# Chambers Global Practice Guides

For more than 20 years, Chambers Global Guides have ranked lawyers and law firms across the world. Chambers now offer clients a new series of Global Practice Guides, which contain practical guidance on doing legal business in key jurisdictions. We use our knowledge of the world's best lawyers to select leading law firms in each jurisdiction to write the 'Law & Practice' sections. In addition, the 'Trends & Developments' sections analyse trends and developments in local legal markets.

**Disclaimer:** The information in this guide is provided for general reference only, not as specific legal advice. Views expressed by the authors are not necessarily the views of the law firms in which they practise. For specific legal advice, a lawyer should be consulted.

# INTRODUCTION

**Contributed by:** Philip Tully, **Matheson LLP**

**Matheson LLP** is the law firm of choice for internationally focused companies and financial institutions doing business in and from Ireland. Established in 1825 in Dublin, Ireland, Matheson LLP celebrates its 200-year anniversary in 2025. The firm has offices in Dublin, Cork, London, New York, Palo Alto and San Francisco, almost 900 people work across the firm's six offices, including 127 partners and tax principals and over 600 legal, tax and digital services professionals. The firm's expertise is spread across more than 30 practice groups. Its clients include over half of the world's 50 largest banks, seven of the world's ten largest asset managers and seven of the top ten global technology brands, and it has advised the majority of the Fortune 100 companies.

## Contributing Editor

**Philip Tully** is a partner in Matheson's tax department and is a member of the firm's international business group and US business group. He advises multinational corporations doing business in and from Ireland on all aspects of corporate tax. His main focus is on cross-border reorganisations, inward investment projects and cross-border tax transactions, as well as transfer pricing matters and tax disputes. He is a member of the Law Society of Ireland, the Irish Tax Institute and the International Bar Association.

## Introduction

The eighth edition of Chambers Global Practice Guides: Doing Business In... is published at a time when macroeconomic volatility and geopolitical instability have become the new normal for global enterprises.

Economic growth is weaker than initially projected in 2026, weighed down by the recent outbreak of conflict in the Middle East and its consequences, a sharp rise in energy costs, record depletion of global oil reserves and supply chain disruptions (see IEA Oil Market Report – May 2026). The full impact of war on the global economy remains to be seen but the spectre of inflation and a significant slowdown in economic growth looms.

Against this backdrop, international policymakers have been striving to achieve security and stability for global businesses in the areas of trade. A notable development in the first half of 2026 was the agreement of major trade deals between the EU and the US and the EU and India, in a bid to restore economic confidence amid ongoing tariff disputes. The legality of the tariff policies imposed by the US administration remains a contested issue both domestically and globally, but the willingness of stakeholders to engage in multilateral trade negotiations signals a constructive development.

On the tax front, the OECD's Side-by-Side Package has sought to bring clarity to the implementation of the Pillar Two rules for US headquartered multinational enterprises (MNEs). However, it remains to be seen whether this marks the final chapter of the OECD's minimum tax project or whether the "stocktake" exercise to be conducted in future years will see further changes to remove any unfair advantages between different countries. With most large MNEs required to register for Pillar Two taxes this year, the impact and efficacy of this global minimum tax regime will need to continue to be assessed.

One particular area of economic growth that remains resilient in 2026 is investment in generative AI. By all accounts, the so-called "AI boom" appears set to continue this year, with many tech players implementing cost efficiency plans in an effort to shift capital towards investment in AI. Investment in physical infrastructure and data centres to support the rapid advancements in AI also remains steady. However, there has been a marked increase in scrutiny on the potential costs of such investments, including constraints in energy supply and impact on energy costs. This industry is also seeing increased regulatory requirements, which may slow growth in this developing sector.

In terms of digital regulation, the EU is continuing to focus on simplification and competitiveness as Ireland takes over the reins of the EU Presidency in July. The EU bloc will seek to remove overlapping regulations and reduce compliance burdens for digital businesses operating within the region with targeted amendments to align the EU Data Act, GDPR and AI Act. These changes are with a view to boosting AI innovation in Europe so as to ensure that regulatory complexity does not contribute to the region falling behind its global peers.

What does remain clear this year is that it is imperative for businesses and investors to remain agile in yet another year of volatility. The economic and geopolitical environment is shifting faster than policymakers and regulators can keep up with, and the businesses best placed to manage the gap will be those that proactively monitor regulatory changes while remaining flexible in their planning and responses.

In the context of this global macro-economic environment, the 2026 edition of the Doing Business In... guide provides a concise summary of the key legal and tax considerations for doing business in countries around the world. It serves as an essential reference point for both lawyers and investors looking to understand the basic principles and legal frameworks of the relevant jurisdictions.

The contributing experts for each jurisdiction have followed a common template, allowing readers to easily compare and contrast different jurisdictions. The guide also summarises recent developments and updates that are of particular importance for those doing business in 2026.

We would like to thank all the participating contributors for their efforts in making this Doing Business In... guide such a vital resource and an essential component of the Chambers Global Practice Guides series.

**Emindset Law Firm** is a business-focused law firm with a team of over 15 and key offices in Andorra and Barcelona, providing integrated legal advice on cross-border matters. Emindset has recognised expertise in commercial law, real estate, new technologies and entertainment law, enabling it to address the legal, regulatory and strategic aspects of complex transactions and innovative projects. Recent highlights include advising on three landmark real estate development projects in Andorra; acting on the acquisition of one of Spain's leading financial institutions; providing legal advice in connection with a feature film; and assisting the Government of Andorra with a major digital transformation initiative. The firm combines technical rigour, commercial insight and a highly responsive, multidisciplinary approach.

## Authors

**Oriol Giró** is the CEO and founder of Emindset Law, where he leads the firm's strategic development and advises businesses, investors and private clients on complex legal matters in Andorra and Spain. He has particular expertise in commercial and real estate law, including corporate transactions, contractual matters, investment structures and property development projects. He is Vice-President of the European Lawyers Association (AEA), a member of Rotary International and a member of the Board of Directors of Anseac (Espic), a leading contact-centre company operating in Andorra and Spain. He has been recognised as CEO of the Year in Legal Advisory for Businesses in Spain.

**Laia Bertran** is the director of the corporate department at Emindset Law. She specialises in commercial and real estate law, advising companies, investors and private clients on corporate governance, contractual matters, company formations, transactions and property-related projects. Her practice is characterised by a practical, detail-oriented approach and a strong understanding of the Andorran business environment.

**Yaumara Toledo** is the director of the commercial law department at Emindset Law, where she advises companies and entrepreneurs on corporate transactions, M&A, commercial agreements and business structuring. Her practice focuses on commercial Law, new technologies and entertainment law, with additional expertise in data protection, privacy, digital law, artificial intelligence and blockchain. As a qualified data protection officer, she provides practical guidance on regulatory compliance and the legal implications of emerging technologies. Her multidisciplinary approach combines sound commercial judgement with a strong understanding of innovation, enabling her to support clients operating in rapidly evolving and technology-driven sectors.

**José Luis Andrés** is the director of the accounting and tax department at Emindset Law and is responsible for leading the firm's tax and accounting practice. He has extensive experience in advanced taxation, financial reporting and complex accounting matters, advising companies, investors and private clients on tax planning, regulatory compliance and business structuring. His deep knowledge of the sector enables him to provide technically rigorous, commercially focused advice and to identify practical solutions to sophisticated financial and tax-related issues.

## 1. Legal System

### 1.1 Legal System and Judicial Order

Andorra's civil-law system is based primarily on the Constitution of 1993 as the supreme legal norm. Its private law has also been influenced by both Roman law and Catalan legal traditions. Case law is not formally binding, although decisions of the higher courts are highly persuasive.

The *Batllia* is the main first-instance court for civil, administrative and certain criminal matters, while the *Tribunal de Corts* primarily hears serious criminal cases. Appeals are generally decided by the High Court of Justice. The Constitutional Court, which is separate from the ordinary judiciary, reviews constitutional matters and protects fundamental rights. Once effective domestic remedies have been exhausted, individuals may also bring an application before the European Court of Human Rights concerning an alleged violation of the European Convention on human rights attributable to Andorra.

## 2. Restrictions on Foreign Investments

### 2.1 Approval of Foreign Investments

Foreign investment in Andorra is generally subject to prior administrative authorisation by the Andorran Government. Approval is required for incorporating or acquiring interests in Andorran companies, establishing branches or permanent establishments, and acquiring more than 10% of a company's capital or voting rights; subsequent changes above that threshold also require approval. Direct and indirect holdings are aggregated. Real estate investments always require prior approval, subject to limited inheritance and matrimonial-property exceptions. Applications are assessed against public order, national security, economic stability, environmental, housing, labour-market, public-health and anti-money laundering considerations. Real estate acquisitions are quantitatively restricted, while property development and tourist accommodation investments are subject to specific prohibitions or conditions. Regulated sectors, including finance, insurance and telecommunications, may require additional sector-specific approvals.

### 2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance

Foreign investors must submit a prior-authorisation application to the competent ministry, either directly or through an authorised representative. The filing must identify the investor, beneficial ownership and proposed investment, and include supporting corporate and transaction documents. Individuals must generally provide a valid passport and criminal-record certificate, duly legalised or apostilled as applicable. Additional documents may be required depending on whether the investment concerns a company, shareholding or real estate. The statutory decision period is two months, extendable by one further month, and the investment may only be completed after approval. Unauthorised investments may be declared null and void.

### 2.3 Commitments Required From Foreign Investors

Foreign investment approvals may be made subject to compliance with the conditions stated in the application and authorisation. In practice, investors may be expected to demonstrate effective economic activity, adequate financing, genuine business substance, employment creation, sustainability and consistency with Andorra's public and economic interests. Companies with foreign investment must generally commence effective activity within 18 months and comply with ongoing reporting and operational requirements. For certain real estate investments, commitments may include maintaining the asset, using it for an authorised business purpose or creating and preserving employment. The government has recently intensified its scrutiny and may reject projects that fail to meet statutory requirements or do not generate sufficient added value for Andorra.

### 2.4 Right to Appeal

A refusal of foreign investment authorisation is a reasoned administrative act and may be challenged for errors of law, fact, procedure or misuse of administrative discretion. The investor must generally file an administrative appeal before the government. Once the administrative route has been exhausted, judicial review may be sought before the Administrative Section of the *Batllia*.

## 3. Corporate Vehicles

### 3.1 Most Common Forms of Legal Entity

The principal corporate vehicles are the *societat de responsabilitat limitada* (SL) and the *societat anònima* (SA). Both may be incorporated by one or more shareholders, whose liability is generally limited to their capital contributions. An SL requires minimum share capital of EUR3,000, while an SA requires EUR60,000, fully subscribed and paid in. Both are governed by the shareholders' general meeting and may be managed by a sole director, joint or several directors, or a board of directors.

The SL is the most commonly used form because of its lower capital requirement and flexible governance, making it suitable for greenfield projects, family businesses, holdings and joint ventures.

The SA is generally preferred for larger projects, broader investment structures and businesses requiring more sophisticated governance. Certain regulated activities, particularly in the financial sector, must be carried out through an SA or another specifically prescribed legal form.

### 3.2 Incorporation Process

The process to set up a company generally begins with the reservation of the company name and, where applicable, obtaining prior foreign investment authorisation. The founders must then open an Andorran bank account and deposit the required share capital. Once the bank certificate and corporate documents are available, the articles of association are executed before an Andorran notary. The company is subsequently registered with the Companies Registry and obtains its tax and administrative identification details. Before commencing operations, it must complete the commercial opening procedure and secure any municipal or sector-specific authorisations required for its activity. In practice, the process usually takes approximately three to four months and remains relatively documentation-intensive. Administrative procedures are, however, being digitised in Andorra, with the objective of enabling more stages to be completed online.

### 3.3 Ongoing Reporting and Disclosure Obligations

Private companies are subject to ongoing filing and disclosure obligations. Changes to the management body, including appointments and removals, and amendments to the articles must generally be approved by the shareholders' general meeting, formalised before an Andorran notary and registered with the Companies Registry.

Companies must also file their annual accounts and periodically confirm or update their beneficial ownership information, which are publicly recorded in the Companies Registry and generally include key corporate data, as well as the identity of registered shareholders and directors. Failure to comply may result in sanctions and restrictions on further registry filings.

### 3.4 Management Structures

Andorran companies may be managed by a sole director, two or more joint directors, two or more several directors, or a board of directors. A sole director exercises the management and representation powers individually. Joint directors must act together in accordance with the articles, while several directors may generally bind the company independently. A board of directors is a collegiate body that adopts decisions collectively, subject to quorum and majority requirements, and may delegate specific powers where legally permitted. Andorran law therefore follows a flexible one-tier model rather than a mandatory two-tier structure.

### 3.5 Directors', Officers' and Shareholders' Liability

Directors may incur civil, administrative and, where their conduct constitutes an offence, criminal liability. They must act in the company's interests with the diligence of an orderly businessperson and the loyalty of a faithful representative, remain properly informed, participate actively in management and investigate irregularities.

Directors are liable for damage caused by acts or omissions contrary to law, the articles or their statutory duties, and liability may extend jointly to all participating directors, including de facto directors.

Andorran courts also recognise an exceptional doctrine comparable to "piercing the corporate veil", allowing the company's separate legal personality to be disregarded where it is used fraudulently, abusively or to evade legal obligations, potentially exposing shareholders or controlling persons to personal liability.

## 4. Employment Law

### 4.1 Nature of Applicable Regulations

Employment relationships in Andorra are primarily governed by the Law on Labour Relations, alongside mandatory statutory minimum standards, individual employment contracts and, where applicable, collective bargaining agreements. Employment contracts may be indefinite or fixed-term and should clearly regulate the position, duties, remuneration, working time, probation, duration and termination conditions.

The parties retain contractual freedom, but they may not waive mandatory employee protections concerning matters such as salary, working hours, leave, equality and health and safety. Case law assists in interpreting these rules, while employment disputes fall within the civil jurisdiction.

The recruitment of non-resident foreign nationals is also subject to immigration quotas and work-authorisation requirements. In practice, available positions must generally be offered first to Andorran nationals and lawful residents before an employer may recruit from abroad.

### 4.2 Characteristics of Employment Contracts

Employment contracts must be concluded individually and in writing, irrespective of their duration or type; a purely verbal contract does not satisfy the statutory formalities. The contract should identify the parties and regulate the employee's position, duties, remuneration, working time, workplace, start date and any probationary period. Contracts may be indefinite or concluded under one of the legally recognised fixed-term or special arrangements.

Fixed-term contracts must state the objective reason for their temporary nature and the date or circumstances determining their expiry. Any contractual term that provides less favourable conditions than mandatory employment law or an applicable collective agreement is invalid.

### 4.3 Working Time

The statutory standard working week is 40 hours, although part-time and legally permitted flexible arrangements may apply. Under an irregular working-time system, daily work may not generally exceed ten hours or 48 hours per week, and minimum rest periods must be observed.

Overtime comprises hours exceeding the statutory, contractual or collectively agreed working time and is limited to 12 hours per week, 48 hours per month and 426 hours per year. It is generally voluntary for the employee, except in exceptional or force majeure

circumstances. Overtime must be paid with at least a premium or, with the employee's consent, compensated by equivalent paid rest.

### 4.4 Termination of Employment Contracts

Andorra is not an employment-at-will jurisdiction. Indefinite contracts may be terminated without cause subject to statutory notice and compensation, while fixed-term contracts normally end on the agreed date or upon completion of the relevant work. Employers may also dismiss employees for objective or disciplinary reasons, provided the legal grounds and procedural requirements under Law 31/2018 are met. Unjustified, defective or discriminatory dismissals may trigger increased compensation or nullity.

Collective redundancies arise when dismissals exceed the statutory workforce thresholds within 90 days. Employers must consult employee representatives, justify the measures and notify the Labour Ministry. An agreement is not mandatory; however, in its absence, prior administrative authorisation is required. Affected employees are entitled to the notice and compensation applicable to objective dismissal.

### 4.5 Employee Representations

Employers must inform employees of their role, duties and working conditions, which should be clearly stated in the written employment contract. They must also comply with ongoing obligations concerning remuneration, working time, health and safety, equality and any material changes affecting the employment relationship.

Employee representation is not mandatory in every company. However, companies with more than 30 employees must establish a works council elected by the workforce. Management must inform and consult that body on relevant employment, organisational and collective measures.

## 5. Tax Law

### 5.1 Taxes Applicable to Employees/Employers

Employment income is taxed at a maximum rate of 10%, subject to statutory allowances and reductions. Employers must withhold and remit any applicable personal income tax.

Social security contributions to the *Caixa Andorrana de Seguretat Social* (CASS) amount to 22% of gross salary: 6.5% is borne by the employee and withheld from salary, while 15.5% is paid by the employer. These contributions cover the general healthcare and retirement benefits. No separate payroll tax generally applies.

### 5.2 Taxes Applicable to Businesses

Companies incorporated in Andorra are generally subject to corporate income tax on worldwide profits at a standard rate of 10%, subject to available exemptions, deductions and special regimes.

Businesses supplying goods or services are also subject to the general indirect tax (IGI), normally at 4.5%, with reduced and increased rates for certain transactions.

Dividends distributed by Andorran companies are generally not subject to withholding tax, while payments to non-residents, including certain interest and service income, may attract non-resident income tax at up to 10%, subject to domestic exemptions and tax treaties.

Real estate transfers may trigger transfer tax, generally between 3% and 4%, and foreign real estate investment may also be subject to a specific tax (currently 6%).

As of June 2026, Andorra has not implemented the OECD Pillar Two GloBE rules or a domestic top-up tax, and no Andorran regime appears on the OECD Central Record as qualifying for safe-harbour status.

### 5.3 Available Tax Credits/Incentives

Andorra already offers a competitive tax framework, with maximum rates of 10% for corporate and personal income tax and a general IGI rate of 4.5%.

Corporate incentives include deductions for creating permanent employment and for qualifying new investments made in Andorra.

Eligible holding companies may benefit from an exemption on qualifying foreign dividends and capital gains, rather than a general 80% rebate. An 80% reduction applies to certain international intangible, trading and intragroup financial activities, subject to strict substance, activity and authorisation requirements.

Tax-neutral treatment may also be available for qualifying corporate reorganisations.

### 5.4 Tax Consolidation

Tax consolidation is available on an optional basis for qualifying Andorran corporate groups. All eligible group companies must agree to apply the regime, consolidate their financial statements and satisfy the statutory parent–subsidiary ownership requirements. The parent company must notify the Ministry of Finance before the beginning of the first tax period concerned and assumes responsibility for the group's consolidated corporate tax filing.

### 5.5 Thin Capitalisation Rules and Other Limitations

Andorra does not apply a traditional debt-to-equity thin-capitalisation ratio. However, net financial expenses are generally deductible only up to certain percentage of tax-adjusted EBITDA, subject to a minimum deduction and statutory exemptions. Related-party financing must also comply with arm's-length transfer-pricing rules.

### 5.6 Transfer Pricing

Transfer pricing rules apply to transactions between related parties, which must be valued on an arm's-length basis. The Andorran tax authorities may adjust the taxable base where agreed terms differ from market conditions, and taxpayers must retain sufficient supporting documentation.

### 5.7 Anti-Evasion Rules

Andorra applies anti-evasion rules allowing the tax authorities to disregard simulated, abusive or artificial arrangements lacking economic substance. These measures are supported by transfer-pricing, beneficial-ownership, anti-money laundering and tax-information exchange rules. Breaches may lead to reassessment, interest, penalties and, in serious cases, criminal liability.

### 5.8 Tariffs

Banking and financial services are subject to an increased IGI rate of 9.5%. Foreign real estate investment is also taxed at 6% for qualifying limited acquisitions and 10% for other investments exceeding the statutory limits. Current developments are influenced by Andorra's closer economic integration with the EU.

## 6. Competition Law

### 6.1 Merger Control Notification

Andorra does not currently apply a general merger-control notification regime based on turnover or market-share thresholds. However, acquisitions, mergers or joint ventures involving foreign investors require prior Government authorisation where they constitute foreign investment, including the acquisition of more than 10% of an Andorran company. Corporate mergers and demergers must also be registered with the Companies Registry. Where the tax-neutral restructuring regime is applied, the transaction must be notified to the tax authorities before execution of the relevant public deed.

### 6.2 Merger Control Procedure

The process usually begins with due diligence, negotiation and preparation of a common merger plan and merger balance sheets. The governing bodies approve the plan, which is then submitted to the shareholders of each participating company for approval. Any required independent expert reports and creditor protection procedures must be completed before implementation.

Where the tax-neutral restructuring regime applies, the transaction must be notified to the tax authorities before execution of the public deed and must be supported by valid economic reasons. The merger is then formalised before an Andorran notary and registered with the Companies Registry, producing universal succession of assets and liabilities. Foreign investment authorisation may also be required. Depending on complexity and approvals, the process generally takes three to four months.

### 6.3 Cartels

Law 13/2013 on effective competition and consumer protection prohibits agreements, concerted practices and decisions that restrict competition, including price-fixing, market-sharing and output limitations. It also prohibits abuse of a dominant position (see **6.4 Abuse of Dominant Position**), subject to limited statutory exemptions and de minimis rules.

