax Law

### 5.1 Taxes Applicable to Employees/ Employers

In the context of an employment relationship governed by a subordination agreement, the employee's salary is subject to progressive personal income tax (PIT) rates ranging from 12.5% to 48%. The applicable withholding rate is determined by the employee's monthly gross salary, and the employer is responsible for withholding and remitting the corresponding amount to the tax authorities on the employee's behalf.

In addition to income tax, employees contribute 11% of their gross salary to the social security system, an amount equally withheld and remitted by the employer. Employers are further required to make their own social security contribution of 23.75%, calculated on the basis of the salary paid to the employee.

### 5.2 Taxes Applicable to Businesses

#### Taxes Applicable to Businesses

Companies that are tax resident in Portugal, namely those with their registered office or place of effective management in Portuguese territory, are subject to corporate income tax (CIT) on their worldwide income. The standard CIT rate currently stands at 19% (for tax periods beginning on or after 1 January 2026), under a phased reduction schedule set to reach 17% by 2028. SMEs and Small Mid Cap companies benefit from a reduced 15% rate on the first EUR50,000 of taxable income, with the standard rate applying to the excess.

Non-resident companies without a permanent establishment in Portugal are taxed only on Portuguese-source income, at a flat rate of 25%.

### VAT

VAT applies to the supply of goods and services in Portugal. The standard rate is 23% in mainland Portugal, with a reduced rate of 13% and a super-reduced rate of 6% applying to certain goods and services. Lower rates apply in the Autonomous Regions of Madeira and the Azores.

### Withholding Tax on Dividends and Interest

Withholding tax treatment depends on the nature and residence of the beneficiary. Where the beneficiary is an individual resident in Portugal, dividends and interest are generally subject to a 28% withholding tax. For corporate beneficiaries resident in Portugal, the applicable rate is 25%, although distributions may be fully exempt under the participation exemption regime, provided the following conditions are met:

- the entity is subject to and not exempt from a tax similar to CIT at a legal rate not lower than 60% of the CIT rate currently in force in Portugal;
- the entity holds at least 10% of the capital or voting rights of the Portuguese entity;
- the entity holds this participation uninterruptedly for the year prior to the distribution; and
- the entity is not resident or domiciled in a country, territory or region subject to a clearly more favourable tax regime, as identified under the list of tax havens approved by Portuguese legislation.

For non-resident beneficiaries, whether individuals or companies, the domestic withholding tax rate is 25%, rising to 35% where the beneficiary is resident in a jurisdiction listed as a tax haven under Portuguese law.

These rates may be reduced under an applicable double tax treaty. Interest paid to non-residents is equally subject to a 25% withholding tax as a general rule, again subject to potential reduction under a double tax treaty or exemption under the EU Interest and Royalties Directive, provided the applicable conditions regarding ownership threshold and holding period are satisfied.

### Real Estate Acquisition Taxes

Companies acquiring real estate in Portugal are subject to two transfer taxes. Municipal Property Transfer Tax (IMT) applies at progressive rates ranging from 0% to 7.5%, calculated on the higher of the purchase price or the tax registration value of the property. Stamp Duty applies at a flat rate of 0.8% on the same basis. Both taxes are due prior to completion of the transaction.

### Pillar Two

Portugal transposed the EU Minimum Tax Directive into domestic law in 2024, implementing the OECD's Pillar Two framework for large multinational and domestic groups with annual consolidated revenues exceeding EUR750 million.

The legislation introduced three rules:

- the Income Inclusion Rule (IIR), under which the parent company of a group calculates and pays its share of the top-up tax in respect of low-taxed group entities;
- the Undertaxed Profits Rule (UTPR), a backstop mechanism applicable where the IIR is not applied by the parent's jurisdiction, allocating top-up tax liability to other group entities; and
- a Qualified Domestic Minimum Top-Up Tax (QDMTT), which ensures that any top-up tax owed in respect of Portuguese low-taxed entities is collected domestically, preserving Portugal's tax revenue and preventing reallocation to other jurisdictions.

The Portuguese QDMTT has been granted safe harbour status on the OECD's central record.

## 5.3 Available Tax Credits/Incentives

### IFICI regime (Tax Incentive for Scientific Research and Innovation)

The IFICI regime grants a flat 20% personal income tax rate on qualifying Portuguese-source income derived from eligible activities and exempts from Portuguese taxation certain categories of foreign-source income. The regime is available for a period of ten consecutive years from the year of registration and is not compatible with other tax benefits, including the former Non-Habitual Resident (NHR) regime, the Young Personal Income Tax (IRS) regime and the Returning Residents regime (*programa regressar*).

To benefit from the regime, the individual must become tax resident in Portugal, must not have been tax resident in Portugal in any of the five preceding years and must carry out an activity that falls within the scope of the regime.

Eligibility is subject to a two-tier validation: the applicant must exercise a qualifying activity as defined by law, and the entity for which the activity is performed must itself be recognised as eligible under the applicable rules.

Qualifying activities include:

- higher education teaching and scientific research;
- qualified positions in contractual investment projects;
- highly qualified roles in specific sectors of strategic relevance to the national economy;
- R&D personnel eligible under the Tax Incentive System for Business Research and Development (SIFIDE) framework;
- positions or members of governing bodies in certified startups; and
- certain activities carried out by tax residents in the Autonomous Regions of the Azores or Madeira, subject to criteria defined under regional legislation.

### Wage Enhancement Tax Incentive

Introduced by the State Budget for 2025 and updated by the State Budget for 2026, the Wage Enhancement Tax Incentive is designed to reward employee performance through benefits at the level of IRS, social security contributions and CIT.

With regard to employees, an exemption is granted on amounts paid or made available to employees by way of productivity bonuses, performance bonuses, profit-sharing payments and balance sheet gratifications, for IRS and social security contribution purposes, up to a limit of 6% of the employee's annual base salary.

In order to benefit from this exemption, the employer must:

- increase the average annual base salary across the company, by reference to the end of the prior year, by a minimum of 4.6%; and
- ensure that the increase in the annual base salary of employees earning a value equal to or lower than the company's average annual base salary at the end of the prior year is also a minimum of 4.6%.

It should also be noted that, for CIT purposes, costs corresponding to the qualifying salary increases are deductible at 200% of their actual amount, recognised as an expense of the relevant financial year.

### SIFIDE – R&D Tax Credit

In the context of available tax incentives, the SIFIDE regime deserves particular attention. Under this regime, certain research and development expenses may be deducted directly from the CIT tax liability, including:

- research expenditure incurred with a view to acquiring new scientific or technical knowledge; and
- development expenditure arising from the exploitation of research results or other scientific or technical knowledge, with a view to the discovery or substantial improvement of raw materials, products, services or manufacturing processes.

Within these categories, eligible expenditure includes costs relating to fixed assets such as personnel costs for technical staff involved in research and development tasks, and costs associated with the participation of directors and senior staff in the management of research and development institutions.

The deductible expenditure is calculated on the following basis.

- Base rate – 32.5% of eligible expenses incurred in the relevant tax period.
- Incremental rate – 50% of the increase in eligible expenses incurred in the relevant tax period compared to the simple arithmetic mean of the two preceding financial years, up to a maximum of EUR1,500,000.

### RFAI – Investment Support Tax Regime

The RFAI is a tax incentive regime available to companies carrying out activities in sectors specifically listed under Portuguese law, including:

- extractive and manufacturing industries;
- tourism, including activities of interest to the tourism sector;
- IT activities and related services;
- agricultural, aquaculture, fishing, livestock and forestry activities;
- research and development and high-technology activities;
- information technology, audiovisual production and multimedia;
- defence, environment, energy and telecommunications; and
- shared services centre activities.

In addition to the sectoral requirements, companies must cumulatively satisfy the following conditions:

- maintain properly organised accounts;
- have their taxable profit determined by direct assessment methods rather than indirect methods;
- retain the assets subject to investment within the company and in the relevant region for a minimum period of three years from the date of investment, in the case of micro, small and medium-sized enterprises, or five years in all other cases, or for the minimum useful life of the assets if shorter, or until the assets are written off, dismantled, abandoned or rendered unusable;
- have no outstanding debts to the state or social security in respect of contributions, taxes or levies, or have such debts duly secured; and
- make qualifying investments that generate job creation and maintain those jobs until the end of the minimum retention period applicable to the assets subject to investment.

Where these conditions are met, the following tax benefits are available:

- CIT deductions – in the case of investments made in the Norte, Centro, Alentejo, Autonomous Region of the Azores and Autonomous Region of Madeira, a deduction of 30% of qualifying expenditure applies to investments up to EUR15,000,000, and 10% on the portion exceeding that threshold. For investments in the Algarve and Lisbon regions, a deduction of 10% of qualifying expenditure applies.
- IMI exemption or reduction – for a period of up to ten years from the year of acquisition or construction of the property, in respect of properties used in connection with qualifying investments.
- IMT exemption or reduction – in respect of acquisitions of properties constituting qualifying investments.
- Stamp Duty exemption – in respect of acquisitions of properties constituting qualifying investments.

### Capitalisation Tax Incentive Regime (ICE)

The tax incentive regime for company capitalisation was introduced by the State Budget for 2023 and replaced the DLRR regime, the deduction for retained and reinvested profits, which was repealed in that same year.

The regime consists of a deduction from taxable profit, available to Portuguese companies, corresponding to the application of the 12-month Euribor rate, equal to the average for the tax period, calculated on the basis of the last day of each month, plus a spread of two percentage points, applied to the net increase in eligible equity.

The deduction may not exceed, in each tax period, the greater of the following limits:

- EUR4,000,000; or
- 30% of earnings before depreciation, amortisation, net financing costs and taxes.

For the purposes of the ICE regime, the following are considered net increases in eligible equity:

- cash contributions made in the context of the incorporation of a company or the share capital increase of the beneficiary company;
- in-kind contributions made in the context of a share capital increase corresponding to the conversion of debt into equity;
- share issue premiums; and

- the appropriation of distributable accounting profits, in accordance with commercial law, to retained earnings or directly to reserves or to a share capital increase.

### 5.4 Tax Consolidation

Tax consolidation is available in Portugal through the Special Group Taxation Regime (RETGS).

The regime is optional and allows the parent company of a qualifying group to elect for a consolidated determination of the group's taxable base, aggregating the taxable profits and losses of all group members through an algebraic sum.

A group exists for these purposes where a parent company holds, directly or indirectly, at least 75% of the share capital of one or more subsidiaries, provided that such holding also confers more than 50% of the voting rights.

The election is only available where all of the following conditions are met on a cumulative basis:

- all group companies must have their registered office and place of effective management in Portuguese territory and their income must be subject to the standard CIT regime at the highest applicable rate;
- the parent company must have held its participation in each subsidiary for more than one year prior to the start of the regime;
- the parent company must not itself qualify as a subsidiary of another Portuguese resident company that meets the conditions to be treated as a parent; and
- the parent company must not have renounced the regime in the three years preceding the election.

### 5.5 Thin Capitalisation Rules and Other Limitations

Portugal historically applied traditional thin capitalisation rules, which were replaced in 2013 by a broader interest limitation regime, in line with the OECD BEPS recommendations and subsequently aligned with the EU Anti-Tax Avoidance Directive (ATAD).

The key rule to highlight is the limitation on the deductibility of net financing expenses. Net financing expenses are deductible up to the higher of EUR1,000,000 or 30% of earnings before depreciation, amortisation, net financing expenses and taxes (EBITDA). The purpose of this rule is to prevent excessive debt financing from artificially reducing taxable income.

Net financing expenses that exceed the applicable threshold in a given tax period may be carried forward and deducted in any of the five subsequent tax periods, subject to the same limitations applying in each of those periods.

### 5.6 Transfer Pricing

Transfer pricing rules apply in Portugal. Under the applicable legal framework, transactions carried out between a taxpayer and any related entity must be conducted on terms and conditions that are substantially identical to those that would normally be agreed between independent parties in comparable transactions.

This is the arm's length principle, which aims to ensure tax equity between companies forming part of multinational groups and independent enterprises, neutralise tax avoidance practices, protect the domestic tax base and reduce obstacles to international investment and trade.

In this sense, related party relationships exist where one entity has the power to exercise, directly or indirectly, a significant influence over the management decisions of another.

To determine the arm's length terms and conditions, taxpayers must adopt the most appropriate method having regard to, among other factors:

- the nature of the transaction;
- the availability of reliable information; and
- the degree of comparability between the controlled transaction and comparable uncontrolled transactions.

The available methods are:

- the comparable uncontrolled price method;

- the resale price method;
- the cost plus method;
- the profit split method; and
- the transactional net margin method.

Where none of these methods can be applied due to the unique nature of the transactions or the absence of reliable comparable data, other generally accepted economic valuation techniques may be used, in particular where the transactions involve real estate rights, shares in unlisted companies, credit rights or intangibles.

### 5.7 Anti-Evasion Rules

#### Anti-Avoidance Framework

Portugal has a number of rules designed to prevent and combat tax avoidance and evasion.

As a starting point, it should be noted that Portugal has a general anti-abuse rule, which may always be invoked where a situation considered abusive for tax purposes is at issue. Under this rule, arrangements or series of arrangements that are put in place with the principal purpose of obtaining a tax advantage that defeats the object or purpose of the applicable tax law, and that are carried out through an abuse of legal forms or are not considered genuine having regard to all relevant facts and circumstances, are disregarded for tax purposes.

Taxation is then applied in accordance with the rules applicable to the transactions or acts that reflect the underlying economic substance, and the intended tax advantages are not recognised.

The rule operates as a safeguard against aggressive tax planning. An arrangement is considered non-genuine to the extent that it is not carried out for valid economic reasons that reflect economic substance. An arrangement may consist of more than one step or part.

In addition to the general anti-abuse rule, which may be invoked by the tax authority whenever it considers a given structure or transaction to be abusive, a number of specific rules deserve mention.

#### CFC Rules

Under Portugal's Controlled Foreign Company rules, profits or income obtained by a non-resident entity may be attributed to a Portuguese tax resident entities where such income originates from a jurisdiction subject to a clearly more favourable tax regime, provided the Portuguese resident holds, directly or indirectly, at least 25% of the share capital, voting rights, or rights over the income or assets of that entity.

#### Blacklisted Jurisdictions

Portugal has, by means of a specific ministerial order, identified an extensive list of jurisdictions considered to have a clearly more favourable tax regime. Income paid to or received from entities in those jurisdictions is subject to several tax aggravations. A tax rate of 35% applies to capital income and securities capital gains arising from or paid to those jurisdictions.

#### Exit Tax Rules

Where an individual taxpayer of Portuguese nationality transfers their tax residence to a jurisdiction identified as having a clearly more favourable tax regime, that individual may continue to be treated as a Portuguese tax resident for taxation purposes in the year of the transfer and the following four years, unless they can demonstrate that the transfer was motivated by legitimate reasons, such as the temporary exercise of an activity in that territory on behalf of an employer domiciled in Portugal.

### 5.8 Tariffs

Portugal, as a Member State of the European Union, does not operate an independent tariff regime. Customs and trade policy are an exclusive EU competence, meaning that the tariffs applicable to goods imported into Portugal from third countries are those established under the EU Common Customs Tariff, applied uniformly across all Member States.

## 6. Competition Law

### 6.1 Merger Control Notification

The Portuguese regulator competent to enforce competition law in Portugal, including the rules on merger control, is the *Autoridade da Concorrência* (Portuguese Competition Authority, PCA).

The relevant legislation concerning national merger control is Law No 19/2012 of May 8, as amended (Portuguese Competition Law, PCL), which establishes the general Competition Law regime.

The definition of undertaking under PCL (article 3) is:

An undertaking shall be understood as "any entity carrying out an economic activity, regardless of its legal status and its method of financing" and, for the purposes of this law, shall be considered as a single enterprise, the set of entities which, although legally distinct, constitute an economic unit or maintain interdependent links between them arising, in particular:

- from a majority shareholding in the share capital;
- the holding of more than half of the votes attributed by the shareholdings;
- the possibility of appointing more than half of the members of the management or supervisory body; and
- the power to manage their business.

### Prior Notification of Merger Operations

In order to assess whether a particular transaction is subject to the obligation of prior notification (either to the European Commission or to the PCA), it is necessary to go through two stages. The first stage is to assess whether there is a concentration of undertakings for the purposes of competition law. Secondly, if the transaction qualifies as a concentration within the meaning of these rules, it is necessary to determine whether such merger of undertaking is subject to mandatory prior merger notification under the applicable law.

The legal definition of concentration of undertakings under PCL (Article 36) is:

A concentration of undertakings shall be deemed to occur, for the purposes of the PCL, where there is a lasting change of control over all or part of one or more undertakings, as a result of:

- the merger of two or more undertakings or parts of previously independent undertakings; and
- the acquisition, directly or indirectly, of control of all or part of the share capital or assets of one or more other undertakings, by one or more undertakings or by one or more persons who already control at least one undertaking.

The creation of a joint venture shall constitute a concentration of undertakings where the joint venture performs, on a lasting basis, the functions of an autonomous economic entity.

Control shall derive from any act, regardless of its form, which entails the possibility of exercising, on a lasting basis, alone or jointly, and considering the circumstances of fact or law, a decisive influence on the activity of an undertaking, in particular:

- the acquisition of all or part of the share capital;
- the acquisition of rights of ownership, use or enjoyment over all or part of the assets of an undertaking; and
- the acquisition of rights or the conclusion of contracts which confer a decisive influence on the composition or on the deliberations or decisions of the organs of the company.

If it is found that there is a concentration of companies for the purposes of Competition law, the next step in the analysis will be to check whether the notification criteria, whether European or national, are met.

### Obligation to (Prior) Notify a Merger – Minimum Thresholds

If the triggers for mandatory notification to the European Commission are not met, a concentration will still be subject to a prior control regime (ex ante intervention) by the PCA when it meets one of the following conditions (as per Article 37 (1) of PCL).

- As a consequence of the concentration, a market share equal to or greater than 50% of the Portuguese market in a specific product or service, or in a substantial part of it, is acquired, created or reinforced.
- As a consequence of the concentration, a market share equal to or greater than 30% but smaller than 50% of the Portuguese market in a specific product or service, or in a substantial part of it, is acquired, created or reinforced provided that the individual turnover in Portugal in the previous

financial year, by at least two of the undertakings involved in the concentration are greater than five million euros, net of taxes directly related to such a turnover.
- The undertakings that are involved in the concentration have reached an aggregate turnover in Portugal in the previous financial year greater than EUR100 million, net of taxes directly related to such a turnover, as long as the turnover in Portugal of at least two of these undertakings is above five million euros. The assessment of the market share and the calculation of the turnover of each undertaking involved in the concentration shall be performed in accordance with specific criteria and special rules apply in some specific cases.

A set of concentrations between the same entities within a period of two years – even if the operations, individually considered, would not be considered subject to prior notification – are considered a single concentration subject to prior notification when the concentrations jointly reach the turnover's threshold entailing the mandatory notification to PCA after the conclusion of the agreement on the last of the operations and before its implementation.

### 6.2 Merger Control Procedure

Concentrations that are considered, under the thresholds set out in **6.1 Merger Control Notification**, to be of mandatory filing before the PCA shall be notified to such authority after the conclusion of the agreement and before being implemented; or, where applicable, after the date of the preliminary announcement of a public takeover bid or exchange offer, or the announcement of the acquisition of a controlling interest in a company whose shares are admitted to trading on a regulated market; or, in the case of a concentration resulting from a public procurement procedure, after the final award and before being implemented.

Also, PCL expressly provides for the possibility of voluntary notification when there is a serious intention of concluding an agreement. A concentration subject to mandatory prior notification may not be put into effect before it has been notified and has been the object of an explicit or tacit decision of non-opposition and, accordingly, the validity of any legal transaction carried out during the evaluation period depends upon the clearance of the concentration (standstill obligation).

A notification only becomes effective after duly submission with all the elements and the respective payment of the fee due.

The procedure for assessing a concentration under the PCL comprises two phases: an initial investigation phase , and an eventual phase two, usually called the "in-depth investigation phase".

- In phase one PCA has 30 working days from the date when the notification becomes effective to decide: that the concentration is not subject to mandatory filing;
- not to oppose the concentration; or
- to initiate an in-depth investigation, if, in view of the evidence gathered, it has serious doubts that the concentration will result in significant impediments to effective competition.

In straightforward cases and if some criteria are met – such as absence of horizontal overlap, the absence of vertical relationships, minimal market shares, transition from joint to sole control or negligible activity – a short-form notification can be used, which requires significantly less data and typically leads to a faster clearance decision.

During phase one, if PCA considers that there are serious competition concerns, it decides to initiate an in-depth investigation (ie, phase two). In this phase, PCA has a maximum of 90 working days to carry out the additional inquiries that it considers necessary (this time period already incorporates all the working days used by PCA during phase one). This period may be extended by the competition authority, at its own initiative or at the request of the notifying party/parties, for a period that, in total, may not exceed 20 working days.

The time period is suspended whenever there are PCA's additional requests of information (to the participant parties and/or other interveners) and respective replies. If no decision is issued by PCA within such deadlines (considering said extensions and sus-

pensions), a non-opposition decision is considered to have occurred. In phase two, PCA must conduct a hearing of the parties (a procedural step that is usually initiated by the issuance of a draft final decision) within 75 working days from notification.

By the end of the phase two PCA must decide:

- not to oppose the concentration (with or without commitments offered by the notifying parties); or
- to prohibit the concentration, prescribing appropriate measures, should the concentration have already occurred.

### 6.3 Cartels

PCL establishes the general competition legal framework concerning anticompetitive agreements and abuses of dominant position. This law applies to all economic activities carried out, whether on a permanent or occasional basis, in the private, public and cooperative sectors. PCL shall be interpreted in accordance with European Union Law and considering the case law of the Court of Justice of the European Union.

Regarding restrictive agreements and similar practices, PCL prohibits, in Article 9, agreements between undertakings, concerted practices and decisions by associations of undertakings which have as their purpose or effect the prevention, restriction or distortion of competition. Said agreements between undertakings may be legally binding agreements, informal agreements or simple arrangements between undertakings.

In regards to concerted practices, they generally involve fixing market conditions and business actions taken in parallel, for instance through a sudden and simultaneous rise in prices for a given product.

As with Article 101 of the TFEU, PCL provides examples of restrictive practices.

- Direct or indirect fixing of purchase or selling prices or of any other trade conditions.
- Limitation or control over production, the distribution, technical development or investments.
- Sharing of markets or sources of supply.
- Application to trade partners of dissimilar conditions to equivalent transactions, therefore placing them in disadvantage in the competition.
- Make the conclusion of contracts subject to acceptance by the other parties of supplementary obligations which, by their nature or according to commercial usage, have no connection with the subject of such contracts.
- Establishing, within the scope of the supply of goods or accommodation services in tourist developments or local accommodation establishments, that the other contracting party or any other entity may not offer, on electronic platforms or in physical establishments, prices or other sales conditions for the same good or service that are more advantageous than those practiced by an intermediary operating through an electronic platform.

Similarly to what is provided by Article 101 (3) of TFEU, in accordance with Article 10 of the PCL, any restrictive practice under the terms of article nine (agreements between undertakings, concerted practices and decisions by associations of undertakings which have as their purpose or effect the prevention, restriction or distortion of competition) may be deemed justified when it contributes to improve the production or distribution of goods or services or to promote technical or economic development, provided that, cumulatively, they:

- offer the users of such goods or services a fair part of the benefit arising therefrom;
- do not impose to the undertakings concerned any restrictions that are not indispensable to the attainment of such objectives; and
- do not grant such undertakings the opportunity to suppress the competition in a substantial part of the goods or services market at stake.

As to the public interest defence/importance, it is established by Article 4 of the PCL that the undertakings that have been legally entrusted with the management of services of general economic interest, or are by their nature legal monopolies, are subject to the provisions of the PCL, to the extent that enforcement of these provisions does not create an obstacle to the fulfilment of their specific mission.

Article 7 (1) of the PCL sets the priorities of PCA's mission and states that in carrying out its responsibilities, the PCA shall be guided by the public interest criterion of promoting and protecting competition and may, based on this criterion, assign different degrees of priority to the matters it is called upon to analyse and reject the handling of matters it deems non-priority.

I is also established by the PCL that the PCA shall exercise its sanctioning powers on a case-by-case basis, whenever the public interest of pursuing and punishing infringements of competition rules entails the initiation of administrative offence proceedings, taking into account in particular the priorities in competition policy and the elements of fact and law brought by the parties.

The PCA registers all complaints but will only initiate proceedings if there are sufficient grounds to do so. Should PCA consider a complaint to be non-priority or lacking legal basis, it must inform the complainant, who then has ten working days to submit written observations. If the complainant fails to do so, the complaint is deemed withdrawn. If observations are submitted (within the deadline), the PCA may, in light of such observations, either initiate proceedings or, alternatively, notify the complainant of an express decision of rejection.

### 6.4 Abuse of Dominant Position

PCL prohibits the abuse of a dominant position which is deemed to occur where an undertaking holds a dominant position in the relevant market, and exploits it in an abusive manner.

According to the European Court of Justice's jurisprudence, a dominant position relates to a position of economic strength that enables an undertaking to prevent effective competition from being maintained in the relevant market by granting it the power to behave in a considerable extent regardless of its competitors, customers and consumers.

There shall be an individual or collective dominant position with regard to a given product or service if:

- a company acts in a market in which it is not subject to significant competition; or
- two or more companies behave in a concerted manner on a market in which they do not have significant competition or in which they prevail over others (joint dominance).

As with Article 102 of the TFEU, PCA also provides examples of restrictive practices.

- Directly or indirectly imposing unfair purchase or selling prices or other unfair trading conditions.
- Limiting production, markets or technical development to the prejudice of consumers.
- Applying dissimilar conditions to equivalent transactions with other trading parties, thereby placing them at a competitive disadvantage.
- Making the conclusion of contracts subject to acceptance by the other parties of supplementary obligations which, by their nature or according to commercial usage, have no connection with the subject of such contracts.
- Refusing access for another undertaking to a network or other essential facilities that it controls, against the appropriate payment, provided that such undertaking without it cannot act, for de facto or legal reasons, as a competitor of such undertaking in a dominant position in the upstream or downstream markets, except if the dominant undertaking evidences that such access is not reasonably possible for operational or other reasons.

The last example is innovative when comparing the wording of the national law with EU Law provisions. However, in practical terms, the same understanding and practice is followed within the EU scheme.

In addition to the abuse of dominant position, PCL also prohibits, in Article 12, the abuse of economic dependence, which intends to prevent the abuse by one or more undertakings of the economic dependence over a supplier or client that has no equivalent alternative.

Portuguese legislation also prohibits unilateral commercial practices regarding activities which do not necessarily or per se have effects on competition. The Decree-Law No 166/2013, of December 27 sets out the legal regime applicable to individual restrictive trade practices which impose transparency and

balance in commercial relations (establishing some obligations such as and prohibits some specific unilateral conducts such as selling below cost (with some specific exceptions), discriminatory pricing and abusive trade practices.

## 7. Intellectual Property

### 7.1 Patents

Patents protect technical inventions that are new, involve an inventive step and are capable of industrial application. In Portugal, patents are governed mainly by the Industrial Property Code and are granted by the Portuguese Institute of Industrial Property (INPI). Protection is territorial and, for national patents, lasts for 20 years from the filing date, subject to payment of annual fees. Utility models may also be relevant for certain technical solutions and have a shorter maximum term of ten years.

#### Registration and Procedure

A patent application may be filed directly before INPI, or protection may be obtained through the European patent system, including validation in Portugal, or through international routes such as the PCT. A national application is subject to formal examination, publication in the Industrial Property Bulletin, a period for third-party observations or opposition, substantive examination and a final decision. The process is technical and investors should normally conduct prior searches and freedom-to-operate analysis before launching products or technology in Portugal.

#### Enforcement and Remedies

Patent rights allow the holder to prevent unauthorised manufacture, use, sale, importation or commercial exploitation of the patented invention. Enforcement is usually brought before the Portuguese Intellectual Property Court, although alternative dispute resolution may be available in specific cases. Remedies may include interim and final injunctions, seizure of infringing goods, removal from the market, destruction of infringing products or means of infringement, damages and publication of the decision. Patent infringement may also have criminal relevance in certain circumstances.

Portugal also participates in the European patent framework. For European patents and unitary patent matters, businesses should consider at an early stage whether protection and enforcement will be pursued through national routes, the European Patent Office and, where applicable, the Unified Patent Court system.

### 7.2 Trade Marks

Trade marks protect signs capable of distinguishing the goods or services of one undertaking from those of another. These signs may include words, names, logos, letters, numbers, colours, shapes, sounds or other signs, provided that they are distinctive and can be represented in a way that allows the scope of protection to be clearly identified. In Portugal, national trade marks are governed by the Industrial Property Code and granted by INPI. Registration is valid for ten years from the filing date and can be renewed indefinitely for further ten-year periods.

#### Registration and Procedure

Applications are filed before INPI and must identify the sign, the applicant and the goods or services covered, classified under the Nice Classification. INPI examines absolute and relative grounds for refusal, such as lack of distinctiveness, descriptiveness or unlawfulness, and third parties prior rights, and the application is published so that third parties may oppose registration. A prior clearance search is strongly recommended, especially before adopting a brand name, launching a product or investing in packaging, domain names or marketing.

Businesses can also protect trade marks in Portugal through an EU trade mark filed with the European Union Intellectual Property Office (EUIPO), which covers all EU member states, or through an international registration designating Portugal or the EU. The best route depends on the geographical scope of the business, budget, likelihood of conflict and enforcement strategy.

#### Enforcement and Remedies

A registered trade mark gives the owner the right to prevent unauthorised use of identical or confusingly similar signs for identical or similar goods or services, and, in some cases, use that takes unfair advantage

of or harms the reputation of a well-known or reputed mark.

Remedies include injunctions, damages, seizure, withdrawal or destruction of infringing goods, customs action and publication of judgments.

Trade mark infringement and counterfeiting may also trigger criminal proceedings. Owners should monitor the market and the INPI, EUIPO and domain name registers, since non-use for a continuous period may expose the registration to revocation.

## 7.3 Industrial Designs

Industrial designs protect the appearance of the whole or part of a product. This may include lines, contours, colours, shape, texture, materials or ornamentation, provided that the design is new and has individual character. Design protection is particularly relevant for consumer products, fashion, packaging, furniture, technology hardware, interfaces and other products where appearance has commercial value.

### Registration and Duration

In Portugal, designs are registered before INPI under the Industrial Property Code. Once granted, national design protection may last for up to 25 years, usually through successive five-year periods of protection. Applicants may also seek protection through the EU design system, which is often attractive where the product will be marketed across several EU jurisdictions.

The registration process involves filing representations of the design and identifying the product to which it applies. Businesses should pay particular attention to the timing of disclosure. Public disclosure before filing may affect novelty, although certain grace-period rules can be relevant. As a practical matter, filing before launch is usually the safest approach.

### Enforcement and Remedies

A registered design allows the holder to prevent third parties from making, offering, putting on the market, importing, exporting or using a product incorporating a design that does not produce a different overall impression on the informed user. Enforcement may be brought before the Portuguese Intellectual Property Court, with remedies including interim and final injunctions, seizure, withdrawal from the market, destruction of infringing goods, damages and publication of the judgment. Where the appearance of a product is also distinctive or creative, overlapping protection through trade marks, copyright or unfair competition rules may also be considered.

## 7.4 Copyright

Copyright protects original literary, scientific and artistic works. In Portugal, the main legal framework is the Code of Copyright and Related Rights. Protected works may include books, articles, music, lyrics, audiovisual works, photographs, software, architectural works, visual arts and other original creations. Copyright protects the form of expression of an idea, not the idea, method, concept or business model itself.

### Creation, Ownership and Duration

Copyright arises automatically upon creation of the work and does not depend on registration. As a general rule, economic rights last for 70 years after the author's death, although specific rules apply to collective, anonymous, audiovisual and other categories of works. Moral rights are also important under Portuguese law and include the right to claim authorship and to object to certain distortions or uses that harm the author's honour or reputation.

Ownership should be addressed carefully in contracts. In many business contexts, such as commissioned works, employment, software development, marketing materials and audiovisual production, the main risk is not whether copyright exists, but whether the company has obtained the necessary rights to use, adapt, distribute, communicate or sublicense the work. Written assignments or licenses should therefore identify the works, rights, territory, term, permitted uses and remuneration.

### Registration and Enforcement

Registration with the Inspectorate-General for Cultural Activities (IGAC) is optional, but may be useful as evidence of authorship, ownership or date of creation. Copyright can be enforced through civil and, in certain cases, criminal proceedings. Remedies may include injunctions, seizure, removal of infringing copies, damages, publication of the decision and measures

against online infringement. For online businesses, music, audiovisual content, software and platform-based services, rights clearance and evidence of the chain of title are often as important as enforcement itself.

### 7.5 Others

#### Software

Computer programs are protected in Portugal primarily by copyright, under specific software legislation and the general copyright framework. Protection covers the expression of the program, including source code and object code, but not the underlying ideas, principles, algorithms or functionalities as such. Patent protection for software-related inventions may be available only where the invention has the required technical character and meets the general patentability criteria.

In commercial practice, software protection usually depends on a combination of copyright, confidentiality, trade secret protection, licensing terms, escrow arrangements, access controls and careful treatment of open-source components. Development agreements should clearly regulate ownership, third-party materials, repositories, documentation, maintenance, cybersecurity, audit rights and permitted use.

#### Databases

Databases may be protected by copyright if the selection or arrangement of their contents is original. Separately, a sui generis database right may protect the maker of a database where there has been substantial investment in obtaining, verifying or presenting its contents. This is particularly relevant for data-driven businesses, platforms, directories, catalogues and digital services.

The practical value of database protection depends heavily on evidence. Businesses should document the investment made in collecting, verifying and maintaining data, restrict unauthorised extraction or re-utilisation through contractual terms, and implement technical controls where appropriate.

#### Trade Secrets and Confidential Information

Trade secrets are protected where information is secret, has commercial value because it is secret, and has been subject to reasonable steps to keep it confidential. This may include technical know-how, business plans, customer lists, pricing models, algorithms, manufacturing processes, financial information and strategic data. Protection does not require registration, but it does require active internal management.

Companies doing business in Portugal should use non-disclosure agreements, confidentiality clauses, internal access controls, employee policies, clean-room procedures where needed and clear rules for contractors and consultants. Remedies for unlawful acquisition, use or disclosure may include injunctions, corrective measures, damages and restrictions on the use or dissemination of the trade secret.

#### Other Rights and Practical Considerations

Other protected subject matter may include domain names, geographical indications, appellations of origin, semiconductor topographies, plant varieties and unfair competition claims. In practice, IP protection in Portugal should be treated as a portfolio exercise. Businesses should combine registrations, contracts, internal policies, monitoring and enforcement planning, rather than relying on a single right.

## 8. Data Protection

### 8.1 Applicable Regulations

The main data protection framework applicable in Portugal is the General Data Protection Regulation, Regulation (EU) 2016/679 (GDPR), together with Law No 58/2019 of 8 August, which implements and supplements the GDPR at national level. Law No 58/2019 also identifies the Portuguese supervisory authority and contains certain national rules on matters such as processing in an employment context, processing by public entities, video surveillance, secrecy obligations and sanctions.

Portuguese data protection law follows the core GDPR principles: lawfulness, fairness and transparency; purpose limitation; data minimisation; accuracy; storage limitation; integrity and confidentiality; and accountability. In practice, organisations doing business in Portugal must be able to demonstrate that personal data is collected and used on a valid legal

basis, that individuals receive clear information, and that appropriate technical and organisational measures are in place.

### Key Compliance Obligations

For companies operating in Portugal, the main compliance obligations usually include:

- preparing privacy notices and internal policies;
- mapping processing activities and maintaining records of processing, where required;
- ensuring that contracts with processors include GDPR-compliant clauses;
- assessing whether a data protection officer must be appointed;
- implementing security measures appropriate to the risk;
- managing data subject rights requests;
- assessing and documenting international data transfers;
- notifying personal data breaches to the supervisory authority where required; and
- carrying out data protection impact assessments for high-risk processing.

Sector-specific rules may also be relevant, depending on the business activity. These include rules on electronic communications and direct marketing, cybersecurity, consumer protection, financial services, health data, employment, video surveillance and the use of digital platforms.

### Practical Approach

In Portugal, as in the rest of the EU, data protection compliance is not only a documentation exercise. Companies are expected to implement procedures that work in practice, particularly where they process sensitive data, monitor employees or customers, use CCTV, rely on digital marketing, transfer data outside the European Economic Area or deploy automated decision-making tools.

## 8.2 Geographical Scope

The GDPR applies directly in Portugal and has broad territorial scope. It applies to organisations established in Portugal that process personal data in the context of their activities, even if the actual processing takes place outside Portugal or outside the European Union. It may also apply to organisations that are not established in Portugal or elsewhere in the EU, where they offer goods or services to individuals located in the EU or monitor their behaviour within the EU. This means that a foreign company with no Portuguese subsidiary may still be subject to Portuguese and EU data protection rules if, for example, it targets Portuguese customers, operates a Portuguese-facing website or app, runs behavioural advertising campaigns aimed at users in Portugal, or tracks users located in Portugal.

### International Transfers

Transfers of personal data from Portugal to countries outside the European Economic Area (EEA) are subject to the GDPR transfer rules. Such transfers may take place where there is an adequacy decision, appropriate safeguards such as standard contractual clauses, binding corporate rules, or another valid transfer mechanism under the GDPR.

In practice, companies should also assess the legal and practical risks of the destination country, particularly where personal data is transferred to service providers, cloud platforms, group companies or technology vendors located outside the EEA.

### Representative and Lead Authority

Non-EU organisations subject to the GDPR may need to appoint an EU representative, unless an exemption applies. Where a company operates in more than one EU Member State, the GDPR's one-stop-shop mechanism may also be relevant, with a lead supervisory authority being determined by reference to the organisation's main establishment in the EU.

For companies entering the Portuguese market, it is therefore important to assess early whether the business model triggers GDPR applicability, whether a Portuguese or EU establishment is being created, and which supervisory authority is likely to be competent.

## 8.3 Role and Authority of the Data Protection Agency

### The CNPD

The Portuguese data protection authority is the *Comissão Nacional de Proteção de Dados*, commonly referred to as the CNPD. Law No 58/2019 confirms that the CNPD is the national supervisory authority

for the purposes of the GDPR and Portuguese data protection law. It is an independent administrative authority with public law powers and administrative and financial autonomy, operating in connection with the Portuguese Parliament.

The CNPD's role is to supervise and enforce data protection law in Portugal. It also cooperates with other EU supervisory authorities, particularly in cross-border cases involving organisations operating in several Member States.

### Powers and Enforcement

The CNPD has investigative, corrective, advisory and authorisation powers under the GDPR and national law. These include the power to request information, carry out audits and investigations, issue warnings or reprimands, order controllers or processors to bring processing into compliance, impose temporary or definitive limitations on processing, order the suspension of data flows and impose administrative fines.

Administrative fines may follow the GDPR framework and can be significant, depending on the nature, gravity and duration of the infringement, the number of individuals affected, the degree of responsibility of the controller or processor, and any mitigating or aggravating factors.

### Practical Role for Businesses

In practice, the CNPD is relevant not only in contentious matters, but also in day-to-day compliance. Organisations may need to interact with the CNPD in the context of personal data breach notifications, complaints submitted by data subjects, prior consultation in high-risk cases, audits, investigations or requests for guidance.

Companies doing business in Portugal should therefore treat data protection governance as an operational risk area. Good documentation, clear internal responsibilities, staff training, vendor management and incident response procedures are important not only to comply with the law, but also to demonstrate accountability if the CNPD reviews the organisation's practices.

## 9. Looking Forward

### 9.1 Upcoming Legal Reforms

No single, comprehensive overhaul of Portuguese private or regulatory law is expected in the short term. Instead, legal development is being driven predominantly by EU-level regulation and targeted national reforms across specific sectors. The most significant trend is the increasing convergence between digital regulation, data governance, AI, cybersecurity and sector-specific regulatory frameworks, alongside incremental reforms in employment and immigration law.

### Intellectual Property, Data Protection and AI

No major structural reform of Portuguese intellectual property or data protection statutes is expected in the immediate future. However, the legal framework is undergoing substantial transformation through directly applicable EU legislation.

### Industrial Designs

A significant development is the EU design reform package. Regulation (EU) 2024/2822 modernises the EU design regime, with key provisions applicable from May 2025 and further procedural changes entering into force in July 2026. Directive (EU) 2024/2823 must be transposed by December 2027.

The reform broadens design protection to include digital and animated designs, clarifies scope of protection, and introduces changes affecting spare parts and repair clauses. This is particularly relevant for businesses in product design, fashion, consumer goods, software interfaces and digital assets.

### Copyright and Artificial Intelligence

Portugal has already implemented the Digital Single Market Copyright Directive via Decree-Law No. 47/2023, introducing significant updates including text and data mining exceptions, press publisher rights and online content-sharing rules.

The most significant ongoing development is the intersection between copyright law and AI regulation. The EU AI Act, directly applicable in Portugal, imposes obligations on providers of general-purpose AI models, including transparency and copyright compliance

requirements relating to training data. The European Parliament's March 2026 resolution on copyright and generative AI signals further EU-level regulatory development in this area.

As a result, copyright compliance is increasingly extending beyond traditional infringement analysis to include AI training datasets, opt-out mechanisms for text and data mining, content provenance and contractual allocation of AI-related risk.

### Data Protection and Digital Regulation

The GDPR remains the cornerstone of Portuguese data protection law, with no replacement anticipated. However, it is increasingly complemented by a broader EU digital regulatory framework.

Key developments include:

- EU AI Act – phased implementation, with significant compliance obligations for AI developers and deployers; Portugal is expected to designate ANACOM as a key supervisory authority.
- Data Act (applicable since September 2025) – introduces rules on access to and use of data generated by connected products and related services, with particular relevance for IoT, industrial systems, mobility, energy, and cloud services.
- NIS2 Directive (transposed via Decree-Law No. 125/2025, effective April 2026) – significantly strengthens cybersecurity obligations for essential and important entities, including governance, incident reporting, and risk management requirements.
- Digital Services Act implementation (Law No. 12-A/2026) – establishes national competent authorities and updates the regulatory framework for intermediary and platform services.

The cumulative effect of these reforms is a regulatory environment increasingly defined by EU-level instruments rather than domestic legislative overhaul. Businesses operating in Portugal should therefore adopt a cross-regulatory compliance approach spanning IP, AI governance, cybersecurity and data regulation.

### Immigration and Nationality Law

Portuguese immigration law has recently undergone targeted amendments, particularly affecting family reunification procedures and job seeking residence permits. These changes reflect a broader policy focus on administrative efficiency and migration control. Further legislative reforms to the Immigration Act remain under discussion and may introduce additional restrictions to family reunification and other residence pathways.

### Forthcoming Reforms

A significant reform of Portuguese nationality law entered into force on 19 May 2026. The minimum residence period for naturalisation has been extended from five years to seven years for EU and CPLP nationals and ten years for all other foreign nationals. The qualifying period now begins on the date of issuance of the first residence permit, rather than the date of the residence application, materially extending eligibility timelines for new applicants. Importantly, the reform applies only to nationality applications submitted on or after its entry into force, with pending applications remaining subject to the previous legal framework.

In addition, the reform strengthens the integration requirements for naturalisation by introducing new requirements relating to Portuguese culture, history, national symbols, and civic knowledge, alongside the existing Portuguese language requirement. Some aspects of these new requirements remain subject to implementing regulations.

### EU-Level Developments and Enforcement

At EU level, the Pact on Migration and Asylum became applicable from June 2026, requiring adjustments to Portuguese border management, asylum processing, return procedures, and administrative cooperation mechanisms.

At national level, the Government continues to pursue broader immigration reforms aimed at strengthening enforcement against irregular migration, including more effective return procedures and enhanced administrative powers. However, some of these measures remain subject to the legislative process and judicial scrutiny.

These reforms indicate a clear policy shift towards tighter immigration control, longer integration timelines, and increased enforcement efficiency, with

material consequences for residence planning, litigation, and family reunification strategies.

### Employment Law

No comprehensive structural reform of the Portuguese Labour Code is expected in the short term. However, labour law is evolving through a combination of national policy proposals and EU-driven regulatory change.

### National Developments

A proposed "labour package" is currently under discussion and may introduce amendments in key areas such as:

- working time organisation;
- fixed-term employment contracts;
- dismissal regimes; and
- employee rights protections.

While the final scope remains uncertain, the direction of reform suggests a recalibration of flexibility versus protection, with a gradual strengthening of employee safeguards.

### EU Influence and Structural Change

EU-level developments continue to exert increasing influence on Portuguese employment law, particularly in areas such as:

- platform work regulation;
- algorithmic management and AI in employment; and
- data protection in the workplace.

These changes are progressively reshaping HR practices, including recruitment, performance evaluation and workforce monitoring.

Although the core structure of Portuguese labour law is expected to remain stable, incremental regulatory tightening and digitalisation-driven obligations are likely to reduce employer flexibility and increase compliance complexity.

### Competition and Merger Control

A significant evolution is underway in EU merger control policy, which is expected to materially influence Portuguese enforcement practice.

The European Commission published its draft revised Merger Guidelines on 30 April 2026. Following a public consultation period that closed on 26 June 2026—with stakeholder feedback currently being published and analysed by DG COMP—the final version of the guidelines is expected to be formally adopted in the fourth quarter of 2026.

The Portuguese Competition Authority (*Autoridade da Concorrência*) is expected to align closely with this evolving EU approach. While no immediate legislative change is confirmed at national level, a shift in enforcement practice is anticipated, particularly in:

- The substantive assessment of mergers – driven by the newly introduced "theory of benefit", which allows companies to justify mergers based on broader efficiencies such as supply chain resilience, sustainability, and security of supply, balanced against stricter scrutiny of dynamic efficiencies;
- The evaluation of non-price effects – placing greater emphasis on the impact of mergers on innovation and investment, including the application of the new "Innovation Shield" to protect start-ups from anticompetitive acquisitions;
- Market structure analysis in digital sectors and ecosystems – increasing scrutiny of killer acquisitions, data accumulation, and theories of harm based on market power entrenchment.

This development suggests a gradual but meaningful shift in merger control enforcement, with increased scrutiny of strategic and digital markets and greater alignment with EU analytical standards.

### Cross-Sector Outlook

Across all practice areas, three overarching trends are evident:

- EU regulatory dominance – Portuguese law is increasingly shaped by directly applicable EU regulations rather than domestic legislative reform.

**Contributed by:** Joana Torres Fernandes, José Manuel Pereira da Costa, Danielle Avidago, Javier Mateo, António Pratas Nunes, Joana Loureiro Veríssimo, Madalena Mourão and David Serras Pereira, **LVP Advogados**

- Digital convergence – IP, data protection, cybersecurity and AI governance are becoming structurally interconnected.
- Increased compliance burden – businesses face expanding obligations across multiple regulatory layers, particularly in technology-driven sectors.

For companies operating in Portugal, the key challenge is no longer isolated legislative change, but continuous adaptation to a fast-evolving, multi-layered EU regulatory ecosystem.

# Trends and Developments

**LVP Advogados**

**LVP Advogados** assists international clients with investment, residence, and citizenship matters in Portugal. Its clients, from over 150 countries, include high-net-worth individuals and families, family offices, businesses and institutions. Its legal team supports foreign clients throughout the entire process, from initial planning to ongoing operations. Where needs extend beyond legal services, it connects clients with trusted third-party professionals and coordinates matters on their behalf, offering a single point of contact for all matters related to Portugal. It makes extensive use of advanced, integrated software to enhance client experience, ensure data security and confidentiality, improve efficiency and minimise the risk of human error. At the same time, it maintains a personalised approach, taking the time to understand each client's specific circumstances.

## Authors

**Joana Torres Fernandes** is a lawyer and founding and managing partner of LVP Advogados. A member of the Portuguese Bar Association since 2011, she heads the firm's Immigration and Private Clients practice. With over 15 years of legal experience, Joana advises international clients, families, investors and high-net-worth individuals on residency, nationality, relocation, real estate and corporate matters in Portugal. Before founding LVP Advogados in 2020, she worked as a senior associate lawyer and gained in-house experience at General Motors. Joana is closely involved in strategic, cross-border matters requiring coordination between immigration, private client, corporate and real estate aspects.

**Luís Maria Branco** is a lawyer at LVP Advogados, with a practice focused on Immigration and Nationality Law. He advises international clients on residence and visa matters, Portuguese citizenship applications and related procedural and strategic issues. Before joining LVP Advogados, he practised at CS'Associados, where he completed his professional internship and subsequently worked as a lawyer, gaining experience in a demanding and highly structured legal environment. He has been a member of the Portuguese Bar Association since 2019.

## Immigration and Nationality in Portugal: Strategic Considerations for International Investors and Businesses

### *Introduction: a changing landscape*

Portugal remains an attractive destination for international investors, businesses and families seeking to relocate within the European Union. However, the conditions governing immigration and nationality have changed significantly in recent years, both in terms of legal framework and practical implementation.

For many years, Portugal was perceived as a relatively accessible jurisdiction, combining residence routes with moderate stay requirements, a stable legal environment and a path to Portuguese citizenship after a comparatively moderate period of legal residence. That perception is now evolving. The country continues to offer relevant opportunities, but the legal and administrative environment has become more demanding.

This shift has become particularly evident over the past two years. Applicants are now more likely to encounter challenges not only in meeting legal requirements, but in navigating the practical aspects of the process. Timing, documentation, administrative access and procedural strategy have become central elements of immigration planning.

As a result, successfully navigating the Portuguese immigration system can no longer be viewed as a purely legal exercise. It requires a structured and strategic approach that integrates legal eligibility, administrative dynamics, timing, documentation and long-term objectives, particularly for international clients whose decisions involve mobility, tax exposure, business operations and family structuring.

### *Nationality Law reform*

Nationality law has undergone one of the most significant reforms in Portugal in recent years, with direct impact on international families, investors and long-term residents.

Following parliamentary approval, promulgation by the President of the Republic and publication in Portugal's official gazette, the *Diário da República*, the new framework entered into force on 19 May 2026.

The reform increased the minimum period of legal residence required for naturalisation from five years to seven years for European Union and CPLP (Community of Portuguese Language Countries) nationals, and to ten years for other foreign nationals.

Access to Portuguese nationality by origin for children born in Portugal to foreign parents has also become more restrictive. Subject to the remaining statutory conditions, a declaration that the child wishes to be Portuguese must be made and, at the time of birth, one parent must have been legally resident in Portugal for at least five years.

Special nationality regimes were also affected. In particular, the previous naturalisation route available to descendants of Portuguese Sephardic Jews under Article 6 (7) of the Nationality Law was revoked. The revocation of this provision represents the effective closure of one of the most internationally known special nationality routes within the Portuguese system.

At the same time, the reform introduced a new naturalisation route for descendants in the third degree in the direct line of Portuguese nationals of origin. This may be relevant for great-grandchildren of Portuguese nationals, but it is not an automatic route to nationality by origin and requires at least five years of legal residence in Portugal.

Another particularly relevant change concerns the calculation of the residence period itself. The reform revoked the previous rule under which, for nationality purposes, the residence period could be counted from the date of submission of an application for a temporary residence permit, provided that the application was ultimately approved. The relevant period must now be assessed by reference to periods during which the applicant's stay in Portugal was legally regularised under a qualifying title, visa or authorisation. This change may have considerable practical impact, particularly in light of the delays currently affecting immigration procedures and residence permit issuance.

This reform represents a fundamental shift in Portugal's broader approach to nationality and long-term integration. While citizenship remains an important

long-term objective for many international clients, the pathway towards Portuguese nationality has become longer and more demanding.

In practical terms, applicants will remain dependent on the immigration system for a longer period before becoming eligible for citizenship. This has implications in terms of residence permit renewals, costs, minimum stay requirements, documentary compliance and overall planning. The new framework also expressly reinforces the requirement that applicants demonstrate the ability to support themselves financially, which may result in greater scrutiny of income sources, financial documentation and long-term economic stability.

The impact varies depending on the residence route. Golden Visa (a residence-by-investment scheme for non-EU nationals) applicants may be required to maintain their investment for a longer period and manage additional renewal cycles. Holders of residence permits such as the D2 (entrepreneur), D7 (passive income) or D8 (remote work) may need to maintain a stronger and more continuous connection to Portugal over an extended period.

These changes are already influencing decision-making, particularly where relocation strategies were initially structured around a shorter timeline to citizenship.

The new framework also reinforces broader integration criteria, including requirements connected to knowledge of Portuguese culture, history, national symbols, civic principles and the political organisation of the Portuguese State, in addition to Portuguese language proficiency.

Despite the entry into force of the reform on 19 May 2026, as of the date of writing, the Portuguese Nationality Regulation has not yet been amended to reflect the changes introduced. Consequently, the practical implementation of certain new requirements, including the integration assessments and the relevant evidentiary and documentary procedures, remains unclear.

Timing has therefore become a critical factor. The moment at which a residence application is initiated, the time taken for the residence permit to be issued and the applicant's ability to maintain residence compliance may now directly affect the long-term nationality timeline and overall strategic positioning.

Importantly, the new framework generally preserves the application of the previous rules to nationality procedures already pending at the time the reform entered into force, reducing the immediate impact on applicants who had already submitted their requests before May 2026.

Portuguese citizenship remains attainable and continues to represent an attractive long-term objective for many international families and investors. However, nationality planning must now be approached with a significantly longer strategic horizon, requiring earlier preparation, closer monitoring of immigration timelines and more careful long-term structuring.

### *Immigration in practice*

A defining feature of the Portuguese immigration system is the growing gap between the legal framework and its practical implementation.

Meeting the legal requirements does not always result in a timely or predictable outcome.

While the law provides a structured set of requirements, the application of those rules may vary. Applicants may be asked to provide supplementary documentation or clarifications, depending on the circumstances of the case and the administrative assessment.

The main challenge is increasingly not whether an applicant qualifies, but whether the administrative process can move forward within a commercially or personally acceptable timeframe.

The Agency for Integration, Migration and Asylum (AIMA) continues to face significant operational constraints. Delays in scheduling appointments, processing applications and issuing residence cards have become structural.

Applicants may wait several months to secure an appointment, even where all requirements are met,

with further delays occurring throughout the process. This can create uncertainty regarding legal status and may affect travel, employment, access to services and family arrangements.

Digitalisation has the potential to improve efficiency but has also introduced transitional challenges, including technical issues and fragmented systems. Communication with the authorities remains limited, and resolving pending matters can be difficult.

These factors have direct consequences for international clients. Business operations, employee mobility, relocation timelines and family stability may all be affected by administrative delays.

Successful immigration planning therefore depends not only on legal eligibility, but also on anticipating procedural bottlenecks and adopting a structured and pragmatic approach.

### *Golden Visa*

The Portuguese Golden Visa programme remains in force and continues to be relevant for certain international investors, although its positioning has changed.

Following the removal of real estate as a qualifying investment, the programme is now based on a narrower range of eligible options, including job creation, investment in scientific research or cultural activities, qualifying non-real-estate investment funds, and certain company capitalisation and job-creation structures.

The Golden Visa is increasingly understood not only as an investment-driven pathway, but also as a long-term residence, mobility and citizenship planning strategy.

Its main advantage remains its flexibility. The limited physical presence requirement makes it particularly suitable for investors who do not intend to relocate to Portugal on a full-time basis. This may also provide flexibility in structuring tax residence, although tax implications should always be assessed independently.

At the same time, administrative delays have reduced predictability. Backlogs in biometric appointments and residence permit issuance mean that the programme must be approached with a longer-term perspective.

The Golden Visa remains a relevant option, but it is not suitable for all profiles. It should be assessed carefully in light of the client's broader objectives, including mobility, tax exposure, investment strategy and long-term plans.

In this context, it should be understood as a long-term mobility, residence and citizenship planning tool, rather than a short-term investment solution.

### *Alternative routes*

Alternative residence routes have gained increasing importance, particularly as the Golden Visa has become more specialised.

A key development has been the reinforced role of consular processing. Following the abolition of the expression-of-interest procedures, consular visa applications have become the main entry route for many new residence cases

Family reunification has also become more restrictive in several respects. As a general rule, many sponsors must hold a valid residence permit for a specified period before applying, subject to statutory exceptions, while accommodation, subsistence and integration requirements have also been strengthened. As a result, relocation planning often needs to begin earlier.

Within this context, the D2, D7 and D8 visas remain key options.

The D2 visa may be suitable for entrepreneurs and individuals developing economic activity in Portugal, provided that the business project is credible and properly structured.

The D7 visa continues to be widely used by individuals with stable passive income, particularly those intending to reside in Portugal on a more permanent basis.

The D8 visa has become increasingly relevant for remote workers, although it requires careful assessment of income structure, tax implications and long-term residence objectives.

These routes are often more effective for clients with a genuine intention to relocate. However, they involve a higher level of physical presence and ongoing connection to Portugal.

Following the extension of the residence period required for naturalisation, these routes must also be assessed by reference to whether applicants can realistically comply with residence, renewal and physical presence requirements over a substantially longer period.

The choice of residence route should therefore be based on a broader assessment of the client's circumstances, including mobility needs, tax exposure, business plans and long-term objectives.

### *Key risks and strategic considerations*

The current environment raises several practical considerations for investors, businesses and international families.

- Processing timelines – increasing unpredictability may affect relocation plans, business operations and family arrangements.
- Administrative capacity – eligibility alone may not ensure a smooth process.
- Timing of residence and nationality planning – the new nationality framework increases the strategic importance of timing, particularly in relation to residence permit issuance, renewals and long-term eligibility for citizenship.
- Choice of residence route – different routes serve different strategic objectives.
- Tax exposure – certain routes may trigger Portuguese tax residency.
- Physical presence – minimum stay requirements must be realistically assessed.
- Documentation – incomplete or inconsistent documentation may lead to delays.
- Family planning – should be considered at an early stage of the process.
- Litigation – may become necessary in cases of prolonged administrative delay.

Immigration planning should therefore be approached in a structured and forward-looking manner, taking into account both legal and operational factors.

### *Litigation and legal remedies*

The operational constraints of the Portuguese immigration system have led to a significant increase in litigation, which is no longer limited to exceptional cases.

Judicial proceedings are increasingly used to address administrative inaction, particularly where applications or renewals remain pending for extended periods without a decision. In such cases, litigation may be used to seek an order requiring the authorities to act or issue a decision within an appropriate timeframe.

This reflects a broader shift in how the system operates. In certain situations, access to an effective administrative outcome may depend on initiating judicial proceedings.

Litigation may also arise in cases involving adverse decisions, including disputes regarding eligibility, documentation or compliance with legal requirements. Judicial review provides a structured mechanism to challenge administrative assessments and obtain legal certainty.

At the same time, litigation must be considered within a broader strategic framework. Courts are also under pressure, particularly in Lisbon, which may affect the duration of proceedings. Judicial action involves cost and procedural considerations that must be assessed in advance.

Litigation is now being considered at an earlier stage, particularly where delays may affect legal status, business operations, family stability and long-term nationality timelines.

In the current environment, litigation is no longer purely reactive. It is increasingly used as a strategic tool to reduce uncertainty, protect legal position and ensure that applications progress within a reasonable timeframe.

### *Looking ahead*

Portugal remains an important jurisdiction for international mobility, investment and relocation. However, the conditions under which immigration and nationality processes operate are evolving.

The overall trend points towards increased regulation, longer timelines and greater scrutiny. At the same time, demand is expected to remain strong, particularly from investors, entrepreneurs, remote workers, highly qualified professionals and international families.

At EU level, the Pact on Migration and Asylum has become applicable on 12 June 2026, requiring Member States to implement changes primarily in their asylum, border, reception and migration-management systems.

For international clients, this means that decisions should be structured before any practical steps are taken. The residence route, documentation, family planning, tax position and long-term objectives should be considered together.

Portugal continues to offer relevant opportunities, but successful outcomes increasingly depend on preparation, timing and the ability to navigate both legal and administrative dimensions effectively.

# 1. Legal System

## 1.1 Legal System and Judicial Order

### Islamic Law

Since the creation of the Kingdom of Saudi Arabia on 23 September 1932, it has been the government's express policy that the country is governed by Islamic law (Sharia). This was confirmed in 1992 by the Basic Law of Rule (Royal Order No A/90 of 27 Sha'ban 1412 Hejra corresponding to 1 March 1992), which is, in effect, the country's constitution. Historically, the Hanbali school of Islamic law has been dominant in the territory that is now Saudi Arabia. The Islamic law texts that Saudi jurists regard as authoritative were compiled during the 13th to 17th centuries CE; as such, they reflect the concerns of a pre-industrial society and do not address many commercial, business or economic issues.

There are numerous areas of law where Islamic law offers few or no guidelines, and where government-made legislation is, therefore, the only law. For example, company law, capital markets law, foreign investment law and employment law are governed by largely self-contained codes. However, until recently the Saudi Arabian government was reluctant to legislate in areas where a given subject matter is covered in some detail in the authoritative Islamic law texts. This has changed with an ambitious reform programme under the supervision of the Main Committee for the Preparation of Judicial Legislation, who have been working on a modern model of legislation consistent with Islamic law principles and international norms. The Evidence Regulation was enacted under Royal Decree No M/43 of 26 Jumada Awwal 1443 Hejra corresponding to 30 December 2021, the Personal Status Regulation under Royal Decree No M/73 of 6 Sha'ban 1443 Hejra corresponding to 9 March 2022, and the Civil Transactions Regulation under Royal Decree No M/191 of 29 Shawwal 1444 Hejra corresponding to 18 June 2023. Taking their cue from the codes of other Arab states as well as European and North American laws, these new Regulations are primarily a codification of Islamic law rules with guidance from internationally accepted principles where Islamic law is silent or unclear. Therefore, they are not a radical departure from Saudi law, but rather have consolidated and clarified existing rules, with some changes where this is possible without conflicting with Islamic law. For example, Article 385 of the Civil Transactions Regulation confirms the clear Islamic law rule that agreements to charge or pay interest are void, while Article 137 permits awarding damages for loss of anticipated income, which was traditionally opposed by the Saudi judiciary without being based on a clear Islamic law prohibition.

An obvious advantage of the new regulations is that one no longer has to ascertain legal principles with reference to 400 to 800-year-old texts, the language of which requires a specialist education to understand – the equivalent of reading Blackstone's commentaries in their original language.

### *Contract law*

The Civil Transactions Regulation entered into force on 20 December 2023, with retroactive effect except for relevant conflicting regulations and judicial principles. It codifies Saudi Arabian contract law, liabilities for harm caused other than in contract, and property rights. There is a section on general principles of contract law, and another section covering nominate contracts such as sales, leases, loan agreements, service contracts, agencies, bailments and partnerships that are not covered by the Companies Regulation. Areas of law which are covered by existing legislation remain largely unaffected; for example, the sections on employment contracts and insurance merely confirm that they are governed by the existing statutes.

Article 104 of the Civil Transactions Regulation confirms the established rule that clear contract terms must be applied as written, reflecting the Islamic law maxim "the contract is the law of the parties" (Al Aqd Shari'at Al Muta'aqdin). Courts may only seek to ascertain the parties' common intention if the contract's wording is unclear. In such situations, judges may have regard to, for example:

- custom;
- the circumstances and nature of the transaction; and
- equality in bargaining power.

## Courts and Tribunals

Saudi Arabia has courts that are administered by the Ministry of Justice, and specialised tribunals. The General Courts (also known as the Sharia Courts), the Commercial Courts and the Labour Courts are under the administration of the Ministry of Justice.

Other specialised tribunals (whose names mostly explain their scope of jurisdiction fully) include the following:

- the Administrative Court, also known as the Board of Grievances, which has exclusive jurisdiction over disputes to which the government or government agencies are party;
- the Committee for the Resolution of Securities Disputes, which deals with disputes falling within the ambit of the Capital Markets Regulation and its Implementing Rules;
- the Committee for Banking Disputes; and
- the Committee for the Settlement of Insurance Disputes.

### *Administration of justice*

The past decade has seen considerable change to the administration of justice in Saudi Arabia, which was initiated under the Judiciary Regulation (Royal Decree No M/78 of 19 Ramadan 1428 Hejra corresponding to 1 October 2007). The Board of Grievances used to have jurisdiction in commercial disputes, but this was transferred to the newly formed Commercial Courts in October 2017, and the definition of commercial disputes was widened to include construction cases and commercial property disputes. Labour disputes used to be administered by the Ministry of Labour's Commission for the Settlement of Labour Disputes, but this jurisdiction was transferred to the new Labour Courts in October 2018.

### *Commercial courts*

Furthermore, the Commercial Courts Regulation (Royal Decree No M/93 of 15 Sha'ban 1441 Hejra corresponding to 8 April 2020) came into force on 16 June 2020, and brought about further innovations to the Commercial Courts. Greater emphasis is placed upon mediating commercial disputes instead of resorting to litigation, and Article 6 provides that, where both parties to a commercial transaction are merchants, they may utilise alternative forms of dispute resolution.

### *Electronic procedures*

Commercial Courts may now engage the services of the private sector for functions such as mediation, notification and judgment delivery. Electronic filing procedures have been introduced, and several court-related procedures may be performed online, such as the exchange of judgments, memoranda and objections.

Parties seeking to litigate commercial claims are subject to a limitation period of five years from the date on which the cause of action arose. Exceptions to this rule exist, such as where the court deems that the plaintiff has a valid excuse for bringing the claim after the expiry of the limitation period.

The past few years have also seen a shift from court proceedings being held in person to being held on online platforms, in no small part in response to the COVID-19 pandemic. Even after regular governmental services resumed in June 2020 following the initial lockdown in the Kingdom, hearings are now mainly held online.

### *Evidence*

The Evidence Regulation regulates civil and commercial transactions. It contains provisions controlling the presentation, examination and interpretation by the courts of evidence, and regulates admissions, oral testimonies, cross-examinations, the taking of oaths, expert evidence and written and digital evidence.

### *Experts*

Where technical or complex financial issues are raised, it is common for the judges to appoint an expert or experts as advisers to the tribunal. The tribunal has discretion over who it appoints as an expert, although as per Article 110 of the Evidence Regulation, should the parties agree on the selection of one or more experts, the court shall abide by their agreement. The court also has discretion over whether or not it accepts or disregards all or part of the expert's findings; however, ordinarily, the determination of technical or complex financial issues falls to the expert.

## 2. Restrictions on Foreign Investments

### 2.1 Approval of Foreign Investments

Until the year 2000, the opportunities for foreign investment in Saudi Arabia were extremely restricted, being limited essentially to foreign minority shareholdings in industrial development projects involving technology transfer to Saudi Arabia. Foreign participation in service or trading businesses was not possible. At the time, the economy was dominated by state-owned monopolies.

With the assistance of the World Bank, a new foreign investment framework was created through the enactment of the new Investment Regulation and the creation of the Saudi Arabian General Investment Authority (SAGIA) in April 2000. Until then, foreign direct investment in Saudi Arabia had been treated as a privilege. Under the new law, all business activities were opened to foreign investment, unless they were expressly excluded from foreign investment under the so-called Negative List.

These reforms immediately opened most forms of industry and services to 100% foreign ownership. Trading activities remained restricted to Saudi nationals until 2007, when the sector was opened up to 75% participation. 100% ownership of trading businesses has been possible since 2016, but is subject to high entry requirements.

In 2020, SAGIA became the Ministry of Investment of Saudi Arabia (MISA). Foreign investors must now obtain approval from MISA before establishing a presence in Saudi Arabia. Approval is obtained after meeting certain conditions (depending on the investment activity) and providing the required documentation. There are various limitations on foreign ownership of joint stock companies, which can vary depending on the nature of the activity carried out by such companies. For example, foreign ownership limits apply to banks, insurance companies and telecommunications companies.

In addition, the Negative List sets out a number of activities that foreign investors are prohibited from undertaking, such as real estate development in the holy cities of Makkah and Madinah.

Until June 2019, foreign investors could not generally own more than 49% of the issued shares or convertible debt instruments of a listed company. The Capital Market Authority has now lifted the maximum foreign ownership limit, permitting foreign investors to increase their investments in some sectors, with the restriction that their shares cannot be sold until they have owned them for two years.

In February 2025, the Investment Law (Royal Decree M/19 of 16 Muharram 1446 Hejra corresponding to 22 July 2024) came into effect. The Investment Law differs from the previous Foreign Investment Law which it replaces (Royal Decree No M/1 dated 5 Muharram 1421 Hejra corresponding to 10 April 2000) in that while the Foreign Investment Law mainly applied to non-Saudi investors, the Investment Law applies to both Saudi and non-Saudi investors alike.

The Investment Law is intended to promote equal treatment between Saudi and foreign investors who are in similar circumstances, and is intended to re-evaluate restrictions on economic activities to treat domestic and foreign investors equally without jeopardising public order in Saudi Arabia.

### 2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance

Up until recently, foreign investors were required to obtain a foreign investment licence from MISA called a “MISA Licence”. MISA licences have been replaced by “Investment Registration Certificates”. The process for obtaining an Investment Registration Certificate requires the submission of several documents by each shareholder; the required documentation may differ depending on the activity of the company to be incorporated.

For example, the following documents are required for a company to obtain an Investment Registration Certificate from MISA in connection with a limited liability company:

- a commercial registration certificate; and
- articles of association.

In the past, these documents had to be authenticated in accordance with the authentication process in their

country of origin, and attested by the Saudi embassy in the same country before being authenticated in Saudi Arabia. On 7 December 2022, Saudi Arabia acceded to the Convention Abolishing the Requirements of Legalisation for Foreign Public Documents, aka the Apostille Convention. Theoretically, documents now only require an apostille in the country of origin and an Arabic translation to be considered authenticated in the Kingdom; however, some government ministries have yet to adopt these changes.

The name of the company would then have to be reserved through filling out the required form, through the Saudi Business Centre online platform.

An application for the Investment Registration Certificate takes place online, and requires the applicant to fill in certain information on the new company being incorporated, such as:

- general information with respect to each shareholder;
- the activities that will be carried out by the company in Saudi Arabia; and
- some general information with respect to the investment in Saudi Arabia, including the capital.

MISA charges an annual services fee of SAR12,000 for the first year, and SAR260,000 for five years.

Once the online application is complete, it can take up to five business days from the date all the required documents are submitted to obtain the licence.

Carrying on unlicensed economic activities in Saudi Arabia is an offence under the Anti-Concealment Law (Royal Decree No M/4 of 1 Muharram 1442 Hejra corresponding to 20 August 2020). The parties involved may be imprisoned and fined, and the proceeds of the business may be seized. In addition, a non-Saudi may be deported, and a Saudi may have their commercial registration cancelled and be prohibited from practising the same activity for up to five years. Participation in unlicensed economic activities also often involves tax fraud, in respect of which please refer to **5.7 Anti-Evasion Rules**.

## 2.3 Commitments Required From Foreign Investors

Depending on the industry for which the Investment Registration Certificate is issued, certain restrictions may be imposed upon the investor. For example, an investment by a non-Saudi interest in retail and wholesale activities with a Saudi shareholder would be subject to the following requirements:

- at least 25% Saudi Arabian participation;
- a minimum foreign investment of SAR20 million (USD5.3 million);
- a restriction of opening a maximum of one shop per district; and
- training a minimum of 15% Saudi employees each year.

Non-Saudi interests can invest in a wholly owned trading venture subject to the following requirements.

- Alternative 1 – foreign investment of SAR300 million (USD80 million), with a minimum of 30% Saudi employees trained each year.
- Alternative 2 – foreign investment of SAR200 million (USD53 million), with a minimum of 30% Saudi employees trained each year, coupled with one or more of the following:
  (a) manufacturing – a proportion of not less than 30% of products distributed locally to be manufactured in the Kingdom;
  (b) research and development programmes – a minimum of 5% of total sales to be allocated to the establishment of research and development programmes in the Kingdom; or
  (c) logistical services and distribution – a centre to provide such services and after-sales services to be established.

## 2.4 Right to Appeal

A foreign investor seeking to engage in a restricted activity may apply to MISA for approval. Such a request will be referred to The Standing Ministerial Committee for Examination of Foreign Investments (the "Examination Committee"). MISA will notify the foreign investor of the Examination Committee's decision within five working days of receiving the decision. A foreign investor may, in the event that their application for approval to engage in a restricted activity is

rejected, reapply, providing the reference number of their first application, and any information or documents not submitted before which would warrant a re-evaluation of the application.

## 3. Corporate Vehicles

### 3.1 Most Common Forms of Legal Entity

The new Companies Regulation (Royal Decree No M/132 of 1 Dhul Hijja 1443 Hejra corresponding to 30 June 2022) and its Implementing Rules came into effect in January 2023, replacing the Companies Regulation (Royal Decree No M/3 of 28 Muharram 1437 corresponding to 10 November 2015), the Professional Companies Regulation (Royal Decree No M/17 of 26 Muharram 1441 Hejra corresponding to 25 September 2019) and the Implementing Rules of the Professional Companies Regulation which were issued on 23 April 2020.

Companies incorporated in Saudi Arabia are usually incorporated as limited liability companies (LLCs) or joint stock companies (JSCs). An LLC can be owned by a single person, and there is no limit on the maximum number of shareholders. There is no minimum share capital requirement for LLCs, but the capital of a company must be sufficient for carrying out the company's activities.

A JSC can be incorporated by one or more persons, whether natural persons or corporate entities. The JSC's capital on establishment must be sufficient to achieve its object, and in any event must not be less than SAR500,000.

Under the 2022 Companies Regulation, a new form of entity called a "simplified joint stock company" can also be created. A simplified joint stock company can be incorporated by one or more persons, and there is no minimum share capital requirement for such companies.

### 3.2 Incorporation Process

The first step towards incorporating an entity with non-Saudi shareholders is obtaining an Investment Registration Certificate from MISA, as further detailed under **2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance**. Once the Investment Registration Certificate has been obtained, the shareholders must submit the company's draft articles of association to the MOC for review and approval. Issuance of the articles of association and commercial registration certificate (which are electronic), and the publication of the articles of association take place in one step once the relevant invoice for this service has been paid.

The timing for incorporating a company from the date of receiving the Investment Registration Certificate up to the issuance of the commercial registration certificate is usually five to ten business days, if the draft articles of association do not deviate too far from the standard articles issued from time to time by the MOC. The duration of the commercial registration is one year and the commercial registration is renewed annually.

Once the commercial registration certificate is issued, the company is incorporated and must complete the post-incorporation registrations with the following government authorities:

- the Ministry of Municipal and Rural Affairs;
- the Ministry of Human Resources and Social Development;
- the General Organisation for Social Insurance; and
- the Zakat, Tax and Customs Authority (ZATCA).

The company may also need to obtain additional approvals from other relevant authorities regulating its activities, depending on the business it will be carrying out. The time to complete these post-incorporation procedures varies widely depending on what registrations with government authorities are required.

### 3.3 Ongoing Reporting and Disclosure Obligations

Any amendments to the articles of association of a company must be submitted to the MOC for review and approval. This includes any change in shareholding, any increase or decrease in the capital of the company, or any change to the activities of the company. Furthermore, the names of the general manager or members of the board of directors are included in the commercial registration certificate of a company, so any change in management must be reported to

the MOC for amendment of the commercial registration certificate.

Companies are required to upload their financial statements in respect of each financial year to the MOC, through the online portal Qawaem.

### 3.4 Management Structures

JSCs are managed by a board of directors, consisting of not fewer than three members, which has the widest powers to manage the company towards achieving its objectives, subject to the limitations set down by the shareholders' general assembly. The board members may be shareholders, or other persons, and are elected by the shareholders in the ordinary general assembly. The first board can be appointed by resolution of the founders or in the JSC's by-laws. The company's by-laws or the shareholders specify the mode of management of the company.

LLCs have more flexibility than JSCs to put a management structure in place that suits the company's shareholders. An LLC can be managed by one or more managers, who can be shareholders or other persons. The shareholders can appoint a board of managers if there are multiple managers.

### 3.5 Directors', Officers' and Shareholders' Liability

As per Article 28 of the 2022 Companies Regulation, "the manager and members of the board of directors shall be responsible by way of joint liability to compensate the company or partners or shareholders or third parties for damage arising by reason of a violation of the provisions of the Regulation or of the company's articles of association or by-laws, or by reason of any error, neglect or default on their part in the performance of their work; any condition providing otherwise shall be void ab initio".

A manager or member of the board of directors who fails to call a shareholders' meeting upon being made aware of the losses of the company reaching 50% may be imprisoned for up to a year and/or fined up to SAR1 million.

Article 242 (1) of the 2022 Companies Regulation provides that the managers or the board of directors of the company must, before the company, the general assembly or the shareholders, pass a resolution to dissolve the company and prepare a declaration stating that they have investigated the financial position of the company, confirming that the assets of the company are sufficient to discharge its debts at the end of the liquidation period proposed, and that the company is not in default under the Bankruptcy Regulation (Royal Decree No M/50 of 28 Jumada Awwal 1439 Hejra corresponding to 14 February 2018) as amended by Royal Decree No M/89 of 9 Rajab 1441 Hejra corresponding to 4 March 2020. This declaration must be presented within 30 days from the date of its separation to the partners, the general assembly or the shareholders for the passing of a resolution to dissolve the company.

Article 242 (2) provides that in a situation where the partners, the general assembly or the shareholders pass a resolution to dissolve the company, when it is apparent from the declaration that the assets of the company are not sufficient to discharge its debts or that the company is in default under the Bankruptcy Regulation, they shall be liable by way of joint liability for any debt outstanding against the company.

Therefore, if a company continues trading while insolvent, eventually the shareholders may be held personally liable for the company's debts, which can only be evaded by either infusing new capital or making an application for a procedure under the Bankruptcy Regulation. Under the Bankruptcy Regulation, a company's manager, member of its board of directors or board of managers, or any of its officers or any other person participating in the establishment or management thereof, or an analogous person, risks imprisonment of up to five years and/or a fine of up to SAR5 million, by "continuing to carry on the activity of the debtor in the absence of the possibility of avoiding liquidation".

## 4. Employment Law

### 4.1 Nature of Applicable Regulations

#### Main Statutes

The main Saudi statutes governing relations between employers and employees are:

- the Labour Regulation (Royal Decree No M/51 of 23 Sha'ban 1426 Hejra corresponding to 27 September 2005), as amended most recently by Royal Decree No M/44 of 8 Safar 1446 Hejra corresponding to 12 August 2024; and
- the Labour Regulation Implementing Rules (Ministerial Resolution No 1982 of 28 Safar 1437 Hejra corresponding to 6 April 2016), as amended most recently by Ministerial Resolution No 115921 dated 19 Sha'ban 1446 Hejra corresponding to 18 February 2025.

The Labour Regulation lays down certain mandatory minimum standards for the treatment of employees, and any agreement reducing an employee's minimum rights is void.

### The Nitaqat System

The basic rule under the Labour Regulation is that Saudi employees shall not represent less than 75% of the total workforce, but that the Minister of Labour may decrease the percentage temporarily. In 2011, the Saudi Ministry of Labour – now the Ministry of Human Resources and Social Development (HRSD) – implemented a detailed list of quotas, known as the *Nitaqat* system, which are determined by the business sector and size of the business entity, with the percentages of Saudi employees currently classed in Red, Low Green, Medium Green, High Green and Platinum sections. These quotas are updated frequently.

### Labour Reforms

In February 2025, certain amendments in relation to the Labour Regulation and its Implementing Rules took effect. These amendments have included the following changes:

- maternity leave has been extended to 12 weeks;
- the introduction of the right to three days of paternity leave, which is to be taken within seven days of the child's birth;
- the maximum probationary period may now be stated to be 180 days in the work contract outright (removing the need for extensions of the previous 90-day probationary period under the Labour Regulation to be by written agreement); and
- in lieu of salary for overtime, with the worker's consent, the worker can be granted compensatory paid leave.

## 4.2 Characteristics of Employment Contracts

*Qiwa* is the official online Saudi Arabian governmental portal for employees and employers. It provides a standard employment agreement for companies to contract with their employees. These online templates are amendable to a certain extent. The Implementing Rules of the Labour Regulation also set out a standard employment contract, certain provisions of which are mandatory. A written employment contract must be executed, but the provisions of the Labour Regulation apply if the employer fails to do so.

The HRSD has recently announced an update to the requirements for compliance with employment contract registration via *Qiwa*, increasing the target compliance rate to 85%, effective 30 April 2026, with the second phase to be completed by increasing the rate to 90% by the end of 30 June 2026. The HRSD has stated that this compliance rate is calculated by comparing the number of registered contracts with the total number of employees' contracts within the company.

Employment contracts with non-Saudis must be on a fixed-term basis, but Saudi employees can be employed on fixed-term contracts or indefinite-term contracts. If a fixed-term contract expires and the parties continue the relationship, it becomes an indefinite-term contract for Saudi employees. If a fixed-term contract contains a renewal provision, it can be renewed twice for less than four years and remains a fixed-term contract. If the contract is renewed three times or the employment period exceeds four years, the contract becomes indefinite for Saudi employees. Accordingly, a Saudi national who has been employed by the same employer for more than four years or whose contract has been renewed three times will automatically be employed on an indefinite-term basis.

## 4.3 Working Time

As a general rule, working hours are eight hours per day for six days per week, with a total of 48 hours per week. During Ramadan, working hours for Mus-

lims are reduced to six hours per day for six days per week, with a total of 36 hours per week. Article 99 of the Labour Regulation provides that statutory working hours may be increased to nine hours per day or decreased to seven hours per day for certain work categories. According to Article 101 of the Labour Regulation, workers may not work continuously for more than five hours at a time, with breaks for meals, rest and prayers of not less than half an hour at a time. Breaks are not counted as working hours, but workers may not remain at the workplace for more than 11 hours per day.

Article 106 of the Labour Regulation provides that the maximum actual working hours may be increased to up to ten hours per day or up to 60 hours per week without a day of rest in certain circumstances, including "if the worker is intended to face extraordinary work pressure". In such situations, overtime is payable at 150% of the employee's base wage.

The circumstances brought about by the COVID-19 pandemic resulted in reductions in the working hours of many employees. In light of this and other changes to contractual relationships caused by the pandemic, the HRSD issued Resolution No 142906 of 13 Sha'ban 1441 Hejra corresponding to 6 April 2020, inserting Article 41 into the Implementing Rules of the Labour Regulation, which is applicable to situations where the government has taken measures in relation to a situation that necessitates a reduction in working hours or has implemented precautionary measures to prevent the worsening of a situation. It allows employers to take certain measures to lessen the adverse impact of the pandemic within six months of the beginning of government-imposed restrictions taking effect. Such options include reducing an employee's salary in proportion to a decrease in their working hours.

On 13 January 2021, the HRSD announced that Article 41 would no longer be effective in relation to the COVID-19 pandemic.

## 4.4 Termination of Employment Contracts

Under Saudi Arabian law, staff can be dismissed in the following circumstances:

- non-renewal of a fixed-term contract;
- for a cause listed under Article 80 of the Labour Regulation; and
- termination of an indefinite-term contract under Article 75 of the Labour Regulation.

### Fixed-Term Contract

A fixed-term contract comes to an end when its term expires. Therefore, an employee can be dismissed by being given notice that the contract will not be renewed. In such circumstances, no compensation is payable other than the statutory end-of-service award, and repatriation costs for non-Saudis.

### Article 80

Article 80 allows an employer to terminate a contract for certain specified causes, most of which involve misconduct. Article 80 (2) permits termination "if the worker fails to perform his essential obligations arising from the employment contract, or to obey legitimate orders, or if, in spite of written warnings, he deliberately fails to observe the instructions related to the safety of work and workers as may be posted by the employer in a conspicuous place".

This is a catch-all provision and is applicable to any breach of the essence of the contract of employment, but the breach must be material. Ordinary, trivial errors are punishable only by disciplinary measures. Any dismissal under Article 80 requires that the employee be given a chance to justify their conduct. For this, a meeting must be called, at which at least two management representatives must be present, and which must be minuted. If the employee fails to respond within a reasonable time, it may be assumed that they have no valid objection to the termination, or that they are not interested in prolonging the employment relationship. Dismissal under Article 80 can only be invoked in isolated instances, and not, for example, to reduce a company's workforce.

### Article 75

Article 75 of the Labour Regulation permits the termination of an indefinite-term contract, where the salary is paid monthly, for lawful cause, upon 60 days' notice by the employer, or 30 days' notice by the employee, although the term "lawful cause" is not defined. In principle, it can include any reason, such as:

- the Labour Regulation and other applicable laws;
- contractual obligations;
- social, religious and customary rules;
- public policy;
- impossibility or frustration of purpose;
- the employer's by-laws and work rules; and
- real business considerations.

However, anything that appears arbitrary or discriminatory will not be accepted by the Labour Courts.

#### Compensation

When a fixed-term contract is terminated prematurely without cause, Article 77 of the Labour Regulation requires the courts to award compensation to the end of the contract (however long this may be), with a minimum of two months' salary. The right to compensation applies not only when the employment contract is terminated early by the employer, but also when the employee terminates early without good cause.

When an indefinite-term contract is terminated without cause, the employee receives 15 days' salary for each year of service, or pro rata for an incomplete year, with a minimum of two months' salary, unless compensation for unlawful termination is set out in the employment contract. The compensation is in addition to the end-of-service benefits (ESBs) that are payable in any event.

Under Article 84 of the Labour Regulation, when an employment contract comes to an end, as a general rule the employee is entitled to:

- one-half of one month's wages for each of the first five years of employment (or pro-rated part thereof); and
- a full month's wages for each year of employment thereafter (or pro-rated part thereof).

Where an employee has resigned for reasons other than force majeure, the ESB is calculated as follows:

- one-third of the Article 84 ESB for two to five years of employment;
- two-thirds of the Article 84 ESB for six to ten years of employment; and
- the full Article 84 ESB for employment of more than ten years.

A waiver of the right to ESB is ineffective under Saudi Arabian law. The ESB is calculated with reference to the employee's gross remuneration, which includes housing and transport allowances, regular bonuses, etc. Where housing and transport are provided to the employee, the actual value or fair market value of such benefits is taken as the basis of the calculation.

### 4.5 Employee Representations

There are no trade unions in Saudi Arabia; employees' interests are represented by the HRSD. The Labour Regulation sets out rules governing the investigation of complaints by labour inspectors.

## 5. Tax Law

### 5.1 Taxes Applicable to Employees/ Employers

There is no personal income tax in Saudi Arabia. The government imposes charges on expatriate employees, which are proportional to the term of the employee's work licence period, and are affected by whether the number of expatriate employees is equal to, fewer than, or exceeds the number of Saudi employees employed by the establishment.

Small businesses with a total workforce of nine employees or less, and industrial companies, may receive a certain number of exemptions from paying these charges on expatriate employees.

In addition, a monthly charge is imposed on expatriates' dependants. While the charges on expatriate employees must be borne by the employer, many employers do not cover the levy on dependants, which is therefore, in effect, a form of income tax.

### 5.2 Taxes Applicable to Businesses

#### Zakat

Saudi Arabian interests pay zakat, which is a religious wealth tax based on the taxpayer's net worth, not income. The effective rate is 2.5% of the net worth of natural persons and 2.5% of the total capital resources of companies. For companies, the tax base for the

calculation of zakat excludes fixed assets, long-term investments and deferred costs from total capital resources, but includes profits from foreign investments that do not consist of investment in real property.

Under the Income Tax Regulation (Royal Decree No M/1 of 15 Muharram 1425 Hejra corresponding to 7 March 2004), most foreign interests that conduct business in Saudi Arabia pay income tax at a flat rate of 20% of the profits. Oil and hydrocarbon production income are taxed at a rate of 50% to 85%. When a company has Saudi and non-Saudi shareholders, the Saudi shareholders pay zakat, and the non-Saudi shareholders pay income tax.

### Withholding Tax

Payments made from a resident party or a permanent establishment to a non-resident party for services rendered are subject to withholding tax, at rates which may, depending on which type of service was performed, vary between 5%, 15% and 20%,

### VAT

Since 1 July 2020, value-added tax (VAT) has been payable at a rate of 15%.

### Real Estate Transaction Tax

The sale of real estate is exempted from VAT. Instead of imposing VAT at a rate of 15%, a real estate transactions tax is imposed on the sale of real estate at a rate of 5% of the value of the property. The real estate transactions tax is imposed on all real estate transactions, including:

- sale;
- bequest;
- financial leasing;
- lease-to-own processes; and
- long-term usufruct contracts where the duration exceeds 50 years.

## 5.3 Available Tax Credits/Incentives

Net operating losses may be carried forward by non-Saudi investors from one year to the next. Any loss that has been carried forward may be deducted from the tax base of future taxable years until the cumulative loss is fully offset.

In March 2020, ZATCA launched an initiative granting amnesty in relation to tax filing and payment penalties for excise tax, VAT, withholding tax, income tax and zakat. The initiative was initially set to run for the period of 18 March 2020 to 30 June 2020, but has been extended multiple times since its launch. The latest extension was until 30 June 2026. The tax amnesty extension is applicable to penalties relating to corporate income tax, withholding tax, VAT, excise tax and real estate transaction tax.

The Regional Headquarters Tax Rules (issued by resolution of the Board of Directors of the Zakat, Tax and Customs Authority No (24-1-9) dated 23 Rajab 1445 Hejra corresponding to 4 February 2024), allows qualifying multinational companies which relocate their regional headquarters (RHQ) to Saudi Arabia to benefit from a 30-year income tax exemption, and a 30-year withholding tax exemption in relation to approved RHQ activities, subject to renewal. Aside from needing to fulfil the necessary criteria with MISA, RHQs need to fulfil the following requirements to qualify for the incentives:

- possessing a valid Investment Registration Certificate, and carrying out only those activities which are within the scope of the licence;
- having adequate premises in the Kingdom suitable for the business activities of the RHQ;
- managing and directing their activities in the Kingdom, including holding board meetings for the RHQ where strategic decisions will be made;
- incurring operational expenditures in the Kingdom, commensurate with the RHQ's activities;
- generating revenue from eligible activities in the Kingdom;
- having at least one director that is resident in the Kingdom;
- employing an adequate number of full-time employees in a tax year that is proportionate to the level of activity carried out by the RHQ; and
- employees of the RHQ possessing the requisite qualifications and skills necessary to execute their duties and fulfil their responsibilities.

## 5.4 Tax Consolidation

For zakat payment purposes, Article 15 of the Implementing Regulation for Zakat Collection permits com-

panies owned by the same partner, or holding companies and their wholly owned subsidiaries both inside and outside Saudi Arabia, to submit consolidated accounts and consolidated declarations.

### 5.5 Thin Capitalisation Rules and Other Limitations

There are no thin capitalisation rules.

Deduction of interest is limited to either the loan charge accumulated during the tax year (if related to taxable income) or the sum of a taxpayer's income from loan charges, whichever is lower, and 50% of taxable income (minus loan charge income and expenses).

### 5.6 Transfer Pricing

Article 63 (c) of the Income Tax Regulation gives ZATCA the power to reallocate income and expenses between related parties as may be necessary to reflect the income that would have been realised if the parties had been independent and unrelated. While this rule has been in force since 2004, it was not widely applied until 2019. On 15 February 2019, ZATCA introduced transfer pricing by-laws based on the OECD's Base Erosion and Profit Shifting Recommendations. On 24 June 2024, ZATCA issued an updated edition of its transfer pricing guidelines. These new guidelines state that the transfer pricing by-laws apply to anyone considered a taxpayer under the income tax system, zakat regulations, or both.

### 5.7 Anti-Evasion Rules

Under the Income Tax Regulation, failure to pay income tax results in a fine of 1% of the unpaid tax for each 30 days of the delayed payment, plus an additional 25% of the unpaid tax if fraud is involved.

### 5.8 Tariffs

The tariff regime employed by Saudi Arabia is based upon the Harmonised Commodity Description and Coding System (HS Code).

Saudi Arabia has signed trade agreements with the Gulf Co-operation Council (GCC) allowing signatories exemptions from customs duties. As a member of the GCC, Saudi Arabia levies the GCC common external tariff of at least 5% on most goods which are imported from non-GCC countries.

Tariff rates vary, with the exact rate depending on the HS Code of the product in question. Saudi Arabia also imposes high excise duties on certain products, for example, cigarettes, cigars, tobacco and tobacco products are subject to an excise tax of 100%.

## 6. Competition Law

### 6.1 Merger Control Notification

Under Article 7 of the Competition Regulation (Royal Decree No M/75 of 29 Jumada Thani 1440 Hejra corresponding to 6 March 2019), businesses that plan to engage in a transaction resulting in an economic concentration must notify the General Authority for Competition (GAC) at least 90 days before the transaction is completed, if the total value of the annual sales for all the enterprises taking part in the economic concentration surpasses SAR100 million. On 29 March 2023, the GAC announced that this minimum threshold for reporting an economic concentration was to be raised to SAR200 million. Since then, the GAC announced additional reporting limits for economic concentrations, which have been subject to amendment. They are, as at the time of writing, as follows:

- the total worldwide annual sales value of the parties to the economic concentration must exceed SAR200 million;
- the total worldwide annual sales value of the target establishment must exceed SAR40 million; and
- the total annual sales value in Saudi Arabia of all of the parties to the economic concentration must exceed SAR40 million.

Article 1 of the Implementing Rules of the Competition Regulation issued by the GAC Board Resolution No (337) dated 25 Muharram 1441 Hejra corresponding to 24 September 2019, defines an economic concentration as "any action that results in a total or partial transfer of ownership of assets, rights, equity, stocks, shares or liabilities of a firm to another by way of merger, acquisition, takeover or the joining of two or more managements in a joint management, or any other form that leads to the control of a firm(s) including influencing its decision, the organisation of its administrative structure, or its voting system". Therefore, a full merger or acquisition is not necessary to trigger

the reporting requirement; for example, the formation of an unincorporated joint venture or a consortium may also be sufficient.

Special rules apply to mergers and acquisitions involving listed companies, which are set out in the Merger and Acquisitions Regulations (Resolution of the Board of the Capital Market Authority No 1-50-2007 of 21 Ramadan 1428 Hejra corresponding to 3 October 2007), as amended by Resolution No 3-45-2018 of 7 Sha'ban 1439 Hejra corresponding to 23 April 2018.

### 6.2 Merger Control Procedure

Under the 2019 Competition Regulation and its Implementing Rules, the parties to an economic concentration exceeding the threshold must submit a report for GAC approval at least 90 days before the completion of the action. This report is submitted through the GAC's website and must contain the following information:

- the basic information concerning the operation of the economic concentration and the parties thereto;
- the sectors and markets concerned;
- the likely effect of the economic concentration on competition generally;
- the most prominent customers; and
- the most prominent competitors.

The report must also contain any other data the GAC requires to review the economic concentration.

Certain documents must also be submitted to the GAC in connection with the buyer and target entities, namely:

- their articles of association;
- their commercial registration certificate or an equivalent document; and
- their financial statements for the past two years.

Once the report and required documents are received, the GAC may publish basic information on the economic concentration and request comments from the public. The GAC must evaluate the application in light of the following factors:

- the structure and level of competition in the market in Saudi Arabia, and abroad in situations where the competition has an impact on the Saudi market;
- the financial positions of the parties to the economic concentration;
- the availability and accessibility of alternative commodities;
- the distinctness of the commodities;
- consumer interests and welfare;
- the probable effect of the economic concentration on prices, quality, diversification, innovation or development in the market;
- advantages and disadvantages to competition arising from the economic concentration;
- the growth and direction of supply and demand in the market;
- the barriers to entry and exit or the expansion of enterprises in the market, including regulatory barriers;
- the likelihood that the economic concentration will create or enhance influential market strength or the dominant position of the enterprise in any particular markets;
- the degree and history of practices prejudicial to competition in the relevant market; and
- the views of the public, the parties related to the economic concentration, and the sector regulators.

At the conclusion of the enquiry, the GAC may approve or reject the application, or may set conditions for its approval. If no ruling is made within 90 days of submission of the application, the application is deemed to be approved.

### 6.3 Cartels

Article 5 of the 2019 Competition Regulation prohibits practices that have the effect or intention of disturbing competition. Such practices can involve express or implied agreements between businesses, but a single entity can also be guilty of engaging in anti-competitive practices.

Article 5 sets out a non-exclusive list of practices that are considered anti-competitive, as follows:

- fixing or proposing prices for goods, consideration for services, conditions of sale or purchase, and the like;

- fixing the volumes, weights or quantities of production of commodities or the performance of services;
- restricting the freedom of flow of commodities or services to the markets, or wholly or partially removing them therefrom by concealing or storing them without right, or refusing to deal therein;
- any conduct tending to impede the entry of an enterprise to the market, or excluding it therefrom;
- withholding commodities or services available on the market wholly or in part from a particular enterprise or enterprises;
- dividing up the markets for the sale or purchase of commodities or goods, or allocating them in accordance with any criterion, particularly according to geographical areas, distribution centres, types of customers, or seasons and periods of time;
- freezing operations of manufacture, development, distribution and marketing and all other modes of investment, or restricting them; and
- colluding or co-ordinating in bids or offers in governmental or other auctions or tenders in such a manner as to disturb competition.

The GAC has both an investigation department and a tribunal that adjudicates on violations of the Competition Regulation. The decisions of the Committee for the Determination of Violations of the Competition Regulation are appealable to the Administrative Court, but such appeals have so far, for the most part, been unsuccessful. Since the GAC was established in 2004, originally as the Competition Protection Council, it has taken to court and convicted enterprises in a variety of industries, including cement, medical gases, rice, sugar and soft drinks.

### 6.4 Abuse of Dominant Position

Under the 2019 Competition Regulation, a dominant entity is defined as having a 40% market share or the ability to influence a particular market.

Dominant businesses may not abuse their position, nor disturb or limit competition. Article 6 of the 2019 Competition Regulation sets out the following non-exclusive list of practices that are prohibited for dominant businesses:

- selling a commodity or service at a price less than the total cost, in order to exclude enterprises from the market or to expose them to grave loss, or to impede the entry of potential enterprises;
- fixing or imposing prices or conditions for the resale of commodities or services;
- reducing or increasing the available quantities of products in order to control prices or fabricate a non-genuine abundance or shortage;
- discriminating in dealings between enterprises in respect of similar contracts with regard to the prices of commodities, consideration for services, or conditions of sale or purchase thereof;
- refusing to deal with another enterprise without objective cause, in order to restrict its entry to the market;
- imposing a requirement on an enterprise that it should refrain from dealing with another enterprise; and
- making the sale of a commodity or the provision of a service conditional upon the assumption of obligations or the acceptance of goods or services that – by their nature or under commercial usage – are unconnected with the commodity or service that is the subject matter of the original contract or transaction.

## 7. Intellectual Property

### 7.1 Patents

Originally, intellectual property rights were administered and protected by three different government authorities:

- King Abdulaziz City for Science and Technology (KACST) for patents;
- the MOC for trade marks; and
- the Ministry of Media for copyrights.

These functions are now handled by the Saudi Authority for Intellectual Property (SAIP), which aims to organise, support, sponsor, protect and promote intellectual property in the Kingdom, in accordance with global best practices.