The regime applies to conduct carried out in Andorra and to conduct implemented abroad where it produces or may produce anti-competitive effects in the Andorran market. Infringements may result in administrative sanctions, invalidity of the relevant arrangements and civil liability.

### 6.4 Abuse of Dominant Position

Law 13/2013 prohibits the abuse of an individual or collective dominant position where conduct harms consumers or unjustifiably forecloses the market. Prohibited practices include unfair pricing, limiting production or market access, discriminatory conditions and contractual tying.

Andorran law does not establish a separate general prohibition of abuse of economic dependency, although such conduct may fall within dominance, unfair competition or general contractual rules.

The regime applies whenever the conduct produces effects in Andorra, irrespective of where it occurred or the parties' domicile.

## 7. Intellectual Property

### 7.1 Patents

According to Andorran legislation, a patent protects an invention in any technological field that is new, involves an inventive step and is capable of industrial application. Protection lasts 20 years from the filing date, subject to payment of annual renewal fees. Applications are filed with the Andorran Trademarks and Patents Office and must include a description, claims, drawings where applicable and an abstract. Following formal examination, the application is normally published after several months and, once the applicable requirements and fees are satisfied, the patent is granted and registered. Patent holders may bring civil proceedings seeking cessation of infringement, injunctions, damages, seizure or destruction of infringing goods and publication of the judgment; invalid patents may be challenged before the courts.

### 7.2 Trade Marks

According to Andorran law, a trade mark is any sign capable of distinguishing the goods or services of one undertaking from others.

Registration with the Andorran Trademarks and Patents Office (OMPA) grants protection for ten years, renewable indefinitely for successive ten-year periods. The application must identify the mark, owner and relevant Nice classes, after which OMPA conducts a formal examination and registers the mark if statutory requirements are met.

Infringement may be challenged through civil proceedings seeking injunctions, damages, seizure or destruction of infringing goods and publication of the judgment.

As Andorran registration protects only within Andorra, internationally active businesses should also consider obtaining an EU trade mark or other foreign protection.

### 7.3 Industrial Designs

Andorra currently has no specific national registration system granting standalone industrial design rights. A product's appearance may nevertheless be protected automatically by copyright where it qualifies as an original artistic work. Additional protection may arise through three-dimensional trademarks, patents for technical features and unfair competition rules. Rights holders may seek injunctions, damages, withdrawal or destruction of infringing products and, where applicable, criminal remedies.

### 7.4 Copyright

Copyright protects original literary, artistic and scientific works, including software and audiovisual creations, from the moment of creation. No registration is required, although evidence of authorship and creation date is advisable.

Economic rights generally last for the author's lifetime plus 70 years. Infringement may give rise to injunctions, damages, withdrawal or destruction of unlawful copies and, in serious cases, criminal liability.

### 7.5 Others

Trade secrets are safeguarded through confidentiality, contractual and unfair competition rules, provided reasonable measures are taken to preserve secrecy. It is recommended to document and notarise the relevant IP, register protectable rights whenever possible, and maintain clear evidence of creation and ownership. Agreements with developers, employees and contractors should expressly regulate confidentiality, IP assignment, permitted use and ownership of improvements.

## 8. Data Protection

### 8.1 Applicable Regulations

Data protection is primarily governed by Qualified Law 29/2021 on Personal Data Protection, as amended by Qualified Law 12/2024, and its implementing regulations. The framework is closely aligned with the EU GDPR and regulates lawful processing, transparency, data-subject rights, security, international transfers, breach notification and accountability. Compliance is supervised by the Andorran Data Protection Agency (APDA).

The GDPR may also apply directly to Andorran companies offering goods or services to, or monitoring, individuals in the European Economic Area. In practice, many Andorran businesses align their policies and procedures with GDPR standards to ensure consistent cross-border compliance.

### 8.2 Geographical Scope

Andorran data protection law applies to processing carried out by entities established in Andorra and may also apply to foreign companies targeting or monitoring individuals in Andorra.

Conversely, Andorran companies offering goods or services to, or monitoring, individuals in the European Economic Area (EEA) may be directly subject to the GDPR.

International transfers are restricted where the destination does not provide an equivalent level of protection, unless appropriate safeguards or a statutory exception applies. As Andorra benefits from an EU adequacy decision, data may generally flow freely between Andorra and the EEA.

### 8.3 Role and Authority of the Data Protection Agency

The Andorran Data Protection Agency (APDA) is the independent supervisory authority responsible for monitoring and enforcing compliance with Andorran data protection law. It may issue guidance, advise public bodies and organisations, investigate complaints, conduct inspections and order controllers or processors to remedy infringements.

The APDA may also impose corrective measures and effective, proportionate and dissuasive administrative sanctions. Its supervisory powers do not extend to processing carried out by courts when acting in their judicial capacity.

## 9. Looking Forward

### 9.1 Upcoming Legal Reforms

Andorra's principal forthcoming legal development is the proposed Association Agreement with the European Union, which remains subject to completion of the European approval process and approval by referendum in Andorra.

If approved, the Agreement will require the progressive incorporation of substantial parts of the EU internal-market acquis into Andorran law, subject to the adaptations and transitional periods negotiated for the country.

This represents one of the most significant legal and institutional challenges in Andorra's recent history and will affect numerous areas, including financial services, company law, employment, consumer protection and competition.

No definitive referendum or entry-into-force date has yet been confirmed. Nevertheless, many recent Andorran laws are already being drafted in alignment with European standards.

# Trends and Developments

**Contributed by:**
Oriol Giró, Laia Bertran, Yaumara Toledo and José Luis Andrés
**Emindset Law Firm**

**Emindset Law Firm** is a business-focused law firm with a team of over 15 and key offices in Andorra and Barcelona, providing integrated legal advice on cross-border matters. Emindset has recognised expertise in commercial law, real estate, new technologies and entertainment law, enabling it to address the legal, regulatory and strategic aspects of complex transactions and innovative projects. Recent highlights include advising on three landmark real estate development projects in Andorra; acting on the acquisition of one of Spain's leading financial institutions; providing legal advice in connection with a feature film; and assisting the Government of Andorra with a major digital transformation initiative. The firm combines technical rigour, commercial insight and a highly responsive, multidisciplinary approach.

## Authors

**Oriol Giró** is the CEO and founder of Emindset Law, where he leads the firm's strategic development and advises businesses, investors and private clients on complex legal matters in Andorra and Spain. He has particular expertise in commercial and real estate law, including corporate transactions, contractual matters, investment structures and property development projects. He is Vice-President of the European Lawyers Association (AEA), a member of Rotary International and a member of the Board of Directors of Anseac (Espic), a leading contact-centre company operating in Andorra and Spain. He has been recognised as CEO of the Year in Legal Advisory for Businesses in Spain.

**Laia Bertran** is the director of the corporate department at Emindset Law. She specialises in commercial and real estate law, advising companies, investors and private clients on corporate governance, contractual matters, company formations, transactions and property-related projects. Her practice is characterised by a practical, detail-oriented approach and a strong understanding of the Andorran business environment.

**Yaumara Toledo** is the director of the commercial law department at Emindset Law, where she advises companies and entrepreneurs on corporate transactions, M&A, commercial agreements and business structuring. Her practice focuses on commercial Law, new technologies and entertainment law, with additional expertise in data protection, privacy, digital law, artificial intelligence and blockchain. As a qualified data protection officer, she provides practical guidance on regulatory compliance and the legal implications of emerging technologies. Her multidisciplinary approach combines sound commercial judgement with a strong understanding of innovation, enabling her to support clients operating in rapidly evolving and technology-driven sectors.

**José Luis Andrés** is the director of the accounting and tax department at Emindset Law and is responsible for leading the firm's tax and accounting practice. He has extensive experience in advanced taxation, financial reporting and complex accounting matters, advising companies, investors and private clients on tax planning, regulatory compliance and business structuring. His deep knowledge of the sector enables him to provide technically rigorous, commercially focused advice and to identify practical solutions to sophisticated financial and tax-related issues.

### Andorra: A Small Country with an Increasingly International Outlook

For many international entrepreneurs, investors and professionals, Andorra is no longer simply a mountain destination between Spain and France. Over the past decade, the Principality has developed into an increasingly sophisticated jurisdiction for establishing businesses, managing investments and relocating families. Its appeal rests on a distinctive combination of political stability, personal security, competitive taxation, high-quality public services and proximity to the main markets of Western Europe.

Andorra nevertheless remains a small country with limited land, housing and administrative capacity. Its recent development has therefore created a difficult policy question: how can the country remain open to international investment without allowing growth to undermine social cohesion, access to housing or the natural environment?

Recent legislation reflects this tension. The Government continues to welcome international businesses and residents, particularly where their projects create employment, technological development, economic diversification or lasting value. At the same time, foreign investment, real estate acquisitions and immigration are being examined more closely than in the past, and some barriers have been implemented.

The result is a jurisdiction that remains attractive but is becoming increasingly selective. Foreign investors should no longer approach Andorra merely as a low-tax destination. A successful project increasingly requires a credible business plan, demonstrable economic substance and a clear understanding of the country's administrative and regulatory expectations.

#### *Why Andorra continues to attract investors and residents*

Andorra's tax system remains one of its most visible advantages. Corporate income tax and personal income tax are generally capped at 10%, while the standard indirect tax, known as the *Impost General Indirecte* (IGI), is 4.5%. These rates compare favourably with those of most neighbouring European jurisdictions.

Taxation, however, is only part of the picture. Andorra also offers a stable constitutional system, the euro as its official currency, a regulated financial sector and a legal system that has progressively incorporated international standards on transparency, taxation, money laundering and data protection. Andorra is one of the safest countries in the world and benefits from an exceptional quality of life, a pristine natural environment and strong political stability, making it a truly unique jurisdiction. The country also benefits from a customs union with the European Union for industrial products and a network of double tax treaties that has expanded its capacity to support cross-border business.

For individuals and families, the practical attractions are equally important. Andorra is widely valued for its safety, natural environment, education system, healthcare, sporting infrastructure and quality of life. It is geographically close to Barcelona and Toulouse while retaining the advantages of a smaller, more personal business and social environment. Andorra also has a

national heliport, which is expected to begin operating regular helicopter services this year, as well as the Andorra–La Seu d'Urgell Airport in Spain, located approximately ten minutes from the Andorran border and offering scheduled flights to Madrid and Palma de Mallorca.

The country is therefore particularly attractive to:

- entrepreneurs establishing businesses with an international or digital dimension;
- family-owned companies and holding structures;
- investors seeking access to Andorra's domestic economy;
- professionals working in technology, consultancy, finance, sport or creative industries;
- high-net-worth individuals seeking genuine residence in a stable European jurisdiction; and
- families seeking a secure and multilingual environment.

These advantages should not be interpreted as allowing artificial or purely formal structures. Andorran authorities increasingly expect companies to demonstrate genuine economic substance, with tax residence determined by the factual circumstances and companies required to maintain genuine governance, business activity and decision-making arrangements. Banks, immigration authorities, tax authorities and foreign investment regulators likewise expect investors to demonstrate the commercial rationale behind their proposed structures.

### *The process to set up a company in Andorra*

The two principal corporate forms are the limited liability company, or *societat de responsabilitat limitada* (SL), and the public limited company, or *societat anònima* (SA). The limited liability company requires minimum share capital of EUR3,000 and is the vehicle most commonly used by entrepreneurs, family businesses, holding companies and joint ventures. The public limited company requires minimum share capital of EUR60,000 and is generally used for larger projects, more complex investment structures and certain regulated activities.

Both vehicles offer limited liability to their shareholders, subject to the usual exceptions for fraud, abuse or unlawful conduct. They may be incorporated by one or more shareholders and managed by a sole director, joint or several directors, or a board of directors. The appropriate structure depends on the number of investors, the decision-making model, the need for checks and balances, and any regulatory requirements applicable to the activity.

In practical terms, incorporating an Andorran company normally involves the following stages:

- reserving the proposed company name;
- obtaining foreign investment authorisation, where required;
- completing bank compliance and opening a capital account;
- depositing the required share capital before an Andorran bank;
- preparing the articles of association and beneficial ownership documentation;
- executing the incorporation deed before an Andorran notary;
- registering the company with the Companies Registry;
- obtaining tax and administrative identification;
- registering the relevant trade or commercial activity; and
- obtaining any "communal", professional or sector-specific permits.

Foreign investment approval is usually required where a non-Andorran investor incorporates a company or acquires a qualifying participation in an existing company. Direct and indirect interests are considered, and acquisitions exceeding the statutory participation threshold require prior authorisation. The authorisation must be obtained before the investment is completed.

Applicants are required to identify the investor, ultimate beneficial owners, source of funds and proposed investment. Individuals generally provide an apostilled or legalised passport and criminal record certificate. Corporate investors must produce incorporation documents, registers, ownership charts and evidence identifying the natural persons who ultimately control the investment.

The authorities may also request information about the business plan, financing, intended premises, projected employees and economic contribution of the project. The more complex or strategically sensitive the investment, the more important it becomes to provide a coherent and properly documented application from the outset.

### *Administrative process and practical timelines*

A straightforward incorporation may still require approximately three to four months, although timing varies considerably. Foreign investment approval, banking compliance, the availability of documents and the nature of the business activity are the principal variables.

The most time-consuming and complex step is often obtaining the criminal record certificate, as it is generally required both from the applicant's country of nationality and from their most recent country of residence. In some jurisdictions, this process can be particularly cumbersome and may require the applicant to complete the formalities in person.

Documents issued abroad frequently require an apostille or legalisation and, depending on their language, a sworn translation. Corporate ownership chains may require several levels of supporting records. Applicants should therefore avoid beginning the process with incomplete or soon-to-expire documents.

Andorra's company formation process remains relatively documentation-intensive. Different stages involve the government, banks, notaries, the Companies Registry, municipal authorities and, where applicable, professional or sectoral regulators. Effective coordination between these actors is crucial.

The country is also progressively digitalising public administration. More procedures can now be initiated or managed electronically, and the stated policy direction is towards a more integrated online system. Nevertheless, investors should not yet assume that company formation can be completed entirely through a single digital platform.

### *Moving to Andorra through an active business*

Incorporating a company and obtaining residence are legally distinct processes. Ownership of an Andorran company does not automatically grant the shareholder the right to reside or work in the country; a separate immigration authorisation is required.

Entrepreneurs who intend to manage and operate their own company commonly apply for residence and work as self-employed persons. This route generally requires the applicant to hold a qualifying ownership interest, form part of the management body and demonstrate that the company has a registered and active commercial establishment in Andorra.

The applicant will normally need to provide identification documents, a criminal record certificate, evidence of accommodation, proof of the corporate investment and documentation concerning the company's activity. A medical examination, municipal registration and enrolment with the Andorran Social Security Fund are also typically required. In addition, a non-refundable payment of EUR50,000 must be made to the Andorran Financial Authority.

The immigration process is subject to annual quotas. This is an important practical consideration, as satisfying the substantive requirements does not necessarily guarantee that an authorisation will be immediately available. In 2026, the government reduced the quota for certain self-employed residence permits as part of its controlled-growth policy.

Applicants must also meet continuing requirements after receiving authorisation. The company should remain operational, the applicant must retain the required corporate position and social security obligations must be fulfilled. Renewal applications may require evidence of actual commercial activity, income and contributions.

A residence strategy should therefore be consistent with the underlying business. Creating a company that exists only on paper may create difficulties not only for tax purposes but also when renewing the immigration authorisation.

### *Other forms of residence: employees and passive residents*

Andorra also offers residence categories for employees, passive residents and persons with certain international, professional, sporting, cultural or scientific profiles. Each category has its own conditions, investment requirements, physical-presence rules and permitted activities.

Passive residence may be relevant for individuals who do not intend to carry out ordinary employment in Andorra. It generally requires a substantial investment commitment, adequate financial resources, insurance and a minimum period of annual presence. The precise investment thresholds and qualifying assets should be reviewed under the legislation applicable when the application is filed, as this area has been subject to reform.

Active residence, by contrast, is intended for persons working in Andorra, whether as employees or self-employed entrepreneurs. It normally entails a more substantial presence in the country and participation in the social security system.

Prospective residents should also distinguish immigration residence from tax residence. An immigration permit grants a legal right to live in Andorra, but tax residence is determined according to statutory tests and factual circumstances. These may include the number of days spent in Andorra and the location of the individual's principal economic or personal interests. The government actively verifies that residents comply with the statutory minimum stay requirements and may request evidence demonstrating their effective residence in the country.

A relocation should therefore be implemented in practice, not merely documented administratively. Housing, family arrangements, management responsibilities, banking, professional activity and connections with previous countries of residence should be reviewed as part of a coordinated legal and tax strategy.

### *Investing in estate*

Real estate has traditionally formed part of many relocation and investment projects. However, this is now one of the most closely regulated areas of foreign investment.

Foreign acquisitions of Andorran real estate generally require prior administrative authorisation. A specific tax on foreign real estate investment also applies, with the applicable rate depending on the scope and characteristics of the acquisition. Recent reforms have increased the tax burden for certain investments and reinforced quantitative and qualitative restrictions.

The regulatory purpose is not simply fiscal. The legislation seeks to moderate speculative demand, improve access to housing and direct foreign capital towards projects that generate broader value. Certain exemptions or reductions may be linked to maintaining the investment for a minimum period, creating rental housing, conducting an authorised economic activity or satisfying employment-related conditions.

Investors should therefore assess real estate acquisitions in the context of the entire project. A property intended as a genuine home for an active resident raises different issues from a portfolio investment, development project or acquisition through a corporate structure.

Foreign investors may undertake real estate investments jointly with local partners, creating opportunities to combine international capital with local knowledge and expertise.

The tax treatment of the acquisition, ongoing ownership, rental income and future disposal must also be analysed. The foreign investment authorisation does not replace urban planning, municipal, construction or sector-specific approvals.

### *Substance Is becoming the key concept*

The direction of Andorran policy can be summarised in one word: substance. Companies are expected to undertake real activity, investors must explain the origin and purpose of their capital, and residents should have a genuine connection with the country. Commercial and tax substance is required, ensuring that investors genuinely contribute value to Andorra.

Substance does not require every business to employ a large workforce or occupy extensive premises. A consulting company, digital enterprise or investment office may naturally operate with a smaller structure. The relevant question is whether the resources, decision-making and activity are proportionate to the business being presented.

Good governance is equally important. Directors should actively exercise their responsibilities, maintain proper records and ensure that important decisions are genuinely taken in Andorra where the company claims Andorran tax residence. Contracts, invoices, intellectual property arrangements and service relationships should reflect commercial reality.

This approach is also relevant internationally. Foreign tax authorities increasingly examine beneficial ownership, effective management, permanent establishments and controlled foreign company rules. An Andorran structure should therefore be designed not only to comply locally but also to withstand scrutiny in the jurisdictions where its shareholders, clients or assets are located.

### The Association Agreement with the European Union

The proposed Association Agreement with the European Union has the potential to become the most significant legal and economic development in Andorra's modern history. Negotiations have produced a framework intended to give Andorran businesses broader access to the EU internal market while recognising the specific characteristics of a microstate.

Andorra faces both the challenge and the opportunity of closer association with the European Union and alignment with the relevant EU acquis. This will require the country to incorporate a substantial body of European legislation into its domestic legal framework within a demanding timeframe, while businesses will also need to adapt their governance, compliance and operating models. At the same time, the process offers a major opportunity to internationalise and diversify the Andorran economy, enabling companies established in Andorra to develop cross-border business more easily while continuing to benefit from the country's highly competitive tax framework.

The agreement would not make Andorra a member of the European Union. Nor would all EU law automatically become applicable. It would, however, require Andorra to incorporate and apply substantial parts of the EU acquis in the areas covered by the Agreement, particularly those connected with the internal market.

Potentially affected areas include:

- the free movement of goods, services, persons and capital;
- competition and state aid;
- financial services;
- company and commercial regulation;
- consumer protection;
- employment and social standards;
- professional qualifications;
- telecommunications and digital services;
- transport, energy and environmental rules; and
- regulatory supervision and judicial co-operation.

The Association Agreement will not require tax harmonisation, allowing Andorra to retain its current tax rates rather than align them with the generally higher levels applicable across the European Union.

For Andorran companies, the central opportunity is improved access. Businesses that currently encounter legal or administrative barriers when operating in the European Union may benefit from a more predictable framework. The recognition of professional qualifications and more consistent rules for services could be particularly important for professionals and smaller companies whose natural market extends beyond Andorra.

The agreement may also increase Andorra's attractiveness as a base for internationally oriented businesses. A company could potentially combine Andorra's stable and competitive domestic environment with a closer legal relationship to the EU market.

#### *Immigration and the preservation of Andorra's particularities*

Free movement of persons is one of the most politically sensitive aspects of the agreement. Andorra's population, labour market and housing stock are too

small to absorb unrestricted demographic change without careful planning.

The negotiated framework is intended to allow Andorran nationals greater freedom to live and work in the EU while preserving specific mechanisms for managing immigration flows into Andorra. These adaptations recognise the structural vulnerability of a country with a population smaller than that of many European cities.

For investors and employers, the future regime may create opportunities to recruit and operate more easily across borders. However, it should not be assumed that Andorra will immediately abandon all immigration controls. The precise implementation of the negotiated safeguards will be essential.

This issue illustrates the broader philosophy of the agreement: integration without erasing Andorra's identity or institutional capacity. Whether that balance can be maintained will be a central question in the public debate.

### *Approval and referendum: no final date yet*

The negotiated Agreement remains subject to the relevant approval procedures at European level. Andorra has also committed to submitting it to a national referendum.

As of June 2026, no definitive referendum date has been confirmed. Work continues within the European institutions, while the Andorran Government and the State Pact on the Association Agreement are preparing the legal, institutional and public-information framework for the vote.

The referendum will not be a purely technical decision. It will require the electorate to weigh long-term market access and legal integration against concerns about sovereignty, regulatory burden, immigration and the capacity of the country to adapt.

Businesses should follow the process but avoid making assumptions about its outcome or timetable. Even if approved, implementation would be progressive rather than immediate. Sector-specific transition periods, institutional preparation and the adoption of domestic legislation will shape the practical effects.

### *What investors should do now*

The most sensible strategy is neither to wait passively for the agreement nor to assume that it is already in force. Projects should be structured under current Andorran law while remaining capable of adapting to closer European integration.

Investors should therefore:

- define the genuine economic purpose of the project;
- analyse foreign investment, company, tax, immigration and property issues together;
- prepare source-of-funds and beneficial ownership records early;
- adopt governance arrangements consistent with the intended activity;
- assess whether the business may fall within a regulated sector;
- monitor housing, immigration and foreign investment reforms;
- consider how future EU-derived rules may affect the activity; and
- ensure that the structure remains defensible in all relevant jurisdictions.

Contractual flexibility can also be valuable. Shareholders' agreements, financing arrangements, licences and service contracts may need mechanisms allowing the parties to respond to future regulatory developments.

Companies already operating in Andorra should conduct a similar review. European alignment may create opportunities for expansion but may also expose weaknesses in compliance, corporate governance, data protection or employment practices.

### *Andorra is now a more mature investment destination*

Andorra's attractiveness has sometimes been reduced to its tax rates. That view is increasingly incomplete. The Principality is evolving into a more regulated, transparent and strategically selective economy.

Its central advantages remain compelling: stability, security, quality of life, competitive taxation, proximity to major European markets and an administration that remains accessible by international standards. At the same time, housing pressures and rapid demographic growth have led the government to demand greater value from new investment.

For genuine entrepreneurs and long-term investors, this evolution should not necessarily be seen as an obstacle. A jurisdiction that distinguishes between productive investment and purely speculative capital may become more sustainable and more credible over time.

The possible Association Agreement adds a further dimension. It could give Andorra a level of integration with the European internal market that substantially changes the scale of opportunity available to its businesses and professionals. It will also require a legal transformation of unprecedented scope.

Andorra therefore stands at a crossroads. It is seeking to remain open without losing control of its development, to integrate with Europe without ceasing to be distinct, and to preserve its quality of life while building a more diversified economy.

For those considering living or investing in the country, the opportunity remains significant. The key is to approach Andorra not as a shortcut, but as a jurisdiction in which a properly structured, genuinely implemented and economically credible project can grow over the long term.

Andorra is also an ideal place to live: one of the few countries in the world that continues to offer a high level of personal and institutional security, an excellent quality of life, competitive taxation and strong legal certainty. More importantly, it is a place where people can build a fulfilling life and share that sense of wellbeing with those closest to them.

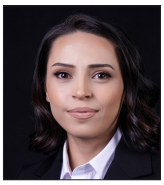
He represents clients' interests in civil and administrative proceedings, as well as commercial and investment arbitrations, provides advice and performs representation in proceedings related to international law. Aram is also involved in deal-signing projects. His internationally recognised expertise has consistently earned him rankings in Chambers and Partners guides and other esteemed legal directories. Aram is a board member of the Arbitrators' Association of the Republic of Armenia, and is included in the lists of arbitrators of several arbitration centres in Armenia and abroad.

**Narine Beglaryan** is a senior partner at Concern Dialog, leading the firm's corporate law and M&A area of practice, as well as banking law and capital markets, data protection and privacy practices. Her role encompasses providing expert legal advice and litigating on behalf of clients. Narine Beglaryan has been a licensed attorney since 2012. She joined the Concern Dialog team in 2013. With over 15 years of experience, her expertise is recognised internationally, as evidenced by her inclusion in Chambers and Partners guides and other esteemed legal directories. Prior to joining the Concern Dialog team, she worked for seven years in a bank and in the telecommunications sector (as in-house counsel).

**Artur Hovhannisyan** is a senior partner at Concern Dialog. He leads the general administrative law, administrative law litigation, tax law, and governmental relations (legislation drafting and concept development) practices of the firm. His work encompasses consulting in these areas, alongside representation in judicial and administrative bodies. Before joining the firm in 2019, Artur worked for 14 years at the Ministry of Justice, where he held several positions, including First Deputy Minister of Justice of the Republic of Armenia. Additionally, he served as First Deputy President of the RA Chamber of Advocates for three years.



**Lilit Karapetyan** is a partner at Concern Dialog. She leads the firm's business establishment and competition practices in Armenia, and also ensures compliance with environmental legislation. She has been a licensed attorney since 2018. She joined Concern Dialog in 2017. Previously, she worked at the Institute of the Mediator of the Financial System. Lilit received a Master's (LLM) from the University of Exeter, England, specialising in international commercial law. She also shares her expertise by teaching at the French University in Armenia and by chairing the ADR Commission and the ICC's Armenia Chapter.

**Contributed by:** Aram Orbelyan, Narine Beglaryan, Artur Hovhannisyan, Lilit Karapetyan, Sarkis Knyazyan and Shushanik Stepanyan, **Concern Dialog**

**Sarkis Knyazyan** is a non-equity partner, attorney and licensed patent and trade mark agent at Concern Dialog. He leads the firm's IP practice, specialising in trade marks, industrial designs, geographical indications and copyright. Sarkis Knyazyan was founder and managing partner of Arluys CJSC (previously Knyazyan and Partners) before the merger of the firms. He was an adviser to the Ministry of Economy of Armenia and served as an IP expert for the Council of Europe and the World Intellectual Property Organization. Sarkis received his Master's in IP from the University of New Hampshire, Franklin Pierce School of Law. He is a board member of Armenia's Intellectual Property Rights Center Foundation.

**Shushanik Stepanyan** is a senior associate at Concern Dialog. She leads the labour law practice. Shushanik provides advice on labour law and representation in labour disputes (representing both employers and employees). Additionally, she offers judicial representation in other civil cases. She joined Concern Dialog in 2019. Previously, Shushanik worked for over five years as a judge's assistant in the RA Civil Court of Appeal, gaining valuable insights into civil law procedures and practices.

## 1. Legal System

### 1.1 Legal System and Judicial Order

Armenia is a unitary parliamentary republic (based on the Constitution, as amended in 2015). Armenia belongs to the (continental) civil law system. The Civil Code is based on the Napoleonic Code, while administrative law was developed based on the German model.

In Armenia, only courts are authorised to administer justice. The following courts operate in Armenia:

- the Constitutional Court (responsible for constitutional justice);
- the Court of Cassation (the highest court outside of constitutional justice; it ensures the uniform application of legislation and eliminates the fundamental violations of human rights and freedoms);
- the criminal, civil, administrative and anti-corruption courts of appeal (these are responsible for reviewing the judicial acts of the courts of first instance; they mostly act as courts of law, with a limited capacity to act as courts of fact – mostly in administrative and criminal proceedings);
- the courts of first instance of general jurisdiction;
- the Administrative Court;
- the Court of Bankruptcy; and
- the Anti-Corruption Court.

The Administrative Court has jurisdiction over all cases arising from public relations (both those between public bodies and those between public bodies and individuals), including disputes relating to public or alternative service and disputes between administrative bodies not subject to settlement by order of precedence. The Administrative Court is the body empowered to review fines and other administrative acts. Starting from 1 January 2025, cases related to disputes concerning entering into public or alternative service, performing such service, exemption from service, and being subjected to disciplinary liability will be examined not by the Administrative Court, but by the first instance courts of general jurisdiction.

The Court of Bankruptcy is responsible for managing bankruptcy cases.

The Anti-Corruption Court has criminal and civil jurisdiction. The criminal jurisdiction covers criminal cases with corruption-related charges. Within the civil jurisdiction, the court deals with civil forfeiture cases and recovery of damages to state and other public entities caused by crimes.

The courts of first instance of general jurisdiction have jurisdiction over all other cases which are not subject to other courts.

## 2. Restrictions on Foreign Investments

### 2.1 Approval of Foreign Investments

The Law on Foreign Investments defines a foreign investor as a foreign state, a foreign legal entity, a foreign citizen, a stateless person, a citizen of Armenia permanently residing outside of Armenia, or any international organisation that engages in investment in Armenia according to the legislation in force. Foreign investment is further defined as any property, including financial resources and intellectual assets, directly invested by a foreign investor as defined above in commercial or other activities in Armenia to gain profit, revenue or any other benefit.

Based on the practice established by Armenian courts, only those assets that are invested in the company's equity (via relevant corporate decisions) shall be considered as investments.

As a general remark, Armenian law in this area does not determine requirements for pre-approval or approval of such foreign investment by any state body. Accordingly, besides the generally applicable processes for carrying out business in Armenia, the law does not determine any such pre-approval requirements.

That being said, in specific sectors, approval of the investment plan assures incentives and other benefits to the investor.

For example, according to the Land Code of the Republic of Armenia (RA), property owned by the state or community can be donated for social or charitable purposes or for implementing investment plans approved by the government of the RA. Such a deci-

sion of the government and the donation agreement indicate the sole purposes for which the donated land can be used.

Furthermore, investors can be entitled to specific tax or customs incentives in specific cases if the government approves the granting of incentives per a submitted investment plan under the particular decree of government specifying the incentives. For example, investors might apply for a five-year exemption from customs duties during the implementation of their investment plan.

Furthermore, investments in public service sectors can be considered by the Public Services Regulatory Commission (PSRC) when determining tariffs for public services. However, obtaining an operational permit in these sectors is not contingent on the submission of an investment plan.

In general, the stated cases concern benefits to and incentives for the investor rather than a pre-approval process to protect the investment or for the investment to be qualified as a foreign investment.

Finally, it should be noted that the Parliament of Armenia is currently discussing the adoption of a new Law on Investments, which is further discussed in **9.1 Upcoming Legal Reforms**. Although the draft law has not yet been adopted, it is already included in the formal agenda of Parliament. Upon its adoption, the Law on Foreign Investments will cease to be in force. However, the new law does not substantially alter the overall approach of maintaining an open regime towards foreign investment.

### 2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance

As described in **2.1 Approval of Foreign Investments**, there is no mandatory regulation of pre-approval mechanisms for investment plans; ie, there is no requirement to invest with prior approval of state bodies. As a general rule, there is no procedure or sanction regarding the supervision or fulfilment of an investment plan as well. However, once incentives are granted under a government-approved investment plan, the relevant plan becomes subject to reporting obligations to the government, and failure to comply with its requirements may give rise to liability depending on the type of incentive granted and the conditions of the government decree on approval of the investment plan under which the incentives are granted. For instance, in the case of incentives for land purchase, the consequence may be the judicial cessation of ownership rights over the land plot should the land plot be used for purposes other than those granted.

### 2.3 Commitments Required From Foreign Investors

The applicable legislation indicates no such specific commitments. However, under the law on public-private partnerships, the government may agree with the investor on specific commitments on a case-by-case basis. As a matter of practice, such commitments can be imposed under the government decree on approval of the investment plan.

### 2.4 Right to Appeal

There is no specific process applicable to the appeal of government decisions concerning failure to approve an investor's investment plan. Theoretically, however, the generally applicable administrative litigation processes concerning the appeal of administrative bodies' decisions would apply. The recipient of a decision not to grant consent to the investment plan can bring a claim to challenge the decision before the Administrative Court. Such a claim must be brought within two months of receipt of the decision.

However, the grounds and scope for potential arguments are limited. The government enjoys considerable discretion in approving investment plans, with no specific criteria for rejection outlined. Technically, an appeal can be filed for procedural violations or breaches of equality requirements, where administrative bodies are required by law to treat similar cases consistently.

In any case, it is important to reiterate that no prior authorisation for foreign investment is required, and the involvement of the government (and other state bodies) is necessary only for additional incentives or where there is a general licensing or permission procedure (not linked to the specific status as a foreign investor).

## 3. Corporate Vehicles

### 3.1 Most Common Forms of Legal Entity

The most common business vehicles are limited liability companies (LLCs) and joint-stock companies (JSCs).

In both cases, the liability of shareholders (or, in the case of LLCs, participants) is limited. Furthermore, no requirements for the minimum share capital or a minimum number of shareholders are determined. However, minimum capital requirements are envisaged in several sectors (mainly for financial institutions).

Both LLCs and JSCs are governed by the meeting of shareholders (participants), which is the highest governing body. The sole director, in the case of LLCs or, in the case of JSCs, a sole director (CEO) or a collegial executive board (directorate), carries out the company's ongoing management. The establishment of a board (board of directors) is possible in either type, with the Law on JSCs regulating specific requirements and the scope of authorities of such a board. In contrast, the Law on LLCs is silent on most of these issues, allowing the companies to determine the scope at their discretion.

The main differences between the two types of entities are as follows.

LLCs are preferred when the shareholding and management structures are straightforward and less complex. For JSCs, it is possible to have multi-layered, complex management structures (including the collegial executive body) and regulate the relationships between the shareholders, including through shareholders' agreements, etc.

Furthermore, in LLCs, the participant has a right to withdraw from the company without the consent of the other participants and request the company to pay the market value of its share. The participant with 10% or more in the charter capital may bring a claim to expel the participant from the company if that participant hinders the company's activities.

Finally, a significant difference to consider is that the information on the participants of LLCs is open to the public; however, in the case of JSCs, the information on shareholders is maintained by private registry keepers and is not provided to third parties without the company's consent. At the same time, since 2023 all the companies are obliged to disclose their UBOs, and that information on UBOs is publicly and freely available on the webpage of the State Registry of Legal Entities. Therefore, irrespective of the corporate type, the information on the UBOs of any company is publicly available.

### 3.2 Incorporation Process

The process of incorporation of both LLCs and JSCs is fairly straightforward. The registration of both types of entities before the Agency for State Register of Legal Entities of the Republic of Armenia (the "Agency") is free of charge. However, JSCs must engage private entities (account operators) licensed by the Central Depository for share registry keeping, incurring additional expenses compared to LLCs.

The process of registration itself takes no more than two working days after submitting the necessary package of documents. For JSCs, the registry-keeping process may be longer, as account operators conduct KYC and due diligence procedures before entering into registry-keeping agreements. Foreign investors should consider the following nuances in the incorporation process.

#### Template (Pre-Approved) Package-Based Registration of LLCs

If the founder(s) of an LLC is an individual, and both the director and the founder(s) are in Armenia, the establishment process is relatively quick. They can simply visit the Agency with their passports (and verified translations if applicable) and answer basic questions from an Agency employee. The employee will provide a standard, pre-approved template package (in Armenian), and the company can be registered in under half an hour, free of charge.

#### The Standard Process of Establishment and Registration of LLCs

As an alternative, the founding and governing documents of the LLC (founding decision, charter) can be drafted to meet the specific needs and requirements of the founders, including preparing multilingual ver-

sions (the Armenian version shall still prevail), establishing specific governing mechanisms, and thus not following pre-approved standard documents.

It must be noted that although the founding package (founding decision, charter) does not need any verification by a notary under Armenian law, the documents or copies thereof related to a foreign founder (in the case of a legal entity – charter and excerpt from the register or equivalent; in the case of an individual – passport) and a foreign director (passport) must be verified by a notary and legalised (consular or by an apostille) and subsequently translated into Armenian with the verification of an Armenian notary.

#### Establishment of a JSC

The process of establishment of a JSC consists of two stages. The first stage is the preparation of the founding documents and submission thereof to the Agency (similar to the registration of an LLC). The second stage is the registration of the company's shares with the Central Depository through one of the account operators (to ensure the quality of services and competition, the Central Depository does not provide services to the public directly, only through the account operators who are acting based on the agreement signed with the Central Depository).

In either case, within 40 days of registration, the companies shall submit declarations on their ultimate beneficial owners (UBOs), disclosing the full ownership structure up to the beneficial owner. Such declaration shall also include the notarised translations of the UBOs' passports if the UBO is a foreign national.

Depending on the company's business activity, there may be exceptions to the general rules described above. For example, the registration and licensing are performed by the relevant regulatory authority – for banks, this is the Central Bank of Armenia – ie, the bank must be registered and obtain a licence simultaneously by applying to the Central Bank.

### 3.3 Ongoing Reporting and Disclosure Obligations

#### Changes of Management

According to the general rules of Armenian legislation, only the head of the executive body is subject to registration with the Agency. Hence, the company needs to disclose a change to its executive body (CEO, general manager, general director, etc).

Depending on the company's business activity, there may be exceptions to the general rules described above. For example, the executive body of a bank, including the chief accountant, deputy directors, chief compliance officers and compliance officers, chief auditor and auditors, as well as the board of directors, is subject to certification and registration by the regulator, in this case, the Central Bank of Armenia. Thus, practically any change in the bank's management needs to be filed and approved by the regulator.

#### Amendments to Articles of Incorporation (Charter)

In the case of the amendment of articles of incorporation in whole or in part (a new edition of articles of incorporation/charter), the amendments must be filed for registration with the Agency. The company needs to change its articles of incorporation when, for instance, it changes its firm name, address, charter capital or corporate governance process.

The process and requirement for registration of amendments to the articles of incorporation/charter may have some peculiarities depending on the reasons for and the content of such amendments. For example, in the case of amendments to the articles of incorporation/charter due to investment into the company (ie, an increase of the company's charter capital), the company needs to submit proof of payment of the investment for registration. There may be some differences, depending on the company's business activity, when the Central Bank, instead of the Agency, is responsible for registration (mostly typical for legal entities that provide financial, insurance and investment services, and investment funds).

#### Change of Shareholder

Participation in the share capital of an LLC needs to be registered with the Agency (open to the public). In contrast, participation in a JSC (ownership of shares) is recorded by the Central Depository, while the process is carried out through account operators). Information on the participation of commercial co-operatives is not recorded by the Agency or in any outsourced registers.

While changing the participation in an LLC, the articles of incorporation must be changed as far as it is mandatory to include that data in the articles of incorporation and keep them up to date.

Information about shareholders of a JSC is not required to be included in its articles of incorporation except at the stage of incorporation of the company (ie, the initial registration of the articles of incorporation). Thus, a shareholder change must only be recorded in the company's shareholders register by the account operators.

### UBO

There is an obligation to submit a declaration to the Agency in the case of a change of UBO.

The legal entity shall submit the following report/information to the Agency by 20 February of each year:

- confirmation that the information on the UBOs submitted to the Agency in the last declaration was still accurate as of 31 December of the previous year; or
- changes in the information on the legal entity's UBOs.

In the case of a change of data regarding beneficial owners, the change must be declared immediately after the disclosure to the legal entity but not later than 40 days after the change.

The declaration on the UBOs and further changes in the declaration are submitted to the Agency through the website bo.e-register.am (see the procedure for filling out the application below). In this case, the declaration shall be signed via electronic signature accepted by the government. Completion of the declaration is possible through an authorised person, in which case a power of attorney is required.

Liability for failure by an entity obliged to submit a declaration on UBOs to file such declaration within the period prescribed by law, for submitting it in violation of the law or for inadvertently providing incorrect or incomplete data in the declaration, is governed by the RA Law on Administrative Offences. Such breaches can result in a warning or a fine of up to AMD100,000.

In addition, if the declaration on the UBOs contains false information or lacks information which should have been included, and the person submitted the false information wilfully, they can be held criminally liable.

In addition, if the obligation to submit confirmation or amended information on UBOs is violated each year for three years in a row, as well as in cases of repeated or gross violation of the rules regarding submitting a declaration, the Agency may apply to the court to dissolve the legal entity.

### Approval of Financial Statements

Companies need to submit financial statements to the State Revenue Service:

- annually for profit taxes;
- monthly for VAT and taxes on the income of individuals (if income is reported by an individual themselves, then the reporting is done annually);
- quarterly for turnover tax (if the company operating within a turnover tax regime/simplified system for small businesses); and
- annually for micro-taxes (if the company pays taxes under this special regime).

As a general rule, there is no requirement for companies to disclose their financial statements. Depending on the type of business activity or size of the company, the law may specifically mandate companies to publish financial statements and financial audit reports. For instance, medium-sized or large companies, banks, insurance companies, and investment fund managers must meet this requirement.

## 3.4 Management Structures

### General Notes on Management Structure

The highest governing body of the company is its general meeting of shareholders (participants). All companies need to have at least one executive body.

There are specific cases defined in the law when the company must have a board of directors. Open JSCs or companies with activities in specific areas, such as banking and insurance, must have a board of directors. The board of directors of an open JSC must have an audit committee under it.

Under its articles of incorporation, the company may declare and set forth the collective executive body.

### The Powers of the General Meeting

The general meeting approves the amendments to the articles of incorporation, decides on reorganisation and liquidation of the company, approves final, interim and liquidation balance sheets, and appoints the liquidation committee. The general meeting approves the number of board members, elects board members, terminates their powers and appoints and dismisses the executive body (unless these authorities are delegated to the board of directors). Increasing and reducing the charter capital, approving the company's annual report, distributing dividends, and approving significant transactions and transactions with conflicts of interest are powers of the general meeting as well.