Patents

Patents are governed by the Patent, Layout Designs of Integrated Circuits, Plant Varieties, and Industrial Models Regulation (Royal Decree No M/27 of 20 Jumada Awwal 1425 Hejra corresponding to 17 July 2005), which gives effect to the Paris Convention for the Protection of Industrial Property under Saudi law. This law was amended in 2023 to extend the period of protection for industrial designs from ten to 15 years. Additionally, the law now formally recognises the Hague Agreement and the World Intellectual Property Organization.

A protection document is granted by the SAIP, which gives full protection within the Kingdom to an invention, a layout design of an integrated circuit, a plant variety or an industrial design. The protection document grants the owner the right to commercially exploit the subject matter of protection.

In accordance with the provisions of the Patent, Layout Designs of Integrated Circuits, Plant Varieties, and Industrial Models Regulation, a patent may be granted for an invention if it is novel, involves a creative step and is capable of industrial application. The invention may be a product or an industrial process, or may relate to either.

Applications for protection documents can now be filed through the SAIP website by filling out a template which requires the input of:

- a summary;
- a full description;
- the elements being protected; and
- drawings (if any) for the invention being patented.

For certain patent applications, the patent application fast track examination programme is also available, which provides a potentially quicker avenue for obtaining a protection document.

The protection document is the personal right of the owner, who may transfer or assign it, or grant a contractual licence to others to commercially exploit the subject matter of protection. Protection is granted to the owner for:

- 20 years for an invention;
- 15 years for an industrial design; and
- 20 to 25 years for a new plant variety.

These periods are renewable, for an annual fee.

Disputes arising from patent infringement are handled by the Commercial Courts.

### 7.2 Trade Marks

Trade marks are regulated under the Trade Marks Regulation (Royal Decree No M/21 of 28 Jumada Awwal 1423 Hejra corresponding to 8 August 2002), which defines a trade mark as:

"… anything having a distinctive form such as names, words, signatures, letters, figures, drawings, logos, titles, hallmarks, seals, pictures, engravings, packs or any other mark or group of marks if used or intended to be used either to distinguish goods, products or services of a facility or other facilities or to indicate the rendering of a service or the control of inspection of goods or services."

Applications for the registration of trade marks are made online. The process is as follows.

- Authorisation must be obtained to register the trade mark.
- A power of attorney must be obtained to register the trade mark.
- A request must be submitted to register the trade mark, which includes the payment of a SAR1,000 consideration fee.
- The request is examined. The SAIP may allow the applicant to modify the trade mark if the SAIP finds the trade mark is not fit for registration.
- If the trade mark is accepted, the SAR500 publication fee must be paid to proceed.
- The trade mark is published for 60 days.
- If no objections are made during the publication period, once it lapses, the applicant must pay the final invoice within 30 days of its issuance, and the trade mark certificate will be issued. The trade mark registration and certificate issuance fees are SAR5,000.

In November 2023, two significant developments took place in Saudi trade mark law.

- The 12th Edition of the Nice Classification was adopted by Saudi Arabia and is now required when new trade mark applications are filed.
- The Saudi Cabinet approved the Kingdom's accession to the Madrid Protocol for international trade mark registration.

In Saudi Arabia, it is not permitted for anyone other than the rightful owner to register a trade mark that is similar to an internationally known mark. Registration of a trade mark provides the holder with protection for ten years from the date of registration, renewable for similar periods. Any renewal must be specifically applied for before the end of the year of expiry of the registration, and the procedure for renewal is the same as that for the initial registration of the trade mark. A trade mark is deemed to be owned by the person who effects the registration. Once the registration is effected in the trade marks register, the party who has registered the trade mark shall be considered the owner thereof, to the exclusion of others.

A trade mark can be licensed, pledged or transferred by the rightful owner. The trade mark may be deleted or cancelled if it is not used for five consecutive years.

Penalties for infringement of a valid trade mark include imprisonment for a period of no more than one year, and a fine of no less than SAR50,000 and no more than SAR1 million. The Commercial Courts preside over infringement-related disputes.

### 7.3 Industrial Designs

An industrial design is defined as "a collection of two-dimensional lines or colours, or a three-dimensional form that gives any industrial product or product of traditional crafts a special appearance, provided that it is not merely for a functional or technical purpose, including textile designs". The industrial design is protected by a protection document called an "industrial design certificate".

Industrial designs are governed by the Patent, Layout Designs of Integrated Circuits, Plant Varieties, and Industrial Models Regulation. A protection certificate shall be granted for an industrial model if it is novel and has features that distinguish it from known industrial models. The industrial model shall be deemed novel if it was not disclosed to the public through publication anywhere in a tangible form, by use or by any other means, prior to the date of filing the registration application or the priority application.

Protection is granted to the owner for ten years for an industrial design. The above-mentioned regulation gives the owner of an industrial model protection certificate the right to initiate an action before the Commercial Courts against any person who infringes the industrial model by exploiting it for commercial purposes without their consent within the Kingdom through the manufacture, sale or importation of a product that includes or represents a wholly or substantially copied industrial model.

Note that the procedure for applying for a protection certificate for an industrial design is similar to the procedure for registering a patent, as described in **7.1 Patents**.

### 7.4 Copyright

The Copyright Regulation (Royal Decree No M/41 of 2 Rajab 1424 Hejra corresponding to 30 August 2003) and its Implementing Rules define copyright protection to include architectural designs, speeches and theatrical, musical, photographic and cinematographic works, as well as works for radio and television, maps, video tapes and computer software. The Regulation gives the author financial and moral rights to:

- print or publish the work;
- make amendments or delete the work;
- withdraw the work from circulation; and
- assign the work as they wish.

The SAIP has launched a copyright registration service for computer software, apps and architectural designs. To register, applicants must complete the registration application on the SAIP website and pay the requisite examination fee.

Upon successful registration, the copyright holder is issued a registration certificate.

In general, the duration of protection afforded to different types of copyrighted works is as follows:

- protection of copyright for the author of a work lasts for the duration of their life and for 50 years following their death;
- protection for works where the author is a corporate entity, or where their name is unknown, lasts 50 years from the date of the first publication of the work;
- the protection period for sound works, audio-visual works, films, collective works and computer programs lasts 50 years from the date of the first show or publication of the work, regardless of republication;
- protection for applied art (handcrafted or manufactured) and photographs lasts 25 years from the date of publication;
- protection for broadcasting organisations lasts 20 years from the date of the first transmission of a programme or broadcast materials; and
- protection for the producers of audio recordings and performances lasts 50 years from the date of performance or the first recording, as the case may be.

Disputes arising from copyright infringement are handled by the Commercial Courts. Infringers of copyright may be punished with a fine of up to SAR250,000 for first-time offenders, which may be doubled to SAR500,000 for repeated infringement.

### 7.5 Others

The Regulations for the Protection of Confidential Commercial Information, issued by the Minister of Commerce and Industry's decision No 3218 dated 25 Rabi Awwal 1426 Hejra corresponding to 4 May 2005, as amended by His Excellency's decision No 431 dated 1 Jumada Awwal 1426 Hejra corresponding to 8 June 2005, enumerate a list of situations where information is considered a commercial secret, namely where:

- the information in its basic constituents or its final form is not generally known, and is difficult to obtain by practitioners of the type of business to which the information pertains;
- the information is commercially valuable due to its confidentiality; or
- the owner of the information takes steps to safeguard its confidentiality.

The obtainment, usage or disclosure of commercial secrets without the owner's consent, through a manner that is deemed to be "inconsistent with honest commercial practices", is deemed an abuse of commercial secrets under the Regulation.

Activities considered contrary to honest commercial practice include:

- the breaching of contracts concerning commercial secrets;
- breaching or encouraging the breaching of confidential information; and
- obtaining commercial secrets from a third party who is known to have obtained the information through one of these activities.

Persons harmed by an abuse of commercial secrets may file a lawsuit to claim compensation for damages they have sustained.

The new Law of Trade Names (Royal Decree No M/83 of 19 Rabi Awwal 1446 corresponding to 22 September 2024), which came into effect in April 2025, replaces the previous Law of Trade Names (Royal Decree No M/15 of 12 Sha'ban 1420 Hejra corresponding to 20 November 1999), and regulates the reservation and registration of trade names. The law enables trade names to be reserved prior to registration, for specific durations, which can be extended. Trade name options have been expanded so that trade names may be Arabic, non-Arabic, transliterated Arabic or alphanumeric. No person may use a registered trade name which belongs to someone else.

## 8. Data Protection

### 8.1 Applicable Regulations

The Personal Data Protection Regulation (PDPR) (Royal Decree No M/19 of 9 Safar 1443 Hejra corresponding to 16 September 2021) amended by Royal Decree No M/148 of 5 Ramadan 1444 Hejra corresponding to 27 March 2023 governs the collection and processing of data in the Kingdom. The regulation places a strong emphasis on obtaining the consent of data owners for the collection of their data, and

maintaining transparency with data owners regarding how their personal information is processed.

Controlling entities, which is to say public bodies, natural persons or private bodies corporate that determine why and how personal data is processed (whether they themselves are processing it or whether this is done through a processing entity), may only (with certain exceptions) collect personal data directly from the owner of the data in question, and process such data solely for the purpose for which the data was collected. Privacy policies need to be adopted by controlling entities and made available to the owners of data. These privacy policies must inform data owners of:

- the reason for their data's collection;
- the contents of the personal data that must be collected;
- the method of data collection, storage and processing;
- the means of deleting the data; and
- the rights of the data owner in connection therewith, as well as the manner in which such rights may be exercised.

A number of industries are also currently governed by regulations that set out measures to protect data collected in those fields. Examples include the following.

- The Health Profession Practice Regulation (Royal Decree No M/59 of 4 Dhul Qada 1426 Hejra corresponding to 6 December 2005), which provides that a medical practitioner must not disclose any confidential information obtained during the course of their work. The regulation lists a few exceptions to this rule, such as a court order requiring disclosure.
- Article 5 of the E-Commerce Regulation (Royal Decree No M/126 of 7 Dhul Qada 1440 Hejra corresponding to 9 July 2019), which provides that online merchants may not retain consumer data beyond the period required for an electronic commerce transaction, and that online merchants must adopt the necessary safeguards to protect consumer data while it is retained. The same regulation prohibits online retailers from the unauthorised disclosure and usage of consumer data.

### 8.2 Geographical Scope

The PDPR applies to any processing of the personal data of individuals, carried out in the Kingdom by any means whatsoever, including the processing of personal data relating to individuals resident in the Kingdom, by any means whatsoever, by any entity residing outside the Kingdom.

Article 2 (b) of the 2018 E-Commerce Regulation details the provisions and sanctions in place to safeguard the protection of consumer data, and also applies to traders outside Saudi Arabia who provide products or services inside the country by offering them in a manner that enables the consumer to obtain them.

### 8.3 Role and Authority of the Data Protection Agency

Although each government authority supervising an activity is responsible for enforcing its specific data protection rules, the National Data Management Office is the national data regulator of Saudi Arabia, and creates laws, regulations and policies to facilitate the protection of data.

The Saudi Authority for Data and Artificial Intelligence is the authority which supervises the implementation of the PDPR.

## 9. Looking Forward

### 9.1 Upcoming Legal Reforms

One of the key aspects of Saudi Vision 2030, a government programme launched with the goal of diversifying Saudi Arabia's economy and culture, is the reformation of the country's legal and judicial framework. To this end, there have been increased efforts to legislate upon previously uncodified areas of the law, in order to create a more predictable legal environment, and encourage foreign investment.

In 2022, the draft of the Commercial Transactions Law was uploaded to Istitlaa, the Saudi public consultation platform for feedback on legislation. The consultation period for this draft has since ended. The official publication of the Commercial Transactions Law is highly anticipated, as it regulates a wide array of commercial

contracts, and will serve as the first comprehensive codification of commercial law in the Kingdom.

A new Copyright Law issued under Royal Decree No M/169 of 14 Sha'ban 1447 Hejra, corresponding to 2 February 2026, will come into effect in August 2026, replacing the current Copyright Law. The 2026 Copyright Law will strengthen copyright enforcement mechanisms, modernise the law to account for the emergence of artificial intelligence, move towards a safe harbour regime for internet content providers, and raise penalties for copyright violations.

**Collyer Law LLC** is a Singapore-based boutique law firm with a team of 14 lawyers and professionals. The firm advises start-ups, venture capital funds, investors and growth-stage businesses on mergers and acquisitions, venture capital and private equity transactions, corporate finance, employment, intellectual property, technology, media and telecommunications, regulatory matters and dispute resolution. Through its cross-border network, the firm regularly advises on transactions involving clients across 50 countries from Asia-Pacific, Europe, MENA and the Americas. The firm is particularly active in the technology, financial services, healthcare, life sciences, consumer and renewables sectors. Recent representative matters include advising Meesho on its acquisition of Kirana Club for approximately USD23 million; advising Tata Capital Limited on Singapore law aspects of financing transactions; advising Burger King on the renewal of its lease at Loyang Point, Singapore; and advising founders, companies and investors on venture capital financings, strategic investments, restructurings and exit transactions.

## Authors

**Azmul Haque** is the managing director and founder of Collyer Law LLC. A tri-qualified lawyer admitted in Singapore, England and Wales, and India, he advises multinational corporations, growth-stage companies, investors and founders on cross-border mergers and acquisitions, venture capital and private equity transactions, technology-related commercial arrangements, regulatory compliance and corporate governance matters. His practice focuses on technology, fintech, digital assets, e-commerce and other emerging sectors. Prior to founding the firm, Azmul practised with Olswang, Berwin Leighton Paisner, WongPartnership and Shook Lin & Bok.

**Ashley Chew** is an associate director at Collyer Law LLC and an intellectual property and technology lawyer based in Singapore. She advises multinational corporations, SMEs and start-ups on both contentious and non-contentious intellectual property matters, including trade mark disputes, portfolio management, commercialisation of intellectual property, technology transactions and regulatory compliance. Ashley also advises on data protection, employment and technology-related regulatory issues involving emerging technologies, e-commerce and digital platforms. Prior to joining the firm, she practised at a leading regional law firm and headed the trade marks practice of the Singapore office of an international patents firm.

**Hu Yutong** is a newly qualified advocate and solicitor at Collyer Law LLC. She advises and assists companies on a range of corporate law matters, including intellectual property matters, employment, corporate governance, regulatory compliance, and mergers and acquisitions.

**Aaron Leong** is a practice trainee at Collyer Law LLC. He assists qualified lawyers on a broad range of corporate and commercial matters, including mergers and acquisitions, corporate governance, regulatory compliance and general corporate advisory work.

# 1. Legal System

## 1.1 Legal System and Judicial Order

Singapore has a common law system. Its sources of law are the Constitution of the Republic of Singapore, legislation, subsidiary legislation and case law. The judicial order is divided into the Supreme Court, which comprises the Court of Appeal and the High Court, and the subordinate courts as may be provided for by any written law for the time being in force.

### The Supreme Court

The Court of Appeal is Singapore's apex court. The High Court consists of the General Division, which exercises original civil and criminal jurisdiction, and the Appellate Division, which hears civil appeals allocated to it under the statutory framework. Specialised lists have been set up in the General Division to hear certain types of disputes; such lists comprise docketed judges and a team of assistant registrars, who manage cases in consultation with the docketed judges as appropriate. The Singapore International Commercial Court is a division of the General Division and hears qualifying international commercial disputes.

### The State Courts and Family Justice Courts

The State Courts comprise the District Courts, Magistrates' Courts and other specialist courts and tribunals. They hear most first-instance civil and criminal matters, subject to statutory jurisdictional limits. The District Courts generally hear civil claims of between SGD60,000 and SGD250,000, or up to SGD500,000 for road traffic accident claims and claims for personal injuries arising out of industrial accidents. The Magistrates' Courts hear claims not exceeding SGD60,000 in value.

The Family Justice Courts hear family proceedings, including divorce, maintenance, guardianship and related matters.

# 2. Restrictions on Foreign Investments

## 2.1 Approval of Foreign Investments

### General Position

Singapore is generally open to foreign investment and does not have a broad foreign investment approval regime. Foreign investors may typically incorporate or acquire full ownership of Singapore businesses without a local equity partner. However, targeted restrictions and approval requirements apply where an investment falls within the Significant Investments Review Act 2024 (SIRA) or sector-specific legislation.

### SIRA

SIRA regulates significant investments in, and control of, entities designated as critical to Singapore's national security interests. Designated entities are identified by the Minister of Trade and Industry and published in the Government Gazette.

Under the SIRA, the following applies:

- a person who becomes a 5% controller must notify the Minister within seven calendar days;
- prior approval is required before a person becomes a 12%, 25% or 50% controller;

- approval is required for acquisitions of all or part of a designated entity's business or undertaking as a going concern; and
- an existing controller must obtain prior approval before ceasing to be a 50% or 75% controller.

The Minister may vary these thresholds for specific designated entities.

### Sector-Specific Controls

Separate approval requirements apply in regulated sectors.

- Banks: under the Banking Act 1970, no person may become a substantial shareholder (generally 5% or more of voting shares) of a Singapore-incorporated bank without prior approval from the Minister for Finance.
- Newspapers: under the Newspaper and Printing Presses Act 1974, foreign corporations cannot hold management shares without ministerial approval from the Minister for Communications and Information.
- Broadcasting: under the Broadcasting Act 1994, a broadcasting licence will not be granted to any company that is controlled by foreign sources, or where foreign sources hold 49% or more of the shares or voting power.
- Real estate: under the Residential Property Act 1976, foreigners must seek prior written approval from the Minister for Law before purchasing real estate such as vacant residential land, landed properties and residential shophouses.

These are illustrative only, and other sector-specific regimes may apply.

## 2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance

### Process for Obtaining Approval

The steps for foreign investors to obtain approval depend on the applicable regime, but broadly involve the following.

- Determining whether the proposed investment triggers any notification or approval thresholds.
- Making submissions to relevant authorities:
  - (a) for SIRA matters, submissions are made to the Ministry of Trade and Industry through the Office of Significant Investments Review (OSIR); and
  - (b) for regulated sectors, submissions are made to the relevant sector regulator.
- The relevant authority will assess the submissions, focusing on national security, public interest or continuation of the entity in providing critical function.
- Approval may be granted with or without conditions, or refused.

The timeline varies depending on the complexity of the transaction and the nature of the sector, and may range from a few weeks to several months.

### Non-Compliance

The consequences of non-compliance depend on the applicable regime. Under SIRA, the Minister of Trade and Industry has broad enforcement powers, such as:

- directing the disposal of shares or interests;
- unwinding or voiding the transaction; and
- imposing restrictions on business operations.

Non-compliance may also attract financial penalties and, in some cases, criminal liability.

Sector-specific regimes may impose additional sanctions, including licence-related action (such as suspension or revocation) and directions to divest offending shareholdings.

## 2.3 Commitments Required From Foreign Investors

Singapore authorities may grant approval subject to conditions, particularly where the investment raises national security, public interest or regulatory compliance concerns. The nature and extent of commitments depend on the applicable regime and the nature of the sector.

For SIRA, the statute itself does not prescribe a closed list of conditions. Instead, it confers wide discretion to impose such conditions as the Minister considers appropriate having regard to national security. Conditions may include:

- restrictions on ownership or control rights, including limits on voting power or board representation;
- requirements to notify and seek approval for future changes in ownership of shares or control; and
- obligations relating to the appointment of directors or senior management.

In regulated sectors, conditions may also include demonstrating adequate financial resources, operational capability, governance framework and compliance systems.

### 2.4 Right to Appeal

#### SIRA Reconsideration and Appeal

Under SIRA, a party may apply through the OSIR for the Minister of Trade and Industry to reconsider his decision. The application must generally be submitted within 14 calendar days after the decision was made.

If the party remains aggrieved following reconsideration, a further appeal may be made to a Reviewing Tribunal within 30 calendar days of the reconsideration decision.

Given that there may be diverse and complex considerations relating to national security concerns, the Minister of Trade and Industry and the Reviewing Tribunal should be allowed adequate time to conduct thorough assessments and properly review the case before them. Nonetheless, they endeavour to process all appeals expeditiously.

The original decision continues to have effect unless and until it is overturned. The decision of the Reviewing Tribunal is final within the statutory appeal framework.

#### Limited Judicial Review

SIRA significantly limits recourse to the courts. Determinations, orders and other decisions made under SIRA are final and conclusive, and are generally not subject to challenge, appeal or review by the courts.

Judicial review is only available on very narrow grounds, namely in relation to procedural compliance with SIRA or applicable regulations or rules. The courts will not review the substantive merits of the decision.

## 3. Corporate Vehicles

### 3.1 Most Common Forms of Legal Entity

The most commonly used corporate vehicles in Singapore are as follows.

#### Private Company Limited by Shares (Pte Ltd)

The most common vehicle for carrying on business in Singapore is a private company limited by shares, which has the following features.

- Nature: separate legal person.
- Governance: managed by directors, with at least one director being ordinarily resident in Singapore.
- Shareholders: at least one and not more than 50 shareholders. Shares cannot be offered to the public.
- Liability: generally limited to the amount unpaid on their shares.
- Capital: no minimum share capital. They are commonly incorporated with SGD1 or its equivalent.

This vehicle is commonly used for operating businesses, holding companies, joint ventures and greenfield investments.

#### Exempt Private Company Limited by Shares (Pte Ltd)

An exempt private company is a sub-category of a private company. It is similar to a private company limited by shares, with the difference being that shareholders are limited to not more than 20, all of whom are individuals (with limited exceptions).

This vehicle is commonly used for small businesses or start-ups.

#### Public Company Limited by Shares (Ltd)

Public companies are subject to more extensive governance and disclosure requirements, and have the following features.

- Nature: separate legal person.
- Governance: managed by directors, with at least one director being ordinarily resident in Singapore.
- Shareholders: no maximum limit. They may raise capital from the public, subject to complying with the applicable securities laws.

- Liability: generally limited to the amount unpaid on their shares. If the company fails, shareholders only lose the money they invested.
- Capital: no minimum share capital, but higher practical thresholds apply for public fundraising or listing.

This vehicle is typically used for listed companies or large-scale fundraising.

### Limited Liability Partnership (LLP)

The features of an LLP include the following.

- Nature: separate legal person.
- Governance: managed by partners, with at least one manager ordinarily resident in Singapore.
- Partners: at least two partners.
- Liability: generally limited, except for a partner's own wrongful acts.

This vehicle is often used for professional service firms and SMEs.

### Foreign Company Branch

A foreign company may register a Singapore branch.

- Nature: not a separate legal entity from the foreign head office.
- Liability: the foreign company bears full liability for the branch.
- Governance: operations are controlled by the foreign head office.

This structure may suit businesses that prefer to operate directly through the foreign entity, although the head office remains exposed to the branch's liabilities.

## 3.2 Incorporation Process

The incorporation of a company in Singapore is generally straightforward and efficient, and is carried out electronically through the Accounting and Corporate Regulatory Authority (ACRA) via its BizFile system.

### Main Steps

The typical steps are as follows.

- Name reservation: the proposed company name must not be identical to existing businesses, and must not contain undesirable words. Approval is usually immediate, unless the name requires referral to another authority.
- Determination and submission of key information: the applicant identifies the company type and submits key information, including:
  (a) the registered office address;
  (b) the financial year end;
  (c) particulars of directors, shareholders and (where applicable) controllers;
  (d) share capital and initial share allotment; and
  (e) the constitution of the company.
- Registration: upon successful submission, ACRA issues a Unique Entity Number (UEN) and electronic certificate of incorporation.
- Post-incorporation requirements: a company must appoint a company secretary within six months, and should also complete its internal registers and corporate records, arrange banking and tax registrations, consider employment and immigration requirements, and obtain any required business licences.

### Timing

A straightforward incorporation can typically be completed within one to three business days.

Additional time may be required where:

- the proposed name or business activity requires regulatory referral;
- there are complex ownership structures; or
- foreign documentation or approvals are needed.

In such cases, incorporation may take several days to a few weeks.

## 3.3 Ongoing Reporting and Disclosure Obligations

Private companies in Singapore are subject to ongoing reporting, filing and record-keeping obligations under the Companies Act 1967, applicable to any changes in corporate particulars, annual reporting and ownership transparency.

### ACRA Filings and Registers

Companies must lodge filings with ACRA within prescribed timelines for key changes, including:

- directors, chief executive officers, secretaries and auditors;
- registered office address;
- share capital and shareholdings; and
- amendments to the constitution.

Companies are also required to maintain up-to-date statutory registers (including registers of members, directors and secretaries).

### Annual Reporting

A private company must comply with ongoing annual reporting requirements, which include the following.

- Preparing financial statements in accordance with applicable accounting standards, unless exempted (eg, dormant companies or certain exempt private companies).
- Holding an annual general meeting (AGM) to present and approve the financial statements, unless exempt. Private companies may dispense with AGMs by passing written resolutions, subject to statutory requirements.
- Filing annual returns with ACRA, including updated company information and, where applicable, financial statements. The filing must be made within prescribed timelines after the financial year end.

Audit requirements depend on whether the company qualifies for exemptions, such as the small company audit exemption, which is based on size criteria (eg, revenue, assets and number of employees).

Tax filing obligations with the Inland Revenue Authority of Singapore (IRAS), including corporate income tax returns and filings, apply separately from ACRA requirements.

## 3.4 Management Structures

### Companies Limited by Shares (Public and Private)

The board of directors is responsible for managing the company's business and affairs, and may delegate authority to management, committees or authorised officers.

Shareholders do not participate in day-to-day management, but retain powers reserved to them under the Companies Act, the constitution and any shareholders' agreement, including approval of specified matters and the appointment or removal of directors.

In practice, the allocation of decision-making powers is determined by the Companies Act, the company's constitution and shareholders' agreements, which should be read together.

### LLPs

The management structure for partnerships differs from companies and is generally more flexible. The management of an LLP is governed primarily by the LLP agreement, subject to the Limited Liability Partnerships Act 2005. Partners typically manage the business, and each LLP must have at least one manager ordinarily resident in Singapore for compliance purposes.

### Branches

A Singapore branch does not have a separate governance structure. It is managed as part of the foreign company, which retains control over its operations. Branches must comply with local registration requirements and appoint locally resident authorised representatives, but management authority remains with the head office.

## 3.5 Directors', Officers' and Shareholders' Liability

### Directors and Officers

Directors and officers of Singapore companies are subject to duties under both the Companies Act and common law. These duties apply to all directors, including de facto and shadow directors in certain circumstances.

Generally, directors have the duties to:

- act bona fide in the best interest of the company;
- act for proper purpose;
- avoid conflicts of interest; and
- exercise care, skill and diligence in the discharge of their duties.

These duties are owed to the company, rather than directly to shareholders or creditors (subject to limited exceptions, such as insolvency situations).

Depending on the circumstances, breach of duties may give rise to:

- civil liability, including damages, account of profits or equitable remedies;
- statutory liability – eg, for failure to disclose interests, maintain proper records or comply with filing requirements; and
- criminal liability in specified cases, such as engaging in fraudulent trading, making false statements or being involved in certain disclosure breaches.

Directors may also be personally liable where they are involved in insolvent or wrongful trading, or where they incur liabilities without a reasonable expectation of the company meeting its obligations.

### Shareholders

A company is ordinarily treated as a separate legal person from its shareholders. Shareholders in a company limited by shares are generally not liable for the company's debts beyond any unpaid amount on their shares. Singapore law recognises the concept of piercing (or lifting) the corporate veil, but this is applied sparingly and only in limited circumstances.

The courts may disregard the separate legal personality of a company where it is used as a sham or façade to conceal wrongdoing, but will generally uphold the principle of separate corporate personality, except in the following exceptional situations:

- fraud or improper conduct;
- use of the company to evade existing legal obligations; and
- situations expressly provided for under statute (eg, a company carrying on business without at least one Singapore resident director for more than six months).

## 4. Employment Law

### 4.1 Nature of Applicable Regulations

Employment relationships in Singapore are governed by statute, contract, common law and, where applicable, collective agreements.

### Statute

The Employment Act 1968 (EA) is the primary employment statute governing most employment relationships in Singapore (excluding seafarers, domestic workers, civil servants and statutory board employees). It sets minimum standards on matters such as salary payment, leave, termination, records, key employment terms and, for employees covered by Part 4, working hours, rest days and overtime. Other employment-related statutes include:

- the Central Provident Fund Act 1953;
- the Employment of Foreign Manpower Act 1990;
- the Retirement and Re-employment Act 1993;
- the Workplace Safety and Health Act 2006;
- the Work Injury Compensation Act 2019;
- the Child Development Co-Savings Act 2001;
- the Platform Workers Act 2024; and
- the Workplace Fairness Act 2025.

### Case Law

Common law principles remain relevant to interpret statute and contractual terms.

### Contract

The employment contract is the primary document governing the relationship between the employer and employee, and sets out the mutually agreed terms and conditions between them. The employee handbook or manual supplements the employment contract and sets out workplace procedures and policies.

### Collective Bargaining Agreements

Collective bargaining is available to recognised trade unions under the Industrial Relations Act 1960. Collective agreements regulating wages and working conditions are valid for two to three years, and must be filed with the Industrial Arbitration Court within one week of signing to be enforceable. Recognised trade unions may also provide limited representation to executive employees in relation to dismissal appeals, retrenchment benefits, breaches of employment contracts, victimisation and re-employment.

### Guidelines, Advisories and Tripartism

A notable feature of Singapore's system is tripartism: a collaborative model involving the Ministry of Manpower (MOM), the National Trades Union Congress,

and the Singapore National Employers Federation, through which guidelines and advisories are issued to supplement the law. Tripartite guidelines and advisories are not primary legislation, but are important in practice and may be considered by regulators when assessing matters such as fair employment practices, flexible work requests and retrenchment exercises.

The Tripartite Alliance for Dispute Management and the Employment Claims Tribunals were set up in 2017 to provide an efficient, cost-effective avenue for resolving salary and wrongful dismissal claims. They were jointly established by the tripartite partners.

## 4.2 Characteristics of Employment Contracts

### Specific Requirements and Statutory Minimums

The EA recognises both written and oral contracts, but written terms are strongly recommended.

Employers must issue written key employment terms to employees who are employed for at least 14 continuous days, no later than 14 days after the day that the employee starts employment with the employer. Such terms must cover matters such as job title, main duties and responsibilities, start date, salary, working arrangements, leave entitlements, notice period, probation period, place of work, bonus or incentives, and other medical benefits.

Under the EA, employers must issue itemised pay slips either with the salary payment or within three working days after the salary payment is made. For termination or dismissal, the pay slip must be issued on the last salary period preceding the end of employment or on the employee's last day of employment with the employer.

An employment contract shall not contain terms that are less favourable to the employee than those prescribed by the EA; any such term is illegal and void to the extent that it is less favourable. The employer is not restricted from granting more favourable terms to the employee.

### Duration

Singapore law does not require employment contracts to be indefinite. Employment may be open-ended or fixed-term, provided the arrangement is genuine and consistent with statutory protections.

## 4.3 Working Time

The statutory working time, rest day, overtime and other conditions set out in Part 4 of the EA only apply to workers (doing manual labour) earning not more than SGD4,500 a month and other employees (non-managerial, non-executive) earning not more than SGD2,600 a month.

For employees covered by Part 4, the main protections are as follows:

- they must not be required under their contract to work more than eight hours a day (and not more than six consecutive hours without a period of break) or 44 hours a week;
- overtime must generally be paid at no less than 1.5 times the hourly basic rate of pay;
- overtime work generally cannot exceed 72 hours a month, unless an exemption applies;
- employees are entitled to one rest day each week; and
- work on rest days is subject to separate statutory payment rules, depending on whether it was requested by the employee or the employer.

For employees not covered by Part 4 of the EA, these terms are governed primarily by the employment contract, which can be negotiated between the employer and the employee.

## 4.4 Termination of Employment Contracts

Singapore is not an "employment at will" jurisdiction in the sense understood in some other common law systems. An employment contract may be terminated without cause on notice (or payment in lieu of notice), or for cause.

An employer may terminate employment only in accordance with the contract and applicable statutes, including the EA. Termination may be by written notice, payment in lieu of notice, expiry of a fixed term, mutual agreement, redundancy or dismissal for cause.

### Termination by Written Notice or Payment in Lieu of Notice

The length of the notice must be the same for both employer and employee, and is to be determined by any provision made for the notice in the terms of the contract of service; in the absence of such provision, it must be determined in accordance with the EA, depending on the length of service by the employee.

Either party to a contract of service may terminate the contract of service without notice or, if notice has already been given in accordance with Section 10, without waiting for the expiry of that notice, by paying to the other party a sum equal to the amount of salary at the gross rate of pay that would have accrued to the employee during the period of the notice – ie, payment in lieu of notice.

### Termination by Cause

An employer is deemed to have broken the employer's contract of service with the employee if the employer fails to pay salary in accordance with the EA.

An employee is deemed to have broken the employee's contract of service with the employer if the employee is absent from work for more than two days continuously without prior leave from the employer and the employee has no reasonable excuse for the absence or does not inform or attempt to inform the employer of the excuse for the absence.

Either party to a contract of service may terminate the contract of service without notice in the event of any wilful breach by the other party of a condition of the contract of service.

Termination by cause on the grounds of misconduct inconsistent with the fulfilment of the express or implied conditions of the employee's service is permitted only after due inquiry. The Tripartite Guidelines on Wrongful Dismissal provide non-exhaustive examples of misconduct, which include theft, dishonest or disorderly conduct at work, insubordination, and bringing the organisation into disrepute. It is common to find other terms in the employment contract or employment handbook upon which the employer may terminate the employee's employment for cause.

In addition to civil claims before the courts, employees may bring a wrongful dismissal claim (ie, dismissal without just cause or excuse) under the Employment Claims Act 2016 for reinstatement in the employee's former employment or compensation.

### Payment on Termination

The total salary and any sum due to an employee who has been dismissed by the employer must be paid on the day of dismissal or, if this is not possible, within three days thereafter, not being a rest day or public holiday or other holiday.

The total salary due to an employee who terminates his or her contract of service with his or her employer by paying in lieu of notice, or after giving due notice to the employer as required, must be paid to the employee on the day on which the contract of service is terminated.

### Retrenchment

Employers may also dismiss an employee with notice on the grounds of retrenchment or redundancy. Employers with ten or more employees that retrench any employee must submit a Mandatory Retrenchment Notification to MOM within five working days of the employee being informed of their retrenchment. Employers must notify their employees of their retrenchment according to their terms for termination in their employment contract.

MOM states that employees who have served the company for at least two years are eligible for retrenchment benefit. Those with less than two years' service could be granted an ex-gratia payment out of goodwill. The amount of retrenchment benefit depends on what is provided for in the employment contract or collective agreement (for unionised companies). If there is no provision, it will have to be negotiated between the employees (or their union) and the employer. MOM recommends that the prevailing norm is to pay a retrenchment benefit of between two weeks to one month salary per year of service, depending on the employer's financial position and the industry. MOM has published the Tripartite Advisory on Managing Excess Manpower and Responsible Retrenchment for employers to carry out a fair and responsible retrenchment.

### Collective Redundancies

An employee who considers themselves dismissed without just cause or excuse by their employer may make a representation through their trade union to MOM to be reinstated in their former employment within one month of the dismissal.

### Fixed-Term Employment Arrangements

Employers and employees may agree that employment will continue for a specified period. In such cases, the contract will generally run until the agreed expiry date, after which the employment relationship comes to an end unless the parties agree otherwise.

## 4.5 Employee Representations

Singapore does not require employees to be represented, informed or consulted by management in every workplace. There is no general requirement for employee representation on company boards.

Employee representation may become relevant where employees are unionised. Under the Industrial Relations Act 1960, a trade union may represent employees in collective bargaining only after it has been formally recognised by the employer. Once recognised, the union acts as the representative body for the employees it covers, and may negotiate with the employer on matters relating to employment terms and conditions.

Consultation may also arise in specific circumstances, including retrenchment exercises involving unionised employees, business transfers affecting employment arrangements, or other situations where consultation is required under applicable collective agreements or sector-specific frameworks.

Since 1 January 2025, platform workers, including ride-hail and delivery workers, have been able to be represented by recognised platform work associations under the Platform Workers Act 2024. These associations may represent platform worker members in engagements and negotiations with platform operators on work-related matters.

# 5. Tax Law

## 5.1 Taxes Applicable to Employees/Employers

In Singapore, the employment relationship is subject primarily to income tax and, where applicable, Central Provident Fund (CPF) contributions.

### Employee Taxation

An individual is subject to Singapore income tax if they are:

- tax resident in Singapore (ie, present or working in Singapore for 183 days or more in a calendar year); or
- non-resident, deriving income from employment exercised in Singapore (generally where presence exceeds 60 days but is less than 183 days; short-term employment of 60 days or less is generally exempt from the income tax regime).

Employees are taxed on employment income, including salary, bonuses and benefits-in-kind. Tax residents are taxed at resident rates, with a current maximum of 24%. Non-residents are generally taxed at a flat rate of 15% or resident rates, whichever results in a higher tax.

Employers are responsible for reporting employee income, but the employee usually remains responsible for their own tax liability.

### Employer Obligations

The CPF is a mandatory social security system for Singapore citizens and permanent residents. Both employers and employees are required to contribute to the CPF. Contribution rates vary based on age and residency status, with total contributions generally up to 37% of ordinary wages, subject to applicable wage ceilings. Employers are responsible for deducting the employee's share and making monthly contributions.

CPF contributions are generally not required for foreign employees.

Employers must also:

- file employee income information with the IRAS and may be required to withhold tax in certain cases, such as when a non-citizen employee ceases employment and leaves Singapore; and
- pay the Skills Development Levy (SDL) for all employees, calculated as a percentage of monthly wages, subject to minimum and maximum amounts.

### Other Taxes

Foreign employees are generally not subject to CPF contributions. However, employers may be required to pay foreign worker levies for certain categories of work pass holders.

## 5.2 Taxes Applicable to Businesses

### Tax Residence and Scope of Taxation

Companies carrying on business in Singapore may be subject to corporate income tax, Goods and Services Tax (GST), where applicable, and certain withholding taxes, regardless of where they are incorporated.

A company is subject to Singapore tax if it is tax resident or derives Singapore-sourced income. A company is regarded as tax resident if its control and management are exercised in Singapore – ie, typically where board decisions are made.

Singapore operates a territorial tax system, under which income sourced in Singapore is taxable and foreign-sourced income is generally not taxed unless received in Singapore, subject to exemptions.

### Corporate Income Tax

The prevailing corporate income tax rate is 17% of chargeable income. Various tax incentives and exemptions, including start-up and industry-specific schemes, may reduce the effective tax rate.

### Capital Gains Tax

Singapore does not impose capital gains tax. However, gains may be taxed where they are revenue in nature, based on the facts and circumstances.

### GST

GST is a broad-based consumption tax on imports and most local supplies of goods and services. The prevailing rate is 9%.

GST registration is compulsory where a business exceeds the SGD1 million taxable turnover threshold under either the retrospective test or the prospective test. Under the retrospective test, a business must register if its taxable turnover for the past 12 months exceeds SGD1 million. Under the prospective test, a business must also register if it is reasonably expected that its taxable turnover will exceed SGD1 million in the next 12 months. Registration must generally be completed within 30 days of meeting either threshold.

Exemptions and zero-rating apply to specified transactions, including certain financial services, residential property supplies, exports and qualifying international services.

### Withholding Tax

Withholding tax may apply to specified Singapore-sourced payments made to non-residents, including certain interest, royalty, technical assistance, management fee and service payments. Rates depend on the nature of the payment, and may be reduced under applicable double taxation agreements.

Singapore does not impose withholding tax on dividends.

### Stamp Duty

Stamp duty may apply to instruments relating to Singapore immovable property and transfers of shares. Share duty is generally 0.2% of either the purchase price or the value of the shares transferred, whichever is higher.

### Transfer Tax

Singapore does not impose a general transfer tax on business assets.

### OECD Pillar Two

Singapore has implemented Pillar Two of the OECD's Two-Pillar solution through the introduction of an Income Inclusion Rule (IIR) and a domestic minimum top-up tax (DTT). These rules apply to multinational enterprise groups with annual consolidated revenue of at least EUR750 million, for financial years beginning on or after 1 January 2025.

The IIR requires the parent entity of a multinational group to pay a top-up tax where group entities are subject to an effective tax rate below 15%, while the DTT ensures that such top-up tax is collected in Singapore in respect of low-taxed Singapore entities.

## 5.3 Available Tax Credits/Incentives

Singapore offers a range of tax incentives, exemptions, deductions and grants to support business activities and innovation. Some common examples are set out below.

### Start-Up Tax Exemption

Newly incorporated companies may benefit from partial tax exemptions for their first three years of assessment, subject to conditions. The exemption applies to qualifying new companies incorporated in Singapore and provides for:

- a 75% tax exemption on the first SGD100,000 of normal chargeable income; and
- a 50% tax exemption on the next SGD100,000 of normal chargeable income.

### Partial Tax Exemption

All companies are eligible for the following partial tax exemption, unless they are claiming the tax exemption for new start-up companies:

- a 75% exemption on the first SGD10,000 of normal chargeable income; and
- a further 50% exemption on the next SGD190,000 of normal chargeable income.

### Foreign-Sourced Income Exemption

Foreign-sourced income refers to income derived from outside Singapore. As a general rule, such income is taxable in Singapore when it is received or deemed received in Singapore.

However, several forms of relief are available to Singapore tax residents, such as:

- the exemption of specified foreign-sourced income – certain foreign-sourced income, such as foreign dividends, foreign branch profits and foreign-sourced service income, may be exempt from tax in Singapore, subject to conditions;
- relief under double taxation agreements (DTAs) – where a DTA exists, Singapore tax may be reduced or eliminated in accordance with the treaty provisions; or
- foreign tax credit (FTC) – credit may be granted for foreign taxes paid, to offset Singapore tax payable on the same income.

### Enterprise Innovation Scheme (EIS)

The EIS supports research, innovation and capability-building activities by providing enhanced tax deductions and allowances for qualifying activities such as:

- qualifying research and development (R&D) undertaken in Singapore;
- the registration of intellectual property (IP) rights;
- the acquisition and licensing of IP rights;
- employee training and skills development; and
- qualifying innovation projects conducted in collaboration with polytechnics, the Institute of Technical Education, or other approved partner institutions.

### Other Investment and Industry Incentives

In addition to the above, Singapore offers targeted incentive regimes administered by agencies such as the Economic Development Board and Enterprise Singapore. These incentives typically provide tax exemptions or concessionary tax rates to companies undertaking activities that contribute to Singapore's economic development.

Common schemes include the Maritime Sector Incentive (MSI) for maritime activities, the Finance and Treasury Centre (FTC) incentive for treasury and financing operations, and broader programmes such as the Pioneer Certificate Incentive and the Development and Expansion Incentive for strategic and high-value activities.

## 5.4 Tax Consolidation

Singapore does not have a full tax consolidation regime. Each company within a group is generally taxed separately for corporate income tax purposes.

### Group Relief System

Instead, Singapore provides a limited form of group relief through the group relief system, which permits qualifying Singapore-incorporated companies in the

same group to transfer specified current year unutilised tax losses, capital allowances and donations to another company within the same group. The relief applies only to current year losses and does not extend to losses carried forward or carried back.

Broadly, to qualify for group relief, companies must:

- be incorporated in Singapore;
- be part of the same group, with at least 75% direct or indirect shareholding, maintained throughout the relevant basis period; and
- have the same financial year end.

The transfer is made by election between the surrendering and claimant companies.

### Other Reliefs

Companies may also carry forward unutilised tax losses, capital allowances and donations. Subject to qualifying conditions being met, unutilised capital allowances and trade losses can be carried forward indefinitely, while unutilised donations can be carried forward for up to five years of assessment.

Companies may also carry back current year unutilised capital allowances and trade losses to offset income of the immediately preceding year of assessment, subject to a cap of SGD100,000.

Transaction-specific reliefs may also be available, such as stamp duty reliefs for qualifying intra-group transfers.

## 5.5 Thin Capitalisation Rules and Other Limitations

Singapore does not impose specific thin capitalisation rules, such as fixed debt-to-equity ratios, that restrict the amount of interest deductible based on a company's capital structure. However, the deductibility of interest is subject to general tax principles, including the requirement that expenses be wholly and exclusively incurred in the production of income, as well as transfer pricing rules requiring related-party financing to be conducted on an arm's length basis.

In addition, the general anti-avoidance provisions may apply to disregard or vary arrangements entered into for the purpose of obtaining a tax advantage. These rules may, in practice, limit the extent to which interest expenses are deductible.

For large multinational groups, the introduction of OECD Pillar Two may indirectly affect financing structures. While not a thin capitalisation rule, it imposes a minimum effective tax rate of 15%, which may reduce the tax benefits of highly leveraged structures.

## 5.6 Transfer Pricing

Singapore applies transfer pricing rules to transactions between related parties, including dealings between a head office and branch. The regime is based on the arm's length principle, which requires related-party transactions to be conducted on terms that would have been agreed between independent parties in comparable circumstances.

IRAS may adjust a taxpayer's profits where such transactions are not conducted on an arm's length basis. In such cases, IRAS may impose upward tax adjustments and a surcharge (generally 5% of the transfer pricing adjustment).

Taxpayers are required to maintain transfer pricing documentation for at least five years from the end of the basis period in which the transaction took place, unless an exemption applies. This documentation should support the pricing of related-party transactions and demonstrate compliance with the arm's length principle. Additional penalties may apply for failure to maintain adequate documentation.

## 5.7 Anti-Evasion Rules

Singapore has anti-evasion and anti-avoidance rules under the Income Tax Act 1947. The primary provision is the general anti-avoidance rule (GAAR), under which the Comptroller of Income Tax may disregard or make relevant adjustments to arrangements where they are entered into with the main purpose or effect of avoiding tax. In particular, this applies where the purpose of the arrangement is, directly or indirectly:

- to alter the incidence of any tax that is payable, or that would otherwise have been payable, by any person;

- to relieve any person from any liability to pay tax or to make a return under the Income Tax Act 1947; or
- to reduce or avoid any liability imposed or that would otherwise have been imposed under the Income Tax Act 1947.

The rule applies broadly and is intended to address artificial or contrived arrangements, even where they comply with the literal wording of the law.

In addition to the GAAR, Singapore has various targeted anti-avoidance provisions, including:

- transfer pricing rules, ensuring that related-party transactions are conducted on an arm's length basis;
- shareholding test rules, restricting the carry-forward of tax losses and allowances following substantial changes in ownership; and
- deductibility limitations, restricting deductions where expenses are incurred in relation to non-taxable or exempt income.

### 5.8 Tariffs

As a major trading hub, Singapore adopts an open and largely tariff-free regime, with most imports not being subject to customs duties. Goods that are not subject to duty may still attract import GST, unless a relief or exemption applies. In practice, importers are expected to classify goods correctly, determine customs value and obtain the necessary permits.

#### Dutiable Goods

Singapore Customs identifies four principal categories of dutiable goods:

- intoxicating liquors;
- tobacco products;
- motor vehicles; and
- petroleum products and biodiesel blends.

Rates may be ad valorem or specific, depending on the goods.

In addition, certain controlled or prohibited goods are subject to separate regulatory regimes and may require approvals from the relevant authorities.

#### Trade Agreements

Singapore is party to a wide network of free trade agreements (FTAs), under which tariffs are often reduced or eliminated where the relevant rules of origin are met.

As a matter of policy, Singapore does not use tariffs to protect specific sectors. Instead, the focus is on keeping trade flows efficient and maintaining the country's position as a regional trading and distribution hub.

#### Global Developments

Global trade developments have not led to significant increases in tariffs in Singapore. However, businesses should monitor sanctions and export controls, strategic goods and customs requirements and supply chain disruptions. These factors may affect the ability to move goods or benefit from preferential treatment, even where tariffs remain low.

## 6. Competition Law

### 6.1 Merger Control Notification

#### Section 54 Prohibition

Singapore's merger and acquisition control regime is governed by the Competition Act 2004 and is based on the Section 54 prohibition, which prohibits mergers that have resulted in a substantial lessening of competition in any market in Singapore, or that may be expected to do so. The regime is effects-based and applies regardless of whether the parties are incorporated in Singapore or elsewhere.

#### Types of Transactions Covered

The Section 54 prohibition applies to transactions that result in a change of control on a lasting basis, including:

- acquisitions of shares or assets;
- mergers or amalgamations; and
- the creation of joint ventures to perform, on a lasting basis, all the functions of an autonomous economic entity.

The key consideration is whether the transaction confers decisive influence over the target.

### Voluntary Notification

Singapore operates a voluntary merger notification regime. There are no mandatory filing requirements and no statutory turnover or revenue thresholds that trigger notification prior to completion.

However, parties are expected to conduct a self-assessment and may notify the Competition and Consumer Commission of Singapore (CCCS) where a transaction may raise competition concerns. Completion without notification does not prevent CCCS from investigating the transaction subsequently, including after completion.

While non-notification is not itself an infringement, parties proceeding without clearance assume completion risk. CCCS may impose remedies such as divestment or unwinding, and may impose financial penalties if the merger substantially lessens competition. For this reason, parties are generally encouraged to notify pre-completion.

### Market Share Indicators

CCCS guidelines provide the following indicative market share thresholds to help assess whether a merger is likely to raise concerns:

- the merged entity has a market share of at least 40%; or
- the merged entity has a market share of 20% to 40%, and the combined market share of the three largest firms is at least 70%.

These thresholds are indicators only and not conclusive safe harbours. The assessment remains focused on whether there is a substantial lessening of competition.

In practice, parties will also consider factors such as:

- the level of concentration in the market;
- closeness of competition;
- barriers to entry;
- buyer power; and
- vertical or conglomerate effects.

## 6.2 Merger Control Procedure

### Main Steps

Singapore's merger notification process is administered by CCCS and is typically carried out on a voluntary, pre-completion basis. The main steps are as follows.

- Pre-notification engagement: parties may engage informally with CCCS to discuss the transaction, the scope of information required, and potential competition issues. This is optional but is commonly done to reduce the risk of infringing Singapore's competition laws.
- Preparation of notification: the notifying party prepares a filing setting out details of the transaction, including:
  (a) transaction description and rationale;
  (b) relevant markets and competitive landscape;
  (c) market shares and supporting data; and
  (d) analysis of competitive effects.
- Submission of notification: a formal application is submitted to CCCS, together with supporting documents and the prescribed filing fee.
- CCCS review process: the review generally proceeds in two phases:
  (a) Phase 1 review is the initial screening to determine whether the transaction raises competition concerns; and
  (b) Phase 2 review (if required) is a more detailed assessment where concerns arise.
- Decision: CCCS may clear the transaction, issue clearance subject to commitments or remedies, or determine that the merger infringes the Section 54 prohibition.

### Timeline

The timing depends on the complexity of the transaction and whether a detailed review is required:

- Phase 1 is typically completed within 30 working days from acceptance of a complete filing; and
- Phase 2 may take an additional 120 working days or more, depending on the issues involved.

The review timeline generally begins only once CCCS confirms that the notification is complete. Requests for further information by CCCS may suspend or extend the review timeline.

## 6.3 Cartels

### Section 34 Prohibition

Anti-competitive agreements and practices in Singapore are governed by the Competition Act 2004, in particular the Section 34 prohibition. Section 34 prohibits agreements, decisions or concerted practices that have as their object or effect the prevention, restriction or distortion of competition within Singapore. The prohibition is also enforced by CCCS.

### Scope of the Prohibition

The Section 34 prohibition applies to a wide range of arrangements between undertakings, including horizontal agreements between competitors and informal arrangements and concerted practices, even where there is no formal contract.

Common examples of anti-competitive conduct include:

- price fixing;
- market sharing;
- output limitations between competitors; and
- bid rigging.

Certain forms of conduct (such as price fixing and bid rigging) are treated as hardcore restrictions and are likely to infringe the prohibition without the need for detailed analysis of actual effects.

### Exemptions

The Competition Act provides for block exemptions and individual exemptions where an agreement generates net economic benefits (eg, improvements in production or distribution), although these apply narrowly in practice.

### Territorial Scope

Singapore adopts an effects-based approach to jurisdiction. The Section 34 prohibition applies where an agreement has the object or effect of restricting competition within Singapore, regardless of where the agreement was entered into or implemented. As such, arrangements entered into overseas may still fall within the scope of the law if they have an appreciable effect on competition in Singapore markets.

### Infringement Consequences

Any provision of an agreement is void and unenforceable to the extent that it infringes Section 34.

Where an infringement of the Section 34 prohibition is committed intentionally or negligently, CCCS may impose a financial penalty of up to 10% of the undertaking's turnover in Singapore for each year of infringement, subject to a maximum of three years.

A party that has suffered loss or damage directly as a result of an infringement may bring a civil claim for damages against the relevant undertaking. However, such private actions may only be commenced after CCCS has made a final infringement decision and any appeal process has been exhausted.

## 6.4 Abuse of Dominant Position

### Section 47 Prohibition

Unilateral conduct in Singapore is governed by the Section 47 prohibition under the Competition Act, which prohibits conduct by one or more undertakings that amounts to an abuse of a dominant position in a market in Singapore. Dominance is assessed by reference to market power rather than market share alone. The law does not prohibit dominance itself, but only its abuse.

### Scope of the Prohibition

An undertaking is considered dominant if it has the ability to act independently of competitors, customers or suppliers. Abuse may take various forms, including:

- predatory pricing;
- exclusive dealing or tying arrangements;
- refusal to supply;
- margin squeeze; and
- discriminatory pricing or conditions.

The assessment is fact-specific and considers market definition, the degree of market power, barriers to entry, any objective or commercial justification, and overall competitive effects.

Singapore law does not recognise a standalone concept of "economic dependence". However, conduct affecting dependent trading partners may still fall

within Section 47 where it amounts to an abuse of dominance.

### Exemptions

Unlike the Section 34 prohibition, there is no equivalent system of block or individual exemptions for abuse of dominance. However, the Competition Act 2004 provides for statutory exclusions, including where conduct is:

- undertaken to comply with a legal requirement;
- necessary to avoid conflict with an international obligation of Singapore; and
- required for exceptional and compelling reasons of public policy.

### Territorial Scope

The regime adopts an effects-based approach. The Section 47 prohibition applies where conduct has the object or effect of restricting competition in Singapore, regardless of where it occurs. Accordingly, conduct outside Singapore may still fall within the Act if it produces appreciable effects in Singapore markets.

### Infringement Consequences

CCCS may impose directions to remedy, mitigate or eliminate the effects of the infringement, and to prevent recurrence.

Where an infringement of the Section 47 prohibition is committed intentionally or negligently, CCCS may impose a financial penalty of up to 10% of the undertaking's turnover in Singapore for each year of infringement, subject to a maximum of three years.

A party that has suffered loss or damage directly as a result of an infringement may bring a civil claim for damages against the relevant undertaking. However, such private actions may only be commenced after CCCS has made a final infringement decision and any appeal process has been exhausted.

## 7. Intellectual Property

### 7.1 Patents

#### Definition

A patent protects an invention that is new, involves an inventive step and is capable of industrial application.

#### Duration

A Singapore patent generally lasts 20 years from the filing date, subject to renewal fees. Limited extensions may be available, including in relation to pharmaceutical products where statutory conditions are met.

#### Registration Process

Applications are filed with the Intellectual Property Office of Singapore (IPOS) and must include the prescribed request, description, claim or claims, drawings where required, and an abstract. Applicants should confirm inventorship, ownership, priority claims and whether parallel overseas or Patent Cooperation Treaty filings are required. IPOS conducts formalities checks, and the applicant must proceed through the relevant search and examination route before the patent is granted. Singapore operates a positive grant system, under which IPOS will not grant a patent where the examination report contains outstanding objections, which supports the robustness of the granted right.

#### Enforcement

A patent proprietor may bring infringement proceedings against unauthorised acts within the statutory scope, including making, disposing of, offering to dispose of, using, importing or keeping a patented product.

#### Remedies

Remedies may include an injunction, damages or an account of profits, delivery up or destruction/disposal of infringing articles, and declarations of validity and infringement. Defendants commonly raise non-infringement and invalidity arguments.

### 7.2 Trade Marks

#### Definition

A trade mark is a sign capable of distinguishing one undertaking's goods or services from those of another.

Registrable signs may include words, names, logos, letters, numerals, shapes and colours.

### Duration
A Singapore registration lasts ten years and may be renewed for further ten-year periods.

### Registration Process
Applications are filed with IPOS for specified goods and services under the applicable classification. IPOS examines the application for absolute and relative grounds. If the application is accepted, it is published for opposition. If no opposition is filed, or if opposition is resolved in the applicant's favour, the mark proceeds to registration.

### Enforcement
A registered proprietor may sue for infringement where an identical or similar sign is used without consent in relation to goods or services in circumstances covered by the Trade Marks Act.

### Remedies
Remedies may include injunctions, damages or an account of profits, and delivery or disposal of infringing goods, materials or articles. Certain counterfeiting conduct and the false application of trade marks may also be criminal offences. Unregistered marks may be protected by passing off, but registration usually provides clearer and more efficient enforcement rights.

## 7.3 Industrial Designs
### Definition
A registered design protects the appearance of a product or non-physical product, not its underlying technical function. Protection may cover features such as shape, configuration, colours, pattern or ornamentation, including qualifying graphical user interfaces and other non-physical products.

### Duration
Registration initially lasts five years and may be extended in five-year periods up to a maximum of 15 years.

### Registration Process
Applications are filed with IPOS, and should identify the applicant, the design, the article or non-physical product to which it is applied, and the required representations. IPOS conducts formalities checks and may register the design if statutory requirements are met.

### Enforcement
The registered owner may sue for infringement where a person performs acts reserved to the owner without consent, such as making, importing, selling, hiring or exposing for sale or hire an article or non-physical product to which the registered design, or a substantially similar design, has been applied.

### Remedies
Remedies include injunctions, damages or an account of profits, and orders relating to infringing articles.

## 7.4 Copyright
### Definition
Copyright protects qualifying original works and other protected subject matter, including literary, dramatic, musical and artistic works, films, sound recordings, broadcasts and published editions. Computer programs are protected as literary works.

### Duration
For most authorial works, copyright generally lasts for the life of the author plus 70 years, although different terms apply to other subject matter.

### Registration Process
There is no general copyright registration system in Singapore; protection arises automatically when the statutory requirements are met. Businesses should therefore focus on documenting authorship, ownership, assignments, licences and creation dates, especially for commissioned works, software, marketing materials and employee-created works.

### Enforcement
Copyright owners may sue for unauthorised acts such as copying, communication to the public, distribution or other restricted acts.

### Remedies
Remedies include injunctions, damages or an account of profits, statutory damages where available, and delivery up or disposal of infringing copies. Certain

deliberate commercial infringements may also attract criminal liability.

### 7.5 Others

#### Software

Software is usually protected first through copyright in source code and object code. A software-related invention may also be patentable if it meets the patentability requirements and is not excluded.

#### Databases

Databases may be protected through copyright where the database structure or compilation qualifies for protection. Database content may also be protected through confidentiality, contract, access controls, technological measures and personal data or cybersecurity obligations, where relevant.

#### Trade Secrets and Confidential Information

Singapore protects trade secrets principally through the law of confidence, contract and equitable remedies, rather than through a registration system. Protection is strengthened by confidentiality agreements, employment provisions, access controls, need-to-know restrictions, information classification, audit logs and exit procedures.

#### Other Rights

Singapore also protects geographical indications, plant varieties and layout designs of integrated circuits under dedicated statutory regimes. Rights-holders may generally enforce these rights through civil proceedings and seek remedies such as injunctions, damages and, where available, an account of profits. Businesses may also rely on passing off to protect goodwill associated with unregistered brands.

## 8. Data Protection

### 8.1 Applicable Regulations

#### General Framework

The Personal Data Protection Act 2012 (PDPA) is Singapore's primary general data protection statute for the private sector. It governs the collection, use and disclosure of personal data by organisations, and establishes the Do Not Call Registry framework.

#### Core PDPA Obligations

The main obligations include:

- accountability;
- purpose limitation;
- notification;
- consent or reliance on an exception;
- access;
- correction;
- accuracy;
- protection;
- retention limitation;
- transfer limitation; and
- data breach notification.

Organisations must designate at least one data protection officer and make the officer's business contact information available to the public.

#### Related Regimes

The PDPA is not the only relevant regime. Sector-specific or activity-specific obligations may arise under laws and regulatory rules relating to cybersecurity, financial services, healthcare, employment, telecommunications, spam control, electronic transactions and state-sector data governance. Where another written law is inconsistent with the PDPA, the other written law prevails to the extent of the inconsistency.

### 8.2 Geographical Scope

#### Jurisdictional Application

The PDPA can apply to organisations carrying out activities involving personal data in Singapore, even if the organisation is incorporated overseas. The analysis depends on the activities conducted in Singapore, local operations, service providers and data flows.

#### Cross-Border Transfers

An organisation transferring personal data outside Singapore must comply with Section 26 of the PDPA and the prescribed requirements in the Personal Data Protection Regulations 2021. In broad terms, the organisation must take appropriate steps to ensure that the overseas recipient is bound by legally enforceable obligations providing a standard of protection comparable to the PDPA, unless another prescribed basis applies.

### Data Intermediaries

A data intermediary processing personal data for another organisation under a written contract is directly subject to selected PDPA obligations, including protection, retention and certain breach-notification obligations. The engaging organisation remains responsible for personal data processed on its behalf and should manage processing instructions, security controls and onward transfers contractually.

## 8.3 Role and Authority of the Data Protection Agency

### Regulator

The Personal Data Protection Commission (PDPC) administers and enforces the PDPA. Its statutory functions include:

- promoting awareness of data protection;
- administering and enforcing the PDPA;
- advising the government;
- representing Singapore internationally on data protection matters; and
- issuing advisory guidelines.

### The PDPC's Role

In practice, the PDPC:

- issues policies, directives, advisory guidelines and guides;
- promotes compliance;
- reviews complaints and data breach notifications;
- conducts investigations;
- accepts voluntary undertakings; and
- takes enforcement action where appropriate.

The Infocomm Media Development Authority supports the PDPC's functions.

### Enforcement Powers

The PDPC may issue directions requiring an organisation to stop collecting, using or disclosing personal data, destroy personal data, comply with access or correction obligations, or pay a financial penalty. The maximum financial penalty is generally SGD1 million; for organisations with annual Singapore turnover exceeding SGD10 million, it is either SGD1 million or 10% of that organisation's annual Singapore turnover, whichever is higher.

# 9. Looking Forward

## 9.1 Upcoming Legal Reforms

### Workplace Fairness Legislation

The Workplace Fairness Act 2025 is slated to take effect by the end of 2027 and will establish statutory protections against workplace discrimination and related employer obligations, while the Workplace Fairness (Dispute Resolution) Act 2025 establishes the dispute resolution framework. Employers should monitor commencement notifications and prepare policies, grievance processes, training and record-keeping practices in anticipation of the new regime.

### CPF Changes

CPF contribution rates for older employees increased from 1 January 2026, with further senior worker adjustments expected from 1 January 2027. Employers should update payroll systems, employment cost forecasts and employee communications.

### Corporate Governance and Anti-Money Laundering

Singapore has continued to strengthen its anti-money laundering and corporate governance framework. Key changes under the Corporate and Accounting Laws (Amendment) Act 2025 commenced in April 2026, including a new director disqualification ground for persons convicted of specified money laundering offences.

**Bowmans**

**Bowmans** helps its clients to solve complex legal problems and achieve their objectives as efficiently as possible while minimising legal and regulatory risks. With over 650 lawyers and nine offices in six African countries, the firm offers its clients a service that uniquely blends expertise in the law, knowledge of local markets and an understanding of their businesses. Its clients include domestic and foreign corporates, multinationals, funds and financial institutions, across a range of industry sectors, as well as state-owned enterprises and governments. Bowmans has a premier M&A practice, closely integrated with market-leading competition, tax, regulatory, banking and finance, private equity, projects, ESG and dispute resolution teams, enabling it to support inbound investors throughout the full investment lifecycle. The firm is consistently instructed on some of Africa's most significant and innovative transactions.

## Authors

**Ezra Davids** is chairman and senior partner at Bowmans and one of Africa's most highly regarded corporate and M&A lawyers, consistently ranked as a Star Individual and Market Leader by leading international legal directories. He advises multinational clients on complex domestic and cross-border M&A, capital markets and securities transactions, and serves as the relationship partner for a number of the firm's key multinational clients. Ezra has led many of the largest and most strategic deals on the African continent and plays an active leadership role in international legal and governance institutions. Beyond being widely recognised for his expertise in foreign investment, he is also deeply involved in social impact initiatives.

**Tholinhlanhla Gcabashe** is the head of Corporate at Bowmans, member of its management board, and a senior M&A partner. Leading one of South Africa's foremost M&A teams, Tholi advises on complex domestic and cross-border mergers, acquisitions, restructurings and joint ventures. His expertise spans public and private M&A, takeovers, corporate governance and strategic transactions across a range of key sectors, and he is regularly involved in high value and market-shaping deals. He works closely with boards, investors and executive teams on transaction strategy, execution and risk management in the South African market.

**Contributed by:** Ezra Davids, Tholinhlanhla Gcabashe, Nanga Kwinana and Cathy Truter, **Bowmans**

**Nanga Kwinana** is a partner in the M&A practice at Bowmans, based in Johannesburg. He advises clients on mergers and acquisitions, supporting complex corporate transactions across a range of sectors. Nanga works closely with boards, management teams and investors on transaction structuring, execution and regulatory considerations, bringing a practical and commercially focused approach to deal-making. His experience includes advising on transactions involving significant strategic and investment considerations, making him a trusted adviser to both local and international clients pursuing growth opportunities through M&A.

**Cathy Truter** is the head of Innovation and Knowledge at Bowmans, where she plays a senior leadership role at the intersection of legal expertise, knowledge management and legal service improvement. She works closely with the firm's M&A practitioners to support complex domestic and cross-border transactions, with expertise in curating, analysing and operationalising regulatory, transactional and market intelligence relevant to foreign investment into South Africa and the wider African region. Her work focuses on ensuring that deal teams and clients have timely access to high quality, practice-specific insight on M&A trends, regulatory reform and transaction execution technologies. Cathy is actively involved in professional knowledge and legal industry bodies supporting the M&A market and regulators.

South Africa continues to stand out as one of the continent's most sophisticated and diversified economies, and remains the dominant African mergers and acquisitions market by value. Its strategic position as the gateway to Africa, underpinned by deep and liquid capital markets, an independent judiciary, predictable commercial law and a highly regulated financial sector, makes it a compelling jurisdiction for international investors seeking both direct exposure and a platform for broader continental expansion.

This publication provides a concise overview of the key legal, regulatory and commercial considerations for clients wishing to do business in or invest in South Africa. It is intended as a practical guide to the current landscape, drawing on recent market developments and policy reforms that shape the operating environment in 2026.

## Legal System and Regulatory Architecture

South Africa operates a hybrid legal system drawing on Roman-Dutch substantive law, English common law principles and a body of customary law, with the Constitution serving as the supreme law. As a general rule, civil procedure follows English law, while contract law, the law of delict and the law of persons derive from Roman-Dutch common law. The country's statutory company law, originally rooted in English legislation, is increasingly influenced by international best practice, including Delaware law concepts.

The jurisdiction has a sophisticated corporate, competition and regulatory architecture. Core statutes relevant to commercial transactions include the Companies Act 2008 and its regulations, the Competition Act 1998, the Financial Markets Act, the Broad-Based Black Economic Empowerment (B-BBEE) Act, exchange control regulations issued under the Currency and Exchanges Act, labour legislation (including the Labour Relations Act and the Basic Conditions of Employment Act), the Protection of Personal Information Act (POPIA) and a range of sectoral statutes governing mining, telecommunications, banking, insurance and broadcasting.

Principal regulators include the Companies and Intellectual Property Commission (CIPC), the Takeover Regulation Panel (TRP), the Johannesburg Stock Exchange (JSE), the Competition Commission and Competition Tribunal, the South African Reserve Bank Financial Surveillance Department (FinSurv), the Prudential Authority, the Financial Sector Conduct Authority (FSCA), the Independent Communications Authority of South Africa (ICASA) and the Department of Mineral Resources and Energy (DMRE).

## Investment Climate and Confidence Drivers

South Africa remains an attractive destination for foreign direct investment (FDI) by virtue of its diversified economy, strategic location, membership of the Southern African Development Community (SADC) and the African Continental Free Trade Area (AfCFTA), and its position as the continent's primary financial centre.

Several developments have materially bolstered market confidence in recent periods.

- Removal from the Financial Action Task Force (FATF) grey list, signalling improved compliance with international anti-money laundering and counter-terrorism financing standards.
- Meaningful progress in energy and infrastructure reform, including the liberalisation of private generation and wheeling structures, and the restructuring of Eskom through the establishment of a separate transmission function.
- Subdued inflation and successive interest rate cuts, improving financing conditions and business confidence.
- A credit-rating upgrade, reflecting improved fiscal discipline and structural reform momentum.
- The successful hosting of the G20 and B20, coupled with accelerating regulatory reform.
- The Government of National Unity (GNU) framework, formed after the 2024 election, which has positioned cooperative governance with stated priorities around growth, job creation and building a capable state.

The South African rand, having experienced volatility in mid-2025 amid global trade and policy uncertainty, has since strengthened and outperformed many emerging market currencies, reflecting broader economic improvements and continued investment opportunities in reform-aligned sectors.

### Foreign Direct Investment Framework

The Protection of Investment Act ensures that foreign investors are treated no less favourably than South African investors in like circumstances. Critically, South Africa does not operate a general FDI screening regime. Although the Competition Act provides for national security screening by a presidential committee for notifiable mergers involving foreign acquirers and critical infrastructure, these provisions are not yet in force and there is no anticipated effective date.

Notwithstanding the absence of a general screening mechanism, investors must carefully consider sector-specific regulatory frameworks. A number of industries are subject to tailored restrictions: domestic control requirements apply in the air services sector; foreign ownership in commercial broadcasting is capped; and mining, financial services and telecommunications impose fit-and-proper and change-of-control approvals that often interact with B-BBEE ownership targets. Sector-specific advice should therefore be obtained at an early stage of any transaction.

### The M&A Market in 2026

Global M&A activity entered 2026 with renewed momentum, yet the market is defined less by exuberance than by selectivity. After several years of macroeconomic volatility, persistent geopolitical tension and elevated financing costs, dealmakers are pursuing strategic transactions with greater discipline and sharper scrutiny of execution risk. Boards and investors are prioritising durability, regulatory preparedness and long-term value creation.

South Africa reflects many of these global dynamics through a distinctly local lens. Domestic deal activity continues to be shaped by evolving competition regulation, transformation imperatives, exchange control reform and sector-specific policy developments.

The market is characterised by measured confidence. The most effective dealmakers in 2026 are those capable of balancing commercial ambition with regulatory acumen, stakeholder engagement and long-term strategic positioning. The emphasis has shifted decisively from speed and scale to execution certainty and adaptability.

Energy remains among the strongest drivers of South African deal activity. Secondary sales of operational renewable portfolios, minority stake disposals and institutional capital deployment into de-risked contracted assets have defined transaction flow. The market's defining constraint is no longer capital availability but grid access. Consolidation in renewables is expected to continue, with battery storage emerging as a parallel growth theme.

Mining M&A is shifting from traditional scale-driven consolidation toward strategic, value-led transactions shaped by geopolitical developments, supply chain security and commodity exposure. Elevated gold prices act as a near-term catalyst, while access to critical minerals such as copper and platinum group metals underpins the energy transition. M&A continues to provide an alternative to slower, capital-intensive greenfield development. Portfolio optimisation, divestments of non-core assets and jurisdictional diversification have driven considerable activity.

Financial technology and digital payments represent one of the most active areas of M&A in South Africa. Major banks and financial institutions have acquired fintech businesses to secure proprietary technology, reduce third-party dependency and expand digital offerings.

South African banking groups continue to pursue disciplined regional expansion, particularly into East African markets. Domestic players continue to record strong growth through advanced technology and operating models.

Healthcare remains attractive, with portfolio optimisation and multinational capital redeployment driving deal flow.

In telecoms and digital infrastructure, activity is concentrated in fibre networks, tower portfolios and data centres, with investors targeting scalable, wholesale-oriented platforms. Technology-driven transactions continue to dominate strategic priorities, with artificial intelligence, cybersecurity and digital infrastructure assets remaining highly sought after.

## Key Regulatory Considerations

### *Companies Act and Takeover Regulation*

The Companies Act 2008 (as amended) provides the core statutory framework governing South African corporate law and M&A, regulating schemes of arrangement, amalgamations and mergers, disposals of all or the greater part of a company's assets, shareholder approvals, appraisal rights, fiduciary duties and disclosure obligations.

Recent amendments have introduced enhanced corporate governance, transparency and M&A oversight, including expanded beneficial ownership disclosure obligations, extended periods for liability claims and stricter compliance enforcement via the CIPC.

Remuneration disclosure requirements are now in effect for public and state-owned companies, requiring shareholder approval before implementing a remuneration policy (every three years or where there is a material change to the policy) and the remuneration report (which now has more detailed disclosure requirements) annually. Where the remuneration report is not approved in two consecutive years, among other considerations, the non-executive directors on the remuneration committee will be barred from serving on that committee for a further two years (the "two-strike" rule).

Certain other changes, though signed into law, remain subject to the proclamation of an effective date. Most notable among those are the amendments to the triggers rendering private companies subject to the additional scrutiny of the takeover regulations and the TRP. Under the proposed amendments, private companies with ten or more shareholders will fall within the regulatory ambit of the TRP, provided they cross a financial threshold that remains to be finalised. This marks a departure from the existing framework, which applies based on whether the company has undertaken significant transactions within the preceding 24 months. Affected companies intending to enter into fundamental transactions should anticipate increased oversight by the TRP, factoring this into closing conditions and transaction timelines.

### *King V*

The King V Code, market regulation on corporate governance best practice, effective January 2026, marks an evolution in South African corporate governance, streamlining principles whilst sharpening focus on accountability and the rhythm of governance, director independence and expanded guidance on artificial intelligence, whistleblowing, sustainability and responsible remuneration. Companies claiming compliance with King V are also now under an obligation to compile new disclosure templates that need to be approved by the board and displayed on their webpages.

### *JSE reforms*

The JSE Listings Requirements are the rules governing companies listed on Africa's largest stock exchange by market capitalisation, regulating disclosure, corporate actions, transaction categorisation and shareholder approvals, with related-party and significant transactions attracting additional requirements.

The JSE has undertaken a comprehensive overhaul of its Listings Requirements as part of a broader simplification initiative, segmenting the Main Board into Prime and General segments alongside AltX, and modernising disclosure and approval frameworks to align with changes to the Companies Act and King V.

### *Competition/antitrust and public interest*

South Africa has a comprehensive competition regime under the Competition Act. The regime regulates, among other things, restrictive horizontal and vertical practices (including price-fixing and market allocation, as well as anti-competitive restraints between parties operating at different levels of the supply chain), abuse of dominance and mergers.

South Africa's merger control regime under the Competition Act is well established and plays a central role in transaction execution. Transactions meeting prescribed financial thresholds require mandatory notification to the Competition Commission prior to implementation. The substantive test assesses whether a merger is likely to substantially prevent or lessen competition and whether it can be justified on public interest grounds.

The Minister of Trade, Industry and Competition, in consultation with the Competition Commission, has amended the merger notification thresholds and merger filing fees in South Africa, notably increasing these trigger thresholds with effect from 1 May 2026.

There remain two categories of mergers that attract mandatory notification obligations and require approval prior to implementation. These are intermediate and large mergers. The combined assets or turnover threshold for intermediate mergers raised to ZAR1 billion (with the target being required to achieve at least ZAR200 million in assets or turnover) and for large mergers to ZAR9.5 billion (with the target being required to achieve at least ZAR280 million in assets or turnover). Mergers that fall below the intermediate merger thresholds are categorised as small mergers and may still be notifiable, but only in limited circumstances. The merger filing fees have always been upwardly revised to ZAR220,000 for intermediate mergers and ZAR735,000 for large mergers.

Public interest considerations are firmly embedded in merger analysis. The competition authorities assess the effect of transactions on a range of public interest factors, with conditions imposed more prominently in relation to employment, the promotion of historically disadvantaged persons (HDPs), and worker ownership, as well as the promotion of small and medium enterprises.

### *B-BBEE and transformation*

B-BBEE is a defining feature of South Africa's corporate landscape, designed to redress the inequalities of the past by promoting the economic participation of black South Africans.

The B-BBEE Act and sector Codes stipulate targets across certain principal elements such as ownership, management control, skills development, enterprise and supplier development, and socio-economic development. The more points a business achieves across these elements, the higher its B-BBEE status level, which translates into a procurement recognition level that determines its ability to contract with government, state-owned enterprises and other measured entities.

The formal introduction of the Transformation Fund framework, alongside ongoing debate regarding the future direction of empowerment policy, underscores the importance of corporates doing business in South Africa proactively engaging with B-BBEE requirements, monitoring evolving sector codes and integrating transformation planning into their broader commercial and investment strategies.

### *Exchange control and capital flow management*

South Africa's exchange control regime, overseen by the South African Reserve Bank Financial Surveillance Department (FinSurv), should not be viewed as a barrier to investment. While cross-border transactions do require approval for capital movements, including share issuances, loans, guarantees, intellectual property transfers and repatriation of proceeds, this is a straightforward process that requires early planning rather than presenting a substantive obstacle, demonstrating the transaction is at fair value and on arm's length terms. Authorised dealer approvals typically take days. For approvals that require elevation to the FinSurv, applications generally take four to six weeks.

Proposed amendments to South Africa's exchange control regime continue to relax certain requirements, while simultaneously streamlining enforcement mechanisms and bringing crypto-assets more squarely within the regulatory perimeter.

National Treasury has earlier this year published Draft Capital Flow Management (CFM) Regulations, which are intended to repeal and replace the current Exchange Control Regulations. The amendments contemplated in the draft CFM Regulations address gaps in the current South African exchange control regulations, including in relation to cross-border crypto asset transactions, which will complement the existing regulation by the Financial Sector Conduct Authority and Financial Intelligence Centre.

## Financing Trends

In addition to capital raises through the JSE, businesses in South Africa access capital through multiple channels. Bank financing remains significant, though private credit is playing an increasingly prominent role in M&A financing, offering flexible and competitive structures. Private equity sponsors continue to deploy

substantial unallocated capital through continuation vehicles and structured solutions.

### Employment

South Africa's employment and labour regime is primarily regulated by a network of legislation providing minimum protection for employees. The Labour Relations Act regulates collective bargaining, unfair dismissal and unfair labour practices, and business transfers, while the Basic Conditions of Employment Act sets minimum standards for working conditions, leave and working hours. The Employment Equity Act prohibits unfair discrimination and promotes workplace diversity through affirmative action measures.

Of particular relevance to M&A, Section 197 of the Labour Relations Act provides that transfers of businesses as going concerns trigger automatic employee transfers, with continuity of employment. The new employer must employ transferring employees on terms and conditions that are on the whole not less favourable than those previously enjoyed with the old employer. South African law affords employees significant protection against unfair dismissal, and dismissals linked to the transfer of a business are deemed automatically unfair. Merger-related retrenchment moratoria are commonly imposed as competition conditions.

### Tax

South Africa operates a residence-based tax system, taxing residents on worldwide income and non-residents on South African-sourced income. The standard corporate income tax rate is 27%. Dividends declared by resident companies are subject to dividends tax at 20%, although this rate may be reduced under applicable double taxation agreements. South Africa has an extensive treaty network that may reduce withholding rates on dividends, interest and royalties. New global minimum tax requirements, also known as Pillar Two, ensure that large multinational enterprises with revenue over EUR750 million pay a minimum 15% effective tax rate on income in every jurisdiction where they operate.

Transaction structuring must consider capital gains tax, transfer duty (on immovable property), securities transfer tax (at 0.25% on share transfers), value-added tax and withholding taxes. Group restructuring relief is available under defined circumstances, and early-stage tax structuring is critical to ensure optimal application of deferral rules and avoid unintended tax consequences.

### Data Protection

The primary data protection legislation in South Africa is the Protection of Personal Information Act (POPIA), which regulates the processing of personal information of both natural persons and juristic persons. POPIA applies where the responsible party is domiciled in South Africa, or where a non-domiciled party uses automated or non-automated means to process personal information in South Africa.

Enforcement has strengthened in recent years, with the Information Regulator conducting assessments and issuing enforcement notices. Administrative fines for non-compliance have ranged up to ZAR5 million, with potential imprisonment of up to ten years for serious offences. Data protection compliance, including cross-border transfer considerations, is now a standard due diligence workstream and a material consideration in post-acquisition integration.

### Intellectual Property

South Africa's intellectual property framework is overseen by the CIPC, managing the registration and regulation of IP rights, including trade marks, designs and patents. The legal framework provides clear mechanisms for the protection and transfer of IP. Copyright assignments must be in writing and signed by or on behalf of the assignor to be valid. Transfers of registered IP rights require an assignment agreement (typically required to be in writing), which is recorded by formal filing with the CIPC, while unregistered IP is typically transferred by way of assignment agreements. Cross-border transfers of IP are subject to exchange control approval, which may result in timing delays of approximately three to six weeks.

IP is a key focus area in M&A due diligence, typically assessed alongside data protection, cybersecurity and broader regulatory compliance considerations.

## Dispute Resolution

South Africa's dispute resolution framework is underpinned by an independent judiciary and a predictable commercial law framework that supports contract enforcement. Commercial disputes are typically resolved through the High Court, which operates divisional structures across the country. Recent court reforms have introduced mandatory mediation requirements in the Gauteng Division of the High Court, a procedural innovation designed to address case backlogs and capitalise on the high incidence of settlements occurring immediately before trial. International arbitration is well supported, and South Africa is a signatory to the New York Convention, facilitating the recognition and enforcement of foreign arbitral awards.

## Practical Observations

South Africa offers investors and those doing business in the country a compelling combination of advantages. The country is widely regarded as offering deep and liquid capital markets, an independent judiciary, predictable commercial law and a well-regulated financial sector. Its sophisticated and diversified economy is strategically located on the African continent, supported by membership in regional communities such as the Southern African Development Community (SADC) and the AfCFTA.

As cross-border African investment activity continues to evolve, driven by shifting trade dynamics, demand for critical minerals and infrastructure investment among other developments, investors are increasingly viewing South Africa as both a domestic market and a gateway into broader African operations through AfCFTA and other trade pathways.

Recent regulatory reforms and the removal of South Africa from the FATF grey list, alongside progress in energy and infrastructure sectors, have significantly bolstered market confidence.

South Africa welcomes foreign investment, having implemented numerous policies and programmes to encourage FDI, including a wide range of incentive schemes. The Protection of Investment Act ensures foreign investors are treated no less favourably than South African investors in like circumstances, and notably, the country does not operate a general FDI screening regime.

While corporates doing business in South Africa should be aware that in addition to the body of laws pertaining to B-BBEE, exchange control, employment, data protection, anti-money laundering, terrorist financing, and consumer protection, several emerging trends are also notably reshaping the regulatory and commercial landscape. Among these, cybersecurity preparedness, AI governance, ESG considerations and supply-chain integrity are front-of-mind considerations for boards.

Overall, the South African business environment is characterised by largely pragmatic and accelerated regulatory reform aligned with international best practice, underpinned by a high degree of legal certainty.

Those engaging experienced local advisers early are able to capitalise on the meaningful opportunities amid the global complexities that necessitate structuring commercially innovative, legally robust and responsive solutions to a rapidly evolving business landscape.

**Dentons Lee** is one of South Korea's longest operating law firms, with its base established in Seoul. Its practice has continuously grown and expanded to meet the evolving needs of both the domestic and international clients. Dentons Lee (formerly Lee International Law Office) offers a full range of legal services necessary for engaging in international business.

## Authors

**Heejun Choi** is a chief managing attorney at Dentons Lee. He is a premier litigation expert who handled numerous civil, criminal and public law cases during his 20 years of distinguished service as a judge at various court levels, including the Supreme Court and Seoul High Court. After retiring from the Seoul Southern District Court as a presiding judge in 2022, Mr Choi transitioned to private practice. He joined Dentons Lee in May 2024, where he remains dedicated to defending clients' rights by leveraging his deep legal knowledge and extensive experience accumulated as both a judge and an advocate.

**Kyoung-Ho Kim** is a senior attorney at Dentons Lee, specialising in cross-border transactions, international construction, energy, infrastructure, insurance and international arbitration. Qualified as both a Korean attorney and a Solicitor/Barrister of England & Wales (UK), he possesses extensive experience advising on complex EPC projects, nuclear power plants and industrial plants. His background includes serving as legal counsel at POSCO, KEPCO (UAE Barakah project) and major Korean law firms, as well as legal director at Onejoon Co Ltd. Mr Kim also regularly advises global insurers and reinsurers on high-value coverage and claims disputes, delivering strategic, commercially focused legal solutions.

**Sungsok Yang** provides expert legal advice on cross-border project financing, overseas investment, M&As, corporate restructuring and international trade. His practice spans infrastructure, ship financing, banking and general corporate matters, with a specialised focus on customs compliance, valuation and tariff issues within global supply chains. Representing both domestic and international lenders and borrowers, Sungsok structures complex financing transactions seamlessly. Bilingual in Korean and English, he serves as a trusted partner who bridges cultural and regulatory gaps, delivering exceptional legal services that actively support his clients' international business growth.

**Eunjee Kim** is an employment and labour law expert at Dentons Lee, having previously practised at a tier 1 Korean law firm. She advises domestic and international companies on the Labour Standards Act and corporate law. Additionally, she specialises in data privacy compliance (PIPA) in M&A, drawing on her unique experience as a local general counsel at a multinational corporation. Admitted to the Korean Bar (2004) and California Bar (2017), she holds an MBA from The Wharton School and a certified labour consultant qualification, offering practical, business-minded solutions for her diverse corporate clientele.

**Kwang-Chun Park** is highly experienced in finance, M&A and corporate advisory. His practice focuses on rendering legal advice to domestic and multinational clients in connection with cross-border M&A, joint ventures, foreign direct investment, industry-specific government regulations, and general corporate matters in Korea. He also regularly advises domestic and international financial institutions, asset management companies, and investors on complex financial transactions and regulatory restrictions. He possesses extensive experience in project financing, structured finance, and syndicated loans, as well as the establishment and operation of private equity funds (PEFs).

## 1. Legal System

### 1.1 Legal System and Judicial Order

South Korea is a civil law jurisdiction. Codified legislation is the primary source of law, with the legal hierarchy headed by the Constitution, followed by Acts of the National Assembly, presidential decrees, ministerial rules and local ordinances.

The principal areas of private and public law are governed by statutes, including:

- the Civil Act;
- the Commercial Act;
- the Criminal Act;
- the Civil Procedure Act; and
- the Criminal Procedure Act.

Judicial decisions are not formally binding under the doctrine of stare decisis. In practice, however, Supreme Court decisions carry significant persuasive authority and are generally followed by lower courts. Academic commentary also plays an important role in statutory interpretation.

The ordinary court system has a three-tier structure. District Courts serve as the principal courts of first instance, High Courts hear appeals and the Supreme Court is the court of final appeal. South Korea also has specialised courts, including the Patent Court, Family Courts, the Administrative Court and Bankruptcy Courts.

Separate from the ordinary judiciary, the Constitutional Court has jurisdiction over constitutional review of statutes, constitutional complaints, impeachment proceedings, dissolution of political parties and competence disputes between state organs.

Accordingly, South Korea's judicial system is best characterised as a civil law system with a three-tier ordinary court hierarchy, supplemented by specialised courts and a separate Constitutional Court.

## 2. Restrictions on Foreign Investments

### 2.1 Approval of Foreign Investments

Foreign investment in South Korea generally does not require prior governmental approval. Under the Foreign Investment Promotion Act ("FIPA"), most foreign investments are implemented through a filing or notification process rather than an approval regime.

To qualify as a "foreign investment" under the FIPA, an investment must generally be at least KRW100 million and result in either:

- the acquisition of 10% or more of the voting shares or equity interests of a Korean company; or
- the acquisition of an equity interest together with the right to appoint or dispatch officers.

A foreign investment report is ordinarily filed before completion, although certain transactions – including listed share acquisitions, mergers, stock-for-stock exchanges, inheritance, gifts, dividend reinvestment and conversions or exercises of convertible securities – may instead be reported after completion.

Prior approval or enhanced review is required only in limited circumstances, principally where national security or specially regulated industries are involved.

A foreign investor acquiring shares in a defence industry company must obtain prior approval from the Ministry of Trade, Industry and Energy ("MOTIE"). Even where no sector-specific approval is required, an investment may be subject to national security review if it results in effective managerial control over an existing Korean company and raises concerns such as:

- disruption to defence production;
- diversion of goods or technologies for military use;
- exposure of state secrets;
- material interference with international peace and security obligations; or
- leakage of national core technologies or national high-tech strategic technologies.

Such investments may be reviewed by MOTIE and the Foreign Investment Committee, which may impose corrective measures or require divestment.

South Korea also maintains a limited list of sectors wholly or partially restricted to foreign investment through prohibitions, foreign ownership caps or sector-specific approval or licensing requirements. These include defence-related businesses, broadcasting and certain media industries, air transport, financial services and businesses involving national core technologies or national high-tech strategic technologies. In some cases, approval from the relevant sector regulator is also required.

### 2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance

As noted in **2.1 Approval of Foreign Investments**, most foreign investments in South Korea are subject not to substantive approval but to a foreign investment reporting requirement under the Foreign Investment Promotion Act ("FIPA"). A foreign investor must generally file a foreign investment report with the relevant authority (typically a designated foreign exchange bank or KOTRA) before completing the investment. Once the report is accepted and a filing certificate issued, the investor may subscribe for or acquire shares and remit the investment funds. Upon completion and payment of capital, the foreign-invested company must complete the required post-closing registration procedures.

Certain transactions – including listed share acquisitions, mergers, comprehensive share exchanges or transfers, inheritance, gifts, dividend reinvestment and conversions or exercises of convertible securities – may instead be reported after completion within the statutory period.

A different regime applies to investments in defence industry companies. A foreign investor acquiring shares in such a company must obtain prior approval from the Ministry of Trade, Industry and Energy ("MOTIE"), following consultation with the Ministry of National Defence. The statutory review period is generally 15 days, extendable once and approval may be granted subject to conditions.

An investment may also be subject to national security review if it would result in effective managerial control over an existing Korean company and raise concerns such as the leakage of national core technologies, national high-tech strategic technologies or other matters affecting national security. Such investments may be reviewed by MOTIE and the Foreign Investment Committee.

The consequences of non-compliance depend on the nature of the breach.

Where a foreign investor acquires shares in a defence industry company without the required approval or in breach of approval conditions, the investor may not exercise the voting rights attached to those shares. MOTIE may also order the disposal of the shares and criminal sanctions, including imprisonment or criminal fines, under the FIPA may apply.

Failure to file a required foreign investment report for an ordinary investment may result in an administrative fine. Criminal penalties may also apply where false documents are submitted in connection with a report or approval application.

### 2.3 Commitments Required From Foreign Investors

Foreign investment approval in South Korea is generally not subject to extensive undertakings because the Foreign Investment Promotion Act ("FIPA") adopts a notification-based rather than approval-based regime. However, where an investment involves a sensitive sector or the investor seeks investment incentives, the authorities may impose conditions or require specific commitments.

The clearest example is an investment in a defence industry company. A foreign investor seeking prior approval to acquire shares in such a company may receive approval from the Ministry of Trade, Industry and Energy ("MOTIE"), following consultation with the Ministry of National Defence, subject to conditions designed to protect national security and continuity of defence operations. These may include:

- maintaining defence production;
- preserving security controls and preventing leakage of sensitive information or technology; and
- separating and disposing of defence-related facilities to a Korean national or Korean company where required.

Compliance with these conditions is required on an ongoing basis. Where the disposal of defence facilities is required, the investor may be restricted from participating in management until the disposal is completed.

Commitments also commonly arise where a foreign investor establishes operations in a Foreign Investment Zone ("FIZ") or seeks state or local investment incentives. These typically relate to:

- the amount and timing of the investment;
- the approved business activities;
- employment or job-creation targets; and
- maintenance of the minimum foreign shareholding required for the incentives.

Preferential treatment, such as reduced rent for state-owned or public land within an FIZ, is generally conditional on implementing the approved investment substantially in accordance with the submitted business plan. Failure to do so may result in:

- the withdrawal of incentives;
- the termination of occupancy or lease arrangements; or the recovery of previously granted benefits.

Where an investment is reviewed from a national security or strategic technology perspective, the authorities may also require safeguards, including restrictions on access to sensitive facilities, technology or information, governance-related limitations or other measures to ring-fence strategic assets or know-how.

### 2.4 Right to Appeal

If the Korean authorities refuse to authorise a foreign investment, the investor may, in principle, challenge the decision before the administrative courts.

Under Korean law, a refusal to grant approval, a permit or a similar authorisation may be challenged by an administrative cancellation action, provided it constitutes an administrative disposition affecting the applicant's legal interests. In the foreign investment context, this includes refusals under the Foreign Investment Promotion Act ("FIPA") or sector-specific legislation, including refusals to approve investments in defence industry companies.

The principal remedy is an action seeking cancellation of the refusal decision. The investor may argue that:

- the statutory requirements for approval were satisfied;
- the authority misinterpreted or misapplied the law;
- the decision was procedurally defective;
- the authority failed to observe the required consultation or review procedures; or
- in the case of a discretionary decision, the authority abused or exceeded its discretion.

The scope of judicial review depends on the nature of the administrative act. Where approval is essentially non-discretionary, the court reviews compliance with the statutory requirements. Where broader administrative discretion is involved (particularly in matters concerning defence, national security or strategic technology), the court generally reviews whether the authority acted within the lawful bounds of its discretion rather than substituting its own policy judgment.

An action must generally be filed within 90 days after the investor becomes aware of the refusal and in any event within one year of the decision. Where an administrative appeal is pursued first, the limitation period runs from the date of notification of the appeal decision.

If the court annuls the refusal, the investment is not automatically deemed approved. Instead, the authority must reconsider the application and issue a new decision in accordance with the court's judgment.

## 3. Corporate Vehicles

### 3.1 Most Common Forms of Legal Entity

The Korean Commercial Code recognises several corporate forms. In practice, however, the principal vehicles for business operations and foreign investment are:

- *chusik hoesa* (joint-stock company);
- *yuhan hoesa* (limited company); and
- *yuhan chaegim hoesa* (limited liability company).

As a general rule, there is no statutory minimum capital requirement and most entities may be established by a single shareholder or member, except partnership-type entities. For foreign investors, however, an investment of at least KRW100 million is generally required to qualify as a "foreign investment" under the Foreign Investment Promotion Act.

### Chusik Hoesa (Joint-Stock Company)

The *chusik hoesa* is Korea's standard corporate form and the vehicle most commonly used for medium-sized and large businesses. It is the only form that may be publicly listed and is therefore the default structure for IPOs and equity fundraising. Shareholders' liability is limited to their capital contribution.

Its governance structure comprises:

- a general meeting of shareholders;
- a board of directors;
- one or more representative directors; and
- where required, a statutory auditor or audit committee.

A *chusik hoesa* may be established by a single shareholder without any minimum capital requirement. Owing to its familiarity with investors and lenders and its suitability for capital raising, it is commonly used for large operating businesses, multi-investor joint ventures, holding company structures and businesses contemplating future public offerings or external investment.

### Yuhan Hoesa (Limited Company)

The *yuhan hoesa* is a closely held limited liability company. Members' liability is limited to their contributions and no minimum capital is required. Compared with a *chusik hoesa*, it is intended for a closed ownership structure, with membership interests that are less freely transferable. It is therefore commonly used for wholly owned Korean subsidiaries, closely held businesses, closed joint ventures and companies with no expectation of accessing public capital markets.

### Yuhan Chaegim Hoesa (Limited Liability Company)

Introduced in 2012, the *yuhan chaegim hoesa* is often compared to a US-style LLC, although it is treated as a corporation rather than a tax-transparent entity under Korean law. Its principal attraction is governance flexibility, with management arrangements largely determined by the articles of incorporation rather than a formal board structure. It is frequently used for negotiated joint ventures, start-ups, project-based enterprises and other investment structures that require contractual flexibility.

### Less Common Forms

The Korean Commercial Code also recognises *hapmyeong hoesa* (general partnership) and *hapja hoesa* (limited partnership). Because these forms involve unlimited liability for at least some participants, they are rarely used in mainstream commercial practice or inbound foreign investment.

## 3.2 Incorporation Process

Companies in Korea are incorporated through a registration-based process rather than by governmental charter.

For foreign investors, the most common corporate forms are *chusik hoesa*, *yuhan hoesa* and *yuhan chaegim hoesa*, all of which follow broadly similar incorporation procedures.

Where the investment is intended to qualify as a foreign investment under the Foreign Investment Promotion Act ("FIPA"), the process generally begins with a foreign investment report filed with a designated foreign exchange bank or KOTRA. Once accepted, the investor remits the capital contribution to a Korean bank.

The company is then organised under the Korean Commercial Code through:

- preparation of the articles of incorporation;
- appointment of directors (and, where applicable, an auditor); and
- adoption of the necessary incorporation resolutions.

For a *chusik hoesa*, this ordinarily includes an inaugural shareholders' meeting and, where applicable, appointment of the representative director by the board.

Following payment of capital, the company files for incorporation registration with the competent court registry. Legal personality arises upon registration, typically within two to three business days.

The company must then obtain business registration from the tax office, generally within a further five business days. Where applicable, post-closing registration as a foreign-invested company must also be completed.

The usual sequence is:

- foreign investment report (where applicable);
- capital remittance and incorporation documentation;
- corporate approvals and officer appointments;
- incorporation registration; and
- business registration and foreign-invested company registration.

Absent regulatory approvals, in-kind contributions or document execution delays, incorporation can often be completed within one to two weeks, although additional time may be required for regulated businesses or when foreign documents must be notarised, apostilled or translated.

### 3.3 Ongoing Reporting and Disclosure Obligations

Although private companies in Korea are subject to fewer disclosure obligations than listed companies, they remain subject to ongoing corporate, accounting and registration requirements.

The principal obligations arise under the commercial registry system. Certain corporate changes must be registered and become publicly accessible, including:

- appointment, resignation or removal of directors, auditors and representative directors;
- changes to the company name, head office, business purpose or other registered particulars; and
- amendments affecting matters recorded in the commercial register.

These changes must generally be registered within two weeks.

Private companies must also prepare annual financial statements and obtain approval in accordance with the applicable corporate procedures. For a *chusik hoesa*, approval is generally obtained at the annual shareholders' meeting, although board approval is permitted in limited circumstances. Companies must also maintain accounting books and records.

Certain companies meeting statutory thresholds are subject to external audit requirements, including:

- the appointment of an external auditor;
- the submission of audited financial statements; and
- compliance with enhanced accounting and internal control requirements.

Korea does not maintain a general public register of beneficial ownership for private companies. Beneficial ownership information nevertheless remains relevant for anti-money laundering and KYC compliance, regulated industries and certain sector-specific reporting obligations.

Accordingly, although private companies are not subject to the continuous market disclosure obligations applicable to listed companies, they remain subject to significant registry, reporting and financial compliance requirements.

### 3.4 Management Structures

The governance structure of a Korean company depends on its corporate form. In practice, the principal forms are *chusik hoesa*, *yuhan hoesa* and *yuhan chaegim hoesa*.