### The Board of Directors

The Law on LLCs does not explicitly define the powers of the board of directors, allowing flexibility for these powers to be outlined in the articles of incorporation or charter. However, the board cannot exercise powers exclusively reserved for the general meeting or executive body. Conversely, the Law on JSCs provides a specific list of exclusive powers for the board of directors. It stipulates that, in the absence of a board of directors, these powers are exercised by the general meeting – except for those relating to the organisation of the general meeting itself, which then fall under the competence of the executive body.

The board of directors of a JSC determines and approves the strategy of the company, decides on using the reserve fund and other funds of the company, and approves (i) internal documents regulating the activities of the company's governance bodies; (ii) the administrative and organisational structure of the company; and (iii) a list of the company's staff positions. It also establishes branches and representative offices and exercises the powers related to convening the general meeting and other powers defined in the law.

### The Executive Body

The single-person executive body or head of the collegial executive body is responsible for the company's day-to-day activities and has the authority to represent the company without requiring a letter of authorisation. The director is entitled to issue letters of authorisation, conclude agreements and contracts, perform banking operations, issue orders, directives, and binding instructions, supervise their implementation, decide on employment and dismissal, apply incentives, and impose disciplinary action on employees.

## 3.5 Directors', Officers' and Shareholders' Liability

### Liability of Board Members and Executive Body

Both the Law on LLCs and the Law on JSCs (the latter consists of more detailed regulation on the matter) determine the liability of board members and the executive body.

The rules are the following: the board members and executive body must act for the benefit (in the interest) of a company in good faith and reasonable manner and avoid actual and possible conflicts of interest while exercising their rights and performing their obligations (fiduciary duty). The Law on JSCs also forbids a person who may, by virtue of participation in the charter capital of the company or other circumstances, have a material impact on the decisions of the company from inducing board members or the executive body to make decisions that contradict the interests of the company or the legitimate interests of shareholders who cannot have a material impact on the decisions of the board.

Members of the board and the executive body may be released from liability if (i) no damage was caused through their fault or, where damage has occurred, if (ii) they voted against the relevant decision, (iii) they did not participate in the meeting, or (iv) they acted in good faith and in a reasonable manner, avoiding actual or potential conflicts of interest between their own interests and those of the company. The resignation, recall or dismissal of a board member or a member of the executive body does not exempt them from liability for any damage caused to the company.

If the damage was caused to the LLC by one of its board members or the executive body, any shareholder (participant) of the company and the company may apply to court on behalf of the company against

that board member or executive body and claim damages. If the damage was caused to the JSC by one of its board members or the executive body, the claim for compensation of damages against that board member or executive body might be brought against the company or its shareholder(s) (jointly) owning 1% or more of the placed common (ordinary) stocks of the company. A breach of fiduciary duty might cause criminal liability for a board member or executive body if their actions or omissions cause essential damages.

### Shareholders' Liability

Under Armenian law, the separation of liability of a legal entity from its shareholders' liability is determined.

Armenian legislation allows for the "piercing of the corporate veil" in specific cases of activities between parent and daughter or dependent companies (subsidiaries). The daughter company must not be liable for the obligations of the parent company, but the parent company must bear joint and several liabilities with the daughter company if the parent company (i) has the right to give binding instructions to the daughter company and (ii) transactions are concluded in pursuance of that instruction.

Other shareholders of a daughter company also have a right to claim from the parent company compensation for any damages caused to the daughter company by the fault of the parent company – ie, when the damage is caused by the execution of binding instructions given by the parent company.

The parent company must bear subsidiary liability for the debt of the daughter company in the case of bankruptcy of the latter if the bankruptcy is caused by the fault of the parent company – ie, when the damage is caused as the result of the execution of binding instructions given by the parent company.

## 4. Employment Law

### 4.1 Nature of Applicable Regulations

The primary sources regulating labour relations in Armenia are the Labour Code and relevant international treaties. Specific regulations of the Civil Code and legislation regulating different types of state service (civil service, military and diplomatic service, etc) regulate particular types of labour relations. Finally, specific aspects of labour relations are regulated by the Law on Foreigners, the Law on Labour and Collective Agreements, and internal and individual legal acts of the employer.

### 4.2 Characteristics of Employment Contracts

The Labour Code mandates that employment contracts should be concluded or issued in writing and should contain specific terms, such as:

- the date, month, year and location of adopting an individual legal act or concluding an employment contract;
- the employee's first and last name, as well as their patronymic name;
- the name of the organisation or, if applicable, the first and last name of the employer as an individual, and their patronymic name;
- the place of work;
- the organisational unit within the company, if applicable;
- the date, month and year when the employment begins;
- the employee's Social Security Number (SSN) or the reference number of a certificate confirming its absence; this does not apply to foreign citizens or stateless persons who do not hold Armenian residency and are performing their duties from abroad;
- the employee's email address;
- the job title and/or job responsibilities, or a reference to the document defining the functions stemming from the position;
- the base salary amount (including taxes, social payments, or other mandatory payments stipulated by law) and/or the method used to determine it (hourly, daily, piecework, or monthly rate);
- additional allowances, bonuses, subsidies, etc, which are/shall be provided to employees according to established procedures;
- the duration of validity for the individual legal act or employment contract if required;
- the duration and conditions of the probationary period (where applicable);
- the work schedule (normal working hours, part-time, reduced working hours, or cumulative

working time) and the weekly duration (excluding cumulative working time);
- the type and duration of annual leave, including minimum, additional or extended vacation;
- the position, first name and last name of the person signing the legal act on behalf of the organisation; and
- the methods by which the employer and employee shall notify each other regarding employment-related matters.

Parties to the contract can agree to include additional conditions in the employment contract or individual legal act, but these conditions must be no less favourable than what is established by law.

### Fixed-Term Contracts

Generally, an employment contract is intended to be of indefinite duration. However, it is also possible to conclude an employment contract for a fixed term if labour relations cannot be defined for an indefinite period, considering the conditions or the nature of the work to be done. The Labour Code specifies certain circumstances in which an employment contract may be concluded for a fixed term. These include the following cases:

- with employees holding elected positions for the specified term;
- with employees appointed for a duration prescribed by law;
- with employees performing seasonal work;
- with individuals engaged in temporary work lasting up to two months;
- with an employee who is filling in for a temporarily absent employee;
- with learners undergoing practical workplace training and performing specific work within the framework of work-based learning under a vocational education and training programme; and
- with foreigners for the duration of validity of a work permit, in cases when a work permit is required for employment by RA legislation.

## 4.3 Working Time

Under Armenian legislation, the regular working hours must not exceed 40 hours per week and eight hours per day (exceptions are specified by the Labour Code, other laws or legal acts).

Certain categories of employees, such as those working in healthcare organisations with continuous duty, guardianship organisations, children's educational institutions, specialised energy, gas and heat supply organisations, specialised communication and emergency response services, etc, may have 24-hour continuous work shifts. The specific list of such occupations is determined by the government of the Republic of Armenia.

Any work performed beyond the specified limits shall be classified as overtime work and must be compensated according to the following rate: for each hour of overtime, in addition to the regular hourly rate, a supplement of no less than 50% of the hourly rate must be provided.

The total working hours, including overtime, must not exceed 12 hours per day (including breaks for rest and meals) and 48 hours per week.

## 4.4 Termination of Employment Contracts

An employment contract can be terminated through various means. The most common cases are:

- termination at the employee's initiative;
- mutual agreement;
- expiration of the contract; or
- termination at the employer's initiative.

The employment contract can also be terminated by the force of law. For example, when the employer fails to notify the employee of the termination of an employment contract that was originally agreed upon for a specific period, and the parties also do not sign the appropriate individual legal act to terminate such a contract, and the employment relationship does not continue in practice, then in such cases, the law may deem the contract terminated.

The Labour Code provides an exhaustive list of reasons that entitle an employer to terminate an employment contract. This implies that an employee cannot be dismissed by the employer for any arbitrary reason.

The grounds for termination specified in the Labour Code are as follows:

- in the case of:
  - (a) the liquidation of a company (termination of the activity of an individual entrepreneur);
  - (b) reduction in workforce or positions resulting from changes in workload, economic or technological conditions, work organisation, or production-related needs;
  - (c) non-compliance of the employee with the position held or the work performed;
  - (d) reinstatement of the employee at their previous job;
  - (e) periodic non-fulfilment by an employee (without a valid reason) of the duties assigned to them by an employment contract or internal regulations;
  - (f) loss of trust in the employee;
  - (g) the employee's long-term incapacity for work (if the employee has been temporarily incapacitated for more than six consecutive months or for more than 180 days within the last twelve months, excluding days of maternity leave);
  - (h) an employee's refusal or evasion of mandatory medical examinations; and
  - (i) the residence status of a foreign worker being recognised as invalid;
- if the employee:
  - (a) is in the workplace under the influence of alcohol, narcotic drugs or psychotropic substances;
  - (b) fails to show up for work for no valid reason during the entire working day; and
  - (c) is excluded from work for more than ten consecutive working days or more than 20 working days during the previous three months because of their failure to submit the necessary documents required to attend work during isolation declared in relation to the COVID-19 pandemic.

According to the Labour Code, the employer is obliged to give notification prior to dismissal to employees in cases specified by the Labour Code. For example, where the employment contract is terminated due to the liquidation of the company or a reduction in the staff, the employer must provide employees with two months of prior notice.

According to the Labour Code, it is possible for an employer to provide pay in lieu of notice, which is calculated by multiplying the employee's average daily salary by each day of notice.

### 4.5 Employee Representations

The Labour Code allows the establishment of employees' representatives, such as a trade union or works council elected by the assembly (conference) of workers. Apart from that, the Law on Trade Unions regulates and guarantees the activities of trade unions.

A works council is elected if the organisation does not have a trade union (or any trade unions) or if any existing trade unions do not unite more than half of the organisation's employees. At the same time, the presence in the organisation of works councils elected by employees should not interfere with the exercise of the trade unions' functions.

Employees' representatives have the power to develop charters, conduct negotiations, propose organisational improvements and participate in decision-making processes. They also oversee labour law implementation, have access to employee information, and can propose measures for better working conditions and fair compensation. They can organise lawful strikes and appeal to the court against violations. Employees' representatives play a crucial role in protecting workers' rights and promoting collaboration between employees and employers.

If an employee's representative violates the rights of the employer or breaches legislation or agreement norms, the employer has the option to seek legal action through the appropriate procedures defined by the legislation, requesting the cessation of the representative's unlawful activities.

Employee representation is not a widespread practice in Armenia. There are some single cases of the practice, and it is expected to develop in the future.

## 5. Tax Law

### 5.1 Taxes Applicable to Employees/ Employers

Employees pay income tax on their employment remuneration.

Employers act as tax agents for their employees. They calculate their employees' income tax due every month and pay it by the 20th day of the following month. So effectively, employers bear liability for any wrong calculation or late payment of those taxes and payments.

According to the Tax Code of Armenia, the income tax rate for employees is 20%.

Besides income tax, employees must also pay a mandatory social security (pension) payment with the following rates:

- 5% on salary up to AMD500,000; and
- AMD25,000 plus 10% on salary above AMD500,000, but not more than AMD87,500 (total cap).

### 5.2 Taxes Applicable to Businesses

The following tax regimes apply in the RA.

- General Taxation: In this case, taxpayers generally calculate and pay VAT and profit tax.
- Special Taxation Regimes:
  (a) Turnover Tax: Taxpayers calculate and pay turnover tax, which replaces VAT and/or profit tax.
  (b) Micro-Enterprise Taxation System: The taxpayer, by carrying out the relevant activities defined by law, is exempt from all types of state taxes related to the enterprise.
- Profit Tax: The object of taxation is the taxable profit, which is the gross income less expenses, and the profit tax rate is:
  (a) 18% for residents and non-residents that have a permanent establishment in Armenia (including a branch); and
  (b) 20% for non-residents who do not have a permanent establishment in Armenia.
- VAT: The VAT rate in Armenia is 20%.
- Turnover Tax: Only resident entities and individual entrepreneurs can pay turnover tax, which is 10% of income received from trade activities or rendering services; the entity and an individual entrepreneur can become a turnover taxpayer only if their turnover last year did not exceed AMD115 million. The following entities cannot be considered turnover tax payers: banks, credit organisations, insurance companies, insurance agents, insurance brokers, investment companies, specialised participants of the securities market, pawnshops, entities engaged in foreign currency exchange operations, investment funds, fund managers, payment and settlement organisations, entities engaged in organising casinos, games of chance, totalisators and internet totalisators, entities engaged in organising lotteries, notaries, audit organisations, and providers of legal services, those engaged in legal and accounting activities, head office activities, management consulting services, temporary employment services, and other labour supply activities.
- Micro-Enterprise: Resident entities and individual entrepreneurs whose sales turnover for all types of activities without VAT during the previous calendar year did not exceed AMD24 million can be considered micro-enterprises, which do not pay any taxes.
- Dividends: Dividends received by natural persons are taxable at 5%. Dividends received by entities are added to the taxpayer's tax base.
- Interest Paid: Interest paid to shareholders is taxed at 20%.
- IP Royalties: Royalties paid to shareholders are taxed at 10%.

### 5.3 Available Tax Credits/Incentives

All taxpayers involved in agricultural production are exempt from profit tax until the end of the year 2026.

Taxpayers who are dealing with handmade carpet production are also exempt from paying profit tax.

### 5.4 Tax Consolidation

There is no tax consolidation prescribed in Armenian tax legislation.

## 5.5 Thin Capitalisation Rules and Other Limitations

There are no thin capitalisation rules in Armenia. At the same time, there are some limitations on the deductibility of interest expenses. The following are not deductible from gross income:

- interest on loans and credit facilities exceeds twice the settlement rate set by the Central Bank of Armenia (currently, the deductible interest rate is capped at 24%); and
- annual interest on loans received from non-bank and non-credit entities that, according to fiscal year results, is above:
  (a) the two-fold positive amount of the equity of the taxpayer (excluding banks and credit organisations) on the last day of the fiscal year; and
  (b) the nine-fold positive amount of the equity of a taxpayer that is a bank or credit organisation on the last day of the fiscal year.

## 5.6 Transfer Pricing

Under the Tax Code, transfer pricing rules are applicable for a taxpayer if the amount of all supervised transactions of the taxpayer exceeds AMD200 million for the current year.

According to the Tax Code, there are several transfer pricing methods allowed:

- the comparable uncontrolled price method – where the price of the object of a controlled transaction is compared with the price of the object of a comparable uncontrolled transaction;
- the resale price method – where the mark-up derived from the resale of an object of a controlled transaction is compared with the mark-up derived from the resale of an object of a comparable uncontrolled transaction;
- the cost-plus method – where the mark-up on the direct and indirect costs incurred during the supply of an object of a controlled transaction is compared with the mark-up on the direct and indirect costs incurred during the supply of an object of a comparable uncontrolled transaction;
- the transactional net margin method – where the net profit realised from a controlled transaction relative to an appropriate base – in particular, costs, sales and assets – is compared with the net profit realised from a comparable uncontrolled transaction relative to the same base; and
- the profit split method – where each of the related taxpayers participating in a controlled transaction receives the share of the profit generated or loss incurred from the transaction in question, which a person not considered as related would anticipate when participating in a comparable uncontrolled transaction (within the meaning of this point, the profit generated from the transaction shall mean the positive difference between the income generated and the costs incurred within the scope of the transaction in question).

## 5.7 Anti-Evasion Rules

The Armenian legislation envisages liabilities provided by the Code on Administrative Offences of the Republic of Armenia, Tax Code of the Republic of Armenia and Criminal Code of the Republic of Armenia.

- The Code on Administrative Offences of the Republic of Armenia provides for administrative liability in cases where a taxpayer fails to submit information to the tax authorities within the prescribed time limit or submits incorrect information (Article 170.6). For these offences, the Code provides for the imposition of a fine on the taxpayer.
- The Tax Code of the Republic of Armenia establishes tax liability for tax evasion. Such liability may arise where a taxpayer fails to pay taxes within the prescribed time limits, submits a tax return after the prescribed deadline or fails to submit one at all, understates the amount of tax due, overstates a tax loss, fails to maintain accounting records in the prescribed manner, or fails to provide accounting records to the officials responsible for conducting tax audits.
- Apart from the liability for the taxpayer legal entities, natural persons (individuals) are obliged to annually declare their income, from which the relevant income tax should be calculated. The Tax Code provides tax liability in the form of fines, penalties and interests for taxpayers who have committed the abovementioned tax offences.
- Concerning criminal liability, it should be mentioned that, pursuant to the anticipated amend-

ment to Article 290 of the Criminal Code of the Republic of Armenia, which will enter into force on 8 June 2026, criminal liability for tax evasion arises if the amount of unpaid taxes is more than AMD30 million (approximately USD81,000). The envisaged punishment for this crime is a fine or even imprisonment for up to eight years. The Criminal Code also establishes criminal liability for legal entities. The criminal liability of a natural person does not preclude the criminal liability of a legal entity. The applicable coercive measures are a fine, temporary suspension of the right to engage in a certain type of activity, compulsory liquidation, and a ban on carrying out activities in the territory of the Republic of Armenia (for non-resident legal entities only).

### 5.8 Tariffs

In the Republic of Armenia, a state fee of AMD800,000 is set for obtaining a licence for each importation of up to 100 tonnes of cement. This measure is aimed at creating fair competition between cement importers from the Islamic Republic of Iran and cement producers in Armenia.

Armenia, like many countries around the world, encourages the import of electric vehicles. Therefore, importers of such vehicles are exempt from the obligation to pay 20% VAT. Under the recent amendments, the VAT exemption will continue to apply in 2026, but from 1 February 2026 to 31 December 2026 it will be limited to electric vehicles classified under the relevant EAEU CN FEA codes and manufactured after 31 December 2023.

## 6. Competition Law

### 6.1 Merger Control Notification

#### Concentrations

Mergers and acquisitions are subject to notification to the Competition and Consumer Interests Protection Commission (the Commission) if they are notifiable concentrations under the Law on the Protection of Economic Competition and Consumer Interests. According to the law, the following actions are considered concentrations:

- acquisition and merger of business entities registered in the RA;
- acquisition of assets of an economic entity registered in the RA by another economic entity if the value of those assets solely or together with the assets already acquired from that economic entity during the last three years equals or exceeds 20% of the value of the total assets of the selling economic entity at the moment of submitting the declaration of concentration;
- acquisition of shares of an economic entity registered in the RA by another economic entity if the amount of those shares solely or together with the shares already owned by that economic entity equals or exceeds 20% of the total shares of the first economic entity;
- acquisition of the right to use an object of intellectual property, including the means of individualisation, as a result of which the economic entity can gain influence on the competitive situation in any product market in the RA;
- any transaction, action, reorganisation or behaviour of economic entities through which an economic entity can directly or indirectly influence the decision-making or competitiveness of another economic entity, or can directly or indirectly influence the decision-making or competitiveness of another person, or can influence the competitive situation in any product market in the RA; and
- establishing a legal entity in the RA by more than one economic entity, which shall act independently/separately.

The law also provides for cases where a transaction is not considered a concentration, regardless of whether the established thresholds are exceeded. These include:

- reorganisations, actions or transactions of economic entities carried out between economic entities forming a group of persons as defined above, namely:
  (a) an economic entity and a natural or legal person, where such natural or legal person, on the basis of participation and/or a contract, has the right, in accordance with the law, to directly or indirectly dispose of (including through sale and purchase agreements, joint activity agree-

ments, mandate, power of attorney or other transactions) more than half of the charter capital or share in the economic entity;
(b) economic entities, where the same natural or legal person, on the basis of participation and/or a contract, has the right, in accordance with the law, to directly or indirectly dispose of (including through sale and purchase agreements, fiduciary management, joint activity agreements, mandate or other transactions) more than half of the charter capital or share in the economic entities;
(c) a natural person, their spouse, parent, child, adoptive parent or adopted child;
- transactions relating to the acquisition of securities listed on stock exchanges, except for over-the-counter transactions;
- transactions concluded through auctions conducted on the basis of a court decision; and
- acceptance of inheritance.

### Notification

A concentration must be declared before the Commission and shall not be completed prior to receiving the Commission's consent in the following cases:

- where the applicable financial thresholds are met, specifically:
  (a) income thresholds (based on the previous financial year):
    (i) the combined income of the parties to the concentration is at least AMD4 billion; or
    (ii) the income of at least one of the parties is at least AMD3 billion.
  (b) asset thresholds (based on the previous financial year or at the time of filing the declaration):
    (i) the combined asset value of the parties is at least AMD4 billion; or
    (ii) the asset value of at least one of the parties is at least AMD3 billion.
  (c) These thresholds also apply where one or more participants were not active in the previous financial year or have been active for less than 12 months.
- where one of the participants in the concentration holds a dominant position in any product market in Armenia.

In all such cases, the transaction is subject to mandatory prior declaration, and may not be implemented or closed until clearance is granted by the Commission.

## 6.2 Merger Control Procedure

The concentration of economic entities is subject to notification before it takes effect. For the assessment of a concentration, the participants submit an application and declaration. The declaration should contain the following information: (i) the purpose of the concentration and (ii) information about the participants (name, address, annual financial statements of the activity, volumes of goods sold during the previous year, etc).

### Duration of Assessment

The Commission's concentration assessment process lasts three months. Based on the Commission's reasoned decision, the three-month period may be extended to another three months.

If, during the review of a notifiable concentration, false, incomplete or misleading information is provided, or if the requested information is not submitted, the Commission may decide to leave the application without consideration. Such a decision may be taken at any stage of the procedure.

In addition, there is a simplified assessment procedure for mixed concentration and concentration within a group of persons. In this case, the assessment procedure lasts one month.

### Liability

Failure to declare the concentration as stipulated by the Law on the Protection of Economic Competition and Consumer Interests shall lead to the imposition of a fine of up to AMD5 million.

The fine imposed for enacting a prohibited concentration shall be up to 10% of the turnover of the preceding financial year.

Also, enacted prohibited concentrations shall be subject to liquidation (annulment, cessation) according to the procedure defined by the legislation.

### 6.3 Cartels

The Law on the Protection of Economic Competition and Consumer Interests prohibits restrictive agreements and practices. According to this Law, anti-competitive agreements are those transactions concluded between economic entities; their oral or written agreements; direct or indirectly agreed actions or behaviour; and decisions made by business associations that lead to or may lead to restriction, prevention or prohibition of competition.

Restrictive agreements and practices can be:

- between economic entities that are potential or actual competitors operating in the same product market if the agreement relates to the given product market (horizontal agreement);
- between economic entities that are not competitors and act as acquirers and sellers in the same product market if the agreement relates to the given commodity market (vertical agreement); and/or
- between economic entities operating in related or different product markets, which directly or indirectly lead to or may lead to the prevention, restriction or prohibition of competition (other agreement).

Restrictive agreements and practices, among other things, relate to the following:

- distribution or division of markets or supply sources;
- setting unfair prices; and
- restricting other economic entities from entering the market.

The actions or behaviour of economic entities in foreign countries, when such actions or behaviour may prevent, restrict or prohibit economic competition or harm the interests of consumers in the RA, may also be considered as restrictive agreements within the meaning of the Law.

### 6.4 Abuse of Dominant Position

The Law on the Protection of Economic Competition and Consumer Interests prohibits the abuse of a dominant or monopoly position, including:

- charging unreasonably high or low prices;
- obstructing competitors in the market;
- refusing to deal with certain customers or offering special discounts to customers who buy all or most of their supplies from the dominant company;
- not authorising the use of transmission networks, other distribution networks or other infrastructure for a reasonable fee or condition; and
- imposing conditions for membership or participation in professional or other unions.

## 7. Intellectual Property

### 7.1 Patents

Patents can be granted for technical solutions that concern a product or a method. There are three conditions for the patentability of an invention:

- novelty;
- inventive step (non-obviousness); and
- industrial applicability (utility).

Patents are registered by the Intellectual Property Office of Armenia. The Office's website has guidance on the procedure and samples of the necessary forms.

If the object of the protection is a product, the rightholder has an exclusive right to prohibit any third party from manufacturing the product, using it, introducing it to the market, offering it for sale, or importing or obtaining the product for any of those purposes. Similar prohibitions can be imposed if the object is a method. The infringement of a patent can result in civil and criminal liability.

Patents are protected for 20 years from the filing date or ten years in the case of short-term patents.

### 7.2 Trade Marks

A trade mark is a mark that is used to distinguish the products and/or services of one person from the products and/or services of another. There are very detailed regulations on the absolute and relative grounds of refusal of trade mark registration, such as:

- non-distinctiveness;
- descriptiveness or genericism; or

• being against public order or morals, etc.

Trade marks are registered by the Intellectual Property Office of Armenia. The Office's website has guidance on the procedure and samples of the necessary forms.

The right-holder of a registered trade mark has the right to prohibit:

- the use of a mark that is identical to its trade mark for the same products and/or services;
- the use of an identical or similar mark for identical or similar goods and/or services if there is a likelihood of consumer confusion; and
- the use of an identical or similar mark for different goods and/or services if the trade mark is declared as well known in Armenia and the use of the mark may cause damage to the interests of the owner of the well-known trade mark.

The length of protection is ten years from the filing date and can be renewed indefinitely every ten years.

## 7.3 Industrial Designs

An industrial design protects the unique and new appearance of an object.

In the RA, the following are protected by the law:

- a registered industrial design protected by a patent;
- an industrial design with international registration in accordance with the law; and
- an unregistered industrial design if it has become public, in accordance with the law.

Designs are registered with the Intellectual Property Office of Armenia. The Office's website has guidance on the procedure and samples of the necessary forms.

A right-holder has the right to prohibit use of a design without permission. Infringement can result in civil liability.

The length of protection is five years from the filing date, and may be renewed every five years, but for no more than 25 years in total.

## 7.4 Copyright

Copyright protects the unique outcome of a creative activity in the domain of science, literature and art created individually or jointly with other authors, which are expressed in a spoken, written or any other objectively perceivable manner, including those stored either permanently or temporarily in electronic format, regardless of the scope, significance, merits and purpose of creation. Subject matters of copyright are:

- literary, scientific works, as well as computer programs;
- works of painting, sculpture, graphics, design and other works of fine arts;
- dramatic and dramatic-musical works, scenarios, scenario sketches, librettos, and other works created for staging;
- choreographic and pantomimic works;
- musical works with or without words;
- audiovisual works (cinematographic, television films, animation films and cartoon films, musical clips, advertisement, documentary and fact-documentary, and other films);
- works of applied decorative art and stage graphics;
- photographic works and works created by analogous modes, which comply with the provisions of the law;
- works of urban planning, architecture, landscaping and their solutions both in whole and separate parts thereof;
- maps, plans, sketches and plastic works related to geography, topography, geology, urban planning, architecture and other sciences;
- derivative works (translations, adaptations of works, changes, arrangements and rearrangements, stage versions, audiovisual adaptations and other transformations of works in the scientific, literary and artistic domain, which are in compliance with the law; collections of works (encyclopaedias, anthologies), databases and other composite works, which are, by reason of the selection and (or) arrangement of their contents, results of a creative work; parts (titles, personages, etc) of a work, which are in compliance with the law and can be used separately;
- fonts; and
- other works in compliance with the law.

Copyright does not require registration.

Authors have the exclusive right to use their creations as they wish and to prohibit or authorise their use by third parties. The infringement of copyright can result in civil and/or criminal liability.

Authors' economic rights are protected during the authors' lifetimes, plus 70 years after their death. The intangible (moral) rights are inalienable and non-transferable and are not subject to exhaustion with the exception of the right of withdrawal, which runs for the life of the author.

### 7.5 Others

There are no specific regulations for the protection of software; software is subject to copyright protection under general rules.

According to the Law on Copyright and Related Rights, a "database" means a collection of works, data or other independent materials arranged in a systematic or methodical way, the individual elements of which shall be separately accessible by electronic or other means, and the acquisition, verification or presentation thereof shall require a substantial qualitative and/or quantitative contribution.

The maker of a database shall be deemed any person by whose initiative and on whose own responsibility a substantial qualitative and/or quantitative contribution is made for the acquisition, verification or presentation of the content of the database.

The rights of a database developer shall arise from the moment of completing the development of the database and shall have effect for 15 years.

#### Trade Secrets

There is no specific definition of "trade secret" in the Armenian legislation. Article 141 of the RA Civil Code provides a definition and protection for "Information Constituting an Employment, Commercial, or Banking Secret".

Information constitutes an employment, commercial, or banking secret, when such information has an actual or potential commercial value by virtue of it being unknown to third persons when there is no free access thereto on a legal basis, and when the holder of the information takes measures for the protection of its confidentiality.

Persons having illegally obtained information that constitutes a trade secret shall be obliged to compensate the damages caused. This obligation shall also be imposed on parties to a contract that have disclosed and/or used a trade secret in violation of a civil law or employment contract.

## 8. Data Protection

### 8.1 Applicable Regulations

#### The Regulation of Data Protection

Under the Armenian Constitution, the right to the inviolability of private and family life and the right to protection of personal data are declared as basic human rights, which may only be legally suspended or restricted during a state of emergency or under martial law.

Armenia has ratified the Convention for the Protection of Human Rights and Fundamental Freedoms 1950. This means that Armenia applies personal data protection in its jurisdiction as it is stipulated under Article 8 of this Convention. Armenia has also ratified the Convention for the Protection of Individuals with regard to Automatic Processing of Personal Data (Strasbourg, 28 January 1981), including the Protocol amending the Convention for the Protection of Individuals with regard to Automatic Processing of Personal Data (Strasbourg, 10 October 2018).

The main internal legal act related to data protection in Armenia is the Law on Protection of Personal Data, which was adopted in 2015 (Data Protection Law). The Data Protection Law stipulates that the following separate laws indicate specific rules for processing the defined particular personal data:

- bank secrecy regulated by the Law on Banking Secrecy;
- notarial secrecy regulated by the Law on the Notarial System;

- insurance secrecy regulated by the Law on Insurance and Insurance Activities;
- legal professional privilege regulated by the Law on the Profession of Advocate;
- personal data use during operations concerning national security and defence regulated by a number of legal acts relating to the national security service and military forces;
- personal data use in preventing and detecting money laundering and terrorism financing regulated by the Law on Combating Money Laundering and Terrorism Financing;
- operational intelligence activities regulated by the Law on Operational Intelligence; and
- proceedings regulated by the Criminal Procedural Code of Armenia, the Civil Procedural Code of Armenia, the Administrative Procedural Code of Armenia, and the Law on Compulsory Enforcement.

There are some other laws that regulate personal data protection in specific areas, such as the Labour Code.

### Principles of Data Protection

The Data Protection Law specifies the principles of personal data protection, which are as follows:

- principle of lawfulness;
- principle of proportionality;
- principle of reliability; and
- principle of minimum engagement of data subjects.

The principle of lawfulness requires the processing of personal data to be in compliance with the law as well as with the data subject's consent. Under the principle of proportionality, the law mandates that:

- the processing must pursue a legitimate purpose, and the measures to achieve it must be suitable, necessary and moderate;
- the volume of personal data processed needs to be the minimum necessary for achieving a legitimate purpose;
- processing needs to comply with its purpose or be compatible with it; and
- processing should be depersonalised if the purpose of processing may be achieved without personalisation of the data subject.

Compliance with the principle of reliability means that personal data being processed needs to be complete, accurate, simple and, where necessary, kept up to date. The principle of minimum engagement of a data subject is mostly applicable to the public authorities when the latter must collect data necessary for exercising their powers from the official sources available rather than request that a data subject regularly provide the same information.

### Data Processing Framework

Data processing should be performed with the data subject's consent unless the law allows the processing without it – eg, in the case of a court order to disclose personal data. The data subject has basic rights such as the right to access personal data, the right to erasure, the right to rectification, and the right to object.

The data processor should notify the data subject prior to the processing of their personal data by indicating the purpose of processing, the list of data processed, the category of processors and other information defined under the law. There is no mandatory requirement to approve a privacy policy.

The transfer of personal data to third parties needs to be performed with the data subject's consent, as well as the transfer of personal data abroad. The transfer of personal data abroad is subject to the preliminary approval of the Personal Data Protection Agency of the Republic of Armenia if the data needs to be transferred to a state without a sufficient level of data protection.

## 8.2 Geographical Scope

The Data Protection Law and the powers of the Personal Data Protection Agency of the Republic of Armenia are limited to the territory of Armenia.

If the personal data is collected (stored) by a legal entity – or a branch or representative office of a legal entity – established in Armenia, the collection and further processing will have to be performed under the Data Protection Law, and the Personal Data Protection Agency of the Republic of Armenia will be entitled to enforce its powers over this data processing.

### 8.3 Role and Authority of the Data Protection Agency

The Personal Data Protection Agency of the Republic of Armenia is part of the Ministry of Justice of Armenia. However, the Data Protection Law declares that the Agency operates independently.

Among other authorities listed under the law, the Agency is entitled to do the following:

- apply administrative sanctions prescribed by law in the case of violation of the requirements of the Data Protection Law;
- require the blocking, suspension or termination of the processing of personal data violating the requirements of the Data Protection Law;
- require the rectification, modification, blocking or destruction of personal data;
- prohibit completely or partially the processing of personal data;
- recognise electronic systems for processing the personal data of legal persons as having an adequate level of protection and include them in the register;
- ensure the protection of rights of the data subject; and
- consider applications of natural persons regarding the processing of personal data and deliver decisions within the scope of its powers.

## 9. Looking Forward

### 9.1 Upcoming Legal Reforms

#### Draft Law on Investments

As of 20 May 2025, the draft of the new Law on Investments has passed its first reading. After this draft law passes its second reading and is signed by the President, it will enter into force one month after its publication.

This new law intends to grant protection to investments made by both local and foreign investors, except for certain portfolio investments. Local investments, however, will be protected under this new law only if the investment is made after the law enters into force and meets certain criteria defined under the law. This new law will apply to foreign investments made prior to its entry into force, unless the old law grants more favourable conditions and the foreign investor chooses to remain under the old Law on Foreign Investments.

The National Treatment regime for foreign investment will be retained, while the Most Favoured Nation regime will be added.

The possibility of restricting investment in certain business operation areas for defined purposes is introduced. Currently, Armenia is at the stage of discussions and drafting with regard to FDI screening, and this new provision is possibly linked to the expected legislative developments.

#### Law on Cybersecurity and Other Related Laws and Sub-Legislative Normative Legal Acts

On 4 December 2025, the National Assembly, upon second reading, adopted the new laws of the Republic of Armenia “On Cybersecurity” and “On the Regulation of Information Systems”, as well as a number of other normative legal acts aimed at regulating cybersecurity.

The Law of the Republic of Armenia “On the Regulation of Information Systems” entered into force on 26 December 2025, while the Law of the Republic of Armenia “On Cybersecurity” (hereinafter referred to as the Law) entered into force on 4 January 2026.

The Law stipulates that the provisions defining the obligations of economic operators shall enter into force with respect to those obligations only after the entry into force of subordinate normative legal acts establishing detailed requirements concerning such obligations. However, the rule set forth in Article 27 of the Law of the Republic of Armenia “On Normative Legal Acts” must be highlighted as it specifically states that, where the implementation of a norm is conditional upon the adoption of another normative legal act, such norm shall not apply until the said other normative legal act enters into force.

Currently, the legal framework regarding cybersecurity is at the stage of development, and it is expected that by the end of 2025 Armenia will have adopted all rel-

evant legal acts, with the first phase of cybersecurity requirements expected to take effect in 2026.

### Amendments to the Law on Joint Stock Companies

Under the new amendments to the Law on Joint Stock Companies, which are expected to enter into force by the middle of June 2026, the list of cases in which a shareholder may request the buy-back of shares has been significantly expanded. These amendments are mainly intended to protect minority shareholders and foresee a mandatory buyback request right as a remedy against potential abuse by the majority shareholder(s).

### Consumer Protection Laws

Throughout 2025 and 2026, Armenia has undertaken significant steps towards aligning its consumer protection regulatory framework with European Union standards. The recent amendments to the Law on Consumer Rights Protection are due to enter into force in July 2026. The said amendments are aimed at strengthening transparency obligations vis-à-vis consumers, as well as providing more comprehensive regulation of digital trade and services, with particular regard to distance contracts and contracts concluded outside business premises.

# Trends and Developments

**MB Legal**

**MB Legal** is a Yerevan-based law firm providing legal services for complex cross-border matters, particularly within the financial services, technology, and investment management sectors. The firm maintains a strong international focus, with a majority of instructions involving foreign counterparties across the APAC, EMEA, and Americas regions. Based in the capital, the team offers specialised expertise in commercial dispute resolution, capital markets, and financial regulation. Recent engagements include advising on bank and investment company licences, handling initial public offerings (IPOs) on the Armenian Securities Exchange, and managing debt restructurings for international financial institutions. The firm also provides support for multi-jurisdictional mergers and acquisitions and is active in private fund registrations within the jurisdiction.

## Authors

**Mesrop Manukyan** is a founding partner at MB Legal with over seven years of experience in transactional and technology law. His career includes serving as general counsel for a Shanghai-based technology firm and leading legal functions at the Foundation for Armenian Science and Technology. Mesrop specialises in arbitration, mergers and acquisitions, intellectual property, and telecommunications, advising international clients on corporate restructuring and emerging tech regulations. He holds an MBA from London Business School, and an LLM from the University of Cambridge.

**Anahit Sargsyan** is a junior partner at MB Legal, having joined the firm as a lawyer in 2021 before progressing to her current seniority. She specialises in corporate and business law, with expertise in international commercial arbitration and mediation, particularly within the investment fund sector. Her technical skills were developed through participation in international moot-court competitions and specialised professional courses organised by IRZ and GIZ. Anahit is a member of the Chamber of Advocates of the Republic of Armenia and holds an LLM from the American University of Armenia.

**Maria Petrosyan** is a senior legal counsel at MB Legal with over seven years of experience in corporate law, dispute resolution, and legislative reforms. She specialises in the development of arbitration and mediation frameworks and previously served as the Armenian national correspondent for the European Commission for the Efficiency of Justice (CEPEJ). Maria is a member of the Chamber of Advocates of the Republic of Armenia and a licensed mediator. Her expertise includes complex transactional analysis and international commercial arbitration, where she frequently serves as a coach and arbitrator for global platforms.

**Ani Avetikyan** is a senior lawyer, bringing extensive experience from her previous roles as an in-house lawyer at the Central Depository of Armenia and the Nork Group of Companies. She specialises in corporate law, contract negotiation, and litigation, with a significant emphasis on identifying and mitigating regulatory and legal risks for both domestic and international clients. Her career progression includes supporting strategic decision-making and the efficient management of day-to-day business operations across leading industrial groups. Ani holds an LLM from the National Academy of Sciences and is a licensed member of the Armenian Bar Association.

### Overview of the Market

The Republic of Armenia has positioned itself as a resilient and rapidly evolving destination for international investment within the Caucasus region. As we move through 2026, the legal landscape is characterised by a profound shift towards transparency, digital integration, and alignment with international regulatory standards. These developments are not merely cosmetic but represent a fundamental restructuring of how business is conducted, regulated, and protected within the jurisdiction.

### A Regulated Crypto-Assets Framework

A brand-new Crypto-Assets Law has brought an entire sector out of legal ambiguity and into a regulated framework. Until mid-2025, there was no licensing framework, no regulatory oversight, and no clear legal basis for the commercial relationships these businesses needed to establish. Banks were frequently reluctant to provide services, and clients faced genuine uncertainty about the enforceability of agreements. That changed fundamentally when the Law on Crypto-Assets was adopted, representing the first comprehensive legal framework for the sector.

This legislation establishes a clear licensing regime for service providers and sets out rigorous disclosure requirements for public offerings. The law identifies various kinds of crypto-assets, including asset-referenced tokens and electronic money tokens. Issuers must now provide detailed offering documents, which are subject to approval by the Central Bank of Armenia. This regulatory clarity is a significant development for fintech companies looking to operate in a stable and legally defined environment.

The framework places a heavy emphasis on consumer protection and financial stability within the digital asset market. Entities providing crypto-services are now required to maintain specific reserve assets and follow strict internal rules of conduct. There are also robust prohibitions against insider trading and market manipulation to ensure market integrity. For international firms, these rules provide the necessary legal certainty to treat crypto-assets as a legitimate part of their Armenian operations.

### Safeguarding the Digital Economy with Cybersecurity Law

The Cybersecurity Law, now in force, imposes mandatory obligations on virtually every business operating in Armenia. This legislation entered into force in 2026, and its scope is deliberately broad to cover all vital economic activities. It identifies critical sectors such as energy, finance, and telecommunications as being essential for the country's security. Providers operating in these critical information infrastructure sectors must now implement robust security measures and protocols.

For international companies, the 72-hour notification timeline for cyber incidents mirrors requirements under the EU's GDPR and the NIS2 Directive. This means that organisations already compliant with European cybersecurity standards will find the Armenian framework conceptually familiar. The key task for these businesses is to ensure that Armenian subsidiaries have their own local incident response protocols. The law also emphasises international co-operation and information sharing regarding digital threats.

The designated autonomous body for cybersecurity has the authority to monitor standards and conduct audits. Entering the Armenian market now involves adherence to high-level digital safety protocols designed to enhance national economic resilience. Businesses are encouraged to develop internal cybersecurity regulations that align with international ISO standards. This proactive approach to digital safety is a vital consideration for any enterprise relying on modern digital infrastructure in the region.

### The High-Tech Sector: A Fiscal Environment Built to Compete

Armenia has been building its technology sector credentials for years, but a new package of incentives represents a qualitative step change. The Law on State Support for the High-Tech Sector, effective from 1 January 2025, introduced a suite of competitive incentives. This framework is structured around a new High-Tech Registry that identifies eligible businesses and entrepreneurs. In our view, the resulting fiscal regime is now one of the most competitive for technology businesses anywhere in the region – and one that merits serious attention from international investors evaluating technology hub locations.