#### Chusik Hoesa

The *chusik hoesa* has the most formal governance structure, comprising:

- the shareholders' meeting;
- the board of directors;
- one or more representative directors; and
- a statutory auditor or audit committee, where required.

The board makes major management decisions and supervises directors, while the representative director manages the company's day-to-day affairs and rep-

resents it externally. The structure broadly resembles a one-tier board supplemented by a separate audit function.

For companies with paid-in capital below KRW1 billion, the governance structure may be simplified and a board or statutory auditor is generally not required.

#### Yuhan Hoesa

A *yuhan hoesa* is managed by one or more directors without a board of directors. Management authority is vested directly in the director(s), subject to matters reserved to the members' meeting. A statutory auditor is optional.

#### Yuhan Chaegim Hoesa

The *yuhan chaegim hoesa* provides the greatest contractual flexibility. Management is vested in one or more managers designated in the articles of incorporation and governance arrangements, including management authority and representation rights, may be extensively customised without a statutory board.

### 3.5 Directors', Officers' and Shareholders' Liability

Directors owe duties of care and loyalty to the company. A director who intentionally or negligently breaches the law, the articles of incorporation or those duties may be liable to the company for resulting damages.

Where a wrongful act is approved by board resolution, directors voting in favour may be jointly and severally liable. Directors participating in the resolution are presumed to have approved it unless their objection is recorded in the minutes.

Directors also owe supervisory duties and may be liable for failing adequately to supervise the affairs of the company, including the conduct of fellow directors and officers. Outside or non-executive directors are not automatically exempt. Directors may also incur liability to third parties where damage is caused through wilful misconduct or gross negligence.

Korean law further recognises liability for de facto directors who effectively direct or control the company's affairs. Statutory auditors and audit committee members may likewise incur liability for failing properly to perform their supervisory functions.

As a general rule, shareholders of a *chusik hoesa*, *yuhan hoesa* and *yuhan chaegim hoesa* enjoy limited liability up to the amount of their contributions.

Korean courts nevertheless recognise a limited doctrine of piercing the corporate veil. A company's separate legal personality may be disregarded where the corporate form is abused to evade legal obligations or the company functions merely as an instrumentality of its controlling shareholder. The doctrine is applied sparingly. Sole ownership, close control or parent-subsidiary status alone are insufficient; courts generally require exceptional circumstances such as:

- commingling of assets;
- disregard of corporate formalities;
- abuse combined with undercapitalisation;
- use of the company to evade existing liabilities; or
- operation of the company as the alter ego of its controller.

Accordingly, limited liability remains the general rule, although directors, de facto managers and, in exceptional circumstances, controlling shareholders may incur liability where the corporate form is abused.

## 4. Employment Law

### 4.1 Nature of Applicable Regulations

Employment relationships in Korea are governed by statutory law, case law, collective bargaining agreements, work rules and individual employment contracts. Statutory law is the primary source and many employment protections are mandatory.

The principal statute is the Labour Standards Act ("LSA"), which establishes minimum standards for wages, working hours, overtime, annual leave, dismissal, disciplinary measures and other working conditions. Any contractual or internal provision falling below these standards is generally invalid and replaced by the applicable statutory rule.

Other key legislation includes:

- the Minimum Wage Act;
- the Employee Retirement Benefit Security Act;
- the Act on the Protection of Fixed-term and Part-time Employees;
- the Act on the Protection of Temporary Agency Workers;
- the Equal Employment Opportunity and Work-Family Balance Assistance Act; and
- legislation governing mandatory social insurance, including:
  (a) the national pension;
  (b) national health insurance;
  (c) employment insurance; and
  (d) industrial accident compensation insurance.

Collective labour rights are governed by the Trade Union and Labour Relations Adjustment Act, which regulates trade unions, collective bargaining, collective agreements, industrial action and unfair labour practices. Collective agreements may have a normative effect on covered employees and, in some circumstances, other employees within the same workplace and employee category.

Many employers must also maintain work rules governing working conditions and workplace discipline. These cannot provide terms less favourable than those set by mandatory legislation or applicable collective agreements and adverse amendments generally require employee consent under the statutory procedure.

Individual employment contracts define matters such as duties, wages, workplace and working hours. However, contractual freedom is limited by mandatory employment legislation, collective agreements and valid work rules, with more favourable contractual terms generally prevailing over less favourable work rules.

Although Korea is a civil law jurisdiction in which statutes are the primary source of employment law, Supreme Court precedents are highly influential, particularly in determining employee status, assessing dismissals, interpreting ordinary wages, evaluating amendments to work rules and distinguishing employment from independent contractor relationships.

Accordingly, Korean employment law is best characterised as a mandatory statutory framework supplemented by collective agreements, work rules, individual contracts and influential case law, with statutory minimum standards forming the baseline of the employment relationship.

### 4.2 Characteristics of Employment Contracts

The employer must specify matters including wages, prescribed working hours, holidays and annual paid leave, together with the components, calculation method and payment method of wages. Failure to comply with these written notification requirements may result in statutory sanctions, but does not invalidate the employment relationship.

Additional written requirements apply to certain categories of employees. Fixed-term and part-time employees must receive written terms covering the employment period, working hours, wages, holidays, leave, place of work and duties. Separate written formalities also apply to dismissal notices, which must generally state the reason for dismissal and its effective date.

Employment contracts may be either indefinite-term or fixed-term. A fixed-term employee may generally be employed for up to two years, after which the employment is deemed indefinite unless a statutory exception applies, including project-based employment, replacement of an absent employee, education or vocational training, employment of certain senior employees or other grounds recognised by law.

Even where a contract specifies a fixed term, Korean courts may examine its substance. If the fixed term is merely formal or the employee has a legitimate expectation of renewal based on the contract, work rules, a collective agreement, repeated renewals or other circumstances, refusal to renew without reasonable grounds may constitute an unfair dismissal.

Probationary periods are permitted, but the employment relationship is regarded as having commenced from the outset. Refusal to confirm employment following probation must be supported by reasonable grounds relating to the employee's suitability, per-

formance or qualifications and the statutory written notice requirements for dismissals may also apply.

### 4.3 Working Time

Under the Labour Standards Act, standard working hours are limited to 40 hours per week and eight hours per day, excluding recess periods. A "week" means seven days, including holidays and time during which an employee remains under the employer's direction or supervision, including certain waiting time, constitutes working time.

Korean law does not prescribe a statutory minimum working time for ordinary employees. However, employees whose prescribed working hours average less than 15 hours per week over a four-week period are generally excluded from statutory weekly paid holidays, annual paid leave and, in some cases, retirement benefit coverage.

Overtime is permitted only within statutory limits. With the employee's agreement, an employer may require up to 12 hours of overtime per week, resulting in a maximum 52-hour working week.

Overtime must be compensated at a premium of at least 50% above ordinary wages. The same premium generally applies to night work between 10pm and 6am. Holiday work attracts a premium of at least 50% for the first eight hours and 100% thereafter.

Work exceeding contractual hours but remaining within the statutory maximum does not automatically attract the statutory overtime premium unless otherwise provided by the employment contract, work rules or a collective bargaining agreement.

Employers must provide statutory rest breaks of at least 30 minutes after four hours of work and one hour after eight hours, including where working hours are extended.

The Labour Standards Act also recognises flexible, selective, deemed and discretionary working-hour systems, together with special rules for certain industries and categories of employees, subject to statutory requirements.

Accordingly, the basic rule in Korea is a 40-hour working week with a 12-hour weekly overtime limit, subject to mandatory overtime premiums and limited statutory exceptions.

### 4.4 Termination of Employment Contracts

Korea is not an employment-at-will jurisdiction. Under the Labour Standards Act, an employer may not dismiss, suspend, transfer, reduce wages or otherwise discipline an employee without just cause. Employer-initiated termination is therefore subject to substantive and procedural requirements.

Employment may terminate by expiry of a fixed-term contract, retirement, resignation, mutual agreement or dismissal. A unilateral termination generally constitutes a dismissal and must be supported by just cause, assessed by reference to whether continued employment would be socially unreasonable in the circumstances.

Dismissal must comply with statutory procedures. The employer must provide written notice stating the reason and effective date of dismissal; otherwise, the dismissal is generally invalid. In addition, the employer must give at least 30 days' notice or 30 days' ordinary wages in lieu, unless a statutory exception applies, such as employment of less than three months or serious wilful misconduct.

Employees are also protected during specified periods, including leave for work-related injury or illness and maternity leave, as well as the applicable post-leave protection periods.

An unfair dismissal is generally invalid. Employees may seek relief before the Labour Relations Commission, generally within three months of dismissal or pursue court proceedings. Remedies include reinstatement, back pay and, exceptionally, tort damages.

Upon termination, employers must settle unpaid wages and other statutory payments, generally within 14 days unless otherwise agreed. Employees with at least one year of continuous service are generally entitled to statutory severance or retirement benefits of at least 30 days' average wages for each year of service.

### Collective Redundancies

Collective redundancy (dismissal for managerial reasons) is separately regulated under the Labour Standards Act. The employer must satisfy four requirements:

- an urgent business necessity;
- best efforts to avoid dismissal;
- reasonable and fair selection criteria; and
- advance notice to and good-faith consultation with, the relevant employee representative.

Where a majority trade union exists, it acts as the employee representative; otherwise, consultation must take place with a representative of the majority of employees. The redundancy plan must generally be notified at least 50 days before the intended dismissal date and, where statutory thresholds are met, reported to the Ministry of Employment and Labour.

Unless otherwise provided by a collective bargaining agreement, work rules, an employment contract or a voluntary separation programme, no separate statutory redundancy payment is required beyond ordinary termination entitlements. Employees remain entitled to accrued wages, payment in lieu of notice where applicable, unused statutory leave payments and statutory severance or retirement benefits.

Failure to satisfy these statutory requirements may render the dismissals invalid, entitling affected employees to reinstatement and back pay.

## 4.5 Employee Representations

Korean law requires employee representation, information or consultation in specified circumstances. The principal mechanisms are:

- the labour-management council under the Act on the Promotion of Workers' Participation and Cooperation; and
- the employee representative system under the Labour Standards Act and related legislation.

These operate separately from, but may coexist with, trade unions.

A labour-management council must be established at any business or workplace ordinarily employing 30 or more employees. It consists of an equal number of employer and employee representatives, generally between three and ten on each side. Employee representatives are elected by direct, secret ballot unless a trade union representing a majority of employees exists, in which case the union appoints them.

The council promotes labour-management cooperation rather than replacing collective bargaining. Employers must report or explain specified management matters and the council exercises consultation and, in some cases, resolution functions in areas such as productivity, training, welfare, occupational safety and labour-management policies.

Separately, the Labour Standards Act requires consultation or written agreement with an employee representative in specified circumstances. Where a majority trade union exists, it acts as the employee representative; otherwise, a representative must be democratically selected by the majority of employees.

Employee representative involvement is required for:

- collective redundancies;
- certain flexible, selective and discretionary working-time arrangements;
- substitution of paid leave for overtime pay;
- substitution of annual paid leave; and
- unfavourable amendments to work rules.

Depending on the statute, the employer may be required to consult in good faith or obtain a written agreement or consent. Failure to do so may affect the validity of the employer's action, particularly in relation to collective redundancies and adverse amendments to work rules.

Trade unions remain distinct from both the labour-management council and the statutory employee representative system. They conduct collective bargaining and conclude collective agreements with normative effect, whereas the labour-management council primarily serves as a cooperative consultation body.

Accordingly, Korean law does not require employee representation for ordinary management decisions

but mandates employee information, consultation or consent for specified matters, particularly workforce restructuring, working-time arrangements and adverse changes to employment conditions.

## 5. Tax Law

### 5.1 Taxes Applicable to Employees/ Employers

In Korea, the principal tax and social security obligations arising from employment are the individual income tax, the local income tax and mandatory social insurance contributions.

Employees are subject to Korean income tax on employment income. Korean tax residents are generally taxed on worldwide income, while non-residents are taxed only on Korean-source income. Employment income includes salary, wages, bonuses, allowances and other employment-related compensation. Employers must withhold and remit income tax and conduct a year-end tax settlement.

Employment income is taxed at progressive national rates of 6% to 45%, depending on taxable income after applicable deductions. Local income tax is levied at 10% of the national income tax, resulting in a combined top marginal rate of 49.5% before deductions, credits or special tax regimes. Certain foreign employees may qualify for preferential tax treatment, subject to statutory conditions.

Employees and employers must also contribute to the:

- National Pension;
- National Health Insurance (including long-term care insurance);
- Employment Insurance; and
- Industrial Accident Compensation Insurance.

National Pension and National Health Insurance contributions are generally shared equally. Employment Insurance is funded by both parties for unemployment benefits, with additional employer contributions for employment security programmes, while Industrial Accident Compensation Insurance is borne entirely by the employer.

Employers are responsible for withholding employees' taxes and social insurance contributions and remitting both the employee's and employer's portions to the relevant authorities. Failure to comply may result in surcharges, penalties or other sanctions.

Accordingly, employees bear income tax, local income tax and their share of social insurance contributions, while employers act as withholding agents and bear their own contributions, including the full cost of Industrial Accident Compensation Insurance.

### 5.2 Taxes Applicable to Businesses

A company doing business in Korea may be subject to corporate income tax, local income tax, value-added tax ("VAT"), withholding tax and other transaction- or industry-specific taxes.

A Korean company is generally taxed on its worldwide income, while a foreign company is generally taxed only on Korean-source income, including income attributable to a permanent establishment in Korea.

Corporate income tax is imposed at progressive rates:

- 10% on the first KRW200 million of taxable income,
- 20% on taxable income over KRW200 million and up to KRW20 billion,
- 22% on taxable income over KRW20 billion and up to KRW300 billion and
- 25% on taxable income exceeding KRW300 billion.

Local income tax is imposed at 10% of the corporate income tax liability, resulting in a combined top marginal rate of approximately 27.5%.

VAT is levied at the standard rate of 10% on the supply of goods, services and imports, although exports and certain goods or services are zero-rated or exempt.

Companies may also have withholding obligations. Dividends, interest and royalties paid to non-residents or foreign companies without a Korean permanent establishment are generally subject to Korean

withholding tax, subject to any applicable tax treaty. Dividends and interest paid to residents are likewise generally subject to withholding tax.

Other taxes may apply depending on the company's activities and assets, including securities transaction tax, acquisition tax, property tax, stamp duty, customs duties and, where applicable, the special tax for rural development.

Korea has implemented the OECD Pillar Two global minimum tax regime, generally applying to multinational enterprise groups with consolidated annual revenue of at least EUR750 million and a minimum effective tax rate of 15%. The Income Inclusion Rule applies from fiscal years beginning on or after 1 January 2024. Korea has also introduced or is implementing, a Qualified Domestic Minimum Top-Up Tax regime, although its qualification for the OECD QDMTT safe harbour remains subject to OECD peer review.

### 5.3 Available Tax Credits/Incentives

Korea offers a range of tax credits and incentives, primarily under the Restriction of Special Taxation Act. These are interpreted strictly and taxpayers must satisfy the applicable statutory requirements and retain supporting documentation.

A principal incentive is the research and development ("R&D") tax credit. Companies incurring qualifying R&D or human resources development expenses may be eligible for corporate income tax credits, with preferential rates for SMEs and certain qualifying technologies. Eligibility generally requires that both the activities and expenses satisfy the statutory criteria.

Korea also provides incentives for SMEs, including partial reductions of corporate or individual income tax for qualifying businesses, depending on company size, business type and location.

Investment-related incentives include tax credits for qualifying investments in facilities, equipment and other business assets, particularly those that promote productivity, strategic industries, energy efficiency, digital transformation and regional investment.

Employment-related incentives are available to companies that increase employment, convert non-regular employees to regular employees, retain employees returning from childcare leave or otherwise satisfy statutory employment requirements, generally subject to maintaining employment levels for a prescribed period.

Foreign-invested companies may qualify for incentives in limited circumstances, particularly where investments involve qualifying high-technology businesses, industrial support services or operations in foreign investment zones or free economic zones. Benefits may include reductions or exemptions from certain national or local taxes, subject to statutory conditions.

Additional incentives are available for start-ups, venture companies, regional or environmental investment and certain strategic industries. Availability depends on the taxpayer's status, business sector, investment, location and compliance with statutory requirements.

The combined use of tax incentives is restricted. Where multiple incentives apply to the same income or investment, taxpayers may be required to elect one unless concurrent application is expressly permitted. Minimum tax and carry-forward rules may also affect the amount and timing of available benefits.

Accordingly, although Korea offers a broad range of tax incentives, their availability is highly fact-specific and depends on the taxpayer's activities, investment structure and compliance with statutory requirements.

### 5.4 Tax Consolidation

Korea operates a consolidated tax return regime for qualifying corporate groups. Subject to statutory requirements and prior approval from the tax authorities, a Korean parent company and its qualifying Korean subsidiaries may calculate and file corporate income tax on a consolidated basis.

The regime is available only to Korean domestic corporations. A foreign company cannot be the consolidated parent or subsidiary itself, although Korean subsidiaries of a foreign group may qualify if the statutory ownership requirements are met.

The principal eligibility requirement is ownership. A Korean parent company must generally hold, directly or indirectly, at least 90% of the issued shares or equity interests of each subsidiary. All qualifying subsidiaries must generally be included; selective inclusion is not permitted. Certain entities, including non-profit corporations, companies in liquidation and other entities specified by law, are excluded.

The regime is not automatic. The parent company must obtain approval from the competent tax office and generally remain within the regime for a minimum period.

The parent company is responsible for filing the consolidated return and paying the consolidated corporate income tax. Group companies may bear joint and several liability, with the tax burden allocated internally.

A newly qualifying subsidiary may join the consolidated group from the following taxable year, while a subsidiary that ceases to satisfy the statutory requirements must leave the group in accordance with the applicable rules.

The regime may also be applied for local corporate income tax purposes and is primarily used to offset profits and losses among qualifying domestic subsidiaries, thus simplifying group tax reporting.

### 5.5 Thin Capitalisation Rules and Other Limitations

Korea applies thin capitalisation rules and other interest deductibility limitations to prevent excessive debt financing and base erosion.

Under the International Tax Coordination Law, the thin capitalisation regime applies to borrowings from certain foreign related parties. Where a Korean company's debt to a foreign related party exceeds the prescribed debt-to-equity ratio, interest attributable to the excess debt may be disallowed and treated as a deemed dividend. The standard debt-to-equity ratio is generally 2:1, although a higher ratio applies to certain financial businesses.

Korea has also implemented an earnings-based interest limitation rule broadly consistent with the OECD BEPS Action 4 recommendations. Where net interest expense to foreign related parties exceeds 30% of adjusted taxable income (broadly comparable to tax EBITDA), the excess may be non-deductible for corporate income tax purposes. Certain financial institutions and other specified entities are excluded.

The Corporate Income Tax Act further restricts interest deductibility for non-business assets, non-business loans to related parties, unidentified creditors or recipients and certain capitalised or restricted financing costs. Participation exemption and dividend-received deduction rules may also reduce the benefit of dividend relief by taking related interest expense into account.

Transfer pricing rules may likewise affect related-party financing. Interest rates and financing terms must satisfy the arm's-length principle and the tax authorities may adjust taxable income when it differs from that agreed between independent parties.

### 5.6 Transfer Pricing

Korea has a comprehensive transfer pricing regime governing transactions between Korean taxpayers and foreign-related parties. The regime is primarily set out in the International Tax Coordination Law ("ITCL") and applies the arm's-length principle to cross-border related-party transactions.

Under the ITCL, where the pricing or other terms of an international transaction differ from those that would have been agreed between independent parties, the Korean tax authorities may adjust the taxpayer's income and tax liability. The rules apply to transactions, including the sale of goods, the provision of services, the licensing of intellectual property, financing arrangements and other cross-border dealings.

Korea recognises transfer pricing methods broadly aligned with the OECD Transfer Pricing Guidelines, including:

- the comparable uncontrolled price (CUP) method;
- the resale price method;
- the cost-plus method;

- the profit split method;
- the transactional net margin method (TNMM); and
- other appropriate methods where these cannot be reliably applied.

The most appropriate method is selected having regard to the nature of the transaction and the availability, reliability and comparability of data. The Korean tax authorities bear the burden of justifying a transfer pricing adjustment, although taxpayers may be required to substantiate their pricing once an arm's-length range has been established.

Korea also operates an Advance Pricing Agreement ("APA") programme. APAs may be unilateral, bilateral or multilateral, with bilateral and multilateral APAs generally pursued through mutual agreement procedures under applicable tax treaties.

Depending on the size of the multinational group and the volume of related-party transactions, taxpayers may be required to submit transfer pricing disclosures, a Master File, a Local File and a Country-by-Country Report (CbCR), while maintaining supporting documentation.

Although the OECD Transfer Pricing Guidelines do not have direct legal force in Korea, they are frequently relied upon by the tax authorities and courts as persuasive guidance.

## 5.7 Anti-Evasion Rules

Korea has a comprehensive anti-avoidance regime comprising both a general anti-avoidance rule ("GAAR") and specific anti-avoidance rules ("SAARs").

At the general level, Korean tax law applies the substance-over-form principle under the Framework Act on National Taxes. Taxation is based on the economic substance of income, assets, transactions and legal arrangements rather than their legal form. Where the nominal recipient differs from the true economic beneficiary or transactions are structured primarily to obtain inappropriate tax benefits, the tax authorities may recharacterise the arrangement according to its economic substance. In practice, this principle functions as Korea's principal GAAR.

Specific anti-avoidance rules apply to both domestic and international transactions. Domestically, the Corporate Income Tax Act permits the tax authorities to disregard related-party transactions that unreasonably reduce the taxpayer's tax burden and recompute taxable income on an arm's-length or objectively reasonable basis.

For international transactions, the International Tax Coordination Law provides for:

- transfer pricing rules;
- thin capitalisation rules;
- earnings-based interest limitation rules;
- controlled foreign corporation (CFC) rules; and
- anti-treaty-shopping and other anti-abuse provisions.

Korea also applies anti-avoidance rules to nominee arrangements and beneficial ownership, including deemed-gift and beneficial ownership provisions designed to prevent tax avoidance through nominal ownership structures.

In addition, Korea has implemented OECD BEPS measures, including transfer pricing documentation requirements, interest limitation rules and the Pillar Two global minimum tax framework.

Although the tax authorities may challenge arrangements lacking genuine economic substance or business purpose, taxpayers remain free to organise their affairs in a tax-efficient manner.

## 5.8 Tariffs

Korea imposes customs duties primarily under the Customs Act. Duties are generally levied on imported goods based on tariff classification, customs value and country of origin.

The tariff regime comprises basic statutory tariffs, adjusted and seasonal tariffs, tariff-rate quotas, safeguards, anti-dumping, countervailing and retaliatory duties, together with preferential rates under free trade agreements ("FTAs"). Where multiple rates apply, priority is determined under the Customs Act and related regulations.

For many industrial goods, tariff rates are relatively moderate and a substantial proportion of imports benefit from Korea's extensive FTA network, including agreements with the United States, the European Union, China, ASEAN, Australia and New Zealand. Importers claiming preferential rates must satisfy the applicable rules of origin and documentation requirements.

The highest tariffs generally apply to sensitive agricultural, livestock and food products, protected through tariff-rate quotas and high out-of-quota tariff rates.

Korea also makes active use of trade remedy measures. Anti-dumping duties may be imposed where dumped imports cause material injury to a domestic industry, while countervailing duties and safeguard measures are also available.

Accordingly, Korea combines a generally liberalised tariff regime for industrial goods with targeted protection for sensitive agricultural products and selected industries through tariff-rate quotas, trade remedies and FTA-based preferential tariff rules.

## 6. Competition Law

### 6.1 Merger Control Notification

Korea operates a mandatory merger control regime under the Monopoly Regulation and Fair Trade Act ("MRFTA"). Certain mergers, acquisitions and other transactions constituting a business combination must be notified to the Korea Fair Trade Commission ("KFTC") where the applicable jurisdictional thresholds are met.

The regime is based primarily on party size rather than market share. Accordingly, a filing may be required even where the parties have limited market shares, although competitive effects remain central to the KFTC's substantive review.

Reportable business combinations generally include:

- acquisitions of shares exceeding the prescribed ownership threshold;
- additional share acquisitions resulting in the acquirer becoming the largest shareholder;
- mergers;
- acquisitions of all or a substantial part of another company's business;
- certain interlocking directorates; and
- formation of joint ventures where a participant becomes the largest shareholder.

For share acquisitions, notification is generally required when the acquirer obtains more than 20% of the voting shares of a non-listed company or more than 15% of the voting shares of a listed company. Subsequent acquisitions may also be reportable where they result in the acquirer becoming the largest shareholder.

A filing is generally required when one party (together with its affiliates) has assets or annual sales of at least KRW300 billion and the other has at least KRW30 billion.

Korea has also introduced a transaction-value filing regime for acquisitions of innovative businesses with limited current revenue where the transaction value exceeds the statutory threshold and the target has a significant business presence in Korea.

Although market share is not a jurisdictional threshold, it remains central to the KFTC's substantive assessment and the KFTC may prohibit or impose remedies on transactions that substantially lessen competition.

Accordingly, merger notification in Korea is determined principally by the type of transaction and the size of the parties (or, in certain cases, transaction value and Korean nexus) rather than market share.

### 6.2 Merger Control Procedure

The merger control process in Korea is administered by the Korea Fair Trade Commission ("KFTC") under the Monopoly Regulation and Fair Trade Act ("MRFTA").

The first step is to determine whether the transaction constitutes a reportable business combination and satisfies the applicable jurisdictional thresholds. If so, the parties must determine whether pre-closing or post-closing notification is required.

As a general rule, merger notifications are filed after closing and must generally be submitted within 30 days. However, transactions involving large companies or subject to the transaction-value filing regime require notification after execution of the transaction documents but before completion.

The filing must be submitted to the KFTC with information on the parties, ownership structure, assets and turnover, the transaction, relevant markets and other information necessary for the competitive assessment, together with supporting documents such as transaction agreements and corporate resolutions. Simplified procedures may be available for transactions unlikely to raise substantive competition concerns, including certain intra-group transactions. Where multiple parties have filing obligations, the notification is generally filed jointly.

Following receipt of the filing, the KFTC conducts its review. The statutory review period is generally 30 days, but may be extended by up to 90 days where further examination is required. Transactions raising no significant competition concerns are often cleared within the initial review period.

For transactions requiring pre-closing notification, completion is generally prohibited until the KFTC has completed its review and any applicable waiting period has expired.

Following its review, the KFTC may:

- clear the transaction unconditionally;
- clear it subject to structural or behavioural remedies; or
- prohibit the transaction where it would substantially lessen competition.

Accordingly, the Korean merger control process consists of determining whether a filing is required, submitting the notification, KFTC review and clearance, conditional clearance or prohibition.

### 6.3 Cartels

Korea maintains a comprehensive competition law regime under the Monopoly Regulation and Fair Trade Act ("MRFTA"), prohibiting cartels, abuse of market dominance and unfair trade practices.

The MRFTA prohibits agreements, concerted practices and other forms of coordination between competitors that unreasonably restrict competition. Prohibited conduct includes:

- price fixing;
- allocation of customers, suppliers or geographic markets;
- output restrictions;
- restrictions on investment or production capacity;
- bid rigging; and
- other coordination that substantially restricts competition.

The existence of an agreement or concerted practice is generally sufficient to establish a violation; implementation need not be proved. Price-fixing and bid-rigging are treated as particularly serious infringements.

The MRFTA also prohibits abuse of a dominant market position and regulates unfair trade practices, including discriminatory treatment, tying arrangements, unfair customer inducement and interference with business activities.

Korea applies an effects-based approach to competition law. The MRFTA extends to conduct occurring outside Korea that affects the Korean market, allowing the investigation of foreign companies whose conduct affects competition or customers in Korea.

The Korea Fair Trade Commission ("KFTC") has broad enforcement powers, including corrective orders, administrative fines and, in serious cases, criminal referrals. Businesses harmed by anti-competitive conduct may also bring private damages claims and Korea operates a leniency programme under which cartel participants who co-operate may receive reduced penalties.

Accordingly, Korea maintains a robust competition law regime prohibiting cartels, abuse of dominance and unfair trade practices, with both domestic and extra-

territorial application based on effects in the Korean market.

### 6.4 Abuse of Dominant Position

Korea regulates both unilateral conduct by dominant firms and conduct based on economic dependence under the Monopoly Regulation and Fair Trade Act ("MRFTA").

A company may be regarded as dominant where it can determine, maintain or change prices, output, quality or other trading conditions in the relevant market. Market dominance is presumed where a company holds at least 50% market share or where three or fewer companies together hold at least 75%, subject to statutory exceptions.

A dominant company may not abuse its position by:

- unfairly determining or maintaining prices;
- unjustifiably restricting output or supply;
- interfering with competitors' business activities;
- impeding market entry;
- excluding competitors through unfair practices; or
- otherwise materially harming consumer interests.

The assessment focuses on whether the conduct has or is likely to have, an anti-competitive effect in the relevant market, rather than merely harming an individual trading partner.

The MRFTA also regulates unfair trade practices, including abuse of a superior bargaining position. This regime applies even where a company is not dominant, particularly where one party is economically dependent on another.

Prohibited conduct includes:

- forcing unwanted purchases;
- compelling economic benefits;
- imposing disadvantageous trading terms;
- interfering with management; or
- otherwise placing the counterparty at an unfair disadvantage.

Sector-specific legislation on subcontracting, franchising, large-scale retail businesses and agency or distribution relationships supplements the MRFTA.

The MRFTA applies on an effects basis. Conduct occurring outside Korea may therefore be subject to Korean competition law where it has a sufficient effect on the Korean market, although international comity and conflicts with mandatory foreign law may also be relevant.

Accordingly, Korea regulates unilateral conduct through both the abuse of dominance and superior bargaining position rules, which may also apply to foreign conduct that affects competition in the Korean market.

## 7. Intellectual Property

### 7.1 Patents

Under the Korean Patent Act, an invention is a highly advanced creation of technical ideas using the laws of nature. Patentable inventions include products, methods and methods of producing products. A patent grants the exclusive right to commercially exploit the invention in Korea.

The scope of protection is determined primarily by the claims, interpreted in light of the specification and drawings, without extending or restricting the claim language.

A patent generally lasts 20 years from the filing date and takes effect upon registration. In certain regulated sectors, including pharmaceuticals and agrochemicals, the term may be extended to compensate for regulatory approval delays.

Patent registration is administered by the Korean Intellectual Property Office ("KIPO"). Applications are examined for formal and substantive requirements, including:

- industrial applicability;
- novelty;
- inventive step; and
- sufficiency of disclosure.

If no grounds for refusal exist, the patent is registered upon payment of the registration fee. Korea also recognises a statutory grace period for certain prior disclosures made by or against the will of, the applicant.

Patent infringement may arise through direct infringement, the doctrine of equivalents or certain forms of indirect infringement. Direct infringement generally requires that all elements of the patented claim be present, while equivalent infringement is recognised, subject to limitations including prior art and prosecution history estoppel.

Patent rights may be enforced through civil proceedings. Available remedies include:

- injunctions;
- destruction of infringing products or facilities;
- damages; and
- measures to restore business reputation where appropriate.

Damages may be assessed by reference to lost profits, the infringer's profits, a reasonable royalty or another court-determined measure. Wilful infringement may attract enhanced damages of up to five times the actual damages.

Patent validity may be challenged through an invalidation trial before the Intellectual Property Trial and Appeal Board. A finally invalidated patent is generally deemed never to have existed and courts may refuse enforcement of a clearly invalid patent on abuse-of-rights grounds.

Intentional patent infringement may also give rise to criminal liability, including corporate liability where applicable.

### 7.2 Trade Marks

Under the Korean Trademark Act, a trade mark is a sign used to distinguish one person's goods or services from those of others. Registrable marks include words, figures, symbols, three-dimensional shapes, colours, sounds, smells, holograms and motion marks, provided they function as indicators of origin.

Korea operates a registration-based trade mark system. Rights arise upon registration with the Korean Intellectual Property Office ("KIPO"), although use remains relevant to acquired distinctiveness, non-use cancellation and enforcement.

Trade mark protection lasts 10 years from registration and may be renewed indefinitely for successive 10-year periods.

Registration requires an application identifying the applicant, the mark, the designated goods or services and relevant classes. KIPO examines formal and substantive requirements, including distinctiveness and prior conflicting rights. International registrations designating Korea are also available under the Madrid Protocol.

Trade mark infringement typically occurs when an unauthorised identical or similar mark is used in connection with identical or similar goods or services, resulting in a likelihood of confusion. Preparatory acts (such as possessing, importing or exporting infringing goods under specified conditions) may also be considered infringement.

Trade mark owners and exclusive licensees may enforce their rights through civil proceedings. Available remedies include:

- injunctions;
- destruction of infringing goods or facilities;
- damages, including statutory damages in certain cases; and
- measures to restore business reputation where appropriate.

Damages may be assessed by reference to the infringer's profits, a reasonable royalty or other statutory methods, with enhanced statutory damages available in specified cases of intentional infringement.

Trade mark registrations may be challenged through invalidation or cancellation proceedings before the Intellectual Property Trial and Appeal Board, including cancellation for non-use over a continuous three-year period without justifiable grounds.

Intentional trade mark infringement may also result in criminal liability and infringing goods may be seized or confiscated.

### 7.3 Industrial Designs

Under the Korean Design Protection Act, a design is the shape, pattern, colour or combination thereof embodied in an article (including part of an article, a typeface or a graphical user interface/image) that creates an aesthetic impression through visual perception. Korean design law protects the visual appearance of products rather than their technical functionality.

Korea operates a registration-based design protection system. A design right arises upon registration with the Korean Intellectual Property Office ("KIPO"), giving the owner the exclusive right to commercially exploit the registered design and similar designs.

The protection term is 20 years from the filing date. The right becomes enforceable upon registration, subject to payment of the prescribed maintenance fees.

To obtain protection, an applicant must file a design application with KIPO. A design must generally be industrially applicable, novel and not readily creatable by a designer of ordinary skill based on prior designs. Korea also recognises a statutory grace period for certain prior disclosures.

Design infringement is assessed by comparing the overall visual impression of the registered and accused designs from the perspective of an ordinary observer. Certain forms of indirect infringement are also recognised.

A design owner or exclusive licensee may enforce its rights through civil proceedings. Available remedies include:

- injunctions;
- destruction of infringing products or facilities;
- damages; and
- provisional relief, including preliminary injunctions.

Damages may be assessed by reference to the infringer's profits, a reasonable royalty or other statutory methods, supported by evidentiary presumptions.

The validity of a registered design may be challenged through an invalidation trial before the Intellectual Property Trial and Appeal Board. A finally invalidated design is generally deemed never to have existed and courts may refuse enforcement of a clearly invalid design on abuse-of-rights grounds.

Intentional infringement of a registered design may also give rise to criminal liability under the Design Protection Act.

### 7.4 Copyright

Under the Korean Copyright Act, a copyright work must be a creative expression of human thoughts or emotions. Copyright protects the expression of ideas rather than ideas, concepts, facts, systems or methods. Protection requires a minimum degree of originality expressed in a perceptible form.

Protected works include literary, musical, artistic, photographic, audiovisual and software works, certain databases and other categories recognised under the Copyright Act. Korean law also recognises neighbouring rights of performers, phonogram producers and broadcasting organisations.

Unlike patents, trade marks and designs, copyright arises automatically upon creation. Korea follows the principle of non-formality, so registration or publication is unnecessary.

Copyright comprises moral rights (publication, attribution and integrity) and economic rights, including reproduction, distribution, public performance, public transmission, display, rental and the creation of derivative works.

Economic rights are generally protected for 70 years after the author's death. Different rules apply to joint works, anonymous or pseudonymous works, works made for hire and audiovisual works.

Although registration is not required, Korea maintains a voluntary copyright registration system administered by the Korea Copyright Commission. Registration provides evidentiary benefits and may enhance enforceability against third parties.

Copyright owners may enforce their rights through civil proceedings. Available remedies include:

- injunctions;
- destruction of infringing copies or materials;
- damages; and
- provisional relief, including preliminary injunctions.

Damages may be assessed by reference to the infringer's profits, a reasonable licence fee or another amount determined by the court where precise proof is difficult.

Intentional copyright infringement may also result in criminal liability, although certain offences require a complaint by the rights holder. In cross-border disputes, Korea generally applies the law of the country for which protection is sought, consistent with the Berne Convention.

Accordingly, copyright protection in Korea arises automatically upon creation, provides long-term protection for original works and is enforceable through civil and criminal remedies.

### 7.5 Others

Korean law also protects other forms of intellectual property and commercially valuable information, including software, databases, data assets and trade secrets.

Software is generally protected as a computer program under the Korean Copyright Act. Protection arises automatically upon creation, without registration and extends to the program's creative expression, not its underlying ideas, algorithms or functional concepts. Software owners may seek injunctions, damages and, where appropriate, criminal remedies. Technical protection measures are also protected and unauthorised circumvention may give rise to liability.

Databases are protected under the Copyright Act where data or materials are systematically organised for access or search. In addition to copyright protection, Korea recognises a database producer's right that protects substantial investment in collecting, verifying or presenting database content. Protection generally lasts five years from completion, with a new term available for substantial updates.

Certain commercially valuable data assets are also protected under the Data Industry Promotion and Utilisation Act and the Unfair Competition Prevention and Trade Secret Protection Act. Unauthorised acquisition, use or disclosure of data created through substantial investment may be prohibited where contrary to fair commercial practices or competitive order.

Trade secrets are protected under the Unfair Competition Prevention and Trade Secret Protection Act. A trade secret is technical or business information that is not publicly known, has independent economic value and is subject to reasonable secrecy management. Protection continues as long as these requirements are satisfied.

Trade secret owners may seek injunctions, removal of infringing materials and damages. Serious misappropriation may also result in criminal liability, particularly where trade secrets are acquired, used or disclosed for improper benefit or to harm the owner, with enhanced sanctions for overseas disclosure or use.

Companies should maintain appropriate confidentiality measures, including access controls, confidentiality markings, non-disclosure agreements, exit procedures, IT security controls and contractual restrictions.

Accordingly, Korean law primarily protects software and databases through copyright and related statutory rights, while trade secrets and certain data assets are protected under unfair competition and trade secret legislation, subject to applicable statutory requirements.

## 8. Data Protection

### 8.1 Applicable Regulations

Korea's data protection regime is centred on the Personal Information Protection Act ("PIPA"), the principal statute governing the processing and protection of personal information. PIPA applies broadly to public institutions, companies organisations and individuals

that process personal information for business purposes.

PIPA protects information relating to an identified or identifiable living individual, including information identifiable in combination with other data. Sensitive information, including health, political opinions, trade union membership and genetic information, receives enhanced protection.

PIPA adopts a consent- and purpose-based framework. Personal information may generally be collected and used only for the notified purpose unless another statutory basis applies. It also regulates third-party provision, outsourcing, cross-border transfers, retention, destruction and the processing of sensitive or unique identifying information.

Data controllers must maintain a privacy policy, appoint a privacy officer where required, implement appropriate technical, administrative and physical safeguards and respond to data subject rights, including access, correction, deletion and suspension of processing.

The Act on Promotion of Information and Communications Network Utilisation and Information Protection ("Network Act") remains relevant to information security, cybersecurity and network protection, although most of its personal information provisions have been incorporated into PIPA.

Sector-specific legislation may also apply, including the Credit Information Act, the Location Information Act, the Medical Service Act and legislation governing telecommunications, electronic finance and public-sector data. Certain commercially valuable data assets are also receiving protection under the Data Industry Promotion and Utilisation Act and the Unfair Competition Prevention and Trade Secret Protection Act.

The principal regulator is the Personal Information Protection Commission ("PIPC"), which has investigative and enforcement powers, including corrective orders, administrative fines, penalty surcharges, criminal referrals and civil enforcement. Data subjects may also seek relief through litigation or the personal information dispute mediation system.

Accordingly, Korea's data protection framework is centred on PIPA and supplemented by cybersecurity, sector-specific and data-related legislation.

### 8.2 Geographical Scope

Korean data protection laws may apply to foreign companies whose activities involve Korean data subjects or otherwise have a sufficient connection with Korea. A foreign company targeting Korean customers, offering services in Korea or processing Korean users' personal information may therefore be subject to the Personal Information Protection Act ("PIPA"), even if incorporated or operating servers outside Korea.

PIPA regulates the collection, use, provision, outsourcing, retention, destruction and cross-border transfer of personal information. Foreign companies processing Korean users' personal information must comply with Korean requirements regarding consent, notification, purpose limitation, security measures, privacy policies and data subject rights, unless a statutory exception applies.

Choice-of-law clauses do not necessarily exclude Korea's mandatory data protection rules. Korean courts have recognised that statutory protections for Korean users may apply even where a contract provides for foreign law, particularly in consumer-facing online services.

Cross-border transfers are permitted only where a statutory basis exists, including:

- separate consent from the data subject;
- a statutory, treaty-based or international legal basis;
- transfer to a jurisdiction recognised as providing an adequate level of protection;
- standard contractual clauses or other recognised safeguards; or
- other grounds permitted under PIPA.

The Personal Information Protection Commission ("PIPC") may order suspension of overseas transfers

that violate PIPA or pose a significant risk to data subjects.

Korea has received an EU adequacy decision and participates in the APEC Cross-Border Privacy Rules framework.

Accordingly, the Korean data protection law has a practical extraterritorial effect where foreign companies process Korean users' personal information or target the Korean market, while cross-border transfers remain subject to specific statutory requirements.

### 8.3 Role and Authority of the Data Protection Agency

The principal data protection regulator in Korea is the Personal Information Protection Commission ("PIPC").

The PIPC is an independent central administrative agency established under the Personal Information Protection Act ("PIPA"), responsible for formulating, supervising and enforcing Korea's data protection framework.

Its principal functions include:

- establishing national data protection policy;
- issuing guidance and interpreting PIPA;
- supervising compliance by public and private sector data controllers;
- investigating suspected violations and data breaches;
- overseeing cross-border transfers;
- operating dispute resolution mechanisms; and
- promoting international cooperation on data protection.

The PIPC has broad investigative and enforcement powers, including requesting information, conducting inspections ordering remedial measures, imposing administrative fines and penalty surcharges, making criminal referrals, publishing enforcement outcomes where permitted by law and suspending overseas data transfers that violate PIPA or pose significant risks to data subjects.

The PIPC also oversees public-sector personal information files, privacy impact assessments, privacy certification systems and the personal information dispute mediation framework.

Although the PIPC is the principal privacy regulator, sector-specific regulators may also have jurisdiction, including financial regulators for credit information and communications authorities for network security.

Accordingly, the PIPC serves as Korea's central data protection authority, exercising broad policy-making and enforcement powers, including oversight of cross-border data transfers.

## 9. Looking Forward

### 9.1 Upcoming Legal Reforms

No single omnibus reform is expected to overhaul the Korean legal system. However, several areas remain subject to active legislative and regulatory development.

In technology and data, the most significant development is the implementation of Korea's AI regulatory framework. The AI Basic Act establishes a general framework for AI governance, including obligations related to high-impact AI, transparency, safety and reliability, with implications for data protection, consumer protection, employment, financial services and technology compliance.

Data protection law also continues to evolve. Amendments to the Personal Information Protection Act focus on governance, security, cross-border transfers, automated decision-making and privacy officers, while enforcement by the Personal Information Protection Commission is becoming more active.

Corporate law reforms continue to focus on directors' duties, shareholder protection, virtual shareholders' meetings and corporate governance. In tax, Korea has implemented the OECD Pillar Two framework, including the Income Inclusion Rule and domestic minimum top-up tax, with further technical guidance expected.

Competition law reforms continue to focus on digital platforms, online marketplaces, merger control in data-driven markets and stronger enforcement by the

Korea Fair Trade Commission. Employment law reform remains focused on labour representation, subcontracted workers, collective bargaining, working-time flexibility and protection of vulnerable workers. In IP, AI, software, data and trade secret protection remain key areas of reform.

Accordingly, while Korea's core legal framework is expected to remain stable, continued reforms are anticipated in AI, data protection, competition, corporate governance, tax, labour law and technology-related intellectual property.

# Trends and Developments

**Contributed by:**
Heejun Choi, Kyoung-Ho Kim, Sungsok Yang, Eunjee Kim and Kwang-Chun Park
**Dentons Lee**

**Dentons Lee** is one of South Korea's longest operating law firms, with its base established in Seoul. Its practice has continuously grown and expanded to meet the evolving needs of both the domestic and international clients. Dentons Lee (formerly Lee International Law Office) offers a full range of legal services necessary for engaging in international business.

## Authors

**Heejun Choi** is a chief managing attorney at Dentons Lee. He is a premier litigation expert who handled numerous civil, criminal and public law cases during his 20 years of distinguished service as a judge at various court levels, including the Supreme Court and Seoul High Court. After retiring from the Seoul Southern District Court as a presiding judge in 2022, Mr Choi transitioned to private practice. He joined Dentons Lee in May 2024, where he remains dedicated to defending clients' rights by leveraging his deep legal knowledge and extensive experience accumulated as both a judge and an advocate.

**Kyoung-Ho Kim** is a senior attorney at Dentons Lee, specialising in cross-border transactions, international construction, energy, infrastructure, insurance and international arbitration. Qualified as both a Korean attorney and a Solicitor/Barrister of England & Wales (UK), he possesses extensive experience advising on complex EPC projects, nuclear power plants and industrial plants. His background includes serving as legal counsel at POSCO, KEPCO (UAE Barakah project) and major Korean law firms, as well as legal director at Onejoon Co Ltd. Mr Kim also regularly advises global insurers and reinsurers on high-value coverage and claims disputes, delivering strategic, commercially focused legal solutions.

**Sungsok Yang** provides expert legal advice on cross-border project financing, overseas investment, M&As, corporate restructuring and international trade. His practice spans infrastructure, ship financing, banking and general corporate matters, with a specialised focus on customs compliance, valuation and tariff issues within global supply chains. Representing both domestic and international lenders and borrowers, Sungsok structures complex financing transactions seamlessly. Bilingual in Korean and English, he serves as a trusted partner who bridges cultural and regulatory gaps, delivering exceptional legal services that actively support his clients' international business growth.

**Eunjee Kim** is an employment and labour law expert at Dentons Lee, having previously practised at a tier 1 Korean law firm. She advises domestic and international companies on the Labour Standards Act and corporate law. Additionally, she specialises in data privacy compliance (PIPA) in M&A, drawing on her unique experience as a local general counsel at a multinational corporation. Admitted to the Korean Bar (2004) and California Bar (2017), she holds an MBA from The Wharton School and a certified labour consultant qualification, offering practical, business-minded solutions for her diverse corporate clientele.

**Contributed by:** Heejun Choi, Kyoung-Ho Kim, Sungsok Yang, Eunjee Kim and Kwang-Chun Park, **Dentons Lee**

**Kwang-Chun Park** is highly experienced in finance, M&A and corporate advisory. His practice focuses on rendering legal advice to domestic and multinational clients in connection with cross-border M&A, joint ventures, foreign direct investment, industry-specific government regulations, and general corporate matters in Korea. He also regularly advises domestic and international financial institutions, asset management companies, and investors on complex financial transactions and regulatory restrictions. He possesses extensive experience in project financing, structured finance, and syndicated loans, as well as the establishment and operation of private equity funds (PEFs).

## Introduction

Over the past two years, South Korea has moved quickly to become a major hub for Artificial Intelligence (AI) in Asia. In doing so, the government is shifting its approach away from outdated "perimeter security" (simply blocking outside connections) toward a modern system focused on safe data use. A primary example of this change is the Framework Act on Artificial Intelligence and the Establishment of a Foundation for Trust, known as the AI Basic Act, which officially took effect in January 2026 and establishes the basic legal rules for AI.

However, South Korea's actual AI market involves much more than just this single law. Multiple government agencies are working together on a sweeping update to the country's digital landscape. These agencies include:

- the Financial Services Commission (FSC);
- the Financial Supervisory Service (FSS);
- the Personal Information Protection Commission (PIPC); and
- the National Intelligence Service (NIS).

Together, they are changing several major policy areas at once. They are dismantling a decade-old rule that strictly separated corporate networks from the outside internet, consolidating the security rules for public cloud computing and buying massive amounts of computing hardware to build national tech independence. For companies and legal professionals, operating successfully in South Korea now requires a clear understanding of how these practical changes affect everyday compliance and business strategy.

## The Architecture of the AI Basic Act: Minimal Enforcement and Administrative Grace Periods

The AI Basic Act serves as the legal foundation for South Korea's AI market. Unlike the European Union's strict risk-classification model under the EU AI Act, which requires extensive government evaluations before a tool can even launch, South Korea uses an administrative style focused on "minimal enforcement". The Ministry of Science and ICT (MSIT) has stated that its priority is to boost industrial growth rather than to punish companies. To give companies sufficient time to prepare, the MSIT has established a mandatory grace period of at least one year from the launch date, during which no active administrative fines will be issued. Instead, officials will focus on education and compliance guidance.

Even with this flexible approach, the Act creates specific legal responsibilities that companies must meet, as outlined below.

### *AI transparency and labelling mandates*

Companies that offer generative AI products or services must make sure users know they are interacting with an AI system. The outputs must be clear and verifiable by both humans and machines. While this labelling rule applies only to the businesses selling the tools, failing to provide a proper notice can result in administrative fines of up to KRW 30 million.

### *High-impact AI operational standards*

AI systems used in important socioeconomic tasks (such as credit scoring and loan reviews by commercial banks) are classified as "High-Impact AI". Businesses operating these systems must follow a structured five-pillar framework:

- risk management – setting up and executing formal risk-management plans;
- explanation – creating automation standards to explain how the AI makes decisions;
- user protection – putting active measures in place to safeguard consumers;
- human oversight – maintaining continuous human supervision over AI; and
- record-keeping – documenting and maintaining clear records of all safety measures.

Under Articles 40 and 43 of the Act, noncompliance with these High-Impact AI rules does not incur immediate fines. Instead, a business can face administrative fines of up to KRW 30 million only if it fails to follow a formal corrective order issued by the MSIT.

### *Mandatory appointment of a domestic representative*

For foreign technology companies and multinational corporations entering South Korea, Article 36 of the AI Basic Act introduces an important local presence rule. Foreign AI businesses that do not have a registered

physical address or local office in South Korea but meet certain thresholds for revenue, user numbers or data volume must legally appoint a domestic representative and report the representative to the MSIT. This representative serves as the local contact for government inquiries, data requests and compliance issues. Under Article 43 of the Act, failing to appoint or report a local representative bypasses the corrective order phase and directly triggers an administrative fine of up to KRW30 million.

To help companies handle these new responsibilities, the MSIT opened an AI Basic Act Support Desk and a specialised consultative body in early 2026 to resolve conflicting rules across different government ministries.

## Data Governance: PIPC's "AI Special Exemption" Framework

South Korea's personal data rules under the Personal Information Protection Act (PIPA) have long been among the strictest in the world, creating high barriers for global cloud providers due to rigid consent requirements and stringent cross-border data transfer policies. However, the rise of large language models (LLMs) has forced the government to pivot toward data utility.

The Personal Information Protection Commission (PIPC) is driving this change by applying its "Guidelines on Personal Data Processing for the Development and Utilisation of Generative AI". This guide divides the AI development lifecycle into four operational phases: purpose definition, strategy formulation, AI training/development and system deployment/management. Two main mechanisms help streamline data processing across these steps:

### *The "AI Special Exemption" regime*

To address the lack of high-quality training data, the PIPC is working on an amendment to PIPA targeted for final approval by the fourth quarter of 2026. This update will create a clear legal pathway for using non-pseudonymised personal data (data that still contains identifying details) for AI training. To qualify, the data use must serve a verified public interest or social benefit, undergo prior review and run entirely within a secure, isolated cloud environment.

### *Fast-track processing mechanism*

To support developers, the PIPC is deploying an accelerated review system. Businesses can submit data exemption applications through a unified government portal and receive a formal decision within 30 days. For applications that feature identical or highly similar technical profiles, the decision timeline drops to just 15 days, drastically reducing time-to-market friction.

### *The relaxation of financial network segregation: transitioning to SaaS and Zero Trust*

For more than ten years, South Korea's financial sector was legally cut off from the global internet. Absolute physical network segregation rules enforced under Article 21 of the Electronic Financial Transactions Act (EFTA) and Article 15 of the Electronic Financial Supervisory Regulations (EFSR) effectively blocked financial firms from using global cloud systems and Software-as-a-Service (SaaS) tools within their internal business networks.

This strict regulatory wall was updated on April 20, 2026, when financial authorities revised the EFSR Enforcement Rules. Under this modernised approach, cloud-based SaaS is now explicitly recognised as a formal exception to the legacy network separation rule. This means financial institutions can deploy these outside software tools directly on internal office computers without going through the slow regulatory sandbox process.

To safely use this new flexibility, financial firms and software vendors must meet three major compliance criteria:

- strict data constraints – the network exception is limited to business tasks that do not process sensitive personal information, unique resident numbers or personal credit histories;
- mandatory security vetting – financial institutions may deploy only SaaS tools that have been explicitly audited and cleared by designated state security vetting agencies; and
- continuous internal governance – banks must install advanced endpoint protections on user devices and run semi-annual internal security

checks, which must be formally reported to their internal information security committee.

This deregulation is paired with an updated enforcement system. The FSS has launched the Financial-IT Incident Response Surveillance Control-Tower. This platform serves as a real-time, interactive communication system that links banks, virtual asset platforms and cloud providers. Instead of relying on slow, one-way paperwork, the platform automatically sends threat alerts to financial firms and allows them to report their mitigation results instantly.

Furthermore, the FSC introduced a streamlined procedure for modifying generative AI models within the financial sector. Financial firms are now exempt from full regulatory sandbox reviews for low-risk updates. The Financial Security Institute (FSI) separates these model changes into three clear categories:

- minor changes – technical updates (like simple version upgrades where the security setup is unchanged and data streams are stable) are granted immediate deployment upon filing a written notice;
- moderate changes – updates that alter the scope or nature of the AI's output while keeping the core security setup identical are allowed after the bank has established internal technical controls and completed an FSI security review; and
- substantial changes – modifications that fundamentally alter the security design or core systems remain subject to the full, formal amendment and approval process under the older sandbox rules.

To assist firms with this transition, the FSI published its Financial Security Level Diagnostic Framework Guide, based on international standards. This tool requires Chief Information Security Officers (CISOs) to audit and log their security maturity, shifting corporate responsibility toward verifiable, self-managed security.

### Public Sector Cloud Reform: CSAP Consolidation and N2SF Alignment

For global technology vendors and hyperscale cloud providers, entering South Korea's public procurement market historically required navigating a dual-track security verification system. Providers had to obtain a Cloud Security Assurance Program (CSAP) certification from the MSIT while concurrently undergoing a separate security review by the National Intelligence Service (NIS).

This overlapping administrative process is being removed through joint restructuring by the NIS and MSIT. The reform consolidates public cloud market entry into a single verification system run entirely by the NIS, simplifying the application pathway. Cloud services that already hold a valid CSAP certification will retain their credentials during a transitional period. Following updates to the national cloud security guidelines, a one-year formal grace period will begin, with the unified NIS verification protocol scheduled to become fully mandatory in the second half of 2027.

This unified verification process coordinates directly with the National Network Security Framework (N2SF) data classification system. The N2SF replaces blanket internet bans with an agile, data-centric tiering model, as outlined below.

- Classified (C) Tier: Applies to high-security national data; requires strict physical isolation and restricts outside internet access.
- Sensitive (S) Tier: Applies to standard internal administrative data; allows external private cloud connectivity under verified security controls.
- Open (O) Tier: Applies to public information; allows unrestricted use of private and international cloud architectures.

While this structural alignment opens the "sensitive" and "open" public sectors to global cloud service providers utilising international standard control frameworks, the consolidation of oversight within national security authorities introduces specific compliance responsibilities. The unified regime places a heightened focus on technical infrastructure resilience, localised incident-response capabilities and strict data residency mandates for core administrative information. Moving forward, long-term technology infrastructure investments in the public sector will depend on a provider's ability to align its system architecture with these evolving data-centric oversight standards.

## Infrastructure Investment and the Rise of Sovereign Computing

South Korea's regulatory changes are backed by an aggressive, state-led industrial policy designed to build national independence in computing power. The government treats computing capacity as a vital national resource, similar to advanced semiconductor manufacturing.

The main tool driving this expansion is the KRW150 trillion Public Growth Fund. Managed by the FSC, the fund focuses on seven strategic areas across AI, semiconductor and battery markets, deploying over KRW30 trillion in initial capital. Of this first tranche, KRW6 trillion is legally earmarked for the AI sector to fund next-generation AI chip manufacturing and massive graphics processing unit (GPU) data clusters.

This public funding runs alongside historic hardware purchase deals. A major global hardware supplier has signed an agreement to deliver 260,000 high-performance GPUs directly to the South Korean market, valued at roughly USD10.4 billion (KRW15 trillion). The distribution of this sovereign computing capacity is strategically split among five key public and private entities to strengthen the nation's core industries:

- the public sector – 50,000 units are allocated to the government for the National AI Computing Centre and public administrative infrastructure;
- semiconductor manufacturing – 50,000 units are designated for integrating AI across advanced semiconductor manufacturing processes;
- next-generation memory – 50,000 units are allocated to a leading memory chip producer to develop next-generation high-speed hardware;
- autonomous mobility – 50,000 units are assigned to a major automotive manufacturer for autonomous driving vehicle testing and validation; and
- sovereign cloud platforms – 60,000 units are allocated to a top-tier domestic cloud provider to build independent, local foundation AI models.

To host these high-density hardware assets, a leading domestic IT service provider is heading a specialised special-purpose company (SPC) consortium to construct the National AI Computing Centre (NACC) in Jeonnam. This facility is engineered to house more than 15,000 high-performance GPUs by 2028, providing subsidised, secure computing power to local research institutions, startups and small- and medium-sized enterprises. These massive industrial infrastructure projects require transactional lawyers to draft complex energy off-take deals, joint venture licensing structures and public-private partnership (PPP) compliance contracts that successfully navigate local zoning laws and tight power-grid regulations.

## Conclusion: Strategic Roadmap for Market Entry and Compliance

South Korea's rapid transformation into an AI-driven digital economy requires a holistic approach to regulatory compliance and market strategy. Business leaders, tech developers and investors can no longer evaluate market risks purely through the baseline text of the AI Basic Act. The true compliance realities and ultimate commercial advantages lie in understanding how shifting administrative guidelines, sectoral data utility programs and massive infrastructure overhauls work together.

To successfully navigate this evolving landscape, market participants should focus on four actionable strategies, as outlined below.

- Strategic use of administrative grace periods: Enterprises should leverage the active one-year grace period under the AI Basic Act to design and deploy necessary machine-readable and human-readable labelling notices for generative products. This window should also be used to self-audit any operational algorithms (particularly in credit, lending or core resource allocations) against the newly defined high-impact AI risk criteria.
- Optimisation of data ingestion pipelines: Organisations must align their ongoing data management with the PIPC's four-phase generative AI lifecycle guidelines. Looking ahead, preparing internal technical setups to take advantage of the upcoming late 2026 PIPA amendments will allow businesses to utilise the new fast-track data exemptions by structuring clear, public-interest impact assessments.
- Transition to zero-trust security models: For financial firms and global technology vendors, moving away from legacy perimeter-isolation systems is

now an operational necessity. Utilising the FSI's diagnostic framework helps document organisational data flows, transit encryption and endpoint protection controls required to maintain the newly introduced internal network exceptions.

- Alignment with public cloud integration timelines: For technology providers targeting the public procurement sector, tracking the consolidation timeline ahead of the 2027 mandatory unified switch is vital. Software designs should be optimised to fit seamlessly into the "Sensitive (S)" and "Open (O)" public data categories while documenting robust localised operational capacities.

As South Korea aggressively builds out its sovereign computing systems and revises its technology laws, businesses that approach the market with an integrated view of AI governance, data utility, cloud security and infrastructure regulations will avoid compliance friction while capturing strong, sustainable market share.

## Trends and Developments

**Contributed by:**
Miguel Bolivar Tejedo, Daniel Gurrea Boix, Esther Mont Soria and Antonio Coello Luna
**Anaford Abogados**

**Anaford Abogados** is a boutique law firm built for clients who expect more than technical excellence. Advising investors, family offices and internationally mobile private clients, the firm's multidisciplinary team operates at the intersection of sophisticated business law and private wealth advisory. Its practice spans the full spectrum of corporate and private client matters, including M&A, private equity and venture capital, international taxation, succession planning, wealth structuring and capital markets. What distinguishes the firm is not only the depth of its expertise, but the quality of its judgement. Combining technical precision with commercial acumen and strategic foresight, the team anticipates complexity before it becomes a challenge, transforming legal risk into opportunity and long-term value. Every mandate is partner-led, and every relationship is built for the long term. With offices in Valencia, Madrid, Zurich and San Diego, Anaford delivers genuinely international capability while preserving the responsiveness, agility and personal attention that define a premier boutique practice.

## Authors

**Miguel Bolivar Tejedo** focuses his practice on corporate and commercial law, mergers and acquisitions and private equity. He regularly advises domestic and international clients on cross-border transactions, due diligence, restructurings and joint ventures across multiple jurisdictions. Additionally, Miguel regularly advises on financing, corporate governance and commercial matters. Before joining Anaford, he worked at a leading Spanish law firm. Miguel combines his practice with academia, teaching at EDEM University and on the International Business Law Master's at Universidad Cardenal Herrera CEU, and regularly participates as a speaker at seminars in his areas of expertise.

**Daniel Gurrea Boix** focuses on private and commercial law. He has specialised his professional practice on advising on corporate matters, M&A, financing, refinancing and restructuring deals, real estate and commercial contracting. His experience includes advising a diverse range of clients, both national and international, including industrial companies from various sectors, financial institutions, investment funds, private equity firms, multinational corporations and family-owned groups, among others. Before joining Anaford, Daniel spent several years working for a leading Spanish law firm. A committed thought leader, Daniel is a lecturer on commercial and corporate law on the Master's in Law and various LLMs at CEU Cardenal Herrera University.

## Introduction: The International Attractiveness of the Spanish Market

For many years, Spain has been establishing its reputation as one of the leading and most stable destinations for cross-border capital within Europe.

Joseph Oughourlian, chairperson of Amber Capital and the Prisa Group, accurately synopsised how Spain is re-establishing itself within the global community as "…an attractive country for investment. [Spain] has reduced its major [macroeconomic] imbalances" (Spain Investors Day, an international forum held at the start of 2026).

This statement reflects the general sentiment amongst foreign investors, who perceive the Iberian market as offering legal certainty and renewed commercial dynamism. This widespread optimism regarding Spain's financial and industrial markets is firmly supported by key macroeconomic indicators.

The projections set out in the latest country report from the International Monetary Fund (IMF) confirm a clear paradigm shift: Spain led economic growth during FY 2025 within the euro area. Economic indicators suggest that Spain is set to maintain its leading position throughout 2026, standing out from the weaker performance of other major eurozone economies.

This is confirmed by an analysis of global indicators compiled by the prestigious *Guide to Business in Spain*, a leading macroeconomic and legal reference manual designed to support foreign investors and large corporations published annually by the Spanish Foreign Trade Institute (*Instituto Español de Comercio Exterior* – ICEX). Spain currently ranks as the world's 15th largest economy in terms of GDP and has advanced in the global rankings to ninth place in terms of foreign direct investment (FDI). This privileged position reflects the high level of long-term confidence inspired by Spain's corporate and institutional landscape.

This situation has created an ideal environment for growth, as reflected in data published by the Venture Capital Institute in early April. In the first quarter of 2026, a total 300 investments were registered in Spain across the four private equity segments (buyout and growth, seed and venture capital, special situations and debt).

Seed and venture capital led the way, accounting for 214 transactions (around 71% of the total). Buyout and growth ranked second, with 39 acquisitions (13%). In addition, there were 38 debt investments (12% of the total), representing a 21% increase in comparison to 2025. Finally, nine special situations deals (compared to eight in 2025) were executed, accounting for 3% of the total transactions.

In terms of geographical distribution, Cataluña and Madrid account for the bulk of the total transaction volume. According to the *Spanish Journal of Private Equity & Venture Capital* (*Revista Española de Capital Riesgo*), out of a total of 300 transactions carried out in the first quarter of 2026, Cataluña ranked as the leading business destination, accounting for 28% of all transactions (84 acquisitions), ranking ahead of Madrid (26% of all recorded transactions; 77 in total). The Basque Country trailed in third place, with 12% of reported transactions (36 investments). However, regions such as the Canary Islands, Andalucia and the Balearic Islands have emerged as new strategic hubs for corporate investment, leading the way in terms of corporate relocations.

In line with the previous trend, Madrid led FDI in Spain from January to March 2026, according to the statistics published by the Ministry of the Economy on its open data portal (DataInvex), with EUR3.37 billion of gross foreign investment recorded in the region. Catalonia (EUR1.54 billion) and Valencia (EUR486.81 million) were the second- and third-placed regions in the country in terms of gross foreign investment.

Finally, when analysing foreign investment by country of origin, the United States (EUR1,359.16 billion) leads in gross investment inflows, whereas the United Kingdom ranks first regarding net investment (gross investment minus divestment, EUR1.24 billion).

## Business Creation

This section briefly analyses the impact on business creation of one of the most relevant structural changes in company incorporation in Spain – the implemen-

tation of electronic processes – within a favourable macroeconomic and social environment.

### *Electronic incorporation*

Spain has recently adopted legal reforms aimed at simplifying administrative procedures and removing barriers to entry. Start-ups have undergone a particularly significant transformation. This has been strongly driven by the implementation of the Create & Build Act (*Ley Crea y Crece*) (18/2022), a landmark piece of legislation strengthened by Spain's Law 11/2023 on the digitisation of notarial procedures, which has enabled the incorporation of companies entirely online, as well as by Law 28/2022 (*Ley de Start-ups*) on the promotion of start-ups. This regulatory framework has revitalised the business sector, as well as helping consolidate a start-up ecosystem that is highly competitive on the international stage.

The aforementioned legislative developments have completely transformed traditional corporate structures through two substantial operational changes that redefine the rules of company creation.

- The previous process for the incorporation of limited liability companies (the most widely used legal form in Spain) has been abolished, allowing them to be incorporated with a share capital of just EUR1. This measure minimises establishment costs, aligning Spanish company creation with Anglo-Saxon corporate standards.
- Comprehensive digitalisation: The online process for company establishment – via the Single Electronic Document (*Documento Único Electrónico* – DUE) – harmonises procedures involving notaries, mercantile registers and the Tax Agency through a single digital portal. This procedure drastically reduces the time required for registration and obtaining a tax identification number to 24–48 hours. In addition, standardised templates for articles of association are available to the public to streamline the assessment process of the Mercantile Registries (which, under the standard company incorporation procedure, have 15 working days to register and approve the incorporation of any company).

Although these technical advances have significantly facilitated initial administrative procedures, sector reports – such as the prestigious Global Entrepreneurship Monitor Spain National Report 2025–2026 by the National Entrepreneurship Observatory (the "GEM Report 2025–26") – show that while these measures have facilitated business creation, they are not the root cause of the upturn in business activity. It is widely accepted amongst experts in the business sector that the option to establish companies with share capital of EUR1 has had more of a psychological than an operational effect. Most founders continue to prefer limited companies with the traditional EUR3,000 share capital due to liability concerns and commercial image considerations. As a result, these measures have helped democratise access to entrepreneurship, yet they are not the driving force behind business start-ups in Spain.

### *A favourable situation*

The significant increase in the number of companies being incorporated (an increase of over 13% in 2026, according to statistics from the Mercantile Registries in Spain) and the general upturn in business activity are mainly due to the favourable macroeconomic and social climate, driven, amongst other things, by the following factors.

- Cultural change and artificial intelligence (AI): Spain has a well-established culture of entrepreneurship. According to the GEM Report 2025–26, the rate of early-stage entrepreneurial activity has risen to 7.8% (compared to 7.2% in the previous year), fuelled by professionals with higher education qualifications and senior founders with previous corporate experience who are seeking to capitalise on new opportunities. With a more highly educated pool of new entrepreneurs, AI and data analytics are playing a key role in reducing the costs of digital business models. Almost three out of every ten new start-ups operate with integrated AI tools from the outset, enabling highly competitive and efficient micro-enterprises to be launched onto the market instantly.
- Foreign workforce and digital nomads: The attraction of international talent and visas for digital nomads have turned Spain into a hub for skilled human capital. These visas take the form of resi-

dence and work permits that allow foreign professionals to live in Spain whilst working remotely for companies or clients outside the country. One of the main attractions of this visa is access to a special tax regime, popularly known as the "Beckham Law", which has been modified as follows: (i) instead of paying the standard progressive personal income tax (which can exceed 47%), digital nomads and foreign workers are taxed at a flat rate of 24% on employment income not exceeding EUR600,000 per year; and (ii) certain foreign-sourced income, such as dividends, rental income or capital gains obtained outside Spain, is not usually subject to taxation in Spain.

- European funds: Spain's ambitious plan for large-scale digitalisation, supported by Next Generation EU funds and implemented through tools such as Kit Digital, has resulted in a massive indirect injection of liquidity into the domestic market. This financial stimulus has altered the landscape of self-employment in two major ways: (i) encouraging the formation of companies – thousands of self-employed workers in the IT, marketing and consultancy sectors have transformed their individual businesses into limited companies to gain financial strength and access larger-scale projects; and (ii) a boom in the B2B system – there has been a huge increase in the number of micro-enterprises focused exclusively on meeting the operational needs of traditional SMEs, which are being driven towards accelerated digitalisation to remain competitive.

## Future Trends

Addressing Spain's structural strengths remains essential when analysing future trends regarding business incorporation in the country, as outlined herein. Furthermore, from a regulatory standpoint, Spain (in accordance with the legislative changes over the last decade outlined above) continues to consolidate its standing as a pioneer in corporate law tailored to 21st century demands. Accordingly, the overarching trend towards establishing a more transparent and public environment for business creation is explored below ("Potential regulatory changes").

### *Structural strengths*

There are several factors that suggest that, in 2026, Spain will continue to establish itself as a leading global destination for business development. Spain's appeal stems from numerous structural strengths and advantages, as well as optimal macroeconomic conditions.

- Strategic hub: Spain is one of the main hotspots for corporate and financial links between the EU and the Latin American market, attracting both (i) global multinational corporations and (ii) corporations from the Latin American region seeking to establish operational and strategic bases in the country. The cultural and linguistic affinity shared with Latin American countries offers a unique competitive advantage. In February 2026, the Ibero-American Business Observatory, together with the Complutense Institute of International Studies at the Complutense University of Madrid, reported that Spain has the second-highest number of springboard companies of Latin American origin worldwide, behind only the United States.
- Sectors for FDI: The Ministry of the Economy shows on its open data portal (DataInvex) that, with respect to FDI in Spain during 2026, there is a clear pattern of capital allocation to high value-added sectors. International capital is prioritising information technology and telecommunications, driven by data centres and the boom in AI. Close behind is the energy transition and massive-scale sustainability projects, largely thanks to the development of green hydrogen infrastructure and solar farms. These investments benefit from strong regulatory support and decarbonisation incentives. Finally, the high-tech industrial manufacturing sector and the pharmaceutical industry round out the top three investment attractions, reinforcing Spain's position as a strategic industrial and technological hub within the EU.
- Ripening of the start-up ecosystem: The tech-based business landscape is highly consolidated, supported by a dense network of incubators and accelerators. In Spain, high-performance centres are increasingly being seen, not only providing seed capital but also acting as commercial validation hubs, helping start-ups achieve a 70% survival rate in their first five years. Some of the

best-known incubators and accelerators in Spain include Lanzadera (in Valencia), driven by the entrepreneur Juan Roig, and Wayra (in Madrid and Barcelona), Telefónica's corporate investment and innovation hub.
- Strong institutional backing: Business activity benefits from strong public support through leading organisations such as the National Innovation Agency (*Empresa Nacional de Innovación*, *SME*, *SA* – ENISA), the Spanish Foreign Trade Institute (*ICEX España Exportación e Inversiones* – ICEX), the Centre for Technological Development and Innovation (*Centro para el Desarrollo Tecnológico y la Innovación* – CDTI) and Red.es, in close co-ordination with the regional economic development agencies. At the start of the year, Spain announced the creation of a government-owned investment fund called *España Crece*, which would enable the Official Credit Institute (*Instituto de Crédito Oficial* – ICO) to inject up to EUR60 billion into the business sector, shifting its financial profile towards that of public investment. Consequently, all of the aforementioned stakeholders offer tailored and customised financial and direct investment instruments (such as traditional equity-linked loans without enforceable collateral, non-repayable grants for technology-intensive projects and new co-investment venture capital schemes), mitigating the impact of economic down cycles.
- Sophistication of the transactional ecosystem: The market has a network of first-class professional services, including specialist legal advisers and financial institutions with a solid track record, which lend maturity, security and fluidity to high-volume corporate transactions. The strength of this network is directly reflected in current investment statistics. The Spanish M&A and private equity market consistently records annual transaction volumes that exceed tens of billions of euros. This steady flow of foreign and domestic investment demonstrates the confidence that major global funds have in the country's service infrastructure and the rigour of local financial intermediaries.

### *Potential regulatory changes*

Regarding legislative proposals that could impact business creation, the Public Integrity Act stands out on the 2026 political agenda.

The preliminary draft on the Public Integrity Act, approved by the Council of Ministers on 17 February 2026, is currently at an early stage of parliamentary consideration. The initiative aims to strengthen the transparency and traceability of corporate ownership, in line with global trends in regulation and good corporate governance.

The proposal introduces several registration control mechanisms for limited liability companies that have generated considerable discussion within the legal and business communities, particularly due to the practical implications they could have for investment. The most noteworthy aspects are:

- the replacement of the traditional notarial instrument with standardised electronic documentation mechanisms for certain transfers of shareholdings;
- the attribution of constitutive effect to the registration of such transfers, with legal shareholder status linked to prior registration in the Mercantile Registry; and
- the granting of access to information regarding the company's ownership, and to companies' internal records.

If approved as currently proposed, these measures could increase the operational complexity of certain transactions and raise practical challenges in terms of execution times, as well as co-ordination with the Mercantile Registries and overall transaction confidentiality.

However, it is important to emphasise that the draft Act is at an early stage of the legislative process and will be subject to review and amendments. It is expected that the final text will incorporate the necessary adjustments to avoid practical uncertainties, while maintaining an appropriate balance between the transparency objectives pursued and the requirements of legal certainty, flexibility and efficiency.

## Final Considerations

Based on current economic assessments and expert analyses, Spain is projected to maintain a strong outlook for long-term investment and corporate activity. It has demonstrated a remarkable ability to transform

the macroeconomic climate into a favourable and attractive economic environment for investment.

In addition, it is essential to emphasise that sustained interest from domestic and foreign investors is not only due to the size or consumption potential of the Spanish market. What truly sets Spain apart is its role as a strategic platform for comprehensive international outreach. On the one hand, its unique geostrategic location within the political and economic framework of the EU affords it direct, tariff-free and highly interconnected access to a market of over 2.6 billion potential consumers across the Europe, Middle East and Africa (EMEA) region. On the other hand, this geographical advantage is naturally complemented by deep-rooted historical, regulatory, linguistic and cultural ties that indisputably position Spain as the gateway and ideal hub for businesses and investments seeking to expand safely into the Latin American market.

For all these reasons, the regulatory proposals currently under consideration should not be interpreted as a break on business activity. There are reasonable expectations that the parliamentary process for the organic Public Integrity Act will address the current operational uncertainties and preserve the balance between transparency and flexibility that businesses in Spain require. The sophistication of the country's network of legal professionals will enable it to absorb these new control requirements and transform them into a competitive advantage.

By combining a network of top-tier public and private sector players with strong legal certainty, Spain reaffirms its status as one of the safest, most sophisticated and most reliable jurisdictions for investment capital.

# 1. Legal System

## 1.1 Legal System and Judicial Order

### Legal System

Sri Lanka has a hybrid legal system that draws from multiple legal traditions, including Roman Dutch law, English common law, statutory law and customary laws (such as Kandyan, Tesawalamai and Muslim personal laws). This pluralistic structure is a result of the country's colonial history and its diverse cultural and ethnic make-up.

While Roman-Dutch law remains the foundation of the common law, especially in private law matters, English common law principles influence areas such as commercial law, criminal procedure, evidence, administrative law and constitutional interpretation. In addition to written laws, Sri Lanka recognises the doctrine of judicial precedent, whereby decisions of the Supreme Court, as the highest court of the land, are binding on all lower courts. Decisions of the Court of Appeal are also binding on subordinate courts, though not on the Supreme Court or the Court of Appeal itself.

### Judicial Order

Sri Lanka's court system is hierarchical and constitutionally established, with specialised jurisdictions allocated across various tiers of courts.

The Supreme Court of the Democratic Socialist Republic of Sri Lanka is the apex court and exercises constitutional jurisdiction, final appellate jurisdiction, writ jurisdiction in limited matters, supervisory jurisdiction, and original jurisdiction in respect of fundamental rights under the Constitution.

The Court of Appeal has both appellate jurisdiction and writ jurisdiction, hearing appeals from the High Court of the Republic, and entertaining applications for writs such as certiorari, mandamus, prohibition, quo warranto and habeas corpus under the Constitution.

Each High Court of the Provinces exercises appellate and revisionary jurisdiction over all courts and tribunals within their respective province, and are vested with writ jurisdiction in terms of Article 154P of the Constitution. In addition, the High Court of the Western Province in Colombo has special original jurisdiction in:

- commercial matters, within the Western Province, where the value in dispute exceeds LKR50 million;
- applications under the Companies Act, No 07 of 2007 (including winding-up, derivative actions, etc);
- matters arising under the Securities and Exchange Commission of Sri Lanka Act, No 19 of 2021; and
- all proceedings under the Intellectual Property Act, No 36 of 2003, including infringement actions and cancellation of registrations.

The High Court of the Republic is vested with original criminal jurisdiction to try serious offences committed within Sri Lanka's territorial waters, including acts of piracy, marine pollution, illegal fishing, and unlawful acts against maritime navigation. It also exercises admiralty jurisdiction under the Admiralty Jurisdiction Act, No 40 of 1983, enabling it to adjudicate maritime claims including those related to ship arrests, cargo disputes, collisions, salvage, crew wages and ship mortgages.

The District Courts are courts of first instance for all civil matters, including family law, succession, contract disputes, delict, taxation and land cases.

Small Claims Courts have jurisdiction over minor civil claims not exceeding LKR2 million and have simplified proceedings to reduce caseloads in District Courts.

Magistrates' Courts exercise original criminal jurisdiction over summary offences and minor statutory violations. In addition, they are vested with non-summary jurisdiction to conduct preliminary inquiries in respect of indictable offences that are to be tried before the High Courts of the Provinces. These inquiries are conducted to determine whether there is sufficient evidence to commit the accused for trial.

Primary Courts exercise limited original jurisdiction in both civil and criminal matters. Their jurisdiction extends to offences under local government laws and by-laws enacted by Municipal Councils, Urban Councils and Pradeshiya Sabhas. In addition, they are empowered to hear disputes relating to the posses-

sion of land where such disputes are likely to result in a breach of the peace.

## 2. Restrictions on Foreign Investments

### 2.1 Approval of Foreign Investments

#### General Requirements

Foreign investment in Sri Lanka is primarily governed by the Foreign Exchange Act, No 12 of 2017, and is subject to certain sector-specific restrictions, approvals and compliance requirements. Foreign investors seeking to invest in Sri Lanka must comply with the Foreign Exchange (Classes of Capital Transactions Undertaken in Sri Lanka by a Person Resident Outside Sri Lanka) Regulations No 2 of 2021 and other directives issued under the Foreign Exchange Act.

While Sri Lanka generally adopts a liberal policy toward foreign direct investment (FDI), full foreign ownership is not permitted in certain sectors, and investment in others may require special approval, or minimum capital thresholds. Prohibited or restricted areas for foreign investment typically include retail trade with less than USD5 million investment, coastal fishing, pawnbroking and certain regulated professions (eg, legal practice). These restrictions are periodically revised by the government, and reference must be made to the most recent regulations to determine the permissibility of investment in a given sector.

All inward remittances for investment purposes must be routed through Inward Investment Accounts (IIAs) opened with licensed commercial banks in Sri Lanka and must be properly documented. Failure to comply with these procedures may restrict the repatriation of returns or capital at a later stage.

#### Board of Investment of Sri Lanka

The Board of Investment of Sri Lanka (BOI) is the country's principal investment promotion agency, historically established under the Board of Investment of Sri Lanka Law, No 4 of 1978. While that Law has been repealed by the Economic Transformation Act, No 45 of 2024, which provides for the BOI's functions to be reconstituted under new bodies including the Economic Commission of Sri Lanka and Investment Zones Sri Lanka, the provisions affecting the BOI have not yet been brought into force. The BOI accordingly continues to operate as a central facilitation point for foreign and domestic investors under transitional arrangements, with existing BOI approvals remaining valid. Approval from the BOI is typically sought where:

- the investment qualifies under a BOI-approved sector or scheme;
- fiscal incentives such as duty exemptions are being claimed;
- strategic development status is being pursued under the Strategic Development Projects Act; or
- a foreign investor seeks to increase their shareholding percentage or obtain approval for 100% foreign ownership in sectors where ownership is otherwise limited or restricted.

BOI approval is not mandatory for all foreign investments, particularly for minority equity participation in non-restricted sectors. In addition, investments approved by the BOI are entitled to operational conveniences such as streamlined import/export procedures, land allocation in industrial zones, and assistance with obtaining work visas for expatriate staff.

#### Colombo Port City Economic Commission

Foreign investments made within the Colombo Port City Special Economic Zone are governed by a distinct regulatory framework under the Colombo Port City Economic Commission Act, No 11 of 2021. The Colombo Port City Economic Commission serves as the single-window regulator for all business and investment activity within the zone.

Any person wishing to undertake a business, commercial or financial activity in Port City must first obtain a business registration and relevant authorisations or licences from the Commission. Unlike the general regime administered by the BOI, Port City offers a highly liberalised environment with no foreign ownership restrictions, guaranteed capital and profit repatriation, tax incentives, and exemptions from certain domestic laws, subject to the specific guidelines and rules issued by the Commission.

All remittances into and out of Port City must be routed through Port City Investment Accounts (PCIAs), and compliance with the Commission's directives is

mandatory for continued operation. Investors seeking to benefit from the Port City regime must ensure that their project or enterprise aligns with the permitted activities and is duly structured to fall within the scope of the Special Economic Zone as defined under the Port City Act.

### Additional Considerations

In addition to the foregoing, sector-specific approvals may be required from relevant regulatory bodies such as:

- the Central Bank of Sri Lanka, in respect of regulated sectors such as finance and banking;
- the Telecommunications Regulatory Commission of Sri Lanka, for ventures involving telecommunications infrastructure and services;
- the National Medicines Regulatory Authority, for the manufacture, importation, marketing and distribution of pharmaceuticals, medical devices and borderline products; and
- the Central Environmental Authority, for investments involving industrial activity or development projects requiring Environmental Impact Assessments (EIAs) or other forms of environmental clearance.

### Compliance With Listing Rules

In the event of investments in companies that are listed on the Colombo Stock Exchange, compliance with the Listing Rules of the Colombo Stock Exchange will be required. The prior approval of the Securities and Exchange Commission of Sri Lanka is required for any private placement of shares in a listed company if the proposed share issuance will result in an increase of 20% or more of the company's post-issuance outstanding shares.

## 2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance

Foreign investors may generally invest in Sri Lanka without the requirement for obtaining any special purpose approvals, provided that the investment in made in compliance with the Foreign Exchange Act, No 12 of 2017, and regulations. Nevertheless, if the proposed investment requires BOI approval or if the foreign investors want to set up their business within the Colombo Port City, they must submit an application along with a detailed business proposal, including information about the nature of the project, proposed shareholding, and funding arrangements. Once the application is reviewed and approved, the investor will enter into a formal investment agreement with the BOI or the Port City Commission.

If an investor proceeds without obtaining prior approval, the investment may be treated as unauthorised. This could lead to restrictions on repatriation of profits and capital, possible penalties or regulatory enforcement, and legal complications. Procedural non-compliance may arise in various forms, including:

- failure to channel foreign investment through an IIA;
- undertaking investments in restricted sectors without prior approval;
- engaging in foreign exchange transactions without the prior approval of the Central Bank of Sri Lanka where such approval is legally required; and
- breach of conditions imposed under the BOI or Port City agreements, or violations of sector-specific approvals (eg, operating outside permitted business activities).

Where such non-compliance is detected, the relevant regulatory authorities (such as the Director of the Department of Foreign Exchange, the Central Bank of Sri Lanka, the Board of Investment of Sri Lanka, the Securities and Exchange Commission of Sri Lanka, etc) may initiate investigative or enforcement action. In some cases, a compoundable offence may be resolved by payment of a penalty determined by the relevant authority. However, for more serious or wilful breaches, sanctions may include:

- monetary fines;
- suspension or cancellation of licences or investment approvals;
- prohibition on repatriation of profits or capital;
- forfeiture of improperly held assets; and
- criminal prosecution, in cases of deliberate fraud, misrepresentation or evasion.

Furthermore, non-compliance may adversely affect investor credibility and future dealings with regulatory authorities. In cases involving BOI or Port City registered enterprises, the BOI or the Commission

may also exercise its right to terminate the investment agreement and recommend cancellation of associated approvals and exemptions.

### 2.3 Commitments Required From Foreign Investors

Foreign investors operating under the BOI or the Colombo Port City Economic Commission are required to comply with a range of legal, regulatory and contractual obligations. These typically include remitting capital through designated investment accounts, complying with sector-specific or project-specific conditions, and meeting any timelines or milestones agreed with the relevant authority. Investors must also ensure ongoing compliance with Sri Lankan laws relating to taxation, labour, environmental protection and company administration.

Where approvals or incentives are granted under a BOI agreement or Port City registration, the investor is also expected to honour any commitments set out therein, such as capital infusion deadlines, local employment targets, or reporting obligations. Non-fulfilment of such commitments may result in withdrawal of approvals, suspension of incentives, or other regulatory sanctions.

### 2.4 Right to Appeal

The right to appeal or challenge decisions affecting foreign investment in Sri Lanka depends on the applicable regulatory framework and the nature of the administrative or contractual relationship between the investor and the regulatory agency.

For investments under the BOI or the Colombo Port City Economic Commission, investors may seek administrative review of adverse decisions by making representations to senior officials or the Director General of the BOI or of the Colombo Port City Economic Commission. This internal review process is often the first recourse and is typically expected to be exhausted prior to initiating formal dispute resolution by referring the matter to arbitration.

In addition, the affected parties may seek judicial redress by way of a writ application to the Court of Appeal, challenging the legality or procedural propriety of the administrative act. In addition, if the decision amounts to an infringement of a fundamental right, a fundamental rights application may be filed before the Supreme Court, subject to the 30-day time limit.

Sri Lankan administrative law principles generally require that internal or administrative review mechanisms be pursued first, before resorting to court action, unless such remedies are unavailable, futile or have been unreasonably delayed.

## 3. Corporate Vehicles

### 3.1 Most Common Forms of Legal Entity

The most common legal structure adopted by foreign investors in Sri Lanka is the limited liability company incorporated under the Companies Act, No 7 of 2007. This may take the form of a private limited company (designated "(Private) Limited") or a public limited company (designated "PLC") depending on the scale and intended nature of operations.

Foreign investors typically choose their legal structure based on the nature of the business, regulatory requirements, sector-specific approvals, tax considerations, and whether they wish to benefit from BOI or Port City concessions.

#### Private Limited Company

A private limited company is generally preferred due to fewer regulatory burdens, and it requires a minimum of one shareholder and one director, with no restriction on foreign shareholding unless the business falls within a restricted sector. It offers limited liability to its shareholders and there is no minimum capital requirement. This structure is best suited for greenfield projects, subsidiaries of foreign companies, or most business cases due to its simplicity and flexibility.

#### Public Limited Company

A public limited company is permitted to offer its shares and other securities to the public and is generally used by larger enterprises, particularly where the investors intend to raise capital from the market. If a public company seeks to list its shares on the Colombo Stock Exchange (CSE), the Listing Rules and Securities and Exchange Commission (SEC) guidelines impose a minimum capital requirement

and minimum public float, which indirectly requires a larger shareholder base. This, however, is a regulatory requirement for listing, not incorporation.

### Company Limited by Guarantee

A company limited by guarantee is a special category used primarily for non-profit purposes, such as charities, professional associations, NGOs, chambers of commerce, and certain educational or cultural institutions. These companies do not have share capital or shareholders but are formed by guarantors, who undertake to contribute a specified amount to the assets of the company in the event of winding up. They require a minimum of two members and two directors, and there is no restriction on foreigners forming guarantee companies.

### Overseas Companies

Foreign companies may also establish a branch office, a project office or a liaison office in Sri Lanka. A branch office is permitted to carry out commercial activities similar to that of the parent company, and a project office is for carrying out a particular project by the parent company; however, both of these require a minimum inward remittance of USD200,000. A liaison office, by contrast, does not have any minimum investment requirement, but is restricted to non-profit-generating activities such as communications, market research, and co-ordination (ie, cannot engage in trade or revenue-generating operations).

### Offshore Companies

For doing business within the Colombo Port City Special Economic Zone, entities must register with the Colombo Port City Economic Commission and operate in accordance with the prescribed rules for businesses within the zone. The Colombo Port City regime permits 100% foreign ownership and provides for a simplified registration process tailored to international service-oriented businesses.

## 3.2 Incorporation Process

Incorporating a company in Sri Lanka under the Companies Act, No 7 of 2007 involves a series of procedural steps and generally takes between seven and 14 working days, depending on the complexity of the structure and the efficiency of document submission.

The process begins with the reservation of a unique company name, which is done by submitting an online request through the e-ROC online portal of the Registrar General of Companies. Name approval typically takes three to five working days. Once approved, the following incorporation documents must be prepared and submitted:

- Form 1 (limited liability company)/Form 5 (company limited by guarantee) – company registration form (includes company details);
- Form 18 – consent and certificate of each director;
- Form 19 – consent and certificate of the secretary; and
- articles of association – either the standard version provided in the Companies Act or a customised version.

These documents, along with the prescribed registration fee, must be submitted online through the e-ROC online portal of the Registrar of Companies. If all documentation is in order, the Certificate of Incorporation is issued within five to 12 days.

Following incorporation, post-registration formalities include:

- opening of the IIA and a corporate bank account;
- obtaining a Taxpayer Identification Number (TIN) from the Inland Revenue Department; and
- registering for VAT, EPF/ETF or other statutory requirements, depending on the nature and size of the business.

Since 30 March 2026, incorporation is not treated as complete until the company has also filed its beneficial ownership particulars with the Registrar through the dedicated portal, pursuant to the Companies (Amendment) Act, No 12 of 2025, and the Companies (Beneficial Ownership) Regulation, No 1 of 2026. The incorporation timeline is slightly longer for companies limited by guarantee or foreign company branches, as they are subject to additional procedural and regulatory requirements.

### 3.3 Ongoing Reporting and Disclosure Obligations

Private limited companies in Sri Lanka are subject to a number of ongoing reporting and disclosure obligations under the Companies Act, No 7 of 2007, aimed at ensuring transparency, corporate accountability and regulatory compliance.

Any change in company management, such as the appointment or resignation of directors or the company secretary, must be reported to the Registrar of Companies by filing Form 20 within 20 working days of the change. Amendments to the articles of association require the passing of a special resolution and must be filed along with the revised Articles within ten working days.

All private companies are required to prepare annual financial statements. These financial statements must be prepared in accordance with the Sri Lanka Accounting and Auditing Standards Act, No 15 of 1995, and in compliance with relevant Sri Lanka Accounting Standards (SLFRS/LKAS).

In addition, every company must file an annual return (Form 15) within 30 working days of its annual general meeting. This return must provide updated information on the company's registered office, directors, shareholders, share capital and other key particulars.

A significant new layer of disclosure has been introduced by the Companies (Amendment) Act, No 12 of 2025, read with the Companies (Beneficial Ownership) Regulation, No 1 of 2026, which became operational on 30 March 2026. Every company must now identify its beneficial owners – broadly, any natural person who directly or indirectly holds or controls 10% or more of the shares or voting rights, or who otherwise exercises effective control – maintain a register of beneficial owners at its registered office, and file the prescribed particulars with the Registrar of Companies through a dedicated online portal.

Companies incorporated before the operational date are required to comply within six months, and depositaries of licensed stock exchanges must notify the Registrar of holders of 10% or more. Limited beneficial ownership information is publicly accessible, with fuller particulars available to regulators and, on application, under the Right to Information Act. The same amendment prohibits the issuance of bearer shares and share warrants to bearer, requiring existing instruments to be converted into registered form. Non-compliance with the beneficial ownership obligations is a criminal offence and may attract personal liability for directors and officers.

Failure to comply with these reporting obligations may result in the imposition of penalties by the Registrar General of Companies.

### 3.4 Management Structures

Most common legal entities, such as private and public companies, operate under a unitary (one-tier) board structure, in accordance with the Companies Act, No 7 of 2007. Under this structure, a single board of directors is responsible for both the management of the company's day-to-day affairs and the oversight of its strategic direction and compliance obligations.

In private companies, directors frequently assume both executive and non-executive roles, and decision-making is often closely aligned with shareholder interests, particularly in closely held companies. Shareholders exercise their rights primarily through resolutions passed at general meetings, including the appointment and removal of directors, approval of dividends, actioning of reserve rights, and amendments to the articles of association.

There is no statutory provision under Sri Lankan law for a two-tier board structure (ie, a separate supervisory and management board), making the one-tier system the default and standard corporate governance framework for companies incorporated in Sri Lanka. However, companies may internally assign functional roles (eg, managing director, non-executive chairman) or have multiple tiers of governing structures to promote oversight and accountability, particularly in larger or regulated entities. This is generally the case in companies limited by guarantee.

### 3.5 Directors', Officers' and Shareholders' Liability

The liability of directors and officers is primarily governed by the Companies Act, No 7 of 2007, which

imposes both fiduciary and statutory duties on directors. These duties include:

- acting in good faith in the best interests of the company;
- exercising powers for proper purposes;
- avoiding conflicts of interest; and
- performing their functions with care, diligence and skill (see Sections 187–189 of the Companies Act).

Directors may be held personally liable for breaches of these duties, particularly in cases involving unlawful distributions, trading while insolvent, or misstatement of financial information. Officers, including company secretaries, may also face liability for non-compliance with statutory requirements, failure to maintain proper records, or facilitating regulatory breaches. They are also liable for securities law violations or breaches of statutory obligations under laws such as the Employees' Provident Fund Act or the Employees' Trust Fund Act.

In the case of listed companies, directors and senior management must additionally comply with the "fit and proper" criteria under the Listing Rules of the Colombo Stock Exchange and relevant provisions of securities laws. They are expected to avoid conduct such as insider trading, misrepresentation of material facts, and falsification of financial statements. Directors of listed entities operating in regulated sectors (such as banking, finance and insurance) must also satisfy the sector-specific fit-and-proper requirements imposed by regulators such as the Central Bank of Sri Lanka and the SEC.

The principle of separate legal personality protects shareholders from personal liability – as such, they are generally not liable for the debts or obligations of the company, other than for any amount unpaid on their shares. Nevertheless, Sri Lankan courts will pierce the corporate veil in exceptional circumstances, such as in cases involving fraud or offences related to bribery, corruption or money laundering.

## 4. Employment Law

### 4.1 Nature of Applicable Regulations

The nature of the legal rules governing employment relationships in Sri Lanka is primarily regulatory and protective of employees based on equitable standards.

Employment contracts are recognised and enforceable, but they must comply with the minimum standards set by statute. Contractual terms more favourable to the employee than those prescribed by law are valid, but any term less favourable than the statutory minimum is void to the extent of such inconsistency.

The principal statutes regulating employment include:

- the Wages Boards Ordinance, which sets standards, minimum wages and working conditions in all trades;
- the Shop and Office Employees (Regulation of Employment and Remuneration) Act, No 19 of 1954, for employees in shops and offices;
- the Factories Ordinance, which is applicable to industrial establishments and sets basic health and occupational safety standards;
- the Industrial Disputes Act, No 43 of 1950, which regulates terminations, disciplinary action, and resolution of disputes;
- the Termination of Employment of Workmen (Special Provisions) Act, No 45 of 1971 (TEWA), which requires prior approval or consent for termination of certain categories of employees;
- the Payment of Gratuity Act, No 12 of 1983; and
- the Employment of Women, Young Persons and Children Act.

In addition, employers must comply with statutory provisions governing working hours, leave entitlements, termination benefits, and social security obligations under the Employees' Provident Fund Act and the Employees' Trust Fund Act.

In unionised workplaces or sectors with active trade unions, collective bargaining agreements (CBAs) may supplement statutory protections and apply in parallel with individual contracts. These CBAs, once registered under the Industrial Disputes Act, become

legally binding on both parties. While CBAs can provide better terms than those mandated by statute, they cannot reduce or override statutory protections.

Furthermore, case law plays a significant role in interpreting statutory provisions, especially in areas such as unjust dismissal, constructive termination and employer obligations, although statutory law takes precedence.

### 4.2 Characteristics of Employment Contracts

Employment contracts may be concluded either in writing or verbally, as there is no statutory requirement mandating written contracts. Verbal contracts are legally valid and enforceable, provided the essential elements of a contract – such as offer, acceptance, intention to create legal relations, and consideration – are present.

In practice, labour tribunals regularly uphold employment relationships established through conduct and surrounding circumstances, supported by documentary evidence such as salary slips, attendance records, or letters of appointment. Nevertheless, best practice dictates that employers issue letters of appointment or employment agreements, especially to satisfy evidentiary requirements, and to clarify the terms of engagement including probation, termination, job duties and benefits.

Regardless of whether the contract is written or oral, certain statutory conditions are automatically implied into all employment relationships. These include provisions relating to minimum wages, working hours, weekly rest, leave entitlements, public holidays, termination procedures and retirement benefits, arising from legislation mentioned in **4.1 Nature of Applicable Regulations**.

There is no legal restriction on the duration of employment contracts in Sri Lanka. Both permanent and fixed-term contracts are recognised. However, courts and tribunals are cautious of abuse of fixed-term arrangements. Where fixed-term contracts are renewed repeatedly without a genuine basis, they may be reclassified as permanent contracts, giving rise to the same protections and entitlements as permanent employment, including the need to obtain prior approval under TEWA for termination.

Additionally, Sri Lankan law now prescribes a statutory minimum retirement age of 60 years for all private sector employees, as introduced by the Minimum Retirement Age of Workers Act, No 28 of 2021. Employment contracts that specify a lower retirement age must be adjusted accordingly, unless an exception is provided by regulation. Employers may, however, retain employees beyond age 60 based on mutual agreement.

### 4.3 Working Time

Working time regulations are primarily governed by the Shop and Office Employees (Regulation of Employment and Remuneration) Act, No 19 of 1954, and by the Wages Boards Ordinance for all other trades.