International companies considering establishing technology centres or R&D functions in Armenia can benefit from substantial state support. For example, the state provides support equal to 60% of the calculated income tax for new employees and migrant workers – a meaningful subsidy that directly reduces the cost of scaling a local team. When combined with Armenia's competitive local labour costs and a well-educated technical workforce, this creates a compelling commercial case for software development and engineering operations that goes beyond tax efficiency alone.

A particularly significant feature of the current regime is the "super deduction" incentive for research and development. Article 123 of the Tax Code allows companies to deduct 200% of salaries paid to staff involved in R&D and specialised high-tech professional work from their taxable base. In practice, this means that for every AMD spent on qualifying R&D salaries, companies receive twice the deduction against corporate income tax – effectively the state co-funding innovation activity. For technology-intensive businesses, this is not a marginal benefit: it can materially alter the economics of locating R&D functions in Armenia versus higher-cost jurisdictions. Companies should, however, note that the list of qualifying job positions and activities remains subject to government approval, and careful structuring will be essential to ensure eligibility.

The high-tech registry also facilitates tracking of sectoral growth and investment levels for future policy development. Registered entities are eligible for specific exemptions and support running until 31 December 2031 – a seven-year horizon that provides the legislative predictability capital-heavy technology projects require. We anticipate that this long-term commitment, combined with Armenia's EU accession trajectory, will accelerate interest from European and international technology firms seeking a stable, well-regulated, and fiscally attractive base in the South Caucasus.

### Labour Market Transformation: Digitalisation and Contracts

Armenia is modernising its labour market by passing a significant compliance threshold regarding how employment is documented. From 1 January 2027, all employment contracts in Armenia must be executed through a digital system using an electronic digital signature. This requirement also applies to any amendments or terminations of existing employment relationships. This shift reflects a broader trend of digitalisation aimed at improving the efficiency of the domestic labour market.

The mandatory use of the digital system for employment contracts with foreigners is set to follow, with a full implementation target in July 2027. This digital platform will streamline the tracking of legal residency and work permissions for foreign staff. It is intended to reduce administrative burdens for both employers and the state migration services. Businesses must now ensure they have the necessary electronic signatures and system access to remain compliant with the Labour Code.

The Labour Code has also been updated to provide clearer protections for vulnerable workers and clarify

intellectual property rights. For instance, there are strict prohibitions on employing minors in heavy or hazardous work environments. Regarding intellectual property, the law generally vests property rights for works created during employment with the employer unless otherwise agreed. These updates are essential for companies in the creative and technology sectors, where human capital is the primary asset.

### A Digital Shift in Migration Management

The regulatory framework for migration in Armenia is set for a major overhaul with the adoption of Law HOOH-11-NOW (HO-11-N) in early 2026. Entering into force on 1 November 2026, these reforms transition migration management into a fully digital era. Central to this transformation is the launch of the Electronic Unified Platform, which will centralise all residency and work permit proceedings. This platform is designed to streamline communication between state bodies, employers, and foreign citizens, significantly reducing the reliance on traditional paper-based applications.

A significant legal shift under the new law is the introduction of the "One Status" rule, which prohibits foreigners from holding multiple residency categories simultaneously. The law also begins the process of phasing out the previous "special residency status" (ten-year passports) for new applicants, integrating these categories into a more standardised temporary and permanent residency framework. Furthermore, temporary residency permits will now be granted for durations of up to one year, aligning closely with specific employment or study contract dates. These changes provide a more structured and transparent hierarchy for legal residence within the jurisdiction.

To manage regional labour market dynamics more effectively, the government has introduced an annual quota system for residency statuses based on type and quantity. Additionally, a new "Work Visa" category has been established, allowing foreigners to enter for short-term employment or to finalise residency applications for up to 120 days. This visa is non-extendable and can only be issued once per calendar year, providing a clear path for short-term expertise. However, any residency or work status remains fragile if a formal employment contract is not registered within 15 working days, as this failure can trigger a revocation of the status.

The 2026 reforms also emphasise automated data verification by integrating the migration platform with other national registers. This allows for real-time validation of applicant data against tax records, the state population register, and the cadastre of real estate. Such integration ensures that residency grounds, such as legitimate employment or property ownership, are continuously monitored against official state records. This digital rigour is intended to enhance the overall integrity of the migration system while improving efficiency for international businesses operating in Armenia.

### Modernising Corporate Finance: Convertible Notes

A targeted but highly significant corporate law reform was enacted in 2025 through amendments to both the Civil Code and the Law on Joint-Stock Companies. These reforms enable international-standard investment structures, such as convertible notes, which were previously difficult to implement under Armenian law. A convertible note is now explicitly recognised as a loan that can be converted into equity upon certain triggers or dates. In our view, this is one of the more consequential changes for the local startup ecosystem in recent years: founders and investors now have a familiar early-stage financing tool that no longer needs to be artificially engineered around gaps in the prior legal framework.

Under the new rules, the process for issuing shares upon conversion is streamlined to reduce legal friction. The law ensures that the rights of existing shareholders are balanced against the needs of new investors during these conversions. This reform is a direct response to the needs of the burgeoning Armenian tech ecosystem and venture capital market, and we expect it to lower the transaction costs and legal risk that previously made Armenian entities less attractive vehicles for early-stage rounds. In practical terms, it allows local firms to attract international funding using instruments that global investors already understand and trust, removing a recurring point of friction in cross-border deal negotiations.

Furthermore, the amendments clarify the corporate approval processes required for issuing such instruments. Boards and shareholder meetings now have clear guidelines on how to authorise convertible loans and manage subsequent equity increases. This added transparency meaningfully reduces the risk of legal challenges to financing rounds and cap table management – a risk that, in our experience, was a genuine deterrent for foreign venture investors prior to this reform. For foreign investors, this reform brings Armenian corporate law significantly closer to international best practices, and we expect it to be a key reference point as Armenia continues to position itself as a venture-friendly jurisdiction in the region.

### Comprehensive Gambling Sector Reform

The Armenian gambling landscape underwent a fundamental transformation with the enactment of the Law on Regulation of Gambling Activities in 2024, set to enter into force by the end of 2026. This reform is designed to move the sector away from legal ambiguity and into a highly controlled, electronic management framework. Central to this shift is the appointment of a "Gambling Sector Regulation Operator" tasked with implementing a centralised monitoring system. This system provides real-time oversight of bets, payouts, and player activities, significantly enhancing the state's ability to combat money laundering and ensure fair play. In our view, this centralised oversight model signals a clear policy intent: Armenia is positioning itself to retain gambling as a legitimate revenue-generating sector while closing off the compliance and reputational risks that have historically made the industry difficult for institutional investors and banks to engage with.

The new regulatory regime places a significant emphasis on "Responsible Gaming" to mitigate the social risks associated with gambling. It introduces mandatory player identification in a "designated" lobby before entry into any physical gambling hall is permitted. The legislation also establishes strict age thresholds, requiring participants to be at least 21 years of age for casino and internet games, and 18 years for lotteries. Furthermore, the law enables citizens to voluntarily restrict their own participation or allows family members to seek a court-ordered restriction for those in financial distress. For operators, we expect these requirements to translate into a material compliance build-out – identification systems, age-verification infrastructure, and self-exclusion registries will need to be operational well before the 2026 deadline, and businesses should begin budgeting for this now rather than treating it as a late-stage implementation step.

Territorial restrictions continue to be a primary tool for regulating physical gambling locations, confining casinos to specific zones such as Jermuk, Tsaghkadzor, and Sevan. An innovative exception exists for large-scale investment projects approved by the government that exceed AMD40,000,000,000. Such projects may be permitted to operate gambling facilities in other locations, provided they meet rigorous criteria. In our assessment, this carve-out is a deliberate lever to attract major resort-scale capital – it effectively trades geographic flexibility for significant committed investment, which should be of particular interest to large international gaming and hospitality groups evaluating entry into the Armenian market. This balanced approach aims to leverage the sector for economic growth while maintaining strict social safeguards and geographic control.

### Enhanced Protections for Minority Shareholders

A landmark development in Armenian corporate law introduces new safeguards for minority shareholders within the Law on Joint-Stock Companies. This legislation significantly expands the rights of non-controlling shareholders to demand that a company purchase their shares at a fair market price. These "buyback" rights are now triggered by a broader range of circumstances designed to prevent the marginalisation of small investors by dominant interests.

The amendments provide critical protection against the "controlling shareholder", defined as an individual or group acting in concert that holds 50% or more of the voting shares. Shareholders can now demand a buyback if the actions or inactions of the company or a controlling shareholder result in obvious disadvantageous consequences for them. This specifically includes instances where a controlling shareholder receives a disproportionate advantage at the expense of non-controlling participants.

Furthermore, the reforms address systemic corporate governance failures that previously left minority investors with little recourse. A buyback right is now triggered if a company fails to convene an annual general meeting or approve essential financial reports and dividend distributions for at least three out of the last five years. Protection is also extended to cases where a shareholder is simply not notified of the annual meeting.

Investment liquidity for minority holders is further secured through new rules regarding dividend distributions. If a company fails to distribute dividends for at least five out of the last ten years, or if the distributed amounts are considered insignificant compared to the market yield based on net asset value, minority shareholders may exit the company via a mandatory buyback. This ensures that capital is not trapped in unproductive or unfairly managed entities.

Significantly, it removes the traditional fiscal barrier to these specific protections. While standard share buybacks are typically capped at 10% of a company's net assets, this limit does not apply when the buyback is triggered by these new minority protection grounds. To ensure fairness in the exit process, the law mandates that the share price must be determined by a qualified evaluator meeting strict government criteria, providing an objective basis for the transaction.

### Strengthening the Regulatory Oversight: The Competition and Consumer Protection Commission

An important shift in Armenia's regulatory environment occurred in 2025 with the significant expansion of the mandate of the autonomous regulatory body, now renamed the Competition and Consumer Protection Commission. This reform establishes the Commission as the jurisdiction's central authority for the protection of consumer interests, moving beyond its traditional focus on market competition. It now possesses explicit powers to prevent and eliminate practices that harm either consumer groups or an indefinite range of consumers.

A core component of this reform is the introduction of a dedicated legal framework for addressing offences against consumer interests. This includes the regulation of unfair commercial practices, misleading advertising, and systemic violations of mandatory trade and service rules. The Commission is now empowered to evaluate these practices against international principles of integrity, honesty, and fair dealing to ensure a balanced marketplace.

To increase administrative efficiency, the updates introduced simplified proceedings for specific retail violations. For example, if a business fails to comply with mandatory price display rules, the Commission's General Secretary can issue a formal notification. This procedure allows the business to rectify the issue and pay a nominal fixed penalty, thereby avoiding a full-scale administrative inquiry while ensuring rapid compliance.

Furthermore, the Commission's enforcement toolkit has been enhanced with the ability to impose significant financial penalties for more serious infractions. Fines for unfair competition or consumer-related offences can now be calculated as a percentage of the entity's annual turnover, reaching up to 5% or 10% depending on the nature of the violation. This ensures that sanctions remain proportional and act as a genuine deterrent for large market participants.

The reforms also prioritise international co-operation in the field of consumer protection. The Commission is now explicitly authorised to collaborate with international organisations and foreign state bodies to exchange information and implement global best practices. For international businesses, this means that Armenia's consumer protection standards are increasingly converging with those of its European and regional partners.

### European Union Accession

On 26 March 2025, Armenia's National Assembly adopted the Law on Launching the Process of Armenia's Accession to the European Union. For foreign investors, this carries three immediate practical implications regarding the stability and future of the Armenian legal framework. The direction of Armenian regulatory reform is now predictable in a way it has never previously been. Businesses familiar with EU-standard frameworks in corporate governance, data protection, competition law, and procurement can

reasonably expect Armenian law to converge with those frameworks over time.

The integration into the European legal space provides a significant psychological and legal safety net for international capital. This process is supported by the Republic's commitment to democratic institutions and the rule of law, as stated in the accession process preamble. This convergence reduces the perceived risks traditionally associated with operating in the Caucasus region.

### Future Outlook

As Armenia looks toward the remainder of 2026 and into 2027, the focus remains on deepening these reforms. The ongoing digitalisation of government services and the implementation of international standards for financial and non-financial reporting are set to continue. While challenges remain, the clear trajectory is toward a more modern, transparent, and investor-friendly environment. For clients wishing to do business in the jurisdiction, these trends represent a significant opportunity to engage with an economy that is increasingly integrated into the global legal and financial system.

The combination of robust legal protections for foreign investment, forward-looking regulations for digital technologies, and a commitment to international transparency makes Armenia a compelling choice for regional operations. By understanding and adapting to these developments, businesses can navigate the Armenian market with confidence and contribute to its ongoing economic transformation. The Republic's journey toward legal excellence and European integration is a defining feature of its current socio-economic context.

**Archer Scott Lawyers** is an independent Australian corporate and commercial law firm with offices in Melbourne, Sydney and Adelaide. The globally connected, results-driven practice combines big-firm expertise with the focus, agility and value of a boutique firm. Archer Scott advises businesses, investors, founders and organisations across areas including mergers and acquisitions, corporate advisory, projects and construction, franchising, start-ups and venture capital, employment, intellectual property, commercial real estate, and sports law. Its approach is centred on practical commercial outcomes, efficient value creation and long-term client relationships. The firm emphasises clear risk management rather than unnecessary complexity, helping clients understand, categorise and manage legal and commercial risks. With experience drawn from significant Australian corporate transactions and global networks, Archer Scott aims to deliver strategic, innovative and client-focused legal advice that supports business growth, protects brand value and helps clients realise long-term commercial opportunities.

## Authors

**Scott Colvin** is an award-winning M&A lawyer who has advised on some of Australia's most significant transactions. He has particular depth in franchising, food and retail, and large-scale distribution, and acts for founders and corporates across the full deal life cycle. Scott has worked in market-leading top-tier global and national law firms. He holds a Juris Doctor from the University of Melbourne and a Certificate of Applied Corporate Finance from Cambridge University, among other qualifications.

**Warren Scott** is an internationally recognised expert in corporate law and franchising, and a natural fit to lead the sale or purchase of a mid-market business. He is sought out for his strategic and commercial approach and his network, and he concentrates on the goal, whether that is a quick transaction or a long-term growth strategy. Rather than focusing on billing by the six-minute unit, Warren focuses on those activities that build actual value through innovation, strategy and his national and global network. He holds a Masters of Commercial Law from Melbourne University.

**Lachlan Speirs** works across the corporate, M&A and franchising practices at Archer Scott, advising clients on a broad range of commercial and transactional matters. He has experience in assisting franchisors with Franchising Code compliance, disclosure documents, franchise agreements and related commercial arrangements. Lachlan supports clients through business sales and acquisitions, due diligence processes, transaction documentation and general commercial contracting. He holds an LLB (finance and law), including study at the University of Leeds in EU Law and Trade Law.

## 1. Legal System

### 1.1 Legal System and Judicial Order

Australia is a common law jurisdiction whose legal tradition derives from England. It is a federation comprising six states and two self-governing territories, operating under a written federal Constitution that distributes power between the Commonwealth (national) and the states.

Law is sourced from legislation enacted by the Commonwealth and state parliaments and from the common law and equity developed by the courts, applied through the doctrine of precedent. The Commonwealth Parliament legislates within enumerated heads of power: the corporations power is the foundation of nationally uniform company, competition and consumer laws, while areas such as real property, conveyancing, stamp duty and retail leasing remain principally matters of state law.

The High Court of Australia sits at the apex of the judicial system as the final court of appeal and the arbiter of constitutional questions. Federal jurisdiction is exercised mainly by the Federal Court of Australia, which hears corporations, competition, consumer, intellectual property, taxation and administrative matters, and by the Federal Circuit and Family Court. Each state and territory has its own hierarchy, headed by a Supreme Court with a Court of Appeal, beneath which sit intermediate and lower courts, and merits review of many government decisions lies with the Administrative Review Tribunal and its state equivalents.

For foreign investors, the practical consequence is that the rules most relevant to acquiring and operating a business – ie, company, competition, consumer, foreign investment, intellectual property and tax law – are federal and apply uniformly across the country. State-based differences in property, duty and leasing matter chiefly to multi-site and franchised operations, which may need to account for variation between jurisdictions.

## 2. Restrictions on Foreign Investments

### 2.1 Approval of Foreign Investments

Foreign investment is regulated by the Foreign Acquisitions and Takeovers Act 1975 (Cth) and the Foreign Acquisitions and Takeovers Regulation 2015, supported by Australia's Foreign Investment Policy and published guidance. The Foreign Investment Review Board is a non-statutory body that advises the Treasurer, who is the decision-maker; the Treasury's Foreign Investment Division administers the regime, and clearances are given as a no objection notification.

A foreign person must generally notify, and obtain a decision, before taking certain actions. The most common triggers are acquiring a substantial interest (20% or more) in an Australian entity, or acquiring interests in Australian land or businesses, where the relevant monetary threshold is met. A national security overlay applies separately: acquiring a direct interest (10% or more, or any interest conferring control or influence) in a national security business or national security land is notifiable regardless of value, as is starting such a business.

Monetary thresholds are indexed annually on January 1st. For 2026, the principal thresholds are as follows.

- Business acquisitions: a threshold of AUD347 million applies to investors from non-agreement countries. For private investors from certain free trade agreement partners (such as the United States, the United Kingdom, New Zealand and Japan), a higher threshold of AUD1.498 billion applies to entities not carrying on a sensitive business, while the AUD347 million threshold continues to apply where the target carries on a sensitive business.
- Agribusiness: AUD75 million. Agricultural land: a cumulative AUD15 million.
- Media businesses and residential land: notifiable at any value.
- National security businesses and national security land: notifiable at any value. Foreign government investors are screened at a nil threshold for all direct interests.

Approval must be obtained before the action is completed, so the regime is suspensory in effect. The Treasurer assesses each proposal against the national interest and, where relevant, national security; neither term is exhaustively defined, and the factors considered include security, competition, tax, the impact on the economy and the community, and the character of the investor. Where a transaction is also notifiable under the merger control regime, foreign investment approval does not substitute for Australian Competition and Consumer Commission (ACCC) approval or a waiver, and the two assessments should be managed as parallel workstreams.

## 2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance

Applications are lodged electronically through the Foreign Investment Portal, which the government launched in 2025, and a fee is payable on lodgement. Fees generally range from AUD1,125 to AUD1,205,200 for non-residential actions, depending on the acquisition type and value. The statutory decision period is 30 days, with a further short period to notify the applicant; it can be extended by an interim order of up to 90 days, and applicants are frequently asked to agree to a voluntary extension. Foreign investors should build the Foreign Investment Review Board timetable into conditions precedent and long-stop dates in their transaction documents, particularly where ACCC approval is also required.

The outcome is either a no objection notification, which may be unconditional or subject to conditions, or, in rare cases, a prohibition. Investing without a required approval, or breaching conditions, exposes the investor to civil and criminal penalties, which for individuals can reach into the millions of dollars and are substantially higher for corporations; investors could also be exposed to divestiture orders, infringement notices and value-based penalties. Foreign persons also have ongoing obligations to notify holdings to the Register of Foreign Ownership of Australian Assets.

## 2.3 Commitments Required From Foreign Investors

The Treasurer routinely attaches conditions to a no objection notification, calibrated to the national interest and national security risk presented by the particular investment. Standard tax conditions are common, requiring the investor to comply with Australian tax law, co-operate with the Australian Taxation Office and refrain from arrangements that shift profits offshore.

Other conditions may address:

- data security and access for sensitive or critical assets;
- development timeframes for vacant land;
- ongoing reporting and audit requirements; and
- in some cases, undertakings as to Australian directors, local management or continuity of operations.

Conditions are negotiated in practice, and early engagement with the Treasury helps investors understand and shape the likely conditions before a binding decision is made.

## 2.4 Right to Appeal

A decision of the Treasurer on the national interest or national security is an exercise of executive discretion, and there is no merits review of such a decision by a tribunal. An affected investor may seek judicial review of the legality of the decision, under the Administrative Decisions (Judicial Review) Act 1977 (Cth) or under

Section 39B of the Judiciary Act 1903 (Cth) and Section 75 (v) of the Constitution.

Judicial review is confined to questions of legality, such as jurisdictional error, denial of procedural fairness or taking into account irrelevant considerations, and does not allow the court to substitute its own view of the merits. Applications are subject to time limits, and reasons may be requested under the judicial review legislation. In practice, formal challenges are uncommon; investors generally manage risk through early and co-operative engagement rather than litigation.

## 3. Corporate Vehicles

### 3.1 Most Common Forms of Legal Entity

The principal vehicle is the company, incorporated and regulated under the Corporations Act 2001 (Cth) and administered by the Australian Securities and Investments Commission (ASIC). The liability of shareholders is limited to any amount unpaid on their shares, and there is no general minimum share capital requirement. The most common forms are as follows.

- Proprietary company (Pty Ltd): a private company limited by shares, with at least one shareholder and a maximum of 50 non-employee shareholders, at least one director ordinarily resident in Australia, and no ability to raise capital from the public. It is the usual vehicle for an inbound subsidiary, a holding company or a joint venture.
- Public company (Ltd): able to have unlimited shareholders and to list on the Australian Securities Exchange, requiring at least three directors (two ordinarily resident in Australia) and a company secretary. It is used for public fundraising and listed groups.
- Registered foreign company: a foreign company may register with the regulator and carry on business through a branch, which does not create a separate legal entity.
- Trusts: discretionary and unit trusts, usually with a corporate trustee, are widely used for investment, holding and family or small-business structuring, and stapled structures are common in property and infrastructure. Partnerships and limited partnerships are available under state law, and incorporated limited partnerships are used for venture capital.

The choice of vehicle is driven mainly by tax treatment, asset protection and liability, and by the commercial purpose. In transactions, a proprietary company is the standard acquisition or bid vehicle, while trusts frequently sit above operating entities as holding vehicles.

### 3.2 Incorporation Process

A company is registered with the corporate regulator, and is issued an Australian Company Number on registration. The company then obtains an Australian Business Number and registers for goods and services tax and pay-as-you-go withholding where required, and each director must first obtain a director identification number.

The company needs:

- a registered office in Australia;
- a principal place of business in Australia;
- at least one Australian resident director;
- at least one member; and
- either a constitution or reliance on the replaceable rules in the legislation.

Registration is inexpensive and is typically completed within one to two business days. A foreign company that prefers to operate through a branch instead registers as a registered foreign company and receives an Australian Registered Body Number.

### 3.3 Ongoing Reporting and Disclosure Obligations

All companies must keep their details current with the regulator, notifying ASIC of prescribed changes, including changes to officeholders, the registered office, the share structure and, where applicable, ultimate holding company details, within the prescribed periods, and confirming their details and paying an annual review fee each year. Public companies, and some companies in particular circumstances, must also lodge special resolutions or changes to their constitution. Financial reporting and audit obligations then depend on size and ownership.

Public companies, and large proprietary companies that meet two of three thresholds for revenue, gross assets and employees, must prepare, have audited and lodge annual financial reports. Small proprietary companies are generally exempt, but a small proprietary company that is controlled by a foreign company must usually lodge audited accounts, unless relief applies. These obligations are relevant in transactions because they determine the financial information available on a target.

Companies must maintain a register of members, while substantial-holding disclosure applies principally to listed companies and registered schemes rather than to private companies generally, and a broader beneficial ownership transparency reform is in progress. Customer due diligence under anti-money laundering law, which from 1 July 2026 extends to certain designated services provided by lawyers, conveyancers, accountants and real estate agents, is increasing scrutiny of ultimate beneficial ownership in dealings and acquisitions.

Disclosure (typically via a prospectus or other disclosure document) is required when raising capital. There are exemptions and short-form disclosures where the capital raise is limited to sophisticated investors.

Where the company operates a franchise system, complex franchising disclosure documents are required.

Australia is a highly regulated environment, and industry-specific registrations, permits and disclosures are typically required.

### 3.4 Management Structures

Australian companies have a single-tier board; there is no separate supervisory board or two-tier structure, but the company may adopt an informal advisory committee-style body. The directors are responsible for managing or supervising the management of the company, and day-to-day operations are usually delegated to officers and senior management.

A public company must have at least three directors and a company secretary, while a proprietary company needs only one director and is not required to appoint a secretary. Shareholders exercise residual powers in general meetings, including amending the constitution and approving certain related-party and major transactions. Listed companies are additionally subject to the Listing Rules and the corporate governance recommendations of the Australian Securities Exchange.

### 3.5 Directors', Officers' and Shareholders' Liability

Directors and officers owe statutory duties under the Corporations Act, including the duty of care and diligence (protected by the business judgement rule), the duty to act in good faith and for a proper purpose, and the duty not to misuse their position or information, alongside equivalent general law and fiduciary duties. Directors may also be personally liable for insolvent trading where a company incurs debts while insolvent, subject to the safe harbour available where they pursue a course of action that is reasonably likely to lead to a better outcome for the company.

Personal exposure can arise under tax law through director penalty notices, and under work health and safety, environmental, competition (including as an accessory) and franchising laws. Breach can lead to civil penalties, compensation, disqualification and, for dishonest conduct, criminal liability.

Limited liability is the governing principle, and Australian courts only rarely pierce the corporate veil, generally where there is fraud or a sham or a genuine agency, with specific statutory exceptions such as insolvent trading. In acquisitions, directors' and officers' insurance, indemnities and run-off cover are standard, and buyers assess director penalty and accessorial exposure as part of diligence.

## 4. Employment Law

### 4.1 Nature of Applicable Regulations

Most private sector employment is governed by the national workplace relations system established by the Fair Work Act 2009 (Cth). The National Employment Standards set a floor of minimum entitlements; modern awards set additional industry and occupation minimums; and enterprise agreements, individual

contracts and the common law operate above that floor.

The Fair Work Commission is the national workplace tribunal and the Fair Work Ombudsman is the regulator, while work health and safety is governed by largely harmonised state and territory laws, and anti-discrimination obligations arise under both Commonwealth and state legislation. The framework has recently been reshaped by:

- the Secure Jobs, Better Pay reforms, including limits on fixed-term contracts; and
- the Closing Loopholes reforms, which:
  (a) changed the rules on casual employment, labour hire, gig and road transport work;
  (b) introduced same job, same pay;
  (c) criminalised intentional wage underpayment; and
  (d) introduced a right to disconnect.

### 4.2 Characteristics of Employment Contracts

There is no requirement for an employment contract to be in writing; a contract may be made orally, although written contracts are standard practice. Whatever the contract says, the National Employment Standards, the applicable modern award and any enterprise agreement apply and cannot be displaced by agreement, so an employer cannot contract below the statutory floor.

Contracts commonly deal with duties, remuneration, hours, leave, confidentiality, intellectual property assignment and post-employment restraints. The use of fixed-term contracts is now limited, with a general maximum of two years including renewals and some exceptions, and casual employment has a statutory definition together with a pathway by which eligible employees may choose to convert to permanent employment. Probationary periods are common, although the qualifying period for unfair dismissal protection is six months, or 12 months for small business employers.

### 4.3 Working Time

The National Employment Standards set maximum weekly hours of 38 for a full-time employee, plus additional hours where reasonable. There is no single statutory overtime rate; overtime, penalty rates and loadings are set by the applicable modern award or enterprise agreement, and casual employees receive a loading (commonly 25%) in lieu of paid leave.

Employees now have a right to disconnect, allowing them to refuse to monitor or respond to unreasonable out-of-hours contact, which, following a later commencement date, now applies to small business employers as well. The national minimum wage is reviewed annually by the Fair Work Commission, and paid leave entitlements (including annual leave, personal and carer's leave, parental leave and long service leave) arise under the National Employment Standards and state legislation.

### 4.4 Termination of Employment Contracts

Australia is not an employment-at-will jurisdiction. An employer must have a lawful basis to terminate and must give the minimum notice set by the National Employment Standards (scaled by length of service) or pay in lieu, unless the employee is summarily dismissed for serious misconduct.

Several statutory protections apply. Eligible employees may bring an unfair dismissal claim if a dismissal is harsh, unjust or unreasonable, with remedies of reinstatement or compensation capped at six months' pay. The general protections regime prohibits adverse action taken for a prohibited reason, such as the exercise of a workplace right, carries no compensation cap and reverses the onus of proof; separate protections address unlawful termination and discrimination.

A genuine redundancy is a defence to an unfair dismissal claim, and redundancy pay is provided for under the National Employment Standards, with consultation obligations arising under awards and agreements. Where 15 or more employees are to be made redundant, the employer must notify Services Australia and any relevant registered employee association, with consultation obligations arising mainly under the applicable award, enterprise agreement or workplace instrument. In transactions, the transfer of business rules can transfer employees and entitlements to a buyer. Acquirers plan for redundancies, accrued leave and transferring instruments, while post-employment

restraints are enforceable only to the extent they are reasonable.

### 4.5 Employee Representations

There is no general system of mandatory works councils or board-level employee representation. Trade unions represent their members and may exercise rights of entry, and the Fair Work Commission oversees enterprise bargaining, which may be conducted at a single enterprise or, in defined streams, across multiple employers.

Consultation obligations arise under modern awards and enterprise agreements, particularly in relation to major workplace change and redundancy. Employees enjoy freedom of association, and adverse action taken because of union membership or activity is prohibited. Health and safety representatives may be elected under work health and safety laws.

## 5. Tax Law

### 5.1 Taxes Applicable to Employees/ Employers

An individual's liability to Australian income tax depends on residency: residents are taxed on worldwide income and non-residents on Australian-source income. Personal income tax is progressive, with a top marginal rate of 45% plus a 2% Medicare levy, and is collected from employees through pay-as-you-go withholding by the employer.

Employers must:

- withhold and remit pay-as-you-go amounts;
- pay the superannuation guarantee, which is set at 12%, into the employee's superannuation fund; and
- pay fringe benefits tax on non-cash benefits provided to employees.

From 1 July 2026, under the Payday Super reforms, the superannuation guarantee must be paid at the same time as salary and wages, rather than quarterly, and is calculated on an employee's qualifying earnings. Employers are also liable for state payroll tax on wages above the relevant state threshold, with rates and thresholds varying between the states and territories.

### 5.2 Taxes Applicable to Businesses

A company is subject to Australian tax on its income if it is resident in Australia (by incorporation, or by having its central management and control in Australia) or derives Australian-source income. The main taxes are as follows.

- Corporate income tax at 30%, reduced to 25% for a base rate entity (broadly, a company with aggregated turnover below AUD50 million and no more than 80% passive income). Distributed profits carry franking credits under the dividend imputation system, which relieves double taxation for resident shareholders.
- Goods and services tax at 10% on most supplies, and withholding tax on unfranked dividends, interest and royalties paid to non-residents, subject to relief under Australia's tax treaties.
- Capital gains tax, as part of the income tax, on the disposal of assets. Non-residents are taxed on taxable Australian property, and a foreign resident capital gains withholding obligation applies to acquisitions of taxable Australian real property and related interests from foreign residents, at 15% since 1 January 2025 following the removal of the former value threshold. Stamp duty is imposed by the states on land and certain transactions, including landholder duty on dealings in land-rich entities.

Australia has implemented Pillar Two of the OECD and G20 Two-Pillar Solution. The Taxation (Multinational—Global and Domestic Minimum Tax) Act 2024 and its rules establish a 15% global minimum tax for large multinational groups with consolidated annual revenue of at least EUR750 million, comprising an income inclusion rule and a domestic minimum tax for fiscal years beginning on or after 1 January 2024, and an undertaxed profits rule from 1 January 2025. Australia's domestic minimum tax is recognised as a Qualified Domestic Minimum Top-up Tax with QDMTT safe harbour status on the OECD central record, effective from 1 January 2024.

### 5.3 Available Tax Credits/Incentives

The principal broad-based incentive is the Research and Development Tax Incentive, which provides a refundable or non-refundable offset depending on the company's turnover. A range of more targeted concessions is also available, including:

- the small business capital gains tax concessions;
- the instant asset write-off (subject to settings reviewed each year);
- concessions for early-stage innovation companies and for venture capital investment through early-stage and other venture capital limited partnerships; and
- incentives for build-to-rent housing.

The government has also introduced production incentives in priority areas, such as clean energy and critical minerals. Eligibility criteria apply to each measure, and the states and territories offer their own payroll tax and investment incentives to attract particular industries or projects.

### 5.4 Tax Consolidation

Tax consolidation is available for wholly owned Australian groups. A consolidated group, made up of a head company and its wholly owned Australian resident subsidiaries, is treated as a single taxpayer, so that intra-group transactions are generally disregarded and the group lodges a single income tax return.

Tax cost-setting rules apply when entities join or leave the group, and a multiple entry consolidated group can be formed by certain foreign-owned groups. The election to consolidate is irrevocable, and the head company is primarily liable for the group's income tax.

### 5.5 Thin Capitalisation Rules and Other Limitations

Thin capitalisation rules apply. The earnings-based rules that took effect from 1 July 2023 limit debt deductions for multinational entities, with a default fixed-ratio test that caps net debt deductions at 30% of tax earnings before interest, taxes, depreciation and amortisation, and alternative group-ratio and third-party debt tests.

A separate debt-deduction-creation rule disallows deductions arising from certain related-party arrangements that lack genuine commercial substance. The rules apply to both inbound and outbound investors above a de minimis level of debt deductions.

### 5.6 Transfer Pricing

Transfer pricing rules apply. Division 815 of the Income Tax Assessment Act 1997 (Cth) requires cross-border dealings between associated enterprises to be priced on an arm's length basis, consistent with the OECD transfer pricing guidelines.

Taxpayers must keep contemporaneous documentation to access penalty protection, and large multinational groups are subject to country-by-country reporting. The Australian Taxation Office actively reviews transfer pricing, and advance pricing arrangements are available to provide certainty for significant cross-border dealings.

### 5.7 Anti-Evasion Rules

Australia has a general anti-avoidance rule in Part IVA of the Income Tax Assessment Act 1936 (Cth), under which the Commissioner of Taxation may cancel a tax benefit obtained from a scheme entered into for the dominant purpose of obtaining that benefit. Part IVA includes the multinational anti-avoidance law and the diverted profits tax, which imposes tax at 40% on profits diverted offshore, and the goods and services tax has its own anti-avoidance rule.

There is a promoter penalty regime for those who promote tax exploitation schemes, together with specific integrity rules addressing matters such as hybrid mismatches and debt deductions. Enforcement is supported by a well-resourced tax avoidance taskforce within the Australian Taxation Office.

### 5.8 Tariffs

Customs duties are imposed under the Customs Tariff Act 1995 (Cth) and are generally low, with many goods entering duty-free and a standard rate of 5% applying to some categories. Australia maintains an extensive network of free trade agreements, including with China, the United States, Japan, the United Kingdom and the parties to the Comprehensive and Progressive Agreement for Trans-Pacific Partnership

and the Regional Comprehensive Economic Partnership, which provide preferential or zero rates for qualifying goods.

Anti-dumping and countervailing measures provide targeted protection for some domestic manufacturing, such as steel, aluminium and certain chemicals. Tariffs are not a significant protectionist instrument in Australia; the more material current sensitivities arise from global trade tensions and from supply chain and critical-minerals policy rather than from tariff barriers.

## 6. Competition Law

### 6.1 Merger Control Notification

A new mandatory and suspensory merger control regime commenced on 1 January 2026 under the Competition and Consumer Act 2010 (Cth), as amended by the Treasury Laws Amendment (Mergers and Acquisitions Reform) Act 2024 (Cth). The ACCC is the sole first-instance decision-maker, replacing the former voluntary and informal clearance model and the separate authorisation process. This is the most significant change to Australian merger control in five decades.

An acquisition of shares or assets that has a connection to Australia must be notified, and must not be completed if it meets a monetary threshold or falls within a designated class. The principal thresholds, measured by Australian revenue, are as follows.

- Large merged firm: the combined Australian revenue of the merger parties is at least AUD200 million, and either the target's Australian revenue is at least AUD50 million or the global transaction value is at least AUD250 million.
- Very large acquirer: the acquirer group's Australian revenue is at least AUD500 million and the target's Australian revenue is at least AUD10 million.
- Serial or creeping acquisitions: separate cumulative thresholds aggregate Australian revenue from acquisitions of the same or substitutable goods or services over the previous three years. Very small acquisitions, broadly those with target Australian revenue below AUD2 million, are excluded.
- From 1 April 2026, further thresholds capture certain asset acquisitions and acquisitions that cross voting power levels of 20% or 50%, even without a change of control.

The regime covers acquisitions of shares, units and interests in managed investment schemes and acquisitions of assets, and brings joint ventures and certain land and development acquisitions within scope, subject to exemptions, while small acquisitions are excluded. Because the thresholds are objective and financial, many transactions that previously raised no competition concern now require notification, so deal timetables and conditions must build in clearance, and the competition assessment that was once considered within the foreign investment process is now conducted separately by the regulator.

### 6.2 Merger Control Procedure

An acquisition is notified through the regulator's acquisitions portal. Pre-notification engagement is encouraged but not mandatory, and a filing fee applies, from which small businesses are exempt. The regulator publishes notified acquisitions on a public register and publishes its reasons for decisions, which over time will give the market greater visibility of its approach.

For suitable acquisitions that plainly raise no competition concern, a party may instead apply for a notification waiver, which, if granted, removes the obligation to notify. Where no waiver is sought or available, the notified acquisition proceeds through the regulator's phased review. A first phase, with a statutory timetable, is expected to resolve the substantial majority of matters by clearance, while transactions that raise concerns proceed to a more detailed second phase, with a longer timetable and the ability to consider remedies and undertakings; a public benefit pathway also exists, and decisions are subject to limited review by the Australian Competition Tribunal.

The substantive question is whether the acquisition would have the effect, or be likely to have the effect, of substantially lessening competition, which now expressly includes creating, strengthening or entrenching a substantial degree of market power. Completing a notifiable acquisition without approval, a waiver or an applicable exemption can have serious

consequences, including the risk that the transaction is void and significant penalties, as follows:

- for corporations up to the greater of AUD50 million, three times the benefit, or 30% of Australian turnover during the period of the breach; and
- for individuals up to AUD2.5 million.

Premature integration or co-ordination between the parties before clearance also carries risk.

### 6.3 Cartels

Part IV of the Competition and Consumer Act 2010 (Cth) prohibits cartel conduct, including price fixing, restricting outputs, allocating markets or customers and rigging bids, both as criminal offences and as civil contraventions, with the Commonwealth Director of Public Prosecutions prosecuting serious cases. The Act also prohibits anti-competitive agreements and concerted practices, and exclusive dealing, that have the purpose or effect of substantially lessening competition.

The prohibitions have extraterritorial reach, applying to conduct engaged in outside Australia by bodies corporate carrying on business in Australia, and to conduct affecting a market in Australia. Penalties mirror those for the merger regime, and an individual convicted of a criminal cartel offence may be imprisoned for up to ten years, in addition to receiving fines. An immunity and co-operation policy is available to the first participant in a cartel to come forward.

### 6.4 Abuse of Dominant Position

Australia prohibits the misuse of market power under Section 46 of the Competition and Consumer Act 2010 (Cth): a corporation that has a substantial degree of power in a market must not engage in conduct that has the purpose, effect or likely effect of substantially lessening competition. There is no separate prohibition on abuse of dominance, and no general prohibition on the abuse of economic dependence of the kind found in some civil law systems.

Imbalances in commercial dealings are instead addressed through other tools, including:

- the prohibitions on unconscionable conduct in the Australian Consumer Law;
- the regime for unfair contract terms in standard-form consumer and small business contracts; and
- prescribed industry codes such as the Franchising Code.

The regulator continues to advocate for a general prohibition on unfair trading practices to capture conduct that distorts decision-making but is not presently unlawful. Contraventions of the unilateral conduct prohibition attract the same penalties as other competition contraventions.

## 7. Intellectual Property

### 7.1 Patents

Patents are governed by the Patents Act 1990 (Cth) and registered by IP Australia. A standard patent protects an invention that is novel, involves an inventive step and is useful, for a term of 20 years, extendable to 25 years for certain pharmaceutical patents. New innovation patents are no longer available, although innovation patents granted before the phase-out continue until they expire.

Protection is obtained by application and examination leading to grant. Infringement is enforced by proceedings in the Federal Court, and remedies include injunctions, damages or an account of profits, and delivery up or destruction of infringing articles.

### 7.2 Trade Marks

Trade marks are governed by the Trade Marks Act 1995 (Cth) and registered by IP Australia. A sign that distinguishes goods or services may be registered for an initial period of ten years and renewed indefinitely, giving the owner the exclusive right to use the mark, and to authorise others to use it. Registration is enforced by infringement proceedings, and unregistered marks and get-up are protected by the tort of passing off and by the misleading-conduct provisions of the Australian Consumer Law.

Trade marks are central to franchising, because the brand is the core asset of a franchise system. Franchisors register their marks and license them to fran-

chisees on controlled-use terms, and protect their get-up, domain names and social media handles. In inbound and master-franchise arrangements, registering the marks early guards against brand squatting. Security can be granted over registered intellectual property to support financing.

### 7.3 Industrial Designs

Designs are protected under the Designs Act 2003 (Cth) and registered by IP Australia. Registration protects the overall visual appearance of a product, comprising its shape, configuration, pattern or ornamentation, where the design is new and distinctive.

A registered design is protected for an initial period of five years, renewable to a maximum of ten years, and must be both registered and certified before it can be enforced. Remedies for infringement are consistent with those available for other intellectual property rights. A reform to align Australian design protection more closely with international practice has been under consideration.

### 7.4 Copyright

Copyright is governed by the Copyright Act 1968 (Cth) and arises automatically on creation, without any system of registration. It protects original literary, dramatic, musical and artistic works, as well as films, sound recordings, broadcasts and published editions, generally for the life of the author plus 70 years, with other terms applying to other subject matter.

The owner has exclusive rights to reproduce, communicate and publish the work, and authors enjoy moral rights of attribution and integrity. Infringement is enforced in the Federal Court, with remedies including injunctions, damages or an account of profits, and additional damages for flagrant infringement.

### 7.5 Others

Software is protected as a literary work under copyright law. There is no separate database right; a database or other compilation is protected only to the extent that copyright subsists in the originality of its selection, arrangement or compilation, rather than in the underlying data as such. Trade secrets and confidential information are protected not by registration but by the equitable action for breach of confidence and by contract, through non-disclosure agreements and the duties owed by employees.