For employees falling under the Shop and Office Employees Act, the standard working time is generally limited to eight hours per day and 45 hours per week, excluding intervals for rest and meals. Overtime work, defined as work performed in excess of the standard daily or weekly limits, must be compensated at a premium rate. The standard rate for overtime is 1.5 times the normal hourly wage, while work performed on public holidays is usually paid at two times the normal rate. The law imposes a cap on overtime, limiting it to a maximum of 12 hours per week.

For sectors covered by the Wages Boards Ordinance, working hours and overtime entitlements are determined by the respective Wages Board constituted for the trade. While the structure of these boards allows for some variation depending on the nature of the industry (eg, manufacturing, plantation, hospitality), the standards generally align with the framework established under the Shop and Office Employees Act. In most cases, Wages Boards also provide for overtime compensation at 1.5 times the regular wage, though specific entitlements and limits may vary slightly across sectors.

Employers are legally obligated to maintain accurate records of working hours and overtime, and failure to compensate overtime in accordance with applicable

law may attract penalties and enforcement action by the Labour Department.

### 4.4 Termination of Employment Contracts

Sri Lanka is not an "employment-at-will" jurisdiction. The termination of individual employment contracts is governed by TEWA, which imposes strict limitations on the unilateral termination of employment by employers.

Under TEWA, an employer cannot lawfully terminate the services of a "workman" other than for misconduct, except with the prior written consent of the employee or the prior written approval of the Commissioner General of Labour. This applies even where the employment contract permits termination on notice. Accordingly, termination without cause or justification, commonly known as "at-will termination", is not legally permissible under Sri Lankan law.

Where approval is sought, the employer must justify the termination on valid grounds, such as redundancy or closure of business operations. The Commissioner General has the discretion to reject the application or to impose conditions, including payment of compensation, based on factors such as the employee's length of service, age, salary and the circumstances of the termination. The amount of compensation is calculated according to the formula prescribed by the Commissioner General. In addition, employees with five or more years of continuous service are entitled to gratuity under the Payment of Gratuity Act, No 12 of 1983, irrespective of the reason for termination, other than for proven misconduct.

Employers who fail to obtain the required consent or approval risk having the termination declared unlawful, which will result in reinstatement of the employee or an order to pay retrospective compensation.

For collective redundancies, the procedure is similarly governed by TEWA. Termination of multiple employees requires prior approval from the Commissioner General of Labour, and the employer must continue to pay salaries and other dues until such approval is obtained. Where a trade union exists, consultation is required, although there is no formal statutory requirement for a negotiated agreement. In practice, employers often seek to implement mutual separation schemes, offering employees ex gratia compensation packages in exchange for resignation, in order to avoid the uncertainty and delay involved in obtaining formal approval for termination.

### 4.5 Employee Representations

Employee representation is primarily facilitated through trade unions and is regulated by the Trade Unions Ordinance. There is no general statutory obligation for employers to consult or inform employees in the ordinary course of business or for routine employment matters. However, employee representation becomes relevant, and in some cases expected or required, where trade unions are recognised or where employment matters escalate into collective disputes, redundancies or collective terminations.

When a trade union represents employees, it is empowered to act on their behalf in collective bargaining, grievance resolution, and dispute settlement processes. In such situations, employers are expected to engage with the union in good faith. While Sri Lankan law does not mandate the formation of works councils or joint consultative bodies, some enterprises – particularly larger or unionised workplaces – voluntarily establish employee relations mechanisms to promote communication and industrial harmony.

In the case of BOI-approved enterprises, the BOI actively promotes co-operation between management and labour and industrial peace through its Industrial Relations Officers. The Manual on Employment Policy and Labour Standards issued by the BOI outlines the labour standards and employment practices that must be observed by BOI-approved companies, both within and outside Export Processing Zones (EPZs). This Manual encourages proactive communication and dispute prevention practices, and reiterates that the national labour laws apply fully to all BOI enterprises. Importantly, the terms and conditions of employment in BOI-approved companies must not be less favourable than those prescribed under applicable Sri Lankan labour laws.

The Ministry of Labour and the Department of Labour are responsible for enforcing labour laws and overseeing industrial relations. These institutions play a

central role in dispute resolution and maintaining compliance across all sectors.

## 5. Tax Law

### 5.1 Taxes Applicable to Employees/ Employers

The taxation of employment income is governed by the Inland Revenue Act, No 24 of 2017, (as amended). Both employees and employers are subject to tax obligations arising from the employment relationship.

Employees are liable to pay income tax through the Advance Personal Income Tax (APIT) system, under which the employer is required to deduct and remit tax at source on employment income. For the 2024/2025 year of assessment, tax applies to annual employment income exceeding LKR1.2 million, and from 1 April 2025 the threshold has increased to LKR1.8 million per annum. Tax is imposed at progressive rates ranging from 6% to 36% based on the employee's chargeable income.

APIT applies to both residents and non-residents who derive income from employment in Sri Lanka. Residency for tax purposes is determined based on physical presence and other criteria under the Inland Revenue Act.

Sri Lanka does not impose any separate social security taxes or national insurance-style contributions beyond the mandatory Employees' Provident Fund (EPF) and Employees' Trust Fund (ETF). Under the EPF scheme, employers are required to contribute 12% of the employee's monthly salary, while employees contribute 8%. In addition, employers must contribute 3% to the ETF. There are no other payroll taxes levied on employers in Sri Lanka.

### 5.2 Taxes Applicable to Businesses

#### Income Tax

Companies are subject to taxation if they are incorporated in Sri Lanka, managed or controlled from Sri Lanka, or derive income from a source within Sri Lanka. The residency test under the Inland Revenue Act, No 24 of 2017 applies to both local and foreign entities, including permanent establishments.

The standard corporate income tax rate is 30% applicable to most companies. However, a higher rate of 45% applies to businesses involved in gaming, betting, liquor and tobacco. Withholding tax (WHT) in Sri Lanka applies to passive and cross-border payments made to non-resident and resident persons. The applicable rates are as follows:

- dividends – 15%;
- interest – 10%; and
- all other payments (excluding dividends) such as royalties, technical service fees, management fees, rent and contract payments – 14%.

These rates may be reduced where a relevant double taxation avoidance agreement (DTAA) applies, provided that the recipient furnishes a valid certificate of residence and other documentation to prove beneficial ownership and eligibility for treaty benefits.

#### VAT and SSCL

Value added tax (VAT) is levied at a standard rate of 18%. The simplified VAT (SVAT) scheme previously available to exporters and BOI companies has been abolished, with effect from October 2025, and VAT-registered entities now rely on a refund mechanism to recover input VAT. With effect from 1 July 2026, the VAT rate on financial services increases from 18% to 20.5%, and VAT applies to digital services supplied by non-resident providers to persons in Sri Lanka through electronic platforms, under the Value Added Tax (Amendment) Act, No 4 of 2025.

A 2.5% Social Security Contribution Levy (SSCL) applies to businesses with quarterly turnover exceeding LKR15 million rupees or annual turnover exceeding LKR60 million, unless exempt. SSCL is calculated on turnover, not profit, and is separate from income tax.

#### Other Taxes

In addition to the foregoing, companies must pay stamp duty on specified instruments and customs and excise duties depending on the nature of the business.

### OECD's Two-Pillar Solution

As of mid-2026, Sri Lanka has not implemented Pillar Two of the OECD's Two-Pillar Solution and has not introduced a Qualified Domestic Minimum Top-Up Tax (QDMTT). The country has not signed the OECD/G20 Statement on a Two-Pillar Solution to Address the Tax Challenges Arising from the Digitalisation of the Economy, and is therefore not expected to qualify for safe harbour treatment under the OECD's transitional rules. Companies operating in Sri Lanka that are part of multinational groups above the EUR750 million threshold should monitor developments, particularly if the parent entity is in a Pillar Two-adopting jurisdiction, as top-up taxes may be triggered at the group level under the Income Inclusion Rule (IIR) or Undertaxed Profits Rule (UTPR).

## 5.3 Available Tax Credits/Incentives

Sri Lanka offers a range of tax incentives and credits aimed at promoting investment, exports, innovation and sectoral development. These incentives are primarily made available under the Inland Revenue Act, No 24 of 2017, the Board of Investment of Sri Lanka Law, No 4 of 1978 (which continues to be applied on a transitional basis pending the operationalisation of the Economic Transformation Act, No 45 of 2024) and the Strategic Development Projects Act, No 14 of 2008.

Under the Inland Revenue Act, eligible businesses may claim enhanced capital allowances for qualifying investments in plant, machinery and infrastructure, particularly in priority sectors such as renewable energy, agriculture and manufacturing.

Enterprises approved by the BOI may benefit from customs duty exemptions and simplified administrative procedures, depending on the scale of investment, export orientation and employment generation. These benefits are typically granted through an agreement entered into with the BOI and are subject to compliance with the policy guidelines.

Projects recognised as Strategic Development Projects (SDPs) under the Strategic Development Projects Act, No 14 of 2008 may be granted significant tax concessions, including:

- tax holidays of up to 25 years;
- exemptions from VAT, customs duty and PAL on imports of project-related goods and services; and
- exemptions from income tax and other levies, subject to meeting prescribed thresholds in relation to capital investment, job creation and national economic importance – approval is granted by the Cabinet of Ministers, based on a recommendation from the Minister of Finance.

In the Colombo Port City Special Economic Zone, businesses that obtain Business of Strategic Importance (BSI) status from the Cabinet of Ministers, based on a recommendation from the Colombo Port City Economic Commission, are eligible for full exemption from all taxes, duties and levies for a period of up to 25 years. This includes income tax, VAT, WHT and stamp duty. The Port City regime is designed to promote international commercial and financial services, and applicants must satisfy criteria related to capital inflow, foreign exchange earnings and global business activity.

## 5.4 Tax Consolidation

Sri Lanka does not permit tax consolidation under the Inland Revenue Act, No 24 of 2017 (as amended). There are no provisions for group relief, intra-group transfer of tax credits, or unified filing status under the law. Each company within a corporate group is treated as a separate legal and taxable entity, and there is no mechanism for filing a consolidated tax return or pooling taxable profits and losses across group companies. Accordingly:

- each company must file its own tax return, compute its tax liability independently, and comply separately with all payment and reporting obligations; and
- losses incurred by one company cannot be transferred or set off against the income of another company within the same group, even if 100% owned.

However, a company may carry forward its own unrelieved tax losses and offset them against future taxable income for up to six consecutive years, subject to continuity of ownership and continuity of business activity requirements.

### 5.5 Thin Capitalisation Rules and Other Limitations

Sri Lanka applies thin capitalisation rules under the Inland Revenue Act, No 24 of 2017 (as amended), which place a cap on the amount of interest expense (financial cost) that a company may deduct for tax purposes. These rules are intended to discourage excessive debt financing and erosion of the tax base through interest deductions.

Under the current regime, companies must ensure that the level of debt is reasonable in relation to their capital structure (ie, company's share capital and reserves). The deductible financial cost is calculated based on:

- the value of the financial instruments that gave rise to the cost; and
- four times the company's issued share capital and reserves at year-end (excluding any revaluation reserves).

If the company's actual financial cost exceeds the amount computed under this rule, the excess is disallowed as a tax deduction for that year. However, the disallowed portion may be carried forward and deducted in subsequent years, subject to the same limitation.

The regime is purpose-built to counter base erosion and profit shifting (BEPS) in line with international best practice. These rules work in tandem with transfer pricing regulations, which require all related-party financing arrangements to reflect arm's length terms and be properly documented.

### 5.6 Transfer Pricing

Sri Lanka has implemented a comprehensive transfer pricing regime under the Inland Revenue Act, No 24 of 2017 (as amended). These provisions require that transactions between associated persons, whether domestic or cross-border, be conducted on an arm's length basis – that is, under terms and conditions comparable to those that would apply between independent parties dealing at arm's length.

Transfer pricing rules are designed to prevent profit shifting and erosion of the tax base, and they apply not only to foreign multinational enterprises but also to domestic groups and BOI-approved entities, where transactions occur between associated persons.

The transfer pricing rules apply to transactions involving:

- the sale or purchase of goods;
- provision of services;
- licensing of intellectual property or other intangible assets;
- financing arrangements; and
- any other transactions that may affect taxable income.

Taxpayers are required to:

- maintain contemporaneous documentation to justify the method used to determine the arm's length price;
- disclose related-party transactions in the prescribed transfer pricing disclosure form, filed together with the annual income tax return; and
- submit a transfer pricing certificate confirming compliance, if the value of transactions exceeds specified thresholds.

The Commissioner General of Inland Revenue is empowered to adjust the taxpayer's income where the actual pricing is not consistent with the arm's length principle. Such adjustments may result in additional tax assessments, interest and penalties.

### 5.7 Anti-Evasion Rules

There is a comprehensive set of anti-evasion and anti-avoidance rules set out in the Inland Revenue Act, No 24 of 2017 (as amended), including:

- Section 35 – empowers the Commissioner General to disregard or recharacterise any arrangement entered into primarily to gain a tax advantage, ensuring that tax outcomes reflect the substance over the form;
- Section 33 – permits the Commissioner General to recalculate income to align related-party transactions with arm's length standards, thus preventing profit shifting through pricing manipulation; and

- Section 34 – enables the Commissioner General to reallocate profits or income among associated persons to prevent artificial income shifting designed to reduce tax liabilities.

These rules empower the tax authorities to counteract artificial arrangements, misstatements and schemes designed to avoid or evade tax liability, whether through deliberate misrepresentation or aggressive tax planning. Together, these rules form a powerful multi-layered system aimed at curbing tax avoidance.

Taxpayers should be aware that every arrangement lacking commercial substance, involving non-arm's-length pricing or resulting in artificial income transfers may be challenged by the Commissioner General under these provisions, with the potential for adjustments, penalties and even criminal proceedings in serious cases.

### 5.8 Tariffs

Sri Lanka applies a range of ad valorem rates depending on the nature of the product, its use and its origin. Raw materials and essential capital goods generally enjoy low or zero tariff rates, while finished consumer goods – especially those competing with local industries – are subject to higher rates. Tariffs on agricultural products, textiles and apparel, and automobiles tend to be among the highest. These duties are designed to offer protection to domestic manufacturing, agriculture and assembly sectors, which are considered sensitive or strategically important to the national economy.

In addition to basic customs duties, imports may attract other levies, such as VAT at 18%, the Port and Airport Development Levy, Excise Duty (on selected goods such as liquor and vehicles) and the Social Security Contribution Levy at 2.5%, depending on the category of goods and importer status.

Tariff preferences are available under various regional and bilateral trade agreements, including the South Asian Free Trade Area (SAFTA), the Indo–Sri Lanka Free Trade Agreement, and the Sri Lanka–Singapore Free Trade Agreement, through which reduced or zero duties may apply on qualifying goods. However, Sri Lanka maintains a sensitive list under these treaties to retain tariff protection for key sectors.

Global trade developments, such as shifting supply chains, currency volatility and rising protectionism in other jurisdictions, have also influenced Sri Lanka's customs and tariff policies. The government periodically reviews rates and trade concessions in response to these external economic factors, as well as to manage foreign exchange outflows and support domestic producers.

In April 2025, the United States imposed a 44% reciprocal tariff on Sri Lankan goods, threatening key export sectors such as apparel and rubber. Following negotiations, the rate was reduced to 30% and then to 20% by the end of July 2025. After the United States Supreme Court struck down the tariffs imposed under the International Emergency Economic Powers Act in February 2026, the United States moved to maintain duties under Section 122 of the Trade Act of 1974, leaving Sri Lankan exports subject to a 10% baseline tariff alongside applicable sector-specific and most-favoured-nation duties; the position remains fluid. In response, Sri Lanka is implementing a National Tariff Policy that rationalises customs import duty into bands of 0%, 10%, 20% and 30% and gradually phases out para-tariffs, aiming to boost competitiveness and align with international trade norms.

## 6. Competition Law

### 6.1 Merger Control Notification

Sri Lanka does not impose any merger control notification thresholds based on revenue, market share or asset value, and there is no mandatory pre-merger notification requirement for private unlisted companies unless otherwise required by a sectoral regulator.

Amalgamations and company mergers are regulated under the Companies Act, No 7 of 2007, which sets out procedural requirements for amalgamations, including court-supervised amalgamations. For listed companies, the SEC has issued the Takeovers and Mergers Code of 1995 (as amended), which requires prior notification to, and approval from, the SEC when an acquirer crosses specified shareholding thresholds

in a listed company. Such transactions must also be disclosed to the Colombo Stock Exchange (CSE) in accordance with its rules.

Separately, entities operating in regulated sectors, such as banking, insurance, finance and telecommunications, must obtain prior approval from the relevant regulator, including the Central Bank of Sri Lanka, the Insurance Regulatory Commission of Sri Lanka, or the Telecommunications Regulatory Commission of Sri Lanka, before completing any merger, acquisition or corporate restructuring within those sectors.

### 6.2 Merger Control Procedure

While there is no unified merger control regime, certain sectors impose mandatory notification and approval requirements that must be complied with prior to the completion of a merger or acquisition.

In the banking and finance sector, approval must be obtained from the Central Bank of Sri Lanka under the applicable financial sector statutes (such as the Banking Act or the Finance Business Act). The parties must submit a formal application with relevant corporate and financial documents, including details of the proposed transaction and its impact on capital adequacy and market concentration. The review period varies but typically takes several weeks to a few months depending on the complexity of the transaction and regulatory queries.

In the telecommunications sector, mergers or acquisitions involving licensed operators must be notified to the Telecommunications Regulatory Commission of Sri Lanka (TRCSL). There is no codified timeline, but the TRCSL assesses such transactions on a case-by-case basis, considering market effects, spectrum allocation and technical capacity. Approval is generally required before completing any change in control.

For listed companies, any acquisition or takeover falling within the scope of the Takeovers and Mergers Code (the "TOM Code") requires prior SEC approval. The Code stipulates that once an offer is announced the entire takeover process must be completed within 60 calendar days, unless an extension is granted by the SEC under special circumstances. The acquirer must disclose the offer and obtain SEC clearance before any shares are acquired above the relevant thresholds.

In all these cases, parties must comply not only with sector-specific procedural steps but also with any disclosure obligations applicable under the Companies Act, the Listing Rules or other relevant laws. There are currently no standardised pre-merger filing procedures or timelines for unregulated sectors.

### 6.3 Cartels

Anti-competitive agreements and concerted practices are primarily regulated under the Consumer Affairs Authority Act, No 9 of 2003. This generally prohibits agreements, decisions or practices that have the effect of substantially lessening competition in any market in Sri Lanka. This would include classic cartel conduct such as price fixing, bid rigging, market allocation, and collusive limitation of supply or production.

The Consumer Affairs Authority (CAA) is the designated enforcement agency empowered to conduct investigations, issue directions and take administrative action against anti-competitive conduct. However, the existing legal framework is limited in both scope and enforcement capacity. It does not clearly distinguish between horizontal and vertical agreements, lacks a formal leniency or whistle-blower mechanism, and does not provide for significant civil or criminal penalties. Moreover, enforcement tends to be reactive and complaint-driven, rather than proactive or systematic.

The Act does not explicitly require that anti-competitive conduct occur within the country's borders; rather, the relevant test is whether the conduct has a substantial effect on competition in Sri Lankan markets. As such, agreements concluded abroad may still fall within the purview of the CAA if they affect domestic trade or consumers.

There have been ongoing discussions and stakeholder consultations on introducing a modern and comprehensive competition law framework to replace or significantly reform the current regime. These reforms are expected to establish a clearer prohibition structure, provide for merger control, introduce investigative and sanctioning powers, and align with international best practices in competition law enforcement.

### 6.4 Abuse of Dominant Position

Under the Consumer Affairs Authority Act, it is prohibited for any enterprise that holds a dominant position in the market to abuse that dominance in a way that prevents, restricts or distorts competition. The Act does not define "dominance" using formal market share thresholds, but in practice the CAA assesses whether an enterprise has the ability to act independently of market forces, competitors and consumers.

Forms of abuse may include:

- unjustified price discrimination;
- imposing unfair purchase or selling prices;
- limiting production or markets; and
- predatory pricing or refusal to deal.

However, the current legal regime does not expressly address economic dependency or exploitative abuses in vertical relationships (such as unjustified termination of long-standing supply arrangements or coercive exclusivity), and there is no standalone provision dealing with essential facility doctrines or dominant platforms.

The effects-based test applies, meaning that even if the conduct takes place outside Sri Lanka it may be caught under the law if it has the effect of distorting or harming competition in the Sri Lankan market.

The CAA has administrative powers to investigate and issue directions but does not have powers to impose substantial penalties, grant injunctive relief or prosecute offenders through a specialised tribunal. As such, enforcement of unilateral conduct cases remains rare and discretionary.

## 7. Intellectual Property

### 7.1 Patents

A patent is a form of intellectual property granted to protect an invention that is novel, involves an inventive step and is industrially applicable. Patent protection is governed by the Intellectual Property Act, No 36 of 2003. A granted patent confers the exclusive right to prevent others from commercially exploiting an invention, such as making, using, selling or importing the patented product or process, without the patent holder's consent.

The term of protection for a patent in Sri Lanka is 20 years from the date of filing the application, subject to the payment of prescribed annual renewal fees.

The registration process begins with filing a patent application at the National Intellectual Property Office of Sri Lanka (NIPO), including a description, claims, drawings (if any) and an abstract. The application undergoes a formal examination, followed by a substantive examination and an international-type search report to determine novelty and patentability. If the examination results are favourable and the invention is not challenged during the publication period, the patent is granted and published in the Gazette.

Patent enforcement mechanisms include both civil and criminal remedies. The patent holder may file a civil action for infringement, seeking remedies such as injunctive relief, damages, account of profits, or destruction of infringing goods. Infringement may also give rise to criminal liability, including fines and imprisonment in aggravated cases. Prosecution must be commenced within three years of the offence or within two years from its discovery by the prosecutor, whichever occurs first. In addition, Sri Lanka Customs is empowered to detain suspected counterfeit goods at the border upon request by the rights-holder.

### 7.2 Trade Marks

A trade mark is a visible sign capable of distinguishing the goods or services of one enterprise from those of another. It may consist of words, names, symbols, logos, shapes or a combination thereof. Trade mark protection is governed by the Intellectual Property Act, No 36 of 2003, and is granted for an initial term of ten years from the date of application, with the possibility of renewal for successive ten-year periods.

The registration process begins with filing an application at NIPO. The application undergoes a formal and substantive examination. If found acceptable, the mark is published in the Government Gazette, triggering a three-month opposition period during which third parties may object to the registration. If no oppo-

sition is filed or if opposition is unsuccessful, the trade mark is registered, and a certificate is issued.

Enforcement of trade marks can be pursued through civil or criminal proceedings. Civil remedies include injunctions, damages, account of profits, and orders for the destruction or forfeiture of infringing goods. In criminal cases, wilful infringement can attract fines or imprisonment. Legal action for infringement must be instituted within three years of the offence or two years from its discovery by the prosecutor, whichever occurs first. Sri Lanka Customs is empowered to detain suspected counterfeit goods at the border.

### 7.3 Industrial Designs

An industrial design is the visual appearance of a product, such as its shape, pattern or combination of colours, that makes it look special or unique. It can be a flat design or a 3D form, and it must be something that can be used as a pattern for making items in industries or by craftsmen and is not dictated solely by function. Industrial designs are protected under the Intellectual Property Act, No 36 of 2003.

Protection is granted for an initial period of five years from the date of application, and may be renewed twice, each time for an additional five years, allowing for a maximum duration of 15 years. To obtain protection, an application must be filed with NIPO, including clear representations or drawings of the design and a description. The application undergoes formal and substantive examination to confirm that the design is new and original. Once approved, the design is registered and published in the Government Gazette, and a certificate of registration is issued.

Enforcement of design rights can be undertaken through civil proceedings, such as for injunctive relief, damages or account of profits. In cases of wilful infringement, criminal sanctions may also be pursued. Legal action for infringement must be instituted within three years of the offence or two years from its discovery by the prosecutor, whichever occurs first.

Sri Lanka Customs can assist by seizing infringing or counterfeit goods at the border upon request by the rights-holder.

### 7.4 Copyright

Copyright is the exclusive legal right granted to the authors and creators of original literary, artistic, musical and dramatic works, as well as software, films, broadcasts and sound recordings. It protects both economic rights (such as reproduction, distribution and public communication) and moral rights (such as the right of attribution and integrity).

In Sri Lanka, it is governed by the Intellectual Property Act, No 36 of 2003. Copyright arises automatically upon the creation and fixation of a work in a tangible form without the need for registration.

The duration of protection depends on the type of work:

- for all copyrightable works (ie, literary, artistic and musical works) – the life of the author plus 70 years after death;
- for cinematographic films and sound recordings – 70 years from the date of publication;
- for applied art – 25 years from the year of creation or publication, whichever is earlier; and
- for anonymous or pseudonymous works – 70 years from the date the work was first made available to the public, unless the identity of the author is revealed earlier.

Enforcement of copyright may be pursued through civil or criminal proceedings. Civil remedies include injunctions, damages and orders for delivery or destruction of infringing copies. In criminal matters, wilful infringement can attract fines or imprisonment. Legal action for infringement must be instituted within three years of the offence or two years from its discovery by the prosecutor, whichever occurs first. Customs authorities may seize pirated or counterfeit goods at the border upon the request of the rights-holder.

### 7.5 Others

The Intellectual Property Act, No 36 of 2003 extends protection to additional categories of intellectual property beyond traditional patents, trade marks and designs.

Geographical indications (GIs) are protected in Sri Lanka under the Intellectual Property Act. A GI is a

sign used on products that have a specific geographical origin and possess qualities, reputation or characteristics essentially attributable to that location, such as "Ceylon Tea" or "Ceylon Cinnamon". Protection arises either through registration with NIPO or under the unfair competition provisions of the Act, even without registration, where misuse is likely to mislead the public.

In addition, software and databases, when they meet the threshold of originality, are protected as literary works under copyright law. This protection arises automatically upon creation and fixation and endures for the lifetime of the author plus 70 years. This includes both source code and object code in the case of software, and original compilations of data in the case of databases.

Trade secrets are protected in Sri Lanka under the concept of "undisclosed information" in the Intellectual Property Act, as well as through principles of unfair competition. This includes confidential business information such as formulas, recipes, customer lists, algorithms, business strategies and methods. These are not subject to registration but are protected through confidentiality obligations, non-disclosure agreements (NDAs) and the general principles of contract and delict (tort). In cases involving wilful misappropriation or breach of trust, criminal sanctions may apply under relevant laws such as the Penal Code or the Computer Crimes Act. Effective protection of these rights depends significantly on the use of internal controls, contractual safeguards and judicial enforcement where necessary.

## 8. Data Protection

### 8.1 Applicable Regulations

Data privacy is governed and regulated by the Personal Data Protection Act, No 9 of 2022 (PDPA), as amended by the Personal Data Protection (Amendment) Act, No 22 of 2025, which provides a comprehensive legal framework for the processing of personal data. The PDPA applies to both public and private sector entities, including foreign entities that process personal data in Sri Lanka or of individuals located in Sri Lanka.

It sets out key principles such as lawfulness, fairness, transparency, purpose limitation, data minimisation and accountability. It grants data subjects specific rights, including the right to access, rectify, erase and object to the processing of their personal data. Data controllers and processors are required to implement appropriate security measures, maintain records of processing activities, and in most cases obtain freely given, specific, informed and unambiguous consent before processing personal data.

In addition to the PDPA, data protection is indirectly supported by:

- the Computer Crimes Act, No 24 of 2007, which criminalises unauthorised access, data theft and related cyber-offences; and
- the Electronic Transactions Act, No 19 of 2006, which recognises the legal validity of electronic records and signatures and facilitates secure data exchange.

Together, these statutes represent a significant advancement in Sri Lanka's data governance landscape, aligning it more closely with international standards such as the EU General Data Protection Regulation (GDPR).

### 8.2 Geographical Scope

The PDPA has extraterritorial application and extends its scope to cover certain activities of foreign entities. Specifically, it applies to any natural or legal person, whether incorporated or operating outside Sri Lanka, who processes the personal data of individuals located in Sri Lanka, in the course of:

- offering goods or services to such individuals; or
- monitoring their behaviour, in so far as that behaviour takes place within Sri Lanka.

This means that foreign companies collecting, analysing or storing the personal data of Sri Lankan residents, whether via websites, apps or other digital platforms, are subject to the same obligations as local data controllers and processors under the PDPA.

Cross-border transfers of personal data are permitted only if the recipient country or foreign entity ensures

an adequate level of data protection, or where appropriate safeguards are in place (such as standard contractual clauses or binding corporate rules). Data controllers must ensure that the rights of data subjects in Sri Lanka are not prejudiced by such transfers.

### 8.3 Role and Authority of the Data Protection Agency

The Data Protection Authority of Sri Lanka is the independent regulatory body tasked with enforcing the country's data protection regime. The Authority has been established and is already active in preparing the regulatory groundwork, and plays a central role in ensuring compliance with the PDPA across both public and private sectors.

Its core functions include:

- monitoring and ensuring compliance with the provisions of the PDPA;
- investigating complaints, either upon receipt or on its own initiative;
- conducting audits and inspections of data controllers and processors;
- issuing binding directions, codes of practice, and guidelines to promote responsible data handling;
- imposing administrative penalties and requiring corrective actions in cases of non-compliance; and
- overseeing data breach notifications, including the assessment of risk and response measures.

The Authority is also empowered to collaborate with international regulatory bodies and issue adequacy decisions or approve cross-border transfer mechanisms. It acts as the primary guardian of personal data rights, ensuring that individuals' privacy is respected and upheld in both the public and private spheres.

While the provisions establishing the Authority are in force, the substantive provisions of the PDPA have been brought into operation on a phased basis. The commencement date originally scheduled for March 2025 was repealed, and, following the Personal Data Protection (Amendment) Act, No 22 of 2025, the remaining provisions (including the principal enforcement powers) are expected to come into full operation during 2026, after which enforcement powers will be exercised in full.

## 9. Looking Forward

### 9.1 Upcoming Legal Reforms

Sri Lanka is currently undergoing a significant wave of legal and institutional reforms, driven by the government's commitment to economic recovery, fiscal transparency and good governance, particularly in line with its obligations under the International Monetary Fund (IMF) programme. These reforms are designed to strengthen investor confidence, modernise regulatory frameworks, and address structural weaknesses exposed by the recent economic crisis.

Recent legislative initiatives have focused on:

- combating bribery and corruption, with stricter enforcement and disclosure obligations;
- reforming anti-money laundering (AML) laws to align with Financial Action Task Force (FATF) standards;
- enacting new legislation on public financial management, namely the Public Financial Management Act, No 44 of 2024 and the Public Debt Management Act, No 33 of 2024, with public procurement reform to follow;
- modernising revenue administration and strengthening the independence of the Central Bank of Sri Lanka; and
- enacting new laws on proceeds of crime and contract enforcement, including the digitalisation of commercial courts.

In the area of tax law, recent and forthcoming changes include:

- an 18% VAT on digital services supplied by non-resident providers, legislated under the Value Added Tax (Amendment) Act, No 4 of 2025, and taking effect from 1 July 2026; and
- an increase in the VAT rate on financial services from 18% to 20.5%, effective 1 July 2026.

A number of the reforms previously anticipated in these fields have since been enacted, including:

- the Companies (Amendment) Act, No 12 of 2025 (introducing the beneficial ownership regime);

- the Personal Data Protection (Amendment) Act, No 22 of 2025;
- the Microfinance and Credit Regulatory Authority Act, No 9 of 2026; and
- the Rescue, Rehabilitation and Insolvency (Corporate and Personal) Act, No 12 of 2026, which modernises the insolvency regime and repeals the Insolvency Ordinance.

Further reforms remain in prospect, notably a consolidated single employment law to replace the existing patchwork of labour statutes, a Public-Private Partnership Bill, and dedicated legislation on public asset management and public enterprise reform, together with the long-discussed modernisation of the competition law framework. The government's continued engagement with development partners and multilateral agencies is likely to result in further corporate governance reform and liberalisation of foreign investment restrictions, including the eventual operationalisation of the investment framework under the Economic Transformation Act, No 45 of 2024. Additionally, reforms are under way to restructure state-owned enterprises, streamline the public sector and promote public–private partnerships, thereby creating a more competitive and investment-friendly legal environment.

## Sri Lanka: Navigating a New Economic Chapter

### *Introduction*

Sri Lanka is in the midst of a profound economic transition. Following the unprecedented crisis of 2022, the country has embarked on a comprehensive programme of fiscal consolidation, institutional reform and structural adjustment, supported by the International Monetary Fund (IMF). For both foreign and domestic investors, this transformation presents a dynamic mix of opportunity and complexity.

This article provides an updated account of key developments shaping Sri Lanka's current investment and economic climate. While reforms are ongoing, notable progress has been made across multiple sectors, ranging from tax policy and public finance to digital transformation and tourism resurgence.

### Post-Crisis Stabilisation and IMF Support

Under the 48-month IMF Extended Fund Facility (EFF) arrangement, now in its final year, Sri Lanka has continued to meet reform milestones. On 27 May 2026, the IMF Executive Board completed the combined Fifth and Sixth Reviews, providing access to approximately SDR508 million (around USD695 million) and bringing total disbursements under the arrangement to about USD2.4 billion. Programme performance has been assessed as generally strong, with the economy having grown by an estimated 5% in 2025; gross official reserves reached approximately USD7 billion by the end of the first quarter of 2026 and external debt restructuring nears completion, including the conclusion of SriLankan Airlines' debt exchange.

This trajectory has, however, been tested by external shocks. In late November 2025, Cyclone Ditwah caused widespread loss of life and displacement, with direct physical damage estimated by the World Bank at approximately USD4.1 billion (around 4% of GDP). In December 2025, the IMF approved emergency financing of approximately USD206 million under the Rapid Financing Instrument to address the resulting balance-of-payments and fiscal pressures. The cyclone, together with the conflict in the Middle East and the attendant rise in global energy prices, has tempered the near-term outlook, with growth for 2026 now projected to moderate to approximately 3%.

The Central Bank of Sri Lanka has cautiously eased policy rates, having moved in November 2024 to a single policy interest rate mechanism centred on the Overnight Policy Rate (OPR). Following a sustained period of easing, the Monetary Policy Board raised the OPR by 100 basis points to 8.75% in May 2026 (with the linked Standing Deposit Facility Rate and Standing Lending Facility Rate at 8.25% and 9.25%, respectively), responding to the upward pressure on domestic energy prices and headline inflation, which reached 5.4% year-on-year in April 2026. Private sector credit has continued to expand, and revenue collection has exceeded expectations.

The temporary relief granted to small and medium-sized enterprises (SMEs) from parate execution lapsed on 30 June 2025 for loans exceeding LKR50 million. The parate execution enables licensed banks to repossess secured assets without recourse to court proceedings, thereby expediting debt recovery. Its enforcement had previously been suspended, initially for six months by the previous government and subsequently for an additional three months by the present administration. With the expiry of the moratorium, the law has now resumed full effect, potentially triggering a wave of enforcement actions by banks seeking to recover non-performing loans.

### Strong Revenue Performance and Fiscal Discipline

Government revenue continued to strengthen through 2025. The tax-to-GDP ratio, having fallen to approximately 8.2% in 2022, recovered to around 13.5% in 2024, and total government revenue is estimated to have reached approximately 15% of GDP in 2025. Customs collections were buoyed by the resumption of motor vehicle imports following the lifting of the 2020 import ban, which proved one of the principal drivers of the 2025 revenue out-turn.

Fiscal performance also improved significantly, with the primary surplus expanding and the overall budget deficit shrinking. These gains reflect both stronger revenue collection and restraint in current expenditure, despite a rising public sector wage bill. The 2026 Budget, presented to Parliament on 7 November 2025 under the theme "Steady and Strong: Committing to Fiscal Discipline for a Resilient Economy", maintained this revenue-based consolidation, targeting a primary

surplus of 2.5% of GDP, total government revenue of 15.4% of GDP, and an overall fiscal deficit of 5.1% of GDP for 2026.

### Tax Reform and Incentive Rationalisation

Following past criticism for granting ad hoc and non-transparent tax holidays, the government has continued to move towards rules-based, time-bound eligibility criteria for tax incentives, displacing the earlier reliance on official discretion. The Economic Transformation Act, No 45 of 2024 provides the statutory framework for codified, eligibility-driven incentives, and the 2026 Budget advanced a series of base-broadening measures consistent with the IMF structural benchmarks. These include:

- the abolition of the Simplified VAT (SVAT) scheme from October 2025 in favour of a refund-based mechanism;
- the phased introduction of risk-based audit selection; and
- a National Tariff Policy rationalising customs import duty into bands of 0%, 10%, 20% and 30%.

To encourage smaller-scale investment, the minimum investment threshold for enhanced capital allowances was reduced from USD3 million to USD250,000.

### SOE Restructuring Without Privatisation

With the change in administration following the Presidential elections in September 2024, the new government has decisively moved away from privatisation as a policy tool. The previous government's plans for partial or full divestment of major state-owned enterprises (SOEs) have been shelved. Instead, the current administration has expressed its commitment to retaining public ownership of key strategic enterprises while pursuing a programme of internal restructuring and operational reform.

The government's SOE reform agenda focuses on improving efficiency, reducing financial losses, and strengthening governance and accountability mechanisms within SOEs. Key entities under this reform initiative include:

- Ceylon Electricity Board;
- SriLankan Airlines;
- Ceylon Petroleum Corporation;
- Sri Lanka Telecom; and
- Sri Lanka Insurance Corporation.

The goal of the restructuring process is to enhance these entities' financial performance and service delivery without altering ownership structures. Proposed reforms include the introduction of:

- performance benchmarks;
- independent oversight boards;
- debt restructuring; and
- enhanced public reporting requirements.

The emphasis is on preserving strategic national assets while ensuring that they operate on sound commercial and operational principles.

These SOEs have traditionally operated as monopolies or dominant players in strategic sectors but have also been fiscally burdensome. Reforms are expected to improve their operational efficiency, corporate governance and ability to attract investment. Tangible progress has been recorded in the resolution of legacy SOE liabilities, including the completion of SriLankan Airlines' debt exchange in early 2026.

### Labour Market Reform

The Cabinet has approved significant increases to minimum wage levels. Effective April 2025, the national minimum monthly wage was increased by LKR9,500 to LKR27,000, and the minimum daily wage was raised to LKR1,080. A further increase, to LKR30,000 per month and LKR1,200 per day, took effect on 1 January 2026. These changes aim to improve income security amidst rising living costs.

In parallel, the government has reiterated its intention to introduce a consolidated employment law to replace the patchwork of existing employment statutes. The proposed reform, which remains at the draft stage, seeks to harmonise disparate legislation – including the Wages Boards Ordinance, the Shop and Office Employees Act and the Industrial Disputes Act – into a single, modernised legal framework. This new law is expected to address long-standing regulatory inconsistencies, simplify compliance, enhance worker protections, and promote greater formalisation

and flexibility in the labour market, an objective that the IMF has identified as important to reducing labour-market rigidities.

### Tourism Recovery and External Trade Pressures

Tourism rebounded strongly through 2025, recording a historic high of approximately 2.36 million arrivals – surpassing the previous peak of 2.33 million set in 2018 – and generating tourism earnings of around USD3.2 billion, notwithstanding the disruption caused by Cyclone Ditwah late in the year. The authorities have set an ambitious target of three million arrivals for 2026. The country nonetheless continues to face headwinds in external trade. Having initially been assigned a 44% reciprocal tariff by the United States in April 2025, Sri Lanka negotiated successive reductions, to 30% and thereafter to 20% by the end of July 2025. Following the United States Supreme Court's decision in February 2026 striking down the tariffs imposed under the International Emergency Economic Powers Act, the US administration moved to maintain duties under Section 122 of the Trade Act of 1974, leaving Sri Lankan exports subject to a 10% baseline tariff alongside applicable sector-specific and most-favoured-nation duties. The trade environment accordingly remains fluid.

### Legal and Regulatory Modernisation

The government is preparing a Public-Private Partnership (PPP) Bill to support structured, accountable and competitive procurement for infrastructure and service delivery. To support access to credit – particularly for SMEs – the secured transactions regime governing movable asset-based lending was strengthened through the Secured Transactions (Amendment) Act, No 17 of 2024. The microfinance sector has since been placed on a comprehensive statutory footing: the Microfinance and Credit Regulatory Authority Act, No 9 of 2026 establishes the Sri Lanka Microfinance and Credit Regulatory Authority, brings money-lending and microfinance businesses (including online lending) within a single licensing regime, and repeals the Microfinance Act, No 6 of 2016.

Until recently, Sri Lanka's insolvency framework was fragmented and outdated. This has now been addressed by the Rescue, Rehabilitation and Insolvency (Corporate and Personal) Act, No 12 of 2026, which was passed by Parliament in May 2026 and repeals the Insolvency Ordinance (Chapter 97). The Act consolidates and modernises the regime across both corporate and personal insolvency, introducing structured procedures for the rehabilitation of viable but distressed companies, a fresh start for honest individual debtors, and provisions addressing receivership and cross-border insolvency. The emphasis on enabling viable businesses to restructure rather than liquidate aligns Sri Lanka with international best practice and is intended to enhance predictability and confidence in the credit market.

In addition, the government has strengthened the legislative architecture underpinning public financial management. The Public Debt Management Act, No 33 of 2024 and the Public Financial Management Act, No 44 of 2024 have been enacted, marking a significant step forwards in Sri Lanka's fiscal governance. These laws establish comprehensive frameworks for prudent debt management – including, under the former, the establishment of the Public Debt Management Office – and for disciplined public expenditure, enhancing transparency and accountability in fiscal operations.

In parallel, the government is developing the Public Asset Management Bill and the Public Enterprise Reform Bill, which aim to optimise the use of state-owned assets and improve the performance and governance of state-owned enterprises (SOEs). These instruments, together with the forthcoming legislation on public–private partnerships and public procurement, are expected to be brought forward in a manner consistent with the Public Financial Management Act. Once enacted, they are expected to enhance fiscal discipline, improve accountability, and support more efficient allocation of public resources.

### Green Finance and ESG Integration

The Colombo Stock Exchange (CSE) is actively promoting sustainability through ESG-aligned instruments such as green bonds and sustainable finance products. These efforts aim to position Sri Lanka as a responsible and attractive destination for impact investors.

### Investment Climate and Market Access

Despite the reforms, challenges remain. Sri Lanka still ranks low in global ease-of-doing-business metrics, particularly in contract enforcement and construction permits. High borrowing costs and lingering exchange rate risk also weigh on investor sentiment.

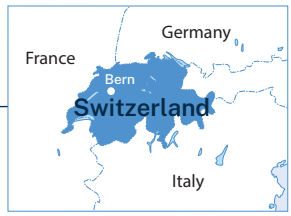
However, the establishment of the Colombo Port City Special Economic Zone offers a unique platform. Under a separate legal and regulatory framework governed by the Colombo Port City Economic Commission, this zone offers:

- tax incentives for strategic businesses;
- streamlined registration and licensing; and
- regulatory sandboxing for financial services.

Licensed commercial banks have already received approval to operate within this zone, paving the way for a modern offshore service and financial hub.

### Digitalisation and Starlink Launch

In response to increased digitalisation, the government continues to work towards comprehensive cybersecurity legislation, a long-anticipated measure that has yet to be enacted. Such a framework would complement the existing Personal Data Protection Act and would strengthen safeguards against cybercrime and financial fraud.



In addition, the digital economy has gained momentum, reinforced by the launch of Starlink in Sri Lanka, which is expected to expand internet access to underserved regions. The 2026 Budget allocated further resources to digitalisation, including the Sri Lanka Unique Digital Identity project and the continued modernisation of the Inland Revenue Department's Revenue Administration Management Information System (RAMIS), alongside the wider digitalisation of investment-facing agencies such as the Inland Revenue Department and the Registrar of Companies, with the objective of streamlining approvals and enhancing transparency.

### Conclusion

Sri Lanka's trajectory remains cautiously optimistic. While risks remain – particularly in debt sustainability, global trade policy and exposure to external shocks, as the impact of Cyclone Ditwah and the conflict in the Middle East has underscored – the country has made visible strides in stabilising its economy, enhancing fiscal discipline, and undertaking long-overdue structural reforms. The completion of the combined Fifth and Sixth IMF reviews, record tourism arrivals, strong revenue performance and renewed investor interest all point towards a slowly improving investment climate, even as growth is expected to moderate in 2026.

Investors should continue to monitor legal and policy developments (especially in the Port City regime, labour law and tax reform) as the country repositions itself as a competitive and rules-based investment destination in South Asia.

**Walder Wyss Ltd** is one of the most successful and fastest-growing Swiss commercial law firms and a full-service law firm with leading specialists across all legal fields, including corporate and commercial, employment, banking and finance, intellectual property and competition, healthcare and life sciences, insolvency, real estate, dispute resolution and tax law. Clients include national and international companies, publicly held corporations and family businesses, public law institutions and private clients. It is a dynamic law firm with flat management structures. The team of around 250 legal experts is augmented by approximately 100 employees working in support functions. Growth and a close relationship with clients are the factors that determine the success of Walder Wyss. With offices in Zurich, Geneva, Basel, Berne, Lausanne and Lugano, the firm provides clients with a seamless one-stop shop, and personalised and high-quality services in all language regions of Switzerland.

## Authors

**Philippe Nordmann** is a partner and co-head of the employment law team at Walder Wyss. He advises companies as well as executive employees on all aspects of employment law (drafting employment contracts and employee regulations, setting up compensation schemes, support concerning dismissals and plant closures, advising companies in negotiations regarding collective bargaining agreements, assignments of employees, staff leasing, work permits, competition clauses, etc) and has substantial experience in litigation. Philippe has been vice-president of the Personnel Appeals Commission of the canton of Basel-Stadt since 2016. His recent publications include the Swiss contribution to the Chambers Employment 2022 Global Practice Guide.

**Marion Bähler** is a partner in Walder Wyss's corporate/M&A team. She is a specialist in cross-border and domestic M&A as well as venture capital transactions, joint ventures, and other complex corporate and commercial transactions. Marion regularly provides guidance to start-ups and investors on a wide range of venture capital matters, such as financing rounds, acquisitions, participation plans (ESOPs) and exits. Additionally, she offers advice to companies on general corporate law matters, corporate governance, and other legal aspects related to their day-to-day operations.

**Christian Hagen** is a partner in the corporate/M&A team at Walder Wyss. He advises clients on all questions of contract law, commercial and corporate law as well as health and medical law. Christian specialises in national and international M&A transactions of non-listed companies (private M&A) – including venture capital and private equity transactions, management buyouts (MBO) and financing rounds. His particular focus is on projects in the healthcare and life sciences. In addition, he advises corporate clients on legal matters related to their daily business, corporate law (foundation, capital increase and change as well as liquidation of all kinds of companies) and on questions of group structuring and financing.

**Samuel Lieberherr** is a counsel in the corporate/M&A team at Walder Wyss. He is a specialist in domestic and international M&A transactions and advises investors on acquisitions, private equity and venture capital transactions. Other preferred areas of practice include corporate law and reorganisations. Additionally, he advises clients on all matters of business law relating to their daily operations and supports them regarding corporate governance and ESG. Samuel is praised for his pragmatic advice and good understanding of the clients' businesses. He is fluent in German and English.

**Dario Glauser** is an associate in the employment law and litigation teams at Walder Wyss. He advises domestic and international clients on contentious and non-contentious employment law matters in general and in connection with employee terminations, bonus schemes and restrictive covenants, as well as social security implications. In this context, Dario also represents parties in court on a regular basis. He is a member of the Basel and Swiss Bar Associations.

# 1. Legal System

## 1.1 Legal System and Judicial Order

Switzerland has a civil law legal system. The most important source of law is written law. Switzerland's federalist structure has three levels:

- the Confederation (the federal state);
- the cantons (the states); and
- the municipalities (the local areas).

The Federal Constitution ranks first in the order of priority. It allocates certain authorities to the Federal Confederation. Where an area is not allocated to the Federal Confederation, the cantons exercise sovereign rights.

The different forms of written law generally have the following order of priority:

- federal laws prevail over cantonal laws;
- constitutional rules prevail over ordinary statutes; and
- statutes enacted by a legislative body prevail over regulations prepared by a government or administrative body.

# 2. Restrictions on Foreign Investments

## 2.1 Approval of Foreign Investments

A new regime regarding foreign investment control will enter into force in 2027.

Until then, Switzerland has no foreign investment control regime in place. No notification or clearance of a governmental agency is required when a foreign national or a foreign company invests in Switzerland or acquires a Swiss company. However, in specific sectors such as residential real estate, banking, insurance, national defence and electricity, sector-specific restrictions apply.

The new Federal Act on the Screening of Foreign Investments (the "Investment Screening Act", or IPG) is scheduled to enter into force in 2027. It will introduce for the first time a dedicated foreign investment screening regime. The regime remains limited in scope and applies only to acquisitions of Swiss companies by foreign state-controlled investors in certain sensitive sectors. The law distinguishes between sectors that are particularly critical to public order and security, which are subject to a lower turnover threshold, and other sensitive sectors with a higher turnover threshold. In the most critical areas, approval is required if the target company had, on average, at least 50 full-time employees worldwide or achieved at least CHF10 million in annual worldwide turnover in the two financial years preceding the application. These areas include companies that produce goods or transfer intellectual property essential for the operational capability of the Swiss Armed Forces. In other security-sensitive areas, acquisitions are subject to approval only if the target company had an average worldwide annual turnover of at least CHF100 million in the previous two financial years. These areas include hospitals or operators of important transport hubs such as airports or ports.

Switzerland is one of the world's largest recipients of foreign investment. It is also one of the world's largest investors abroad. Being open to inward foreign investment is important for Switzerland as a business centre. The country, therefore, aims to remain attractive for foreign investment by introducing a limited investment screening regime.

## 2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance

Under the new regime, filings need to be submitted to the State Secretariat for Economic Affairs (SECO) if the intended transaction falls within the scope of the new regulation. SECO must make its decision within three months.

If an acquisition is completed without the required approval, or if approval was obtained on the basis of false information, the Federal Council may order appropriate administrative measures to restore lawful conditions. This may include the divestment of the acquired participation. In addition, administrative sanctions may be imposed: the company resulting from an unapproved or improperly approved transaction can be fined up to 10% of the average worldwide annual turnover generated by the domestic target in the two financial years preceding the acquisition. For

breaches of information obligations, foreign state-controlled investors or domestic companies can also be fined up to CHF100,000. SECO is responsible for investigating and assessing such violations, which are subject to a five-year limitation period from the date of the infringement.

### 2.3 Commitments Required From Foreign Investors

Under the new regime, a foreign state-controlled investor must submit an application to SECO if the intended transaction falls within the scope of the new regulation.

### 2.4 Right to Appeal

Under the new regime, a decision rendered by SECO can generally be challenged in court.

## 3. Corporate Vehicles

### 3.1 Most Common Forms of Legal Entity

In Switzerland, there are different ways to engage in commercial activities, either through structures that require capital investment or through personal commitment with associated liabilities. Accordingly, a variety of legal forms are available in Switzerland, including:

- sole proprietorships;
- general partnerships;
- limited partnerships;
- corporations;
- LLCs;
- co-operatives; and
- foundations.

While Switzerland, as a member state of the Hague Trust Convention, recognises foreign trusts, trusts are not available under Swiss law, and comparable functions are served by foundations.

The most frequently used structures for the development of commercial activities are share corporations and limited liability companies (LLCs), both providing substantial flexibility and enabling the accommodation of a broad range of possible governance and operation set-ups.

Share corporations have a mandatory share capital of CHF100,000, split into shares of a nominal value that needs to be higher than zero, which can be issued to one or more shareholders. At incorporation, at least CHF50,000 of the share capital must be paid in cash or by contribution in kind of assets or rights.

LLCs have a mandatory quota capital of CHF20,000, split into quotas of a nominal value of CHF100 or more, which can be issued to one or more quota holders. The entire quota capital must be paid in cash or by contribution in kind of assets or rights.

Shareholders of a share corporation are not disclosed in any publicly available register (except under the disclosure rules for listed companies). In contrast, the commercial register reflects the quota holders of all LLCs.

### 3.2 Incorporation Process

Typically, share corporations and LLCs are incorporated within two weeks, although it is possible to accelerate the process if necessary. The incorporation requires the filing and registration of the following documents in the competent commercial register of the canton of the seat:

- a public deed on the resolutions of the founders' meeting;
- articles of association;
- proof that the share or quota capital has been paid in and/or proof that contributions in kind were made;
- documentation of the appointment and the acceptance thereof of the board of directors/management and the auditors (if any);
- legalised signature specimens for those directors and other representatives with signatory rights; and
- documentation of the company's domicile.

### 3.3 Ongoing Reporting and Disclosure Obligations

#### Corporate Actions

A number of corporate actions and changes need to be registered in the commercial register, including:

- changes in the board/management;
- changes of signatories;

- in the case of an LLC, changes in the quota holder(s); and
- changes to the articles of association, including changes to the company's registered seat, capital, purpose, transfer restrictions, etc.

### Reporting to the Equity Holders and Audit Requirements

The directors/management of a private company need to submit the company's business report, consisting of (i) annual financial statements and, for larger entities, (ii) a management report and (iii) consolidated financial statements to the shareholders/quota holders for approval.

While the financial statements of private companies do not have to be filed in a public register or publicly disclosed, listing regulations require listed entities to publish their financials in line with international standards.

Whether an ordinary or a limited audit of the financial statements needs to be performed depends on a company's size and economic relevance. Smaller companies can, with the unanimous consent of their shareholders/quota holders, waive the audit requirement altogether under certain conditions.

The financial statements of private companies are subject to an ordinary audit requirement where, for two consecutive fiscal years, at least two of the following threshold values are exceeded:

- CHF20 million for the balance sheet total;
- CHF40 million for revenue; and
- 250 full-time employees.

A company must also undergo an ordinary audit if it must consolidate or if shareholders holding at least 10% of the company's shares request an ordinary audit (opting up). An ordinary audit of the annual financial statements can also be required by the company's articles of association or a resolution of a shareholders' meeting.

If the foregoing criteria are not met, a company's financials are subject to a limited audit. A company may limit the audit partially (opting down) or fully (opting out) with the shareholders' unanimous consent if the company does not employ more than ten full-time employees.

### Beneficial Owners

Companies are required to keep a register of the beneficial owners of the shares issued by them, and such beneficial owners must be disclosed to the company by the shareholders when the threshold of 25% (on a standalone basis as well as when acting in concert) of the share/quota capital or votes is reached, within one month following the relevant acquisition.

### Tax Filings

Annual tax returns must be made on an annual basis, while various other taxes are subject to a variety of deadlines.

## 3.4 Management Structures

Share corporations and LLCs, in general, have three bodies, namely:

- the shareholders' meeting/quota holders' meeting;
- the board of directors/management; and
- the auditor (subject to potential opting out).

The shareholders' meeting is the supreme authority of a share corporation, resolving the fundamental organisation of the company, electing the board of directors and taking a (limited) number of key decisions.

The board of directors is the executive body responsible for all matters not reserved for the general meeting, and shall manage the business of the company to the extent it has not delegated such management to individual members or the executive management.

The auditor is a controlling body, with the scope of its tasks depending on whether a limited or ordinary audit is to be conducted.

Despite corporate law thus generally providing for a one-tier model, in practice, the day-to-day management (except for certain reserved matters) is, in many cases, delegated to the executive management, effectively leading to a two-tier structure. Certain companies, including banks and insurance companies, are even legally required to establish such two-tier struc-

ture. The following are non-transferable, inalienable duties that may not be delegated:

- the overall management of the company and the issuing of all necessary directives;
- determination of the company's organisation;
- the organisation of the accounting, financial control and financial planning systems as required for the management of the company;
- the appointment and dismissal of persons entrusted with managing and representing the company;
- overall supervision of the persons entrusted with managing the company, in particular with regard to compliance with the law, articles of association, operational regulations and directives;
- compilation of the annual report, preparation for the general meeting and implementation of its resolutions;
- filing an application for a debt restructuring moratorium and notification of the court in the event that the company is overindebted; and
- in the case of companies whose shares are listed on a stock exchange, the preparation of the remuneration report.

### 3.5 Directors', Officers' and Shareholders' Liability

In general, members of the board of directors and the executive management are personally responsible to the company, its shareholders and creditors for damages caused intentionally or negligently by default of their duties. The liability is, however, excluded if a task was properly delegated and if due care was given in selecting, instructing and supervising the person(s) put in charge of the relevant task. Under the business judgement rule, a business decision taken in a proper, unbiased and reasonably informed manner does not lead to liability, even if, in retrospect, it becomes clear that such decision was materially wrong and to the detriment of the company.

Liability actions can be brought by the company, its shareholders (either directly if they suffered direct damage or on behalf of the company in case of indirect damages, such as by a diminished share value) and, in the event of its bankruptcy only, the company's creditors. However, formal actions against board members are not common in practice.

Once shareholders have fully paid in their shares, they are not personally liable for the company's obligations. Under the "piercing of the corporate veil" concept, shareholders can, in exceptional cases, be held liable if the legal separation between the shareholder and the company has been disregarded and it would be abusive to rely on the legal independence of the company.

## 4. Employment Law

### 4.1 Nature of Applicable Regulations

#### Nature and Hierarchy of the Legal Rules Governing Employment Relationships

There are various sources of law that may be of relevance when it comes to determining the mutual rights and obligations in connection with a particular employment relationship. These are typically the following (listed in hierarchical order):

- mandatory statutory law (including pertinent case law);
- mandatory standard employment contracts – ie, a special kind of legislative decree (as the case may be);
- collective bargaining agreements (as the case may be);
- operating regulations (as the case may be);
- employment contract;
- regulations of the employer (if any);
- non-mandatory standard employment contracts (as the case may be);
- non-mandatory statutory law (including pertinent case law);
- instructions of the employer (if any); and
- judge-made law based on the hypothetical will of reasonable contracting parties (in the absence of any other applicable legal source).

### 4.2 Characteristics of Employment Contracts

#### Principle of Freedom of Form

*Principle*

Swiss employment law is governed by the principle of freedom of form, meaning that there are, as a matter of principle, no formal requirements for the conclusion of an employment contract. Therefore, the conclusion of an employment contract generally only requires

explicitly or impliedly communicated corresponding declarations of intent, pursuant to which:

- the employee undertakes to work in the service of the employer for a limited or unlimited period; and
- the employer undertakes to pay remuneration to the employee.

For the purpose of proof alone, however, it is always advisable to conclude an employment contract in writing.

*Exceptions*

There are also exceptions to the aforementioned principle of freedom of form. First, there are specific employment contracts whose conclusion requires the observation of the written form (eg, apprenticeship contracts). Secondly, there are a number of specific contractual provisions in any employment contract that may only be bindingly agreed upon in writing (eg, post-contractual non-compete restrictions).

### Duration of Employment Contracts

*Permanent versus fixed-term employment contracts*

Swiss employment law provides for two basic types of employment contracts – ie, permanent and fixed-term employment contracts:

- permanent employment contracts are entered into for an indefinite period, and their termination requires a notice of termination (which may, in the sense of temporal protection against terminations, not be given at an inopportune juncture); and
- fixed-term employment contracts simply cease at the end of their fixed term and do not, at least as a matter of principle, provide for a premature ordinary termination option (although this is a possibility the parties may agree on).

*Prohibition of "illegal chain employment contracts"*

To guarantee a minimum temporal protection against terminations for the benefit of the employee, case law has developed the rule that it is not possible to agree on multiple consecutive fixed-term employment contracts without an objective reason for preferring this to a permanent employment contract. In the absence of such an objective reason, the seemingly fixed-term employment contracts are, therefore, simply reinterpreted into one permanent employment contract.

### Maximum Duration of Employment Contracts

After ten years, any fixed-term employment contract concluded for a longer duration (which is extremely unusual) may be terminated by either party by giving six months' notice expiring at the end of a month.

## 4.3 Working Time

### No Minimum Working Time for Salaried Employees

Swiss law does not provide for minimum working times. As a matter of principle, it is up to the parties to agree on a salaried employee's workload.

### Maximum Working Time for Some Salaried Employees

*Maximum weekly and daily working time for a large group of salaried employees*

At least for a large group of employees employed in Switzerland, the Federal Act on Work in Industry, Trade and Commerce (the "Labour Act") provides for weekly and daily maximum working times. These maximum working times pursuant to the Labour Act particularly, but not exhaustively, apply to most so-called blue-collar workers but explicitly not to employees holding a higher executive position, employees performing a scientific activity and employees performing an autonomous artistic activity (to name a few of the exceptions).

*Maximum weekly working time for salaried employees who are subject to the Labour Act*

With regard to employees who are subject to the Labour Act, the maximum weekly working time is generally either 45 hours (roughly simplified: for employees performing predominantly intellectual work in offices or office-like jobs) or 50 hours (roughly simplified: for employees with a predominantly manual field of activity). These limits may still be exceeded in exceptional cases, however.

*Maximum daily working time for salaried employees who are subject to the Labour Act*

With regard to employees who are subject to the Labour Act, there is also a general maximum daily working time of 12.5 or 13 hours (depending on the calculation method) to observe. This follows (indirect-

ly) from the Labour Act's various provisions regarding minimum rest periods (such as mandatory minimum breaks and the general prohibition of work during the night and on Sundays/public holidays).

### Overtime and Extra Hours

#### *Distinction between overtime and extra hours*

There are two main categories of hours worked in excess of the applicable usual weekly working time that need to be distinguished:

- "overtime" means the hours that an employee works in excess of the (usual) weekly working time that has been contractually agreed, is customary or has been defined in an applicable collective bargaining agreement or standard employment contract; and
- "extra hours" means the hours that an employee works in excess of the applicable maximum weekly working time (if any).

In the context of variable working time systems (eg, flexitime systems), there may be an additional important category of hours worked in excess of the applicable usual weekly working time (ie, hours worked based on the employee's "time sovereignty", which are to be distinguished from overtime).

#### *Employee's duty to perform overtime and extra hours*

While the employee is obliged to perform overtime if such overtime is required and to the extent they are able and may reasonably be expected to do so, the performance of extra hours (additionally) requires the existence of exceptional circumstances.

#### *Compensation for overtime and extra hours*

Pursuant to statutory law, overtime and extra hours are principally compensated by corresponding time off (only if the employee consents) or by an additional salary payment including a 25% surcharge (if the employee does not consent to compensation by time off).

However, this statutory compensation rule is only mandatory with regard to extra hours (for some employees, only from the 60th extra hour per calendar year). With regard to mere overtime, any employee compensation claim (ie, compensation in cash or in kind) may be excluded by a written agreement between the parties or by a provision in a collective bargaining agreement or standard employment contract.

## 4.4 Termination of Employment Contracts

### Freedom of Termination

#### *Principle*

Ordinary terminations of employment (ie, terminations observing the applicable notice period) do not require a particular lawful reason, so Switzerland may be described as an "employment at will" jurisdiction. If the other party so requests, the party giving notice must state its reasons for termination in writing.

#### *Limitations to the principle*

However, there are important limitations to the aforementioned principle of freedom of termination, as set out in the following.

- Terminations must principally observe the applicable notice period (during which the employer remains obliged to pay the employee's compensation).
- Terminations may never be issued in bad faith (so-called abusive terminations), whereas such bad faith is specified in a non-exhaustive legislative enumeration of circumstances (eg, bad faith is assumed if a termination is the result of the other party asserting claims under the employment relationship in good faith). While even an abusive termination is valid, it entitles the terminated party to a penalty payment of up to six monthly salaries (provided that said party submits a written objection against the termination before the expiry of the notice period and brings the claim before the competent court within 180 days of the end of the employment relationship).
- Terminations with immediate effect (ie, without observing the applicable notice period or an agreed fixed term) require the existence of good cause. This is only very exceptionally assumed if the terminating party may not reasonably be expected to continue the employment until the expiry of the applicable notice period or the agreed fixed term and acts within just a few days of becoming aware of the good cause. While even terminations without good cause result in immedi-

ate termination of the employment, the (non-)existence of good cause determines the further legal consequences of a termination with immediate effect, such as an additional penalty payment of up to six monthly salaries (in the case of an employer's termination without good cause).

While statutory law does not provide for severance payments, this may, in particular, be provided for in employment contracts or collective bargaining agreements (subject to the respective prohibition for members of the board of directors, the executive board and the advisory board, and persons close to them, of Swiss stock corporations whose shares are listed on a stock exchange).

### Termination Agreements

As a matter of principle, the parties may agree on mutual termination of their employment relationship in a termination agreement. This, however, requires that such termination agreement is not concluded to circumvent statutory provisions protecting the employee's interests (such as mandatory provisions in connection with incapacity for work due to illness or accident) but rather constitutes an actual "settlement". It is against this background that respective termination agreements usually provide for an additional "voluntary" severance payment that shall compensate the employee for fixing an exact termination date (the exclusion of any statutory prolongation of the employment in connection with an employee's incapacity for work) and/or which shall compensate the employee for waiving their potential claim to an additional penalty payment in view of an abusive termination. Non-compliance with the "actual settlement" requirement leads to the entire termination agreement being declared null and void.

### Collective Redundancies

#### *Procedural rules to be followed*

The termination of a certain minimum number of employees (ten at the very least) within 30 days, and for reasons not pertaining personally to the affected employees (ie, collective redundancies), is subject to specific procedural requirements. Most importantly:

- an employer may not decide to carry out collective redundancies before having informed the works council or (in the absence of such a works council) the employees in writing (including a copy sent to the cantonal employment office) and having consulted with them;
- in connection with such consultation, the employer must at least provide the works council or the employees the opportunity to formulate (non-binding) proposals on how to avoid redundancies, limit their number and/or mitigate their consequences within a set deadline of (in standard cases) approximately two weeks (otherwise, any respective termination would qualify as abusive and entitle each affected employee to a penalty claim of up to two monthly salaries);
- the employer must notify the cantonal employment office about the results of the consultation and provide it with further appropriate information in writing (including a copy sent to the works council or the employees); and
- no individual employment relationship eventually terminated in the course of collective redundancies may end until at least 30 days after such notification of the cantonal employment office.

#### *Employer's duty to issue a social plan*

Only employers normally employing at least 250 employees and intending to make at least 30 employees redundant within 30 days for reasons not pertaining personally to the affected employees are obliged to negotiate a social plan (ie, an agreement setting out measures to avoid redundancies, to reduce their number and to mitigate their consequences) with the works council or (in the absence of such a works council) the employees. If the employer fails to reach an agreement with the works council or the employees, the social plan will be issued by an arbitral tribunal.

## 4.5 Employee Representations

### Optional Constitution of a Works Council

According to the Federal Participation Act, employees of a Swiss employer with a head count of at least 50 are entitled (but not obliged) to constitute a works council. At the request of 20% of the employees (or at the request of 100 employees of an employer with a head count of more than 500), an anonymous vote must be held to determine whether the majority of the

employees casting a vote are in favour of the suggested constitution of a works council.

### Participation Rights

According to the Federal Participation Act, the management must provide the works council with all the information necessary to carry out its tasks properly (at least once a year). In addition, the works council has special participation rights (such as specific information rights, consultation rights or even a right of co-decision) in connection with questions relating to occupational safety and employee protection, transfers of undertakings, collective redundancies and selected topics in connection with occupational pension funds. In the absence of a works council, the employees may exercise their rights individually.

### Far-Reaching Consequences of a Violation of Participation Rights

The potential consequences of a violation of the aforementioned participation rights are not uniform but may, depending on the subject, be quite far-reaching (eg, pursuant to case law, the termination of an affiliation contract with an occupational pension fund without the necessary consent of the works council/employees must be considered null and void).

## 5. Tax Law

### 5.1 Taxes Applicable to Employees/Employers

#### Taxes Applicable to Employees

##### *Income tax*

Income tax is levied at the federal, cantonal and municipal levels on:

- the worldwide income from all sources in case of a tax resident employee (so-called unlimited taxation); or
- income earned in Switzerland in case of a non-tax resident employee (limited taxation).

Individuals are considered tax resident if they are:

- a Swiss resident (ie, the centre of vital interests is in Switzerland);
- involved in gainful occupation and staying in Switzerland for at least 30 consecutive days; or
- staying in Switzerland for at least 90 consecutive days (irrespective of any gainful occupation).

Income from enterprises and permanent establishments outside Switzerland is exempt from unlimited taxation. Further exemptions from income tax may apply, for example, with regard to certain types of income (such as income from inheritance, gifts and matrimonial property rights, which may however be subject to gift or inheritance taxes), capital gains from the disposal of privately held movable assets (eg, shares; such movable assets are in principle exempt unless the taxpayer is deemed a professional dealer) and gains from immovable assets (ie, real estate) located in Switzerland.

Swiss income tax rates are progressive, with the marginal income tax rates varying between approximately 20% and 41%. Reduced taxation applies for certain non-occupational income (such as dividend income in case of qualified participation of at least 10% of the nominal share capital). The applicable tax rates are determined based on the worldwide income, irrespective of whether unlimited or limited taxation applies.

Swiss domestic tax law and the aforementioned principles of Swiss income tax may be overruled if, in an international context, a double taxation treaty (DTT) applies. DTTs have been concluded by Switzerland with over 100 countries.

##### *Wealth tax*

Levied on a cantonal and municipal level only, the distinction between unlimited and limited taxation also applies.

In case of unlimited taxation, wealth tax will be levied on the worldwide wealth, excluding assets attributable to business operations, permanent establishments or real estate outside Switzerland (these assets are, however, considered in determining the applicable tax rate). Wealth tax rates vary significantly depending on the canton and municipality of residence, with top marginal wealth tax rates varying between approximately 0.1% and 1.0% above a certain threshold, which is usually tax-free.

Levied on the gross income, the "state pension" covers old-age and survivors' insurance, disability insurance, and loss of earnings compensation in case of (military or similar) service, maternity, parenthood, caring for a seriously ill child and adoption. Social security contributions are split 50:50 between employee and employer, with the employee's portion amounting to 5.3% of the gross salary and being deducted and directly paid by the employer.

*Occupational pension contributions*

Contributions to the occupational pension scheme(s), to be established or acceded to by the employer for its employees, are determined by the specific pension scheme based on individual factors (such as age and insured salary) and are usually split 50:50 between employee and employer (the employee's portion may in any case not exceed 50% of the total contributions).

Employees earning above a certain annual threshold (CHF22,680 from 2025) are required to join the employer's pension scheme. Mandatory pension schemes are limited to a maximum annual salary (CHF90,720 from 2025), above which the employer may establish or accede to a voluntary pension scheme.

*Unemployment insurance contributions*

Providing certain compensation for a limited period in case of unemployment, weather-induced loss of working hours, short-time work and non-payment in case of the employer's insolvency, the contributions amount to 2.2% of the gross salary not exceeding CHF148,200 and are split 50:50 between employer and employee. No contributions are due for a gross salary above CHF148,200.

*Non-occupational accident insurance contributions*

Employees working at least eight hours per week are mandatorily insured against non-occupational accidents. The contributions depend on the individual insurance contract and are usually borne entirely by the employee, deducted from the employee's gross salary and directly paid to the insurance by the employer.

*Daily sickness benefits insurance contributions*

For a limited period, the employer is obligated to continue paying the salary if an employee is prevented from working due to illness. The employer may take out insurance to cover this risk and agree with the employee to bear up to 50% of the contributions, subject to the individual insurance contract.

*Social health insurance premiums*

Though mandatory for all Swiss residents, social health insurance is a private matter for each employee unrelated to the employment relationship. The employer is not obligated to contribute, nor is it customary that the employer contributes, to its employees' social health insurance premiums.

### Taxes Applicable to the Employer

With regard to general taxation, please see **5.2 Taxes Applicable to Businesses**. In addition, a wage source tax in the amount of the income tax owed is levied and withheld by the employer from the salary of employees who are:

- non-tax residents (in Switzerland); or
- neither Swiss citizens nor holders of a permanent residency permit nor married to a Swiss citizen.

*Social security contributions*

The employer's portion of 5.3% is to be paid directly by the employer in addition to the gross salary (from which the employee's portion of an additional 5.3% is deducted and directly paid to the social security authority by the employer).

*Occupational pension contributions*

As with employees, these contributions are usually split 50:50, with at least 50% being borne by the employer.

*Unemployment insurance contributions*

As with employees, these contributions are usually split 50:50, with at least 50% being borne by the employer.

*Occupational and non-occupational accident insurance contributions*

Occupational accident insurance is mandatory for all employees working in Switzerland and must be borne

by the employer. Contributions depend on the individual insurance contract. With regard to non-occupational accident insurance, the situation is the same as for employees, as described in the foregoing.

*Daily sickness benefits insurance contributions*

As with employees, these contributions are usually split 50:50, with at least 50% being borne by the employer.

*Family allowance contributions*

Family allowances (child and education allowances as well as, depending on the canton, birth and adoption allowances) are paid by the employer to entitled employees, for which the employer is reimbursed by the competent compensation office. Family allowance contributions are mainly borne by the employer based on a percentage of the salary and depend on the canton, economic sector and relevant family allowance section at the competent compensation office (usually between 0.7% and 3.5% of the annual gross salary).

## 5.2 Taxes Applicable to Businesses

### Corporate Income Tax

As is the case for individuals, corporate income tax is levied at the federal, cantonal and municipal levels:

- on worldwide net income from all sources in Switzerland in case of a tax resident legal entity, including companies, co-operatives, associations and foundations (so-called unlimited taxation); or
- on net income earned in Switzerland in case of a non-tax resident legal entity (limited taxation).

A legal entity is considered a tax resident if (i) its statutory seat or (ii) its place of effective management is located in Switzerland.

Income from enterprises and permanent establishments or real estate outside Switzerland is exempt from unlimited (corporate) taxation. Effective corporate income tax rates depend on the canton and the municipality and vary from approximately 12% to 21%.

Tax losses may be carried forward and offset against income for the following seven years.

Dividends are subject to participation relief in case of participation of at least 10% of the nominal share capital or reserves or a fair market value of the participation of at least CHF1 million. This also applies to capital gains derived from the disposal of a qualifying participation (at least 10%), provided that the minimum holding period of one year is met. In the case of such income from qualified participations, the corporate income tax will be reduced by the ratio between the net income from the participation and the aggregate taxable income of the legal entity concerned.

Further deductions may be available, such as IP box, R&D super deduction or notional interest deduction.

### Capital Tax

Tax resident and non-tax resident legal entities in Switzerland are subject to an annual capital tax at the cantonal and municipal levels. Levied on the tax-adjusted net equity, the applicable tax rates range between approximately 0.001% and 0.53%. The capital tax is creditable to the corporate income tax in some cantons.

### Stamp Duty

A one-time capital duty of 1% is levied on any issuance of new shares by a tax resident company exceeding the amount of CHF1 million (nominal value and share premium, with any issuance up to such amount being tax-free), and on contributions made by the direct shareholder to such company. In both cases, certain reliefs are available for, inter alia, recapitalisation, restructuring and migration.

A security transfer tax of 0.15% for Swiss securities and 0.3% for foreign securities applies to any transfer of taxable securities:

- that are transferred against consideration;
- where at least one of the parties or intermediaries involved in the transfer qualifies as a Swiss securities dealer; and
- where none of the available exemptions applies.

Stamp duty is further levied in certain special legal cases (eg, on insurance premiums).

### Value Added Tax (VAT)

VAT is levied at a federal level on taxable supplies and services made in Switzerland, as well as on the import of goods. Taxable services from abroad are subject to the reverse charge mechanism.

The standard tax rate is 8.1%. A special tax rate of 3.8% applies to accommodation services (eg, hotels), and a reduced tax rate of 2.6% applies to the charge (and import) of certain elementary supplies such as food, water and medication.

Individuals and legal entities providing taxable supplies and services are subject to VAT if such supplies and services exceed CHF100,000 per annum (in certain special cases such as sports associations, the threshold amount is CHF150,000).

### Withholding Tax (WHT)

Dividends in cash or in kind in excess of the nominal share capital plus confirmed capital contribution reserves from a tax resident company are subject to WHT at a rate of 35%, to be withheld by the company and paid to the Swiss Federal Tax Authorities. The WHT is refundable or creditable, in full, to any shareholder who has recognised the distribution in the income statement; or reported it in the income tax return based on a DTT or, under certain circumstances, the agreement with the EU regarding international automatic exchange of information. A notification procedure is available (instead of paying the tax and claiming the refund) under certain conditions.

Interest payments of tax resident legal entities are subject to WHT if:

- made for customer deposits with Swiss banks; or
- based on collective debt fundraising (ie, debt raised from more than ten creditors under identical conditions or 20 creditors under deviating conditions, and where the aggregate debt concerned amounts to at least CHF500,000).

Royalties paid by tax resident legal entities are not subject to WHT as long as they meet at arm's length terms.

### OECD/G20 Minimum Tax Rate

The Federal Council implemented the minimum tax rate of 15% for large multinational companies with an annual turnover of at least EUR750 million, as agreed by the OECD and G20 member states by means of a constitutional amendment accepted by popular vote on 18 June 2023. The qualified domestic minimum top-up tax (QDMTT), which entered into force on 1 January 2024 based on a temporary ordinance, has been granted safe harbour status on the OECD's central record. The tax law will be enacted subsequently in the ordinary manner. The minimum tax rate has been implemented in Switzerland by means of a national supplementary tax.

On 4 September 2024, the Federal Council decided to also enact the international supplementary tax-related Income Inclusion Rule (IIR) from 1 January 2025.

## 5.3 Available Tax Credits/Incentives

Further tax credits and incentives – such as IP box, R&D super deduction and notional interest deduction – may be available; however, this depends on the cantonal implementation (if any) and is therefore subject to the tax domicile.

## 5.4 Tax Consolidation

Tax consolidation is available for VAT purposes. Legal entities, including permanent establishments, under common control may form a VAT group, through which intra-group supplies are excluded from VAT.

## 5.5 Thin Capitalisation Rules and Other Limitations

The minimum equity of a tax resident company is calculated according to the asset base – ie, the maximum indebtedness permissible for tax purposes for each category of assets, with such permissible maximum indebtedness ranging between 0% and 100%. A company is considered thinly capitalised if the aggregate debt owed to related parties exceeds the calculated permissible maximum indebtedness.

Such qualification has the effect that:

- related party debt exceeding the calculated permissible maximum indebtedness will be deemed

hidden equity for capital tax purposes (ie, increasing the basis of the capital tax); and
- interest payments on such excess-related party debt will not be tax deductible and will be deemed a (hidden) dividend, resulting in respective taxes being applicable, in particular a 35% WHT.

### 5.6 Transfer Pricing

As a principle, Switzerland has no statutory transfer pricing rules other than the requirement that intercompany charges are on arm's length terms. Therefore, Swiss tax authorities accept, in principle, the transfer pricing methods described by the OECD guidelines.

Special rules apply with regard to interest rates on loans granted from or to shareholders and other related parties. The Swiss Federal Tax Authorities publish, on an annual basis, safe-haven interest rates. Higher or lower interest rates may be applied if it can be proved that they are on arm's length terms.

### 5.7 Anti-Evasion Rules

Swiss law does not provide for specific anti-evasion rules. Based on Swiss law and decisions by the Swiss Federal Supreme Court, the following two rules have been developed.

- Legal entities are taxable at the registered seat or the place of effective management.
- Arrangements may be disregarded if:
  (a) the taxpayer's legal form appears unusual or unsuitable for its economic goal;
  (b) the legal form appears to have been chosen arbitrarily and only to achieve tax savings; and
  (c) the legal form leads to tax savings.

### 5.8 Tariffs

Switzerland maintains a relatively liberal trade regime, characterised by very low average tariffs on industrial goods but comparatively higher protection for specific sectors – most notably agriculture. As a member of the European Free Trade Association (EFTA), Switzerland participates in numerous free trade agreements, which significantly reduce or eliminate tariffs with partner countries.

On 1 January 2024, Switzerland abolished tariffs on nearly all industrial goods, regardless of country of origin. This reform applies to products classified under chapters 25–97 of Annex 1 to the Swiss Customs Tariff Act, including machinery, electronics, automobiles and parts, pharmaceuticals and consumer goods such as clothing, furniture and sports equipment. The removal of tariffs on industrial goods was introduced to reduce costs for businesses and consumers, simplify customs procedures, and support Switzerland's export-driven economy. It positions Switzerland among the world's most open markets for industrial imports.

In contrast, and as in most European countries, tariffs remain comparatively high on agricultural goods. These measures are intended to shield domestic farmers and support broader policy objectives such as food security, the preservation of the rural landscape and the continuation of traditional farming practices. Many agricultural tariffs are accompanied by tariff rate quotas, allowing limited imports at reduced rates while imposing higher duties on quantities exceeding the quota.

Switzerland has bilateral agreements – particularly with the European Union – that eliminate most tariffs on industrial goods, though agricultural trade is typically excluded or only partially liberalised. In addition, Switzerland has concluded free trade agreements via EFTA with over 40 countries, including Canada, South Korea and Indonesia, offering preferential tariff treatment on a wide range of products.

In addition to tariffs, imports into Switzerland are subject to VAT. See **5.2 Taxes Applicable to Businesses** for the applicable VAT rates.

International pressure, especially within WTO negotiations and in trade talks with partners like Mercosur, has intensified calls for Switzerland to further liberalise its agricultural market. Domestically, there is also growing political debate about aligning tariff preferences with environmental and labour standards, reflecting evolving societal priorities around sustainability. Although recent US tariff increases have added external pressure – particularly affecting high-value sectors such as watches and pharmaceuticals – the Swiss government remains committed to a rules-based global trade system and continues to pursue diplomatic solutions to safeguard its economic interests.

## 6. Competition Law

### 6.1 Merger Control Notification

Mergers and acquisitions must be notified if certain turnover thresholds are reached. Planned concentrations of undertakings such as mergers, acquisitions of sole or joint control over a previously independent undertaking, as well as the setting up of full-function joint ventures (concentrations) must be notified to the Competition Commission (COMCO) before their implementation if the following turnover thresholds are reached in the financial year preceding the concentration:

- the undertakings concerned together reported a turnover of at least CHF2 billion, or a turnover in Switzerland of at least CHF500 million; and
- at least two of the undertakings concerned each reported a turnover in Switzerland of at least CHF100 million.

Regardless of whether the turnover thresholds described in the foregoing are reached, a concentration must be notified if one of the undertakings concerned has been held (in a binding decision) to be dominant in a market in Switzerland, and the concentration concerns either the same market or an adjacent, upstream or downstream market.

### 6.2 Merger Control Procedure

The merger control procedure can include two phases: COMCO has one month for a preliminary assessment of a notified transaction (Phase I). Then, the concentration may be implemented, unless COMCO opens a Phase II investigation. The Phase II investigation must be completed within an additional four months. Before Phase I and, if relevant, Phase II is completed, concentrations must not be implemented.

COMCO assesses whether the notified concentration leads to the creation or strengthening of a dominant market position likely to eliminate effective competition. The threshold for intervention seems comparatively rather high. Also, COMCO can only clear concentrations under certain conditions and obligations.

### 6.3 Cartels

Agreements that significantly restrict competition in a market for specific goods or services and are not justified on the grounds of economic efficiency, and all agreements that eliminate effective competition are unlawful.

Agreements and concerted practices between competitors (horizontal agreements) related to prices or elements thereof (such as rebates), quantities or the allocation of territories or customers are presumed to eliminate effective competition (so-called hardcore restrictions). Such hardcore restrictions can hardly ever be justified on the grounds of economic efficiency.

Agreements between undertakings at different levels of the production and distribution chain (vertical agreements) regarding fixed or minimum prices are presumed to eliminate effective competition and thus qualify as hardcore restrictions, irrespective of whether the agreement has actual effects on the relevant market. The same is true for agreements on absolute territorial protection. Absolute territorial protection clauses prohibit passive sales – ie, they prohibit the fulfilment of unsolicited customer orders.

### 6.4 Abuse of Dominant Position

Dominant undertakings and undertakings with relative market power behave unlawfully if, by abusing their position in the market, they hinder other undertakings from starting or continuing to compete (eg, by pricing below cost) or disadvantage trading partners (eg, by imposing excessive prices or unfair trading terms).

Undertakings are considered dominant in a specific market if they are able, as suppliers or consumers, to behave to an appreciable extent independently of the other participants (competitors, suppliers or consumers) in the market. A dominant position is generally presumed for a company with a market share of 50% or more. However, under certain circumstances, a lower market share of approximately 40% is sufficient to qualify as a dominant market position.

An undertaking has relative market power if other undertakings are dependent on it for the supply of or the demand for goods or services in such a way that

there are no adequate and reasonable opportunities for switching to other undertakings.

The Swiss Cartel Act lists certain behaviours of dominant undertakings and undertakings with relative market power that are considered unlawful (non-exclusive):

- any refusal to deal (eg, refusal to supply or to purchase goods);
- any discrimination between trading partners in relation to prices or other conditions of trade;
- any imposition of unfair prices or other unfair conditions of trade;
- any undercutting of prices or other conditions directed against a specific competitor;
- any limitation of production, supply or technical development;
- any conclusion of contracts on the condition that the other contracting party agrees to accept or deliver additional goods or services; and
- restriction of the opportunity for buyers to purchase goods or services offered both in Switzerland and abroad at the market prices and conditions customary in the industry in the foreign country concerned.

The abuse of a dominant market position by a dominant company (but not the abuse of relative market power) is subject to a fine of up to 10% of the turnover of such company in Switzerland in the preceding three financial years.

## 7. Intellectual Property

### 7.1 Patents

#### Definition

An invention or process can be patented if it is:

- new and does not form part of the state of the art – ie, all knowledge that has been made publicly available anywhere in the world prior to the patent application;
- inventive, which means that it must not be obvious to a person skilled in the art; and
- industrially applicable and practicable, with the possibility of replicating its implementation.

Under the current Swiss patent regime, novelty and inventive step are generally not substantively examined prior to grant. However, revised Swiss patent legislation entering into force on 1 January 2027 will introduce a mandatory prior-art search for all applications and an optional full examination of novelty and inventive step.

The following cannot be patented:

- abstract ideas without specific technical solutions, discoveries of natural processes or phenomena, scientific theories and mathematical methods;
- game rules and teaching methods;
- diagnostic, therapeutic and surgical procedures used on humans or animals;
- plant varieties, animal breeds and other biological procedures for breeding plants or animals (however, biotechnological inventions – such as the extraction of human insulin from yeast cells – can be patented); and
- inventions whose use would be contrary to public policy, explicitly forbidden or immoral.

#### Application

Swiss patent applications must be filed with the Swiss Federal Institute of Intellectual Property.

The following need to be submitted over the course of the filing process:

- information on the applicant;
- a description of the invention;
- at least one patent claim to define the invention;
- technical drawings of reproducible quality;
- a declaration regarding international priority rights claimed (if any); and
- the names of the individual inventors.

#### Enforcement and Remedies

Any valid patent can be challenged before the Swiss Federal Patent Court. Patents (or parts thereof) can be cancelled if:

- the invention was not new or innovative at the time of filing; or
- the invention is not described sufficiently clearly and precisely for it to be realised by a person

skilled in the art. This is referred to as insufficient disclosure. The plaintiff can also argue that important elements or steps relating to the invention are not mentioned or obvious in the patent specification.

Patent infringements can be prosecuted through both civil actions and criminal proceedings.

### Length of Protection

Patents are protected for 20 years from the date of filing. This period is generally not extendable. However, for certain products (eg, medicinal products) a supplementary protection certificate may be requested that extends patent protection for up to five years.

## 7.2 Trade Marks

### Definition

A trade mark is a protected sign that distinguishes a company's products or services from those of other companies.

The following categories of trade marks are available:

- individual trade marks, being the most common category, typically used by companies to identify and market their products and services;
- collective trade marks, used for the identification and marketing of products and services by associations and their members;
- guarantee trade marks, guaranteeing that goods and services possess specific characteristics (eg, regarding quality or geographical origin); and
- geographical trade marks, requiring the existence of a prior registration, a foreign (controlled) designation of origin recognised by Switzerland, a geographical indication, the existence of a Federal Council ordinance or an equivalent foreign regulation.

Amongst others, the following types of trade marks are available:

- word marks;
- figurative marks (optionally with a colour claim); and
- combined word and figurative marks (optionally with a colour claim).

The trade mark owner has the exclusive but transferable and licensable right to use the trade mark for goods or services for which it is registered and can prohibit third parties from using it.

### Application

Swiss trade mark applications must be filed with the Swiss Federal Institute of Intellectual Property.

### Enforcement and Remedies

Any trade mark can be challenged by means of an opposition if it could be confused with one or more other trade marks. The opposition must be filed with the Swiss Federal Institute of Intellectual Property within three months upon registration of the trade mark. Trade marks can be challenged at any time after the expiration of the opposition period before ordinary civil courts.

Trade mark infringements can be prosecuted through both civil actions and criminal proceedings.

The cancellation of a trade mark can be requested after a non-interrupted period of non-use of five years; it should be noted that the use of a trade mark either by the trade mark owner or by a third party with the consent of the trade mark owner is sufficient to prevent successful cancellation requests.

### Length of Protection

Trade marks are protected for an initial period of ten years from the date of filing and can be renewed for an unlimited number of additional ten-year periods.

## 7.3 Industrial Designs

### Definition

The design of products or parts of products is characterised in particular by the arrangement of lines, surfaces, contours or colours, or by the materials used.

Designs can be protected if they are:

- new (ie, they have not been made publicly available prior to the date of application or priority); and
- sufficiently distinctive from existing designs in terms of key features.

They must also not be:

- otherwise unlawful;
- contrary to public policy, explicitly forbidden or immoral; or
- only comprised of features dictated solely by the technical function of the product.

The owner of a design has the exclusive right to its use and can prevent third parties from using it for commercial purposes. Protection covers the external appearance and visual impression of a product. The production, utility, intended use and technical effects of a design are not protected.

Animated creations are not covered by design protection in Switzerland.

### Application
Swiss design applications are to be filed with the Swiss Federal Institute of Intellectual Property. Publication can be deferred for up to 30 months.

### Enforcement and Remedies
Design infringements can be prosecuted through both civil actions and criminal proceedings.

### Length of Protection
Designs are protected for an initial period of five years from the date of filing and can be renewed for an additional five years, for a total duration of up to 25 years.

## 7.4 Copyright
### Definition
Intellectual creations (including visual and audiovisual works, music, works of architecture, computer software and scientific works) with an individual character are copyright-protected works. Software is an explicitly recognised work category. Further, photographs are protected even if they do not have an individual character.

Copyright does not protect, for example, ideas, achievements, products of nature or coincidence, concepts or instructions, or laws and regulations. Patent specifications and published patent applications are not protected.

The copyright owner has the exclusive right to determine how and when the copyright-protected work is used. This includes:

- the right to reproduce;
- the right to distribute;
- the right to make a work available to the public;
- the right to perform and present; and
- the right to adapt.

### Protection
Protection arises automatically upon the creation of the work, with no registration required. Under Swiss law, it is not necessary to add "©" or "Copyright" for protection to apply.

As there is no register for copyrights, in case of a dispute the copyright owner needs to demonstrate authorship or having been assigned (by operation of law or contractually) ownership. Aside from other means of proof (witnesses, drafts, etc), the Swiss Copyright Act provides for a presumption of authorship, meaning that, unless proven otherwise, the author is deemed to be the person whose name or pseudonym appears on the copies of the work published.

### Enforcement and Remedies
Copyright infringements can be prosecuted through both civil actions and criminal proceedings. Remuneration claims for certain types of works are only enforceable by societies for the collective management of copyrights.

### Length of Protection
Protection lasts for the life of the author, plus:

- 50 years for computer software and photographs; and
- 70 years for all other copyrights.

## 7.5 Others
Switzerland does not have an act dealing specifically with trade secrets. Instead, trade secrets are protected under various provisions, as set out in the following.

- Criminal law prohibits persons legally committed to keeping a secret from exploiting or revealing it. It also prohibits industrial espionage. Furthermore,

a number of secrecy obligations are enforced with criminal sanctions in various industrial sectors and professions, such as the secrecy obligations applicable to lawyers, physicians, banking, etc.
- Under Swiss competition law, unfair business practices regarding the unlawful procurement, misappropriation or exploitation of information are prohibited. Violation of these rules may lead to civil liability and criminal sanctions.
- Corporate law prohibits the bodies and top management of companies from disclosing or otherwise utilising secret information other than according to the scope of their mandates.
- Employment law prohibits an employee from exploiting confidential information acquired in the course of work.
- Agency and procurement law forbids an agent from making use of the trade secrets of the principal it has been entrusted with.

Furthermore, Switzerland is a party to the Agreement on Trade-Related Aspects of Intellectual Property Rights (TRIPS).

## 8. Data Protection

### 8.1 Applicable Regulations

Data protection in Switzerland is mainly regulated by the Federal Act on Data Protection (FADP) and its ordinances, particularly the Federal Ordinance on Protection Act. However, sector-specific or overarching data protection legislation may provide for a broader scope of application. The new FADP, which entered into force on 1 September 2023, aligned Swiss data protection with the European legislation to a significant extent and has, amongst other things, implemented:

- the principle of data protection by design and by default;
- the obligation to perform an impact assessment under certain circumstances; and
- the obligation to notify the Federal Data Protection and Information Commissioner (FDPIC) or data subjects of data breaches unless an exception applies.

Given that Switzerland is not a member state of the EU, the EU General Data Protection Regulation only applies under certain circumstances – eg, if a Swiss-based company offers goods or services to individuals in the EU or monitors the behaviour of such individuals.

### 8.2 Geographical Scope

The FADP is applicable to the processing of personal data that has an effect in Switzerland, even if it was collected abroad. Therefore, if personal data concerning natural persons in Switzerland is processed abroad, the controller or processor abroad must comply with applicable Swiss law. In addition, private controllers domiciled or resident abroad must appoint a representative in Switzerland if they process the personal data of persons in Switzerland.

The FADP establishes certain principles, which must be observed by controllers as well as – for most principles – processors.

- Lawfulness – personal data must be processed lawfully, meaning that processing must not violate another norm of Swiss law directly or indirectly aimed at protecting the personality.
- Good faith – data shall be processed in good faith, meaning that the processing shall be evident to the data subject.
- Transparency and purpose limitation – the collection and usage of personal data must be apparent to the data subject, and use shall be limited to the specified purpose.
- Proportionality – processing must be proportionate to the purpose (data minimisation) and must be “destroyed or anonymised” as soon as it is no longer needed with regard to the purpose of the processing.
- Accuracy – reasonable measures are to be taken to ensure that the personal data is up to date, and that it is possible to correct incorrect data.
- Privacy by design and security – controllers must set up technical and organisational measures in order to meet the data protection requirements (privacy by design) and, in particular, to ensure a level of data security appropriate to the risks (data security).

- Privacy by default – unless the data subject instructs otherwise, the controller is required to limit the processing to the required minimum through pre-defined settings.

The transfer of personal data to countries that do not provide a level of data protection considered adequate by Swiss law is not permitted unless the protection of the personal data is ensured by other measures (eg, by using the standard contractual clauses of the EU with certain Swiss-specific amendments). In certain cases, the transfer mechanism requires prior approval by or notification to the FDPIC, the Swiss data protection authority.

### 8.3 Role and Authority of the Data Protection Agency

The FDPIC is an independent body tasked with supervising private persons and federal bodies with respect to data protection compliance. To this end, the FDPIC has published several non-binding guidelines.

The FDPIC may investigate cases either on its own initiative or at the request of a third party. If such an investigation reveals that data protection regulations are being breached, the FDPIC may issue binding orders (eg, that the processing is fully or partially adjusted, suspended or terminated). The individual or entity subject to such order (but not the data subject) may initiate proceedings against it before the competent court. The FDPIC may also inform the public of its findings and its decisions in cases of general interest, which may lead to negative publicity. Moreover, the FDPIC is subject to the Freedom of Information Act and may be required, upon request, to release information to the public or the media.

The FDPIC does not have the authority to issue any fines. However, law enforcement agencies may issue fines of up to CHF250,000 for certain data protection breaches. These fines may be imposed on the individuals responsible for a breach, including, if applicable, on directors and officers and employees with independent decision-making power, provided these breaches have been committed wilfully (see Article 12, Criminal Code) and on the condition that a subject makes a complaint.

In addition, data subjects may directly take legal action in case of violation of their rights under the FADP and related Swiss data protection legislation.

## 9. Looking Forward

### 9.1 Upcoming Legal Reforms

#### Revised Patent Act

On 1 January 2027, the revised Swiss Patent Act will enter into force together with the revised Swiss Patent Ordinance. The main changes are as follows.

- Patent applicants will be able to request that the Swiss Federal Institute of Intellectual Property examine their patent application for all patentability requirements. The fully examined national patent will offer medium-sized enterprises and individual inventors, in particular, an equivalent, convenient and lower-cost alternative to the European patent. If no such request is made, the partially examined patent will continue to be an inexpensive and easily obtainable IP right.
- The Swiss Federal Institute of Intellectual Property will have to establish the state of the prior art in the field of the invention. The search results will be published, which will allow all interested parties to determine whether the invention is eligible for patent protection. Overall, this will increase the value of the Swiss national patent.
- The well-versed Federal Patent Court, instead of the Federal Administrative Court, will judge appeals against decisions of the Swiss Federal Institute of Intellectual Property.

#### Foreign Investment Control

The new Swiss Federal Act on the Screening of Foreign Investments (IPG) is scheduled to enter into force in 2027. So far, Switzerland does not have any foreign investment control regime. It will introduce a dedicated foreign investment screening regime targeting acquisitions of Swiss companies by foreign state-controlled investors in certain sensitive sectors. The law distinguishes between sectors that are particularly critical to public order and security (eg, defence industry, water supply, energy, and security-related IT systems), which are subject to a lower turnover threshold, and other sensitive sectors (eg, important hospitals or

operators of important transport hubs such as airports or ports). See **2. Restrictions on Foreign Investments** for further details.

### Possible Revision of the Swiss Labour Act

At the political level, a relaxation of some provisions of the Labour Act is currently being discussed with regard to employees who work remotely (eg, exemptions from the prohibition of work on Sunday). However, it is not yet possible to say whether – and, if so, when – such changes will come into effect.

**Habib Al Mulla & Partners** was founded in 1984 and is a market-leading law firm headquartered in Dubai, with offices in Abu Dhabi, Istanbul, Moscow, Baghdad, Cairo and New Delhi. The firm brings together a team of 80+ lawyers who provide tailored legal advice across over 14 areas of practice and serve clients in industries ranging from finance and construction to energy and technology. Renowned for its strength in dispute resolution, regulatory work, and cross-border transactions, the firm is consistently highly ranked, affirming its position among the region's top-tier firms. Dr Habib Al Mulla, the firm's founder, is one of the UAE's most prominent legal figures and was instrumental in shaping major legislative reforms. His vision helped establish the Dubai International Financial Centre (DIFC) – the UAE's first financial free zone – solidifying the firm's legacy as a pioneer in legal and regulatory advancement in the Middle East.

## Authors

**Amir Alkhaja** is the managing partner of Habib Al Mulla and Partners and a licensed UAE lawyer with rights of audience before all UAE courts, including the Court of Cassation and the Supreme Court. With over 15 years of experience, he focuses on commercial, banking and white-collar crime litigation, including Islamic finance disputes. A former Dubai Police officer, Amir brings a rare dual perspective of law enforcement and legal advocacy. He is widely respected for leading high-stakes disputes across the GCC and MENA regions, and for successfully guiding the firm through its recent transition to an independent, growth-focused practice.

**Areen Jayousi** is a senior disputes lawyer and a qualified solicitor of England and Wales with over 18 years' experience advising on complex commercial disputes across the UAE. He specialises in UAE law litigation and arbitration, and is consistently ranked Band 1 by Chambers and recognised by another leading law directory. Areen covers civil and commercial litigation, arbitration, insolvency and financial crime matters, often involving significant financial and reputational exposure. He combines strong knowledge of onshore UAE law with an international outlook, regularly advising international law firms and multinational clients on contentious matters within the region. Fluent in Arabic and English, he is known for his pragmatic, commercially focused and detail-oriented approach.

**Gulsun Ozmen** is a UK-qualified lawyer specialised in corporate and M&A. She is involved in transactional and advisory work on a broad range of non-contentious corporate and commercial matters. Gulsun negotiates, drafts and provides advice on transactional documents relating to M&A deals and investment activities. She also advises on foreign direct investment projects, carrying out corporate due diligence, pre-closing restructuring and post-closing implementation. Gulsun negotiates and drafts constitutional documents for company establishments and shareholders' agreements. She advises and assists regional high-net-worth individuals and large family businesses on restructuring, trust structuring, governance and family succession planning. She also advises clients on the regulatory and compliance requirements in the UAE.

**Alia AlMarzooqi** is a trainee associate in the corporate and commercial department at Habib Al Mulla and Partners. She brings progressive experience across top-tier private practice, in-house and international firms, having developed focused expertise in corporate advisory, M&A transactions, commercial contract drafting, regulatory compliance and governance across UAE, Bahrain and Oman frameworks. Alia holds an LLM in Business Law from Saint Joseph University, Dubai, and a Professional Diploma in International Arbitration from the Dubai International Arbitration Centre (DIAC), reflecting her commitment to continued professional development across transactional and dispute resolution practice areas.

40+ HABIB AL MULLA AND PARTNERS 1984 YEARS of EXCELLENCE

# 1. Legal System

## 1.1 Legal System and Judicial Order

### Civil Law Foundations

The UAE operates a civil law system, rooted primarily in codified legislation that draws significantly from Egyptian civil law (itself derived from French civil law principles) alongside an overlay of Islamic (Sharia) principles, particularly in areas of personal status, inheritance and certain aspects of commercial law. The primary codified instruments include the Civil Transactions Law (Federal Decree Law No 5 of 1985, as comprehensively amended by Federal Decree Law No 25 of 2025 coming into force on 1 June 2026) and the Commercial Transactions Law (Federal Law No 18 of 1993). There is no doctrine of binding judicial precedent as understood in common law systems, although courts give significant weight to decisions of higher courts, particularly the Federal Supreme Court.

### Federal and Emirate Court Structure

The UAE constitution establishes a dual court structure comprising a federal judiciary and independent emirate-level judiciaries. The federal court system consists of the Federal Supreme Court (the apex court, sitting in Abu Dhabi), Federal Courts of Appeal and Federal Courts of First Instance. However, the emirates of Abu Dhabi, Dubai and Ras Al Khaimah have each exercised their constitutional right to maintain independent local court systems, with their own courts of first instance, courts of appeal and courts of cassation. In practice, the majority of commercial litigation is conducted before the Dubai and Abu Dhabi local courts.

### Financial Free Zone Courts

The Dubai International Financial Centre (DIFC) and the Abu Dhabi Global Market (ADGM) each maintain separate common law court systems operating in English, with jurisdiction over civil and commercial matters arising within those zones. The DIFC courts apply common law principles as developed in England and Wales and are widely regarded as a sophisticated dispute resolution forum. Both the DIFC courts and the ADGM courts regularly enforce each other's judgments and have entered into recognition arrangements with various international courts, adding significantly to their utility in cross-border disputes.

# 2. Restrictions on Foreign Investments

## 2.1 Approval of Foreign Investments

### General Framework

Foreign investment in the UAE mainland is governed by the Commercial Companies Law (Federal Decree Law No 32 of 2021 as amended by Federal Decree Law No 20 of 2025) with implementing Cabinet decisions. The current framework permits 100% foreign ownership across the majority of commercial activities on the mainland. The limitation on foreign ownership is defined by reference to a "List of Activities with Strategic Impact" established by Cabinet decision (No 55 of 2021), which identifies the activities reserved for UAE national ownership or UAE national-majority ownership; all activities not appearing on the Negative List may be conducted through a wholly foreign-owned entity.

### The Negative List

The Negative List encompasses activities considered to be of strategic national significance, including certain defence and security activities, oil exploration concessions, specific money exchange and financial services segments, and other designated sectors. For activities on the Negative List, Emirati ownership requirements remain in place, and the degree of permissible foreign participation (if any) is specified by the relevant Cabinet decision. Foreign investors should verify the current status of their intended activity against the Negative List at the time of application, as the list is subject to periodic revision by the Cabinet.

### Sector-Specific Regulatory Approvals

For regulated industries, including banking and financial services, insurance, securities and investment, telecommunications, healthcare and education, a licence from the relevant sector regulator is required in addition to the standard licence from the emirate's licensing authority. Each regulator applies its own criteria, including fit-and-proper assessments, minimum capital requirements, governance standards and local substance conditions. Sector regulatory approval must generally be obtained before or in parallel with the main commercial licence application. Free zones, by contrast, permit 100% foreign ownership as a baseline, with no nationality restrictions, though free zone entities are generally limited to conducting business within the free zone or internationally.

## 2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance

The standard procedures generally applicable to all investors establishing a mainland presence in the UAE are as follows.

### The Licensing Process

An investor wishing to establish a mainland presence must apply to the relevant emirate's Department of Economic Development (DED) or equivalent authority. The principal steps are:

- reserving a trade name;
- obtaining initial activity approval;
- preparing and notarising a memorandum of association (MOA) before a UAE notary;
- submitting shareholder identification documentation; and
- paying the prescribed fees.

Where the activity requires a third-party approval, such as from the Central Bank or the Securities and Commodities Authority (SCA), that pre-approval must be obtained alongside the DED application. A standard limited liability company (LLC) can typically be established within two to four weeks; regulated activities may take considerably longer depending on the regulating authority.

### Post-Licensing Obligations

Once the trade licence is granted, the company must register with the Federal Tax Authority for corporate tax purposes and, where applicable, for VAT. Employers must also register with the Ministry of Human Resources and Emiratisation (MOHRE) before hiring employees and must comply with beneficial ownership filing obligations by registering ultimate beneficial owner (UBO) information with the licensing authority within prescribed timeframes.

### Consequences of Operating Without Approval/Licence

Conducting commercial activity without a valid trade licence or the necessary regulatory approval is a criminal offence under applicable federal and emirate legislation. Penalties include administrative fines, mandatory cessation of operations, asset seizure and, in serious cases, criminal prosecution of responsible individuals, which may result in imprisonment. In regulated sectors, unlicensed activity may additionally attract regulatory fines, disgorgement of profits and public censure. Contracts entered into in the course of unlicensed operations may be challenged as void or unenforceable before the UAE courts.

## 2.3 Commitments Required From Foreign Investors

The standard procedures generally applicable to all investors establishing a mainland presence are as follows.

### Standard Licensing Conditions

The relevant licensing authority retains discretion to impose conditions on the grant of a licence. In prac-

tice, common conditions include minimum paid-up capital thresholds (which vary by activity type and emirate), the appointment of a general manager and the maintenance of an address within the licensed emirate. The company's licence must at all times accurately reflect its permitted activities, address and organisational details.

### Emiratisation Obligations

All employers with sufficient workforce size and operating in applicable sectors are subject to Emiratisation requirements, which mandate the hiring of UAE nationals at prescribed ratios or minimum numerical targets. These obligations are administered by MOHRE and enforced through financial contributions including the Emiratisation Development Contribution for each unfilled quota position. Emiratisation targets have been progressively expanding in scope and depth, and compliance is a significant operational consideration for any business employing staff in the UAE.

### Regulated Sector and Project Commitments

In regulated sectors, the regulating authority may impose additional binding conditions as part of the authorisation process, such as maintaining qualified management and operational functions within the UAE, ongoing capital adequacy compliance and periodic regulatory reporting. Investors participating in government concessions or public-private partnership projects may also be required to agree to local content, technology transfer and workforce training and development commitments as part of the concession or project agreement.

## 2.4 Right to Appeal

### Administrative Court Challenge

Decisions refusing a licence or investment approval are subject to challenge before the UAE administrative courts. At the federal level, the Federal Administrative Court has jurisdiction to review administrative decisions on grounds of illegality, procedural irregularity and disproportionality. In Dubai, the Dubai Administrative Court hears challenges against decisions of local government authorities and licensing bodies.

The time limit for commencing an administrative challenge is generally 60 days from the date of publication, notification of the decision to the investor or the date on which the investor is deemed to have had certain knowledge of it. This deadline may be interrupted by filing a formal grievance with the relevant administrative authority; if no decision on the grievance is issued within 60 days, it is deemed rejected, and the litigation period begins to run. Given these strict deadlines, specialist legal advice should be sought promptly.

### Internal Reconsideration and Free Zone Appeals

Most licensing and regulatory authorities provide an internal reconsideration or administrative appeal mechanism, and investors are generally expected – and in some cases, required – to exhaust these internal remedies before approaching the courts. Within the DIFC and ADGM, administrative and regulatory decisions are subject to their own internal appeal procedures, with review before the relevant free zone bodies. The scope of judicial oversight of regulatory decisions is generally confined to questions of lawfulness and procedural compliance rather than a full examination of the underlying merits of the decision.

# 3. Corporate Vehicles

## 3.1 Most Common Forms of Legal Entity

### Limited Liability Company (LLC)

The LLC is the most widely used corporate structure for mainland commercial activity and is governed by the Commercial Companies Law. An LLC may have between one and 50 shareholders, with each shareholder's liability limited to their capital contribution. There is no prescribed minimum share capital at the federal level, though specific activity types may attract minimum capital requirements under sector regulation. The LLC is suited to the broadest range of commercial purposes – trading, services, manufacturing, joint ventures and general market entry – and is the standard vehicle of choice for foreign investors establishing a wholly owned or jointly owned mainland presence.

### Public Joint Stock Company (PJSC)

A PJSC is a company whose shares may be offered to the public and listed on the Abu Dhabi Securities Exchange (ADX) or the Dubai Financial Market (DFM). It requires a minimum of five founding shareholders

and a minimum share capital of AED30 million for listed companies, with higher thresholds applicable in certain regulated sectors. PJSCs are subject to comprehensive corporate governance requirements under the SCA's Corporate Governance Code and are the appropriate vehicle for businesses seeking access to public equity capital markets or looking to raise capital from a broad investor base.

### Private Joint Stock Company (PrJSC)

A PrJSC has a similar structure to a PJSC but its shares are not offered to the public and may not be listed on any exchange. It requires a minimum of two shareholders and a minimum share capital of AED5 million. This vehicle is typically used by larger private enterprises and family-owned business groups, and as a holding structure or a transitional vehicle for companies contemplating a future public listing.

### Branch of a Foreign Company

A foreign company may establish a branch on the UAE mainland. A branch is not a separate legal entity; the parent company is directly and fully liable for all obligations incurred by the branch. In general, foreign branches are no longer required to appoint a local service agent (LSA). However, certain regulated or restricted activities may still require the appointment of an LSA, who must be either a UAE national individual or a company wholly owned by UAE nationals. The LSA's role is limited to administrative and governmental liaison functions, and the LSA does not hold any ownership interest in the branch or entitlement to its profits.

A branch is most suited to foreign companies undertaking a defined project or specific activity in the UAE without establishing a locally incorporated entity. A branch may also be established as a representative office, in which case its activities are limited to marketing and promotional functions and facilitating the parent company's business relationships and contracts within the UAE.

### Free Zone Entities

Each UAE free zone offers its own categories of legal entity, most commonly a free zone establishment (FZE, with a single shareholder) and a free zone company (FZCO, with multiple shareholders). These entities benefit from 100% foreign ownership, full repatriation of profits and capital, and potential tax advantages. However, free zone entities are generally restricted from conducting direct commercial activities with mainland UAE customers and must work through a separately licensed mainland entity or appointed distributor to do so.

## 3.2 Incorporation Process

### Key Steps

Establishing an LLC involves the following principal steps.

- The applicant must first reserve a trade name with the relevant DED. The proposed trade name must comply with applicable naming regulations and must not contravene public morals, imply affiliation with a government authority or otherwise mislead the public.
- A follow-up receipt in respect of the proposed activities, shareholder(s) and general manager must then be obtained. This confirms that the proposed activities are permissible and, where applicable, identifies any additional approvals or pre-approvals required from the relevant sector regulator.
- The MOA, setting out the company's name, objects, share capital, shareholders and management arrangements, must be drafted, executed by all shareholders and notarised by a UAE notary.
- The company must secure premises suitable for its licensed activities. Depending on the nature of the activity and the relevant DED requirements, this may consist of a physical office, virtual office or flexi-desk arrangement. The lease agreement must be registered through the applicable Ejari system or equivalent tenancy registration platform in the relevant emirate.
- The notarised MOA, shareholder and manager identification documents, Ejari certificate, UBO details and any additional supporting documents must then be submitted to the relevant DED to obtain the payment voucher for licence issuance.
- Where any approval or pre-approval from a relevant sector regulator is required, such approval must be obtained prior to submission of the licensing documents to the DED for issuance of the payment voucher.

- Upon payment of the relevant DED fees, the DED issues the licence for the LLC.

### Registration, Licensing and Post-Incorporation Obligations

Following issuance of the licence, the LLC must register with the Federal Tax Authority for corporate tax purposes and, where applicable, VAT purposes. The LLC must also register with MOHRE prior to employing any staff and initiate the process for opening a corporate bank account in the UAE.

The overall incorporation timeline for a standard LLC that does not require additional regulatory approvals is typically between two and four weeks.

## 3.3 Ongoing Reporting and Disclosure Obligations

### Licence Renewal and Change Notifications

UAE mainland companies must renew their licence annually with the relevant DED, which involves fee payment and confirmation that the company's registered particulars remain accurate. A valid Ejari certificate, or equivalent tenancy registration document in the relevant emirate, is required in order to complete the licence renewal process.

Any amendments to the company's constitutional documents, including the MOA, must be duly notarised before a UAE notary public and filed with the relevant DED without delay. Any changes in the MOA notarised by the notary must also be filed with the relevant DED without delay.

Failure to maintain a valid and accurate trade licence or to update the company's registered information may constitute a regulatory violation and may result in administrative fines, suspension of the company's activities and practical difficulties in dealing with banks, government authorities and third parties.

### UBO Filing Requirements

Companies must maintain an internal partners and shareholders register and a separate UBO register identifying all individuals who ultimately own or control 25% or more of the share capital or voting rights, or who otherwise exercise effective control. This information must be filed with the relevant licensing authority and updated within 15 days of any change. Non-compliance with the UBO regulations attracts administrative penalties and can affect the company's ability to renew its licence or conduct activities.

### Financial Reporting

Companies must maintain accounting records in compliance with applicable standards. Under the corporate tax regime, all taxable persons must prepare financial statements in accordance with the International Financial Reporting Standards (IFRS) or the IFRS for SMEs and file an annual corporate tax return with the Federal Tax Authority. PJSCs and PrJSCs are subject to more extensive disclosure obligations under the Companies Law, including preparation of annual audited financial statements and their presentation to the annual general meeting of shareholders.

## 3.4 Management Structures

### LLC Management

An LLC is managed by one or more managers appointed by the shareholders, who may be shareholders themselves or third parties. The manager has authority to bind the company in day-to-day business within the scope of authority defined in the MOA and/or any shareholders' resolutions. The LLC does not require a mandatory two-tier governance structure; the default is a single-tier arrangement in which the manager or board of managers exercises both executive and supervisory functions.

In practice, shareholders may also appoint a board of directors for internal governance purposes. However, unlike a general manager, directors are not registered with the relevant DED as authorised representatives of the LLC. The names and details of such directors may instead be recorded in the MOA or in a separate shareholders' resolution.

The general assembly of shareholders retains ultimate authority over reserved matters, including approval of the company's financial statements, declaration and distribution of profits, appointment or removal of managers and amendments to the MOA. The general assembly must convene at least once annually.

### PJSC Governance

A PJSC must have a board of directors comprising no fewer than three, and no more than 11, members elected by the general assembly, unless otherwise approved by the SCA.

The board is responsible for the overall management, strategic direction, and supervision of the company and must satisfy the independence and governance requirements prescribed under the applicable SCA Corporate Governance Rules and Standards. The board typically appoints a chief executive officer or managing director to oversee the company's day-to-day operations and executive management. While this creates a practical distinction between oversight and executive functions, the UAE PJSC governance framework does not adopt a formal two-tier board structure in the continental European sense.

Listed PJSCs are additionally required to establish specialised board committees, including an audit committee and a nomination and remuneration committee, in accordance with the applicable SCA governance regulations.

## 3.5 Directors', Officers' and Shareholders' Liability

### Directors' and Managers' Duties and Liability

Under the Commercial Companies Law, managers of an LLC and directors of a PJSC owe duties of care, loyalty and good faith to the company and its shareholders. Personal liability may arise for losses caused by fraud, undisclosed or improperly approved conflicts of interest, wilful mismanagement or conduct in excess of the authority conferred by the company's constitutional documents.

Claims for breach of duty may be brought by the company itself, by qualifying shareholders meeting prescribed thresholds or in insolvency proceedings by a court-appointed liquidator. Criminal liability may arise where a director or manager has engaged in fraudulent conduct, misappropriation of company assets or other criminal acts in connection with the management of the company.

### Shareholders' Limited Liability and Piercing the Corporate Veil

Shareholders of an LLC, PrJSC or PJSC are not personally liable for the company's obligations beyond their capital contributions; the principle of limited liability is fundamental to UAE corporate law.

In exceptional circumstances, however, UAE courts may disregard the company's separate legal personality and impose personal liability on shareholders where the corporate structure has been used to perpetrate fraud, evade legal obligations or conceal improper conduct. This may arise, for example, where there has been substantial commingling of personal and company assets or affairs.

The legal basis for this principle derives from broader doctrines of good faith, abuse of rights and prohibition of fraud under UAE law, including the Civil Transactions Law, as amended by Federal Decree Law No 25 of 2025. which comes into force on 1 June 2026. The application of this doctrine by the UAE courts remains limited and strictly fact-specific.

# 4. Employment Law

## 4.1 Nature of Applicable Regulations

The primary legislation governing employment in the UAE mainland private sector is Federal Decree-Law No 33 of 2021 on the Regulation of Labour Relations (the "Labour Law"), which came into effect on 2 February 2022. Since its enforcement, the Labour Law has been amended three times, with the most recent amendment in 2024.

The Labour Law is supplemented by Cabinet and ministerial decisions issued by MOHRE, which also oversees registration, compliance and dispute resolution. There is no system of collective bargaining or statutory trade union recognition in the UAE mainland; in practice, the employment relationship is governed by the Labour Law and the individual employment contract. The DIFC and the ADGM each maintain their own separate employment legislation,

### 4.2 Characteristics of Employment Contracts

All employment contracts in the UAE must be concluded in writing and registered with MOHRE using the prescribed standard form. Under the Labour Law, all contracts must be fixed-term, and the previous distinction between limited and unlimited-term contracts has been abolished; the original statutory maximum term of three years has been removed, and the parties may now agree a fixed term of any duration, with contracts being renewable upon expiry for equivalent or shorter periods. Where a contract is executed in more than one language and a dispute arises as to its interpretation, the Arabic version prevails unless the parties have expressly agreed otherwise.

### 4.3 Working Time

The standard maximum working time is eight hours per day and 48 hours per week. During the holy month of Ramadan, working hours are reduced to six hours per day and 36 hours per week, subject to limited exceptions. Overtime work is generally permitted up to two additional hours per day and is compensated at the basic wage plus a premium of at least 25%, rising to at least 50% for overtime performed between 9 pm and 4 am. Employees are entitled to a minimum of one rest day per week and to annual leave of a minimum of 30 calendar days per year following the first year of service.

### 4.4 Termination of Employment Contracts

The UAE does not operate an "employment at will" system. An employment contract may be terminated by either party by serving the contractually agreed notice period, which must be no less than 30 days and no more than 90 days. If either party terminates without serving the agreed notice, it is required to compensate the other party with an amount equal to the employee's remuneration for the full notice period or the remaining part of it.

Termination will be considered unlawful in the specific cases set out in Article 47 of the Labour Law, including where the reason for dismissal is that the employee has filed a serious complaint with MOHRE or has brought a successful claim against the employer; in such circumstances, the court may award compensation of up to three months' wage in addition to any other entitlements.

All employees are entitled to an end-of-service gratuity upon termination, except where dismissal occurs on grounds of gross misconduct as specifically enumerated in the Labour Law. Gratuity is calculated on the basis of the last basic salary as follows: 21 days' basic salary for each completed year of the first five years of service and 30 days' basic salary for each subsequent completed year.

Total gratuity is capped at two years' total remuneration. There is no formal collective redundancy procedure under UAE federal law; however, employers proposing significant workforce reductions are expected to notify MOHRE in advance and must, in all cases, comply with the notice and end-of-service gratuity entitlements applicable to each individual employee.

### 4.5 Employee Representations

There is no statutory requirement for employee representation, works councils or trade union recognition in the UAE mainland private sector. Employees may bring individual labour complaints before MOHRE, which operates a mandatory conciliation process prior to referral to the labour courts.

Employers with 50 or more employees are required to implement internal employment policies, including a grievance procedure, and in practice typically maintain a dedicated human resources or employee relations function to handle workplace disputes. There are no obligations to inform or consult any representative body in the context of restructurings, redundancies or changes to terms and conditions of employment.

## 5. Tax Law

### 5.1 Taxes Applicable to Employees/ Employers

The UAE does not impose personal income tax on employees, regardless of nationality or residency. Expatriate employees, who constitute the substantial majority of the UAE private sector workforce, are not subject to any social security or pension contributions. UAE national and Gulf Cooperation Council (GCC) national employees in the private sector are subject to pension and social security contributions administered at federal and emirate level, including

through the General Pension and Social Security Authority (GPSSA): employers contribute 12.5% of insurable salary (15% in the Emirate of Abu Dhabi), and employees contribute 5%. There are no other payroll taxes or levies applicable to the employment relationship.

## 5.2 Taxes Applicable to Businesses

### Corporate Tax

The UAE introduced a federal corporate tax regime under Federal Decree-Law No 47 of 2022 on the Taxation of Corporations and Businesses, applicable to financial years commencing on or after 1 June 2023. The standard rate is 9% on taxable income exceeding AED375,000; income up to that threshold is taxed at 0%, providing effective relief for smaller businesses. Businesses qualifying as "Qualifying Free Zone Persons" may benefit from a 0% rate on "Qualifying Income" derived from activities conducted within or between free zones, subject to substance requirements, a de minimis threshold for non-qualifying revenue and other prescribed conditions. Extractive businesses and non-extractive natural resource businesses remain subject to emirate-level taxation and fall outside the federal corporate tax regime.

### VAT and Excise Tax

VAT applies at a standard rate of 5% under Federal Decree-Law No 8 of 2017 on VAT. An excise tax applies to tobacco products and energy drinks at 100%, and to carbonated beverages at 50%. There is no withholding tax on dividends, interest or royalties paid to non-residents, and no standalone capital gains tax, although capital gains form part of taxable income under the corporate tax regime.

### Pillar Two - QDMTT

The UAE enacted a qualifying domestic minimum top-up tax (QDMTT) by Cabinet Decision No 142 of 2024, effective for financial years commencing on or after 1 January 2025. The QDMTT applies to large multinational enterprise groups with consolidated global revenues of EUR750 million or more and ensures that such entities are subject to a minimum effective tax rate of 15% in the UAE. The UAE's QDMTT has been granted safe harbour status on the OECD's central record, meaning that in-scope groups satisfying the QDMTT will not be exposed to a top-up tax in other jurisdictions in respect of their UAE profits.

## 5.3 Available Tax Credits/Incentives

One of the principal tax incentives available in the UAE is the 0% corporate tax rate for qualifying free zone persons on qualifying income, where the statutory conditions are satisfied. More than 40 free zones operate across the UAE, each offering varying benefits including 100% foreign ownership, full repatriation of profits and capital, customs duty exemptions and, where the qualifying conditions are met, the 0% corporate tax rate.

Small business relief is available to businesses with annual revenues not exceeding AED3 million, allowing eligible taxpayers to elect to be treated as having no taxable income for corporate tax purposes for a specified period. Certain sectors and activities also benefit from specific exemptions or reduced-rate treatment under the corporate tax law and its implementing decisions.

## 5.4 Tax Consolidation

Tax grouping is available under the corporate tax regime. A UAE resident parent company and one or more UAE resident subsidiaries may elect to form a tax group, provided the parent holds at least 95% of the share capital and voting rights of each subsidiary, directly or indirectly, and all members apply the same financial year and accounting standards. A tax group is treated as a single taxable entity, enabling profits and losses to be consolidated and offset across group members, and the group must apply to the Federal Tax Authority for approval to form or modify a tax group.

## 5.5 Thin Capitalisation Rules and Other Limitations

The UAE corporate tax regime adopts an interest limitation rule rather than a traditional thin capitalisation test. Net interest expenditure is deductible up to the higher of 30% of earnings before interest, tax, depreciation and amortisation (EBITDA), or AED12 million per tax period. Interest expenditure disallowed in a given period may be carried forward and deducted in up to ten subsequent tax periods, subject to the same limitation. Specific exemptions apply to banks, insur-

ance companies and certain other regulated financial entities.

### 5.6 Transfer Pricing

Transfer pricing rules apply under the corporate tax regime, and all transactions between related parties and connected persons must be conducted on an arm's-length basis in accordance with the OECD Transfer Pricing Guidelines. Taxpayers meeting prescribed thresholds are required to maintain transfer pricing documentation at the master file and local file level, and to disclose related-party transactions in their annual tax returns.

Country-by-country reporting obligations apply to UAE-headquartered multinational enterprise groups with consolidated global revenues of AED3.15 billion or more.

### 5.7 Anti-Evasion Rules

The corporate tax law contains a general anti-avoidance rule (GAAR), which empowers the Federal Tax Authority to disregard or recharacterise arrangements that lack genuine commercial substance and are entered into with the principal purpose of obtaining a tax advantage that is contrary to the object and purpose of the law.

Additionally, the UAE's Economic Substance Regulations require entities conducting certain "relevant activities", including banking, insurance, investment fund management, finance and leasing, and holding company activities, to demonstrate genuine economic substance in the UAE by reference to management and control, qualified employees and operating expenditure, with non-compliance attracting penalties and possible disclosure to foreign competent authorities.

### 5.8 Tariffs

The UAE is a member of the GCC Customs Union and applies the GCC Common External Tariff, which sets a standard rate of 5% on most imported goods. Certain categories attract a 0% rate, including basic foodstuffs, medicines and agricultural inputs, while tobacco and tobacco products are subject to a customs duty of 100% and alcoholic beverages to 50%.

The UAE has concluded a number of bilateral free trade agreements in recent years, most notably with India (effective May 2022) and Israel (effective April 2023), providing preferential tariff treatment for qualifying goods originating from those countries; further agreements are under active negotiation. The UAE's tariff environment has also been affected by US tariff measures introduced from early 2025, and the UAE government has engaged with the US administration with a view to exploring a bilateral trade agreement that could provide greater certainty for businesses operating across both markets.

## 6. Competition Law

### 6.1 Merger Control Notification

#### Legislative Framework

Merger control in the UAE is governed by Federal Decree Law No 36 of 2023 on the Regulation of Competition (the "Competition Law"), supplemented by Cabinet Decision No 3 of 2025 concerning thresholds for economic concentration filings and its subsequent executive and implementing regulations clarifying notification procedures and merger filing requirements.

The Ministry of Economy is the competent authority for merger control review on the UAE mainland. Certain regulated sectors including banking, financial services, insurance and telecommunications fall outside the scope of the general Competition Law and are instead subject to the merger review frameworks, if any, maintained by their sector regulators. Economic activities conducted within UAE free zones are generally also excluded from scope.

#### Notification Thresholds

Cabinet Decision No 3 of 2025 introduced two alternative triggering thresholds for mandatory pre-closing notification:

- a turnover threshold, where the combined turnover of the parties to the concentration equals or exceeds AED300 million in the relevant UAE market; and
- a market share threshold, where the combined market share of the parties equals or exceeds 40% of the relevant market in the UAE.

A mandatory notification obligation arises where either threshold is met. Full-function joint ventures, those performing all the functions of an autonomous economic entity on a lasting basis, are treated as concentrations subject to notification where the applicable thresholds are satisfied. Parties should assess both thresholds at the time of transaction planning, as satisfaction of either is sufficient to trigger the filing obligation regardless of whether the other threshold is met.

## 6.2 Merger Control Procedure

### Filing, Standstill and Review

Notification must be filed with the Ministry of Economy before completion of the transaction. The implementing regulations issued pursuant to Cabinet Decision No 59 of 2026 (expected to take effect on the 30 July 2026) clarify the notification procedures and the information and documentation required to accompany a complete filing, including details of the parties and transaction structure, relevant market definitions, market share and turnover data, and financial information.

The Ministry has ninety (90) calendar days from receipt of a complete notification to issue its decision, extendable by a further forty-five (45) calendar days; during this standstill period the parties may not complete the transaction. Note that if no decision is issued within the applicable period, the transaction is deemed rejected. The Ministry may request supplementary information during the review, which may extend the timeline, and parties are encouraged to engage with the Ministry proactively and at an early stage where there is any uncertainty about whether either threshold is satisfied.

### Decision and Consequences of Non-Compliance

The Ministry may approve the transaction unconditionally, approve it subject to conditions which may include structural remedies such as divestitures or behavioural commitments, or prohibit it outright on competition grounds. Completing a notifiable transaction without notification or in breach of the standstill obligation may result in significant administrative penalties and, in serious cases, the unwinding of the completed transaction.

## 6.3 Cartels

### Prohibition

The Competition Law prohibits agreements, concerted practices and decisions of associations of undertakings that have as their object or effect the prevention, restriction or distortion of competition in the UAE market. The prohibition applies to both horizontal arrangements between competitors and vertical arrangements between suppliers and distributors.

Hard-core horizontal restrictions including price-fixing, market allocation, bid rigging and output limitation are treated as the most serious category of infringement and attract maximum penalties regardless of actual market effect. Vertical arrangements incorporating hard-core restraints, such as resale price maintenance or absolute territorial protection, are similarly prohibited.

### Enforcement and Extra-Territorial Reach

The Ministry has broad investigative powers, including the ability to request documents, conduct on-site inspections and interview employees. The Competition Law applies on an effects basis: anti-competitive conduct carried out entirely outside the UAE falls within scope where it has actual or potential effects on competition within the UAE market. Administrative fines for prohibited agreements may reach up to 10% of the violating entity's total UAE revenues during the period of the infringement, with higher penalties applicable in cases of repeat violation.

## 6.4 Abuse of Dominant Position

### Dominance and Prohibited Conduct

This refers to the abuse by one or more undertakings of a dominant position in the UAE market or a substantial part thereof. Pursuant to Cabinet Resolution No 3 of 2025, a company is generally presumed to hold (whether solely or in conjunction with other establishments) a dominant position where its market share equals or exceeds 40% of the relevant market, although dominance may also be established based on broader indicators of market power and the ability to act independently of competitors, customers or consumers.

Prohibited abusive conduct includes imposing unfair purchase or selling prices, limiting production or mar-

ket supply to the detriment of consumers, applying dissimilar conditions to equivalent transactions so as to disadvantage trading parties, tying or bundling unrelated products or services, and predatory pricing or margin squeeze.

### Enforcement and Extraterritorial Application

The Ministry is responsible for enforcing the abuse of dominance provisions and may exercise the same investigative and enforcement powers applicable to anti-competitive agreements and cartel conduct. The Competition Law and its Implementing Regulations applies on an effects basis and may extend to conduct occurring outside the UAE where such conduct produces anti-competitive effects within the UAE market.

Administrative fines for established abuses may reach up to 10% of total UAE revenues during the period of the infringement, and the Ministry may also order the cessation of the abusive practice and impose structural or behavioural remedies.

As with the cartel prohibition, regulated sectors including banking, financial services, insurance and telecommunications remain subject to their own sector-specific regulatory frameworks and are excluded from the general Competition Law.

## 7. Intellectual Property

### 7.1 Patents

Patent protection in the UAE is governed by Federal Decree-Law No 11 of 2021 on the Regulation and Protection of Industrial Property. To be patentable, an invention must be novel, involve an inventive step and be capable of industrial application; certain categories, including discoveries, scientific theories, mathematical methods and methods of medical treatment, are excluded from patentability.

A patent confers protection for 20 years from the filing date, with no possibility of renewal beyond that term, and applications are filed with the Industrial Property Department of the Ministry of Economy, which conducts substantive examination. The UAE is also a member of the GCC Patent Office, which offers a single regional application providing protection across all six GCC member states, although the role of the GCC Patent Office is in the process of being re-evaluated by member states. Enforcement is available through both the civil courts (injunctions, damages and delivery up) and the criminal courts (fines and imprisonment for wilful infringement).

### 7.2 Trade Marks

Trade marks are protected under Federal Decree-Law No 36 of 2021 on Trade Marks. A registered trade mark confers exclusive rights for ten years from the date of registration and is indefinitely renewable for further ten-year periods upon payment of the prescribed renewal fees.

Applications are filed with the Ministry of Economy's Trade Mark Registry, and the UAE follows the Nice Classification system for the classification of goods and services. Well-known marks enjoy protection in the UAE even without local registration, consistent with the UAE's obligations under the Paris Convention and the Agreement on Trade-Related Aspects of Intellectual Property Rights (the "TRIPS Agreement"), and civil remedies include injunctions, damages and an account of profits, while criminal liability may arise for wilful infringement.

### 7.3 Industrial Designs

Industrial designs, the ornamental or aesthetic features of a product, are protected under Federal Decree-Law No 11 of 2021 on the Regulation and Protection of Industrial Property. Registration is with the Ministry of Economy and confers an initial protection period of ten years, renewable for two further five-year periods, providing a maximum protection period of 20 years. Unregistered designs do not receive equivalent statutory protection, and rights-holders are accordingly advised to register prior to commercialisation or public disclosure, with enforcement mechanisms mirroring those available for patent infringement, including civil and criminal remedies.

### 7.4 Copyright

Copyright in the UAE is governed by Federal Decree-Law No 38 of 2021 on Copyrights and Neighbouring Rights. Protection arises automatically upon the creation of an original work, without any requirement

for registration; however, voluntary registration with the Ministry of Economy is available and is recommended as a means of establishing a public record of ownership.

The law protects a broad range of works, including literary, artistic, musical, dramatic, audiovisual, architectural and applied art works. The duration of protection is the lifetime of the author plus 50 years for most categories; works of legal entities and audiovisual works are protected for 50 years from publication, and both civil remedies (injunctions, damages and seizure of infringing copies) and criminal enforcement are available, with the UAE Customs Authority empowered to detain suspected infringing goods at the border.

### 7.5 Others

#### Software and Databases

Computer software is protected as a literary work under the Copyright Law and benefits from the same term and enforcement framework. Databases that involve a sufficient degree of creative selection or arrangement are similarly protected; there is no separate sui generis database right in the UAE, and protection is contingent on meeting the originality threshold under the Copyright Law.

#### Trade Secrets

Trade secrets are protected under Federal Decree-Law No 26 of 2020 on Trade Secrets. Protection applies to commercially valuable confidential information that the rights-holder has taken reasonable steps to maintain as secret; there is no registration requirement, and misappropriation gives rise to civil liability in damages, with criminal liability potentially arising under the Cybercrime Law (Federal Decree-Law No 34 of 2021) where the misappropriation involves the use of electronic systems or networks.

#### Domain Names

Registration and dispute resolution in respect of the. ae country code top-level domain are regulated by the Telecommunications and Digital Government Regulatory Authority (TDRA), which operates a dispute resolution policy based on the Uniform Domain Name Dispute Resolution Policy (UDRP) model and provides a cost-effective mechanism for recovering domain names registered in bad faith.

## 8. Data Protection

### 8.1 Applicable Regulations

The primary federal data protection legislation is Federal Decree-Law No 45 of 2021 on the Protection of Personal Data (PDPL), which came into effect on 2 January 2022. It is worth mentioning that the Implementing Regulations of this Law have not yet been issued.

The PDPL establishes a principles-based framework for the processing of personal data, incorporating requirements relating to lawful basis, transparency, purpose limitation, data minimisation, accuracy, storage limitation and security. Sector-specific rules apply in a number of areas: the Central Bank of the UAE has issued data protection and cloud computing regulations applicable to licensed financial institutions, and the health sector is subject to supplementary requirements under Ministry of Health and Prevention guidance. The DIFC and ADGM operate distinct and more comprehensive data protection regimes, the DIFC Data Protection Law 2020 and the ADGM Data Protection Regulations 2021, respectively, which are broadly modelled on the GDPR and apply exclusively within those financial free zones.

### 8.2 Geographical Scope

The PDPL applies to the processing of personal data of individuals located in the UAE, and to data controllers and processors established in the UAE. The law also has extraterritorial reach: it applies to the processing of personal data of UAE residents by entities located outside the UAE where that processing relates to the offering of goods or services to residents or the monitoring of their behaviour within the UAE.

Cross-border transfers of personal data outside the UAE are permitted only to countries, territories or international organisations that ensure an adequate level of protection, as determined by the UAE Data Office, or where the data controller has implemented appropriate safeguards such as standard contractual clauses or binding corporate rules. Transfers may also be made on the basis of enumerated derogations, including the explicit consent of the data subject or necessity for the performance of a contract to which the data subject is a party.

### 8.3 Role and Authority of the Data Protection Agency

The UAE Data Office was established as the competent supervisory authority under the PDPL and is responsible for enforcing the law, issuing binding decisions and guidance, and administering the data protection register. The UAE Data Office has the power to investigate complaints from data subjects, conduct audits of data controllers and processors, issue compliance notices and impose administrative penalties, including significant fines for breaches of the PDPL. Within the DIFC, the Commissioner of Data Protection exercises equivalent supervisory and enforcement functions; within the ADGM, those functions are performed by the Office of Data Protection.

## 9. Looking Forward

### 9.1 Upcoming Legal Reforms

#### Civil Transactions Law

The most significant near-term legislative development across the UAE's general legal landscape is Federal Decree-Law No 25 of 2025, which comprehensively revises the UAE Civil Transactions Law, the principal statute governing contract, tort and obligations law in the UAE, and which comes into force on 1 June 2026. The new law makes material amendments to core provisions, including those governing force majeure, hardship, contractual liability and the general theory of obligations, and businesses with existing long-term contracts governed by UAE law should review their agreements in light of these changes, particularly provisions addressing supervening events, price adjustment mechanisms and remedies for breach.

#### Corporate Tax

The UAE's corporate tax regime remains in a period of active development. The Federal Tax Authority continues to issue guidance on the application of key provisions, including the free zone qualifying income rules, transfer pricing documentation requirements and the QDMTT, and further implementing decisions and clarifications are anticipated, particularly in relation to cross-border transactions, the interaction between the corporate tax regime and the UAE's expanding network of double tax treaties, and the treatment of specific industry sectors.

#### Artificial Intelligence Regulation

The UAE is actively developing a regulatory framework for artificial intelligence (AI), consistent with its National AI Strategy 2031. Sector-specific AI guidance has been issued in certain regulated industries, including financial services and healthcare, and broader horizontal AI legislation is anticipated in the near term, with businesses deploying AI systems in the UAE, particularly in areas involving automated decision-making, employment or the processing of personal data, encouraged to monitor legislative and regulatory developments closely.

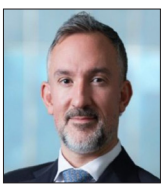
#### AML/CFT and Beneficial Ownership Transparency

The UAE has undertaken substantial reform of its anti-money laundering and counter-terrorism financing framework in recent years, and continued refinement is expected. Enhanced beneficial ownership transparency requirements applicable to both onshore and free zone entities are already in force; further alignment with Financial Action Task Force (FATF) recommendations and active enforcement by the supervisory authorities, including the Central Bank, the SCA and the Ministry of Economy, is anticipated.

#### Competition Law

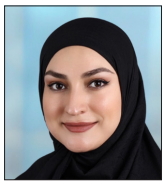
Federal Decree-Law No 36 of 2023 significantly updated the UAE's competition regime, expanding the scope of merger control notification obligations and enhancing the Ministry of Economy's investigative and sanctioning powers. The full implementation of the 2023 law – particularly after the issuance of its implementing regulations in 2026 – including enforcement guidance, is ongoing, and businesses considering mergers, acquisitions or commercial arrangements that may affect competition in UAE markets should take careful account of the updated thresholds and procedural requirements.

# Trends and Developments



**Contributed by:**
Amir Alkhaja, Areen Jayousi, Gulsun Ozmen and Alia AlMarzooqi
**Habib Al Mulla & Partners**

**Habib Al Mulla & Partners** was founded in 1984 and is a market-leading law firm headquartered in Dubai, with offices in Abu Dhabi, Istanbul, Moscow, Baghdad, Cairo and New Delhi. The firm brings together a team of 80+ lawyers who provide tailored legal advice across over 14 areas of practice and serve clients in industries ranging from finance and construction to energy and technology. Renowned for its strength in dispute resolution, regulatory work, and cross-border transactions, the firm is consistently highly ranked, affirming its position among the region's top-tier firms. Dr Habib Al Mulla, the firm's founder, is one of the UAE's most prominent legal figures and was instrumental in shaping major legislative reforms. His vision helped establish the Dubai International Financial Centre (DIFC) – the UAE's first financial free zone – solidifying the firm's legacy as a pioneer in legal and regulatory advancement in the Middle East.



## Authors

**Amir Alkhaja** is the managing partner of Habib Al Mulla and Partners and a licensed UAE lawyer with rights of audience before all UAE courts, including the Court of Cassation and the Supreme Court. With over 15 years of experience, he focuses on commercial, banking and white-collar crime litigation, including Islamic finance disputes. A former Dubai Police officer, Amir brings a rare dual perspective of law enforcement and legal advocacy. He is widely respected for leading high-stakes disputes across the GCC and MENA regions, and for successfully guiding the firm through its recent transition to an independent, growth-focused practice.

**Areen Jayousi** is a senior disputes lawyer and a qualified solicitor of England and Wales with over 18 years' experience advising on complex commercial disputes across the UAE. He specialises in UAE law litigation and arbitration, and is consistently ranked Band 1 by Chambers and recognised by another leading law directory. Areen covers civil and commercial litigation, arbitration, insolvency and financial crime matters, often involving significant financial and reputational exposure. He combines strong knowledge of onshore UAE law with an international outlook, regularly advising international law firms and multinational clients on contentious matters within the region. Fluent in Arabic and English, he is known for his pragmatic, commercially focused and detail-oriented approach.

**Gulsun Ozmen** is a UK-qualified lawyer specialised in corporate and M&A. She is involved in transactional and advisory work on a broad range of non-contentious corporate and commercial matters. Gulsun negotiates, drafts and provides advice on transactional documents relating to M&A deals and investment activities. She also advises on foreign direct investment projects, carrying out corporate due diligence, pre-closing restructuring and post-closing implementation. Gulsun negotiates and drafts constitutional documents for company establishments and shareholders' agreements. She advises and assists regional high-net-worth individuals and large family businesses on restructuring, trust structuring, governance and family succession planning. She also advises clients on the regulatory and compliance requirements in the UAE.

**Alia AlMarzooqi** is a trainee associate in the corporate and commercial department at Habib Al Mulla and Partners. She brings progressive experience across top-tier private practice, in-house and international firms, having developed focused expertise in corporate advisory, M&A transactions, commercial contract drafting, regulatory compliance and governance across UAE, Bahrain and Oman frameworks. Alia holds an LLM in Business Law from Saint Joseph University, Dubai, and a Professional Diploma in International Arbitration from the Dubai International Arbitration Centre (DIAC), reflecting her commitment to continued professional development across transactional and dispute resolution practice areas.

## Navigating Uncertainty: Force Majeure, Hardship and the UAE Civil Transactions Law

The UAE continues to develop the legal infrastructure governing commercial relationships, and that framework is now being tested by current conditions. The region is experiencing geopolitical pressures that have resulted in active conflict. Although the UAE is not a party to that conflict, it has experienced consequences within its territory and for its assets.

Against that backdrop, how UAE law responds to disruption, whether arising from geopolitical conflict, global pandemics, supply chain shocks or climate-related events, is a question of direct practical relevance for businesses of all sizes operating in, or transacting with counterparties from, the UAE market.

This chapter examines three interconnected themes that are currently reshaping contracting practice in the UAE:

- the doctrine of force majeure;
- the concept of hardship and judicial price revision; and
- the Civil Transactions Law framework

Both Federal Law No 5 of 1985 (the "Old CTL") and the new Federal Decree-Law No 25 of 2025 (the "New CTL"), which came into force on 1 June 2026, are examined. Together, these themes define the boundaries of contractual obligation in times of stress; understanding them is essential for any business seeking to do business in, or with counterparties from, the UAE.

### *Force majeure under UAE Law: what it means in practice*

Under UAE Law, force majeure is the principle where a party is excused from performing its contractual obligations when performance becomes impossible due to an event beyond its control. It operates differently from the way it is understood in common law jurisdictions.

#### *The statutory basis*

Force majeure in the UAE has a statutory basis in both the Old CTL and the New CTL. Under Article 273 of the Old CTL (Federal Law No 5 of 1985), if performance of an obligation became impossible due to a foreign cause not attributable to the obligor, the corresponding obligation was extinguished and the contract terminated by operation of law. The New CTL, under Article 236, preserves this core principle but modernises its expression: in bilateral contracts, a force majeure event making performance impossible causes the reciprocal obligations to lapse and the contract to dissolve ipso jure.

This is a significant provision in both iterations of the law. Unlike many common law systems where force majeure only applies if expressly included in the contract, UAE law has always provided a baseline statutory right to rely on impossibility as a ground for discharge. The New CTL introduces two notable refinements:

- first, on partial impossibility, either party may now insist on lapse of the corresponding obligation or petition for rescission (compared to the Old CTL, which simply extinguished the impossible part); and
- second, in continuing contracts subject to temporary impossibility, Article 236 (3) of the New CTL expressly empowers either party to seek modification of the contract, a remedy not available under the Old CTL.

The key requirements for successfully invoking force majeure under Article 273 of the Old CTL and Article 236 of the New CTL are as follows:

- the event must have rendered performance impossible, not merely more difficult or more expensive;
- the event must be unforeseeable at the time of contracting;
- the event must be irresistible, meaning the party could not have avoided or overcome it by reasonable means; and
- the event must not be attributable to the fault or negligence of the party seeking to rely on it.

#### *Total versus partial impossibility*

UAE law draws an important distinction between total and partial impossibility. Where performance is entirely impossible, the contract is terminated in its entirety, and both parties are released from their obligations. Where performance is only partially impossible, the contract survives but is reduced to the extent of what

remains possible, and the counterparty has the right to terminate if the partial performance would be of no value to it.

### *The notification requirement*

A frequently overlooked but practically important requirement is that the party seeking to rely on force majeure must notify its counterparty promptly. Failure to give timely notice may result in the loss of the right to rely on the excuse or may give rise to a damages claim for losses caused by the delay in notification. Contracts governed by UAE law should therefore always include a clearly drafted notification clause that specifies the form, timing and recipient of force majeure notices.

### *Contractual force majeure clauses*

The existence of a statutory regime does not make contractual force majeure clauses redundant. On the contrary, a well-drafted contractual clause can expand, restrict or clarify the scope of the statutory right in ways that provide greater certainty for both parties. Contractual clauses can, for instance:

- specify events that will or will not constitute force majeure (such as geopolitical conflict, pandemics, sanctions or cyberattacks);
- prescribe the consequences of a force majeure event (suspension of obligations, extension of time or termination after a specified period);
- allocate the risk of partially impossible performance differently from the default statutory position; and
- establish the procedure and timing for invoking the clause.

Where a contract contains a force majeure clause, UAE courts will give effect to it to the extent that it does not violate mandatory provisions of law or public policy. The interaction between the contractual clause and the statutory default must therefore be carefully mapped in any contract governed by UAE law.

## *The hardship doctrine: when performance becomes excessively burdensome*

Force majeure addresses situations where performance is impossible. When performance remains technically possible, but has become significantly more burdensome due to a material change in circumstances, such that it would be unfair to hold the obligor to the original terms, it becomes the domain of the hardship doctrine. The hardship doctrine is one of the most distinctive and practically important features of the UAE's civil law framework.

### *Article 249 of the Old CTL and Article 224 of the New CTL*

The hardship doctrine in the UAE is principally grounded in Article 249 of the Old CTL and Article 224 of the New CTL. Under the Old CTL, a court could, having regard to the interests of both parties, reduce the onerous obligation to a reasonable level. The New CTL preserves this power but adds a significant new remedy: Article 224 expressly empowers the court to order rescission of the contract in addition to, or instead of, reduction of the obligation. This expansion gives courts greater flexibility to achieve a just outcome where reduction alone would be inadequate.

This is a notable provision by comparative standards, and has been so since its introduction in 1985. Both the Old CTL and the New CTL give UAE judges the power to revise contractual obligations where supervening circumstances have fundamentally altered the original economic balance of the agreement. The New CTL reinforces and extends this by also expressly permitting rescission, reflecting an acknowledgment that in some cases revision is insufficient to restore fairness between the parties.

The key requirements are as follows:

- the circumstances must be exceptional, that is, not within the ordinary range of commercial risk;
- they must be unforeseeable at the time the contract was concluded;
- they must make performance excessively burdensome, not merely inconvenient or less profitable; and
- the threat of serious loss must be ongoing, not historical.

### *Judicial price revision in practice*

Article 249 of the Old CTL continues to be actively invoked before the UAE courts in respect of contracts entered into during the period of its operation. Article 224 of the New CTL now governs contracts entered

into after the New CTL came into force. The body of case law applying Article 249 has grown substantially, and in 2026 remains a live tool in disputes across the real estate, construction, hospitality and long-term services sectors, where shifts in market conditions, regulatory changes or external shocks have altered the economic balance of contracts.

UAE courts, and particularly the Dubai courts and the Abu Dhabi courts, have issued a substantial body of jurisprudence on Article 249 of the Old CTL, and that case law will inform the interpretation of Article 224 of the New CTL. The threshold for judicial intervention remains high under both provisions. Courts have consistently emphasised that the hardship remedy is one of last resort. Parties are expected to negotiate in good faith before seeking judicial intervention, and a party that has not made genuine efforts to renegotiate may find that a court is reluctant to exercise its revisionary or rescissionary powers.

This reinforces the practical importance of including hardship renegotiation clauses in commercial contracts provisions that require the parties to enter into good-faith negotiations when specified triggering conditions are met, before either party may resort to litigation.

### *The relationship between hardship and force majeure*

Force majeure and hardship are distinct but related doctrines, and they are not mutually exclusive. A single event, such as a global pandemic, a war or a sudden regulatory change, or a sanctions measure, may simultaneously:

- render certain specific obligations impossible (engaging force majeure); and
- make the overall performance of the contract excessively burdensome without rendering it impossible (engaging hardship).

Careful contract drafting should address both doctrines separately, referencing both the force majeure and hardship provisions by their applicable article numbers (Article 273/Article 236 for force majeure; Article 249/Article 224 for hardship, depending on when the contract was entered into), and parties in litigation should consider whether both grounds are available on the facts of their dispute.

### *The Civil Transactions Law: Old and New*

Federal Law No 5 of 1985 on Civil Transactions (the Old CTL) governed civil obligations in the UAE for four decades. Federal Decree-Law No 25 of 2025 (the New CTL) came into force in 2025 and now governs contracts entered into after its commencement date. Both laws share the same doctrinal architecture for force majeure and hardship, but the New CTL introduces important refinements that parties to current and future contracts must understand.

#### *Good faith and interpretation*

Both the Old CTL and the New CTL require contracts to be performed in good faith. The New CTL under Article 221 expressly reinforces this, stating that a contract must be performed in accordance with its contents and in a manner consistent with the requirements of good faith, and that a contract is not limited to its express terms but extends to requirements arising from law, custom and the nature of the obligation. The New CTL also expands the rules of contractual interpretation under Article 218, including a new requirement that contracts be interpreted in a manner that achieves justice and good faith between the parties.

This has practical implications for how force majeure and hardship situations must be handled under both the Old CTL and the New CTL. A party that invokes force majeure or hardship in bad faith, for instance by manufacturing a triggering event or by refusing to negotiate a reasonable adjustment, risks not only losing the protection of the doctrine but also being exposed to liability for acting contrary to the good faith obligation that both laws embed in the contractual relationship.

#### *Adhesion contracts and unfair terms*

A noteworthy addition in the New CTL is Article 223, which empowers courts to modify or exempt a party from arbitrary or unfair clauses in contracts concluded by adhesion. This provision has direct relevance to force majeure and hardship analysis: a limitation of liability clause, a force majeure carve-out or a clause excluding the right to seek revision that appears in a standard-form contract of adhesion may be subject to judicial

modification if it operates unfairly against the adhering party. The Old CTL contained no direct equivalent.

For businesses operating under standard-form contracts, this is a significant development that may affect the enforceability of contractual provisions that purport to limit or exclude the statutory protections available under the force majeure and hardship provisions.

*Pre-contractual obligations and disclosure*

The New CTL introduces express pre-contractual obligations that did not exist in the Old CTL, including a duty of good faith in negotiations (Article 121) and a duty to disclose material information (Article 122). These provisions affect the force majeure and hardship analysis: where a party was aware at the time of contracting of circumstances that would give rise to a future hardship or force majeure event and failed to disclose them, it may find that this undermines its ability to rely on those doctrines after the event materialises.

*Transitional considerations*

Contracts entered into before the New CTL came into force will generally remain governed by the Old CTL, meaning that Articles 249 and 273 of the Old CTL will continue to apply to existing long-term agreements for many years to come. Parties renegotiating, novating or extending such contracts should carefully consider whether the parties intend the New CTL to apply going forward, and should address this expressly in any amendment agreement.

For new contracts, Articles 224 and 236 of the New CTL will apply, and the expanded court powers under those provisions, particularly the right to order rescission in hardship cases, should be reflected in the drafting of any hardship renegotiation clause.

### *Practical considerations for businesses operating in the UAE*

*Review your existing contracts*

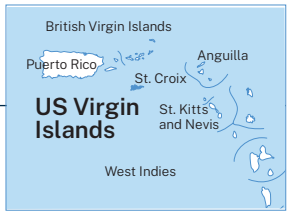
Contracts entered into before the New CTL came into force should be reviewed to identify which version of the law applies and whether the force majeure and hardship provisions are adequate for the current risk environment, including risks such as geopolitical conflict, trade sanctions, energy price volatility and AI-driven supply chain disruption. Contracts entered into after the New CTL took effect should be reviewed for consistency with its new provisions, including the expanded judicial powers under Articles 224 and 236.

*Draft for the UAE legal environment*

Force majeure and hardship clauses drafted for common law jurisdictions do not translate seamlessly into UAE-governed contracts. Key differences to address include:

- the threshold of impossibility (not mere difficulty) required for statutory force majeure;
- the court's power under Article 249 of the Old CTL (and Article 224 of the New CTL) to revise or rescind onerous obligations, going beyond what is available in most common law systems;
- the notification requirements and the consequences of failing to notify; and
- the good faith obligations that govern conduct before, during and after a disruption event.

*Include a hardship renegotiation mechanism*



Best practice for UAE-governed commercial contracts is to include a bespoke hardship clause that specifies the triggering conditions, the renegotiation process, the timeframe for negotiation and the consequences if negotiation fails (which may include referral to an expert, mediation or litigation). This provides a structured pathway for managing disruption without immediate recourse to the courts.

*Consider the choice of law and forum*

Businesses operating in the UAE have a meaningful choice between the onshore civil law system and the common law regimes of the Dubai International Financial Centre (DIFC) and the Abu Dhabi Global Market (ADGM).

Force majeure and hardship operate differently in each system: the DIFC and ADGM courts apply English common law principles, under which force majeure is a creature of contract (there is no general common law doctrine of force majeure equivalent to Article 273 of the Old CTL or Article 236 of the New CTL), and hardship as a ground for judicial price revision or rescission does not exist in the same form. The choice of governing law and dispute resolution forum is therefore a substantive commercial decision, not merely an administrative one.

**Marjorie Rawls Roberts PC** has decades of experience in representing companies and individuals in business, securities, tax, trusts and estates, and real estate matters in the USVI. The firm's clients are based in the USVI, the US mainland, other US territories and international locations. The firm also provides comprehensive estate planning services and advice regarding the requirements for bona fide USVI residency. It represents clients before the USVI Economic Development Authority, the University of the Virgin Islands Research and Technology Park, and other government agencies as they seek economic incentives.

## Authors

**Marjorie (Jorie) Roberts** is the managing partner of Marjorie Rawls Roberts PC and holds law degrees from Harvard Law School, Cambridge University and New York University. She previously worked in both the public and private sectors, including for global law firm Gibson, Dunn & Crutcher, the US Treasury Department and the USVI Bureau of Internal Revenue, and as general counsel and vice president of Globalvest Management Company. She is admitted to the practice of law in the USVI, the State of California, the Third Circuit Court of Appeals, and before the US tax court and the US Supreme Court. Jorie is also a solicitor in England and Wales and is licensed to practise law in the BVI.

**Duncan J.J. Kessler** is a lawyer at Marjorie Rawls Roberts PC. He graduated from U.C. Berkeley on the Dean's List with BAs in Latin and Political Science with a sub-focus in International Relations. He received his J.D. summa cum laude from American University Washington College of Law and is a member of the Order of the Coif. Prior to joining the firm, he clerked for four years for Justice Denise Francois of the Virgin Islands Supreme Court when she was a Judge at the Superior Court of the US Virgin Islands, interned at the DC Superior Court, and was a paralegal for three years at the Law Offices of Linda M. Hoffman. He is admitted to the practice of law in the District of Columbia and the US tax court.

**Jessica McKenney** is an attorney who assists Marjorie Rawls Roberts PC with mostly residency and tax matters. She earned a JD/MA in international affairs from American University Washington College of Law with a focus on human rights, and while attending, she earned the Exceptional Pro Bono Service Honors and interned for non-profits such as AARP Foundation Litigation. Jessica clerked for the Honorable Kathleen Y. Mackay at the Superior Court of the Virgin Islands, and chaired the Virgin Islands Bar Association Legislation and Law Reform Committee. She is admitted to the practice of law in the US Virgin Islands, in the District of Columbia and before the US Tax Court.

## 1. Legal System

### 1.1 Legal System and Judicial Order

The legal system of the United States Virgin Islands (USVI) is, in most respects, similar to the legal systems of the 50 states of the United States of America. Federal sources of law, such as the Constitution of the United States, statutes enacted by the US Congress, regulations promulgated by US administrative agencies, and executive orders issued by the President of the United States, are generally applicable in the USVI. However, because the USVI is an unincorporated territory of the United States, Congress may vary the applicability of most federal laws in the USVI in a way that deviates from the 50 states. For example, the USVI constitutes a separate customs zone with different tariff rates from the rest of the United States (based on the Danish customs law in effect when the United States purchased the USVI from Denmark in 1917), and Congress has authorised unique variations in the federal income tax laws in the USVI that differ from the uniform federal income tax laws in the 50 states. However, overall, the USVI operates under a mirror tax code with the US Internal Revenue Service (IRS), meaning that the USVI has adopted the Internal Revenue Code of 1986, as amended, and the applicable Treasury Regulations, as its own code pursuant to the Naval Services Appropriation Act of 1922, 48 U.S.C. 1397 (the "Code"). Section 1397 specifically provides that taxes will be paid to the USVI. This is further expanded in other statutes and regulations, including Section 932 (c), which specifies that bona fide residents of the USVI pay income taxes on their worldwide income to the USVI Bureau of Internal Revenue (BIR).

Congress has, through the Revised Organic Act of 1954, as amended, and its predecessor Organic Acts, also established a territorial government for the USVI that includes a locally elected Governor, a locally elected unicameral legislature and locally created administrative agencies – as well as a judicial system, discussed below. The USVI Legislature may enact general statutory laws for the territory (subject to the veto of the Governor) to the extent they do not conflict with federal law. The Legislature may also grant rule-making authority to the local executive agencies, and the Governor has the power to issue executive orders.

The judicial system in the USVI comprises both federal and local courts (previously referred to as "territorial courts"). The jurisdiction of the federal District Court of the Virgin Islands is substantially similar to that of the federal district courts in the 50 states. However, because Congress established the District Court of the Virgin Islands pursuant to its authority under Article IV of the US Constitution rather than Article III, there are some important differences. For example, the District Court has exclusive jurisdiction over questions of income tax in the USVI and may preside over some criminal cases based on local law. Decisions of the District Court are appealable to the US Court of Appeals for the Third Circuit (headquartered in Philadelphia, Pennsylvania) and, ultimately, to the Supreme Court of the United States, similar to cases arising from Delaware, Pennsylvania and New Jersey.

In parallel with the federal District Court, there is a two-tier territorial judiciary. The Superior Court of the Virgin Islands is the trial court of general jurisdiction that presides over both criminal and civil cases, as well as appeals from territorial administrative agencies, and has a specialised division for family cases, including juvenile matters. The Superior Court also has a magistrate division that presides over probate matters, landlord–tenant disputes, small claims, traffic violations and certain misdemeanours. Decisions of the Superior Court are appealable to the Supreme Court of the Virgin Islands. The Supreme Court was established in 2004 by the Legislature and began exercising its authority in 2007. Decisions of the Supreme Court are appealable to the Supreme Court of the United States. Like most of the 50 states, the USVI follows the common-law tradition in which judge-made case law informs legal decision-making. The USVI previously followed the Restatements of the Law published by the American Law Institute. However, since the USVI Supreme Court case *Banks v International Rental & Leasing Corp*., 55 V.I. 967 (V.I. 2011), the common-law principles are now established through a legal analysis by the court as outlined in *Banks*, and the legal analysis may still determine that the Restatement of the Law is the best rule.

## 2. Restrictions on Foreign Investments

### 2.1 Approval of Foreign Investments

The USVI is part of the United States, so federal statutes governing foreign investment in the United States, such as the Foreign Investment Risk Review Modernization Act of 2018 and the regulations promulgated thereunder, apply in the USVI.

Additionally, the USVI is included within the definition of "United States" in the United States' extensive network of Treaties of Friendship, Treaties of Commerce, and Navigation and Bilateral Investment Treaties, officially known as Treaties Concerning the Encouragement and Reciprocal Protection of Investment. These treaties provide a number of important benefits, most notably protection in the case of expropriation. As a note, the US International Trade Administration lists the Bilateral Investment Treaties currently in force between the United States and other countries. In contrast, the USVI is not included in the United States' network of income tax treaties (nor are other US territories) and is not able to enter into its own tax treaties. However, the USVI has agreements with the United States for the exchange of information relating to taxes, namely, the Tax Implementation Agreement Between the United States of America and the Virgin Islands, dated 24 February 1987, and IRS Notice 2007-31, which includes the Working Arrangement.

### Legislating Foreign Investment and Growth in Particular Sectors

The USVI does not have separate legislation or other rules limiting foreign investment in the USVI. Foreign businesses, like other businesses, must register to do business with the Office of the Lieutenant Governor and obtain the appropriate approvals and licences for their business. The USVI as an unincorporated territory is also subject to the federal review process for any merger, acquisition or real estate transaction that involves critical infrastructure, sensitive personal data, or proximity to a military or government site (a "CFIUS review"). The USVI has local laws that address mergers and acquisitions as well.

Not only does the USVI have few prior-approval or criteria requirements for foreign investment, the USVI has enacted a number of economic incentive programmes to attract US and foreign investors to work and invest in the USVI. These programmes are generally, but not always, managed by the Virgin Islands Economic Development Authority (EDA), which actively seeks investment in certain USVI sectors. Examples of incentive programmes in the USVI include the Economic Development Commission (EDC), the University of the Virgin Islands Research and Technology Park ("RTPark") and the South Shore Trade Zone (SSTZ) programmes.

Eligible EDC beneficiary industries are outlined in 29 V.I.C. § 708 and include multiple categories:

- "Legacy Virgin Islands Industries" – such as rum distilling, watch and jewellery manufacturing, and milk/dairy production;
- "Product Assembly, Manufacturing, Repair and Maintenance and/or Export Operations";

- "Facilities, Tourism and Communications Developments – including Hotels/Guesthouses, Health Care, Recreation and Retirement Facilities, Transportation, Utilities (including Alternative Energy Industry), and Telecommunication";
- "Designated Services Businesses", as defined in 29 V.I.C. § 703 (g), which includes, among other listed businesses, investment managers, trading services, financial services, medical services, and other businesses serving clients outside the USVI as deemed appropriate by the EDC; and
- "International Financial Service Entities". Under 29 V.I.C. § 708 (t), applicants in this category are exempt from most of the regulations governing other EDC entities but must comply with provisions of the International Banking Center Regulatory Act.

The SSTZ Program provides incentives for investment in the industries of production, warehousing, trading, transportation and forwarding, fairs and expositions (hotels, training and conference facilities), financial and credit services, think tanks, etc, within a designated area along the south shore of St. Croix. The RTPark Program provides investment incentives for companies with a focus on technology, research and science, or fields that are extensively "knowledge or skills based".

While these programmes do not limit foreign investment generally, they each have their own rules and regulations, and application and approval processes, to qualify for admittance into the programmes and subsequent benefits. The EDC and SSTZ Programs require that applicants be approved by the EDA, a USVI government entity, and the RTPark Program requires approval of the RTPark Board, a quasi-government entity. Both the EDA and RTPark Programs have continuing compliance commitments related to ownership structure, legal documentation and financial reporting.

Lastly, foreign investors in USVI real estate are subject to the Foreign Investment in Real Property Tax Act of 1980, which is codified in Sections 897 and 1445 of the Code.

## 2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance

There are no specific steps for foreign investors to follow in order to obtain approval before investing, although investors in real estate may be subject to the withholding percentage of real-estate purchase price. The businesses themselves may be subject to CFIUS review if involved in the sectors mentioned in **2.1 Approval of Foreign Investments**. If a business is a banking (including a foreign bank), insurance or financial services entity, then it is subject to licensing and regulation by the Virgin Islands Division of Banking, Insurance & Financial Regulation, which is administered by the Office of the Lieutenant Governor and/or the Virgin Islands Banking Board, of which the Lieutenant Governor serves as the Chairman, but this is not necessarily specific to foreign investors.

For investors that want to invest with the benefits of a tax incentive programme, eg, the EDC or RTPark Program, applicants must apply for benefits and be approved through those respective programmes.

## 2.3 Commitments Required From Foreign Investors

Foreign investment itself is not conditioned upon certain commitments, although those seeking to benefit from one of the USVI incentive programmes have certain commitments relating to local employees, using local businesses, charitable contributions, etc, which are generally statutory and apply to all applicants.

All USVI exempt companies (as described in **3.1 Most Common Forms of Legal Entity**) must still file a specific annual report and annual franchise tax report prescribed by the Lieutenant Governor for exempt companies and pay an annual franchise tax of USD1,000. See 13 V.I.C. § 860.

## 2.4 Right to Appeal

USVI companies have access to the US court system for dispute resolution. The District Court of the Virgin Islands operates no differently from the district courts in the 50 states, and it is in the Third Circuit – the same as Delaware. Moreover, cases can be heard in the Superior Court of the Virgin Islands.

Beneficiaries under the EDC Program can request modifications, extensions, renewals or waivers under the Program. See, eg, 29 V.I.C. § 715. Additionally, applicants and beneficiaries of the Program can appeal any actions of the EDC in the Superior Court of the Virgin Islands. See 29 V.I.C. § 724.

## 3. Corporate Vehicles

### 3.1 Most Common Forms of Legal Entity

Like the United States, the USVI primarily uses corporations, limited liability companies (LLCs), general partnerships, limited liability partnerships (LLPs) and limited liability limited partnerships (LLLPs).

Under 13 V.I.C. § 62, corporations must have at least three directors (unless the corporation has fewer than three shareholders), and under § 69 any two offices (but not more than two) other than those of president and secretary may be held by the same person. LLCs may be formed by one member, while LLPs require at least two partners. In our experience, most entities are LLCs or LLPs, which limit the liability of their members or partners. Some persons may prefer LLPs depending on their initial capital, as under 13 V.I.C. § 531 every USVI or foreign corporation doing business in the USVI must pay an annual franchise tax of USD1.50 for each USD1,000 in "stock, capital, and paid in capital stock used in conducting business in the [USVI]". However, an LLP pays a flat annual franchise tax of USD150.

LLCs are the most common entities and are well-suited for a wide range of business activities while providing their members with flexibility in governance. For example, LLCs do not require mandatory annual meetings or the appointment of directors or officers, and, other than certain statutory fiduciary duties (duty of loyalty, duty of care, the obligation of good faith and fair dealing, and access to books and records), an LLC's operating agreement may differ from the provisions found in the LLC Act.

The V.I. Code specifically provides for foreign corporations, foreign LLCs and foreign limited partnerships doing business in the USVI. See 13 V.I.C. §§ 401–407; 13 V.I.C. §§ 2001–2009; 26 V.I.C. §§ 521–528.

On 8 December 1986, the Legislature enacted the exempt companies' legislation, which subsequently went into effect on 24 February 1987, upon the signing of the Tax Implementation Agreement Between the United States of America and the Virgin Islands. On 17 August 1993, then-USVI Governor Alexander Farrelly signed into law the Exempt Company Amendments Act of 1993, which made significant changes to the USVI exempt companies' legislation to enhance the use of exempt companies by foreign investors.

USVI exempt companies offer many of the benefits of other offshore jurisdictions' international business companies but with the added advantages of US flag protection, access to US courts, non-coverage of the Common Reporting Standard, and the ability to obtain an "N" registration number from the US Federal Aviation Administration for foreign-owned aircraft.

The V.I. Code (13 V.I.C. §§ 850–863) provides for exempt companies. According to § 855, most exempt companies are treated as "a foreign corporation which does not earn United States Virgin Islands source income and which is not engaged in trade or business within the United States Virgin Islands". However, an exempt insurer, exempt mutual fund or exempt international banking facility has additional provisions that relate to its exempt status. A USVI exempt company offers foreign investors substantial tax benefits. An exempt company is effectively exempt from tax on all income except for income derived from US sources and effectively connected with a US trade or business. A USVI exempt company is exempt on interest income received on deposits with banks or savings institutions located in the USVI or abroad, as well as on amounts held by an insurance company under an agreement to pay interest on the amounts. USVI exempt companies are also exempt from tax on dividends and interest received from another exempt company and on gains or losses from the sale, exchange or other disposition of the stock of another exempt company. They are also exempt from all local USVI taxes, shareholders of a USVI exempt company are not subject to any withholding tax, and stock held by a non-resident alien individual in a USVI exempt company is not subject to federal estate tax or to USVI inheritance tax, so use of a USVI exempt company can be an important estate planning tool for foreign individuals. Such individuals

can place their worldwide assets in a USVI exempt company to obtain the many benefits such an entity provides without subjecting those assets to any estate tax liability.

Moreover, most exempt companies are exempt from licensing unless certain circumstances are met, except that exempt insurers and exempt international banking facilities must be licensed. Exempt companies can request to enter into a contract signed by the Lieutenant Governor providing for the tax exemption benefits for 20 years, provided the exempt company remains in compliance with all USVI laws, regulations and rules and current with any USVI taxes and fee payments.

Standard corporations, LLCs and exempt companies must have a minimum amount of USD1,000 in capital to commence business. See, eg, 13 V.I.C. § 2; 13 V.I.C. § 1203.

### 3.2 Incorporation Process

The Office of the Lieutenant Governor, Division of Corporations & Trademarks, serves as the registry for all corporate filings in the USVI. To incorporate, companies must generally provide the name of the corporation; verify whether their intended name is currently in use or not; describe the nature of the business; provide a physical and mailing address and a registered agent address; name the partners, members or directors along with their titles and physical and mailing addresses; list the amount of capital of the company and the Par Value of the company; list the amount of shareholders; provide copies of government IDs; and indicate whether the application is to be expedited or not expedited.

Effective in 2018, the Division of Corporations & Trademarks implemented an electronic filing system for entity formations and registrations. With the exception of exempt LLCs, which require paper filings, all entity formations, registrations and annual reporting requirements must be submitted to the Division using the Division's online system, Catalyst. Applications are submitted through the Catalyst online portal. It generally takes one to three days to determine name availability. Checking name availability with the United States Patent and Trademark Office (USPTO) and the local Division of Corporations & Trademarks takes only about 20 minutes. Expediting filings take one to three days for registration and formation. Regular registration and formation takes about seven to 20 days. It takes six to eight weeks for business licence approval.

### 3.3 Ongoing Reporting and Disclosure Obligations

Each USVI (and foreign) corporation, including LLCs, must file an "Annual Report on Domestic or Foreign Corporations" and a "Report of Corporation Franchise Tax Due" with the Office of the Lieutenant Governor, Division of Corporations & Trademarks. The Annual Report is due by 30 June of each year. The annual franchise tax due is based on the type of entity created under USVI law. For example, LLCs pay a minimum of USD300 annually, based on their capital.

Moreover, the different domestic and foreign entities in the USVI, eg, corporations, LLCs, limited partnerships, etc, have various requirements for filing changes with the USVI.

### 3.4 Management Structures

Corporations can either be one-tiered or two-tiered. Generally this comes down to the purpose, size and scope of the company and whether it is a foreign entity registering to do business in the USVI or a new company. The most common framework is a one-tier structure with founders, executives and management board members also running the day-to-day operations. Within the most common entity, an LLC, there is generally at least one member, and an LLC may be either member-managed or manager-managed.

### 3.5 Directors', Officers' and Shareholders' Liability

Directors and officers have protection from personal liability so long as they are acting in good faith. The USVI does have a "wilful misconduct" exception codified in 13 V.I.C. § 809 in which directors and officers may be responsible for losses that were occasioned by their wilful misconduct. Further, corporate limited liability does not extend to situations of fraud or failure to maintain a corporation's separate legal identity (eg, commingling of corporate funds with the personal funds of shareholders), or consistent failure to follow corporate formalities (eg, failure to hold annual

meetings of shareholders and directors and failure to appoint officers on a consistent basis). In such situations, courts in the USVI do allow a suit against a corporation's stockholders if doing so prevents fraud or gross injustice to third parties.

USVI courts have adopted the equitable remedy of "piercing the corporate veil", with the seminal case for the current remedy being *Donastorg v Daily News Publishing Co., Inc.*, 63 V.I. 196 (2015). However, USVI courts view it as an extraordinary remedy that must be proved by the injured party by clear and convincing evidence and only when the case involves fraud, would promote injustice and/or involved an unlawful act that directly harmed the plaintiff.

## 4. Employment Law

### 4.1 Nature of Applicable Regulations

Statutory law governing employment and employer–employee relations is the basis of the employment relationship. The USVI laws governing the employment relationship are derived from US federal laws, such as the Fair Labor Standards Act, and territorial statutes, rules and regulations governing occupational health and safety, labour relations and employment discrimination. Case law further provides particular guidelines in the way of equitable remedies or in situations where statutory language is silent or ambiguous, such as in non-compete clauses. In 2019, the Superior Court of the Virgin Islands held in *Arvidson v Buchar*, 71 V.I. 277 (V.I. Super. Ct. 2019), that a covenant not to compete was invalid and unenforceable when not only did it fail to make clear what legitimate business interests it was created to protect, it did so without giving a durational restriction, a territorial restriction and a manner restriction, and it could not be equitably reformed, as supplying the time, place and manner terms would equate to the court supplying the essential terms of the covenant.

The USVI protects collective bargaining by employees, as found by statute in 24 V.I.C. § 64, as well as protecting employees through safety, labour relations and employment anti-discrimination laws. The Virgin Islands Department of Labor (DOL) and the Virgin Islands Public Employees Relations Board are two territorial agencies that oversee non-union employer–employee relations in the USVI. Oversight of union relations is provided by the federal National Labor Relations Board, Region 12.

In addition to collective bargaining and employee protection laws, employment may be limited by other laws to protect employees, such as the USVI Labor Relations Act, the USVI Plant Closing Act and, as discussed in **4.4 Termination of Employment Contracts**, the USVI Wrongful Discharge Act. Additionally, some labour laws in the USVI provide for preferential hiring of qualified residents of the USVI before hiring qualified non-residents.

Lastly, any arbitration agreement must not limit the remedies that an employee would have available in court. Pre-dispute waivers of remedies or substantive protections written into an arbitration agreement by the employer are not enforceable and are against public policy. Employees retain the right to elect arbitration at the time a dispute arises, or for a reasonable time thereafter. There can be nothing in the agreement to unfairly limit the employees' access to arbitration due to economic reasons. If an employee cannot afford arbitration, the employer must absorb the expense, if both parties agree to arbitration.

Lastly, the DOL is mandated to assist resident workers in the USVI to obtain, safeguard and protect their preference to be employed in occupations and industries in the USVI. One way the DOL does this is by requiring employers in the USVI to submit job openings on the Virgin Islands Electronic Workforce System (VIeWS).

### 4.2 Characteristics of Employment Contracts

Employment contracts can be written, verbal or implied, so long as there is an offer, an acceptance and consideration. Contracts may be implied or expressed, and each party has a duty of good faith and fair dealing in performance and enforcement. Employment contracts usually state terms relating to the date of commencement of employment and date of termination of employment or terms of renewal of the contract, wages to be paid, benefits to be provided by the employer to the employee, circumstances in which the employment contract may be terminated, avenues of resolution of contract dispute, language

relating to confidentiality, non-compete and other terms specific to the employer's business.

The DOL regulates employment contracts along with payment of required minimum wages and tipped wages, meal and rest period requirements for certain circumstances, employment discrimination, sexual harassment and child labour laws.

### 4.3 Working Time

Working time is governed by the USVI Fair Labor Standards Act, 24 V.I.C. § 20, which mandates generally a 40-hour work week, no more than five consecutive work days, and no longer than eight-hour workdays, unless overtime hours are paid as calculated at a rate of no less than 1.5 times the regular rate at which the employee is employed. The USVI recognises exemptions to these rules for restaurant or tourist industry workers. Some salaried workers are exempt from minimum or maximum working time, including executives and certain professional workers whose work requires advanced knowledge or skill.

Additionally, other workers may not be included as "employees" for the purpose of working time requirements such as: an individual employed in domestic service in a private home; an individual employed by the United States, or by the USVI Government or any instrumentality thereof; an individual engaged in the activities of an educational, charitable, religious or non-profit organisation where the employer–employee relationship does not, in fact, exist or where the services rendered to such organisation are on a voluntary basis; or an individual employed as a seaman or engaged in the catching, taking or selling of any fresh fish, shellfish or crustacea.

### 4.4 Termination of Employment Contracts

The USVI has adopted the Wrongful Discharge Act detailed in 24 V.I.C. § 76, which provides nine grounds for appropriate discharge, for example, performing work in a negligent manner, advancing the interests of a competitor, or incompetence. Moreover, the law does not prevent termination of an employee due to cessation of business or general cutback because of economic hardship. If wrongfully terminated, the employee can timely appeal their termination to the Commissioner of Labor, who can conduct an investigation, hold hearings and, if the employee was wrongfully terminated, order they be reinstated with back pay. These orders can then be taken to the Superior Court of the Virgin Islands, which can enforce, modify or set aside the order of the Commissioner.

Additionally, under the USVI Plant Closing Act, an employer with fewer than 1,000 employees that is closing a facility, planning a relocation or any other action resulting in an employment loss is required to provide a 90-day advance written notification to the DOL and to the affected employees, and their union, as applicable. For an employer with more than 1,000 employees, 180 days' advance notification must be given.

In case of a mass layoff that will not result in a plant closing, the employer must give at least 30 days' advance notification of the mass layoff to any affected employees and their respective labour unions, and at least ten days' advance notification to the DOL. An employer is not required to provide notice of a mass layoff, relocation or employment loss if it results from a physical calamity or an act of terrorism or war. Severance pay to the affected employees must equal one week's pay for every year of service with the employer in addition to any final wage payment owed to the employee.

### 4.5 Employee Representations

There is no requirement that an employee be represented. Union employees may be represented by their union representative, and union representatives designated or selected by a majority of employees for collective bargaining are the exclusive representatives of all employees in the union for negotiations on employment contracts.

Employers must follow federal labour laws when it comes to informing employees, such as National Labor Relation Acts Postings and Occupational Safety and Health Act Postings.

## 5. Tax Law

### 5.1 Taxes Applicable to Employees/ Employers

As previously touched on, the Code applies in the USVI as the USVI tax code through the use of a substitution scheme known as the "mirror" system. Pursuant to the mirror system, the words "Virgin Islands" are substituted for the words "United States" wherever they appear in the mirror Code. Also under the mirror Code, "any changes to, interpretations of, regulations and revenue rulings on and court interpretations of the substantive tax provisions of the Internal Revenue Code are applicable to Virgin Islands tax cases as long as the particular provision at issue is not manifestly inapplicable or incompatible with a separate territorial income tax..."

The Code contains several sections – notably Sections 932, 934 and 937 – that deal specifically with the USVI and, more particularly, govern the extent to which the USVI can grant tax incentives and how USVI residents and persons with USVI source income file their income tax returns. Guidance contained in IRS Publication 570 (Tax Guide for Individuals with Income from US Territories) discusses the filing requirements of USVI residents and US citizens and residents with USVI source income, and is updated annually.

Individuals who perform work in the USVI but are not bona fide residents of the USVI are required to file Form 1040 with the IRS and with the BIR and, on the return filed with the BIR, include IRS Form 8689 (Allocation of Individual Income Tax to the U.S. Virgin Islands) to allocate taxes for income earned in the USVI to the BIR. Often, this allocation is made based on the time spent working in the USVI. Taxes on USVI income are then paid to the BIR and other taxes are paid to the IRS with a credit given on the return filed with the IRS for income taxes paid to the BIR.

Individuals who are bona fide residents of the USVI during the entire taxable year pay the full amount of their tax liability on their worldwide income to the USVI tax authorities (the BIR). An employee who performs above a minimum threshold of work in the USVI that qualifies as USVI source income is subject to taxation. Guidance for filing by USVI residents and non-residents of the USVI with USVI source income is provided in IRS Publication 570, "Tax Guide for Individuals With Income from U.S. Territories".

Employers that have USVI employees must pay Federal Insurance Contributions Act (FICA) taxes, which are also referred to as Social Security and Medicare taxes, to the IRS. Starting in 2024, employers pay FICA taxes using Form 941 (Employer's Quarterly Federal Tax Return), but do not answer questions regarding US income tax withholding – unless they have an employee who is subject to such withholding – because income taxes for USVI employees are paid to the BIR on Form 941 V.I. (Employer's Quarterly Virgin Islands Tax Return).

Additionally, employers must pay USVI and US unemployment insurance taxes as well as USVI workers' compensation insurance.

### 5.2 Taxes Applicable to Businesses

Income tax is withheld from the pay of most employees. An individual's pay includes their regular pay, bonuses, commissions and vacation allowances. It also includes reimbursements and other expense allowances paid under a non-accountable plan.

If an individual's income is low enough, such individual will not have to pay income tax for the year and may be exempt from withholding. Each individual has the responsibility of requesting their employer to withhold income tax from non-cash wages and other wages not subject to withholding. If such employer does not agree to withhold tax, or if an insufficient amount of tax is withheld, the individual may have to pay an estimated tax to the BIR.

In addition, FICA is made applicable by specifically defining "United States" to include the USVI for purposes of the Old Age, Survivors and Disability Insurance (OASDI, also known as Social Security) and hospital insurance taxes ("Medicare"). Also, FICA taxes on self-employment income apply. These taxes are paid to the IRS and not the BIR because they are not "mirrored" to the USVI. The IRS has specific authority to administer and collect these taxes in the USVI.

The FICA taxes are imposed in equal percentages on both the employer and the employee. The employer collects the employee's percentage via withholding. The Social Security tax rate is 6.2% on annual wages up to a maximum of USD184,500 for 2025. The Medicare tax rate is 1.45% on all wages without limit. Self-employed individuals are required to pay the employer's percentage of FICA tax in addition to their own. Additionally, individuals who make over a certain amount (based on filing status) pay an additional 0.9% in Medicare tax. There is no employer match for this additional Medicare tax, but the employer is responsible for withholding the 0.9% once an employee's wages exceed USD200,000 in a year (regardless of filing status).

In the case of an individual who is not a bona fide resident of the USVI, the taxation depends on whether the person is a US citizen or US resident or a resident of a foreign country.

In the case of a resident of the United States (US citizen, resident alien, or a person meeting the physical presence test set out for aliens who do not have a green card in the United States) deriving USVI source income, or income effectively connected with a USVI trade or business, the person must file a return with the IRS and the BIR, and a credit is granted against the US tax liability for taxes paid to the BIR. The person must sign each return and must attach Form 8689 (Allocation of Individual Income Tax to the U.S. Virgin Islands), which is used to allocate income and tax liability between the United States and the USVI.

A non-resident of both the USVI and the United States who is engaged in a trade or business in the USVI must pay tax on the income effectively connected with that USVI trade or business. The person must file a return with and pay tax on that income to the BIR. A non-resident of both the USVI and the United States who is not engaged in a trade or business in the USVI but who has USVI source income is generally subject to a 10% withholding tax, which is to be paid to the BIR by the USVI payor of the income. However, if the income is interest on a loan secured by USVI real property with a value equal to or greater than the loan, then no withholding tax is due.

The determination of whether someone is a resident alien or non-resident alien of the USVI is made under the same principles under Code Section 7701 (b) as in the United States, but as mirrored to the USVI. An alien (whether resident or non-resident) is an individual who is not a US citizen. For the purposes of determining whether a person is a resident alien or a non-resident alien under the mirrored Code Section 7701 (b) definition of resident alien and non-resident alien, presence in the United States (meaning the 50 states and the District of Columbia) does not count as residency in the USVI, even though entry to the USVI falls under the immigration laws of the United States (that is, the USVI does not have its own immigration procedures, and US law treats the USVI as part of the United States for all purposes).

### Exemptions

Cash or property received as employment compensation by a non-resident of the USVI will not be USVI source income under mirrored Code Section 861 (a)(3) if:

- the compensation is earned while the individual is temporarily present in the USVI;
- the taxpayer is not present in the USVI for more than 90 days during the taxable year;
- the compensation does not exceed USD3,000; and
- the employer is either:
  - (a) a foreign person not engaged in a business in the USVI; or
  - (b) a foreign office of a USVI person.

If income meets these four requirements, it is exempted from USVI taxation.

If income does not meet these four requirements, it is subject to USVI withholding tax at a rate of 10%.

### Investment Income

Investment income consisting of interest and dividends is, under Code principles as mirrored to the USVI, generally sourced to the situs of the payor. Rents and royalties are generally sourced to the location where the property giving rise to the rents and royalties is located.

Such income from the USVI would be USVI source income not effectively connected with a USVI trade or business (assuming it is not related to a USVI trade or business) and taxed under Code Section 871 (a). The tax imposed by Code Section 871 (a)(1) and its attendant withholding under Code Section 1441 are reduced to 10% by the USVI with regard to non-resident aliens.

The 3.8% Net Investment Income Tax found in Section 1411 of the Internal Revenue Code is not applicable to bona fide residents of the USVI per Treasury Regulation Section 1.1411-2 (a)(2)(vi)(A).

### Capital Gains Income

Capital gains income is, under Code principles as mirrored to the USVI, generally sourced to the situs of the owner of the capital asset and recipient of the gain. Thus, capital gains income received from the sale of a USVI-situs capital asset by a non-resident is not subject to USVI tax, other than a gain from the sale of USVI real estate, as property is considered sourced from where it is located. Code Section 865 also contains a number of exceptions to the general rule that the source of income from the sale of personal property is based on the residence of the seller.

Exceptions exist for sales of inventory property, gain from the sale of depreciable personal property, intangibles, and sales of stock in an affiliate that is located in a foreign country. See Code Sections 865 (b)–(f).

In addition, Treasury Regulation Section 1.937-2 (f) provides special rules for gains from certain dispositions of property by former US residents. Specifically, if an asset is transferred to the USVI by a US resident who then moves to the USVI, any gain on the sale of the asset is all US source for ten years, or if an election is made, the gain must be allocated based either on the value of the asset as of the date of the individual's change in residency (if publicly traded), or on a formula of USVI days over total days in the holding period (if not publicly traded).

## 5.3 Available Tax Credits/Incentives

The USVI offers a variety of tax incentive programmes under either the EDA or the RTPark in the industries that were indicated in **2.1 Approval of Foreign Investments**. While there are a variety of programmes, such as the SSTZ, the Enterprise Zone Act, and the Sustainable Tourism through Arts-based Revenue Streams (STARS) Act programmes, the primary tax incentive programmes for FDI are the EDC Program and the RTPark Program. Each programme has general requirements consistent with their applications requiring notification to relevant agencies such as the Department of Labor, background checks, board approvals, compliance obligations and charitable contribution obligations.

### EDC Tax Benefits

Under the USVI economic development laws, qualifying businesses (corporations, partnerships, limited liability companies, trusts and sole proprietorships) receive tax benefits if they meet certain investment criteria. The tax benefits are granted by the territory's seven-member EDC. As of June 2020, approximately 105 businesses received tax benefits under the EDC Program, including hotels and other tourism-related businesses, goods-producing businesses, and businesses serving customers outside the territory.

In order to meet the minimum qualifications for tax benefits, an applicant must invest at least USD100,000 (exclusive of inventory) in an eligible business, and employ a certain amount of USVI residents depending on the business category. The minimum investment and employment numbers may be reduced by the EDC in specified circumstances. Beneficiaries are also required to purchase from local vendors meeting certain requirements imposed by the EDC.

The EDC grants tax benefits for 20 years for investments on the islands of St. Thomas and St. John, and for 30 years on St. Croix. In addition, beneficiaries that invest more than USD10 million are eligible to receive an additional ten years of benefits, and beneficiaries that invest between USD1 million and USD10 million are eligible for an additional five-year term of benefits. Benefits packages may be extended upon proper application and review.

However, benefits packages may not be extended for more than ten years at 100% of benefits. Historically, the Governor of the USVI had to approve all beneficiaries. However, in December 2017, the Legislature

removed the Governor from the approval process for new applicants.

### Income Tax Benefits

An EDC Program beneficiary receives a substantial reduction in, or exemption from, all taxes imposed on businesses operating in the USVI. A beneficiary under the EDC Program receives a 90% tax credit against its income tax liability on income from the business for which benefits are granted. Such income must be sourced or effectively connected with the conduct of a USVI trade or business under Code Sections 934 (b)(1) and 937 and the Treasury Regulations promulgated thereunder. The reduction results in an effective tax rate of approximately 2.31% on income from the business. Tax benefits also extend to passive income from certain qualifying investments, such as USVI government obligations.

The 90% income tax reduction also extends to dividends received by a corporate beneficiary's USVI bona fide resident shareholders, and to distributions or allocations to the USVI bona fide resident shareholders or partners of a subchapter "S" corporation or partnership, respectively, that have been granted benefits by the EDC.

Beneficiaries of the EDC Program are exempt from withholding tax on interest payments and are subject to a reduced withholding tax rate of 4% on dividends. Other forms of passive income payments (such as royalties) are subject to withholding tax at a 10% rate (or 11% if a corporation). However, no withholding tax is imposed on payments to US entities.

### Other Tax Benefits

#### *Exemptions*

Beneficiaries receive an exemption from the USVI gross receipts tax on their receipts from their approved activities, which is otherwise imposed at a 5% rate on the gross receipts of a business, with no deductions. USVI entities engaged in business activities that are not covered by their grant of EDC benefits must pay gross receipts tax on the gross receipts from such business activities. Although exempt from gross receipts tax for business activities covered by a beneficiary's grant of benefits, the BIR requires that each beneficiary report its gross receipts (on a monthly basis, assuming annual gross receipts of more than USD225,000), and indicate that the beneficiary is exempt from payment of the tax pursuant to the EDC Program.

Beneficiaries receive an exemption from USVI excise tax on building materials and machinery used in the construction of their facilities and on raw materials brought into the USVI to produce articles. Otherwise, a tax ranging from 2% to 25% applies to the fair market value of many items. A number of excise tax exemptions exist, including exemptions for steel, concrete and lumber.

Beneficiaries receive an exemption from the USVI property tax. However, the personal homes of the owners of a beneficiary do not receive the property tax exemption, even if the respective owner maintains a home office. Moreover, if a beneficiary rents an office, the property tax exemption does not pass through to the beneficiary's landlord.

#### *Customs*

Because the USVI is outside the US customs zone, it has enacted its own customs law, imposing a 6% duty on items that are not manufactured in the United States. An EDC Program beneficiary's customs duties are reduced from 6% to 1% on raw materials and component parts imported from outside the USVI. Materials made in the United States are exempt from any customs duty. In addition, as with the excise tax, there are a number of customs duty exemptions.

Although the foregoing exemptions and reductions are imposed at the entity level, as mentioned above, a beneficiary's owners receive the income tax benefit on dividends and/or distributions if the owners are bona fide USVI residents.

### The University of the Virgin Islands Research and Technology Park Protected Cell Corporation

As an alternative to the tax benefits provided under the EDC Program, businesses in the USVI can qualify for tax benefits under the University of the Virgin Islands (UVI) Research and Technology Park Protected Cell Corporation Act. The UVI Research and Technology Park Corporation and its subsidiary, the UVI Research and Technology Park Protected Cell Corporation

(RTPark), are structured as public corporations and autonomous instrumentalities of the USVI government. The purposes of the RTPark include developing a technology sector in the USVI in order to promote the growth, development and diversification of the USVI economy and, more broadly, to promote a sector focused on developing knowledge-based businesses.

Further, the RTPark exists to broaden the capabilities of UVI by training students and creating a supportive research environment that combines the resources of UVI with those of the public sector and private industry. Oversight of the RTPark Program is vested with the seven-member RTPark board of directors (the "Board"). The Board has the authority to approve or disapprove applications by potential beneficiaries, referred to under the RTPark Program as "Protected Cells".

*Income tax benefits*

The income tax benefits granted to beneficiaries of the RTPark Program are substantially similar to those received by beneficiaries of the EDC Program. A beneficiary under the RTPark Program receives a 90% tax credit against its income tax liability on income from the business for which benefits are granted. Such income must be sourced from or effectively connected with the conduct of a USVI trade or business under Code Sections 934 (b)(1) and 937 and the Treasury Regulations promulgated thereunder.

The reduction results in an effective tax rate of approximately 2.31% on income from the business. If the beneficiary's owners are bona fide residents of the USVI, they receive the reduction on dividends and/or distributions. Salaries and other forms of compensation such as guaranteed payments, however, are fully taxable.

With respect to income tax benefits, the main difference between the RTPark Program and the EDC Program concerns the duration of benefits granted to each programme's beneficiaries. RTPark Program beneficiaries receive an initial 15-year term of benefits, with an initial renewal period of ten years at full benefits, and subsequent renewal periods of five years at full benefits.

*Other tax benefits*

The other tax benefits granted to beneficiaries of the RTPark Program are also essentially the same as those received by beneficiaries of the EDC Program. The one exception is that royalties under the RTPark Program receive the reduced withholding tax rate that is only applicable to dividends paid under the EDC Program.

## 5.4 Tax Consolidation

The US tax system allows eligible corporate groups to elect to file consolidated returns for federal income tax purposes in lieu of separate returns. As the USVI follows the mirror system, corporations organised in the USVI are also eligible to elect to file consolidated returns for USVI income tax purposes with the BIR in lieu of filing separate tax returns. However, USVI corporations that elect to file a consolidated return may not include corporations organised in the United States and vice versa.

A "consolidated group" is an affiliated group that files a taxable year consolidated return. An affiliated group is a group of "includible corporations", which are connected through stock ownership with a common parent that is an includible corporation. Generally, all corporations are includible corporations, except those that are specifically excluded.

Such excluded entities that may not file consolidated returns include:

- tax-exempt corporations;
- life insurance corporations;
- foreign corporations (which includes corporations formed in the United States);
- regulated investment companies;
- real estate investment trusts;
- domestic international sales corporations; and
- "S" corporations.

## 5.5 Thin Capitalisation Rules and Other Limitations

While many foreign jurisdictions combat perceived thin capitalisation abuse by mandating specific debt-to-equity ratios and by disallowing interest expense deductions on excess indebtedness, the United States (and thereby the USVI through the adoption

of the mirror Code) has adopted a somewhat different approach. It must be determined in each case whether a purported loan is in fact indebtedness or whether the loan represents an equity investment in the corporation.

Concerning the classification of an investment in a corporation as either debt or equity, Code Section 385 sets out five factors that are to be considered, namely:

- whether there is a written unconditional promise to pay on demand or on a specified date a sum certain of money in return for an adequate consideration in money or money's worth, and to pay a fixed rate of interest;
- whether there is subordination to or preference over any indebtedness of the corporation;
- the ratio of debt to equity of the corporation;
- whether there is convertibility into the stock of the corporation; and
- the relationship between holdings of stock in the corporation and holdings of the interest in question, ie, whether or not such holdings are proportional.

The United States does not have a debt-to-equity ratio that can be used as a safe harbour to ensure debt treatment. Instead, the debt-to-equity ratio is merely one factor taken into account by the IRS and the courts, although it is generally believed that the IRS will not challenge a ratio of 3:1 or less on debt instruments that do not have equity features.

IRS Notice 94-47 provides a list of the factors that it will consider in deciding the debt or equity character of an instrument. The characterisation of an instrument for federal income tax purposes depends on the terms of the instrument and all surrounding facts and circumstances. Among the factors that may be considered in making this determination are:

- whether there is an unconditional promise on the part of the issuer to pay a sum certain on demand or at a fixed maturity date that is in the reasonably foreseeable future;
- whether holders of the instruments possess the right to enforce the payment of principal and interest;
- whether the rights of the holders of the instruments are subordinate to the rights of general creditors;
- whether the instrument gives the holders the right to participate in the management of the issuer;
- whether the issuer is thinly capitalised;
- whether there is an identity between the holders of the instruments and stockholders of the issuer;
- the label placed upon the instruments by the parties; and
- whether the instruments are intended to be treated as debt or equity for non-tax purposes.

No particular factor is conclusive in making the determination of whether an instrument constitutes debt or equity. The weight given to any factor depends upon all the facts and circumstances, and the overall effect of an instrument's debt and equity features must be taken into account.

The IRS stated that certain categories of instruments will be closely examined on audit to determine whether debt treatment is appropriate. This includes financial instruments that are treated as equity for regulatory, rating agency or financial accounting purposes, but sought to be treated as debt for income tax purposes; instruments with unreasonably long maturities; and instruments with provision for payment of principal using stock of the issuer.

### 5.6 Transfer Pricing

The US transfer pricing regime of Code Section 482 applies to the USVI by virtue of the mirror system. Code Section 482 provides that gross income, deductions, credits and other allowances may be allocated among two or more organisations, trades or businesses under common ownership or control whenever it is determined that such action is necessary to prevent the evasion of taxes or to clearly reflect the income of the parties.

True taxable income is determined by evaluating transactions between commonly controlled taxpayers against the standard of comparable transactions between unrelated persons dealing at arm's length. If a taxpayer's results differ from its true taxable income, the taxpayer may be subject to a reallocation of income, deductions, credits or any other item or element affecting taxable income. The permissible

methods for determining an arm's length price depend on the type of transaction and are fully set out in the Treasury Regulations issued under Code Section 482.

### 5.7 Anti-Evasion Rules

The US tax law and regulations as applicable in the USVI contain numerous anti-abuse rules that are intended to prevent taxpayers from claiming inappropriate tax benefits. USVI taxpayers are also subject to numerous reporting requirements, including with respect to interests in foreign assets and certain transactions that have the potential for tax avoidance or evasion.

### 5.8 Tariffs

While a part of the United States, the USVI is outside the tariff zone of the United States. The USVI imposes its own flat 6% duty rate on imported items. Further, goods imported into the USVI that have undergone "substantial transformation" are able to then be shipped into the United States free of mainland tariffs. Thus, the USVI, given its proximity to the mainland United States, is a prime location for FDI for those seeking to work in the importation and exportation of goods with minimal impact from tumultuous developments in the current US tariff regime.

## 6. Competition Law

### 6.1 Merger Control Notification

The USVI has laws regarding merger and consolidation under the General Corporation Law in 13 V.I.C. §§ 251–256, regarding conversions and mergers under the Uniform Limited Liability Company Act in 13 V.I.C. §§ 1901–1907 and regarding conversions and mergers under the Uniform Partnership Act in 26 V.I.C. §§ 191–198. The statutes require some sort of plan or agreement, and may also require a vote, and a filing or notification made with the Lieutenant Governor. Additionally, corporations also require a filing with the district courts where the merging entities are located. Mergers can occur with domestic USVI entities or certain other entities, including foreign entities.

### 6.2 Merger Control Procedure

See **6.1 Merger Control Notification**.

### 6.3 Cartels

The Virgin Islands Antimonopoly Law forbids agreements in restraint of trade between competitors. Forbidden agreements include agreements to fix prices, fix levels of production or distribution, or allocate territories and customers. The law is construed similarly to federal antitrust law.

### 6.4 Abuse of Dominant Position

The Virgin Islands Antimonopoly Law forbids the use of monopoly power for the purpose of excluding competition or manipulating prices. The law is construed similarly to federal antitrust law.

## 7. Intellectual Property

### 7.1 Patents

The laws of the United States relating to patents, trade marks and copyrights, and the enforcement of rights arising thereunder, have the same force and effect in the USVI as in the continental United States. The District Court of the Virgin Islands has the same jurisdiction in causes arising under such law as is exercised by United States district courts.

Inventions are patented to grant the inventor the right to exclude others from making, using, offering for sale or selling the invention in the United States or importing the invention into the United States. Patents are issued by the USPTO. The three types of patents are utility, design and plant patents.

Filing for a non-provisional patent requires patent law expertise, scientific knowledge, and extensive attention to detail and time. An inventor may apply for a provisional patent before a non-provisional patent, providing the means to establish an early effective filing date and permit the use of the term "Patent pending" before filing a non-provisional patent application. The term of a provisional patent is 12 months.

The term of a non-provisional, new patent is generally 20 years from the date on which the application for the patent was filed in the United States or from the date an earlier related application was filed in special cases, subject to the payment of maintenance fees.

US patent grants are effective only within the United States, US territories and US possessions.

To apply for a provisional or a non-provisional patent, an inventor may file a paper or online application. Once a patent is issued, the patentee must enforce the patent without aid of the USPTO.

### 7.2 Trade Marks

A trade mark is a device, name, symbol or word used with goods to designate the source of the goods and to distinguish them from goods of others. A service mark identifies and distinguishes the source of a service rather than goods. The purpose of applying and obtaining trade mark or service mark rights is to prevent others from using a confusingly similar trade mark or service mark. It does not prevent others from making the same goods or from selling the same goods or services under a different trade mark or service mark. Trade mark registrations can be filed by paper or online.

A registered trade mark requires regular maintenance. Six years after the registration date, a Declaration of Use or Excusable Non-Use must be filed with applicable fees and evidence showing that the trade mark is in use. If this declaration is not filed, the registration is cancelled.

The Madrid Protocol is a filing treaty to ensure protection for trade marks in multiple countries through filing one application. It is the right of each country whether or not trade mark protection is granted. If granted, the trade mark is protected in that country.

### 7.3 Industrial Designs

Industrial design is a combination of applied art and science to improve a product in its function, aesthetics, usability and ergonomics. The Hague Agreement is an international registration system which offers the possibility of obtaining protection for up to 100 industrial designs in designated member countries and intergovernmental organisations (referred to as "Contracting Parties") by filing a single international application in a single language either directly with the International Bureau of the World Intellectual Property Organization or indirectly through the office of applicant's Contracting Party.

Applicants can file international design applications through the USPTO as an office of indirect filing. Industrial design patents have a 15-year term from issuance.

### 7.4 Copyright

Copyright is a form of protection provided to the authors of "original works of authorship" including literary, dramatic, musical, artistic and certain other intellectual works, both published and unpublished. The 1976 Copyright Act generally gives the owner of copyright the exclusive right to reproduce the copyrighted work, to prepare derivative works, to distribute copies or phonorecords of the copyrighted work, to perform the copyrighted work publicly, and to display the copyrighted work publicly.

The copyright protects the form of expression rather than the subject matter of the writing. For example, a description of a machine could be copyrighted, but this would only prevent others from copying the description; it would not prevent others from writing a description of their own or from making and using the machine. Copyrights are registered by the Copyright Office of the Library of Congress, and applicants may file paper or online applications. For works created after 1 January 1978, a copyright is good for 70 years after the death of the author.

### 7.5 Others

A person, association or entity doing business in the USVI under any name other than its own, whether they are a resident or non-resident, must have their tradename approved, file an application for the tradename, and pay a USD50 fee to the Office of the Lieutenant Governor of the USVI, Division of Corporations & Trademarks. The application should set forth the name or style under which said business will be known, the location of the business, a brief description of the kind of business to be transacted under the tradename, and the real name or names of the party or parties conducting or intending to conduct business and the addresses of the party or parties. The application must be notarised before an officer authorised by the laws of the USVI to authenticate signatures.

A certificate of tradename is issued for a period of two years and is renewable. If the party or parties fail to

renew the tradename within six months of the expiration date, the tradename becomes available to anyone who files for the tradename and pays the required fee.

If a person, association or entity doing business in the USVI fails to or refuses to obtain a tradename certificate, the USVI Attorney General may institute an action in the District Court of the Virgin Islands to enjoin the conduct of the business. Further, the violating entity may not commence or maintain any court action in the USVI.

When the party or parties cease to conduct business in the USVI, notice of the date of cessation, sworn to by a person, partner, corporate officer, member, executor or administrator, must be filed within ten days after the business ceases.

## 8. Data Protection

### 8.1 Applicable Regulations

Contract, common law, federal regulations and USVI statutory law govern data protection requirements. The most applicable local statute is 14 V.I.C. § 2209, which deals with the crime of identity theft. This statute outlines the requirements for companies or persons that conduct business in the USVI regarding notifications of any breach of digital security and leaking of personal information such as social security numbers and driver's licence numbers.

### 8.2 Geographical Scope

Any business that targets or does business in the USVI must follow both territorial and federal laws regarding data protection and notification in case of breach.

### 8.3 Role and Authority of the Data Protection Agency

The USVI has also established a Bureau of Information Technology, which includes in its mandate the development of the policies and standards to be followed in providing for the confidentiality of information; ensuring the security of the USVI's informational and physical assets; providing for the preservation of the USVI information processing capability; and coordinating research and identifying problems affecting information security and their solutions.

## 9. Looking Forward

### 9.1 Upcoming Legal Reforms

While there are no specific legal reforms expected that will affect foreign investment in the USVI, please see the Trends and Developments article for a deeper discussion of trends and developments in this field, particularly with regard to the economic incentive programmes.

**Marjorie Rawls Roberts PC**

**Marjorie Rawls Roberts PC** has decades of experience in representing companies and individuals in business, securities, tax, trusts and estates, and real estate matters in the USVI. The firm's clients are based in the USVI, the US mainland, other US territories and international locations. The firm also provides comprehensive estate planning services and advice regarding the requirements for bona fide USVI residency. It represents clients before the USVI Economic Development Authority, the University of the Virgin Islands Research and Technology Park, and other government agencies as they seek economic incentives.

## Authors

**Marjorie (Jorie) Roberts** is the managing partner of Marjorie Rawls Roberts PC and holds law degrees from Harvard Law School, Cambridge University and New York University. She previously worked in both the public and private sectors, including for global law firm Gibson, Dunn & Crutcher, the US Treasury Department and the USVI Bureau of Internal Revenue, and as general counsel and vice president of Globalvest Management Company. She is admitted to the practice of law in the USVI, the State of California, the Third Circuit Court of Appeals, and before the US tax court and the US Supreme Court. Jorie is also a solicitor in England and Wales and is licensed to practise law in the BVI.

**Sean E. Foster** is a partner with Marjorie Rawls Roberts PC and assists clients with the formation and design of new business ventures and the restructuring of existing business ventures to optimise tax efficiencies, asset protection and wealth succession. He received a BBA cum laude from Texas Tech University and a JD cum laude from the University of Oklahoma. Prior to joining the firm, he was associated with the law firm Ober, Kaler, Grimes & Shriver in Washington, DC. He is admitted to the practice of law in the USVI, Texas, Virginia and the District of Columbia, a solicitor in England and Wales, and licensed to practise law in the British Virgin Islands.

**David Bornn** is a senior attorney with Marjorie Rawls Roberts PC and represents clients in the energy, hospitality and government relations sectors, among others. He graduated from Trinity College and received his JD from Villanova University School of Law. David has practised transaction law since 1981 in the USVI. He served as chief legal counsel to Governor Albert Bryan Jr from 2018 to 2022, and is admitted to the practice of law in the USVI and the Third Circuit Court of Appeals.

**Lisa M. Wisehart** is a paralegal with Marjorie Rawls Roberts PC. She graduated from Purdue University and received her JD from Indiana University Maurer School of Law – Bloomington, where she served as managing editor of the Indiana Journal of Global Legal Studies. She then clerked for the Indiana Court of Appeals for several years. Lisa currently focuses on working with clients in the Economic Development Program and the Research and Technology Park Program. (Lisa is not admitted to the practice of law in the USVI.)

## Doing Business in the US Virgin Islands: An Introduction

### *Background*

The US Virgin Islands (USVI) is an unincorporated territory of the United States of America (USA) located approximately 1,100 miles south-east of Miami, Florida. Acquired from Denmark in 1917, the USVI is made up of the islands of St. Croix, St. John, St. Thomas and Water Island, plus numerous uninhabited cays, with a total population of approximately 85,000. The USVI uses US currency, and no exchange controls exist.

The USVI's prime natural resources include pristine beaches, crystal-clear seas, a mild year-round climate, the natural harbour on St. Thomas, the Virgin Islands National Park on St. John, and the rainforest on St. Croix. These assets, combined with the investment security of a US jurisdiction and a variety of federal and local incentives, have cemented the territory as a stable place to do business, with tourism as the major local economic activity.

Beyond tourism, the USVI attracts a growing number of consulting businesses and technology businesses owned by US citizens who have moved to the USVI to take advantage of its specialised economic incentive programmes for entrepreneurs who want to live and work in paradise. In 2020, the USVI completed a long-term economic strategy and action plan (Vision 2040), with goals that include diversifying the territory's economic base through growth in target industries, including professional and technical services, renewable energy, agribusiness, coastal/ocean resources and health sciences.

The USVI is particularly well suited to attract and utilise all types of renewable energy, and is actively working with investors on a significant solar power expansion and implementation of wind power.

The USVI also offers banks that are insured by the Federal Deposit Insurance Corporation and are covered by the USA's extensive network of bilateral investment treaties (but not tax treaties). The USVI has two federal judges and is part of the Third Circuit Court of Appeals. Moreover, the USVI has a local court, the Superior Court of the Virgin Islands (which includes a Magistrate Division), and its own local highest court, the Supreme Court of the Virgin Islands.

With respect to transportation, the Virgin Islands Port Authority recently embarked on a public-private partnership with the goal of redeveloping and modernising the territory's two airports: the Henry E. Rohlsen Airport on St. Croix, and the Cyril E. King Airport on St. Thomas. Among other goals, the project is intended to stimulate economic growth in the USVI by increasing the efficiency and safety of airport operations, expanding airport capacity and attracting private investment to the territory. The USVI has direct flights to many mainland cities and also attracts many yachts seeking a secure, well-located and attractive home base.

### *Tax system overview*

The Internal Revenue Code of 1986, as amended (the "Code"), applies in the USVI under a "mirror" system whereby "USVI" is effectively substituted for "United States" wherever the latter appears. This mirror system was created pursuant to the Naval Services Appropriation Act of 1922, 48 U.S.C. 1397, which stated: "The income-tax laws in force in the United States of America and those which may hereafter be enacted shall be held to be likewise in force in the Virgin Islands of the United States, except that the proceeds of such taxes shall be paid into the treasuries of said islands." Practically speaking, this means that bona fide USVI residents should pay income taxes on their worldwide income to the U.S. Virgin Islands Bureau of Internal Revenue (BIR) only, and not to the Internal Revenue Service (IRS). The income tax provisions of the Code, the Treasury Regulations promulgated thereunder, and revenue rulings and revenue procedures issued by the IRS are included in what is generally applicable in the USVI, with certain limitations.

As a US territory, the USVI occupies a unique status: although it is part of the USA, it has been granted authority by the US Congress to enact special tax laws to encourage investment in business operations. See, for example, 26 U.S.C. Section 934 (b)(1). The USVI therefore offers many opportunities for investors, and especially entrepreneurs who seek a politically stable jurisdiction with targeted economic incentives, legitimate protection of their assets from taxes, and an enticing location with excellent telecommunica-

**Contributed by:** Marjorie (Jorie) Roberts, Sean E. Foster, David Bornn, Lisa M. Wisehart and Duncan J.J. Kessler,
**Marjorie Rawls Roberts PC**

tions. While some programmes, such as the Sustainable Tourism through Arts-based Revenue Streams (STARS) Act, remain underutilised, other major incentive programmes have proven a boon for entrepreneurs, investors and the territory alike. The major USVI incentive programmes available to entrepreneurs are as follows.

*Economic Development Commission Program*

The infrastructure to support hotels and tourism businesses (among others) in the USVI has largely been in place for more than 63 years through the Economic Development Authority (EDA) and its various investment programmes and their predecessors. The Economic Development Commission (EDC) Program, administered by the EDA, offers exemptions and reductions to entities qualified as EDC Program beneficiaries, and reductions to direct and indirect owners of entities qualified as EDC Program beneficiaries if the owners are bona fide residents of the USVI (see discussion below). The EDC Program is available to a wide array of businesses – for example, public relations services, international banking and insurance, business and management consulting, call centres, investment managers and advisers, family offices, technological businesses, medical services, and manufacturing and production businesses. See 29 V.I.C. Sections 703, 708. Moreover, in 2016, an International Financial Service Entity (IFSE) category was added to the list of businesses eligible for benefits. An IFSE must also be licensed as a bank pursuant to the International Financial Services Center Regulatory Act administered by the Division of Banking, Insurance and Financial Regulation in the Office of the Lieutenant Governor.

Benefits under the EDC Program include the following:

- A credit equal to 90% of the otherwise applicable income tax, which applies to the income from the benefited business as distributed to bona fide USVI resident owners on their allocations or dividends. A USVI corporation pays an effective tax rate of approximately 23.1% on its eligible income; with the 90% tax credit, the effective rate is 2.31%. (However, salaries and other forms of compensation, such as guaranteed payments, remain fully taxable.)
- Beneficiaries are exempt from the territory's 5% tax on gross receipts on revenue received from approved business activities.
- Beneficiaries are exempt from USVI property tax for the property occupied by the beneficiary for its approved business activities.
- Beneficiaries receive an exemption from USVI excise tax on building materials and machinery used in the construction of their business facilities and on raw materials brought into the USVI to produce goods.
- A beneficiary's customs duties are reduced from 6% to 1% on raw materials and component parts imported from outside the USA. No local customs duties are imposed on US-made products.

No withholding tax is imposed on payments to US corporations or US-resident individuals. Beneficiary companies with foreign owners are exempt from withholding tax on interest payments, and are subject to a reduced withholding tax rate of 4.4% on dividend payments made overseas to corporate owners. Similarly, no income tax is withheld on interest paid to non-resident alien individuals, and the tax rate on dividends paid to non-resident individual owners is 4%.

To be eligible for EDC Program benefits, the income must satisfy applicable federal source and effectively connected income regulations, as set out in Section 937 (b) of the Code and Sections 1.937-2 and 1.937-3 of the Treasury Regulations promulgated thereunder, and the income must be sourced from or effectively connected to the USVI.

To qualify under the EDC Program, an applicant in a qualifying business must generally make a minimum capital investment of USD100,000 (exclusive of inventory) and meet certain minimum employment requirements. Typically, a business must employ at least ten full-time employees, but "designated service businesses" – which are typically financial or consulting firms exclusively serving clients outside the USVI – are only required to employ five full-time employees, and the EDA has the authority to lower the five-employee minimum or permit a business to have several years to meet the five-employee minimum upon a showing

**Contributed by:** Marjorie (Jorie) Roberts, Sean E. Foster, David Bornn, Lisa M. Wisehart and Duncan J.J. Kessler,
**Marjorie Rawls Roberts PC**

of good cause. A full-time employee is someone who works at least 32 hours a week. A beneficiary must post all positions with the USVI Department of Labor (DOL) and notify the DOL when positions are filled, among other reporting requirements.

At least 80% of the beneficiary's employees must be USVI residents, unless a waiver is granted. Beneficiaries must purchase goods and services locally when available, make certain contributions to scholarships and public education, and provide a plan for civic participation. Beneficiaries must also provide employee benefits and enact a management training programme.

The application process requires a detailed application, including details of the beneficiary's ownership, financial information, and a background check for beneficial owners with more than a 5% interest. Submission of the application is followed by the application's presentation at a public hearing before the EDC commissioners and a review of the application by the EDC commissioners. Since 2020, the public hearings have been held virtually and the EDC has not yet indicated when, if ever, public hearings will return to being in person.

Upon approval by the EDC, benefits are available for initial periods of 20 years for investments on the islands of St. Thomas and St. John, and for 30 years on St. Croix. Beneficiaries that make an additional investment in the beneficiary business in infrastructure, new construction or refurbishment during the term of their existing certificates may be entitled to extensions of their benefits upon the expiration of their certificates. Separately, a beneficiary may seek an extension of 100% of benefits for an additional ten years on the same terms.

In recent years, new hotel applicants under the EDC Program have committed to constructing low-density developments, including "glamping"-style accommodation designed to promote environmental sustainability and low-impact construction. Other hotel beneficiaries have restored historic structures in the USVI to showcase local culture and traditions.

### *Hotel Development Act Program*

The Hotel Development Act (HDA) Program is also administered by the EDA, and was initially passed in 2011 to provide a means for financing new hotel development projects (and hotels seeking substantial upgrades) in the USVI. In 2019, the HDA Program was amended to provide for the development, construction, reconstruction and renovation of commercial facilities and other hotel facilities. The hotel room occupancy tax (HROT) can now be 100% utilised by developers of new hotels, or up to 50% of the HROT for existing hotels where at least 70% of the units were previously damaged – by hurricanes, for example – for the development, construction, reconstruction and renovation of the facility.

The 2019 amendment also provides for the imposition of an economic recovery fee (ERF) to finance, fund or cover the costs incurred in the renovation, reconstruction, construction, improvement and development of hotel properties and related facilities or infrastructure. The amount of the ERF is the difference between the percentage rate of HROT applicable at the time of the application (currently set at 12.5%) and a percentage rate over such tax, not to exceed 7.5%, which is determined by the applicant and subject to implementation protocols. The ERF can be collected and deposited into an ERF trust account for a period of 30 years, and is only available to applicants applying before 31 December 2028. Any funds remaining after completion of the approved project can be used by the developer for other expenditures for improving or enhancing the ERF project.

### *Enterprise Zone Commission Program*

Businesses seeking to invest in historic preservation have additional opportunities available through the Enterprise Zone Commission (EZC) Program administered by the EDA, which offers tax incentives to businesses investing in designated historic and commercial districts. The mandate of the EZC Program is to facilitate the investment of private resources in productive business enterprises located in severely distressed Enterprise and Commercial Zone areas on St. Croix and St. Thomas, and to provide jobs for the residents of these areas. Governor Albert Bryan Jr. expanded the areas that qualify for EZC Program benefits by Executive Order No. 542 to include additional

**Contributed by:** Marjorie (Jorie) Roberts, Sean E. Foster, David Bornn, Lisa M. Wisehart and Duncan J.J. Kessler,
**Marjorie Rawls Roberts PC**

areas in Charlotte Amalie on St Thomas, along with adding Cruz Bay on St John, encompassing the area surrounding the Cruz Bay Creek, Frangipani Lane and Gallows Point.

The benefits available to beneficiaries under the EZC Program are an income tax credit of 90%, a gross receipts tax exemption of 100% and a property tax benefit of 100%. Applicants must have businesses/activities that are in accordance with the incentivised activities for the zone in which the applicant is applying. For example, applicants in the Garden Street area of downtown Charlotte Amalie, St. Thomas, must be engaged in "live work", sports and entertainment, good community, experiential tourism, the arts or restaurants.

To qualify under the EZC Program, an applicant must (among other things) make a minimum capital investment of USD10,000 and employ a minimum of two full-time USVI resident employees, either directly or through a contractor. The application process requires the submission of a description of the history and current condition of the property within the Enterprise and Commercial Zone and details of the construction or rehabilitation efforts to be undertaken. Applications are considered by the EZC commissioners. Upon approval, benefits are available for five years.

*Research and Technology Park Program*

The Research and Technology Park Program ("RTPark") seeks to support the USVI's expanding technology and knowledge-based sectors to promote the growth, development and diversification of the USVI economy. Examples of knowledge-based businesses found in 17 V.I.C. Section 482 (i) include e-commerce, electronics, information technology and research businesses. In addition, the RTPark works to broaden the capabilities of the University of the Virgin Islands (UVI) by providing it with financial support and training opportunities for UVI students, and by creating a research environment that combines the resources of UVI with those of the public sector and private industry. The RTPark has begun promoting enrichment programmes for USVI students K-12 through Science, Technology, Engineering and Mathematics (STEM) afterschool enrichment programmes and summer camps to strengthen the local pool of talent in STEM fields long-term.

Beneficiaries of the RTPark currently operate in the areas of data analytics, web content development, interactive media management, e-commerce, software development and licensing, technology-based management and business process services, internet advertising, telecommunications and information technology, application development, financial technology and medical device technology. Oversight of the RTPark Program is vested in the seven-member RTPark board of directors (the "Board"), which includes the chairperson of the UVI board of trustees and the president of UVI.

In most cases, an applicant, through a legal representative, negotiates the terms of a tenancy with the RTPark's executive director. Negotiations include:

- the amount of the one-time entry fee paid by the applicant (typically at least USD50,000 and up to USD100,000, depending on the size of the applicant);
- the applicant's obligation to pay annual management fees to the RTPark (typically between 1.5% and 3% of the applicant's gross income);
- the structuring of a charitable donation to UVI that can include scholarships, internships, faculty support, funds for specific programmes and in-kind contributions of time, typically starting at a total of USD35,000 annually; and
- the percentage of equity interest to be awarded to the RTPark (often a 1% non-voting, no distribution "Class B" interest).

Once negotiations have been finalised, a term sheet is entered into between the applicant and the RTPark, providing the basis for the formal application that covers the applicant and its owners. The final terms are memorialised in the Protected Cell's Park Tenant Agreement, which serves as the operative document defining the relationship between the Protected Cell, ie, an approved applicant, and the RTPark. Each RTPark application requires payment of a USD2,500 application fee.

**Contributed by:** Marjorie (Jorie) Roberts, Sean E. Foster, David Bornn, Lisa M. Wisehart and Duncan J.J. Kessler,
**Marjorie Rawls Roberts PC**

Benefits under the RTPark Program are initially available for 15 years and can be renewed for an initial period of ten years, followed by subsequent renewal periods of five years, subject to Board approval. As with the benefits under the EDC Program, the RTPark offers numerous tax exemptions and reductions, the most notable of which is a 90% reduction on tax liability for the business and also for owners of beneficiaries if the owners are bona fide residents of the USVI. Specifically, a Protected Cell in the RTPark receives a 90% tax credit against its income tax liability on income from the business for which benefits are granted. For a corporate Protected Cell, the reduction results in an effective tax rate of approximately 2.31% on eligible income. If the beneficiary's owners are individual residents of the USVI, they will receive a reduction on their dividends or allocations. Salaries, however, remain fully taxable. To be eligible for the reduction, such income must be sourced from or effectively connected to conducting a trade or business in the USVI in accordance with Sections 934 (b)(1) and 937 of the Code (and the relevant Treasury Regulations promulgated thereunder).

No withholding tax is imposed on payments to US corporations or individual residents. Furthermore, beneficiaries of the RTPark with foreign corporate owners are exempt from withholding tax on interest payments and enjoy a reduced withholding rate of 4.4% on dividend payments overseas (while the withholding rate on non-resident individuals is 4%). The tax withholdings on royalties paid to non-resident individuals or foreign corporations are 4% and 4.4%, respectively. The withholding tax is paid by the withholding agent (typically the RTPark beneficiary) to the BIR on Form 8109 and then reconciled annually on Form 1042.

As with the EDC Program, beneficiaries receive an exemption from USVI gross receipts tax, otherwise imposed at 5% on the gross receipts of a business, with no deductions. The BIR requires each beneficiary to report its gross receipts (monthly, assuming annual gross receipts of more than USD225,000) on Form 720 VI and to indicate that the beneficiary is exempt from payment of the tax pursuant to its status as an RTPark beneficiary. This exemption does not apply to gross receipts from business activities that are not covered by a beneficiary's grant of RTPark benefits, including income that is not sourced from or effectively connected to a trade or business in the USVI.

Beneficiaries receive an exemption from USVI excise tax on building materials and machinery used in the construction of their facilities, and on raw materials brought into the USVI to produce articles. Otherwise, a tax ranging from 2% to 25% applies to the fair market value of many items. In addition, several other statutory exemptions from excise tax apply, regardless of beneficiary status.

Beneficiaries receive an exemption from the USVI property tax, although the personal homes of beneficiary owners do not receive the property tax exemption, even if the respective owners maintain home offices. Moreover, if a beneficiary rents an office, the property tax exemption does not pass through to the landlord.

Because the USVI is outside the US customs zone, it has enacted its own customs law, imposing a 6% duty on items not manufactured in the USA. An RTPark beneficiary's customs duties are reduced from 6% to 1% on raw materials and component parts imported from outside the USVI. Materials made in the USA are exempt from any customs duty. As with the excise tax, several statutory exemptions from customs duties apply, regardless of beneficiary status.

### *Manufacturing and agriculture as growth sectors*

The USVI legislature has provided for a number of tax benefits and economic incentives to encourage agriculture, including the Farmers, Fishermen and Consumers Assistance Act, which gives certain tax exemptions to the farming and fishing industry, including an exemption from gross receipts tax on sales of products derived from the agricultural business.

Additionally, the EDC Program includes agriculture, food processing, product assembly and manufacturing as eligible activities. Moreover, the USVI Economic Development Bank, administered by the EDA, provides low-interest loans and micro-credit for USVI farmers and fishers, and farmers can qualify for property tax exemptions on agricultural land.

**Contributed by:** Marjorie (Jorie) Roberts, Sean E. Foster, David Bornn, Lisa M. Wisehart and Duncan J.J. Kessler,
**Marjorie Rawls Roberts PC**

### *South Shore Trade Zone Act*

In 2020, the USVI legislature enacted the Virgin Islands South Shore Trade Zone (SSTZ) Act, designating 3,000 acres on the south shore of St. Croix, which features a deep-water port and is a short distance from the Henry E. Rohlsen Airport, as an Enterprise Zone. The SSTZ Act entitles approved applicants to a credit equal to 90% of the otherwise applicable income tax, in addition to 100% exemption from the gross receipts tax, property tax, excise taxes and customs duties for up to 20 years.

The goal of the SSTZ, administered by the EDA, is to designate an area that eliminates traditional barriers to commercial trade and investment in support of light manufacturing, trans-shipment, the agricultural sector, micro-manufacturing, industrial development and the territory's green and blue economy sectors. Among other requirements, an applicant in a qualifying business must make a minimum capital investment of USD100,000 (exclusive of inventory) and employ a minimum of ten full-time employees and one paid apprentice. Additionally, applicants must comply with all local and federal laws and notify the DOL of any job openings or subcontracting openings. On 22 May 2026, the 36th Legislature of the USVI held an Economic Development Program Summit with a particular focus on highlighting opportunities in the SSTZ.

### *Opportunity Zones – federal benefits for USVI investments*

Several US programmes are also available for investors in the USVI. The Tax Cuts and Jobs Act, passed in December 2017, established the Opportunity Zone Program, which provides immediate and long-term tax advantages to US investors in Opportunity Zones. Investors can defer capital gains taxes on earnings from many types of investments up to 2027, can reduce taxes on the capital gain invested into an Opportunity Fund by 10% or 15%, depending on whether the qualifying investment is held for five years or seven years, and can gain permanent exclusion from capital gains taxation on Opportunity Fund investments held for at least ten years. The USVI has 14 designated Opportunity Zones.

Other tax credits are also available in the USVI, such as the 20% income tax credit for preserving historic properties and tax credits for owners of certain newly constructed or substantially rehabilitated low-income rental housing projects.

### *Choice of entity*

The USVI provides many options when choosing to form a legal entity within the jurisdiction, including corporations, limited liability companies and partnerships, such as:

- general partnerships;
- limited partnerships;
- limited liability limited partnerships;
- limited liability partnerships; and
- trusts.

The USVI has adopted the Uniform Limited Liability Company Act, and the formation and governance of an LLC is similar to that imposed in the 50 states and the District of Columbia.

Except for general partnerships (which are formed by the agreement of the partners) and trusts, all entities are formed through filings with the Office of the Lieutenant Governor of the USVI, Division of Corporations and Trademarks. Federal law applies in the USVI, including the Securities Act of 1933 and the Securities Exchange Act of 1934. In addition, the USVI has adopted the Uniform Securities Act for territorial-level securities regulations. The USVI imposes an annual franchise tax on LLCs and corporations, based on the capital used in the USVI trade or business, with the minimum franchise tax being USD300 annually. Partnerships pay a set annual fee of USD150.

### *Residency requirements*

Many USVI economic incentives and related programmes provide personal tax benefits for bona fide USVI residents on their allocations or dividends. To be a bona fide USVI resident, a person must meet one of five alternative physical presence tests each year, have a closer connection to the USVI than to any other location, and have a USVI tax home.

The most-used "physical presence" test involves being in the USVI for all or part of 183 days in a given year; however, individuals who travel frequently can satisfy the physical presence test by spending no

more than 90 days in the USA each year or by not having a significant connection to the USA at any time during the year (which is usually satisfied by not having a home, voter's registration, or spouse or minor child located in the USA).

The establishment of a "closer connection" to the USVI involves such factors as having an individual's main home in the USVI, filing returns in the USVI as a USVI resident, obtaining a USVI driver's licence, registering to vote and voting in the USVI, having a USVI bank account, etc, although no single factor is determinative. A "tax home" is the location of an individual's principal place of business.

In most cases, the individual must be a bona fide resident of the USVI for the entire year to get benefits on their income from a benefited business, although there is a "year of move" rule permitting individuals to be bona fide residents if they move to the USVI in the first half of a year and remain USVI residents for the next three years, among other requirements.

### *Applicability of the net investment income tax*

Finally, Section 1411 of the Code imposes a Medicare contribution on unearned income, and specifically imposes a tax equal to 3.8% of an individual's net investment income for a taxable year. The Treasury Regulations promulgated under Section 1411 of the Code provide that bona fide residents of US territories are subject to the tax only if they have a US income tax filing requirement. However, bona fide residents of the USVI have no income tax obligation (or related return filing requirement) with the USA, provided that they properly report income and pay income tax to the BIR. Therefore, the tax imposed by Section 1411 does not apply to bona fide residents of the USVI.

## Trends and Developments

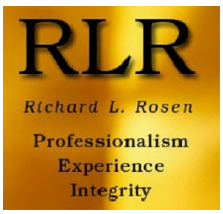
**Contributed by:**
Richard L. Rosen, Leonard S. Salis and Dennison D. Marzocco
**Rosen Karol Salis, PLLC**

**Rosen Karol Salis, PLLC** and its predecessors have been providing legal services in the franchise and real estate fields since 1970. The firm represents franchisors, franchisees and real estate entrepreneurs in all business and legal areas worldwide. Senior partner Richard L Rosen has over 40 years' experience as a franchise lawyer, business attorney and real estate developer. Richard and Rosen Karol Salis PLLC have won dozens of franchise awards and authored many articles on franchising and real estate.

## Authors

**Richard L. Rosen** is the founding member of Rosen Karol Salis, PLLC, and has been actively engaged in franchise and real estate law for over 40 years. Mr Rosen was Chairman of the American Association of Franchisees and Dealer's Fair Franchising Standards Committee; received the AAFD's Total Quality Franchising Lifetime Achievement Award in 2008 for his contributions to the field of franchising, and the Lifetime Achievement Award from Who's Who in America in 2019; is a founding member and past Chairman of the Franchise Law Committee of the New York State Bar Association; and is a member of the Steering Committee of the National Franchise Mediation Program. Richard has frequently lectured on franchise and real estate topics before many groups and organisations, and is widely published.

**Leonard S. Salis** is a Brooklyn Law School graduate with over 28 years of legal experience, and has been a partner in Rosen Karol Salis, PLLC since 2010. Leonard has become an experienced business lawyer with extensive knowledge of franchise law and franchise-related matters, as well as contracts, business transactions, corporate law, real estate and dispute resolution. Leonard has also co-authored several franchise and real estate-related articles. In 2022–2024, Leonard was recognised with the award for Franchise Lawyer of the Year in the USA by ACQ5 Gamechangers TM Global Awards. In 2022, The Lawyer Network awarded Leonard with its Annual Awards Winner in three categories. Leonard also featured in Marquis Who's Who Top Lawyers 2020–2021.



**Dennison D. Marzocco** is a real estate and transactional associate at Rosen Karol Salis, PLLC, and is engaged in a wide range of business transactions. He specialises in all aspects of commercial real estate, including complex leasing transactions, acquisitions and the sale of real property, real estate financing transactions, franchise matters, contracts and intellectual property matters. Dennison received his JD from Syracuse University and his BA from Washington and Lee University, where he was a member of the Sigma Nu Fraternity. He is admitted to practice in the federal and state courts of New York and New Jersey, and is a New York State-licensed real estate broker.

### What Every Prospective Franchisee and Franchisor Should Know

Investing in a franchise business is a major financial and personal commitment for the franchisee. Unlike starting a business from scratch, franchise ownership means stepping into someone else's brand, system and rules, which are governed by the franchise agreement. Likewise, the franchisor must take seriously the fact that it is entering into a long-term business relationship, often measured in decades, with a third party that will engage in business under the auspices of the franchisor's brand; thus, obviously, choosing the "right" franchise is crucial for any prospective franchisee. This article is a survey of various key aspects of the franchisee–franchisor relationship from both sides, as well as related real estate issues that will impact many, if not most, franchise businesses.

### Negotiating the Franchise Agreement

Prospective franchisees too often treat the franchise agreement as a "take it or leave it" document. While franchisors are, understandably, less willing to negotiate certain core provisions such as royalty and marketing fund fee rates, there are other key provisions which reasonable franchisors should be willing to negotiate. Franchisees should be wary of franchisors who regard their franchise agreements as non-negotiable – unfortunately, things sometimes go wrong during the franchise relationship, and both parties will be in a better position to resolve their issues if they begin their relationship as "team players" rather than adversaries. The following is a non-exhaustive list of issues that should be addressed when negotiating a franchise agreement.

#### *Territory and buffer zones*

In addition to ensuring that each franchise location includes a "protected territory", it is also important to negotiate a defined "buffer zone" surrounding each franchise territory. Seek to provide for a "right of first refusal" or "right of first purchase" if the franchisee is seeking, directly or by another franchisee, to open within the buffer zone. This will protect the business against competition from other franchisees and the franchisor, if either seeks to open a location outside but close to the protected territory which, in the absence of a buffer zone, would still compete in your market – which is, of course, within your protected territory.

#### *Fees and caps*

While franchisors are usually hesitant to negotiate royalty and other fee rates, it is important for franchisees to seek to limit potential increases over the life of the franchise relationship, and it is reasonable to seek a "cap" or limit on the franchisor's ability to raise its fees unreasonably.

#### *Term length and renewal rights*

"Evergreen", or perpetual, franchise terms are ideal, but not necessarily typical. Generally, longer initial terms and the right to multiple renewal options provide the franchisee with the ability and time to build substantial equity in the franchised business. Franchisees should also look to negotiate certain provisions in the franchise agreement to incorporate key negotiated provisions, such as royalty and marketing fund rates, renewal and transfer provisions, and the territory renewal agreements (if possible), rather

than being required to sign the franchisor's then-current and potentially less favourable form of franchise agreement on renewal.

### *Personal guarantees*

A full guaranty of every obligation under the agreement – sometimes required from both the franchise owner and, often, a non-owner spouse – should if possible be negotiated to a limited guaranty, tied only to the ongoing financial obligations of the franchise and post-termination covenants.

### *Transfer rights*

Franchise agreements typically include "rights of first refusal" on a sale, which can discourage third-party buyers, as they risk losing the deal at the last minute after investing time and money. A "right of first purchase", where the deal is presented to the franchisor before it is marketed, is more favourable to a seller. For succession (and estate planning) purposes, the franchisee should also seek an exception from typical franchisor consent requirements (and rights of first refusal) when the franchisee's principal desires to transfer its interests in the franchise to spouses, family members or trusts in favour of family members.

### *Default, termination and cross defaults*

Franchisees should carefully negotiate these provisions, including:

- an exception to standard cure periods for breaches of a nature that genuinely cannot be fixed within the stated window, so long as the franchisee is "diligently" working towards a resolution; and
- a reasonable requirement with respect to how frequently a non-compliance issue must occur, or how material non-compliance must be to trigger the ultimate remedy of termination.

For developers of multi-unit locations, franchisees/developers should seek a limit on the cross-default rights of the franchisor (where a default at one unit may jeopardise all units) to certain, egregious conduct.

### *The right to close the business in the event of sustained losses*

Franchise agreements often do not provide the franchisee with an exit strategy if the business fails. It is worth seeking to negotiate a contractual right to close a business in the event of losses, but, understandably, this should be subject to certain limitations (eg, losses in the form of calendar quarters in excess of "x" per quarter or, cumulatively, losses in the form of consecutive calendar quarters in excess of "x" per quarter).

### *Restrictive covenants*

The length and geographic scope of non-competition and non-solicitation clauses should be reasonably drawn to reflect the actual market size. For example, a city-wide or multi-mile restriction makes less sense in a dense urban territory than in a rural one, and a shorter, narrower restrictive period is a reasonable counterproposal to an exceedingly long one.

### *Dispute resolution*

Generally, arbitration is the favoured method of dispute resolution in franchise agreements. Notwithstanding this norm, it is beneficial for both parties to first use negotiation and then mediation to resolve their disputes, as these forms of alternate dispute resolution will be cost-saving and give the parties opportunities to resolve their dispute(s) before diving into costly and time-consuming arbitration or litigation. Franchisees should also make sure that a mutual "fee shifting" provision is in the franchise agreement, as this incentivises each of the parties to seek to resolve their dispute rather than to engage in a costly fight.

### *Structuring multi-unit deals*

A franchisee developing more than one location should consider negotiating a single form of addendum with consistent, favourable terms applied across all of the individual franchise agreements, rather than being bound contractually by the franchisor's "then-current form of franchise agreement" and negotiating each one separately.

While these requests are reasonable, a franchisor's willingness to engage in negotiation varies by brand and market.

## What Can Go Wrong as a Franchise Owner?

Even well run, reputable franchise systems carry real risk for the individual owner, as is the case with any business. Common problem areas include the following.

### *Pre-sale misrepresentations*

Under the Federal Trade Commission (FTC) Franchise Rule, as well as various state laws, franchisors must give prospective franchisees a Franchise Disclosure Document (FDD) covering 23 "Items" relating to the system's history, litigation record, development costs (Item 7), fees, and, if the franchisor chooses to provide it, financial performance data in Item 19. A mature system that does not share any performance information can be sending a warning sign, particularly if the franchisor's franchisees make unflattering comments to prospective franchisees, 12 to 15 of whom should be reached out to before they commit to the franchise. Misrepresentations made in the FDD, or informally by a sales representative or broker, are frequently the basis of costly legal claims against franchisors when the franchised business does not perform as promised.

### *Runaway fees*

Royalties, marketing fund contributions, technology charges, and required purchases from approved suppliers can add up well beyond the franchisee's expectation at the outset, particularly as franchisors pass along rising costs from inflation, tariffs or supply disruptions. Franchisees should carefully read Item 6 when reviewing an FDD and negotiate appropriate caps, if possible.

### *Escalating operational requirements*

Mandatory suppliers, point-of-sale systems, and brand standards can become more financially demanding over time.

### *Personal guaranty and lease exposure*

Many franchisors require a full personal guaranty from franchisee principals and, often, their spouses, covering every obligation under the franchise agreement.

### *Liquidated damages*

Many franchise agreements provide for liquidated damages provisions that are triggered in the event of the termination of the franchise agreement. This could cause the franchisee to be on the hook for specific damages calculated by a formula, which is typically a multiple of royalties and marketing fund fees over a defined period of time.

Many of these risks can be reduced through the kinds of negotiated terms described above, and negotiating territory, fee and guaranty protections before signing is far easier than trying to fix them after the business is operating.

## What If I Have a Problem and the Franchisor Will Not Help?

Under many state laws, franchise agreements generally include an implied duty of good faith and fair dealing. This means that a franchisor cannot use its contractual discretion to unfairly deny the franchisee the benefit of the deal. That duty has real limits, though, because the covenant does not override clear, express terms of the franchise agreement. What the agreement actually says, and what it does not say, matters when a dispute arises. When a franchisor is unresponsive to a legitimate problem, franchisees have several options, although none will necessarily guarantee a quick resolution or apply to every situation.

### *Alternate dispute resolution*

As discussed above, a well-negotiated agreement channels disputes through negotiation and mediation before arbitration. Even when a franchisor is simply unresponsive, it is usually worth formally invoking that process rather than escalating straight to a demand letter or lawsuit. Mediation is confidential and non-binding, and costs to engage are typically not excessive, while preserving every right to escalate if it does not work.

### *State franchise laws with private rights of action*

15 states, including California and New York, require franchisors to register their disclosure documents and provide franchisees with the right to sue over violations of those laws. California's Franchise Investment Law and New York's Franchise Sales Act (NYFSA) both allow a franchisee harmed by a registration or disclosure violation to recover damages, and where the violation was wilful (and material, in the case of the NYFSA) to offer rescission and reasonable attor-

ney's fees as well. These state-specific remedies can give a franchisee more leverage than the federal rule alone, as the FTC's Franchise Rule does not allow an individual franchisee to sue directly.

### *State relationship laws*

About half of US states regulate aspects of the franchisor–franchisee relationship directly, including rights regarding termination, encroachment and fair dealing, regardless of what the agreement says, and many give franchisees a private right to sue.

### *State unfair trade practices statutes*

Many states have their own Little FTC Acts allowing franchisees to sue directly, sometimes for enhanced damages and attorney's fees.

### *Franchisee associations*

Many relationship laws protect a franchisee's right to join or form an independent association without retaliation, and collective leverage can sometimes accomplish what an individual franchisee cannot, as the relative bargaining power between individual franchisees and franchisors often puts individual franchisees at a disadvantage.

## What Happens If My Franchise Fails?

Franchise failure through underperformance, default or closure sets off a series of contractual and legal consequences worth reviewing and understanding before financial distress hits.

### *Termination and cure periods*

For a default, often but not always relating to the nonpayment of fees, most agreements and many state relationship laws require written notice and a chance to cure – often 60 days or more, except for serious or incurable defaults such as health and safety violations, trade mark and IP-related violations, or abandonment of the franchise, which can permit faster termination.

### *The franchisor's step-in and repurchase (buy-back) rights*

Most agreements provide the franchisor with a right to take over operations temporarily by managing the location for a fee, or after termination, particularly where a franchisee is failing financially or has abandoned the business or committed a serious default of its franchise agreement. Termination often, but not always, comes with a franchisor option (not an obligation) to purchase a part or all of the business's assets, frequently using a formula well below fair going-concern value. Some state relationship laws improve on this – for example, requiring the repurchase of assets, inventory or goodwill at fair market value – but available protection varies considerably from state to state.

### *Bankruptcy*

A struggling franchisee's bankruptcy filing generally triggers an automatic stay that halts the franchisor's enforcement efforts. In a Chapter 11 reorganisation, a franchisee that was not in default at filing may be able to keep, or assume, its franchise agreement and lease, while one that was in default faces a harder path, typically needing to cure and demonstrate that it can perform going forward.

### *Personal exposure*

Personal guaranties typically survive the underlying business, so closing or losing a struggling location does not necessarily end an owner's personal liability for its debts. Guaranties should be carefully negotiated and limited.

## Can I Run My Franchise "My Own Way"?

Franchise systems exist because of the need to have consistency across a franchise brand. While franchisees are owned and operated independently, franchise ownership inherently involves the franchisee surrendering some independence with respect to how they operate their businesses. The following are several examples of how a franchisee is limited in how it can operate independently.

### *Mandatory brand standards*

Franchisees cannot alter the design, signage or store layout without franchisor permission, which is not easily obtained.

### *Pricing and suppliers*

Minimum resale pricing and required supplier provisions can limit commercial flexibility, subject to antitrust and state law limits.

### *Marketing*
Franchisees are almost always required to contribute to a national marketing fund and typically cannot conduct local marketing without franchisor review and approval.

### *Technology and software*
Franchisees are typically required to utilise franchisor-mandated technology and software, including, for example, specific point-of-sale and inventory management systems.

### *Restrictive covenants*
Franchise agreements impose certain in-term and post-term restrictive covenants and non-solicitation provisions, limiting the franchisee's ability to compete with the franchisor.

## The Franchisor's Obligation Regarding Registration and Disclosure
Franchising in the USA is regulated by a patchwork of federal and state franchising laws. In 1978, the FTC promulgated 16 CFR Part 436, which was subsequently amended in 2007 (the "FTC Franchise Rule") to regulate the offer and sale of franchises in the USA. While many states have franchise-related laws, surprisingly there is no uniform legal definition of a "franchise". The FTC Franchise Rule imposes a pre-sale disclosure requirement on franchisors that applies to the offer or sale of all franchises throughout the USA, obligating franchisors to furnish prospective franchisees with information and data regarding the material terms of the franchise relationship prior to negotiating with prospective franchisees or consummating the sale or offering of a franchise. This "disclosure" takes the form of an offering prospectus commonly referred to as the Franchise Disclosure Document (FDD).

15 states have state registration and/or disclosure franchise statutes that require the franchisor to register the franchise with the appropriate state agency before the franchisor is permitted to offer and sale franchises in that state, and to provide an updated FDD to prospective franchisee before any fees are paid or any agreement is entered into. 25 states have Business Opportunity Laws which require franchise sellers to register their business opportunity – ie, filing a form with the appropriate state agency that discloses certain limited information to prospective consumers who purchase business opportunities, including franchises.

## Selecting the Franchisee
There is an old joke in franchising.

- Question: "What does a franchisor look for in a prospective franchisee?"
- Answer: "Anyone with a pulse and a checkbook".

This joke reflects the fact that many franchisors are desperate to achieve growth and sometimes are not discerning as to which franchisees they select for their franchise system. Franchisors are well served when they select their franchisees after a screening process known as franchise due diligence, which evaluates, for example, a candidate's financial stability, operational readiness, reputation, character and compatibility with the system before awarding a franchise.

## Expansion
Franchisors have different ways to accomplish their goals of franchise expansion. In addition to selling single-unit franchises under a franchise agreement, many franchisors also offer multi-unit (or area) development deals to well-financed franchisees, under a multi-unit development agreement. Under this arrangement, the area developer pays a development fee to the franchisor and contracts to open and operate a set number of franchise locations within a specific geographic territory, over a defined timeframe and in accordance with a defined development schedule.

Alternatively, franchisors, especially international franchisors seeking to expand their franchise system into another country (such as the USA), contract with a "master franchisee" which functions as a "sub-franchisor" for a large territory (often a large state or entire country). Under this arrangement, the master franchisee (sub-franchisor) recruits, trains and supports the sub-franchisees within its territory on behalf of the master franchisor (the franchisor), and the master franchisee pays the franchisor a percentage of the royalties and initial franchisees paid by the sub-franchisees.

### Lease Protection

In the event that a franchisee defaults on its lease for the franchised premises, the franchisor wants to ensure that it does not "lose the location" as part of its franchise system. To prevent this from happening, franchisors seek to contract their right to assume (take over) a franchisee's lease under these circumstances. Franchisors achieve this by requiring their franchisees, and their landlords for the anticipated demised premises, to enter into the franchisor's form of "Collateral Lease Assignment" and "Lease Rider". Counsel for the franchisee may seek to negotiate certain terms of these agreements. Typical provisions include:

- providing the franchisor with "step-in rights" to allow it to "take over", even temporarily, the operations of the franchisee's location;
- a pre-agreed landlord's consent to a lease assignment to the franchisor or its affiliate; or
- the right for the franchisor to cure any defaults under the lease by the franchisee.

### Dispute Resolution

All franchise agreements need to have procedures in place to resolve disputes with franchisees. Many franchise agreements provide that, before the franchisor or franchisee can commence a court litigation or arbitration proceeding, the parties must engage in good faith negotiations and, if they do not resolve the dispute, non-binding mediation where a neutral attorney with experience in franchise law seeks to facilitate a settlement. Some franchise agreements require that disputes be determined by a judge in a public court litigation (which typically permits the parties to engage in a significant amount of "discovery"), while others require that disputes be determined by an arbitrator (usually a franchise attorney or former judge) in a private and confidential arbitration process (which usually permits more limited "discovery" by the parties), and where the parties may be required to pay the arbitrator's fees in advance for the time that the arbitrator spends handling the case; the successful party in the case is reimbursed for its attorney's fees by the unsuccessful party.

### Brand Protection

In order to expand its franchise system, a franchisor must be able to protect its brand. A franchisor accomplishes this by requiring its franchisees to sign various agreements, including confidentiality and non-disclosure agreements, together with non-competition and non-solicitation agreements. Successful franchisors remain vigilant in protecting their confidential and proprietary information – including, for example, IP (trade marks), operations manuals, customer lists and related information – from unauthorised use or disclosure by their franchisees.

### Choice of Location

A franchisee's choice of the retail location from which it will operate is a critically important decision. While a franchisee's success will ultimately depend on many factors, the selection of a quality location is close to the top of the list. Franchisors typically require their franchisees to submit site selection information to the franchisor, and the franchisee is required to obtain the franchisor's approval with respect to the selected location prior to moving forward and negotiating a lease.

### Lease Negotiation

Commercial leases are drafted by landlord's counsel and are typically drafted to strongly benefit the landlord. Franchisees are well served by retaining knowledgeable real estate counsel to review the proposed lease and seeking to negotiate a variety of key provisions, including, without limitation:

- what, if any, lease guaranty will be required;
- the term of the lease and options to renew the lease, along with insuring co-ordination of the timing between the expiry of the lease and the franchise agreement; and
- transfer and assignment-related provisions.

### Lease Guaranties

When a franchisee seeks to purchase a franchise and enter into a commercial lease for the location from which it will operate the franchised business, the principal(s) typically form(s) a new single purpose entity, sometimes with minimal assets, which will enter into both the franchise agreement and lease. Accordingly, most landlords require a franchisee/prospective tenant to provide a lease guaranty, most often (but not always) from a principal of the tenant, as an inducement for the landlord to enter into the lease. From

a franchisee's/tenant's perspective, providing the landlord with a "good guy" guaranty of the entity's principal is significantly more preferable than providing a "full" individual personal guaranty for all of the obligations under the lease. A good guy guaranty is a conditional limited personal guaranty which limits the guarantor's financial liability (provided that the tenant vacates the leased premises, often in "broom clean" condition, and with defined advance notice, for all rent and additional rent through the agreed-upon surrender date).

### Rights of Transfer and Assignment

From a franchisee's/tenant's perspective, the ability to negotiate assignment and transfer-related provisions is very important. When landlords prepare commercial leases, they often seek to require a great deal of control over when, and under what circumstances, the tenant is permitted to assign or transfer the lease. However, the franchisee/tenant will always seek to maximise the value of the franchised business, and therefore will want to negotiate the assignment/transfer-related provisions in such a way as to provide it with as much flexibility as possible. For example, franchisee counsel should seek to negotiate a provision that will permit the tenant to assign the lease to the franchisor or any of its affiliates, or to any "approved" existing or new franchisee of the franchisor, without having to obtain the "consent" of the landlord.

Franchisee counsel should also seek to negotiate a provision that if the new tenant (assignee) provides the landlord with a good guy guaranty (in the same form provided by the existing guarantor) with the guarantor having a net worth that is at least as much as the existing guarantor, the landlord will then release the existing guarantor from liability following the effective date of the lease assignment. In any of the above circumstances, the existing franchisee/tenant should be released from liability under the lease (and franchise agreement) as well.

### Lease Term, Options and Renewals

From a franchisee's/tenant's perspective, the expiry date of the initial lease term and all renewals should "match" exactly with the expiry date of the initial franchise agreement. As the franchisee/tenant should seek to maximise the value of the franchised business, it should negotiate a potential, total lease term, including lease options to renew the lease, which cumulatively is at least 20 years. For example, if the term of the initial franchise agreement is ten years and the franchisee has, at a minimum, either one ten-year option or two five-year options to renew the franchise agreement, the franchisee/tenant should negotiate a lease term that mirrors the initial term and renewal term(s) of the franchise agreement, and the expiry of the lease term(s) should always match the expiry dates of the franchise agreement term(s).

## California's Pay Equity Laws for 2026, and What It Means for Business

Two California statutes that took effect on 1 January 2026, SB 642 and SB 464, changed how pay is measured, how far back employees can recover, and what employers have to disclose regarding pay. If you have ever wondered whether you are paid fairly, the law now gives you more room to find out.

The wage gap is not an abstraction. It has persisted over decades and imposed distinct disadvantages on working women and their families, resulting in substantial pay shortfalls that compound over an individual's work life. According to certain published figures, white women in the United States are paid roughly 81 cents for every dollar paid to white men; for black women the figure is about 64 cents, and for Latinas about 55. Disparities based on race and ethnicity can be just as striking and detrimental – especially considering long-standing wealth disparities.

Numbers like the foregoing are the reason that California has spent a decade building one of the country's strongest equal pay regimes, embodied in laws such as Labor Code Section 1197.5, and the reason that it strengthened that regime again this year, at the very moment that federal enforcement was receding. For an employee, the practical question is narrower and more personal: what do these new and expanded provisions actually give you? The short answer is more time to bring claims, a fuller measure of what counts as pay recoverable in a lawsuit, and better information to work with.

### What Actually Changed

California passed two key bills in relation to pay equity in 2025, and both took effect on 1 January 2026. SB 642, the Pay Equity Enforcement Act, amended the state's Equal Pay Act, Labor Code Section 1197.5 and its pay transparency and salary history law, Labor Code Section 432.3.

SB 642 makes four important changes worth knowing as a California employee, as follows.

It extends the time to bring an equal-pay claim from two years to three after the last date that the cause of action occurs. It also defines when a cause of action occurs in a broad, employee-friendly manner. This includes when any of the following occur:

- an alleged unlawful compensation decision or other practice is adopted;
- an individual becomes subject to an alleged unlawful compensation decision or other practice; or
- an individual is affected by application of an alleged unlawful compensation decision or other practice, including each time wages, benefits or other compensation are paid, resulting in whole or in part from the decision or other practice.

Further, as long as you bring the claim within three years of the last date that a cause of action occurs, such as the last time you receive a discriminatory paycheck or other form of compensation, you can now obtain relief for lost compensation going back *six years*.

SB 642 also redefines "wages" to include "all forms of pay, including, but not limited to, salary, overtime pay, bonuses, stock, stock options, profit sharing and bonus plans, life insurance, vacation and holiday pay, cleaning or gasoline allowances, hotel accommodations, reimbursement for travel expenses, and benefits". This means that a sex/gender-based, race-based or ethnicity-based differential in any one of these areas can potentially give rise to a claim.

Furthermore, SB 642 replaces "opposite sex" with "another sex", ensuring that the law's protections apply to non-binary workers and to gender identity and expression. Likewise, it incorporates by reference the definition of "sex" from Cal Govt Code 12926 (r), which encompasses gender identity and expression as well as pregnancy, childbirth, breastfeeding and related medical conditions.

Moreover, SB 642 refines and strengthens the requirement for employers to post a good-faith pay range for a position, by now requiring "a good-faith estimate" of the range that the employer expects to pay upon hire.

SB 464 amends Cal Govt 12999 as of 1 January 2026, and then repeals and replaces Govt Code 12999 as of 1 January 2027. The bill is aimed at employers, but it matters to employees' compensation by enhancing

existing pay reporting requirements designed to foster greater pay equity. It turns the annual pay-data report into a tool that the state's Civil Rights Department uses to find pay disparities, and it makes the penalties for failing to file mandatory rather than optional. The information that your employer reports does not sit in a drawer; it goes to the same division that investigates discrimination and enforces equal-pay law.

### You Can Now Recover Lost Wages Going Back Six Years

SB 642 lets you recover for the entire period that an unequal-pay violation persisted, up to six years, and it treats every discriminatory paycheck as a fresh violation.

That distinction is the heart of the change. Under prior formulations, a pay decision made years ago could be out of reach even though the employee continues to experience unequal pay. Under the bill, each paycheck issued under a discriminatory policy or practice restarts the clock, so a gap that has quietly persisted does not become untouchable in a lawsuit simply because it began long ago. The clock does not run out on your claims until three years after:

- your employer ends the discriminatory practice and begins paying you fairly; or
- you leave your employment.

It is worth looking at an example of how this could play out in practice. Suppose that two employees of different genders do substantially similar work under similar working conditions, and one is paid USD15,000 a year less than the other for reasons that have nothing to do with seniority, merit or any lawful non-discriminatory factor. Over six years, that amounts to USD90,000 in unpaid wages, before the law's provisions for liquidated (double) damages, interest and other relief are even considered.

This example illustrates the scale and impact of the law, not an automatic result: the disparity has to be proven, and the employer's defences still apply. However, it explains why a difference that looks small on a single paycheck is not small over time – and this is the case for an individual worker. If the employer adopts a similar discriminatory practice towards a large number of employees, when multiplied out, the losses and potential recoveries can reach many millions of dollars.

### Your Bonus and Your Equity Count, Not Just Your Salary

For equal-pay claims, SB 642 now defines "wages" to reach nearly all compensation: bonuses, profit-sharing, stock, stock options and restricted stock units, allowances and most benefits – not base salary alone.

This closes a gap that has long hidden real disparities. Two employees can carry nearly identical salaries while a discretionary bonus or an equity grant stacked in favour of members of one gender opens a six-figure compensation difference between them. A comparison that looks only at base pay would show a false parity that does not exist. The point often lands hardest in the technology sector, where so much compensation arrives in the form of stock. This should not give employers licence, for example, to bestow sweetheart compensation deals on white men while withholding them from similarly situated members of other groups.

The authors' own work in the sector, including a USD19.5 million settlement with Qualcomm on behalf of roughly 3,300 women in STEM, turned on exactly this principle: pay has to be compared in full.

### Pay Must Be Based on Non-Discriminatory Factors That Cannot Include Prior Salary or Salary History

For several years, California has barred employers from setting your starting pay based on your salary history. See Cal Labor Code Sections 1197.5 (a)(4) and 432.3 (a). Indeed, to ensure compliance, employers are prohibited from even seeking salary history information from applicants. See Cal Labor Code Section 432.3 (b). These provisions are based on the long-standing recognition that reliance on compensation history can often serve to incorporate and perpetuate past disparities. If your current pay was built on what you earned at a prior job, that history may be carrying an old disparity forward into your present salary. Instead, your pay must be based on your qualifications, experience and what you actually do in your job.

This is the primary theory at issue in *Jong v Apple*, an ongoing class action which alleges that, even after it

became illegal to do so, Apple continued to enquire about applicants' prior pay under the guise of their compensation expectations; it then used this information to set starting salaries. This practice allegedly perpetuated past pay disparities and resulted in lower pay rates for women than for men who performed substantially similar work. In January 2025, a court largely allowed the claims to proceed.

### Two More Changes

SB 642 extends equal-pay protection to non-binary workers, and it requires employers to be honest in what they post.

The law used to speak of the "opposite sex", a framing that left gender-diverse workers in an uncertain position. It now reaches pay disparities measured against "another sex", and against gender identity and expression.

Separately, the salary range that an employer lists in a job posting must be a genuine good-faith estimate of what it expects to pay *upon hire*. A range so wide that it discloses almost nothing, such as the familiar "USD90,000 to USD250,000" posting, no longer satisfies the law. It is not sufficient to post a broad range generally associated with a position as opposed to the projected starting pay.

### The Honest Part: A Pay Gap Alone Is Not Proof

A difference in pay, standing by itself, is not unlawful. The law asks whether that difference can be explained by common non-discriminatory factors.

This is the caveat that no responsible discussion should omit. If an employee proves that they suffer from a pay gap as compared to a similarly situated employee of a different sex/gender, race or ethnicity, an employer is still entitled to justify that pay difference as being the result of legitimate non-discriminatory factors. It can do show by showing that the difference stems from a bona fide seniority system, a merit system, a system that measures the quantity or quality of work, or another genuine factor other than sex/gender, race or ethnicity – such as education, training or experience – that is job-related and consistent with business necessity. SB 642 did not abolish those defences; thus, a pay differential does not, by itself, establish a case. It is a reason to look closely, with advice specific to your situation, as to whether the other employee is performing substantially similar work to you under similar conditions and whether there is some other legally acceptable justification for the difference. No worker should assume that a disparity is unlawful, or lawful, without an individualised legal analysis.

### What to Do If You Think You Are Underpaid

If you suspect that your pay does not reflect equal work, a few concrete steps protect your position.

#### *Identify your comparators*

Note your colleagues doing substantially similar work, measured by the skill, effort and responsibility the job requires, under similar conditions.

#### *Account for all of your pay*

Compare total compensation, salary, bonus, equity and benefits, not base salary alone.

#### *Gather what you can*

Relevant evidence includes offer letters, pay stubs, bonus and equity statements, performance reviews, and job postings with their stated ranges. However, you should generally only assemble documents that are publicly available or that are provided to you in the ordinary course of applying for over-performing your job.

The law protects you from retaliation for disclosing your own wages to your employer or to other employees, discussing the wages of others, enquiring about another employee's wages, or aiding or encouraging any other employee to exercise their rights under California's Equal Pay Act. If you are fired, discriminated against, or otherwise retaliated against for exercising these rights, you may have a claim for retaliation regardless of whether or not you have a valid claim for unequal pay. See Labor Code Section 1197.5 (k).

#### *Mind the clock*

The limitations period is three years from the last violation, with potential recoveries going back up to six years. Waiting narrows your options.

*Get individualised advice*
An equal-pay analysis is fact-specific, and much of it is best done under the protection of the attorney-client relationship.

## Frequently Asked Questions

*How do I know whether I am being underpaid under California law?*
Employees should compare their total compensation to that of colleagues of a different sex/gender, race or ethnicity doing substantially similar work, then ask whether any difference rests on a lawful factor such as seniority, merit or experience. A gap that cannot be explained that way may support a claim for discriminatory pay.

*How far back can I recover for unequal pay in California?*
SB 642 allows recovery for the entire period that a violation persisted, up to six years. The deadline to file is three years from the date of the last violation.

*Do stock options and bonuses count when comparing pay?*
For claims under Labor Code Section 1197.5, "wages" do now include bonuses, stock, stock options and Restricted Stock Units (RSUs), profit-sharing, allowances and most other benefits – not salary alone.

*Is a pay gap by itself illegal?*
A pay gap by itself is not illegal. The law permits pay differences that rest on a bona fide seniority, merit or production system, or a genuine factor other than sex. A disparity is unlawful only when no such justification accounts for it.

*What if my employer set my pay using my prior salary?*
California bars employers from relying on salary history to set pay. A starting salary built on lower past earnings can carry an old disparity forward, which is one of the practices the new law and recent litigation are testing.

*Am I protected from retaliation?*
Labor Code Section 1197.5 (k) protects employees from retaliation for actions that they take in support of enforcement of the Equal Pay Act. This would include complaints about unequal pay, disclosures or discussions about pay, enquiring about other employees' pay, and aiding or encouraging other employees with potential equal pay claims. Other provisions of the Labor Code, anti-discrimination laws and labour relations law may also protect employees from retaliation for making complaints or reports of pay discrimination, or for discussing pay.

### Beyond a Checklist: Understanding a Prudent Fiduciary Process Under the Department of Labor (DOL)'s Six Proposed "Safe Harbour" Factors

The Employee Retirement Income Security Act of 1974 (ERISA) governs employer-sponsored 401 (k) plans and the fiduciaries tasked with administering and overseeing those plans. In the 50 years since ERISA's enactment, the landscape has shifted from one primarily characterised by defined benefit pension plans to one dominated by defined contribution 401 (k) plans.

401 (k) plan fiduciaries are charged with overseeing and monitoring the investment options and service providers made available to plan participants. Often referred to as the "highest duties known to law", ERISA holds plan fiduciaries to the utmost standards of prudence and loyalty. On prudence, ERISA Section 404 (a)(1)(B) states that fiduciaries must discharge duties "with the care, skill, prudence, and diligence under the circumstances then prevailing that a prudent man acting in a like capacity and familiar with such matters would use in the conduct of an enterprise of a like character and with like aims". ERISA does not, however, articulate what, precisely, plan fiduciaries must do to satisfy this "prudent expert" standard. However, for over 30 years the DOL has maintained that fiduciaries should evaluate whether the investment would be expected to provide a plan with a lower rate of return than available alternative investments with commensurate degrees of risk or riskier than alternative available investments with commensurate rates of return. If so, the investment will not be prudent. See Department of Labor Interpretive Bulletin 94-1 (23 June 1994).

The DOL's recently proposed "safe harbour" regulation addressing ERISA's fiduciary duties in selecting investment alternatives represents a significant development in defined contribution plan governance. The proposal seeks to establish a process-based safe harbour for fiduciaries selecting investments for participant-directed plans, including investments containing alternative assets such as private equity, private credit, real estate, infrastructure, commodities and potentially cryptocurrency.

Unlike mutual funds, these types of alternative investments are not subject to the same registration requirement or the regulatory regime of the federal securities laws. Because of that, these investments historically have been available only to sophisticated investors who can properly assess and understand the risks and have sufficient assets to bear the risk of financial loss.

The DOL's proposal could dramatically alter this longtime dynamic, marking the first time these alternative investments could be offered entirely to a market of investors. Instead of limiting sophisticated and risky investments only to sophisticated investors able to bear the risk, plan fiduciaries could make these alternative investments available to every participant in the 401 (k) plan. The amount of money at stake is staggering, and, if passed, plan fiduciaries should expect an onslaught of pressure from those who stand to benefit financially.

At first glance, the proposal appears to offer fiduciaries a more navigable roadmap for satisfying ERISA's prudence obligations. The DOL identifies six non-exclusive factors that fiduciaries must evaluate in order to obtain a presumption of prudence under ERISA Section 404 (a)(1)(B). However, fiduciaries should resist the temptation to view the proposal as a simplified compliance exercise or litigation shield that can be achieved through a superficial checklist approach.

In practice, the proposed framework sets the floor for fiduciary process. Each factor requires nuanced judgement, detailed market analysis and ongoing monitoring that many committees may underestimate. It effectively acknowledges what ERISA litigators and courts have emphasised for decades: prudence is not simply checking boxes off a list – rather, it is the product of a rigorous, well-informed and diligent fiduciary process.

The DOL's proposal does not lower fiduciary risk. Instead, it formalises expectations for a robust governance framework around investment selection and monitoring.

## The Changing Retirement Plan Market Landscape

The proposed regulation arrives at a time when the retirement marketplace is facing the potential for significant change in retirement plan investments. As private market sponsors continue searching for access to defined contribution capital, there has been a rise in managed accounts, private equity, annuities and so-called "personalised" retirement solutions being pitched as alternative investment options for plan participants.

The DOL's proposal should not be read as a signal that fiduciaries should embrace such alternatives casually. Indeed, many fiduciary committees already struggle to maintain consistent monitoring procedures for traditional fund line-ups on a plan. Sometimes, these committees attach too much importance to blindly going through the motions, repeatedly checking the same boxes. Many are under the illusion that being wedded to habit, rather than devotion to a prudent fiduciary process, satisfies their duty. However, under the DOL's proposal, many fiduciaries evaluating more complex strategies will need enhanced governance structures, deeper investment expertise, outside consultants, revised investment policy statements, more sophisticated monitoring metrics, and substantially expanded documentation practices.

The DOL's proposal repeatedly emphasises analytical rigour, comparison against similar alternatives, independent valuation methodologies, liquidity risk assessment and meaningful benchmark construction. Analysing each proposed factor individually, and certainly taken together as a whole, the burden associated with satisfying the proposed safe harbour is considerably greater than some may appreciate.

## Assessing Performance

"The fiduciary must appropriately consider a reasonable number of similar investment alternatives and determine that the risk-adjusted expected returns of the designated investment alternative, over an appropriate time horizon and net of anticipated fees and expenses, furthers the purposes of the plan by enabling participants and beneficiaries to maximise risk-adjusted return on investment, net of those fees and expenses."

The first factor requires fiduciaries to decide how much risk and volatility they want to expose their employees to. The lower the risk, the lower potential for return; the higher the risk, the higher potential for return. Therefore, fiduciaries should evaluate an investment's risk-adjusted performance net of fees as compared to a reasonable number of similar investment alternatives. This emphasises the critical role that performance plays when evaluating plan investment options. The purpose of a 401 (k) plan, after all, should be to grow investments into a retirement nest egg for employees while sparing them the stress of extreme up-and-down volatility.

The key here will be diligent fiduciary rigour in evaluating a number of undefined metrics. While the specific metrics will vary from plan-to-plan and investment-to-investment, a few in particular stand out.

- First, creating objective metrics through which fiduciaries can determine which investment alternatives are "similar" to the one under consideration.
- Second, determining which method of calculating risk-adjusted returns applies best to the given investment type.
- Third, determining the appropriate time horizons by which the fiduciaries will evaluate performance. The DOL currently requires plan fiduciaries to disclose investment returns for one-, five- and ten-year periods in annual participant disclosures. See 29 CFR Section 2550-404a-5 (d)(1)(ii)(A). Presumably, this would be a minimum expectation for the time horizons by which fiduciaries evaluate historic performance, though it may make sense to include additional performance periods depending on the investment type.

Within each of these three illustrative examples there are myriad considerations that fiduciaries must consider. Fiduciaries therefore must establish and document their process and the rationale for *why* a selected investment's expected risk-adjusted return profile is superior relative to available alternatives.

Furthermore, the values of certain asset classes, such as commodities, options and cryptocurrencies, can change in the blink of an eye, and wipe out an entire portfolio without warning. Unless plan fiduci-

aries build adequate guardrails to deal with extreme volatility, participants exposed to that risk could find themselves on the wrong end of market swings.

This obligation will likely require many fiduciary committees to engage deeply with conflict-free investment professionals with specialised expertise when evaluating non-traditional products. Ultimately, though, the DOL makes clear that fiduciaries cannot disregard red flags in performance simply because a strategy is marketed as innovative or diversified.

### Fee Analysis

"The fiduciary must consider a reasonable number of similar alternatives and determine that the fees and expenses of the designated investment alternative are appropriate, taking into account its risk-adjusted expected returns, and any other value the alternative brings to furthering the purposes of the plan. For this purpose, 'value' includes any benefits, features, or services other than risk-adjusted returns net of fees."

The DOL's proposed safe harbour reiterates that fiduciaries must consider the fees and expenses of investments in the plan line-up. While not obligated to select the cheapest available investment, fiduciaries must be able to articulate and justify what additional "value proposition" the higher-cost investment alternative provides.

For example, if an actively managed strategy charges more than a passive alternative, the committee must evaluate what extra benefits warrant the extra costs. This may require investigating issues such as:

- whether historical alpha generation is sustainable;
- whether diversification characteristics improve participant outcomes;
- whether the manager's process has remained consistent; and
- whether historic performance is actual or the result of hypothetical modelling.

Similarly, the proposal's discussion of share classes underscores that fiduciaries cannot get so in the weeds that they overlook common sense. The DOL is clear that selecting a more expensive share class when an identical lower-cost option exists "demonstrates imprudence".

Most alternative investment products charge two types of fees: an investment advisory fee as a percentage of a fund's net assets and a performance fee based on a percentage of the fund's profits. This structure is typically referred to as "2 and 20", a 2% investment advisory fee and a 20% performance fee. Historically, performance fees could only be assessed against investors with substantial assets. Most participants would not qualify.

Fiduciaries will need to embrace a new set of issues that performance fees pose. Will participants understand how performance fees work? How are they calculated? Is the fee based on all gains or just gains above a threshold/benchmark? Is there a high watermark – ie, must the fund recoup past losses before it can begin calculating performance fees? Participants may not understand these concepts or how they work. Disclosure that the average person can understand will be critical to addressing these issues.

The proposal ultimately *increases*, not decreases, expectations regarding the process that fiduciaries use to evaluate fees and the rationale used to justify any additional expenses. Fiduciaries who cannot clearly explain the basis for an investment's total economic cost structure should not feel "safe" within the proposed "safe harbour" framework.

### Liquidity Analysis

"The fiduciary must appropriately consider and determine that the designated investment alternative will have sufficient liquidity to meet the plan's anticipated needs at both the plan and individual levels."

Liquidity may emerge as one of the most operationally challenging aspects of the proposed rule. Many alternative investment funds own non-public investments that cannot be readily disposed of like a stock traded on an exchange. Such funds hold an abundance of cash on hand, and therefore lack the liquidity that many plan participants have come to expect with publicly traded mutual funds.

A participant's access to their retirement savings may be limited by the fund's redemption policies. Redemption policies for these funds may permit monthly, quarterly or annual redemptions. Others may allow redemptions only when the fund's manager, in their sole discretion, allows it. Often, alternative investment funds may honour redemptions not with cash but with the securities in the portfolio which, themselves, may be illiquid. Under this backdrop, fiduciaries must give consideration to the liquidity needs of participants who experience a financial crisis, retire or change employment, and to beneficiaries of a participant who passes away.

It remains unclear whether illiquid investment alternatives will be asked to prepare liquidity risk management programmes that mirror those of registered funds, or whether fiduciaries will instead draw on bargaining power to negotiate certain key provisions from Rule 22e-4 of the Investment Company Act of 1940, such as limiting investment in illiquid assets to 15% or less, or to enter into separate agreements with a fund's manager (also known as side letters) that allow plan participants special redemption rights.

This requirement creates a substantial practical challenge for many committees. Liquidity risk management involves highly technical concepts that many fiduciaries lack the expertise to evaluate. As a result, one anticipated outcome of the proposal is greater fiduciary reliance on outside investment professionals with specialised expertise. Even then, fiduciaries retain oversight obligations and must document both the process and rationale for their conclusion.

### Valuation Risk Creates Significant Exposure

"The fiduciary must appropriately consider and determine that the designated investment alternative has adopted adequate measures to ensure that the designated investment alternative is capable of being timely and accurately valued in accordance with the needs of the plan."

Defined contribution plan fiduciaries should expect regular account valuation, daily transactions and transparent, conflict-free pricing. Because real estate funds, hedge funds and private equity funds hold hard-to-price assets, plan fiduciaries will need to familiarise themselves with and periodically monitor a fund's valuation process to ensure a timely and fair valuation of the portfolio.

The DOL's proposal reflects growing regulatory concern regarding conflicts in private market valuation practices. Fiduciaries, then, must engage in rigorous scrutiny to ensure an independent, conflict-free valuation process. How does a plan assign a fair value to an asset that is not traded on a recognised exchange or whose trading has been suspended? How does a plan assign a fair value to a bond that is in default? What steps are the plan's fiduciaries taking to ensure that the private fund manager has adequate procedures in place that fairly value the assets in the fund? Fiduciaries must be able to answer these, and more, questions regarding the valuation of plan investments.

Failure to do so evidences an imprudent fiduciary process. For example, under the DOL's proposal, funds managed by an entity that can purchase private assets from an affiliate using proprietary valuation methods would not meet the requirements of the proposed "safe harbour". A fiduciary committee that cannot explain how illiquid assets are valued may struggle to defend the prudence of selecting those investments.

### Performance Benchmarking

"The fiduciary must appropriately consider and determine that each designated investment alternative has a meaningful benchmark and compare the risk-adjusted expected returns, net of fees, of the designated investment alternative to the meaningful benchmark. The proposal defines 'meaningful benchmark' for this purpose as 'an investment, strategy, index, or other comparator that has similar mandates, strategies, objectives, and risks to the designated investment alternative.'"

The investment adviser of an investment fund charges an investment advisory fee on the premise that it will beat an identified benchmark (eg, S&P 500, FTSE Narieit, LIBOR). If a plan intends to pay these fees, fiduciaries should select and retain an asset that beats its benchmark; otherwise, the plan is not getting value for its money. Prudent selection and evaluation of investment benchmarks are critical to evaluating fund

performance. Poorly chosen benchmarks can obscure underperformance or exaggerate success.

The DOL's proposal comes just as the Supreme Court gears up to weigh in on the much-debated "meaningful benchmark" standard in *Anderson v Intel Corp Investment Policy Committee*.

In *Anderson*, the Ninth Circuit held that to plead fiduciary imprudence "based on a fiduciary's decision to make one investment rather than an alternative" plaintiffs must provide a "sound basis for comparison" – ie, a "meaningful benchmark". See *Anderson*, 137 F4th 1015, 1022 (9th Cir 2025), cert granted, 223 L Ed 2d 553 (16 January 2026). The Ninth Circuit went on to explain that meaningful benchmarks are those that have similar aims, risks and potential rewards. Id 1023. This is consistent with DOL guidance that requires fiduciaries to "tak[e] into consideration the risk of loss and the opportunity for gain... compared to the opportunity for gain... associated with reasonably available alternatives with similar risks". See 29 CFR Section 2550.404a-1 (b)(2)(i).

The Supreme Court will now take up the case to determine whether pleading a "meaningful benchmark" is required in fiduciary prudence claims. See *Anderson*, *Petition for Writ of Cert*, *Anderson*, 2025 WL 2993964, at *i (US 20 October 2025) (No 25-498).

Regardless of the outcome in *Anderson*, one thing is clear. Plan fiduciaries can no longer treat benchmarking as a routine reporting exercise. Benchmarking must be treated with the same rigour and scrutiny as any other central component of fiduciary prudence analysis. Accordingly, fiduciaries should expect to thoroughly evaluate benchmarks and document their rationale for selecting appropriate investment benchmarks.

### Complexity

"The fiduciary must appropriately consider the designated investment alternative's complexity and determine that she has the skills, knowledge, experience, and capacity to comprehend the designated investment alternative sufficiently to discharge her obligations under ERISA and the governing plan documents or whether she must seek assistance from a qualified investment advice fiduciary, investment manager, or other individual in evaluating the designated investment alternative."

The final factor – complexity – arguably underlies every part of a prudent fiduciary process. Many alternative investment products pursue highly complex investment programmes. Terms such as "long/short", "market neutral", "risk arbitrage" and "leveraged portfolio" become part of the lexicon.

Fiduciaries are expected to evaluate plan investments with the same skill and expertise that industry professionals "familiar with such matters" would use when overseeing "an enterprise of a like character and with like aims". See 29 USC Section 1104 (a)(1)(B). For many retirement plans, this means the skill and expertise expected of an investment professional tasked with overseeing several billion dollars in assets under management.

With alternative investments pushing to gain access to retirement plan dollars, scrutiny of fiduciary knowledge and expertise becomes even more critical. The DOL aptly recognises that some investments may exceed the practical competence of typical plan fiduciaries, especially where fiduciary committees are comprised of internal employees whose primary responsibilities are unrelated to sophisticated investment analysis.

The proposal's managed account example is particularly instructive. The DOL concludes that fiduciaries act imprudently when they fail to understand how a complex service operates and therefore cannot provide the information necessary for participants to receive its intended benefits.

However, the foregoing principle extends well beyond managed accounts. Plan fiduciaries cannot rely on superficial familiarity with investment terminology. Under the DOL's proposal, fiduciaries must understand the mechanics of analysing:

- investment objectives and how the manager intends to pursue them;
- whether the fund concentrates its investments in a particular asset;
- how much leverage the fund intends to use;

- how volatility can affect performance;
- the level of risk associated with the product and the maximum risk of loss; and
- other considerations, including risk-adjusted investment performance, fee structures that may include performance fees, liquidity constraints, valuation methodologies and benchmark construction.

Introducing complex alternative investments such as cryptocurrency exposure, multi-layered option and futures strategies, or private equity structures pushes most plan fiduciaries far beyond the limits of their expertise. Accordingly, plan fiduciaries should think carefully about whether they have the ability to prudently manage a plan including such investments in the line-up.

### The Impact of the DOL Proposal in a Post-Chevron Deference Era

The ultimate impact of the DOL's proposal, if adopted, remains unclear. The proposal arrives during a period of major administrative law uncertainty following the Supreme Court's decision in *Loper Bright Enterprises v Raimondo*, 603 US 369, 412 (2024).

Historically, courts often afforded considerable deference to agency interpretations, such as the DOL's interpretations of ERISA fiduciary obligations. In *Loper Bright*, however, the Supreme Court overruled the long-standing *Chevron* doctrine of deference to agency interpretations. Id at 412. This decision significantly alters the regulatory landscape for federal agencies, including the DOL.

Here, the reduction in agency deference makes it difficult to predict the ultimate impact of the DOL's proposal. Different courts may reach different conclusions regarding how, or whether, to utilise the DOL's proposed "safe harbour" framework when evaluating fiduciary conduct. Moreover, administrations change, and a future administration may de-emphasise the DOL's proposal, materially amend it or scrap it all together.

### Conclusion

The DOL's proposed fiduciary safe harbour marks a significant development in ERISA fiduciary governance. While the proposal provides a structured framework for evaluating plan investment options, it does not create a one-size-fits-all fiduciary "checklist". On the contrary, the DOL's proposal emphasises that fiduciary prudence requires diligent, thorough, rigorous and ongoing investment analysis across multiple dimensions.

Defined contribution plans are increasingly becoming the central retirement savings vehicle for American workers. Simultaneously, investment products are becoming more complex and more difficult for typical plan participants to evaluate on their own. This makes fiduciary prudence in the selection and ongoing monitoring of plan investment options more important than ever.

Against this backdrop, ERISA fiduciaries should approach the DOL's proposed framework as one that clarifies the need for sophisticated oversight of increasingly sophisticated investment options. Otherwise, plan fiduciaries may find themselves well outside the safety of the proposed "safe harbour".

## Market and Legal Trends for Doing Business in Georgia 2026

### *Introduction*

The interests of consumers and businesses are often at odds. Alarmed by its lead position on a Judicial Hellholes® report, Georgia recently took significant steps to prioritise business interests in litigation. As a result of the newly enacted tort reform measures, Georgia no longer appears on the list. But, as is also often true, the proverbial pendulum has a tendency to swing wide in either direction before settling somewhere in between the extremes.

Specifically, significant tort reform changes – including allowing parties to split trials into liability and damages phases, limitations on damages, and heightened requirements for negligent security claims – benefit both businesses and property owners by theoretically decreasing the risk of large jury verdicts. Similarly, changes to the Georgia corporate code have increased protections for directors and officers through a broader exculpation statute, expanded the jurisdiction of the State-wide Business Court ("Business Court"), and increased ownership requirements for certain shareholder derivative lawsuits. On the other hand, meaningful reform of the Property Owners' Association Act to benefit homeowners is also afoot. New laws seek to safeguard residential property owners by increasing transparency, accountability and due process. Other developments targeting consumer protection include potential liability for negligent data breach claims and requiring businesses to comply with AI guidelines. Below, we dive deeper.

### *Georgia Tort Reform Act of 2025: where are we?*

Georgia tort reform seeks to reduce litigation costs, deter litigation abuse and decrease so-called nuclear jury verdicts. The promised benefit from the litigation is the stabilisation of insurance costs. Whether the changes will deliver on the promise will depend on how the courts explore, test and interpret the new laws.

- Adjustments to medical damages: one of many insurance-friendly aspects of the tort reform is that it significantly limits special damages for medical and healthcare expenses. It is now up to the jury to determine the "reasonable value" of necessary care, treatment or services, based on the actual amount charged and the amount necessary to satisfy such charges with the plaintiff's health insurance, regardless of whether the policy will be used and, apparently, without regard to the carriers' subrogation rights against their insureds. This is a substantial departure from Georgia's past implementation of the collateral source rule, which permitted plaintiffs to submit their entire medical bill as evidence, but barred defendants from introducing evidence of payments or benefits the plaintiff received from third parties, such as insurance companies. Now, the jury will be able to assess the plaintiff's actual out-of-pocket expenses, increasing transparency and, thus, likely limiting the award for damages. The premise, which may or may not be true, is that insurance companies raised premiums because of big verdicts.
- Limitations on non-economic damages: Georgia Senate Bill 68 limits the scope and timing of

arguments to the jury, and allowable evidence, regarding certain damages, commonly known as pain and suffering. Section 9-10-184 of the Official Code of Georgia Annotated (O.C.G.A.) defines non-economic damages as those recoverable in tort for bodily injury or wrongful death, and for physical or emotional pain and suffering, loss of enjoyment of life, loss of consortium, and injury to reputation. Now, neither party has the opportunity to argue the worth or value of non-economic damages prior to the close of evidence. With this, attorneys entitled to opening and concluding arguments, pursuant to O.C.G.A. Section 9-10-186, face an additional limitation. Specifically, they must argue the same worth or monetary value of non-economic damages in both arguments. Furthermore, this argument must be "rationally related" to the evidence of non-economic damages. However, nowhere in the statue is "rationally related" defined, making it difficult for attorneys to know what evidence they are permitted to reference. This is a corporate (insurance) friendly statute intending to prevent anchoring tactics that encourage a jury to determine the monetary value of pain and suffering by referring to the value of famous works of art, athletes' salaries or other factors far removed from the claim.

- Trial bifurcation: the statute permits any party to a wrongful death or bodily injury case to elect, via a written demand prior to the entry of the pretrial order, to have the fault of each defendant determined before considering the damages to be awarded. Bifurcation is mandatory unless the other party objects and the court determines that the amount in controversy is less than USD150,000, or where the claimant, in very limited circumstances, would be likely to suffer distress by having to testify twice. In a bifurcated trial, if one or more defendants are determined to be at fault, the trial recommences for a determination of compensatory damages. If compensatory damages are awarded, the trial may recommence for a determination of punitive damages or liability for an amount of attorney fees or other litigation expenses. Bifurcation is thought to be business-friendly because the defendant's liability is determined before the jury hears more emotional testimony. Bifurcation also makes litigation more expensive for the plaintiff because the trial is longer. And juries do not want to stay for additional litigation. It is too early to see the impact in Georgia. Studies elsewhere have shown that defence verdicts are more likely, but that juries that have already determined liability may tend to award higher damages against the remaining defendants.
- Third-party litigation funding: a consumer-friendly change caused by the tort reform governs third-party litigation funding. Third parties providing litigation funding are bound by new guidelines, all of which are geared toward consumer protection. Third parties must register as litigation financiers with the Georgia Department of Banking and Finance, which will oversee the new process. One qualification for these litigation financiers is that the individual or entity cannot be associated with a hostile foreign adversary. Litigation financiers must utilise litigation financing agreements going forward. Numerous requirements were created for these agreements – namely, a pre-drafted set of disclosures that identifies a consumer's right to cancellation, the maximum amount the litigation financier may receive, the litigation financier's inability to make decisions related to the litigation, and the consumer's right to change legal representation. A violation of any of these new rules regarding litigation funding agreements renders the agreement void and unenforceable.
- Negligent security claims: in reaction to the growing number and size of jury verdicts against property owners and occupiers, and several appellate decisions that decreased the likelihood of summary judgment, Georgia enacted legislation to make it much harder to hold an owner or occupier accountable for injuries sustained on their premises as a result of wrongful conduct by a third party. Plaintiffs now face heightened foreseeability and prior knowledge requirements, as well as other limitations on bringing such a claim. A person may not bring a negligent security claim if they were trespassing, or intended to or were committing a crime, if they were injured on a single-family residence, or if they were injured by either a tenant or the guest of a tenant and eviction proceedings had been initiated against such tenant. Furthermore, owners and occupiers are protected by a rebuttable presumption that an apportionment of fault is unreasonable if they are assigned a greater per-

centage of fault than the third party. They also have a defence from liability if reasonable efforts were made to contact law enforcement, alerting them of the imminent wrongful conduct. The sweeping changes brought by this new law should dramatically curtail negligent security claims in Georgia.

### *Attracting businesses to Georgia through Corporate Code changes*

On 1 July 2026, numerous changes took effect regarding corporate internal governance and shareholder litigation. Each of these changes will add to the protections Georgia law provides for corporations and their directors and officers.

- Director and officer exculpation: previously, Georgia's exculpation statute allowed companies to protect directors but not officers from certain legal and financial liability. Following the trend of other states and the Model Business Corporation Act, Georgia extended this statute to enable companies to provide for both director and officer exculpation.
- Expansion of the Business Court: the Business Court, which is often preferred by companies for its expertise and expediency, may see an increase in cases on its docket after these changes take effect, as the subject matter jurisdiction of the Business Court has been expanded to include internal entity claims. In addition, companies can now mandate, via a forum selection clause in their by-laws or Articles of Incorporation, that certain claims be heard in the Business Court.
- Derivative standing: certain publicly traded companies can now require shareholders to meet an ownership threshold of up to 1% of outstanding shares to have derivative standing.
- Disclosure-only claims: these are no longer considered a substantial benefit to the corporation for purposes of awarding attorney fees to plaintiffs in derivative proceedings. This change removes the economic incentives previously associated with supplemental disclosure cases.
- Books and records requests: the definition of a proper purpose was restricted to exclude books and records requests made by shareholders involved in derivative proceedings or other civil litigation against the corporation. Relatedly, if there is a finding that the corporation denied a shareholder's inspection request in good faith, courts now have discretion to grant or deny a successful shareholder's request for attorney fees.

### *Striking a balance between HOA accountability and liability*

The boards of homeowners associations (HOAs) generally avoided judicial scrutiny so long as they exercised their authority in a "procedurally fair and reasonable" manner and if their substantive decisions were "made in good faith, and [were] reasonable and not arbitrary and capricious". However, after hearing of abuses of power, the Georgia legislature recently engaged in significant HOA reform. Given this trend, developers of planned communities, HOAs and property management firms should consider the cumulative impact of HB 220 (2024), the Georgia Property Owners' Bill of Rights Act (SB 406) and the Georgia HOA Accountability and Community Empowerment Act (HB 62).

- HB 220 (2024): HB 220 went into effect on 1 July 2024 and introduced immediate changes, including a mandatory ten-day written notice before fines or liens can be imposed for violations, retained voting rights for homeowners who are delinquent only in fines (not assessments), and mandatory annual HOA meetings with financial disclosures. Also, when seeking injunctive relief, HOAs need not utilise or exhaust any other available remedies once the ten-day notice period expires.
- SB 406: Georgia legislators had three goals in mind when drafting SB 406, all geared towards providing safeguards for homeowners: transparency, accountability and due process. SB 406 will increase transparency when it goes into effect on 1 January 2027, because HOAs looking to collect fines or fees from homeowners will be required to register annually with the Georgia Secretary of State ("Secretary") and submit their governing documents. Furthermore, SB 406 creates an administrative process in an attempt to simplify the settlement of disputes between HOAs and homeowners. Instead of hiring an attorney and filing suit, a homeowner may file a complaint directly with the Secretary within 180 days of the HOA's alleged misconduct. Filing the complaint stops the HOA from collecting disputed fines or fees from

the homeowner. A hearing officer will be appointed and will have the discretion to order a hearing with appropriate notice. The hearing officer will issue their findings and conclusions, and the homeowner and the HOA will have 15 days to comply. Appeals may be made to the magistrate court if the claim is within the jurisdictional amount, or to the superior court in all other cases. Finally, SB 406 strengthens due process by increasing the notice requirement for foreclosure liens from 30 days to 60 days and doubling the minimum delinquency amount to USD4,000, consisting only of unpaid assessments. Because filing the complaint stays collection of fines and fees, and the non-prevailing party is only required to pay USD100 to the Secretary, there is a clear potential to abuse the system. Even so, these new laws are expected to curb longstanding abuses of power.

- HB 62: Georgia's proposed HB 62 focuses on the management aspects of HOAs and highlights the importance of fairness, transparency and accountability. HB 62 increases election oversight by requiring, at a minimum, annual board elections whereby the results are filed with and certified by the Secretary. Furthermore, HB 62 promotes board accountability by requiring board members to be a resident of the community, meaning that they own a unit and list that unit address on their government-issued ID.

### *Data breaches: could your business now be liable?*

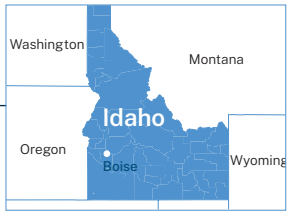
A landmark decision from 2025 will surely impact the future of Georgia data breach litigation; see *Bland v Urology of Greater Atlanta, LLC*, 377 Ga. App. 177 (2025). For the first time, a Georgia appellate court applied a common law duty of care requiring businesses to protect their customers' personally identifiable information against foreseeable cybersecurity risks. At the motion to dismiss stage, the court permitted the plaintiffs in this putative class action to proceed on their claims – namely, those for negligence and breach of an implied contract to implement data security adequate to protect the privacy of the plaintiffs' personal information.

Although this case arose in the healthcare industry, the common law duty will apply to any business facing foreseeable risk of data breaches. With data breach crime increasing globally, it will be easy for a plaintiff to plead that a business defendant knew of the importance of the private information and the consequences of a breach. Accordingly, companies should assess cybersecurity risks and implement sufficient safeguards, examine cybersecurity insurance coverages, and consider whether they can disclaim or otherwise limit liability.

### *Georgia's first swing at regulating artificial intelligence*

As of 1 July 2027, artificial intelligence (AI) operators must comply with the unprecedented SB 540 regarding AI companion chatbots ("AI companions"). There are numerous requirements aimed at protecting all consumers, such as requiring operators to disclose to users that they are interacting with an AI companion, rather than a natural person. In addition, an AI companion may not represent that it is qualified to provide professional services unless its operator is lawfully authorised to provide such services.

There are also a large number of requirements specifically protecting minors. For example, operators must take reasonable measures to prevent AI companions from discussing a list of topics that legislators identified as sensitive. To identify minor users, operators must implement and maintain age assurance methods. While employing age assurance methods, companies must minimise the collection of personal information, keep retention periods short, and refrain from selling any data collected in the process. Once a minor account is identified, there are additional account settings that must be made available to the minor and their parents, such as tools for managing screen time. The Attorney General will enforce these requirements and may do so by bringing civil actions against violators.



Similar to the Protecting Georgia's Children on Social Media Act (2024), SB 540 may face challenges when it comes to age assurance methods and potential cybersecurity risks. Regardless of the short retention periods, the onus will be on the businesses creating the AI companions to implement sufficient data security measures to protect the personally identifiable information.

### *Conclusion*

As these laws continue to go into effect, the interpretation and enforcement processes will make potential difficulties with compliance clearer and show just how far-reaching the advantages will be for both consumers and businesses in Georgia. The legislature is actively reshaping policy for the future, with an apparent goal of balancing these interests.

A final thought: business likes predictability. Changes in the law – good or bad – create unpredictability. The old adage may prove true, at least in the short term. Be careful what you wish for.

## Authors

**Tyler Anderson** is a partner with Hawley Troxell whose practice focuses on litigation and mediation at both the trial and appellate levels. He represents businesses, financial institutions and individuals in a wide range of complex disputes, providing strategic counsel and advocacy throughout all phases of litigation. His practice includes a primary emphasis on commercial litigation, banking and finance matters, construction defect claims, and employment-related disputes. Tyler has significant experience in handling sophisticated banking and financial services matters, representing lenders and financial institutions in cases involving breach of participation agreements, foreclosures, breaches of promissory notes, breaches of guaranties, and lender liability defence. He is skilled in navigating complex financial disputes and developing practical solutions that align with his clients' business objectives.

**Carsten Peterson** is a partner with Hawley Troxell whose practice encompasses a broad range of civil litigation matters, with a particular emphasis on employment law and employer defence. He regularly represents employers in claims involving employment discrimination, wrongful termination, wage and hour disputes, workplace harassment, retaliation and other employment-related matters. Carsten works closely with clients to develop practical strategies that minimise risk while addressing complex workplace issues. A significant portion of his practice is devoted to defending employers in administrative proceedings and investigations. He has extensive experience in handling claims brought under various acts and state employment and housing laws. His experience includes guiding clients through agency investigations, responding to complaints, and representing employers throughout the administrative and litigation process.

### Non-Compete and Non-Solicitation Agreements in Idaho

In 2024, the Federal Trade Commission (FTC) issued a nationwide rule that banned non-compete agreements. The rule was challenged and was blocked by federal courts later in 2024. In January 2026, the FTC clarified that it would no longer pursue a categorical national ban on non-competes and officially removed the rule from the Code of Federal Regulations. Since the nationwide ban is officially dead, non-compete agreements are governed entirely by state laws. Some states such as California, North Dakota and Minnesota have outright bans on employment non-competes. Other states, such as Colorado, Oregon and Washington (which has enacted a law for a near-total ban that becomes effective 30 June 2027 and that will also be retroactive to existing agreements), ban non-competes for workers earning below a certain state-mandated compensation level.

In Idaho, restrictive covenants, such as non-competes and non-solicitation, generally are enforceable but are "disfavoured" and must be "narrowly tailored" under Idaho law. See *Pinehaven Planning Bd v Brooks*, 138 Idaho 826, 831, 70 P3d 664, 669 (2002). A majority of the Idaho case authorities addressing restrictive covenants have dealt with them in the context of employment agreements. Historically, courts have balanced an employer's legitimate business interests and an individual's right and ability to pursue gainful employment. Restrictive covenants must be reasonable in scope and cannot be broader than necessary to protect the employer's legitimate business interests. See also Idaho Code (IC) Section 44-2701.

Idaho statutes also govern non-compete agreements. See IC Section 44-2704; this statute provides "rebuttable presumptions" that favour the enforceability of non-compete agreements involving "key employees" and "key independent contractors". A "key employee" is one that is among the highest-paid 5% of the employer's workforce. To rebut this presumption, the employee must show that they lack the ability to adversely affect the employer's legitimate business interests, such as customer relationships, confidential information, goodwill or trade secrets. For example, an employee that lacks information or knowledge about the practice, trade secrets or marketing of a business is likely not to be a key employee. In practical terms, courts are more likely to find a manager or an executive as a key employee but not a "regular" employee.

Further, a non-compete lasting no longer than 18 months after termination is presumed reasonable as to duration. Restrictions longer than 18 months generally require additional consideration beyond mere employment or continued employment. Further, a non-compete is reasonable as to geographic area if it is restricted to areas where the employee provided services or had a significant presence or influence on behalf of the employer. This means that there should be a specific mileage radius boundary from the employer's business for the new employment, or other geographic limitation. Nationwide prohibitions are not likely to be enforced, even if an employee does business throughout the country. Similarly, a restriction is presumed reasonable if it limits the employee only from engaging in the same type of employment or line of business that the employer performed while working for the employer.

The Idaho Supreme Court has not directly interpreted the rebuttable presumptions in IC Section 44-2704. However, it is clear that courts must analyse the Idaho statutes. See *Blaskiewicz v Spine Institute of Idaho, PA*, 171 Idaho 201, 519 P3d 1141 (2022). In *Blaskiewicz*, the lower court had only analysed the case under prior decisions governing non-compete agreements in granting summary judgment to the employee, finding a non-compete agreement unenforceable. The Supreme Court concluded it was "clear error" for the lower court to not address the statutes. The Court in *Blaskiewicz* concluded that there were genuine issues of material fact as to whether the non-compete agreement was void as a matter of public policy or otherwise enforceable.

No Idaho appellate court to date has issued an opinion explaining or detailing what evidence is sufficient to rebut the presumptions of enforceability. Therefore, it is a factual enquiry for a court to decide on in evaluating the evidence. What is clear, however, is that a non-compete agreement should meet the rebuttal presumptions if it is to be enforceable. The statutes also allow a court to "blue-pencil" a non-compete agreement; that is, if a restrictive covenant

is unreasonable in some respect, a court may modify the covenant to make it reasonable rather than invalidate it. However, courts will not rewrite an agreement by adding essential terms. In practice, courts are not inclined to blue-pencil an agreement.

The rebuttal presumptions in Idaho statutes technically only apply to non-compete agreements. No Idaho appellate court has analysed the statutes in the context of non-solicitation agreements related to employment. Still, a non-solicitation agreement must be narrowly tailored and limited in duration. An agreement that prohibits a former employee from soliciting all customers of a company, including those the employee did not know or work with, is subject to challenge and likely unenforceable. See *Frieburger v J-UB Engineers*, *Inc*, 141 Idaho 415, 111 P3d 100 (2005).

In the context of other types of agreements (eg, purchase and sale agreements containing non-solicitation clauses), public policy regarding the freedom to contract may be more applicable. "Freedom of contract is a fundamental concept underlying the law of contracts and is an essential element of the free enterprise system". See *Morrison v Nw Nazarene Univ*, 152 Idaho 660, 661, 273 P3d 1253, 1254 (2012).

The Idaho Supreme Court recently issued an opinion regarding how courts are to interpret what is – and what is not – "solicitation" for purposes of enforcing non-solicitation agreements. See *Insure Idaho LLC v Horn*, 572 P3d 183 (2025). Until the *Horn* decision came out, passively accepting business could be considered "solicitation". In *Horn*, the Idaho Supreme Court held that "the plain meaning of solicitation requires some overt act initiated by one party, seeking something in return from a second party". The Court went on to hold that "[t]o be clear, the mere acceptance of business, without more, does not fall within the plain meaning of solicitation; nor can a court infer solicitation from the simple communication between parties alone". Moreover, the Court held that it is unreasonable to infer solicitation from the sole fact that one accepted the business of another.

The *Horn* case is recent enough that no clarifying authority exists regarding evidence required to prove "solicitation" under the new standard. Yet, based on the Court's holding in *Horn*, a party seeking to enforce a contractual non-solicitation clause likely would have to put forth evidence (most likely, either testimony by former clients or communications between the offending party and those clients) showing, as the Court in *Horn* put it, "affirmative action that entreats, implores, pleads, or petitions for the business at issue" by the offending party. In the litigation context, the party seeking to enforce a contractual non-solicitation clause could subpoena communications and depose the former clients in an attempt to obtain such evidence (assuming it exists).

Careful consideration should be given to the likelihood of obtaining evidence consistent with the Court's holding in *Horn* – prior to filing suit. If that evidence does not exist (or it cannot be obtained despite all efforts to do so), a court could dismiss the suit and award fees to the offending party (as happened in the *Horn* case).

### Idaho Supreme Court Attorney Fees

IC Section 12-121 allows for the court, in any civil action, to "award reasonable attorney's fees to the prevailing party or parties when the judge finds that the case was brought, pursued or defended frivolously, unreasonably or without foundation". An analysis of recent Idaho Supreme Court decisions awarding attorney's fees shows the potentially expansive application of IC Section 12-121, which appellants should factor into their decision when considering filing an appeal.

*Hyde v Oxarango* concerned an appeal from the district court regarding a dispute over a family farm and the district court's order dismissing the ensuing complaint. Rochelle Oxarango, Gretchen Hyde and Dinah Reaney are sisters and owners of a family farming and ranching business that is managed in a limited partnership. Oxarango and her husband, Robert Oxarango, are general partners along with the sisters' father, James Little. Hyde and Reaney are limited partners. Hyde and Reaney sued the Oxarangos, asserting derivative and direct claims relating to breach of fiduciary duty and sought expulsion of the Oxarangos as general partners. See *Hyde v Oxarango*, Docket No 51625, 2026 WL 478542, *1 (20 February 2026).

The Idaho Supreme Court upheld the district court's decision, finding that:

- the limited partners did not plead with particularity why demand on all general partners would be futile, and thus lacked standing to bring derivative claims;
- the limited partners did not suffer any injury distinct from injuries allegedly suffered by the partnership, and thus lacked standing to bring direct action;
- the limited partners did not suffer any injury distinct from injuries allegedly suffered by the partnership, and thus lacked standing to seek expulsion; and
- appeal by the limited partners was brought frivolously, unreasonably and without foundation, and thus general partners were entitled to attorney fees and costs under statute.

In responding to the plaintiffs' appeal from the district court's grant of a motion to dismiss for failure to state a claim for relief under Rule 12 (b)(6), the Oxarangos sought attorney's fees under IC Section 12-121, asserting that "Hyde/Reaney pursued this appeal frivolously, unreasonably and without foundation". See *Hyde*2026 WL 478542, at *10. The Court set forth the standard by which it considered a ruling under IC Section 12-121:

"An award of attorney fees under Idaho Code Section 12-121 will be awarded to the prevailing party on appeal only when this Court is left with the abiding belief that the entire appeal was brought, pursued, or defended frivolously, unreasonably, or without foundation" (see *Edwards v Lane* […] 578 P3d 525, 531–32 (2025) (quoting *Severinsen v Tueller*, 174 Idaho 669, 681, 559 P.3d 771, 783 (2024)). "[W]hen a party pursues an action which contains fairly debatable issues, the action is not considered to be frivolous and without foundation" (see *Garner v Povey*, 151 Idaho 462, 468, 259 P3d 608, 614 (2011) (quoting *C & G, Inc v Rule*, 135 Idaho 763, 769, 25 P3d 76, 82 (2001)). "An award of fees under Section 12-121 is within this Court's discretion" (see *Aizpitarte v Minear*, 170 Idaho 186, 203, 508 P3d 1260, 1277 (2022) (citing *Owen v Smith*, 168 Idaho 633, 648, 485 P.3d 129, 144 (2021)). Id.

In finding that an award of fees and costs was appropriate under IC Section 12-121, the Court noted that Hyde and Reaney's arguments were poorly reasoned, and that "Hyde/Reaney failed to comply with [the] pleading requirement, and their appeal merely invites this Court to second-guess the district court's decision… as a result, we conclude that the appeal was brought frivolously, unreasonably, and without foundation". Id.

The Idaho Supreme Court used almost identical language in *Bickerstaff v Bickerstaff* in support of their decision to award attorney fees under IC Section 12-121, noting that "[a] prevailing party is also entitled to attorney fees under the statute 'if the appeal merely invites the appellate court to second-guess the trial court on the weight of evidence'" (citing *Crowley v Critchfield*, 145 Idaho 509, 514, 181 P3d 435, 440 (2007)) and that the "arguments on appeal simply asked us to reweigh evidence and second-guess the magistrate court's findings". See *Bickerstaff v Bickerstaff*, No 53588, 2026 WL 1261279, *24 (8 May 2026).

In *Spears v Antelope Mountain Resort, LLC*, family members of a deceased employee brought action for wrongful death, intentional infliction of emotional distress (IIED), and negligent infliction of emotional distress (NIED) against the employer and employer's limited liability company, following the murder of an employee by the employer's grandson who resided on the employer's property; the district court ultimately granted summary judgment in favour of the defendants, and the plaintiffs appealed. See *Spears v Antelope Mountain Resort, LLC*, 585 P3d 314 (2026). On appeal, the Idaho Supreme Court found in favour of the respondents, and held that:

- the employment relationship did not reflect the degree of custody and control quintessential to the special relationship from which a duty to aid or protect could arise, thus precluding wrongful-death claims;
- the defendants did not voluntarily assume the duty to aid or protect the employee, thus precluding wrongful-death claims;
- the defendants' purported failure to warn or otherwise protect the employee did not amount to

extreme and outrageous conduct required for IIED claims;
- there was no evidence that the defendants intended to cause family members emotional distress, precluding IIED claims;
- the defendants did not owe a duty to family members, precluding NIED claims; and
- the family members' appeal of summary judgment on IIED and NIED claims was frivolous, and thus the defendants were entitled to partial attorney fees.

In ruling on the respondents' request for attorney fees under IC Section 12-121, the Court used slightly different language in detailing the analysis that the Court undertakes in considering an award under IC Section 12-121. The Court may award reasonable attorney fees to the prevailing party upon finding that "the case was brought, pursued or defended frivolously, unreasonably or without foundation". See IC Section 12-121. In evaluating such a request, the Court considers "[t]he entire course of the litigation". See *Telford Lands LLC v Cain*, 154 Idaho 981, 993, 303 P3d 1237, 1249 (2013). "Apportionment of attorney fees is appropriate for those elements of the case that were frivolous, unreasonable, and without foundation". See *Idaho Mil Hist Soc'y*, *Inc v Maslen*, 156 Idaho 624, 632, 329 P3d 1072, 1080 (2014).

See also *Spears*, 585 P3d at 329. The Court, while acknowledging that "awarding attorney fees against a tort plaintiff carries the risk of disincentivizing victims and their heirs from vindicating their compensatory rights, deterring future negligence, and punishing tortfeasors", still found that the respondents were entitled to a partial award of attorney fees. Id. The Court noted that the "NIED and IIED claims lacked a sound legal basis", and that the Court did not believe "the district court's grant of summary judgment to Mary Russel on those claims is fairly debatable". Id. However, the Court did find "the Flaget heirs' arguments on appeal concerning the district court's treatment of the special-relationship and assumed-duty theories to be more plausible, even if unartfully presented in the briefs and at oral argument" and did not award attorney's fees for that specific portion of the appeal. Id.

In light of the decisions in *Hyde*, *Spears* and *Bickerstaff*, potential appellants should consider whether their appeals raise legitimate questions of law in disputing the decision of a lower court; otherwise, they may face significant fees under IC Section 12-121 for essentially asking the Idaho Supreme Court for a second opinion. More recently, the Idaho Court of Appeals awarded attorney's fees under IC Section 12-121 against a pro se litigant serving a unified life prison sentence for first-degree murder. See *Randall v Miller et al*, Docket No 63670, Slip Op (13 May 2026). Randall, the plaintiff, sued his former attorney, who handled a majority of the criminal defence for legal malpractice. The defence moved for summary judgment and received a favourable ruling from the district court, which was upheld on appeal.

In awarding attorney's fees, the Idaho Court of Appeals recited the language referenced above, including the statement that appellate courts do not second-guess decisions of the trial court. It is significant that the Idaho Court of Appeals is awarding fees under 12-121, and particularly more significant that it issued an award against a pro se plaintiff serving a life prison sentence. If your clients are thinking that taking up an appeal to get a second opinion is in their best interest, reasonable attorneys should have a discussion about the fee risks associated with that strategy.

## Trends and Developments

**Contributed by:**
Michael Forde, Brian O'Meara, Ellie Carey and John Ransford
**Forde & O'Meara LLP**

**Forde & O'Meara LLP** is a Chambers-recognised litigation boutique focused on complex commercial disputes. Founded by former partners of global law firms, the team has extensive experience in handling contract claims, partnership and shareholder disputes, business torts, government procurement matters, class actions, consumer protection claims, and constitutional and administrative law issues. Clients include major companies in Chicago and across the United States, as well as organisations such as the Federal Judges Association, the Illinois Judges Association, and former Chicago Mayor Rahm Emanuel. The firm has particular experience in the real estate, technology, finance, hospitality and legal industries. It regularly serves as co-counsel to leading global and national law firms, and litigates matters in state and federal courts throughout the country. The litigation practice is complemented by boutique real estate transactions and government affairs practices.

## Authors

**Michael Forde** has been a partner and co-founder of Forde & O'Meara since 2012. Prior to that, he was an equity partner at Mayer Brown LLP, where he was co-chair of the commercial litigation practice group. Michael served as a law clerk to the Honorable Charles P. Kocoras (N.D. Ill.) and Illinois Supreme Court Justice Mary Ann McMorrow. He is a member of the Lawyers' Advisory Committee to the Chancery Division of the Cook County Circuit Court.

**Brian O'Meara** is an experienced litigator with extensive state and federal trial and appellate experience. He has tried numerous cases involving a wide range of disputes, and has briefed and argued appeals in courts across the country, including the Sixth, Seventh and Ninth Circuits. Brian's practice focuses on complex commercial and financial services litigation. He has represented clients in class actions, business torts, breach of contract matters, commercial landlord-tenant disputes, and cases involving financial institutions. He also regularly handles matters arising under state and federal consumer protection statutes, including BIPA, TCPA, FDCPA, FCRA, TILA, and the Illinois Consumer Fraud Act.

**Ellie Carey** focuses on complex commercial disputes in state and federal courts, representing corporations, partnerships, LLCs and individuals. Her experience includes breach of contract, fraud, fiduciary duty, non-compete and non-solicitation disputes, defamation, trade secret misappropriation, tortious interference, class actions, wage and whistle-blower claims, public contract bids, zoning matters, real estate disputes, emergency injunctive relief, and appeals. Ellie has significant first- and second-chair trial experience, as well as extensive expertise in brief writing, complex motion practice, and electronic discovery management.

**John Ransford** focuses on complex commercial litigation in his practice. Prior to joining Forde & O'Meara, he served as a judicial law clerk to the Honorable Daniel J. Pierce and the Honorable Sanjay T. Tailor, both of the Illinois Appellate Court, First District, and to the Honorable Michael T. Mullen of the Circuit Court of Cook County. He also served as a research attorney for the Illinois Supreme Court.

### Practising in Illinois State Courts: What You Need to Know

In many states, civil procedure in state courts closely resembles that in federal courts. Illinois is not one of those states. Lawyers at global and national law firms that do not have Illinois offices but act as co-counsel with local firms frequently remark on the stark differences between practising in federal court and Illinois state courts. This article will lay out some of the more unusual aspects of practising in state courts in Illinois, particularly in Cook County.

#### *Substitution of judge*

New actions filed in Illinois' circuit courts are randomly assigned to a judge who will preside over the entirety of the case or, in some cases, the initial stages of the case. Illinois law, however, provides parties to a civil case with a statutory right to ask the court to assign a new, randomly selected judge, either "as of right" (meaning the party does not need to identify a reason for asking for a new judge) or "for cause" (meaning there is a reason why the case should be reassigned to a new judge).

The first method – substitution as of right – is the most common. Each party to a case may file a motion asserting its right to have the case reassigned to a new judge one time. This is true for each party (plaintiff or defendant) named in the original complaint, and also for parties that are subsequently added to the case. And it is true regardless of any affiliation among the parties. So, for example, if a parent company and three subsidiaries are named as defendants, each has a separate right to substitution of judge – collectively, four in total.

The ability to file a motion for substitution as of right vests once a party has filed an appearance in the case. In most situations, a judge has no discretion and must grant a motion to substitute judge as of right, with certain limitations:

- a party that previously moved for and was granted a substitution of judge as right cannot do so again;
- the motion must be presented at the beginning of a trial or hearing, and should not be made during the hearing or trial; and
- the judge to be substituted must not have made a ruling on a "substantial issue" in the case; see generally 735 ILCS 5/2-1001 (a)(2).

The statute does not define "substantial issue", but case law provides some limited guidance. Generally, a judge's rulings on matters that relate to the merits of the case (such as rulings on requests for injunctions, motions to dismiss or motions for summary judgment) are considered rulings on substantial issues, while orders that are more administrative in nature (such as setting dates for filing responsive pleadings or extending deadlines) are not. A significant caveat to the "substantial ruling" limitation is that a party that files its appearance in the case after a judge's "substantial ruling" – either because the moving party was not yet part of the case or had not yet filed its appearance (and not been found to be in default) – may still file a motion to substitute that judge as of right, and the judge must grant the motion.

It is important to note that other limitations may arise in fringe situations. The Illinois Supreme Court has not foreclosed circuit court judges from denying motions for substitution of judge as of right where doing so is necessary to protect the integrity of the court and prevent abuse or manipulation of the system, such as to prevent judge-shopping, though the precise nature of that limitation is vague. Nevertheless, circuit court judges are generally wary of denying motions for substitution of judge as right because, if it is later determined by a court of review that a circuit court judge erroneously denied such a motion, all proceedings that occurred after the denial are void, and all of the proceedings must then be re-done.

The second method of substitution of judge is "for cause". This is a less common method with a much higher standard, and is reserved for situations where a judge demonstrates actual prejudice against a party through prejudicial trial conduct or personal bias. It is not enough that a judge makes unfavourable rulings: the judge must be engaged in conduct that prevents a fair judgment in the case; see generally 735 ILCS 5/2-1001 (a)(1).

### *Scope of the attorney-client privilege*

Illinois courts apply a more restrictive test in determining whether communications in the corporate context are protected by the attorney-client privilege. In federal court, communications between all corporate employees, regardless of their role or responsibilities, and the company's counsel are protected by the attorney-client privilege as long as they are made at the direction of corporate superiors in order to secure legal advice, and the communications concerned matters within the scope of the employee's corporate duties; see *Upjohn Co. v United States*, 449 U.S. 383, 394 (1981). In Illinois, the *Upjohn* standard does not apply. Instead, courts apply the much narrower "control group" test; see *Consolidation Coal Co. v Bucyrus-Erie Co.*, 89 Ill. 2d 103, 119-120 (1982).

Under the control group test, only communications between the company's counsel and those in its control group are protected from disclosure. There are two tiers of employees who qualify as members of the control group:"(*1*) *top management who have the ability to make a final decision*; *and* (*2*) *employees who advise top management in a particular area such that a decision would not normally be made without their advice or opinion*, *and whose opinion forms the basis of any final decision made by those with actual authority*. *With respect to the second tier*, [*there is*] *a distinction between opinion and information*. *Thus*, *while employees whose opinion forms the basis of a decision are part of the control group*, *individuals upon whom* [*top management*] *may rely for supplying information are not members of the control group*" (*Doe v Twp. High Sch. Dist. 211*, 2015 IL App (1st) 140857, para 105). Furthermore, the distribution of otherwise privileged material to individuals outside of the control group destroys the privilege.

Because Illinois' control group test is much narrower, corporate clients should be advised to limit any attorney-client communications to those within the control group when there is, or might be, litigation in Illinois courts.

### *Motions to dismiss*

Illinois law provides for two types of motions to involuntarily dismiss a pleading:

- motions to dismiss under Section 2-615 of the Illinois Code of Civil Procedure ("2-615 motion") for failure to state a claim under which relief may be granted; and
- motions under Section 2-619 ("2-619 motion") to dismiss based on certain specified defects or defences.

Unlike federal court, which only requires notice pleading, Illinois is a fact-pleading jurisdiction, meaning the pleader must allege sufficient facts to support a claim or defence. A pleading does not need to rely on or cite evidence, but instead needs only to allege the facts that support a claim or defence, although the factual allegations must consist of more than mere conclusions.

A 2-615 motion tests the legal sufficiency of the pleading and asks the question: "if all the well-pleaded facts in the pleading are proved, would the pleader be entitled to a judgment in their favour?" As with federal rule 12 (b)(6), a 2-615 motion must be confined to the pleading to which it is directed and cannot rely

on or raise factual matters outside of the pleading. A court faced with a 2-615 motion construes the allegations liberally and will only grant a 2-615 motion where the pleader cannot prove any set of facts that would entitle them to a judgment. If a pleader can replead their claims with additional facts, they will generally be given a chance to do so, but courts have the discretion to allow successive amendments to defective pleadings; see generally 735 ILCS 5/2-615.

A 2-619 motion, on the other hand, raises defects or defences outside of the pleading that defeat or avoid the pleader's claims. There are several types of defects or defences that may be asserted in a 2-619 motion, including that:

- the court lacks subject matter jurisdiction;
- a party lacks capacity to sue or be sued;
- the claims raised in a pleading are being litigated by the same parties in another action;
- the claims raised in the pleading have already been adjudicated;
- the claims were not brought within the statute of limitations;
- the claims have been released, satisfied or discharged in bankruptcy;
- the claims are unenforceable under the Statute of Frauds;
- the claims cannot be brought against the moving party because they are a minor or are otherwise disabled; or
- some other affirmative matter avoids or defeats the claim, such as laches, waiver or immunity.

A 2-619 motion accepts the factual and legal sufficiency of the pleading and must show that even if the pleader is entitled to a judgment, the moving party cannot be held liable for all or a portion of the judgment. A party moving to dismiss a pleading under Section 2-619 is not confined to the allegations in the pleading and may raise factual matters outside of the pleading, provided those facts are supported by an affidavit or other evidence, and provided that the moving party is not simply contesting the factual allegations in the pleading; see generally 735 ILCS 5/2-619.

### *Deposition categories and limits*

Illinois discovery rules contain a number of relatively unusual provisions governing depositions. First, unlike the federal system, Illinois distinguishes between discovery depositions and evidence depositions. When serving a notice for deposition, the notice must identify, inter alia, "whether the deposition is for purposes of discovery or for use in evidence" (S. Ct. Rule 206 (a)).

By rule, discovery depositions are limited to three hours (as opposed to seven hours under the federal rules). However, the rule also states that a court can extend that time limit "upon showing that good cause warrants a lengthier examination" (S. Ct. Rule 206 (d)). As a general matter, courts view the three-hour limit as being geared towards personal injury cases, and will often grant additional time in complex commercial litigation.

There is no time limit for evidence depositions. Parties typically take an evidence deposition to preserve testimony for trial when the witness will be unable to attend the trial. Therefore, an evidence deposition is treated as trial testimony, and objections must be made during the deposition, or they are waived.

### *Expert reports and discovery*

Illinois generally allows broader discovery from testifying expert witnesses than the federal rules do. These differences might be a reason to be cautious in communicating with experts even in federal cases, if there is a chance of related litigation in Illinois state courts. The requirements for expert disclosures are also different. Three examples of this are as follows.

- First, under the federal rules, draft expert reports are not discoverable; see Fed. R. Civ. P. 26 (b)(4)(B); Fed. R. Civ. P. 26, Committee Notes. The Illinois rules contain no such bar to discovery of draft reports, and the broad scope of discovery allowed generally suggests that draft reports are discoverable. Often, for their mutual convenience, parties in Illinois cases will nevertheless agree that the federal rule against disclosure of draft expert reports applies.
- Second, under the federal rules, communications between an expert witness and a party's attorneys are generally not discoverable; see Fed. R. Civ. P.

26 (b)(4)(C); Fed. R. Civ. P. 26, Committee Notes. By contrast, under Illinois law, communications between attorneys and their experts are discoverable. In many cases, attorneys for the competing parties still agree to follow the federal practice.

- Third, the form of expert reports/disclosures differs between federal and Illinois practice. In the federal system, Rule 26 (a)(2)(B) contains very detailed requirements: an expert must issue a report that includes "a complete statement of all opinions the witness will express and the basis and reasons for them", "the facts or data considered by the witness in forming them", "any exhibits that will be used to summarise or support them", "the witness's qualifications, including a list of all publications authored in the previous 10 years", "a list of all other cases in which, during the previous 4 years, the witness testified as an expert at trial or by deposition", and "a statement of the compensation to be paid for the study and testimony in the case". The Illinois rule is much narrower. Supreme Court Rule 213 (f)(3) says that "upon written interrogatory", for retained experts, the party (not the expert) must identify "(i) the subject matter on which the witness will testify; (ii) the conclusions and opinions of the witness and the bases therefor; (iii) the qualifications of the witness; and (iv) any reports prepared by the witness about the case". Unlike the federal rule, there is no requirement to identify the basis and reasons for the expert's opinions, the facts or data considered by the witness, the exhibits that the expert will use, the expert's prior publications and testimony, or the witness's compensation. Thus, the expert disclosure required in Illinois has much less detail than under the federal rule – often just a few paragraphs. Nevertheless, for tactical reasons, parties sometimes choose to create reports that go beyond the Illinois rule's requirements and more closely resemble that of the federal disclosure practice.

### *Divisions of the Cook County Circuit Court*

The Cook County Circuit Court is divided into divisions, which in turn are divided into sections. These divisions and sections differ in their jurisdictions, though there is significant overlap among the divisions. Civil lawsuits of any consequence will be filed in either the General Chancery Section of the Chancery Division, or the Law Division. The jurisdiction of each is set forth in Cook County General Order No. 1.2, 2.1.

The General Chancery Section hears cases falling into a broad set of categories, including "*class actions*, *arbitration*, *injunctions*, *temporary restraining orders*... *mandamus*, *quo warranto*, *declaratory judgments*, *interpleader*, *ne exeat*, *specific performance*, *rescission and reformation of contracts*, *creditors' rights*, *complaints for contribution*, *actions to quiet title and the setting aside of deeds*, *partition*, *equitable liens*, *redemption rights*, *declarations concerning the constructions of trust and wills* (*other than during the period of an estate administration*), *the appointment of trustees*, *successor trustees and the removal of trustees* (*other than during the period of an estate administration*), *receiverships*, *accounting cases*, *dissolution of partnerships and corporations*, *or other proceedings under the Corporations and Partnership Acts*... *statutory review*, *certiorari*... *and all administrative review* (*except tax matters*, *matters under the Unemployment Insurance Act* (*820 ILCS 405/1100*)) " (Cook County General Order 1.2, 2.1 (b)(1)).

The Law Division hears, inter alia, "civil actions at law" in which the plaintiff seeks in excess of USD100,000 (Cook County General Order 1.2, 2.1 (a)). The nature of the action does not matter: if a case is an "action at law" (as opposed to equity), and the damages claimed exceed USD100,000, it falls within the jurisdiction of the Law Division. This obviously includes claims for breach of contract, torts, nuisance, and statutory claims.

The jurisdictions of the Chancery Division and the Law Division are obviously not mutually exclusive – a lawsuit might include, for instance, claims for dissolution of a partnership (Chancery) and for money damages for breach of the partnership agreement (Law), or claims that seek both a declaratory judgment (Chancery) and monetary damages (Law).

Thus, one obvious question is which division hears a case that falls within the purview of both divisions. The answer is two-fold. First, the plaintiff decides in which division to file the case. They can file in either Law or Chancery, but there is an important caveat: the assigned judge has the authority – either on the

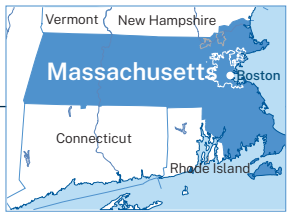
defendant's motion or sua sponte – to transfer the case from one division to the other (see Cook County General Order 1.3 (c)). Such cases generally go to Chancery – there is no written rule that says so, but the general practice is that if a case could have been filed in Chancery, it belongs in Chancery.

Judge assignments in the Chancery Division operate very much as in federal court. Upon filing in the Chancery Division (or transfer into the Chancery Division), a case is randomly assigned to one of the "calendars" (judges) in Chancery. The judge oversees the case for its entirety.

In the Law Division, how a case proceeds depends on the section within the Law Division in which the case is pending. When a case is filed, the plaintiff files a "Law Division Cover Sheet" with the complaint, in which they identify "the appropriate case type which best characterises your action" from among a number of lists. The most commonly used categories are:

- "Commercial Litigation", with subcategories including Breach of Contract, Professional Malpractice (other than legal or medical), Fraud (other than legal or medical), Consumer Fraud, Breach of Warranty, Statutory Action, Other Commercial Litigation, and Retaliatory Discharge; and
- "Personal Injury/Wrongful Death", with subcategories including Medical Malpractice, Asbestos, Product Liability, Other Personal Injury/Wrongful Death, Intentional Tort, and Premises Liability.

If the cover sheet identifies a case as "Commercial Litigation", the case will almost certainly be assigned to the Law Division's Commercial Calendar Section. If the cover sheet identifies it as "Personal Injury/Wrongful Death", the case will almost certainly be assigned to the Law Division's Motion Section. It is important to note that the cover sheet is not dispositive on the question of the section to which a case is assigned – if the assigned judge deems the case better suited for another section, that judge has the discretion to transfer it to that section; see Cook County General Order 1.3 (c).



This distinction between the Commercial Calendar Section and the Motion Section is important because of the way cases proceed from there. Cases in the Commercial Calendar Section are assigned to a judge who oversees the case from start to finish, as in the Chancery Division, but cases assigned to the Motion Section proceed on a very different path. The case is randomly assigned to a motion judge, who oversees all pretrial matters in the case – discovery motions, dispositive motions, and the like. When all discovery is complete and all motions decided, the motion judge then enters a Trial Certification Order, designating the case as ready for trial. Shortly thereafter, the parties receive a notice of their trial assignment date. The lawyers go to the courtroom of the Presiding Judge or his designee and get assigned a trial date and to a judge from the Trial Section, who will then preside over the trial on that date. This is subject to the possibility that a party exercises its right to a substitution of judge, in which case the parties go back to the Presiding Judge for a new trial date and judge; see generally Law Division G.A.O. 16-2.

The possibility of multiple parties using their substitution of judge, and the scheduling uncertainty that can result, gave rise to a separate trial assignment process available to litigants in the Motion Section. Given "the difficulty of scheduling witnesses, especially expert witnesses, in complex cases and the importance of trials starting on a date certain", the Law Division has a process for "advanced random assignment of complex cases for trial" (Law Division G.A.O. 24-1). The process, which requires the agreement of all parties, allows the parties to agree on five possible trial judges for the case, and to waive their right to take a substitution of judge. The parties then present an agreed motion (including the list of five judges) to the Presiding Judge, who assigns the case to one of those five judges for trial; see generally Law Division G.A.O. 24-1.

### *Conclusion*

Navigating a case through the Illinois state court system can often seem daunting and counterintuitive to those who do not frequently practise here. The authors hope that this primer provides readers with a better understanding of the nuances of practising in Illinois state courts.

## Trends and Developments

**Contributed by:**
Paul A. Hughes, Evan S. Kipperman, Daniela Badiola Spanos, Katherine "Katie" Rubino, Tamia Simonis and Mark W. Heaphy
**Wiggin and Dana LLP**

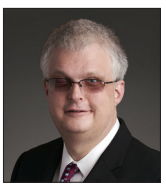
**Wiggin and Dana LLP** is a full-service law firm of highly talented, creative and experienced lawyers dedicated to exceeding their clients' expectations. With offices in Boston, Connecticut, New York, Philadelphia, Washington, DC, and Florida, the firm represents clients throughout the United States and globally on a wide range of sophisticated and complex matters. From defending a Fortune 500 institution in "bet-the-company" litigation, to helping the next generation of inventors bring a new technology to market, to preserving the wealth that a family business has worked so hard to create, Wiggin and Dana offers value-driven solutions and results.

## Authors

**Paul A. Hughes** is the chair of Wiggin and Dana's Corporate department and a former managing partner at the firm. He also practises in the Health Care department. He is experienced with the representation and operation of both mature and emerging growth companies in a variety of industries, including energy and utilities, information technology, clean technology, telecommunications, biotechnology, health care services, manufacturing and outsourcing. Paul regularly represents clients in the areas of debt and equity financings, mergers, acquisitions, divestitures, joint ventures, strategic alliances, and corporate governance. Chambers USA lists Paul as one of the leading corporate/M&A lawyers in Connecticut and adds that he offers experience of working with mature and emerging growth companies from a range of sectors, including biotechnology and telecommunications.

**Evan S. Kipperman** is a partner in Wiggin and Dana's Corporate department and member of the firm's executive committee, Evan is dedicated to helping growth-stage companies, publicly held middle-market companies, family offices, high net worth individuals, private equity firms, and other clients achieve their business goals. Evan focuses on corporate finance transactions, mergers and acquisitions, venture capital financing, securities law, licensing arrangements, and general corporate matters, across a broad range of industries that includes software/information technology, life sciences, digital media, financial services, high-tech manufacturing, educational technology, consumer products, and food and beverages. Over the past few years, Evan has been involved in hundreds of venture capital and M&A transactions with billions of dollars in value.

**Contributed by:** Paul A. Hughes, Evan S. Kipperman, Daniela Badiola Spanos, Katherine "Katie" Rubino, Tamia Simonis and Mark W. Heaphy, **Wiggin and Dana LLP**



**Daniela Badiola Spanos** is a partner in Wiggin and Dana's Corporate department and Private Equity practice group. Daniela has extensive experience representing private equity funds and their portfolio companies in a range of transactions. Her transactional experience includes mergers and acquisitions, platform growth acquisitions, company sales, growth equity and venture capital financing, distressed sales, leveraged buy-outs, 363 transactions, strategic transactions, and executive employment and incentive equity arrangements, along with other general governance matters. Daniela is experienced in the nuances of the healthcare and technology industries and her extensive industry expertise extends to food products, manufacturing, automobiles, and retail, both within and outside of the United States.

**Katherine "Katie" Rubino** is a partner in the Corporate department at Wiggin and Dana. Katie frequently represents clients on target discovery collaborations, assisting in structuring spin-offs, divestitures, and out-licensing from pharma, hospital systems, and academic research institutions. She also counsels life sciences companies developing pharmaceuticals, vaccines, antibody products, digital health, medical devices, artificial intelligence, and quantum computing, and advises companies raising growth capital, merger and acquisition transactions, and initial public offerings. Katie is experienced in transactions involving intellectual property rights, strategic partnerships, licensing, and research collaborations. Katie is active in industry organisations and chairs the American Chemical Society's Chemistry and the Law Division

**Tamia Simonis** is a partner in Wiggin and Dana's Outsourcing and Technology group whose practice focuses on helping global outsourcing and technology suppliers structure, negotiate and document the full range of onshore, offshore and near-shore technology and services transactions. Tamia has extensive experience negotiating complex, competitively-bid business process outsourcing (BPO) and information technology outsourcing (ITO) transactions across North and South America, Europe and Asia. Tamia advises customers and suppliers of all sizes in the development, procurement, distribution, implementation, maintenance and use of technology-enabled products and services. Her experience spans a wide variety of vertical industries, including financial services, insurance, hospitality, retail, manufacturing, life sciences, healthcare, pharmaceuticals, business consulting and general E-commerce.

**Mark W. Heaphy** chairs Wiggin and Dana's Outsourcing and Technology practice group as well as its India practice, where he leads a broad-based, supplier-focused team of experienced professionals representing a diverse group of global providers of technology and services related to outsourcing, software, digital transformation, automation, E-commerce, data analytics and the cloud. Mark has decades of experience advising on all aspects of sourcing and procurement, from initial RFP through implementation, go-live and beyond. Global service providers rely on Mark's expertise to help them structure, negotiate and document domestic, near-shore and off-shore outsourcing strategies in North and South America, Europe, Asia, the Middle East and Africa.

Artificial intelligence (AI) is rapidly transforming the legal, regulatory and commercial landscape, driving fundamental changes in how organisations develop, deploy and contract for technology-enabled services. State laws in the United States remain fragmented and continue to evolve. At the same time, divergent global approaches are emerging, with the European Union (EU) adopting a comprehensive, risk-based regulatory regime and United States' federal authorities pursuing a combination of regulatory guidance, judicial action and policy initiatives. This dynamic and multi-layered regulatory environment has created growing complexity and uncertainty for companies operating across jurisdictions and industries.

Against this backdrop, AI is reshaping traditional legal frameworks, challenging long-standing assumptions, and requiring a reimagination of well-established contractual norms. At the same time, the rapid growth of AI-driven businesses – particularly in innovation hubs such as Boston – has fuelled significant venture capital activity, reflecting the increasing strategic importance of AI across every sector of the economy. As AI adoption continues to accelerate, organisations must actively adapt both their legal strategies and commercial practices to address emerging risks, allocate responsibility effectively, and maintain a competitive advantage in an increasingly AI-driven world.

## Regulatory Environment

### *Massachusetts*

While Massachusetts has not yet enacted any specific statute comprehensively regulating the development or use of AI, Attorney General Andrea Joy Campbell issued an advisory in April 2024 clarifying that the Commonwealth's consumer protection, anti-discrimination and data privacy laws apply to AI developers, suppliers and users just as they would in any other context. The advisory identified a non-exhaustive list of practices that may constitute unfair or deceptive acts under the Massachusetts Consumer Protection Act, including:

- falsely advertising the quality or usability of AI systems;
- supplying AI technology that is defective or impractical for the advertised purpose;
- misrepresenting an AI system's reliability, safety, condition or manner of performance;
- offering for sale AI systems that are not fit for the ordinary purpose for which such systems are used;
- deploying deepfakes or voice cloning to perpetrate fraud; and
- using AI systems that produce discriminatory results in violation of the state's civil rights laws.

It also clarified that Massachusetts'data security and incident response rules generally apply to AI systems that touch personal information, imposing prescriptive, technology-neutral security obligations on any person or entity that owns or licenses personal information about a Commonwealth resident. Similarly, Massachusetts' anti-discrimination laws prohibiting discrimination on the basis of protected characteristics apply to developers, suppliers and users of AI systems, including technologies for hiring, tracking, evaluating or terminating employees.

Massachusetts has also adopted certain sector-specific rules related to automated recognition technologies, and the legislature is currently considering new

legislation explicitly focused on AI issues. The proposals under consideration include:

- AI disclosure requirements;
- restrictions on AI-based employee monitoring;
- a bill targeting algorithmic discrimination that would impose strict liability and a private right of action;
- a bill establishing comprehensive data controller obligations regarding AI-related data processing; and
- legislation addressing the use of AI in healthcare settings, including a prohibition on AI making independent therapeutic decisions in behavioural health.

### *State regulation generally*

Looking beyond Massachusetts, more than half of US state legislatures have enacted statutes that meaningfully regulate some aspect of AI. In general, these laws have aimed to:

- establish AI governance bodies (task forces, commissions and executive offices to guide AI policy and oversee government use of AI systems);
- mandate transparency (disclosing AI's role in decision-making);
- prevent bias (algorithmic discrimination by AI systems in high-stakes decisions); and
- limit or prohibit "deepfakes" (realistic, artificial images, videos and audio generated by AI and used for malicious or deceptive purposes such as non-consensual pornography and election disinformation).

### *Federal regulation*

At the federal level, the Trump administration released an AI action plan last July that emphasised federal deregulation, the acceleration of AI infrastructure, the promotion of open models, the securing of US hegemony and the removal of what the plan characterised as ideological biases. The plan followed President Trump's January revocation of the Biden administration's prior Executive Orders and priorities regarding AI. Among other recommendations, the plan called for:

- the identification and removal of federal regulations that hinder the development of AI technologies;
- the revision of environmental standards, permitting processes and procurement priorities to accelerate infrastructure development;
- the use of discretionary federal spending to challenge and dissuade state regulatory requirements;
- promoting access to large-scale computing resources and private-sector adoption of open source models; and
- directing the Department of Commerce to facilitate the exportation of US-developed "full-stack AI packages" and the global adoption of AI technologies that meet US technical and security standards.

In March 2026, the administration released an AI legislative framework further emphasising the goals above, calling on Congress to implement the administration's policy objectives, and introducing additional priorities related to children, fair use, free speech and workforce education.

### *EU AI Act*

By contrast, Europe has gone in a different direction, adopting comprehensive regulations in 2024, with phased implementation during 2025 and 2026. The EU AI Act contains five core principles, requiring uses of AI to be safe, transparent, traceable, non-discriminatory and environmentally friendly. Applications of AI technology are classified as posing unacceptable risk, high risk or limited risk. Deployment of AI technology classified as presenting unacceptable risk is prohibited, while high- and limited-risk AI uses are regulated, albeit at different levels. High-risk technologies, for example, require mandatory assessments of their potential impact on fundamental rights.

Limited-risk systems trigger less stringent obligations, including informing users when they are viewing AI-generated content. In all cases, AI tools must be overseen by humans, rather than by technology. European regulators also required measures to protect copyrights, certain mandatory disclosures and detailed technical documentation. Penalties for violations can be severe, and the Act applies to entities providing or deploying AI systems that are either used in the EU

**Contributed by:** Paul A. Hughes, Evan S. Kipperman, Daniela Badiola Spanos, Katherine "Katie" Rubino, Tamia Simonis and Mark W. Heaphy, **Wiggin and Dana LLP**

or that produce effects in the EU, wherever the entity may be based.

### IP Strategy

In 2025, Boston was ranked as a state with one of the highest AI ecosystems throughout the continental United States (see here). As companies across every sector accelerate their adoption of AI tools, long-standing assumptions about patentability and inventorship are being tested. This shift is prompting organisations to rethink traditional intellectual property (IP) strategies and adapt them to a world where human and machine contributions increasingly intertwine.

A foundational principle of US patent law is that only a natural person can be named as an inventor. The US Patent and Trademark Office (USPTO)'s recent Inventorship Guidance for AI-Assisted Inventions reaffirms this requirement, even as AI systems play a growing role in generating inventive concepts. US copyright law follows a similar rule: human authorship is required.

For patent applicants, inventions that incorporate AI-generated inputs or outputs raise new questions about obviousness, enablement and disclosure at the USPTO. Inventors must now determine how much detail to provide about their AI models, such as training data and model parameters, to demonstrate human conception and reduction to practice. The line between human insight and machine-generated output is becoming more complex to document.

AI systems also rely heavily on large, often sensitive datasets, including genomic sequences, compound libraries, biomarker repositories and user-generated information. As AI models are increasingly trained on combinations of proprietary, licensed and open-source data, companies must confront difficult questions about data ownership, rights to AI-derived insights, public disclosure of sensitive information into open source models, and how to protect valuable datasets themselves. These issues are especially pressing in life sciences, where data assets can be as valuable as the inventions they enable.

The rapid integration of AI into research and development is creating a heightened need for cross-functional collaboration. Legal, scientific and technical teams must work together to document human contributions to AI-assisted inventions, negotiate licensing agreements that address data and model usage, and ensure compliance with evolving global standards.

While AI is accelerating innovation at an unprecedented pace, it is also destabilising traditional IP structures. Companies that wish to safeguard their competitive advantage must proactively adapt their IP strategies to the realities of AI-enabled discovery and development.

### Sourcing and Technology Transactions

The exponential proliferation of AI and deep machine learning across nearly every category of sourcing, technology and managed services is rapidly reshaping legal and operational approaches to deal making. AI-driven technologies are a material component of nearly every services transaction today. This new paradigm has necessitated a rethinking of market norms and established approaches to key contractual terms, including IP ownership, service level agreements, performance warranties, indemnification provisions, and limitations on the parties' liability to one another.

#### *IP ownership*

Under most legal systems, including US copyright law, a work must be authored by a human to qualify for copyright protection. When a provider uses generative AI to produce code, designs, reports or other deliverables, the protectability of those outputs and who owns them becomes legally uncertain. As a result, customers increasingly demand explicit contractual terms that address AI-generated outputs separately from human-authored work. These terms often take a "belt-and-suspenders" approach: a work-for-hire designation where possible, a broad assignment of rights (including a waiver of moral rights where permitted), and a fallback perpetual licence in case neither of those is effective.

Providers frequently rely on proprietary or third-party AI systems, including large language models and machine learning, to improve productivity and efficiency. This creates several negotiation pressure points. Providers typically argue that their models, training data, algorithms and fine-tuned configurations are

pre-existing IP that must be excluded from any customer IP assignment. Customers, however, worry that deliverables are so intertwined with the AI tools that these carve-outs effectively strip them of meaningful ownership.

Many providers depend on third-party AI platforms whose terms of service may impose conditions on ownership or use of outputs. Customers increasingly require providers to disclose which platforms they use and to warrant that applicable third-party terms do not conflict with the customer's IP rights.

In all cases, the rapid adoption of AI tools in sourcing arrangements has fundamentally complicated negotiations around the ownership of IP. Parties must now address new questions about authorship, protectability, training-data rights, patentability, third-party platform terms, and regulatory compliance. In this new environment, both customers and providers benefit from creating detailed, AI-specific IP ownership provisions rather than relying on legacy frameworks that never contemplated AI-generated works.

### *Service level agreements*

Historically, service level agreements (SLAs) in sourcing contracts have been built around human-driven performance benchmarks, response times, resolution rates, processing volumes, and error rates calibrated to the capabilities of human teams. However, the rise of AI has introduced significant new considerations and challenges for both customers and providers. When a provider deploys AI-driven automation (eg, robotic process automation, AI-based customer service, or intelligent document processing), the parties must negotiate SLAs that address the unique characteristics of AI-delivered services. Negotiating these metrics is more complex than traditional SLAs because AI performance may make bright-line pass/fail thresholds more difficult to set. Where AI tools are used to deliver or monitor services, questions arise about liability for AI-driven failures, the adequacy of service credits as a remedy, and the circumstances under which AI-related performance failures should excuse or mitigate a provider's responsibility for such failures.

Service providers are often hesitant to offer service levels for AI tools, citing difficulties around accuracy rates, error tolerances, bias monitoring, explainability requirements, and the inability to control inaccurate or harmful outputs. When an AI system fails or produces an incorrect output, determining fault is far more complex than with human error. AI tool performance is heavily dependent on the quality, completeness and timeliness of input data. Providers frequently seek to carve out SLA liability where poor performance is attributable to data supplied or controlled by a customer. Customers increasingly demand that SLA targets reflect AI-enhanced capabilities, faster response times, near-zero error rates, and continuous availability, since AI tools can operate continuously without fatigue. Accordingly, the integration of AI into sourcing contracts has led to a shift in negotiating SLA provisions, requiring tailored approaches to address the unique characteristics and risks of AI technology while balancing the potential benefits of automation and innovation.

### *Performance warranties*

Traditionally, sourcing performance warranties have focused on human-delivered services and throughput tied to defined processes. As providers integrate AI tools to deliver or augment those services, the parties must reconsider how to define satisfactory performance. When an AI system produces inaccurate or substandard output, customers increasingly seek warranties that place responsibility on the provider regardless of whether the issue stems from the model, training data or human oversight. Providers, by contrast, often aim to limit liability for outcomes that are inherently probabilistic.

Customers may also demand transparency warranties requiring the provider to explain how an AI system generated a particular result, while providers resist such obligations, citing trade-secret concerns or technical limitations.

The widespread use of third-party AI models further complicates negotiations: customers want the provider to stand behind all outputs, whereas providers often seek carve-outs for failures attributable to AI platforms.

**Contributed by:** Paul A. Hughes, Evan S. Kipperman, Daniela Badiola Spanos, Katherine "Katie" Rubino, Tamia Simonis and Mark W. Heaphy, **Wiggin and Dana LLP**

AI adoption has also created new categories of performance warranties absent from traditional sourcing. Customers increasingly require assurances that AI tools will not produce biased, discriminatory or otherwise unlawful outputs, particularly in HR, financial services and healthcare. Customers also seek enhanced warranties around system security and protection of input data, due to security risks introduced by AI systems, and they want assurances that AI-generated outputs do not infringe third-party IP rights, a contentious issue amidst ongoing generative-AI litigation.

Negotiating performance warranties has become much more complicated and the appropriate warranty terms for any sourcing arrangement will necessarily depend on the services involved, the AI tools used, the regulatory environment and each party's risk tolerance.

### *Indemnification provisions*

The rise of AI tools in sourcing arrangements has significantly reshaped how indemnity provisions are negotiated. Customers increasingly seek broader infringement indemnities that expressly cover claims arising from the provider's use of AI tools, while providers push to limit liability for risks they view as inherent to AI systems and outside their control.

AI tools require access to substantial datasets, often including customer confidential information or personal data. This has intensified negotiations over data breach and privacy indemnities. Customers worry that inputting their data into third-party or cloud-based AI platforms could lead to unauthorised disclosure, data leakage, loss of trade-secret protections or regulatory violations. Customers extend indemnity clauses to cover losses stemming from AI-driven data processing, but providers seek to limit these obligations to instances of their own negligence or breach rather than accepting strict liability for failures of underlying AI platforms.

Where providers use AI to support professional or advisory services, such as legal research, financial analysis or technical recommendations, customers increasingly request indemnities for losses caused by inaccurate or "hallucinated" AI outputs. This differs from traditional sourcing indemnities, which contemplated human error rather than systemic algorithmic errors. Negotiations often focus on the provider's duty to maintain human oversight and quality controls, with indemnity scope turning on whether the provider can demonstrate adequate review processes for AI-assisted work.

Many providers rely on third-party AI platforms rather than proprietary models and thus argue for a layered risk structure. Customers typically argue that providers should bear full responsibility for the tools they choose, including third-party AI, and should offer "flow-down" indemnities regardless of whether they can recover from the AI vendor. Providers contend that certain risks, such as fundamental flaws in widely used AI models, should be treated as force majeure or excluded from indemnity obligations altogether.

In sum, the integration of AI tools into sourcing arrangements has expanded both the scope and complexity of indemnity negotiations, driving the development of new indemnity categories and intensifying disputes over allocation of third-party risk.

### *Liability limits*

The growing use of AI tools by service providers has reshaped negotiations around limitation-of-liability clauses. Historically, these provisions focused on service failures, data breaches and IP infringement. However, AI introduces a broader set of risks. When providers rely on AI to deliver services, such as analytics, automated decision-making or AI-assisted coding, the possibility of inaccurate, biased or irrational outputs creates new liability exposure. Customers often argue that these risks should fall outside standard caps or be treated as carve-outs. If AI produces discriminatory outcomes in areas such as HR outsourcing or claims processing, customers may face regulatory scrutiny and reputational harm, prompting demands for uncapped liability or higher super-caps.

AI-driven training on customer data adds further concerns around data protection, confidentiality and IP ownership, all of which influence liability discussions. Customers often contend that the potential scale of harm – regulatory fines, reputational damage and third-party claims – can far exceed contract value, increasing pressure on providers to accept higher

caps for AI-related losses, especially where customers lack visibility into the AI systems used. Providers, in turn, argue that uncapped exposure is commercially unsustainable and seek to maintain aggregate caps while offering narrowly tailored, capped indemnities for defined AI failures.

Unfortunately, the market has not yet converged on a standard approach. Outcomes vary widely based on bargaining power, the criticality of the outsourced function, the nature of the AI tools involved, and the applicable regulatory environment.

### Venture Capital

The rapid growth of the AI industry across the Boston innovation ecosystem has been fuelled, in large part, by the venture capital community. The technology companies developing foundational AI models – as well as the significant infrastructure, talent, data and energy demands required to support them – remain heavily dependent on venture financing to scale.

According to PitchBook's 2025 NVCA Venture Monitor, at the end of 2025, approximately USD3.3 trillion in private company market value was tied to AI. AI-focused investments accounted for an estimated 65.4% of total venture deal value in 2025, representing roughly 39.4% of completed transactions. Boston-area companies continue to play a leading role in this growth, particularly at the intersection of AI, life sciences, healthcare and enterprise software.

### Private Equity and M&A Activity

AI is rapidly transforming private equity transactions across the entire deal life cycle, from sourcing and diligence through exit. While adoption levels vary across the industry, one principle is increasingly clear: when implemented effectively, AI creates a meaningful competitive advantage in processes where speed, precision and data analysis are critical. This is equally true for funds and law firms helping to execute on deals.

At its core, AI is another tool in the efficiency toolbox. AI-powered tools enable private equity firms and their advisers, including legal, financial and accounting professionals, to process significantly larger volumes of structured and unstructured data in far less time. These tools can extract insights from extensive document sets at a scale that would be impractical through traditional methods.

One of the most immediate effects of AI adoption is the compression of transaction timelines. Tasks such as financial and legal diligence that traditionally required weeks of manual work can now be completed in a fraction of the time. While human judgement remains essential to ensure the integrity of the dataset and resulting analysis, AI significantly reduces the time required to conduct that analysis. This has important implications for competitive processes. In auction settings, where speed can determine access and success, buyers must now be able to evaluate opportunities and respond with high-quality bid materials on accelerated timelines. Firms that cannot keep pace risk losing competitive positioning early in the process.

At the same time, this compression of timelines can benefit smaller or more targeted investment platforms. Because AI reduces reliance on large teams for data processing, firms that were previously disadvantaged by slower manual workflows can now respond more quickly and compete effectively in fast-moving processes. These tools can enable deal teams to spend less time on data collection and processing and more time on higher-value strategic analysis.

This shift is particularly impactful for mid-sized and boutique private equity firms and their advisers. Historically, larger firms held a distinct advantage in transaction execution by deploying larger teams to manage labour-intensive processes such as diligence, modelling and analysis. By automating data-intensive tasks, AI allows smaller, highly sophisticated teams to achieve levels of output previously reserved for organisations with significantly greater headcount. Lower-leverage teams can compete on more equal footing with larger firms in data-driven aspects of transactions.

Ultimately, for smaller and mid-sized private equity firms, the rise of AI is an encouraging development. As these technologies become more accessible and easier to implement, they reduce many of the historical advantages associated with sheer size and manpower. Firms that are agile, focused and thoughtful

in adopting AI tools are well positioned to narrow the gap with larger competitors and, in some cases, outperform them.

## Conclusion

Boston stands at the forefront of AI-driven innovation. As regulatory regimes continue to develop and market practices mature, organisations operating in this space must remain agile – continuously reassessing their compliance frameworks, contractual structures and investment strategies. Those that align legal risk management with technological advancement will be best positioned to capitalise on AI's transformative potential and navigate its inherent uncertainties.

**IX Legal**

**IX Legal** is a full-service Wall Street law firm founded by Michael Iakovou. The firm focuses on litigation, real estate, corporate, employment, personal injury, trusts and estates, and tax, servicing clients in commercial and residential real estate, hospitality, construction, lending, investment funds, and asset management. IX Legal provides proactive yet practical guidance to clients, assisting in day-to-day legal issues while providing planning solutions for long-term growth and exit strategies. The firm's flagship office is in New York City, and it also has offices in Jersey City, Miami and Long Island, while featuring a multilingual team dedicated to client service. The IX Legal team leverages strong interdepartmental collaboration and a disciplined work ethic to deliver a strategic integrated approach that maximises solutions for clients.

## Authors

**Konstantine Paschalidis** is the chair of the litigation department at IX Legal, and has over 17 years' experience trying cases in New York and New Jersey courts, focusing on shareholder disputes, employment matters, non-compete agreements and restrictive covenants. Outside of court, he resolves pre-suit matters through AAA arbitration, mediation and negotiation with opposing counsel. Konstantine serves a diverse client base of individuals, business owners and medical professionals, and leads the firm's cross-departmental litigation team. He is a member of the Hellenic Lawyers Association, the Hellenic Medical Association, the Greek American Chamber of Commerce, the New York State Bar Association, the New Jersey State Bar Association, and the Pennsylvania Bar Association.

**Michael Iakovou** is the managing member of IX Legal and chair of the firm's transactional department, representing sellers, purchasers and landlords in commercial real estate and business transactions throughout New York City and Long Island, including development sites, multi-family properties and commercial lending matters. His experience as a business owner and in-house counsel informs his approach to asset protection, with a focus on construction, development law and the representation of institutional lenders. He is a member of the Hellenic Lawyers Association, the New York State Academy of Trial Lawyers, and the New York State Trial Lawyers Association, and is co-founder of the Miami Hospitality Alliance.

**Socrates Xanthopoulos** is the head of transactions at IX Legal, representing owners, developers, institutional lenders, family offices, asset, investment and property management firms, and closely held companies and individuals in complex real estate and business transactions at all levels of the capital stack, and involving properties across real estate asset classes throughout the nation. He advises on land acquisition and development deals, commercial real estate financing and refinancing transactions, and purchases and sales of multi-family, mixed-use, office, hotel and retail properties, as well as general corporate matters. He is a member of the Hellenic Lawyers Association and the Hellenic-American Chamber of Commerce.

## Forced Buyout Provisions as a Risk-Reducing Tool for New York Entities

Three partners sat in the IX Legal main conference room with our clients, the two largest interest holders in a New York family-run real estate group with a significant portfolio. Although the two relatives maintained a good rapport and managed to resolve disagreements in a practical manner, they sensed tensions brewing within the rising generation set to replace them. One of the clients recently concluded an acrimonious divorce proceeding in which the client's spouse claimed a right to interest in the family's real estate holding company. That experience, combined with horror stories from business partners and acquaintances, understandably left the clients on high alert.

Although the clients' goals remained straightforward and achievable, they required systemic collaboration between the firm's litigation, corporate and real estate departments. The clients sought to implement an amendment to the decades-old operating agreement they inherited to provide for a fair and objective buyout mechanism while simultaneously keeping any potential family scuffles out of the public eye and away from the press. Both individuals remained pensive and concerned about the effect of drawn-out litigation on their family's legacy. This was the firm's first example in a growing trend of clients seeking to amend agreements for the purpose of including forced buyout provisions.

### *Litigating forced buyouts*

Shareholders of New York corporations with at least 20% interest have statutory tools at their disposal to force the remaining shareholders of the corporation to purchase the interest of the aggrieved shareholders; see NY BCL Section 1104-a. Upon a showing of illegal, fraudulent or oppressive actions towards the petitioning shareholders by those in control, or that the directors, officers or those in control are looting, wasting or diverting the assets of the corporation for improper purposes, the court may order dissolution of the corporation.

Built into the same Article of the Business Corporation Law (BCL) is the right of election available to the remaining shareholders or corporation within 90 days of the petition to purchase the petitioners' shares at "their fair value" (NY BCL Section 1118). Upon such election and subsequent application of the purchaser, the court stays the petition to determine the value of the petitioners' shares, effectively converting the nature of the action from one of shareholder oppression or wrongdoing to a valuation hearing. In the context of a shareholder dispute, this shift serves as a stop-gap measure to prevent further damaging details of wrongdoing or dissention from leaking.

While the Section 1118 election effectively gags the public squabbles of most closely held corporations, for many the damage of a detailed pleading of the inner squabbles provides sufficient harm to image and reputation. Outside of Section 1104-a petitions, shareholders cannot force a buyout, nor can a court "convert over a petitioner's objection, a dissolution petition that does not afford a buyout option for non-petitioning shareholders" (*Fedele v Seybert*, 250 A.D.2d 519, 523 (1st Dept. 1998)). The Limited Liability Company Law lacks the equivalent mechanism of a

BCL Section 1118, and "does not expressly authorize a buyout in a dissolution proceeding", although a court may permit an equitable buyout of interests to avoid dissolution, in the appropriate circumstance (*Mizrahi v Cohen*, 104 A.D.3d 917, 920 (2d Dept. 2013) (internal citations omitted); see also *Lyons v Salamone*, 32 A.D.3d 757 (1st Dept. 2006), noting the lack of LLC law authorising a buyout but noting that the court may find an equitable method of liquidation or the other party is to purchase the interest in lieu of dissolution).

Assuming a court will save their business from dissolution is a desperate if not foolhardy strategy for an entity's controlling interest holders. A more prudent course of conduct is to prevent the risk of dissolution altogether by creating a forced buyout provision in the context of a shareholder agreement or operating agreement, or by amending the existing agreement to guarantee its compliance with the framework of relevant court analyses.

### *Buyouts in agreements*

Courts must enforce agreements when they are set down in "a clear, complete document" (*W.W.W. Assocs. v Gianconteri*, 77 N.Y.2d 157, 162 (1990). In the context of a buyout provision, the same guidelines prevail (*Rosiny v Schmidt*, 185 A.D.2d 727 (1st Dept. 1992)). Indeed, in *Rosiny*, the First Department reversed a trial decision preventing a forced sale of defendants' shares pursuant to the terms of the shareholders' agreement. The *Rosiny* shareholder agreement contained a post-mortem buyout for the defendant shareholders at a value of the greater of the book value as of the month preceding the operative date or USD200 per share, and the *Rosiny* court rejected defendants' contentions of unconscionability in plaintiff's interpretation of the buyout provision.

There are limits to what courts tolerate, however, and the First Department has rejected a draconian USD1 buyback clause in an operating agreement for any breach of the agreement (*Atlantis Mgt. Group II v Nabe*, 216 A.D.3d 526 (1st Dept. 2023)). Similarly, the Second Department has rejected a buyout provision with a blank space for purchase price and no mechanism for valuation (*Stein v McDowell*, 74 A.D.3d 1323 (2d Dept. 2010)). The *Stein* court found that "[t]he omission of the price from the buyout provision meant that the shareholders' agreement contained no buyout provision".

Moreover, a court will nullify a buyout provision when it is not timely exercised; see *Urban Archeology Ltd. v Dencorp Invs. Inc.*, 12 A.D.3d 96 (1st Dept. 2004) (finding that the failure to exercise the buyback within 90 days as contemplated expressly in the parties' agreement constituted a fatal waiver that the trial court lacked authority to reinstate). To the extent parties modify buyout provisions, courts review the modifications under the same rubric as the original terms (*Milgrim v Backroads*, Inc., 91 Fed.Appx. 702 (2d Cir. 2002)). Parties negotiating and drafting buyouts must give thought to their application, and to how courts will weigh the fairness of the methodology therein. The opportunity to craft a buyout provision presents a chance to also determine the venue of any challenge and thus the ability to shift disputes from the courts to arbitration.

### *Arbitration with clauses in the context of a buyout*

Article 75 of the Civil Practice Law and Rules (CPLR) establishes the enforceability of a "written agreement to submit any controversy … to arbitration" (CPLR Section 7501; see also 9 U.S.C. Section 1 et seq for the Federal Arbitration Act). Indeed, a "party will not be compelled to arbitrate … absent evidence which affirmatively establishes that the parties expressly agreed to arbitrate their disputes" (*Waldron v Goddess*, 61 N.Y.2d 181, 183 (1984)). In the context of a dispute among interest holders, the same analysis applies and the court is bound to review the agreement arbitration and ensure that it is "clear, explicit and unequivocal and must not depend upon implication or subtlety" (*Sutphin Retail One, LLC v Sutphin Airtrain Realty, LLC*, 143 A.D.3d 972, 973 (2d Dept. 2016), citing *Waldron* at 183–84).

Assuming the applicability of an arbitration provision, a party "aggrieved by the failure of another to arbitrate may apply for an order" under CPLR Article 75 (CPLR Section 7503). Although a motion to compel arbitration succeeds in the appropriate circumstances, it stays rather than dismisses any underlying pending action; see *In re Princeton Info, Ltd.*, 235 A.D.2d 234 (1st Dept. 1997), reversing the dismissal with prejudice of a BCL Section 1104 action to reinstate the proceeding

but stay the action pending arbitration since judicial action may be required after the arbitration). Critically, the *Princeton* matter concerned the applicability of a buyout provision in a shareholders' agreement. The right to arbitrate is not absolute, however, and may be "modified, waived, or abandoned" (*Stark v Molod Spitz DeSantis & Stark, P.C.*, 9 N.Y.3d 59, 66 (2007)).

The courts will examine the totality of a party's conduct to determine whether it waived its rights to arbitrate when that party's "use of the courts is clearly inconsistent with [its] later claim that the parties were obligated to settle their differences by arbitration" (*Cusimano v Schnurr*, 26 N.Y.3d 391, 400 (2015), internal citations omitted). A party that chooses to "fully participate in litigation for more than 16 months" before moving to compel arbitration clearly waived its rights to arbitrate the underlying claims (*Flores v Lower E. Side Serv. Ctr.*, 4 N.Y.3d 363 (2005)). In deciding on how much time constitutes waiver, the First Department and Second Department held that four months of active litigation suffice (*Hyde v Jewish Home Lifecare*, 149 A.D.3d 674 (1st Dept. 2017);*Byrnes v Castaldi*, 72 A.D.3d 718 (2d Dept. 2010)).

From the court's perspective, such behaviour of active engagement in litigation followed by a reversal and application to compel arbitration contains indications of "blatant forum-shopping" (*Cuisamano* at 401). Critically, waiver is fact-specific, and a party that merely moves to dismiss prior to compelling arbitration does not waive its right to arbitrate unless the opposing party demonstrates prejudice (*Stark* at 67).

While a party may still file an action in court, a valid arbitration cause ensures that the action is promptly stayed and then moved to the appropriate private forum. This prevents the public from further engaging in review of the latest filings on the docket and speculating as to the nature of the parties' spat. However, there is nothing preventing a vindictive aggrieved interest holder from filing in the first instance in the courts, even with a valid arbitration provision. Parties must consider that even a brief attempt to litigate rather than promptly move to compel may jeopardise the ability to compel arbitration.

### *Learning from prior buyout litigation*

We recently settled a matter involving a dispute between members of a limited liability company that owned valuable real estate in Astoria, Queens (*Imian P.V. Member LLC v Vlacich LLC*, No. 654719/2024 (Sup. Ct. N.Y. Co.);*Vlacich LLC v Imian P.V. Member LLC et. al.*, No. 721125/2024 (Sup. Ct. Queens Co.)). In that situation, the operating agreement contained a buyout provision providing a mechanism for dispute resolution that permitted the aggrieved party to value the company and, in his valuation, simultaneously submit his interest for sale within a period of time after serving notice on the other member. The caveat remained that the other member possessed the right, within the same period, to elect to purchase the initiating member's interest at the same valuation. If the non-triggering member did not elect to purchase within the timeframe, the triggering member's notice served as his purchase price for the other member. The concept gave the triggering member a dilemma with balance: select a price too low and the receiving member turns the tables to purchase your interest at a discount. Alternatively, the triggering party risked paying a premium for overvaluing the company, as the agreement forced the triggering party to purchase at the same rate where the other member did not elect to purchase under his valuation. A conceptually straightforward summary judgment motion became muddied when the other member disputed our client's standing as a member after the court dismissed its counterclaim. However, the parties came to terms before the dust settled following a motion to reargue the summary judgment motion.

Conversely, in a shareholder dispute highlighted by a breakdown of trust between the two 50% interest holding principals with only a voluntary (rather than a forced) buyout or mechanism in place to address potential misappropriation of corporate assets, the sole logical remedy remained a BCL Section 1104 dissolution (*Matter of Markopoulos*, No. 718319/2025 (Sup. Ct. Queens Co.)). As the election remedy of BCL Section 1118 remains unavailable in a dissolution under Section 1104, the petitioner filed without the fear that his shareholder partner could use his petition to purchase his interest in the business. Here, cooler heads prevailed and the respondent's selection of competent counsel led to a swift settlement of

the action. The outcome in this matter, while optimal under the circumstances, stood to benefit from an enforceable forced buyout provision. If the shareholder agreement presented the client with the opportunity to buy out his partner upon certain conditions outlined in the petition for dissolution, with a binding arbitration provision, the company could avoid the risk that its clients would learn of the upheaval at the top.

### *Executing an enforceable buyout*

Working hand in hand across the relevant departments, the firm finalised the family's amendment to ensure the group and its portfolio's continued survival in the face of any anticipated adversity. Our team crafted a fair vehicle, with objective valuations and a triggering mechanism to avoid the pitfalls learned from experience and through research. The amended operating agreement contained express binding arbitration language, ensuring the parties' option to keep their issues outside of the courts. After explaining the new system in detail, the clients expressed relief that their vigilance guaranteed the survival of their grandparents' efforts. The potential issues of the next generation must take place within a new framework designed to continue the legacy of the original generation, give fair value to any aggrieved members, ensure leadership remains with the most capable, and keep drama out of the public eye. While predicting the cost savings for these particular clients requires omniscience, we can confidently report that the cost to prepare and execute the amendment to the operating agreement remained less than 1% of a hotly contested litigation and from that time forward all parties to the agreement and their successors maintain a better understanding of their rights and responsibilities vis-à-vis the buyout clause.

## Trends and Developments

**Contributed by:**
Kelly Rains Jesson
**Jesson & Rains, PLLC**

**Jesson & Rains, PLLC** is a regional trusts, estates and business law firm with offices in Charlotte, North Carolina and Fort Mill, South Carolina, and attorneys licensed in North Carolina, South Carolina, Florida, Wisconsin and Illinois. The firm's approach goes well beyond document drafting. For example, in one recent engagement, the firm co-ordinated transfer documents for approximately 70 assets across four businesses, multiple real estate parcels and various financial accounts, with all documents executed on the same day as the estate plan. For families with minor children, the firm prepares supplemental documents, ensuring a child is never left in the care of social services during an emergency. Its Legacy Circle annual membership keeps clients' plans current and their families prepared. Jesson & Rains has been ranked by Chambers and Partners in the USA: Spotlight Guide for North Carolina Trusts & Estates in 2025 and 2026.

## Estate Planning in a Shifting North Carolina Landscape: Trends, Technology and the Case for Relationship-Centred Practice

### *Introduction*

The estate planning landscape in North Carolina is undergoing a meaningful evolution. Modern technology at the state court level, changes in federal tax laws, a landmark Supreme Court decision affecting business succession planning, and the increasing number of new residents who call this great state home are collectively reshaping the priorities of thoughtful estate planning.

At the same time, the commoditisation of legal documents through technology and AI has fundamentally shifted client expectations. Sophisticated clients today understand that documents can be produced by rapidly advancing technology, so in order for them to invest in legal counsel, they must receive thoughtful opinions, proactive consultation and ongoing relationships from their human lawyer.

For practitioners, these developments underscore a fundamental truth: technically proficient document drafting, while necessary, is no longer sufficient. The legal and market environments now reward firms that invest in ongoing client relationships and have deep familiarity with clients' personal, business and financial circumstances. This article examines the trends driving that shift and explains how our firm has structured its practice to respond accordingly.

### *The new priority is probate avoidance, and that requires an ongoing relationship*

#### *The erosion of probate privacy in North Carolina*

One of the most significant recent developments for North Carolina estate planning practitioners is the state's transition to an online probate court system. While probate court records were never "private", a person wanting to view a probate court file before 2025 would have to physically go down to the county courthouse, pull the file, and pay a fee to make physical copies on the county's copy machine in the file room. Now, North Carolina probate files are publicly accessible to anyone with internet access; wills admitted to probate, inventories of estate assets, including values, and the identities of beneficiaries, including whether they are over the age of 18, are now available for viewing via a simple search query. The only sensitive information that is redacted are dates of birth, social security numbers and bank account numbers. Not even addresses are safe.

While this firm has not yet seen any instances of fraud, it is just a matter of time. Whenever we record a deed for a client, form a business for a client or submit a trade mark application (all of which are online and publicly available for viewing), our clients receive spam mail from companies pretending to be the government, claiming that they need to pay a fee in order to get an official record (as an example). It is just a matter of time before some bad actor realises that it can scan the court filings and figure out what deceased person left a grieving surviving spouse with a large life insurance policy and start spamming them with mail or, worse, calling them or preying on their minor children.

This development has material implications for clients who previously relied on wills as their primary testamentary instrument. That might have accomplished that client's goals in the past, but if the client now has a goal of privacy (especially after being educated about the change in state court process), the will by itself will not do the trick. However, a properly drafted and funded revocable trust will achieve the client's privacy goal. The trust instrument itself is not filed with the court, and any assets titled in the name of the trust are not listed on any court inventory. Therefore, if the trust is fully funded, there may be no need for court-supervised probate at all.

#### *A changed federal tax environment*

In the recent past, sophisticated estate planning was organised around minimising federal estate tax exposure. It was not that long ago that the federal estate tax exemption was USD5.6 million (2017). Think about how many clients would be affected by this if the law were still in place, even adjusted for inflation. Now, with the federal estate tax exemption "permanently" at USD15 million per individual (since there is no sunset provision in the new law), plus adjustments for inflation, most clients no longer face federal estate tax exposure.

This shift has reoriented the goals of estate planning for many clients, including business owners and high net worth individuals who once required complex tax-driven structures. Where the primary concern

was once tax minimisation, it is now increasingly probate avoidance. Clients across a broader range of net worths are now well-served by trust-based structures, and the rationale for those structures no longer depends on tax savings alone.

One of the quiet failures of transactional estate planning is the assumption that a client's net worth determines what kind of plan they need. Many traditional estate planning attorneys are guilty of this thought process, sticking clients into a will-based plan or a trust-based plan based on net worth. However, these traditional lawyers could be doing their clients a great disservice.

A client's net worth is not a proxy for their planning goals; it is simply a data point. The decision of how much to invest in an estate plan, and what that plan should accomplish, belongs to the client. A firm should educate every client on the practical realities of probate, fiduciary administration and asset transfers, and then empower them to make informed decisions about how they want to proceed.

### *A trust that is partially funded does not avoid probate*

All practitioners know that the existence of the trust document alone will not achieve the goal of probate avoidance. The funding process – transferring titled assets into the trust, aligning beneficiary designations with the overall plan design, and ensuring that newly acquired assets are properly titled going forward – is where the plan becomes operational. Yet, many of us lawyers give the client a "to do" list and send them out the door after the trust is executed, never to be seen or heard from again. Those of us who do put in extra work and help the client get their existing assets transferred to the trust post-signing leave it up to the client to notify the lawyer of any life changes in the future.

True probate avoidance, as a planning goal, cannot be achieved through a transactional relationship. Assets change. Property is bought and sold. Financial accounts are opened and closed. A client who executes and fully funds their trust today may find, years later, that the bulk of their estate passes through probate anyway, not because the plan was poorly drafted, but because it was never properly maintained. Our firm addresses this directly through a structured funding meeting conducted after plan documents are executed, and through ongoing annual reviews that assess whether the asset picture has changed and whether the plan remains properly implemented. The goal of probate avoidance is only achievable if someone is paying attention over time. That requires an ongoing relationship, not a one-time transaction.

## *Business owner clients require deeper analysis*

### *The operational realities of a business owner's death*

Estate planning attorneys who work with business owners are, in effect, planning for two transitions simultaneously: the transfer of personal wealth and the continuity or orderly wind-down of a business enterprise. These two objectives are intertwined in ways that document-focused planning frequently fails to address.

One of the most immediate and under-appreciated practical challenges is the gap in fiduciary authority that arises at death. When a business owner dies with a will-based plan, an executor must be formally appointed by a probate court before that individual has legal authority to act on behalf of the estate (and thus the business). In North Carolina, in some of the busier counties, that appointment can take weeks or even months. However, a successor trustee has authority to act immediately upon the owner's death (although they must often wait approximately a week for a death certificate before dealing with third parties). For a business with employees to pay, vendors to manage, contracts to honour and banking relationships to maintain, the difference between days and weeks of fiduciary paralysis is not just inconvenient but can be materially damaging to the value of the very asset the plan is designed to transfer.

The operational challenges do not end there. In many cases, the existing business documents, such as operating agreements, banking resolutions and signature authority designations, do not contemplate the death of an owner and do not provide the successor with clear authorisation to act. Thoughtful estate planning anticipates these gaps and addresses them before they become crises.

### *SBA loans, personal guarantees and hidden liabilities*

Business owners frequently carry obligations that are not immediately visible in a review of their personal balance sheet but that can have significant consequences for their estates and their families. SBA loans, and other obligations that might be personally guaranteed, are a common example. Upon the owner's death, that personal guarantee becomes a claim against the estate. If the estate lacks sufficient liquid assets to satisfy the obligation, estate assets may need to be liquidated to address it, potentially disrupting the very inheritance the owner intended to leave behind.

The implications extend further. Many business owners pledge personal assets as collateral for business loans without fully appreciating the estate planning consequences of that structure. Sometimes, business owners will use assets titled in the name of the business for quasi-personal use (such as their daily vehicles) without thought as to the consequences their families must deal with at their death. This is precisely the kind of information that a transactional estate planning engagement is unlikely to expose. The ongoing client relationship is what creates the opportunity to ask those questions on a regular basis.

### *Connelly v United States and the life insurance question*

Against this backdrop of operational and liability complexity, the Supreme Court's 2024 decision in *Connelly v United States*, 602 U.S. 257 (2024), adds a layer of tax planning urgency that practitioners cannot afford to overlook. In brief, the Court held that life insurance proceeds received by a corporation to redeem a deceased shareholder's stock are an asset of the corporation includable in the company's date-of-death value. The practical effect of this ruling is that the estate tax value of a deceased owner's interest in the business may be valued much more than the pre-death fair market value, potentially increasing estate taxes and even North Carolina court fees if the business interest passes through probate (here, the court bases its fees on the value of the personal property passing through probate, and business interests are personal property).

Before *Connelly*, estate planners did not have to think much about life insurance owned by the business. Now, attorneys working with business owner clients must determine who owns the life insurance on each owner's life and assess whether the existing ownership structure creates a valuation problem. For higher net worth clients, the tax savings available through restructuring can be substantial. For business owner clients, the failure to ask these questions at all is no longer defensible.

### *What this means for practitioners*

Taken together, the operational vulnerabilities at death, the hidden liabilities in business financing and titling structures, and the valuation consequences created by *Connelly* make one point unmistakable: business owner clients require a fundamentally different level of engagement than the established standard of just drafting estate planning documents. They require an adviser who understands the business, stays current with their circumstances and brings a level of proactive analysis that a transactional model simply cannot support.

This is another area where the ongoing client relationship yields concrete, measurable value. A client who is in regular contact with their estate planning attorney is far more likely to mention a new business venture, a new insurance policy, a change in ownership structure or the addition of a business partner (not to mention, the attorney being more proactive about asking the questions). Otherwise, attorneys leave it up to the client to reach out, and the client does not know that these are triggering events that might affect their estate plan. This level of analysis is not a one-time exercise.

## *Planning for North Carolina families with minor children and the relationships that grow from it*

### *Documents that require ongoing attention*

Most estate plans just name a guardian for a minor child in a will, but this provision only kicks in when a guardian needs to be formally appointed by a court due to death or permanent incapacity. This leaves massive gaps that keep parents awake at night: what if the parent suffers a medical emergency while with their child? What if there is an emergency with the child while the parent is out of town? In addition to the core estate planning documents, it is advisable to draft medical powers of attorney for minors, to

carry emergency contact cards, to issue instructions to permanent guardians and to implement short-term guardian designations, so that, if there is an emergency, a child never has to be placed in the custody of social services until the permanent guardian arrives.

In the greater Charlotte region of North Carolina, this additional planning has great value. According to Census data released earlier this year, Charlotte added more people over the past year than any other US city. Many of these new residents are naming permanent guardians for their minor children who live many states away. In the event of an emergency, it may take their permanent guardian hours to reach their minor children. Naming a short-term local guardian who can take care of children until the permanent guardian arrives and is appointed, instead of children being placed in the care of social services, is critical.

With these additional documents comes the increased need for routine maintenance. The people named in the documents may need to change due to relocation, a relationship shifting, or maybe a named decision-maker is no longer the right person for the role. Keeping these designations current requires the same kind of ongoing attention that trust funding and beneficiary designations demand, and is another reason why the transactional model of estate planning serves families with young children poorly.

### *The relationships that grow naturally from good planning*

The ongoing client relationship does more than keep a plan current: it creates the conditions under which problems are identified and solved before they become irreversible issues. When clients are in regular contact with their estate planning attorney, the natural rhythm of those conversations uncovers planning needs that might otherwise go unaddressed.

A child turning 18 is one of the most common examples. In a transactional model, that milestone may pass without notice. In an ongoing relationship, it comes up, either because the attorney asks or notices, or because the parents know to raise it, having been educated on its significance. A young adult leaving for college or entering the workforce for the first time has no powers of attorney, no healthcare directive and no ability to authorise a parent to act on their behalf in a medical emergency. That gap can be closed quickly and inexpensively when the relationship exists to surface it.

The same dynamic applies to aging parents. Clients who are engaged in their own planning often arrive at a point where they recognise that their parents have not done the same work, or that plans made years ago no longer reflect current circumstances. Because the relationship is already there, that conversation happens naturally. The attorney who already knows the family is well positioned to help identify what needs attention, explain the consequences of inaction, and assist the family in getting things in order.

This is the compounding value of a relationship-centred practice. Each conversation creates context. Each life change, when shared, becomes an opportunity to add value. The goal is not simply to keep clients connected to the firm: it is to ensure that the people who have trusted such firm with their planning are never caught off guard by something the firm could have helped them anticipate.

### *Conclusion*

The convergence of North Carolina's online probate system, a fundamentally changed federal tax environment, the implications of *Connelly* for business owner clients, and the need for creative guardianship planning for North Carolina's new residents and their minor children has made estate planning more complex and more consequential for a broader population of clients than at any point in recent memory. Practitioners who continue to operate as transactional document drafters will find themselves increasingly ill-equipped to serve those clients well.

The firms that will distinguish themselves in this environment are those that know their clients deeply, maintain those relationships over time, and bring relevant legal developments to clients proactively before problems arise, rather than deal with them after. An estate plan is not a product delivered at signing: it is a living framework that must be implemented, maintained and ultimately executed by people who understand it. Building a practice around that reality is not just a competitive differentiator but is what the work actually requires.

## Trends and Developments

**Contributed by:**
Erich Schock, Ron Reybitz, Kate Durso and Colin Keefe
**Fitzpatrick Lentz & Bubba, PC**

**Fitzpatrick Lentz & Bubba, PC** is a full-service Pennsylvania law firm with nearly 50 attorneys advising businesses, financial institutions, developers, municipalities, non-profits and individuals across the Commonwealth. From offices in Allentown and Easton, the firm provides counsel in corporate, banking and finance, real estate, litigation, labour and employment, trusts and estates, tax, environmental, land use, construction and other key practice areas. Its multidisciplinary energy and infrastructure group draws on attorneys from these practices to guide clients through the full life cycle of development and infrastructure projects, from site selection, acquisitions and financing through zoning, permitting, utility coordination, construction and dispute resolution. The firm regularly represents clients in matters involving industrial and mixed-use development, warehousing and logistics, energy facilities, utility infrastructure, telecommunications, manufacturing and commercial real estate, providing practical counsel on the legal and business issues that shape investment and development throughout Pennsylvania.

## Authors

**Erich Schock** is the managing shareholder of Fitzpatrick Lentz & Bubba, and chair of the firm's real estate, land use and development group. For more than 34 years, he has focused his practice on land use, zoning and development approvals for residential, commercial, industrial and institutional projects throughout Eastern Pennsylvania. His work includes manufacturing facilities, warehouses and distribution centres, energy infrastructure, data centres and commercial developments. He represents developers, property owners and businesses through Pennsylvania's municipal approval process, from project planning through final approvals. Erich serves on the Board of Directors of the Bar Association of Lehigh County.

**Ron Reybitz** is an attorney in Fitzpatrick Lentz & Bubba's real estate, land use and development group, where he focuses on zoning, land development and municipal approval matters. Before returning to the firm, he spent more than 20 years as in-house counsel at PPL Corporation, including as chief counsel for PPL Electric Utilities. During that time, he advised on numerous electric transmission construction and rebuild projects, including serving as lead attorney for PPL on the 150-mile Susquehanna–Roseland transmission line. Ron has extensive experience in infrastructure, regulatory and development matters affecting complex energy and utility projects.

**Contributed by:** Erich Schock, Ron Reybitz, Kate Durso and Colin Keefe, **Fitzpatrick Lentz & Bubba, PC**

**Kate Durso** is a shareholder at Fitzpatrick Lentz & Bubba, whose practice focuses on land development, zoning and real estate matters throughout Pennsylvania. She has represented clients in warehouse and distribution, mixed-use, solar, apartment, hotel, residential and retail developments, as well as wireless communication facilities. Kate regularly guides clients through municipal approvals, land development matters and the real estate transactions necessary to bring projects to completion. She is also a licensed title agent and has been selected for inclusion in Pennsylvania Super Lawyers, Rising Stars (2005 to 2008) and Super Lawyers (2023 to 2026).

**Colin Keefe** is the deputy managing shareholder of Fitzpatrick Lentz & Bubba. His practice focuses on mergers and acquisitions, commercial finance and corporate transactions, with an emphasis on seller-side representation in eight- and nine-figure strategic and private equity transactions involving national and international buyers. He also represents banks and financial institutions in complex commercial financings, and advises clients on construction contracts, real estate acquisitions and dispositions, and general corporate matters. Before returning to the Lehigh Valley, Colin practised with a large Manhattan law firm representing lenders in project and acquisition finance transactions. He is admitted in Pennsylvania and New York.

## Infrastructure and Industrial Opportunities: Pennsylvania's Next Development Cycle

As the information age evolves, e-commerce grows and the United States renews its focus on industry and manufacturing, Pennsylvania is attracting renewed interest from companies and developers seeking land, infrastructure and market access in one location. The strongest activity is coming from uses that are often grouped together but place very different demands on a site, including data centres, distribution and logistics, pharmaceutical and life sciences manufacturing, advanced manufacturing, and, in some markets, transit-oriented or walkable development and redevelopment.

These uses are not interchangeable. A warehouse project turns on addressing highway access, truck circulation, labour, grading, stormwater and traffic. A data centre starts with power, redundancy, fibre and cooling. Pharmaceutical and advanced manufacturing users may focus first on water, wastewater, process utilities, environmental controls and workforce training. Mixed-use or transit-oriented development raises different questions about planning, housing demand, parking, transit access and walkability.

Pennsylvania remains intensely competitive because of the availability of these inputs. The Commonwealth sits between the Midwest and the Northeast Corridor, with highway, port and rail networks that support distribution and manufacturing. For data centres and other power-sensitive uses, generation capacity, transmission access and fibre routes keep Pennsylvania in the conversation. For life sciences and advanced manufacturing, older industrial sites, water resources, universities, community colleges and technical training programmes give several regions a strong workforce and infrastructure base.

The advantage is not that every site is shovel ready, but rather that, in many places, land, power, water, transportation, workforce, connectivity and approvals can be assembled into a workable project.

## The Site-Selection Question Now Supplemented

The old threshold questions do still matter. Buyers care about acreage, price, location, zoning, taxes and incentives. Those issues now sit beside a more practical one: can this site support this use on the required timeline?

The answer depends primarily on the particular use. For logistics, the early issues may be access, off-site road improvements, truck circulation, grading, stormwater and municipal fatigue with warehouse development. For a data centre, the deal may hinge on available electric service, required upgrades, utility study timing, cooling, water, backup power and, increasingly, community acceptance. For pharmaceutical or advanced manufacturing, diligence may turn on water supply, wastewater treatment, discharge limits, process utilities, clean manufacturing space, environmental controls and workforce training. For redevelopment, the focus may be title, easements, legacy contamination, parking, housing demand, public infrastructure and local planning goals.

Early sequencing can determine whether a project advances. A developer may need utility input before finalising site control. A lender may want comfort on permits and service commitments before closing. A municipality needs to understand the impacts on traffic, water, stormwater and emergency services before hearings and public meetings begin. Long-lead equipment, utility upgrades, highway occupancy permits and land development approvals each move on their own schedule.

Pennsylvania's local approval structure adds another layer. Land use is municipally regulated, so a project of regional importance will depend on the ordinance, hearing schedule and political climate of one township, borough or city. A use that fits one municipality may face different definitions, conditions or community expectations in the next. That local variation is not a reason to avoid Pennsylvania, but it is a reason to do the municipal outreach early.

The best site is not always the cheapest or the largest; it is the site where the team can identify constraints, price the improvements, allocate risk and secure approvals without losing the business case. A property that looks ordinary on a map may be more valuable than a larger tract if it offers a clearer path to power, water, access, zoning and construction. Con-

versely, acreage and location can lose value quickly if the infrastructure answer is uncertain.

Use-specific infrastructure planning is now part of the deal's front end. It affects site control, purchase agreements, financing, incentives, construction scheduling and the public process. The projects that move are likely to be the ones that ask the harder questions before the commitment to a location is adversely impacted by economic constraints.

### Large Loads, Power and Project Risk

For large-load projects, power diligence is no longer a macro conversation about whether Pennsylvania produces enough electricity. It is a micro, site-specific inquiry: which utility serves the property, what load can be served, what upgrades are required, how long the studies will take and what commitments the customer must make before service is available.

That matters most for data centres, but it is not limited to them. Advanced manufacturing, cold storage, heavy industrial users and some life sciences projects can also create electric loads that affect site economics. The business issue is not only whether power can be delivered, but also who pays for the infrastructure, who bears the delay risk, what is the impact on other rate payers if the project goes forward and what happens if the project is reduced, delayed or abandoned after the utility has begun planning around it.

PJM Interconnection (PJM) co-ordinates the movement of electricity through all or parts of Pennsylvania, Delaware, Maryland, Ohio, nine other states and the District of Columbia. Its long-term forecast underscores the essential nature of power allocation, with its 2026 forecast projecting that summer peak demand in the PJM footprint could rise by roughly 85,000 MW over 15 years, to more than 241,000 MW. PJM has also been reviewing large-load requests more closely, in part to separate credible projects from duplicative or speculative load estimates. The demand is real, but not every announced data centre or large-load project will be built.

The regional supply question remains unresolved. PJM has warned that this region could fall short of required reserves beginning in 2027 if demand grows faster than new generation, transmission, demand response and other resources can be brought online. There is disagreement over timing and severity, but the issue is now part of development planning. For very large users, the power strategy may need to include on-site or nearby generation, power purchase agreements, storage, curtailment rights or demand-response commitments.

Pennsylvania's Public Utility Commission (PUC) has moved into this discussion through its large-load model tariff framework. The framework generally applies to customers above 50 MW individually or 100 MW in the aggregate. It addresses cost responsibility, financial security, study timing, contract terms, exit provisions, queue transparency and self-construction options. The PUC's role differs from PJM's role in regional reliability and interconnection, but both will now determine whether a large-load project in Pennsylvania can be financed and built.

For developers and users, the practical answer is to treat power as a critical, even gateway, deal term rather than a utility follow-up. Service commitments, upgrade costs, deposits, minimum-load obligations, termination rights and construction sequencing should be addressed while the project still has leverage and optionality. Waiting until after site control is locked down can mean the project has to negotiate around constraints it should have discovered and priced earlier.

### Water, Wastewater and Stormwater

Water and wastewater deserve the same early attention. For pharmaceutical manufacturing, food and beverage, healthcare, advanced manufacturing and some data centre cooling strategies, capacity can be as important as electric service. A site may need an authority commitment, a private system, pretreatment, discharge approvals, line extensions or plant upgrades before it can operate as planned.

These issues can quickly become community issues. A municipality or authority may support economic development but still worry about system capacity, ratepayer impacts, treatment obligations and the timing of public improvements. A project that will draw heavily from local water or wastewater infrastructure

needs a clear story about demand, discharge, funding, long-term operations and mitigation.

Addressing stormwater is an underappreciated constraint. It affects the development of warehouses, data centres, manufacturing, solar, mixed-use redevelopment and ordinary commercial projects. In Pennsylvania, it often sits at the centre of municipal and county land development review, state permitting, site engineering and neighbourhood concern. Stormwater can affect usable areas, grading costs, building and parking layout, and the approval schedule.

Public investment reflects both the need and the opportunity related to water use. In 2025, PENNVEST announced a USD547.1 million funding round for drinking water, wastewater, stormwater and non-point source projects across Pennsylvania.

That investment helps to modernise systems, but it does not replace project-level diligence. A developer still has to know whether the specific authority, plant, pipe, pump station or receiving stream can support the project in question.

### Solar as the Cautionary Example

Solar remains part of Pennsylvania's energy and land use picture, but it is no longer the straightforward growth story it might have appeared to be in some markets. Utility-scale solar still has demand, particularly as large users and public entities look for renewable power options. At the same time, many projects now face a harder path through local zoning, agricultural land concerns, interconnection limits, decommissioning obligations and public opposition.

That does not make solar irrelevant or a mistake, but it does make it a cautionary tale. A use can be favoured by market demand and still slow down when municipal ordinances, local planning goals and public expectations have not caught up. Pennsylvania's Department of Environmental Protection recognises the role of local governments in solar siting, including zoning and land use review for grid-scale projects. Similar local questions are now appearing around battery storage, data centres, substations, transmission lines and other infrastructure-heavy uses.

The lesson is simple: public need does not eliminate local review. A project that looks compelling at the state, regional or utility level may still have to answer municipal-level questions about traffic, farmland protection, noise, viewshed, emergency services, stormwater and future land use. The best projects anticipate that tension instead of treating it as a late-stage communications problem.

### Pennsylvania's Local Approval Layer

Pennsylvania's land use structure is one of this market's defining features, particularly for developers more familiar with county-led approval systems. Maryland offers a useful East Coast comparison. It has about 6.3 million residents and 24 primary local jurisdictions: 23 counties and Baltimore City. Pennsylvania has about 13.1 million residents, but land use approval often drops below the county level to one of 2,560 municipal corporations. Roughly 1,603 of those municipalities have adopted their own zoning ordinances. Another 137 are covered by county zoning, and 821 have no zoning at all. The result is a far more localised approval map.

County review still matters in Pennsylvania, but it usually does not replace municipal review. Municipal zoning takes precedence over county zoning, and a municipality can displace county zoning by adopting its own ordinance. The same local-first pattern often appears in subdivision and land development reviews. Even where there is no zoning, a project may still need subdivision and land development approval, stormwater review, sewage planning, highway access approvals, environmental permits, building code review and utility co-ordination. "No zoning" can mean no zoning district or conditional use process; it does not mean no land use hurdles.

There can be real variation from one municipality to the next. A use permitted by right in one place may require conditional use approval, a special exception, a variance or a zoning text amendment elsewhere. Definitions matter, too. A local ordinance may not clearly account for a data centre, battery storage facility, fulfilment centre, life sciences manufacturing use or accessory generation facility. When that happens, the approval process can become the place where the use is effectively defined.

Traffic is often the flashpoint. Municipal officials and residents may want road improvements that address regional traffic patterns, not just traffic from a single project. But the approval process does not always allow every desired improvement to be imposed on a developer. Some work requires PennDOT involvement; some depends on the municipality's subdivision and land development ordinance; and some must be negotiated rather than required. That distinction should be clear before the first public meeting.

Early municipal work matters. The project team should understand the comprehensive plan, zoning ordinance, subdivision and land development ordinance, the hearing process, the risk of appeals and likely community concerns before committing deeply to a site. In Pennsylvania, local approvals are not a box to check after the business terms are settled: they are part of the business terms.

### The Lehigh Valley as a Regional Example

The Lehigh Valley shows how the pieces can come together. The region has long benefited from its location between New York and Philadelphia, its highway and rail network, its industrial base and its labour pool. Those advantages still matter. They are now being paired with life sciences, manufacturing, logistics, healthcare, higher education, downtown reinvestment and redevelopment.

Lehigh Valley Economic Development Corporation (LVEDC) reported that the Lehigh Valley economy reached USD57.3 billion in 2025, and that the region ranked as the No 1 mid-sized US market for new economic development projects. Those figures do not make the region immune to land constraints, traffic concerns or public resistance, but they do show why site selectors keep returning to places where transportation, utilities, workforce and approvals can be assembled with some confidence.

A prime example is a recent project in which Fitzpatrick Lentz & Bubba, is working with Eli Lilly to develop a pharmaceutical manufacturing campus in Lehigh County. Public statements from the company and the Commonwealth describe a planned USD3.5 billion investment, at least 850 permanent jobs and approximately 2,000 construction jobs. The important point is not only the size of the investment: it is the mix of factors behind the site decision, including industrial land, access, utilities, incentives, workforce development and a co-ordinated approval path.

Other regions of Pennsylvania will tell the story differently. Some will compete through energy and land; others through universities, medical systems, ports, rail, legacy industrial sites or downtown redevelopment. The common thread is not that every region has the same assets; it is that the most competitive regions can match the right assets to the right use and move the project through approvals without losing the schedule.

### Project Delivery: Where the Business and Legal Work Meet

These projects do not move through one legal lane. A single development may involve real estate, land use, energy, environmental, tax, finance, construction, utility, incentives and eminent domain issues simultaneously. Treating those as separate workstreams can create gaps in timing and risk allocation.

The better approach is to organise the work around the project's actual sequence. Before site control, the team should know whether the use is allowed, whether utilities can serve it and whether access is feasible. Before closing, the team should understand easements, title, environmental conditions, public approvals and financing conditions. Before construction, the team should have a realistic path through permits, utility commitments, procurement and public improvements.

The questions worth answering early are practical ones.

- Can the project obtain the utilities and access it needs, including power, gas, water, wastewater, broadband, roads and rail, where relevant?
- Does the zoning ordinance support the use, and what approvals or ordinance changes are required?
- What off-site improvements, easements, right-of-way or utility upgrades are needed, and who will pay for and obtain them?
- Is there a viable workforce, including training support through universities, community colleges,

career and technical schools or employer-funded programmes?
- What stormwater, environmental, title, mineral, access or legacy-site issues could affect design or timing?
- Are incentives available, and do they impose investment, job, reporting, infrastructure or community benefit obligations?
- What opposition, appeals, neighbour claims or operating issues are foreseeable?

Those are legal questions, but they are also business questions. They determine whether the project can be financed, approved, built and operated without the schedule or cost structure breaking down.

### Outlook

The next year is likely to be a period of filtering. Developers and users will continue to pursue sites, but more attention will shift to utility capacity, water and wastewater, transportation access, zoning, municipal appetite and the approval path. For data centres and other large loads, power availability and utility study timing will remain gating factors. For logistics and industrial projects, traffic, land supply, stormwater and community reaction will continue to separate workable sites from difficult ones.

Over the next few years, more announced projects will either enter visible development or fall away. The projects that move forward will become visible in the form of substations, utility upgrades, water and wastewater improvements, road work, fibre extensions, redevelopment activity, generation and storage projects, and public hearings. The projects that stall will often do so because a utility study took too long, a road improvement became too expensive, a zoning appeal changed the schedule, financing tightened, or local opposition made the business case harder to defend.

Pennsylvania should be well positioned in this cycle, but the opportunity is not automatic. The Commonwealth has location, energy, water, industrial history, transportation, workforce and redevelopment capacity. It also has aging infrastructure, local land use variation, power delivery constraints, warehouse fatigue in some communities, water and stormwater pressure, and a public approval process that can become contested.

The projects that succeed will be the ones that do the hard work early. They will match the use to the site, test the infrastructure, understand the local ordinance, price the improvements, secure the necessary rights and build a credible public record. In this market, Pennsylvania's advantage is not just its assets: it is that, in the right places, those assets can still be assembled into a project that works.

## Trends and Developments

**Contributed by:**
Kenneth "KJ" Johnston and Blaine Grant
**Phelps Dunbar LLP**

**Phelps Dunbar LLP** has 18 office locations across the USA and in London. The firm serves clients in the region's major commercial centres. Its more than 450 lawyers focus on six core areas: labour and employment, litigation, business, admiralty, insurance coverage and healthcare. But it is more than its casework that sets the firm apart. The firm is known for asking questions not only about what is, but what should be. It ensures clients can access its experience seamlessly, with every lawyer in every office available to contribute as part of their team. This approach reflects the firm's belief that anything can make the difference in a business-critical deal or lawsuit.

## Authors

**Kenneth "KJ" Johnston** is a partner at Phelps Dunbar LLP. KJ represents financial institutions, energy companies and businesses in high-stakes litigation, regulatory actions and complex business disputes. He helps clients navigate disputes where legal, financial and operational risks converge. When corporate governance, creditor remedies and financial exposure add risk to clients' operations, KJ aligns legal strategy with business objectives and realities. KJ's practice is grounded in financial services litigation. He regularly represents banks, lenders and institutional clients in disputes involving loan structures, syndications, lender liability and statutory frameworks, including: Fair Credit Reporting Act (FCRA); Fair Debt Collection Practices Act (FDCPA); Equal Credit Opportunity Act (ECOA); and Uniform Commercial Code (UCC).

**Blaine Grant** is counsel at Phelps Dunbar LLP. Blaine represents businesses, executives and financial institutions in high-stakes commercial disputes where the outcome affects their enterprise value, control and reputation. A trusted legal and business adviser and strategist, he develops and executes litigation strategies aligned with his clients' objectives, whether that means resolving a dispute early or trying the case to verdict. A trial lawyer with nearly 30 years of experience, Blaine is known for building leverage early, simplifying complex disputes and driving outcomes. Blaine handles a broad range of complex commercial matters, with particular strength in shareholder and closely held business disputes, financial services and regulatory litigation, and high-exposure tort defence.

## Doing Business in Texas in 2026: Courts, Capital, and Capacity

Texas has established itself as a leading business-friendly jurisdiction in the United States. According to the Texas Economic Development & Tourism Office, Texas continues to attract businesses due to its business-friendly climate, absence of corporate or personal income tax, skilled and diverse workforce, accessible global markets, strong infrastructure, and reasonable regulatory environment. However, in 2026, Texas is moving beyond size, growth, and political branding by building a comprehensive business-law ecosystem. This includes specialised courts for high-value commercial disputes, updates to corporate-governance law, new capital markets infrastructure, advanced power and infrastructure planning, and support for emerging industries such as commercial space, artificial intelligence infrastructure, energy expansion, and advanced manufacturing. For companies considering Texas, the opportunities are significant, but so are the diligence requirements. Growth alone no longer defines Texas; legal, governance, energy, and dispute resolution planning must now be addressed early in any Texas investment.

### *A new forum for high-risk business disputes*

One of the most important legal developments for companies doing business in Texas is the creation and continuing refinement of the Texas Business Court and the Fifteenth Court of Appeals. Together, they represent a structural change in how Texas will handle many high-stakes commercial disputes. The Business Court is a specialised trial court for certain commercial disputes. It does not replace Texas district courts, nor does it hear every business case. Its importance lies in the types of disputes it is designed to handle: high-value commercial matters, governance disputes, fiduciary-duty claims, significant business transactions, and other matters that can benefit from judges focused on complex business litigation. For parties entering Texas transactions, this development changes initial planning. Forum selection clauses, venue provisions, governing-law clauses, jury-waiver provisions, arbitration clauses, and entity-governance documents should be reviewed with the Business Court in mind. Companies should not assume disputes will automatically be heard in the Business Court, nor should they overlook its likely influence. In appropriate cases, access to a specialised business forum may influence litigation strategy and settlement leverage. The Fifteenth Court of Appeals is equally important. Appeals from the Business Court follow a specialised appellate path. Over time, that should help create a more coherent body of Texas commercial-law precedent. That is significant in a state where large commercial disputes historically moved through different intermediate appellate districts, creating the possibility of uneven treatment among regions. As with any new court, some initial uncertainty is expected. Parties are testing the limits of jurisdiction, removal, remand, venue, and amount-in-controversy requirements. This uncertainty should prompt careful drafting, pleading, and planning, rather than avoidance of the forum. For businesses, dispute-resolution strategy in Texas now starts before litigation. It should be considered during contract drafting, entity formation, governance updates, and when determining where and how prospective disputes will be resolved.

### *Corporate-governance modernisation and the Texas redomestication pitch*

The Business Court is just one aspect of Texas's expanded strategy. The state has also enacted substantial changes to its business-organisation laws, striving to make Texas more attractive for operating, forming, governing, and potentially redomesticating business entities. Recent amendments to the Texas Business Organizations Code address issues that matter to directors, officers, shareholders, investors, and litigation counsel. They include provisions concerning internal entity claims, exclusive Texas forum provisions, jury-waiver provisions in governing documents, derivative proceedings, director independence, officer and director liability, and the treatment of certain shareholder-litigation practices. These changes reveal a national competition for corporate charters, headquarters, and investment. While Delaware remains the leading corporate law jurisdiction, Texas is making a direct appeal to corporations and investors. For companies with significant operations, capital, or litigation in Texas, and growing access to Texas-based exchange infrastructure, Texas corporate law should be part of strategic planning. The most immediate impact is on corporate planning. Boards and management teams of Texas entities should

review their governing documents to ensure compliance with the new statutory environment, including exclusive-forum provisions, jury waivers, indemnification and exculpation clauses, derivative-action procedures, shareholder-meeting mechanics, and approval thresholds for significant transactions. Public companies have additional considerations. Texas now allows certain nationally listed corporations to opt into stricter requirements for shareholder proposals. These provisions may appeal to companies concerned about shareholder activism, environmental or social proposals, or proxy-season costs, but call for careful analysis. Investor expectations, exchange rules, federal securities law, proxy-advisory firm positions, and shareholder-relations strategy remain important. Not every company should become a Texas entity, but the question is now more relevant than ever. Texas is moving beyond branding and is building a legal infrastructure to compete for corporate decision-making authority.

### *Y'all Street and the rise of Texas capital markets*

The term "Y'all Street" reflects a genuine trend, despite being more of a slogan than a legal doctrine. Dallas, along with the broader Texas market, is increasingly positioned as a financial centre, supported by new exchange infrastructure and a growing capital markets presence. The Texas Stock Exchange is part of the state's effort to provide a Texas-based alternative in public markets. NYSE Texas has launched as a Dallas-based electronic equities exchange, and Nasdaq Texas now offers dual-listing functionality. These developments give Texas a more prominent role in public-company listing, trading, issuer relations, and corporate identity. A Texas listing option may affect investor communications, corporate governance choices, exchange compliance planning, shareholder proposal strategy, and the wider decision about whether to align a company's legal identity, operational headquarters, and public-market presence. These exchange developments complement the state's corporate-law reforms. Texas is pursuing an integrated approach including corporate law reforms, specialised courts, an appellate structure, exchange infrastructure, and a business climate designed for public companies, private equity sponsors, family offices, lenders, and emerging-growth businesses.

Texas is unlikely to replace New York as the centre of US capital markets or displace Delaware's dominance in public-company governance. However, companies now have more options, which should be evaluated strategically rather than by default. For companies with a significant Texas presence, new questions have become more prominent: should the company remain incorporated elsewhere or consider forming or redomesticating in Texas? Should it pursue a Texas-based or dual listing? Should the governing documents be updated to comply with Texas law? Should commercial contracts account for the Business Court? Should investor-relations teams be prepared to explain the benefits of a Texas-based governance structure? These questions go beyond legal considerations and intersect with finance, investor perspective, and business identity.

### *Power, data centres, and the new infrastructure diligence*

Texas's growth increasingly depends on the electric grid. While site-selection analysis has traditionally focused on land, labour, incentives, logistics, and taxes, many projects – especially data centres, advanced manufacturing, cryptocurrency facilities, hydrogen projects, and oil-and-gas electrification – now prioritise whether reliable power can be secured on a commercially viable timeline. ERCOT's long-term planning illustrates the scale of the challenge. Texas sees significant projected load growth, largely from data centres and other major electricity users. Even if not all proposed projects are built, large-load interconnection has become an important factor for economic development. The state has responded with a more organised process for evaluating large-load interconnection requests. ERCOT's Batch Zero process groups qualifying projects for collective study, permitting more coherent evaluation of demand, reliability, and transmission needs. This approach distinguishes mature projects from speculative ones and provides developers, utilities, and regulators with a clearer planning path. For companies, this shift affects deal diligence. Agreements for large Texas projects should not treat power as a routine utility condition. Power availability, interconnection status, transmission constraints, curtailment risk, private generation, behind-the-meter arrangements, water use, environmental permitting, and cost allocation may all be

material considerations. Lenders and investors face similar concerns. Even with a strong site, sponsor, and incentives, a project may face considerable execution risk if power procurement is uncertain. Financing parties should assess the interconnection pathway, utility discussions, load forecast maturity, backup generation availability, and contractual allocation of delay or curtailment risk. Texas will likely remain attractive for data centres and other high-growth infrastructure projects due to its land, large power market, major technology customers, favourable business climate, and energy development tradition.

However, these advantages do not remove constraints, making disciplined diligence essential. Legal work on Texas infrastructure projects is becoming more integrated. Real estate, energy, environmental, tax, construction, finance, procurement, corporate, and litigation counsel must all understand the same project assumptions. The key issue is not only whether the project can be built, but whether it can be powered, connected, operated, and financed in line with the business plan. SpaceX's Starbase operations in South Texas provide a case study in how Texas approaches frontier industries. While most companies do not resemble SpaceX, Starbase demonstrates both the speed and complexity of disruptive projects in Texas. Commercial space activity involves multiple layers of law and regulation, including federal launch licensing, environmental review, public safety, land use, road and beach access, local government authority, infrastructure development, workforce housing, and community relations. Starbase also illustrates how private industrial projects can influence local governance and regional identity. The FAA's approvals for expanded Starship/Super Heavy launch activity demonstrate the importance of federal review, even in a state known for business-friendly policy. Texas may provide the local and political environment for rapid development, but a launch operator still depends on federal licensing, environmental analysis, and operational approvals.

For businesses in other sectors, the lesson is broader: Texas welcomes ambitious projects, but legal complexity persists. Advanced manufacturing, semiconductor, energy, carbon-capture, data centre, logistics, and aerospace projects all present multi-layered legal obstacles. Larger and more visible projects are more likely to attract scrutiny from regulators, communities, counterparties, competitors, and advocacy groups. Starbase also stresses the importance of local planning. Texas is not a uniform market; projects in different regions may face distinct political, labour, infrastructure, environmental, and community dynamics. While state-level policy is important, local execution often determines project success.

### *Privacy, data, and technology compliance as a cross-cutting issue*

Texas is emerging as an important regulator of privacy and technology. The Texas Data Privacy and Security Act applies to many companies doing business in Texas, providing products or services to Texas residents, or processing personal data. It grants consumers rights over their data and imposes obligations on businesses regarding notices, consumer requests, data security, sensitive data, and data protection assessments. This extends past traditional consumer-facing businesses. Data centres, software providers, financial services, healthcare-adjacent businesses, retailers, employers, marketing platforms, artificial intelligence developers, and technology vendors must assess whether and how Texas privacy law applies to their operations. Privacy compliance should be integrated into Texas expansion planning. Companies entering the Texas market should review consumer notices, vendor contracts, data-processing agreements, cybersecurity practices, biometric data practices, targeted advertising, sensitive data processing, and consumer-request workflows.

Recent enforcement actions by the Texas Attorney General have focused on failure to provide clear consumer notices, insufficient processes for responding to consumer requests, and inadequate safeguards for sensitive personal data, including biometric and health-related information. Common compliance pitfalls include failing to respond promptly to data subject requests, inadequate employee training in handling personal data, and insufficient documentation regarding data processing activities. Counsel should remain aware of evolving enforcement priorities and ensure that privacy programmes are regularly reviewed and tested to reduce enforcement risk. The key takeaway is that Texas's pro-business reputation does not equate to a lack of regulation. In privacy,

energy reliability, infrastructure, securities markets, and corporate governance, Texas is actively legislating and regulating. While its approach may differ from California, New York, or the federal government, it acts proactively.

### *Practical takeaways for companies entering or expanding in Texas*

Companies operating in Texas in 2026 should view the state as a strategic legal market, not just an operating location. Several considerations are increasingly important.

- First, companies should review governance documents. Texas entities and companies considering Texas formation or redomestication should evaluate forum-selection clauses, jury waiver provisions, derivative-action procedures, director and officer protections, shareholder proposal mechanics, indemnity provisions, and approval requirements for significant transactions.
- Second, companies should draft commercial contracts with a dispute forum in mind. The Texas Business Court and Fifteenth Court of Appeals should be part of the litigation-planning conversation for high-value commercial relationships, especially where governance, fiduciary duty, investment, acquisition, finance, or major commercial disputes may arise.
- Third, capital markets decisions should be integrated with corporate-governance decisions. Texas-based exchanges and dual-listing options may create opportunities, but they also require careful consideration of investor expectations, securities law compliance, public company governance, and communications strategy.
- Fourth, power and infrastructure diligence should move to the front of the project schedule. For data centres, manufacturing facilities, energy-intensive operations, and major real estate developments, power availability and interconnection risk may be as important as land, labour, and incentives.
- Fifth, privacy and technology compliance should be addressed early. Texas privacy law can apply to companies outside Texas that do business with Texas residents. Consumer data practices, vendor contracts, and data protection assessments should be reviewed before launch, not after a complaint or regulatory inquiry.
- Sixth, local execution matters. Texas affords notable opportunities, but projects often succeed or fail based on local infrastructure, permitting, community participation, workforce availability, environmental constraints, and political relationships.

### *Conclusion*

Texas remains an important business jurisdiction in the United States. However, in 2026, its story extends beyond population growth, relocations, and advantageous tax policy. The state is developing a more comprehensive business-law platform. The Texas Business Court and Fifteenth Court of Appeals are changing the dispute-resolution landscape. Corporate-law reforms are strengthening the state's pitch to boards, investors, and public companies. Texas-based exchange infrastructure is giving substance to the "Y'all Street" narrative. ERCOT's large-load planning reflects the reality that economic growth now depends on power capacity and transmission planning. Starbase shows how Texas can attract frontier industries while still calling for careful navigation of federal, state, and local law. Privacy regulations show that the state is willing to actively regulate in areas it considers important. For companies, the opportunities are considerable. However, success in Texas now requires more than simply establishing operations. The optimal approach is to align legal structure, governance, dispute planning, capital strategy, infrastructure diligence, and regulatory compliance from the outset. Texas is open for business. In 2026, success also depends on appreciating the legal infrastructure the state is building to support business activity.

**VILAF** has been at the forefront of Vietnam's legal market for over three decades. The firm is widely recognised for advising foreign investors and institutions on their business activities in Vietnam, delivering high-quality, commercially focused legal solutions. With more than 100 lawyers, including 16 partners, VILAF offers expertise across a full range of practice areas, including banking and finance, corporate and M&A, dispute resolution, energy and infrastructure and real estate. Its internationally trained lawyers combine global standards with deep local insight, enabling the firm to handle complex cross-border transactions effectively. VILAF is particularly known for its strong M&A and corporate practice, supported by a large team of English-speaking lawyers and Chinese language capabilities. The firm consistently handles large, sophisticated matters under demanding timelines, with many partners recognised as leading lawyers in Vietnam.

## Authors

**Ngoc Luong Trinh** is a partner at VILAF with over 23 years of legal experience, including more than 17 years at the firm. He has extensive expertise across corporate and M&A, banking and finance, energy and infrastructure, capital markets, employment, antitrust and tax. Ngoc regularly advises international clients on complex, multi-million-dollar cross-border M&A transactions in diverse sectors. He is known for his strategic thinking and ability to navigate intricate legal and commercial issues, delivering practical and effective solutions for clients.

**Tung Nguyen** is a partner at VILAF, focusing on banking and finance, mergers and acquisitions and capital markets. He has extensive experience advising on complex financing transactions, cross-border deals and corporate matters, with particular strength in banking law. His practice includes syndicated lending, project and real estate finance, bond issuances and other capital markets transactions. Tung has advised leading domestic and international financial institutions on high-value transactions across sectors, including infrastructure, energy and real estate. He also gained valuable in-house experience through secondments with BNP Paribas and HSBC. Tung is recognised by leading legal publications as a prominent lawyer in Vietnam.

**Hanh Vo** is a senior associate at VILAF, specialising in dispute resolution, crisis management and employment. She joined the firm in 2015 after working at the People's Court of District 1 in Ho Chi Minh City. Hanh has extensive experience advising and representing clients in a wide range of disputes, including commercial, civil, tax, customs, corporate and employment matters. She regularly acts before Vietnamese courts and arbitral tribunals such as VIAC and SIAC. Her practice spans multiple industries, where she provides practical and effective solutions for both contentious and day-to-day operational issues, supporting clients in complex and high-stakes situations.

**Esko Cate** is a senior associate at VILAF and a US-qualified lawyer based in Ho Chi Minh City, with a practice focused on corporate and technology law. He specialises in cross-border transactions, foreign investment, mergers and acquisitions and corporate structuring, regularly advising multinational clients on market entry and operations in Vietnam. Esko is particularly recognised for his expertise in privacy, data protection, cybersecurity and technology-related regulatory matters. With a practical, commercially driven approach, he provides strategic guidance across the full lifecycle of transactions, helping clients navigate complex regulatory frameworks and achieve efficient, compliant outcomes.

**Contributed by:** Ngoc Luong Trinh, Tung Nguyen, Hanh Vo, Esko Cate, Nguyen Dang, Khanh Le, Hoang Nguyen and Truc Ta, **VILAF**

**Nguyen Dang** is a senior associate with over six years of experience at VILAF, specialising in dispute resolution. He focuses on complex commercial, construction, employment and investment disputes, representing clients in both litigation and arbitration. Nguyen regularly appears before Vietnamese courts and leading arbitral institutions, including VIAC and SIAC. His work involves advising multinational corporations, foreign-invested enterprises and project sponsors on high-value disputes and enforcement matters. He is known for his practical approach and ability to resolve contentious operational and contractual issues, delivering effective and commercially sound solutions across a range of industries.

**Khanh Le** is a supervising associate with over six years of experience across banking and finance, energy, M&A and capital markets. Since joining VILAF in 2021, she has advised foreign investors, private equity funds and financial institutions on cross-border equity investments, joint ventures, project and corporate finance and bank M&A. She has also supported fintech initiatives and advised on regulatory frameworks, securities offerings and IPO processes for Vietnamese banks.

**Hoang Nguyen** is a supervising associate at VILAF, admitted in Vietnam and has passed the UK Solicitors Qualifying Examination (SQE1). Since joining the firm in 2017, he has developed broad experience across dispute resolution, crisis management and employment. He regularly advises and represents clients in complex, high-stakes disputes involving construction, corporate and investment, employment, commerce and insurance, including proceedings before Vietnamese courts, VIAC and SIAC. Hoang also supports foreign investors and local companies in corporate and M&A transactions, employment and antitrust matters. He graduated as salutatorian from the Diplomatic Academy of Vietnam and contributes to legal scholarship through published works on arbitration and investment disputes.

**Truc Ta** is a supervising associate at VILAF, specialising in mergers and acquisitions, antitrust, employment, and general corporate matters. Since joining the firm in 2019, she has advised both domestic and international clients on complex transactions and business operations across a wide range of industries, including consumer goods, food and beverage, energy, pharmaceuticals, insurance, real estate, healthcare, education, and water infrastructure. Truc has been involved in numerous high-profile cross-border M&A transactions, spanning both private and capital markets, acting for leading regional and global investors. She also regularly advises multinational corporations and international law firms on investments, due diligence, corporate governance, regulatory compliance and a broad range of commercial matters. She holds an LLB from Ho Chi Minh City University of Law.

# 1. Legal System

## 1.1 Legal System and Judicial Order

### Overview of the Legal System

Vietnam's legal system is principally rooted in the civil law tradition, reflecting its historical development under French colonial rule. As a result, the legal framework is primarily founded on codified law. It mainly comprises primary legislation enacted by the National Assembly and subordinate legislation issued by the Government, ministries and other agencies. The Government plays a central role in law-making by proposing and drafting legislation, enacting and implementing regulations on key aspects of laws and publishing guidance on their practical application.

Vietnam has recently developed a case-law system under which the Supreme People's Court may select and designate certain portions of judgments as official precedents. These precedents are binding on Vietnamese courts when adjudicating cases involving similar legal issues. However, the system of precedent remains limited, with fewer than 100 officially recognised cases to date. The Supreme People's Court and the Supreme People's Procuracy also periodically issue internal guidance informed by higher-court decisions to promote consistency in the judicial approach to particular issues.

### Organisation of Judicial Order

#### *The People's Courts system*

Following a restructuring of the court system in 2025, Vietnamese courts are organised into a three-tier structure comprising the Regional People's Courts, the Provincial-level People's Courts and the Supreme People's Court:

- The Regional People's Courts serve as the principal first-instance courts for most criminal, civil, commercial, family and administrative cases. For certain specialised matters related to insolvency, rehabilitation, intellectual property and technology transfers, only some selected Regional People's Courts in Hanoi, Da Nang and Ho Chi Minh Cities with specialised court divisions will have the first-instance jurisdiction over such matters. These courts generally exercise jurisdiction over a broad geographical area spanning several wards, being the smallest administrative units in Vietnam.
- The Provincial-level People's Courts generally hear appeals from the Regional People's Courts. They also exercise first-instance jurisdiction over serious criminal cases and certain special matters, such as annulment of domestic arbitral awards.
- The Supreme People's Court, based in Hanoi, is the highest court in the judicial system and primarily handles cassation and retrial cases. It also has three Appellate Divisions in Hanoi, Da Nang and Ho Chi Minh City to hear appeals from the Provincial-level People's Courts.

#### *The IFC Specialised Court*

Notably, in early 2026, Vietnam established a new specialised court at the International Financial Centre located in Ho Chi Minh City ("IFC Specialised Court") to support the operation of Vietnam's newly

established International Financial Centre (with two hubs located in Ho Chi Minh City and Da Nang). The IFC Specialised Court has exclusive jurisdiction over most types of business and commercial disputes and matters where at least one party is a member of the International Financial Centre in Vietnam, provided that they do not involve public interests or the interests of the State. It was established as a self-contained dispute resolution mechanism with its own legal framework and procedural rules, many of which are derived from common law practice. Some notable features are:

- Foreign judges: Vietnamese and foreigners can be appointed as judges. They must have relevant expertise, at least 10 years' experience resolving investment and business disputes and sufficient English proficiency.
- English being the primary language: Proceedings shall be conducted and judgments issued, in English, either alone or together with a Vietnamese translation.
- More streamlined proceedings: There are only two tiers of proceedings and appellate judgments are final and not subject to cassation or retrial procedures. The Court may also issue default judgments and summary judgments. Proceedings may also be conducted by electronic means from case filing until trial.
- Case and cost management: The IFC Specialised Court has case management powers not available to the People's Court. These include conducting case management conferences and conducting pre-trial review. The Court may also allocate costs based on the outcome of the case, including reasonable attorney fees, which are generally not recoverable in traditional court litigation.
- Direct enforcement: Unlike ordinary court judgments and orders, which are enforced by the Civil Judgment Enforcement Agency, the enforcement of IFC Specialised Court judgments and decisions is overseen directly by designated judges, who may issue ancillary enforcement orders, including orders attaching property or earnings and third-party debt orders.

At present, the Supreme People's Court is in the process of developing the detailed Procedural Rules for the IFC Specialised Court.

## 2. Restrictions on Foreign Investments

### 2.1 Approval of Foreign Investments

Under Vietnamese laws, foreign investments into Vietnam are subject to a prior investment approval regime, as outlined.

#### Investment Policy Approval (IPA)

Certain investment projects must obtain investment policy approval before implementation due to their scale, sector, land use, national security impact or other regulatory sensitivities (Article 24 of the Law on Investment 2025).

#### Projects Subject to Approval by the National Assembly

The National Assembly has the authority to approve investment policies for projects that require special mechanisms or policies that differ from existing laws or National Assembly resolutions (Articles 24.20 and 25.1 of the Law on Investment 2025).

#### Projects Subject to Approval by the Prime Minister

The Prime Minister has authority over, among others:

- projects involving conversion of protected forests, watershed forests, border protection forests or production forests exceeding statutory thresholds;
- projects involving the conversion of two-crop rice cultivation land of 500 hectares or more;
- nuclear power plant projects;
- foreign-invested projects in telecommunications infrastructure, afforestation, publishing and press sectors; and
- casino and betting business projects (Article 24.1, Article 24.2, Article 24.4, Article 24.6, Article 24.7 and Article 25.2 (a) of the Law on Investment 2025).

The Prime Minister also approves projects involving large-scale resettlement and projects located within specially protected world heritage conservation areas (Article 25.2 (b) and Article 25.2 (c) of the Law on Investment 2025).

### Projects Subject to Approval by the Provincial People's Committee Chairman

The Chairman of the provincial People's Committee has authority over, among others:

- projects requiring land allocation, land lease or land use conversion;
- housing and urban development projects;
- golf course projects;
- airport, seaport and aviation transport projects;
- industrial park infrastructure projects; and
- projects implemented in areas affecting national defence or security (Article 24.8 through Article 24.18 and Article 25.3 (a) of the Law on Investment 2025).

The provincial authority also approves projects involving medium-scale resettlement and projects located within protected heritage areas outside the Prime Minister's authority (Article 25.3 (b) and Article 25.3 (c) of the Law on Investment 2025).

### Authority of Industrial Zone and Economic Zone Management Boards

For projects located within industrial parks, export processing zones, high-tech zones, concentrated digital technology zones or economic zones that are consistent with approved planning, the relevant management board has the authority to approve the investment policy (Article 25.4 of the Law on Investment 2025);

### Investment Registration Certificate (IRC)

Foreign investors and foreign investor equivalents, as prescribed in the Law on Investment regulations, must obtain an Investment Registration Certificate in the following principal circumstances:

- establishment of a new foreign-invested company to implement an investment project in Vietnam (Article 26.1 (a) of the Law on Investment 2025);
- implementation of an investment project by an economic organisation treated as a foreign-invested economic organisation under Article 20.1 of the Law on Investment 2025 (Article 26.1 of the Law on Investment 2025);
- implementation of investment projects under a business cooperation contract ("BCC") between:
  - a domestic investor and a foreign investor; or
  - foreign investors together (Article 22.2 of the Law on Investment 2025).

### Notification on Satisfaction of Capital Contribution, Share Acquisition or Acquisition of Capital Contribution in Existing Vietnamese Enterprises ("M&A Approval")

Vietnamese law permits investors to invest in existing Vietnamese enterprises through:

- capital contribution;
- share acquisition; or
- acquisition of capital contribution interests (Article 21.1 of the Law on Investment 2025).

These investment forms constitute the principal framework for mergers and acquisitions ("M&A") transactions involving foreign investors in Vietnam.

Foreign investors conducting M&A transactions in Vietnam must satisfy the following principal conditions:

- compliance with foreign investor market access conditions;
- compliance with national defence and security requirements; and
- compliance with land law restrictions applicable to land use rights in sensitive locations, including islands, border areas, coastal communes, wards and special administrative zones (Article 21.2 (a), Article 21.2 (b) and Article 21.2 (c) of the Law on Investment 2025).

Foreign individuals or organisations receiving shares or capital contributions through donations, inheritances, exchange contracts or other ownership transfer arrangements must also satisfy the same conditions as those applicable to foreign investor M&A transactions (Article 75.5 of Decree No. 96/2026/ND-CP).

### Member Registration or Recognition Certificate (MRC)

Organisations and enterprises may register as members of the International Financial Centre ("IFC") if they satisfy the applicable requirements on financial capacity, reputation and business activities aligned

with the IFC development orientation under Resolution No. 222/2025/QH15 and its implementing regulations (Article 10.1 of Resolution No 222/2025/QH15).

Certain qualified institutions may obtain member recognition without conducting formal member registration procedures. These include:

- financial institutions, investment funds or enterprises listed in the Fortune Global 500 ranking published by Fortune Magazine at the time of registration or their direct parent companies, excluding entities operating in banking, securities and insurance sectors; and
- domestic financial institutions ranked among the top ten enterprises by charter capital within their respective sectors, excluding banking, securities and insurance sectors (Article 10.2 (a) and Article 10.2 (b) of Resolution No 222/2025/QH15).

Except for specific regulated sectors, investors must establish a legal entity as an IFC member in accordance with the Resolution and implementing regulations (Article 10.3 of Resolution No. 222/2025/QH15).

Following issuance of the MRC, investment projects implemented by an IFC member are generally exempt from the IRC requirement. However, projects subject to IPA under the investment laws must still obtain the relevant IPA before implementation. In addition, projects operating in conditional business sectors remain subject to applicable sector-specific operating licenses or certificates of eligibility prior to commencement.

Other sector-specific licenses may apply depending on the nature of the investment. For example, a foreign contractor awarded a construction contract in Vietnam may obtain a construction operation license from the Ministry of Construction under the Law on Construction. In such a case, the construction operation license is generally sufficient to implement the relevant bid package without requiring a separate investment license.

## 2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance

### IPA

Projects subject to IPA are generally implemented through a two-step process:

The first step is obtaining the IPA. IPA applications are submitted to:

- the Ministry of Finance, for projects subject to approval by the National Assembly or the Prime Minister;
- the provincial Department of Finance ("DOF"), for projects outside special-purpose zones; or
- the Management Board of industrial parks or economic zones, depending on project nature and scale (Articles 24 and 25 of the Law on Investment 2025).

The second step requires obtaining the IRC, following issuance of the IPA.

The statutory timeline is as follows.

- IPA issuance:
  (a) National Assembly approvals depend on the legislative session schedule and applications are generally required at least 60 days before the relevant session;
  (b) Prime Minister approvals: at least 38 working days; and
  (c) Provincial People's Committee approvals: at least 26 working days; and
- IRC issuance: following issuance of the IPA, the competent licensing authority will issue the IRC within five working days (Article 38.1 (a) of Decree No 96/2026/ND-CP).

For projects in which the investor has already won an investor selection tender or a land auction, the IRC is also issued within five working days of the investor's request being submitted (Article 38.2 of Decree No 96/2026/ND-CP).

Investment activities implemented without the required IPA may be subject to administrative penalties, mandatory post-filing obligations and suspension of the unlawful investment project. (Article 19.3 (a) of

Decree No. 122/2021/ND-CP and Article 35.2 (dd) of Law on Investment 2025)

### Investment Registration Certificate (IRC)

Projects subject to IRC but exempt from IPA are generally implemented through a two-step process.

The first step is obtaining the IRC. The investor submits one set of application documents to the competent investment registration authority. (Article 39.1 of Decree No 96/2026/ND-CP). The competent authority depends on the project location:

- the Management Board has authority for projects located inside industrial parks, export processing zones, high-tech zones, concentrated digital technology zones or economic zones (Article 27.1 of the Law on Investment 2025);
- the Department of Finance has authority for projects located outside such zones (Article 27.2 of the Law on Investment 2025); and
- for multi-province projects or those implemented both inside and outside industrial/economic zones, authority is determined by the location of the project operating office (Article 27.3 of the Law on Investment 2025; Article 36.2 and Article 36.4 of Decree No 96/2026/ND-CP).

Step two is obtaining an enterprise registration certificate ("ERC"). Following the IRC issuance, foreign investors will be required to submit an application dossier to establish an enterprise and obtain an ERC from the relevant provincial DOF.

Alternatively, under the new investment regime, foreign investors may establish the enterprise to obtain the ERC before obtaining the IRC, provided that the IRC is completed within 12 months of ERC issuance.

The statutory timeline is as follows.

- The IRC must be issued within 10 working days from receipt of a valid dossier if all statutory conditions are satisfied. (Article 39.3 of Decree No. 96/2026/ND-CP)
- The ERC must be issued within 3 working days from receipt of a valid dossier.
- Foreign investors commencing investment activities without obtaining the required IRC:
  (a) will be subject to an administrative penalty;
  (b) will be required to submit for the IRC; and
  (c) may even face suspension of the entire unlawful investment (Article 19.3 (a) of Decree No 122/2021/ND-CP and Article 35.2 (dd) of Law on Investment 2025).

### Special Investment Procedure

Under the Law on Investment 2025, foreign investors may elect to apply the special investment procedure for projects located in:

- industrial parks;
- export processing zones;
- high-tech zones;
- concentrated digital technology zones;
- free trade zones;
- international financial centres; and
- functional zones within economic zones (Article 28.1 of the Law on Investment 2025).

Under this mechanism, the project is exempt from several pre-approval procedures, including:

- investment policy approval;
- technology appraisal;
- environmental impact assessment procedure;
- detailed planning procedure; and
- construction permit procedure (Article 28.2 of the Law on Investment 2025).

However, the investor must provide written commitments regarding compliance with construction, environmental and fire prevention regulations (Article 28.2 of the Law on Investment 2025).

Before construction commencement, the investor must submit a commencement notice and supporting technical documents to the competent authorities (Article 28.3 of the Law on Investment 2025).

#### *Consequences of non-compliance*

Investment activities undertaken without the IRC may be subject to administrative penalties, mandatory post-filing obligations and suspension of the unlawful investment project (Article 19.3 (a) of Decree No

122/2021/ND-CP and Article 35.2 (dd) of the Law on Investment 2025).

### M&A Approval

To complete a M&A transaction subject to M&A Approval, foreign investors will need to undergo a two-step process with the provincial DOF.

The first step requires obtaining M&A approval, followed by the second stepc ompleting post-transaction registration changes. Step one will generally take 10 working days or 17 working days for transactions involving land in national defence or security-sensitive areas. Step two will take three working days.

Transactions completed without the required approval may not be legally recognised and may be subject to administrative penalties.

### MRC

The procedure requires submitting an application dossier for IFC's member registration or recognition with the IFC's Operating Authority. Following the issuance of an MRC, the IFC's Operating Authority assigns a unique identification number (with equivalent validity to an enterprise registration number).

It takes seven working days for registration and five working days for recognition from the date of receipt of a complete application dossier (Article 4 of Decree 324/2025/ND-CP).

The only risk regarding compliance is that the entity will not qualify for IFC membership.

## 2.3 Commitments Required From Foreign Investors

In practice, the licensing authorities assess not only the legality and feasibility of the proposed investment project, but also the foreign investor's financial capacity, implementation capability and compliance commitments. Approval is generally conditional upon the investor satisfying the statutory investment conditions and undertaking to comply with applicable Vietnamese laws throughout the project lifecycle.

Under Article 39.3 of Decree No 96/2026/ND-CP, key commitments and conditions commonly required include:

- the investment project must not fall within prohibited business sectors;
- the investor must have a lawful project location or a lawful right to use the proposed site;
- the project must comply with applicable master planning, zoning and land use requirements;
- the investor must satisfy applicable foreign ownership limitations and market access conditions for conditional sectors; and
- the project must satisfy technology, environmental, fire prevention and national security requirements where applicable.

In addition, foreign investors are generally expected to commit to implementing the project in accordance with the registered investment objectives, implementation schedule and investment capital contribution timeline. For conditional business sectors, investors may also be required to obtain additional operational licenses or approvals after establishment.

For projects implemented under the special investment procedure, investors are also required to provide written undertakings confirming compliance with construction, environmental protection and fire prevention regulations prior to project implementation.

## 2.4 Right to Appeal

Foreign investors may challenge a refusal decision or other adverse administrative decision issued by the competent investment authority through administrative complaint procedures or court proceedings in accordance with the Law on Administrative Procedures.

In practice, however, judicial challenges against investment licensing decisions are relatively uncommon, as the process may be time-consuming and the likelihood of overturning the authority's decision is generally limited.

Before issuing a formal rejection, the licensing authorities commonly offer investors the opportunity to amend, supplement or restructure the proposed

investment project and application dossier to align with Vietnam's foreign investment conditions and regulatory requirements.

## 3. Corporate Vehicles

### 3.1 Most Common Forms of Legal Entity

Vietnam's Law on Enterprises recognises four principal forms of enterprise: limited liability companies, joint stock companies, partnerships and private enterprises. In practice, the two most prevalent corporate forms are the limited liability company (LLC), which can be owned by between one and 50 members and the joint-stock company (JSC), which must have at least three shareholders but is not subject to any limitation on the number of its shareholders.

#### Limited Liability Company

An LLC may be established as either a single-member LLC or a multiple-member LLC.

A single-member LLC has one owner, which may be an individual or an organisation. A multiple-member LLC has two to 50 members. An LLC is a form of company that cannot issue shares but issues equity interests in its charter capital to its "members," who have an interest in and limited liability for the charter capital pro rata to their capital contributions.

There is no general statutory minimum charter capital, although minimum capital requirements may apply in certain regulated sectors, eg, banking, insurance or securities.

Transfers of capital interests in an LLC are more restricted than transfers of shares in a JSC. In a multiple-member LLC, existing members generally have statutory preemptive rights before a capital interest may be transferred to a third party.

An LLC is typically suitable for circumstances where the parties prefer a simple company form with a limited number of investors and tighter control over changes in ownership (eg, wholly owned subsidiaries, greenfield projects, holding companies and closely held joint ventures).

#### Joint Stock Company

A JSC is a form of company which can issue shares in different classes and must have at least three shareholders. There is no statutory maximum number of shareholders. If a JSC has more than 100 voting shareholders or has made an "initial public offering" via mass media, it may become a "public company" and therefore be subject to higher disclosure and other requirements under securities regulations. Similar to an LLC, a JSC also offers shareholders limited liability to the extent of their contributed capital.

There is no general statutory minimum charter capital, subject to sector-specific requirements. Shares in a JSC are generally more freely transferable than capital interests in an LLC (except for certain limitations on founding shareholders for the first three years or restrictions on the company's charter agreed by shareholders).

This form is best suited for businesses with multiple investors and/or that need greater flexibility to raise additional capital, as well as companies intending to become public or listed.

### 3.2 Incorporation Process

The incorporation process may vary depending on whether the proposed company is domestically owned or foreign-invested.

For a domestic company initially incorporated by Vietnamese investors, incorporation generally requires an application for an Enterprise Registration Certificate (ERC) submitted to the competent business registration authority. The statutory processing timeline is three business days from submission of a valid application.

For a foreign-owned company initially incorporated by the foreign investor and/or foreign equivalent investor, such investor will generally first need to obtain an Investment Registration Certificate (IRC) for the "investment project," followed by an ERC for the company implementing such investment project or *vice versa*.

In practice, a straightforward domestic company may be established within one to two weeks, while

a straightforward foreign-invested company typically takes four to eight weeks, depending on the project scope, business lines, foreign ownership conditions, location and authority review.

After incorporation, both domestic- and foreign-invested companies must complete post-licensing matters, including:

- opening a bank account;
- obtaining a company seal;
- contributing charter capital; and
- (where applicable) obtaining sector-specific sublicences or operational permits.

## 3.3 Ongoing Reporting and Disclosure Obligations

Generally, private companies in Vietnam may be subject to ongoing corporate, tax, accounting and, where applicable, investment reporting obligations.

### Changes in the Enterprise Registration Information

A company must register or notify the competent business registration authority of changes in its enterprise registration information, such as its company name, head office, charter capital, legal representative, owner or members/shareholders in certain cases and its business lines. Certain enterprise registration information will also be available through online public searches on the National Business Registration Portal, a centralised national portal that provides basic corporate information of all companies incorporated in Vietnam.

Amendments to the company charter are generally approved internally by the relevant corporate body, but where the amendment results in any changes in registered enterprise information (eg, legal representative or charter capital), the corresponding change must be registered or notified to the business registration authority.

### Changes in the Investment Project

A company with the IRC must conduct procedures to amend its IRC if any amendment to the investment project changes the contents of the IRC..

### Accounting

Annual financial statements must be prepared and approved in accordance with the company's governance rules and filed with the competent authorities within the statutory timeline, generally within 90 days from the end of the annual accounting period. If the company is subject to statutory audit requirements, its annual financial statements must be audited by an independent audit firm before being disclosed and submitted to the state authorities.

For reference, under the laws, foreign-owned entities, credit institutions, financial institutions, insurance-related enterprises, public companies, securities trading organisations and other large-scale enterprises must be audited at least once a year by an independent audit firm.

### Tax Filling

A company is generally required to submit tax declarations to the competent tax authority on a monthly, quarterly, annual or transaction-by-transaction basis, depending on the relevant tax and circumstances. Value-added tax and personal income tax are generally declared monthly or quarterly, while corporate income tax (CIT) is generally paid provisionally on a quarterly basis and finalised annually. Certain taxes may also be declared upon each occurrence, eg., real estate transfer cases.

Tax payments are generally due by the applicable tax filing deadline, except where specific rules provide otherwise, such as the deadline for quarterly provisional CIT payments. Companies using invoices purchased from the tax authorities must also submit invoice usage reports in accordance with the invoice regulations. Late filing, late payment or invoice-related non-compliance may result in administrative penalties and/or late payment interest.

### Beneficial Ownership Disclosure

Vietnam has introduced beneficial ownership disclosure requirements. Companies are required to identify, maintain and disclose information about their beneficial owners in accordance with applicable laws. A beneficial owner is generally an individual who directly or indirectly owns at least 25% of the enterprise's

charter capital or voting shares or otherwise controls key corporate decisions of the company.

### Periodical Investment-Related Reporting

A foreign-invested company and/or a company implementing investment projects shall be subject to investment reporting obligations. These typically include periodic reports on project implementation, such as investment capital disbursements, business results, human resources, taxes, environmental matters and other project-specific indicators, submitted to the investment registration authority and the statistics authority.

## 3.4 Management Structures

The management structure depends on the type of company and the governance model adopted in its charter.

### Limited Liability Company

In a single-member LLC,the governance structure is relatively simple and depends on the status of the owner. Where the owner is an individual, the company is generally managed by a company president and a director or general director (collectively, GD). Where the owner is an organisation, the company may adopt either a company president model or a Members' Council (MC) model. The MC, if established, comprises three to seven members appointed by the owner. In either case, the company will also have a GD responsible for day-to-day management and, where required, an Inspection Committee.

A multiple-member LLC is managed through the MC comprising all capital-contributing members (or their authorised representative if the member is an organisation), a GD is responsible for day-to-day management and a Supervisory Board (SB), where required. The MC is the highest decision-making body of the company.

### Joint Stock Company

A JSC may adopt either of the following governance structures:

- The first model includes a General Meeting of Shareholders (GMS), a Board of Directors (BOD), an SB and a GD.
- The second model includes a GMS, BOD and GD. For a JSC that follows the second model, at least 20% of the BOD must be independent and the company must establish an Audit Committee under the BOD.

The GMS is the highest decision-making body, comprising all shareholders with the right to vote.

The BOD has three to 11 members appointed by the GMS. This is the company's management body and has full authority, on behalf of the company, to decide and exercise the company's rights and obligations.

The SB members are appointed in a similar manner to those of the BOD and the number of SB members must be at least three and not more than five. The SB oversees the BOD and the GD with respect to the company's management.

The GD is appointed or hired by the BOD and is responsible for the day-to-day management of the company.

## 3.5 Directors', Officers' and Shareholders' Liability

### General Duties

The members of MC, BOD, SB, GD, legal representatives and other managers of Vietnamese companies are subject to statutory duties under the Enterprises Law. These duties generally include:

- to act in accordance with law, the company charter and corporate approvals;
- to exercise rights and perform duties honestly, diligently and to the best of their ability for the protection of the legitimate interests of the company;
- to be loyal to the company; not to abuse the company's position, corporate information, business opportunities or assets for personal benefit or for the benefit of others; to notify timely, completely and accurately any substantial shareholding owned by them or their related persons, in other companies; and
- to disclose their related interests and abstain from voting on transactions between the company and their related person.

Managers who breach these duties may be personally or jointly liable for losses, required to return benefits received and liable to compensate the company and, in certain cases, third parties. Members or shareholders, a group of shareholders holding at least 1% of ordinary shares, may bring claims against managers in certain circumstances, including where managers breach their statutory duties or exceed the scope of authority granted under applicable laws or the company's charter.

### "Piercing The Corporate Veil"

Vietnamese law does not expressly recognise a broad common law-style doctrine of "piercing the corporate veil." However, Vietnamese law contains specific statutory exceptions under which shareholders, members, owners or managers may be subject to personal, joint, civil, administrative or even criminal liability despite the company's separate legal personality and limited liability. These include, for example, failure to fully and timely contribute committed charter capital, unlawful withdrawal or return of capital or related-party transactions conducted without proper approval.

## 4. Employment Law

### 4.1 Nature of Applicable Regulations

#### Employment Legislations

As Vietnam's legal system is principally rooted in the civil law tradition, the legislations governing the employment relationship are primarily codified. The principal source is the 2019 Labour Code ("Labour Code"). Other notable labour-related legislations include:

- the 2024 Law on Social Insurance;
- the 2025 Law on Employment;
- the 2015 Law on Occupational Safety and Hygiene;
- the 2024 Law on Trade Unions;
- Decree No 145/2020/ND–CP of the Government guiding certain provisions of the 2019 Labour Code; and
- Decree No 219/2025/ND–CP of the Government on foreign workers working in Vietnam.

Vietnam has recently developed a case-law system. Certain parts of a court judgment adopted by the Supreme People's Court as official precedents are binding on Vietnamese courts when adjudicating cases involving similar legal issues. However, to date, there are only a few official precedents in the employment sector.

#### Collective Bargaining Agreements

Collective bargaining agreements may be concluded at the level of an enterprise, an industry, multiple enterprises or other forms through a collective bargaining process, although in practice they are most commonly concluded at the enterprise or industry level. They typically provide employees with entitlements that are more favourable than those set out by law. Although collective bargaining agreements are recognised by law in Vietnam, in practice, they are not especially common.

#### Employment Contracts

The employment contract is the principal document establishing the employment relationship and governing its terms and conditions, including the place of work, term/ duration of employment, remuneration, working and rest periods and other obligations such as confidentiality, provided that the terms and conditions are not contrary to applicable law and collective bargaining agreements.

### 4.2 Characteristics of Employment Contracts

An employment contract is an agreement between an employee and an employer regarding a paid job, salary, working conditions and the rights and obligations of each party in labour relations. Accordingly, regardless of how the parties name the agreement between them (eg, collaboration agreement, service contract), such an agreement will still be deemed an employment contract if it provides for paid work, wages and management, direction and supervision by one party. This approach is intended to ensure that employees receive the protections afforded under labour law.

In terms of formalities, all employment contracts with a term of one month or more must be made in writing. Employment contracts with a term of less than 1 month can be made verbally, with a few exceptions. Employment contracts made in electronic form in accordance with the law are also considered as being in writing. Vietnam has recently introduced legislation

to encourage the use of electronic employment contracts.

In terms of duration,an employment contract can be for a definite term of up to 36 months or for an indefinite term. After signing two consecutive definite-term contracts, the parties may only continue the employment relationship under an indefinite-term contract, subject to certain exceptions, including foreign employees and elderly employees who continue working after reaching the statutory retirement age. In the case of foreign employees, this is because the term of the employment contract cannot exceed the term of the work permit, which has a maximum duration of two years.

An employment contract must contain several mandatory terms, including:

- information of the employer and the authorised signatory;
- information of the employee and the work permit number or work permit exemption certificate number for a foreign employee.
- job description and workplace;
- duration of employment contract;
- salary and payment terms;
- salary increments and promotion regime;
- working hours and rest periods;
- occupational safety and labour protection equipment;
- compulsory insurance obligations; and
- training and professional development.

## 4.3 Working Time

The normal working time must not exceed 8 hours per day (where working time is determined on a daily basis) or ten hours per day (where working time is determined on a weekly basis) and in any event, must not exceed 48 hours per week. For certain work that exposes employees to hazardous or harmful factors, employers must also comply with the working time limits set by relevant laws and technical regulations.

Employers may generally only require employees to work overtime with their consent and must observe the following limits:

- overtime does not exceed 50% of normal working hours per day, not exceed 12 hours (normal plus overtime hours) per day and not exceed 40 hours per month; and
- total overtime does not exceed 200 hours per year in normal cases or 300 hours per year in certain industries, such as textiles and garments, leather and footwear and seafood processing or due to exceptional situations such as urgent production deadlines. In the latter case, employers must also notify the relevant Department of Home Affairs.

Employers may require employees to work overtime without their consent at any time, without hours limitations, in extraordinary cases, such as for the purpose of national defence or security or to protect human life and property in cases of disasters, fire and epidemics.

## 4.4 Termination of Employment Contracts

Leaving aside termination upon expiry of its term, an employer cannot terminate an employment contract or otherwise bring it to an end at will and must comply with the applicable statutory grounds, conditions and procedures. In contrast, an employee may generally terminate the contract at will by giving the required statutory notice.

### Unilateral Termination by the Employer

An employer may unilaterally terminate an employment contract in the following cases:

(i) the employee consistently fails to satisfy performance standards prescribed in the employer's internal rules, which are only adopted after following a statutory procedure;
(ii) the employee is ill or injured and has received treatment but has not recovered for a legally prescribed period, which varies based on the term of the contract;
(iii) the employer is required to reduce its workforce due to a natural disaster, fire, major epidemic or relocation or downsizing required by a competent authority.
(iv) the employee fails to return to work within 15 days after expiry of a period of suspension of the contract;
(v) the employee reaches the retirement age;
(vi) the employee is absent without reason for five

consecutive days; and
(vii) the employee provides untruthful information affecting their recruitment in the first place.

For the cases set out in (i), (ii), (iii), (v) and (vii) above, the employer must give prior notice of at least:

- 45 days (for indefinite-term contracts);
- 30 days (for definite-term contracts of 12–36 months);
- 3 working days (for definite-term contracts under 12 months); and
- 3 working days for the case in (ii) above.

In certain sectors (eg, aviation personnel, enterprise management personnel and seafarers), longer notice periods may apply.

However, an employer may not unilaterally terminate the contract where:

- the employee is undergoing treatment or rehabilitation prescribed by a competent medical establishment (except for the case in (ii) above);
- the employee is on annual leave, personal leave or other employer-approved leave; and
- the female employee is pregnant or the employee is on maternity leave or raising a child under 12 months of age.

### Retrenchment/Collective Redundancies

An employer may implement retrenchment/ collective redundancies in the following circumstances: (i) technological or organisational changes, (ii) economic reasons (eg, recession or restructuring of the economy) or (iii) company restructuring or change of control. An employer must strictly comply with the statutory requirements, the most important of which are:

- establishing and justifying the basis and necessity for collective redundancies;
- preparing a labour usage plan (detailing, among others, the employees who are kept, re-trained for continued employment, moved to part-time positions or terminated) with the consultation of the employees' representative organisation at the grassroots level;
- offering impacted employees new positions (if available);
- announcing the labour usage plan within 15 days of its adoption; and
- for cases involving technological or organisational changes or economic difficulties, consulting the relevant grassroots employees' representative organisation at the grassroots level and giving at least 30 days' prior notice of the proposed termination to the labour authority and affected employees.

### Employee Dismissal

An employer may dismiss an employee for committing certain serious disciplinary violations prescribed under the Labour Code, including:

- committing theft, embezzlement, gambling, intentional injury or drug use at the workplace;
- disclosing trade or technological secrets;
- infringing the employer's intellectual property rights;
- causing serious damage or threatening particularly serious damage to the employer's assets or interests (what constitutes serious damage or particularly serious damage is normally defined in the employer's internal labour rules, which are required to be registered with the relevant Department of Home Affairs); or
- committing workplace sexual harassment.

What constitutes serious damage or particularly serious damage is normally defined in the employer's internal labour rules, which are required to be registered with the relevant Department of Home Affairs.

- repeating the same misconduct within a certain period after having been disciplined by wage increase deferral or demotion for such misconduct; and
- being absent without a valid reason for a total of five days within a 30-day period or 20 days within a 365-day period.

The dismissal process, including the conduct of a disciplinary hearing, must be carried out in strict compliance with applicable legal requirements.

### Unilateral Termination by the Employee

An employee may unilaterally terminate the employment contract by giving a prior notice of at least:

- 45 days (for indefinite-term contracts),
- 30 days (for fixed-term contracts of 12–36 months),
- 3 working days (for fixed-term contracts under 12 months).

In certain sectors (eg, aviation personnel, enterprise management personnel and seafarers), longer notice periods may apply.

An employee may also terminate the employment contract without prior notice where:

- the employee is not given the work, workplace or working conditions as agreed;
- the employee fails to pay wages in full or on time;
- the employer abuses, harasses or forces the employee to work against their will;
- the employee is sexually harassed in the workplace;
- the fmeale employee is pregnant and has to stop working;
- the employee reaches the age of retirement; and
- the employer provides false information when signing the contract (eg, work, workplace, working hours, remuneration or insurance).

### Monetary Entitlements Upon Termination of Employment

Upon terminating or otherwise ending an employment contract, the employer must pay the employee all entitlements, including salary and other contractual benefits, up to the date of termination. Depending on the reason for terminating or ending the contract, the employer may also have to pay a severance allowance or a job-loss allowance.

## 4.5 Employee Representations

Under the Labour Code, an employee may join a "grassroot-level employees' representative organisation" ("representative organisation" for short), which is voluntarily established by the employees within an enterprise to protect their rights and interests. Such organisations may be either a Trade Union at the enterprise level, which is a part of the Vietnam Trade Union or an employees' organisation within the enterprise not belonging to the Vietnam Trade Union. In practice, the most common type of representative organisation is the Trade Union at the enterprise level.

At law, an employer must engage in workplace dialogue with employees (through their representatives) or the grassroots-level employees' representative organisation on certain workplace topics at least annually, in accordance with the workplace democracy rules. In addition, an employer must consult and/or have the grassroot-level employees' representative organisations (if established) participate in certain matters, including:

- adoption of the internal rules on assessment of performance standards for employees;
- retrenchment due to technological or organisational changes or economic reasons;
- adoption of the labour usage plan in the case of retrenchment/ collective redundancies;
- establishment of pay scales, payroll and productivity norms;
- establishment of a reward scheme;
- adoption or amendment of internal labour rules; and
- conducting disciplinary proceedings.

Where no representative organisation has been established at the enterprise level, employers commonly, as a matter of prudence, involve the higher-level Trade Union for matters that would otherwise require such organisation's participation, although this can be time-consuming.

# 5. Tax Law

## 5.1 Taxes Applicable to Employees/ Employers

Under Vietnamese law, employees are subject to PIT on employment income if they are either tax residents in Vietnam or non-residents deriving Vietnam-sourced income. An individual is generally regarded as a tax resident if he/she is present in Vietnam for 183 days or more within a calendar year or 12 consecutive months or have a permanent residence in Vietnam. Tax residents are taxed at progressive rates from 5% to 35%,

while non-tax residents are taxed at 20% on Vietnam-sourced income.

Both Vietnamese employees and employers are required to contribute to compulsory insurances, subject to statutory caps:

- employee contributions include 8% social insurance, 1.5% health insurance and 1% unemployment insurance; and
- employer contributions include 17.5% for social insurance, 3% for health insurance and 1% for unemployment insurance.

## 5.2 Taxes Applicable to Businesses

A company is generally subject to taxation in Vietnam if it is established under Vietnamese law or has income sourced from Vietnam. The principal taxes applicable to companies doing business in Vietnam include:

### Corporate Income Tax ("CIT")

CIT rates in Vietnam generally range from 15% to 50%, depending on the taxpayer's revenue level and the nature of its business activities. The standard CIT rate is 20%. Reduced rates of 15% and 17% apply to certain enterprises meeting prescribed revenue thresholds, while higher rates ranging from 25% to 50% apply to oil and gas exploration and production activities and certain precious and rare natural resource extraction activities. Expenses are generally deductible for CIT purposes where they are incurred in relation to the taxpayer's business operations and income-generating activities, are supported by sufficient supporting documents and are not specifically excluded from deductibility under the prevailing tax regulations.

### Value-Added Tax ("VAT")

Vietnam applies three VAT rates: 0%, 5% and 10%. The 0% rate generally applies to exports and certain international services; the 5% rate applies to specified essential goods and services; and the standard 10% rate applies to all other taxable goods and services.

### Foreign Contractor Tax ("FCT")

FCT applies to foreign entities and individuals that earn income sourced from Vietnam under agreements with Vietnamese parties. FCT comprises VAT and CIT or PIT, for the income of foreign individuals. Payments subject to the foreign contractor tax include interest, royalties, service fees, leases, insurance, transportation, transfers of securities and goods supplied within Vietnam or associated with services rendered in Vietnam. There are several options for tax declaration. However, the most common method is the direct method, where foreign contractors do not register for VAT purposes or file CIT or VAT returns. Instead, CIT and VAT are withheld by the Vietnamese party from the payments made to the foreign contractor.

### Import and Export Duties

Import and export duty rates are subject to frequent changes and it is always prudent to check the latest position. Import duty rates are classified into three categories: ordinary rates, preferential rates and special preferential rates. Preferential rates apply to imported goods from countries that have Most Favoured Nation (MFN, also known as Normal Trade Relations) status with Vietnam. The MFN rates are in accordance with Vietnam's WTO commitments and apply to goods imported from other WTO member countries.

### Other Taxes

Depending on the taxpayer's business activities and industry sector, additional taxes may be applicable, including special sales tax, natural resources tax, environmental protection tax and other taxes prescribed under Vietnamese tax laws.

### Qualified Domestic Minimum Top-Up Tax rule and Income Inclusion Rule

Effective from 1 January 2024, Vietnam applies the OECD Pillar Two Global Minimum Tax regime through the Qualified Domestic Minimum Top-Up Tax rule and Income Inclusion Rule. The regime is designed to ensure that in scope multinational enterprise groups are subject to a minimum level of taxation in accordance with the OECD's Global Anti-Base Erosion rules.

## 5.3 Available Tax Credits/Incentives

Vietnam does not generally provide tax credits. Instead, tax incentives are primarily granted through preferential Corporate Income Tax ("CIT") rates, CIT exemptions and reductions and land rental incentives.

Qualifying investment projects may benefit from preferential CIT rates of 10%, 15% or 17%, compared to the standard 20% CIT rate. Such incentives are generally available to projects in encouraged sectors, including high-tech enterprises, the production of high-grade steel, energy-efficient products and other priority industries, as well as projects located in economic zones, high-tech parks and areas with difficult or especially difficult socio-economic conditions.

Eligible projects may also enjoy CIT holidays, typically comprising a period of CIT exemption followed by a 50% CIT reduction for a specified period. Certain large-scale, high-technology, innovation-driven or strategically important projects may qualify for enhanced incentive packages, including lower CIT rates and extended tax holiday periods.

The availability and scope of these incentives depend on the sector, location, scale and nature of the investment project and are subject to satisfaction of the applicable statutory conditions.

### 5.4 Tax Consolidation

Vietnam does not currently have a tax consolidation regime. Tax is assessed on a separate entity basis.

### 5.5 Thin Capitalisation Rules and Other Limitations

There are generally no thin capitalisation requirements under Vietnamese tax legislation.

However, pursuant to investment licensing requirements, the maximum permissible debt funding is generally limited to the difference between the registered investment capital and the capital contribution recorded in the relevant investment registration certificate or, where applicable, the in-principle investment approval.

### 5.6 Transfer Pricing

Vietnam's transfer pricing regime, governed by Decree 255/2026/ND-CP, effective from 1 July 2026, is broadly aligned with OECD principles. Taxpayers engaging in related party transactions are generally required to file annual transfer pricing disclosures and maintain contemporaneous transfer pricing documentation. Under Decree 255/2026/ND-CP, the deductible net interest expense for corporate income tax purposes of enterprises having related party transactions is subject to a cap of 30% of the taxpayer's total net profit from business activities during the tax period, plus interest expense after deducting interest income from deposits and loans arising during the period, plus depreciation expense incurred during the period.

### 5.7 Anti-Evasion Rules

Vietnam has anti-evasion and anti-avoidance rules under its tax regulations. These include, among other things, transfer pricing rules for related-party transactions, restrictions on deductible expenses and the tax authorities' powers to reassess or recharacterise transactions that lack economic substance or are undertaken primarily for tax avoidance.

### 5.8 Tariffs

Vietnam imposes import and export duties in accordance with the Law on Export and Import Duties and related implementing regulations. Applicable tariff rates depend on the classification of the goods, their customs value origin and Vietnam's international treaty commitments. Vietnam is a member of the WTO and numerous free trade agreements, including CPTPP, EVFTA and RCEP, under which preferential or special preferential import duty rates may apply to goods that satisfy the applicable rules of origin and other treaty requirements.

In practice, import duty rates vary significantly across product categories. Higher import duties are generally imposed on products for which Vietnam seeks to provide protection to domestic industries, including certain agricultural and steel products, as well as selected consumer goods. Goods imported from countries or territories that do not satisfy the conditions for most favoured nation treatment or preferential tariff treatment may be subject to ordinary import duty rates in accordance with Vietnamese law.

Vietnam's tariff regime has also been influenced by global trade developments and supply chain shifts. In recent years, Vietnam has increasingly resorted to trade remedy measures, including anti-dumping duties, countervailing duties and safeguard measures, particularly in sectors such as steel, metals, chemicals and certain manufactured products, to protect

domestic industries from unfair trade practices and serious injury caused by increased imports.

## 6. Competition Law

### 6.1 Merger Control Notification

Under the Vietnamese Law on Competition 2018 ("Competition Law"), the merger control regime applies to transactions which qualify as "*economic concentration*", including:

- mergers;
- consolidations;
- acquisitions resulting in control or dominance over another enterprise;
- joint ventures; and
- other forms as prescribed by laws.

An economic concentration is generally subject to a merger control filing if any of the following thresholds is reached:

- (a) the total value of assets in the market of Vietnam of a participating enterprise or group of affiliated enterprises of which the participating enterprise is a member is VND6,000 billion (approximately USD230 million) or more during the financial year immediately preceding the year of the proposed economic concentration;
- (b) the total sales or purchases in the market of Vietnam of the participating enterprise or group of affiliated enterprises of which the participating enterprise is a member reach VND6,000 billion (approximately USD230 million) or more during the financial year immediately preceding the year of the proposed economic concentration;
- (c) the transaction value of the economic concentration is VND2,000 billion (approximately USD76 million) or more (not applicable to a transaction conducted outside Vietnam); and
- (d) the combined market share of the participating enterprises is 20% or more in the relevant market during the financial year immediately preceding the year of the proposed economic concentration.

The thresholds at limbs (a), (b) and (c) are effective for the period from 1 July 2026 to 28 February 2027 pursuant to the Government's Resolution No 66.18/2026/NQ-CP. Prior to 1 July 2026, the thresholds at limbs (a) and (b) were VND3,000 billion (approximately USD115 million) and the threshold at limb (c) was VND1,000 billion (approximately USD38 million).

### 6.2 Merger Control Procedure

#### Pre-Notification Assessment and Notification Filing

The merger control process in Vietnam begins with an assessment of whether the proposed transaction constitutes an economic concentration and whether any of the statutory notification thresholds are met. If a notification is required, the parties must file with the NCC before proceeding with the transaction.

#### Preliminary Review

Upon receipt of a complete and valid filing, the NCC conducts a preliminary review that is statutorily required to take 30 days. During this stage, the NCC assesses whether the transaction raises competition concerns. If no such concerns are identified, the transaction may be cleared.

#### Official Review (If Required)

Where the NCC determines that the transaction may have anti-competitive effects by exceeding certain criteria as prescribed by law, it will proceed to an official review. This review may take up to 90 days and may be extended by a further 60 days in complex cases.

#### Issuance of Decision

At the conclusion of its review, the NCC may approve the transaction, approve it subject to conditions or prohibit it if it is likely to substantially restrict competition in the Vietnamese market. The transaction may only be implemented after obtaining the necessary clearance from the NCC.

### 6.3 Cartels

The Competition Law regulates agreements between parties in any form that cause or are capable of causing competition-restricting effects. The law distinguishes between horizontal agreements entered into by competitors and vertical agreements entered into by enterprises operating at different levels of the production, distribution or supply chain.

Certain anti-competitive agreements are prohibited per se, irrespective of market share or actual anti-competitive effects. These include, amongst others:

- bid rigging;
- agreements on preventing or impeding other enterprises from participating in or developing the market;
- agreements on excluding other enterprises from the market; price fixing agreements (whether directly or indirectly);
- agreements on sharing customers, markets or sources of supply; and
- agreements on restraining or controlling output or input.

Other restrictive agreements are prohibited where they cause or are capable of causing a significant competition-restraining effect in the relevant market. These include, amongst others, agreements to restrain technical or technological development or investment; agreements imposing conditions for contract execution or requiring other enterprises or customers to accept obligations unrelated to the subject matter of the contract; agreements not to transact with other enterprises; and agreements restricting the market for the sale or purchase of goods or services of other enterprises.

### 6.4 Abuse of Dominant Position

Under the Competition Law, an enterprise is deemed to hold a dominant market position if it has a market share of 30% or more in the relevant market or possesses significant market power. A group of enterprises may also be considered collectively dominant if they act together and hold a combined market share of 50% or more (for two enterprises), 65% or more (for three enterprises), 75% or more (for four enterprises) or 85% or more (for five enterprises), provided that no individual enterprise within the group has a market share of less than 10%.

Enterprises holding a dominant market position are generally prohibited from engaging in conduct that has the effect or is capable of having the effect of restricting competition. Prohibited conduct includes, among others, selling below the prime costs which lead to or may lead to eliminating competitors, imposing unreasonable purchase or sale prices or fixing minimum resale prices, causing or possibly causing damages to customers, restricting production, limiting the market or obstructing technical or technological development, causing or possibly causing damages to customers; applying discriminating commercial conditions to similar transactions in ways which impede or may impede other enterprises participating or expanding the market; imposing on other enterprises conditions for signing contracts or request other enterprises or customers to accept irrelevant obligations to exclude/hinder such enterprises from participating in or expanding the market; and obstructing the participation or expansion of other businesses in the market.

## 7. Intellectual Property

### 7.1 Patents

Vietnam protects inventions through invention patents and utility solution patents. An invention is a technical solution, in the form of a product or process, that solves a specific problem by applying laws of nature. An invention patent is available where the invention is novel, involves an inventive step and is industrially applicable. A utility solution patent is available where the invention is novel, industrially applicable and not common knowledge, even if the inventive threshold is lower.

Patent protection is obtained through registration with the Vietnamese industrial property authority or through recognition of an international application under an applicable treaty. Foreign applicants without a permanent residence or business establishment in Vietnam must file through a lawful representative in Vietnam. Applications may be filed in paper or electronic form and must generally be made in Vietnamese. A patent application normally includes a description, claims and abstract. A formally valid patent application is published in the nineteenth month from the filing date or priority date, unless early publication is requested. A request for substantive examination must be filed within 36 months from the filing date or priority date. If no request is filed, the application is deemed withdrawn.

Generally, an invention patent is effective from the grant date until the end of 20 years from the filing date. A utility solution patent is effective from the grant date until the end of ten years from the filing date. The patent owner has the right to use, license, prevent others from using and dispose of the protected invention. Use includes manufacturing the protected product, applying the protected process, exploiting the protected product or a product made by the protected process, circulating, advertising, offering or stocking it and importing it.

Unauthorised use of a protected invention during the patent term constitutes infringement. The owner may request cessation, public correction, damages, administrative handling, court proceedings or arbitration. In a civil patent case involving a patented process, the defendant may be required to prove that its process is different where the protected process produces a new product or where the owner cannot identify the defendant's process despite reasonable efforts.

### 7.2 Trade Marks

A trade mark is a sign used to distinguish the goods or services of different organisations or individuals. Registrable signs include words, letters, drawings, images, three-dimensional shapes, colours, combinations of those elements and sound signs capable of graphic representation. A mark must be distinctive and must not fall within statutory exclusions, such as misleading signs, prohibited official symbols, signs identical or confusingly similar to protected marks and signs that take unfair advantage of well-known marks.

Vietnam follows a first-to-file system for registered trade marks. Rights in an ordinary trade mark are established by the grant of a trade mark registration certificate or by recognition of an international registration under an applicable treaty. Rights in a well-known mark are established through use and are not subject to registration. An applicant may register a mark for goods it produces or services it provides. It may also register a mark for goods it lawfully places on the market if the producer neither uses the mark nor objects.

A trade mark application may cover one mark used for one or more goods or services. The application is published in the Industrial Property Gazette within one month after being accepted as formally valid. Third parties may oppose registration within three months of publication. A trade mark application is substantively examined within five months from publication. Registration may be refused for lack of distinctiveness, conflict with earlier rights, misleading content or other statutory grounds.

A registered trade mark is protected from the grant date until the end of ten years from the filing date. Protection may be renewed for consecutive ten-year periods without a statutory limit. A registration may terminate if it is not renewed, if the owner relinquishes it, if the owner no longer exists or conducts business without a lawful successor or if the mark is not used for five consecutive years before a termination request, subject to statutory exceptions.

Trade mark infringement includes unauthorised use of an identical mark for identical goods or services, use of an identical or similar sign for related goods or services where confusion is likely and use of a sign identical or similar to a well-known mark where confusion or a misleading association is likely. Customs control is particularly relevant for counterfeit trade mark goods. Customs authorities may suspend clearance, inspect or supervise goods and apply administrative remedies where counterfeit goods are detected.

### 7.3 Industrial Designs

An industrial design is the external appearance of a product or part of a product, in physical or non-physical form, expressed by shapes, lines, colours or a combination of those elements and visible during exploitation of the product's utility. Protection is available for designs that are new, creative and industrially applicable. A design is not protected if its appearance is dictated solely by technical characteristics, is the shape of a civil or industrial construction work or is invisible during use.

Industrial design rights are established by the grant of an Industrial Design Patent or by recognition of an international registration under an applicable treaty. Foreign applicants without a permanent residence or

business establishment in Vietnam must file through a lawful representative in Vietnam. A formally valid application is published within one month after formal acceptance, although publication may be deferred at the applicant's request, but not beyond seven months from the filing date. Third parties may oppose the grant within three months of publication. Substantive examination is generally completed within five months of publication.

An Industrial Design Patent is valid for five years from the filing date and may be renewed twice for further five-year terms. The maximum term is therefore 15 years from the filing date. The owner has the right to use, license, prevent others from using and dispose of the protected design. Use includes manufacturing products bearing the protected design, circulating, advertising, offering for sale or stocking those products and importing them.

Infringement includes unauthorised use of the protected design or a design not significantly different from it during the term of protection. Remedies follow the general IP enforcement framework, including civil claims, administrative handling, provisional measures and customs measures.

### 7.4 Copyright

Copyright protects literary, artistic and scientific works that are directly created and expressed in material form. Protection does not depend on content, quality, form, medium, language, publication status or registration. Protected works include written works, lectures, press works, musical works, stage works, films, fine-art and applied-art works, photographs, architectural works, maps, folklore works, computer programs and data compilations. Derivative works are protected only where they do not prejudice copyright in the underlying work.

Copyright arises automatically upon creation and fixation. Registration is not required to obtain or enjoy protection, but it is useful evidence. A copyright registration certificate means the registrant need not prove ownership in a dispute unless contrary evidence exists. Foreign applicants without permanent residence or a local head office, representative office or branch must file through an authorised copyright representative in Vietnam.

Copyright consists of moral rights and economic rights. Moral rights include the right to title the work, be named, publish or authorise publication and protect the integrity of the work. Economic rights include making derivative works, public performance, reproduction, distribution, import for public distribution, broadcasting or communication to the public, making the work available to the public at a chosen place and time and rental of cinematographic works or computer programs where the computer program is the main rental object.

The moral rights to title, attribution and integrity are protected indefinitely. For films, photographic works, applied art works and anonymous works, the publication rights and economic rights are generally protected for 75 years from first publication or 100 years from fixation if certain works are not published within 25 years. For other works, economic rights are generally protected for the author's life plus 50 years. For co-authored works, the term ends 50 years after the death of the last surviving co-author.

Copyright enforcement is particularly relevant online. Right holders may use technological protection measures, request the removal of infringing content from the internet or telecommunications networks, request that competent authorities handle infringement and bring court or arbitration proceedings. Digital platform owners and intermediary service providers have obligations to receive and handle takedown or access-blocking requests, provide contact points and comply with safe-harbour conditions.

### 7.5 Others

Computer programs are protected as works of copyright, not as a separate IP category. Computer programs are protected whether expressed in source code or machine code. Computer programs as such are excluded from patent protection, so protection normally depends on copyright, contracts, confidentiality and trade secrets.

Vietnam does not recognise a sui generis database right. Databases are protected by copyright only

where they qualify as data compilations created through creative selection or arrangement of materials. Protection of a data compilation does not extend to the underlying data.

Trade secrets are protected as industrial property rights without registration. Protection requires information that is not common knowledge or easily obtainable, gives the holder a business advantage and is kept secret by necessary measures. Infringement includes unauthorised access, collection, disclosure or use, breach of confidentiality obligations and use or disclosure by a person who knows or should know that the information was obtained unlawfully. Trade names, semiconductor layout designs, geographical indications and plant varieties are also protected under specific statutory rules.

## 8. Data Protection

### 8.1 Applicable Regulations

As Vietnam continues to develop its digital economy, data has become an increasingly important resource. In this vein, Vietnam's data protection regime has developed rapidly and now rests on two related but distinct pillars: a broader framework for data governance and a specific framework for personal data protection. The principal legal regulations applicable to data protection are as follows.

- At a broader framework level, the 2024 Law on Data ("Law on Data"), adopted by the National Assembly and effective from 1 July 2025, constitutes Vietnam's first comprehensive legal instrument governing data-related activities. The Law on Data is supplemented by Decree No 165/2025/ND-CP ("Decree No. 165/2025"), effective on the same date, which provides detailed guidance on implementing certain provisions of the Law on Data. Taken together, they set out requirements relating to data processing activities (eg, collection, storage, use and transmission), data protection measures, data risk management, the rights and obligations of data subjects and relevant parties (eg, preparing impact assessment dossiers, managing data security and internal controls and addressing restrictions or filing obligations for offshore transfers) and the allocation of regulatory oversight among competent authorities. These instruments mean that businesses operating in Vietnam or handling Vietnam-related data should assess compliance at several levels. This also reflects Vietnam's increasing regulatory attention to high-volume and high-risk processing, including cloud services, artificial intelligence, profiling, platform-based services and other technology-driven business models.
- At the level of personal data, Decree No 13/2023/ND-CP marked Vietnam's first comprehensive regime dedicated to personal data protection. Although this Decree has now been replaced, it remains important for understanding the evolution of Vietnam's approach because many of the compliance concepts first introduced under that Decree continue to shape the current regime.

From 1 January 2026, the 2025 Law on Personal Data Protection ("Law on PDP") establishes Vietnam's first higher-level legislative framework specifically governing personal data protection. This Law provides a comprehensive statutory regime, including enhanced enforcement mechanisms and more detailed compliance requirements and addresses personal data protection in emerging sectors such as artificial intelligence (AI), cloud computing and blockchain. The Law on PDP is followed by Decree No. 356/2025/ND-CP ("Decree No 356/2025"), effective on the same date as the Law on PDP, which implements the Law on PDP and replaces Decree No 13/2023/ND-CP. This Decree provides detailed regulations on administrative procedures relating to personal data protection, including personal data processing impact assessments, cross-border data transfer assessments and data breach notification requirements.

### 8.2 Geographical Scope

Both the Law on Data and the Law on PDP adopt an extraterritorial approach, significantly expanding the reach of Vietnamese data regulations to offshore entities and cross-border data flows. In other words, foreign organisations engaging with the Vietnamese market may be subject to local compliance requirements, even without a physical presence in Vietnam, if they directly participate in or are otherwise connected with, data processing activities involving the Vietnamese market or protected categories of Vietnam-related

data subjects. In practical terms, this means that if a foreign company targets Vietnamese users, processes employee or customer data relating to Vietnam, transfers Vietnam-related data offshore or provides data processing services in Vietnam, it may need to carefully assess the applicability of Vietnamese law, as outlined in examples below.

- The Law on Data applies to foreign agencies organisations and individuals that directly participate in or are otherwise involved in, activities concerning digital data in Vietnam, to the same regulatory expectations as domestic entities. A key practical implication lies in the distinction between different categories of data, which affects the applicable cross-border compliance requirements and drives the level of regulatory scrutiny. While cross-border transfers of "important data" can generally proceed without prior approval, transfers of more sensitive "core data" require pre-approval. In practice, this creates a tiered compliance burden and may introduce timing and regulatory uncertainty for transactions involving higher-risk data sets.
- The Law on PDP adopts a similar scope, extending to foreign agencies organisations and individuals directly engaged in or involved in, data processing activities concerning (i) Vietnamese citizens and (ii) persons of Vietnamese origin residing in Vietnam whose nationality has not been determined and who have been issued identity cards. Accordingly, offshore entities falling within this scope must comply with substantially the same obligations as organisations and individuals in Vietnam.

The Law on PDP also requires that a cross-border transfer impact assessment be submitted to the competent authority within 60 days of the first transfer. This approach operates as a post-transfer compliance mechanism, allowing data flows to proceed without prior regulatory approval. However, the regime relies largely on self-assessment by businesses and does not provide standards for evaluating the adequacy of protection in recipient jurisdictions. That said, the Ministry of Public Security may review the dossier and has its own discretion in issuing a result on whether it meets regulatory requirements. As a result, while the level of regulation is less restrictive compared to the EU GDPR framework, which permits cross-border transfers only on the basis of an adequacy decision or recognised safeguards such as Standard Contractual Clauses or Binding Corporate Rules, it would be more accurate to say that Vietnam adopts its own administrative assessment-based approach to cross-border transfers rather than a clearly less restrictive system.

Further, both laws include mechanisms to address potential overlap in impact assessment requirements. Compliance with impact assessment obligations for "core data" and/or "important data" under the Law on Data may exempt subjects from corresponding requirements under the Law on PDP. Conversely, compliance with personal data processing or cross-border transfer impact assessments under the Law on PDP may remove the need to conduct parallel assessments under the Law on Data. However, this does not remove the need for organisations to map their data flows carefully and identify which legal basis or filing route applies to a particular activity.

## 8.3 Role and Authority of the Data Protection Agency

The Law on Data as well as the Law on PDP allocate responsibilities to competent authorities for the administration and enforcement of data protection regulations, as outlined below.

### Ministry of Public Security ("MPS")

- Under the Law on Data, the MPS plays a central role in administering and enforcing data-related regulations. It is responsible for overseeing and coordinating the implementation of the data governance framework, including the management, protection, processing and use of data, as well as ensuring data security and preventing data-related violations.
- Under the Law on PDP, the MPS is the primary authority responsible for state management of personal data protection. Its key responsibilities include ensuring unified state management, leading the development and implementation of the legal framework and supervising compliance with data protection requirements.

For the purpose of handling administrative procedures relating to personal data protection (eg, receiving data assessment report, cross-border transfer assess-

ment report and other submissions required under the personal data regime), the MPS has designated its Department of Cybersecurity and High-Tech Crime Prevention (A05) as the competent authority responsible for such matters. Accordingly, the MPS/A05 is the primary regulator to consider when assessing official filings, regulatory expectations and enforcement risk in this area.

- The Ministry of National Defence is responsible for data and personal data protection within the military and national defence sectors under both the Law on Data and the Law on PDP.
- The Law on Data and the Law on PDP also allocate responsibilities to ministries, ministerial-level agencies and other Government bodies.

Notably, under the Law on PDP, the Ministry of Science and Technology plays a key coordinating role with the MPS in developing technical standards and regulations on personal data protection, including those relating to data anonymisation and de-identification. At the same time, the relevant ministries, ministerial-level agencies and other relevant state bodies may be assigned co-ordination and implementation responsibilities within their respective functions.

Further, People's Committees at the provincial and municipal levels are also responsible for implementing, administering and promoting compliance with data/personal data protection regulations.

That said, the system is not one in which businesses typically deal with a single independent privacy commissioner, as in some other jurisdictions. Instead, the Vietnamese regime is more state management-oriented, with the MPS and particularly A05 for personal data procedures, occupying a central position. Businesses should therefore regard the MPS as the lead authority for personal data protection matters, while also remaining alert to parallel requirements that may arise under sectoral regulation or the broader Law on Data framework.

## 9. Looking Forward

### 9.1 Upcoming Legal Reforms

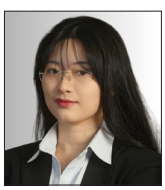
There are no noteworthy upcoming legal reforms.

# Trends and Developments

**Contributed by:**
Tung Ngo, Ngan Nguyen, Hien Tran and Quynh Chi Nguyen
**VILAF**

**VILAF** has been at the forefront of Vietnam's legal market for over three decades. The firm is widely recognised for advising foreign investors and institutions on their business activities in Vietnam, delivering high-quality, commercially focused legal solutions. With more than 100 lawyers, including 16 partners, VILAF offers expertise across a full range of practice areas, including banking and finance, corporate and M&A, dispute resolution, energy and infrastructure and real estate. Its internationally trained lawyers combine global standards with deep local insight, enabling the firm to handle complex cross-border transactions effectively. VILAF is particularly known for its strong M&A and corporate practice, supported by a large team of English-speaking lawyers and Chinese language capabilities. The firm consistently handles large, sophisticated matters under demanding timelines, with many partners recognised as leading lawyers in Vietnam.

## Authors



**Tung Ngo** is the founding and managing partner of VILAF in Ho Chi Minh City, with over three decades of experience in corporate law, mergers and acquisitions, and dispute resolution. He is widely recognised for his deep expertise in complex cross-border transactions, strategic investments, and high-stakes disputes. Tung has advised multinational corporations and major investors on market entry, acquisitions, restructurings, and regulatory matters in Vietnam. Known for his practical approach and strong commercial insight, he consistently delivers effective legal solutions tailored to clients navigating Vietnam's evolving legal and business landscape.

**Ngan Nguyen** is a partner at VILAF, focusing on mergers and acquisitions, corporate restructuring, project financing, real estate and capital markets. She has extensive experience advising on both local and cross-border transactions, including joint ventures and equity investments. Ngan regularly assists multinational corporations, financial institutions and investors across sectors such as energy, real estate and manufacturing. Her work includes advising on complex transactional structuring and high value transactions. She holds an LLB from Hanoi Law University and an LLM from the National University of Singapore, combining strong academic credentials with practical, commercially focused legal expertise.

**Hien Tran** is a partner at VILAF with over 20 years of experience in litigation and arbitration. Since joining the firm in 2007, he has represented clients in complex disputes before Vietnamese courts and international arbitral institutions, including VIAC and SIAC. His practice covers investment, construction, commercial, insurance, and maritime disputes, as well as cross-border M&A and corporate matters. He regularly advises multinational corporations and state-owned enterprises on both contentious and non-contentious issues. Hien is known for delivering practical, strategic solutions, particularly in high-stakes and crisis situations, and is widely regarded for his sophisticated and commercially focused approach.

**Quynh Chi Nguyen** is a supervising associate at VILAF, focusing on corporate, M&A, private equity, anti-trust and general commercial matters. She advises multinational corporations and investors across a wide range of industries, including investment, insurance, education, pharmaceuticals, agriculture and real estate, with particular experience in cross-

border M&A transactions and deal structuring. Her experience includes advising on high-profile acquisitions, strategic investments and corporate restructurings, as well as handling regulatory, governance, employment and competition-related matters. Chi has worked on transactions involving leading international and regional clients, supporting their expansion and operations in Vietnam. She holds an LLB from Ho Chi Minh City University of Law and a BSc from Foreign Trade University.

Vietnam is entering a new era of economic and regulatory development in which investment opportunities continue to expand, while the legal and compliance environment becomes more sophisticated. Many of the developments now shaping the market in 2026 represent a continuation and acceleration of policy and regulatory directions that became more visible in 2025, particularly in relation to digital transformation, infrastructure, sustainability, financial innovation and higher-value manufacturing. For foreign investors, this creates a market that remains highly attractive, while also requiring a more deliberate approach to regulatory planning, transaction structuring and ongoing compliance.

At the same time, enforcement trends indicate a shift toward more active and coordinated supervision across the investment lifecycle, particularly in areas such as:

- tax;
- labour;
- licensing;
- competition;
- foreign exchange; and
- ESG-related obligations.

In this environment, successful investment in Vietnam depends not only on identifying commercial opportunities but also on aligning business models with policy direction, anticipating regulatory risk and establishing governance systems capable of supporting long-term operations.

## M&A Environment and Transaction Structuring

M&A activity in Vietnam remains active across sectors such as manufacturing, real estate, logistics, energy and technology. Transactions are shaped by key regulatory considerations, including acquisition approvals, sector-specific foreign ownership limits and merger control obligations under competition law.

A notable recent development is the adjustment of merger filing thresholds under Resolution No 66.18/2026/NQ-CP, effective 1 July 2026 to 1 March 2027. The framework increases the primary thresholds that trigger notification, raising the total assets and turnover thresholds to VND6,000 billion and the transaction value threshold to VND2,000 billion, while the combined market share threshold remains unchanged. This adjustment reduces the number of transactions subject to pre-closing notification, particularly mid-sized deals and is expected to streamline transaction timelines and lower compliance costs.

In parallel, Vietnam has undertaken a significant reform of its investment framework through Resolution No 66.17/2026/NQ-CP, which simplifies conditional business sectors with effect from 1 July 2026 to 1 March 2027. Under this reform, the number of conditional business lines is reduced from 198 to 142 sectors, reflecting a substantial relaxation of market entry requirements. This reform represents a broader shift in regulatory approach, with the government moving away from a “pre-approval” licensing model toward a “post-inspection” framework based on technical standards and ongoing compliance. As a result, while initial licensing constraints are reduced, regulatory oversight continues through sector-specific requirements and post-licensing supervision. However, transactions that fall below merger thresholds or are outside conditional sectors remain subject to substantive competition review and other regulatory scrutiny. Accordingly, transaction structures must continue to address regulatory risks, particularly in regulated or sensitive sectors.

Key regulatory considerations affecting transactions include:

- acquisition approval requirements;
- sector-specific foreign ownership limits;
- merger control obligations under competition law.

In practice, this requires:

- early regulatory mapping;
- parallel processing of approvals;
- detailed contractual provisions addressing regulatory risks, including change-in-law and liability allocation.

The combined effect of merger control reform and simplification of conditional business lines reinforces a more facilitative investment environment, while maintaining a robust compliance framework. As such, the

increasing sophistication of transactions continues to underscore the importance of comprehensive legal due diligence and proactive regulatory engagement.

### Cross-Border Documentation Reform Through the Adoption of the Apostille Convention

A further notable development supporting cross-border investment is Vietnam's accession to the Hague Apostille Convention, which abolishes the requirement for legalisation of foreign public documents and is expected to take effect in September 2026.

The reform introduces a fundamental change in how foreign public documents are authenticated for use in Vietnam and abroad. Under the current regime, documents are typically subject to a multi-step consular legalisation process involving certification in both the issuing country and Vietnam. The new framework replaces this process with a single Apostille certificate issued by the competent authority of the originating jurisdiction.

This shift is expected to significantly reduce administrative burdens for investors, particularly in transactions requiring cross-border documentation, such as M&A, financing arrangements and dispute resolution proceedings.

Key trends arising from this reform include:

- simplification of authentication procedures through the replacement of multi-step legalisation with a single Apostille certification;
- reduction in processing time and transaction costs for cross-border investments and corporate documentation;
- increased predictability in project timelines, particularly for licensing, financing and workforce mobilisation;
- greater alignment of Vietnam's legal framework with international practices in document recognition and legal cooperation.

The reform also has direct practical implications for transactional and dispute-related documentation, including powers of attorney, corporate records and litigation documents, which are expected to be processed more efficiently.

For foreign investors, the adoption of the Apostille system represents a significant administrative improvement and supports a more seamless execution of cross-border transactions, consistent with Vietnam's broader efforts to enhance its investment environment and legal integration.

### Financial Innovation by Vietnam International Financial Centre

A significant development in Vietnam's financial sector is the establishment of the Vietnam International Financial Centre, structured as a single financial platform operating across Ho Chi Minh City and Da Nang City.

The framework introduces a specialised regulatory regime designed to attract international capital, financial institutions and fintech participants, while facilitating cross-border financial activity within a more flexible and commercially oriented environment.

The dual-location structure reflects distinct policy orientations. Ho Chi Minh City is positioned as a comprehensive financial hub focused on capital markets and traditional financial services, whereas Da Nang City is designed as an innovation-driven centre with an emphasis on fintech, digital assets and regulatory sandbox models.

Entry into the financial centre is available through registration, recognition or sector-specific licensing, depending on the nature of the business. While the regime simplifies market entry and reduces administrative procedures for many investors, regulated sectors such as banking, securities and insurance remain subject to separate licensing and supervision.

Recent developments indicate a shift toward specialised financial ecosystems aligned with Vietnam's comparative advantages and strategic industries. In particular, Ho Chi Minh City is advancing sector-specific financial clusters, including the development of an aviation financial hub (the Asia-Pacific Aviation Financial Hub, an initiative under VIFC-HCMC), supporting aircraft financing, leasing, insurance and logistics-related financial services, with initial capital mobilisation already reaching approximately USD6.1 billion.

In parallel, the launch of an international maritime financial ecosystem (the International Maritime Financial Ecosystem, another initiative under VIFC-HCMC), supported by strategic cooperation between financial institutions and logistics operators such as Vietcombank and Gemadept, aims to integrate financial services with port infrastructure, trade flows and global supply chains. This initiative seeks to enhance domestic value retention in maritime activities and develop higher-value financial services, including trade finance, insurance and risk management, which have historically been performed offshore.

The regulatory framework is further complemented by specialised institutional mechanisms within the financial centre. In particular, the establishment of an International Arbitration Centre creates a dedicated dispute resolution forum for commercial and investment-related matters arising within the VIFC ecosystem. Its jurisdiction is based on party agreement, allowing parties to refer to disputes arising from activities within the VIFC to a forum aligned with international arbitration practice. The framework also permits parties, subject to agreement, to waive recourse to setting-aside proceedings before domestic courts, thereby enhancing the finality and enforceability of arbitral awards. This mechanism is designed to improve predictability in dispute resolution and reduce post-award litigation risks, particularly for cross-border transactions.

In addition, the Commodity Exchange within the VIFC introduces a regulated platform for trading a broad range of asset classes, including commodities, energy products, derivatives, metals and emerging products such as carbon credits and tokenised assets. The platform is structured to enable integrated trading, hedging and financing functions, supporting the development of more sophisticated financial products within Vietnam's market.

Key trends emerging from the framework include:

- development of specialised financial hubs, including aviation and maritime finance, integrated with real economy sectors;
- expansion of fintech, digital asset and carbon-related financial services within controlled regulatory environments;
- greater flexibility in capital mobilisation and cross-border transactions;
- gradual adoption of international accounting standards and market practices;
- growth of integrated ecosystems linking finance, logistics, infrastructure and trade;
- establishment of specialised dispute resolution and market infrastructure platforms supporting investor protection and market development.

For foreign investors, the financial centre offers a strategic platform for accessing Vietnam's financial markets and participating in both traditional and emerging sectors, while benefiting from a more flexible and internationally aligned regulatory framework.

### Strategic Direction in Technology, Sustainability and the Digital Economy

Vietnam's development strategy is increasingly anchored in the convergence of technology, sustainability and digital transformation. The government has positioned science, technology, innovation and digitalisation as central drivers of national growth, reinforced through Resolution No 57-NQ/TW, which sets ambitious targets for digital competitiveness and economic modernisation.

This shift is already reflected in measurable outcomes. Vietnam's digital economy reached approximately USD 72.1 billion in 2025, contributing around 14.02% of GDP and recording strong growth momentum across sectors. These figures highlight the transition of the digital economy from a high-growth sector into a foundational component of the national economic structure.

In parallel, climate commitments have been integrated into national policy. Vietnam's net zero target by 2050, combined with strengthened environmental regulation and ESG requirements, reflects a broader transition toward a sustainability-driven growth model. For investors, this dual focus on technology and sustainability increasingly shapes regulatory priorities and project approval processes.

Within this framework, the digital economy has evolved from a high-growth sector into a critical component of national infrastructure. Recent legislative reforms,

including the Law on Digital Technology Industry and related investment and tax amendments, have established a structured legal foundation for digital technologies, data infrastructure, semiconductors and digital assets.

Key trends include:

- expansion of digital infrastructure, particularly large-scale data centres, cloud computing and supporting platforms;
- accelerated adoption of artificial intelligence and advanced digital technologies, supported by dedicated governance frameworks;
- formal recognition and regulation of digital assets, including tokenised assets, for the first time under Vietnamese law;
- development of digital technology parks and innovation zones designed to attract high-tech investments and support ecosystem integration;
- introduction of targeted investment incentives, particularly for semiconductor manufacturing, AI applications and digital infrastructure projects, including preferential tax treatment and streamlined procedures.

In addition, certain strategic digital projects benefit from accelerated implementation mechanisms that allow earlier execution by bypassing traditional approval processes. At the same time, regulatory expectations are increasing. Greater emphasis is placed on data governance, cybersecurity, transparency and risk management, particularly regarding AI systems and digital platforms.

For investors, the digital economy presents significant opportunities across data infrastructure, semiconductors and emerging digital asset markets. However, the evolving regulatory landscape requires careful alignment between global operational models and Vietnam-specific compliance requirements, particularly in areas such as data control, licensing and technology governance.

### Energy Transition and Power Market Reform

Vietnam's energy sector is undergoing a structural transformation driven by rapid economic growth, industrialisation and rising energy demand, alongside its commitment to achieving net-zero emissions by 2050.

The regulatory framework underpinning this transition is anchored in the revised Power Development Plan 8 (PDP8) and the Electricity Law (2024), which together establish a comprehensive roadmap for decarbonising the power sector, strengthening energy security and modernising market structures.

Key trends emerging from this framework include:

- accelerated expansion of renewable energy, with solar, wind (including offshore) and biomass forming the core of future capacity growth;
- progressive reduction of coal dependency, with caps on coal-fired capacity and long-term transition toward cleaner energy sources;
- large-scale investment in grid infrastructure, smart grids and energy storage to address capacity constraints and integrate renewable generation;
- introduction of more market-oriented mechanisms, including direct power purchase agreements, enabling large consumers to procure renewable energy directly;
- increasing alignment with ESG and sustainable finance frameworks, supporting investment in green energy and infrastructure.

The scale of investment required is substantial, with PDP8 estimating capital needs of approximately USD136.3 billion for the period from 2026 to 2030.

Despite strong policy direction, investors continue to face regulatory and practical challenges, including evolving tariff mechanisms, grid curtailment risks and bankability concerns in power purchase arrangements. These factors remain critical considerations in structuring and financing energy projects.

### ESG, Carbon Markets and Sustainable Supply Chains

Sustainability is becoming a core consideration in Vietnam's investment and regulatory environment, with ESG compliance, carbon market development and sustainable finance frameworks advancing alongside broader economic transformation.

Recent reforms signal a clear policy direction. These include mandatory ESG-related disclosures for certain enterprises, the introduction of a national green taxonomy to guide environmentally eligible investments and the pilot development of a domestic carbon market to support emissions reduction and climate-aligned capital flows.

In parallel, sustainable finance is expanding. Green bonds, green credit programmes and environmentally focused lending are gaining traction, strengthening the link between capital markets and sustainability objectives. However, the framework remains evolving, with further clarity expected on carbon pricing, market operation and reporting standards.

At the same time, these developments are reshaping Vietnam's manufacturing and infrastructure sectors. While the country continues to benefit from its role in global supply chains, investment is shifting toward higher-value, technology-driven production, with stronger ESG requirements across supply chains.

Key trends include:

- increased automation and adoption of advanced technologies;
- growing emphasis on ESG compliance and supply chain traceability;
- continued expansion of logistics and infrastructure supporting trade and distribution;
- closer alignment between industrial growth and sustainability objectives.

Infrastructure development, particularly in transport, logistics and urban systems, remains essential but involves complex regulatory processes, including land acquisition and environmental approvals.

For investors, these convergence points signal a transition toward more sustainable and higher-value economic activity, requiring integrated approaches to compliance, technology and long-term sustainability strategy.

### Metro and Transit-Oriented Development (TOD)

Vietnam's recent legal and policy framework has elevated metro infrastructure and transit-oriented development (TOD) to core tools for reshaping urban growth, especially in Hanoi City and Ho Chi Minh City. Vietnam's Capital Law 2024 expressly embeds "urban development oriented towards public transport" as a key planning principle for Hanoi City, laying the groundwork for higher-density, mixed-use development around metro corridors.

At the national level, the National Assembly's Resolution 188/2025/QH15 adopts special mechanisms to accelerate urban rail and TOD, empowering major cities to integrate land-use planning, financing and rail investment more flexibly.

At the planning level, the adjusted master plan for Ho Chi Minh City to 2040 (Decision No 1125/QD–TTg) adopts public transport-oriented urban development as a core principle. The plan promotes the alignment of urban expansion, redevelopment of existing areas and infrastructure investment with transit systems, emphasising increased connectivity and improved land-use efficiency throughout the urban structure. A consistent direction is reflected in the adjusted master plan for Hanoi City to 2045 (Decision No 1668/QD–TTg), which also places urban rail and public transport networks at the centre of spatial organisation.

In Ho Chi Minh City, these policies are being operationalised through a dedicated TOD implementation plan along Metro Line 2 (Ben Thanh – Tham Luong), under which the People's Committee of Ho Chi Minh City has defined TOD zones as the area within a 1,000-metre radius of stations and the depot selected for pilot implementation. The city's approach focuses on using metro stations as focal points for compact urban clusters that integrate residential, commercial and office functions, with improved public spaces, pedestrian connectivity and reduced reliance on private vehicles. Complementing this, the government has proposed allowing Ho Chi Minh City to retain revenue generated from TOD-related land development to reinvest in urban rail and transport infrastructure, effectively creating a form of land value capture to fund metro expansion. In practice, these mechanisms are now visible in project-level decisions: Ho Chi Minh City has approved pilot TOD planning at five sites along Metro Line 2, while Hanoi City is integrating TOD concepts into new metro lines such as Line 3 (Nhon

– Ha Dong), with planners and investors increasingly required to coordinate transport, planning and land policy from the outset.

For investors, developers and lenders, the latest TOD framework means that transit-accessible land banks, mixed-use zoning potential and compliance with TOD-specific planning requirements (including resettlement, public amenities and pedestrian infrastructure) are becoming central to project feasibility and regulatory engagement must now start early in the rail-planning cycle rather than after metro routes and stations have been fixed.

## CHAMBERS GLOBAL PRACTICE GUIDES

Chambers Global Practice Guides bring you up-to-date, expert legal commentary on the main practice areas from around the globe. Focusing on the practical legal issues affecting businesses, the guides enable readers to compare legislation and procedure and read trend forecasts from legal experts from across key jurisdictions.

To find out more information about how we select contributors, email Rob.Thomson@chambers.com