Other rights include protection for circuit layouts under the Circuit Layouts Act 1989 (Cth) and for plant varieties under the Plant Breeder's Rights Act 1994 (Cth), and the protection of unregistered get-up and reputation through passing off and the Australian Consumer Law. Domain names are administered by the national domain authority.

## 8. Data Protection

### 8.1 Applicable Regulations

Data protection is governed principally by the Privacy Act 1988 (Cth) and the 13 Australian Privacy Principles, which regulate how entities handle personal information. The Act applies to Australian government agencies and to private sector organisations – generally those with annual turnover above AUD3 million together with certain others. The Notifiable Data Breaches scheme requires eligible data breaches to be reported to the regulator and to affected individuals.

The regime was significantly strengthened by the Privacy and Other Legislation Amendment Act 2024 (Cth), which introduced:

- a statutory tort for serious invasions of privacy from 10 June 2025;
- a tiered civil penalty regime;
- a doxxing offence;
- enhanced security obligations;
- a Children's Online Privacy Code to be in place by December 2026; and
- transparency obligations for automated decision-making from December 2026.

A further tranche of reform is being progressed, which may include a fair and reasonable test for the handling of personal information. Sector and state laws on matters such as health records, surveillance and unsolicited communications operate alongside the Act.

### 8.2 Geographical Scope

The Privacy Act has extraterritorial reach. It applies to organisations that carry on business in Australia, including foreign organisations, even where personal information is collected or held outside the country, so a foreign business that targets or deals with customers in Australia can be subject to the Australian Privacy Principles.

The disclosure of personal information overseas is regulated by Australian Privacy Principle 8, under which an entity generally remains accountable for the handling of information by an overseas recipient unless an exception applies, such as comparable protection or informed consent. The statutory tort for serious invasions of privacy may also be relevant to cross-border conduct affecting individuals in Australia, although questions of jurisdiction and applicable law will need to be considered case by case.

### 8.3 Role and Authority of the Data Protection Agency

The Office of the Australian Information Commissioner, led by the Privacy Commissioner, regulates privacy at the federal level. It investigates complaints and conducts own-motion investigations, accepts enforceable undertakings, makes determinations and issues guidance, and can seek civil penalties in the Federal Court.

The 2024 reforms expanded the regulator's toolkit, adding tiered penalties, infringement notices for specified breaches and a mid-tier penalty for interferences with privacy that are not serious, and the Commissioner has signalled a more enforcement-focused approach. In addition, individuals can now bring proceedings directly under the statutory tort, without relying on the regulator to act.

## 9. Looking Forward

### 9.1 Upcoming Legal Reforms

Several reforms across the fields above are expected to remain prominent through 2026 and beyond.

#### Merger Control

The new mandatory merger regime commenced on 1 January 2026, and further thresholds capturing certain asset acquisitions and voting power changes came into effect from 1 April 2026. The regulator's guidance and its decision-making practice will continue to develop as the market adjusts to the new system.

#### Franchising

Australia has the most comprehensive and complex franchising regulation in the world. The remade Franchising Code, made as the Competition and Consumer (Industry Codes—Franchising) Regulations 2024, commenced on 1 April 2025 with a grace period to 1 November 2025, implementing recommendations of the independent review by Dr Michael Schaper. It expands civil penalties, extends protections relating to a reasonable opportunity to make a return on investment and to early termination, and gives the small business ombudsman a power to name franchisors who do not engage in dispute resolution. The government has consulted on, but not yet legislated, a possible franchisor licensing scheme.

#### Foreign Investment

In May 2026, the government announced a package of reforms to streamline and strengthen the foreign investment framework. From 1 January 2027, it will aim to decide all low-risk applications within 30 days, remove mandatory notification for selected low-risk acquisitions, and extend the default validity of approvals from 12 to 24 months, while strengthening its tools to scrutinise sensitive sectors and to enforce compliance. Where a transaction also requires ACCC clearance, foreign investment approval will continue to follow the regulator's decision.

#### Privacy, Data and Anti-Money Laundering

A second tranche of privacy reform is being progressed, with the Children's Online Privacy Code and transparency obligations for automated decision-making to take effect by December 2026. Anti-money laundering and counter-terrorism financing obligations extend to certain designated services provided by lawyers, accountants, conveyancers and real estate agents from 1 July 2026, which is significant for professional advisers and for property and corporate transactions.

### Tax, Superannuation, Climate and Consumer Law

Australia's Pillar Two global and domestic minimum tax is bedding in, with its domestic minimum tax recognised as having QDMTT safe harbour status on the OECD central record, alongside public country-by-country reporting and continuing multinational integrity measures. The Payday Super reforms, requiring the superannuation guarantee to be paid each payday, take effect from 1 July 2026.

Mandatory climate-related financial disclosure is being phased in for large entities and financial institutions, with thresholds expanding through 2026 and 2027. The government is considering a general prohibition on unfair trading practices, while enforcement of the unfair contract terms regime, which has carried civil penalties since November 2023, remains a regulator priority.

# Trends and Developments

**Archer Scott Lawyers**

**Archer Scott Lawyers** is an independent Australian corporate and commercial law firm with offices in Melbourne, Sydney and Adelaide. The globally connected, results-driven practice combines big-firm expertise with the focus, agility and value of a boutique firm. Archer Scott advises businesses, investors, founders and organisations across areas including mergers and acquisitions, corporate advisory, projects and construction, franchising, start-ups and venture capital, employment, intellectual property, commercial real estate, and sports law. Its approach is centred on practical commercial outcomes, efficient value creation and long-term client relationships. The firm emphasises clear risk management rather than unnecessary complexity, helping clients understand, categorise and manage legal and commercial risks. With experience drawn from significant Australian corporate transactions and global networks, Archer Scott aims to deliver strategic, innovative and client-focused legal advice that supports business growth, protects brand value and helps clients realise long-term commercial opportunities.

## Authors

**Scott Colvin** is an award-winning M&A lawyer who has advised on some of Australia's most significant transactions. He has particular depth in franchising, food and retail, and large-scale distribution, and acts for founders and corporates across the full deal life cycle. Scott has worked in market-leading top-tier global and national law firms. He holds a Juris Doctor from the University of Melbourne and a Certificate of Applied Corporate Finance from Cambridge University, among other qualifications.

**Warren Scott** is an internationally recognised expert in corporate law and franchising, and a natural fit to lead the sale or purchase of a mid-market business. He is sought out for his strategic and commercial approach and his network, and he concentrates on the goal, whether that is a quick transaction or a long-term growth strategy. Rather than focusing on billing by the six-minute unit, Warren focuses on those activities that build actual value through innovation, strategy and his national and global network. He holds a Masters of Commercial Law from Melbourne University.

**Lachlan Speirs** works across the corporate, M&A and franchising practices at Archer Scott, advising clients on a broad range of commercial and transactional matters. He has experience in assisting franchisors with Franchising Code compliance, disclosure documents, franchise agreements and related commercial arrangements. Lachlan supports clients through business sales and acquisitions, due diligence processes, transaction documentation and general commercial contracting. He holds an LLB (finance and law), including study at the University of Leeds in EU Law and Trade Law.

## Doing Deals in Australia in 2026: Merger Reform, Franchising and the New Compliance Frontier

2026 is a landmark year for anyone investing in, acquiring or franchising a business in Australia. Several structural shifts have arrived more or less together: a mandatory merger control regime, a recalibrated foreign investment framework, a comprehensively remade Franchising Code, and a tighter cross-cutting compliance environment spanning employment, privacy, financial crime, climate reporting and tax. Each alone would reshape deal practice; together they change how transactions are planned, priced and executed.

These reforms did not appear in isolation. They reflect a broader policy direction that has brought Australia closer to the practice of its international peers and that responds to public concern about market concentration, the fairness of dealings with small business, and the protection of personal information. For international investors and their advisers, the headline is not that Australia has become harder to do business in; it remains an open, rule-of-law market with transparent institutions and a deep professional and financial services sector. What has changed is that the sequence and certainty of deal execution now demand earlier and more integrated planning.

This article looks past the black-letter detail to the commercial consequences:

- how the new competition gateway affects deal certainty and structuring;
- how foreign investment review now sits alongside it;
- what the reset of the franchising framework means for brand owners and network transactions;
- how an expanding compliance perimeter is reshaping diligence, warranties and integration; and
- how tax considerations affect the way acquisitions are financed.

The common thread is that 2026 rewards preparation and penalises improvisation.

### *The merger gateway becomes mandatory, and strategic*

The most consequential change is the move away from a voluntary and informal clearance culture, from 1 January 2026, to a mandatory and suspensory regime in which the competition regulator is the gatekeeper for transactions that meet objective financial thresholds. For decades, parties could close many deals without ever engaging the regulator, and even contentious matters were handled through an informal, often confidential process. That optionality has gone.

The practical effect is felt first in deal certainty and timing. Where a transaction is caught, completion is conditional on Australian Competition and Consumer Commission (ACCC) approval. A notifiable acquisition completed without that approval, or without an applicable waiver or exemption, carries serious consequences, including the risk that it will be declared void and significant penalties will be imposed. Acquirers can no longer treat competition as a residual risk to be managed after signing; it becomes a gating condition that shapes the timetable from the outset.

The substantive question the regulator asks is whether a transaction would substantially lessen competition – a test that now expressly extends to acquisitions that create, strengthen or entrench a substantial degree of market power. That formulation signals particular attention to consolidation in already concentrated sectors, and to the acquisition by large incumbents of smaller or emerging rivals. Investors in areas that have drawn regulatory interest – including digital platforms, supermarkets and retail, healthcare and essential services – should expect closer review, and should prepare a competition narrative that addresses entrenchment as well as any direct overlap.

A central feature of the new system is the notification waiver. For acquisitions that clearly raise no competition concern, parties can apply to the ACCC for a waiver that, if granted, removes the obligation to notify, offering a faster and less burdensome route than a full notification. Choosing between a waiver application and a Phase 1 notification has quickly become one of the first strategic decisions in a deal. The early figures bear this out: in the regime's first quarter, to 31 March 2026, the ACCC reported receiving 50 notifications and 108 waiver applications, clearing 39 matters in Phase 1 and moving two to Phase 2, while meeting its commitment to decide around 80% of acquisitions within 20 business days.

A second effect is on deal structuring and risk allocation. Conditions precedent, long-stop dates and the allocation of regulatory risk between buyer and seller are now central negotiating points in Australian share and asset sale agreements, as they have long been in larger cross-border deals. Parties are debating who bears the risk of a clearance that is delayed or refused, whether the buyer must accept remedies through so-called "hell or high water" obligations, and how break fees and reverse break fees should be calibrated. Sellers in competitive auctions increasingly screen bidders for regulatory deliverability, not merely on price.

In practical terms, this changes how deals are run from the very first conversation.

- Earlier competition analysis: a credible view on whether a deal is notifiable or a candidate for a waiver, and on its substantive risk, is now needed at the term-sheet stage rather than after signing.
- Tighter conduct discipline: integration planning and information exchange before clearance, sometimes called "gun-jumping", carry real risk, so clean-team protocols and conduct guidelines matter.
- Aggregation awareness: serial and "creeping" acquisitions and bolt-on roll-ups can be captured even where any single transaction looks small, which bears directly on buy-and-build strategies.
- Co-ordinated approvals: an ACCC approval or waiver is a separate requirement from foreign investment approval, so inbound investors must run the two workstreams in parallel, since one does not substitute for the other.

At the level of transaction documents, the regime is driving more elaborate regulatory provisions. Sale agreements increasingly specify the standard of effort a buyer must use to obtain clearance, the extent to which it must accept divestitures or behavioural commitments, and the consequences if clearance is not obtained by the long-stop date. Ticking fees that compensate a seller for a prolonged clearance period, reverse break fees payable if approval fails, and detailed co-operation and information-sharing covenants are becoming familiar features. Allocating these risks well at the drafting stage is now a core part of protecting deal value.

Private equity and roll-up acquirers feel this most acutely. Buy-and-build strategies (a staple of mid-market private equity and of franchising consolidation) depend on executing a series of smaller acquisitions quickly. The aggregation rules mean that a programme of bolt-ons can attract scrutiny that no individual transaction would, so sponsors are now mapping their pipeline against the regime before the first deal rather than after the third.

The change is also felt well beyond large, obviously contentious mergers. Because the thresholds are financial and objective, mid-market transactions that raise no real competition concern can still require notification, adding cost and time to deals that would previously have closed without regulatory contact. For acquirers pursuing several transactions, the cumulative compliance burden is material, and building noti-

fication capability and budget into the deal model is now part of disciplined planning. The publication of decisions and reasons on the public register will, over time, give the market a clearer sense of how the regulator approaches particular sectors, but in the first year the prudent course is to treat clearance as a project to be managed from day one.

### *Foreign investment: open, but security-conscious*

For inbound investors, foreign investment review sits alongside merger control as the second approval gateway, and the two must be planned together. Australia continues to welcome foreign capital, and the Treasury's stated direction is a framework that is faster for low-risk, passive investment and more demanding where national security is engaged. A streamlined pathway for clearly low-risk proposals is being developed, while sensitive areas attract closer scrutiny, including critical infrastructure, critical minerals, defence-related capability, and data and technology.

The practical consequences for deal makers are about sequencing and conditionality. A foreign investment approval is not a substitute for an ACCC approval or waiver, so the two workstreams run in parallel, and the transaction timetable must accommodate both. Acquirers in sensitive sectors should expect conditions and should engage early, while those in non-sensitive sectors can increasingly expect a more predictable and faster path. Identifying which category a deal falls into, at the outset, is now a core part of deal planning.

### *The Franchising Code, reset*

Australia has one of the most developed franchising sectors in the world, spanning food and beverage, retail, health and fitness, and a wide range of service businesses, and it is a common route for international brands to enter the market. That prominence is precisely why the sector attracts close regulatory attention, and why the remade Franchising Code, which took effect in 2025 following an independent review, is significant to inbound investors as much as domestic operators.

For franchisors, whether established domestic networks or international brands expanding into or within Australia, the reset is best understood not as a technical compliance update but as a shift in the balance of the franchisor and franchisee relationship, and in the consequences of getting it wrong. The most commercially significant features are the expanded penalty exposure and the strengthened protections for franchisees. A wider range of obligations now carries civil penalties, and the regulator and the small business ombudsman have sharper tools, including the ability to publicise franchisors who decline to participate in dispute resolution. For brand owners, the reputational dimension of that power can be as material as the financial one, particularly for consumer-facing brands.

Enhanced protections around a franchisee's reasonable opportunity to make a return on investment, and around compensation for early termination and exit, change network economics. Franchisors are revisiting their unit economics, disclosure practices and termination pathways, because arrangements that once shifted most of the risk onto franchisees are now more closely scrutinised. The Code also sharpens transparency around marketing and other co-operative funds, requiring franchisors to administer and account for them more rigorously, and it reinforces the pre-contract disclosure process on which prospective franchisees rely. The practical message is that a franchise system must be able to demonstrate, not merely assert, that its model is fair and sustainable.

The minimum requirements in Australia require a franchisor to provide a comprehensive disclosure document and independent advice certificates in a proscribed format prior to a franchisee making an investment decision to purchase a franchise or master franchise.

For transactions, this reshapes diligence on both the buy side and the sell side.

- Buying a franchise network: diligence now extends well beyond the disclosure document to the network's penalty exposure, dispute history and termination practices, and the robustness of its unit economics, because these drive both value and post-completion risk.
- Selling or restructuring a network: vendors should expect closer examination of compliance posture,

and should prepare disclosure and any remediation accordingly.
- Inbound brand and master-franchise deals: international brand owners entering Australia through master-franchise or area-development structures must align their global systems with the Australian Code, and should register and protect their trade marks early, since the brand is the core asset and the value of the system depends on it.

Looming over the sector is the prospect of a franchisor licensing scheme. The government has consulted on, but not yet legislated, such a regime; if introduced, it would represent a further step-change, moving franchising closer to a regulated-entry model. Even as a possibility, it is prompting well-advised franchisors to professionalise their governance and compliance now, both to reduce present risk and to be ready if the regulatory perimeter expands. Franchising in Australia remains attractive and well supported, but the margin for casual compliance has narrowed.

### *An expanding compliance perimeter shapes deal value*

Beyond competition, foreign investment and franchising, a cluster of reforms in employment, privacy, financial crime and sustainability is quietly reshaping how deals are valued and integrated. Individually, these are compliance developments; collectively, they have become factors in price, warranties and completion planning.

#### *Employment*

Recent workplace reforms have changed the cost and risk profile of the workforce that comes with a business. The Secure Jobs, Better Pay changes limited the use of fixed-term contracts, and the later Closing Loopholes reforms addressed casual employment, labour hire, "same job, same pay" and the criminalisation of intentional wage underpayment. Acquirers must now diligence workforce classification and pay compliance carefully, because historical underpayment is not only a financial liability but, where intentional, a potential criminal exposure, and it features increasingly in warranties, indemnities and purchase price adjustments. In franchise conversions and multi-site businesses, where workforces are large and award-covered, this is a first-order issue.

#### *Privacy and data*

Australia's privacy regime has been materially strengthened, with a new statutory cause of action for serious invasions of privacy that commenced in June 2025, tougher penalties and a more enforcement-minded regulator. Data assets and data-handling practices are now a standard part of diligence, and exposure for historical breaches is a live warranty topic. For technology-, consumer- and data-rich targets in particular, the quality of a target's privacy compliance has become a value and risk issue in its own right.

#### *Financial crime and gatekeeper reforms*

From 1 July 2026, anti-money laundering and counter-terrorism financing obligations extend to certain designated services provided by lawyers, conveyancers, accountants, trust and company service providers, real estate professionals and dealers in precious metals and stones. For transactions, the practical effect is likely to be more formal customer due diligence, beneficial ownership checks and source-of-funds processes around property, corporate structuring and related deal services. Advisers and their clients should expect these steps to become a routine part of deal execution.

#### *Climate and sustainability*

Mandatory climate-related financial disclosure, which is a sustainability reporting obligation under the Corporations Act, is being phased in for large entities and financial institutions, with the largest entities reporting for periods from 1 January 2025 and the net widening over the following years. For deal makers, this elevates climate and sustainability information from a reputational consideration to a disclosure obligation, with consequences for representations, warranties and ongoing reporting in transactions involving larger targets.

The cumulative effect is that diligence is broader and deal documents are doing more work. Buyers are pricing compliance risk, sellers are preparing more thorough disclosure, and integration plans are accounting for obligations that did not exist a few years ago. The advisers who add the most value are those who can connect these threads across competition, foreign investment, franchising, employment, privacy, finan-

cial crime and sustainability into a single coherent transaction strategy.

### *Financing and structuring: the tax overlay*

Tax is rarely the first thing international investors consider when they look at Australia, but it increasingly shapes how acquisitions are structured and financed. Three features in particular warrant early attention in any inbound deal.

First, the earnings-based limits on debt deductions, which broadly cap net debt deductions by reference to 30% of tax EBITDA for multinational groups, constrain how much benefit a buyer can extract from leveraging an Australian acquisition. Highly geared structures that once delivered substantial interest deductions may now see those deductions capped, which affects after-tax returns and the choice between debt and equity funding. Acquisition structures and shareholder loan arrangements should be modelled against these limits at the outset rather than assumed.

Second, for large multinational acquirers, the global and domestic minimum tax, which underpins a minimum effective rate of 15%, adds a layer of analysis to any structure that touches low-taxed jurisdictions, and it is now a standard item in structuring and diligence for groups above the relevant size. Third, on the disposal side, a foreign resident capital gains withholding obligation applies to acquisitions of certain Australian property and relevant interests from foreign residents, at a rate of 15% since 1 January 2025, so buyers and sellers alike now build clearance and withholding mechanics into completion. None of this is prohibitive, but each rewards early, joined-up tax and legal planning.

Entrants into Australia should also be aware of proposed changes to the taxation of Australian trusts (formerly a common corporate vehicle). The government has proposed a minimum 30% tax on trusts, which would see trusts taxed at the same effective rate as many Australian private companies, lessening their use case in many circumstances.

### *Outlook for 2026 and beyond*

None of this diminishes Australia's appeal. It remains an open economy with transparent institutions, a sophisticated professional and financial services sector, and deep connections to both Asia and the major Western markets through an extensive free trade network. Capital continues to flow into infrastructure, the energy transition, resources, healthcare, technology, and consumer and franchised businesses, even against a softer regional deal backdrop.

What has changed is the premium on preparation. The mandatory merger regime rewards parties who plan competition and foreign investment strategy together and from the outset; the remade Franchising Code rewards franchisors who can demonstrate fair and sustainable systems; and the wider compliance frontier rewards buyers and sellers who diligence and document thoroughly. The transactions that struggle in 2026 will be those that treat these elements as afterthoughts.

For international investors, the practical takeaway is straightforward: engage early, build realistic timetables and risk allocation into transaction documents, and choose advisers who can integrate the competition, foreign investment, franchising, employment and tax dimensions of a deal into one strategy. Approached that way, Australia in 2026 is as attractive a place to do business as ever, and a more predictable one for those who come prepared.

**GrahamThompson** has been one of the pre-eminent law firms in The Bahamas since 1950. The firm operates four offices conveniently located throughout The Bahamas. It is well regarded for its work with high-net-worth private clients. GrahamThompson's key practice areas include: private clients, trusts and estates (estate and trust structuring, foundations, trust company licensing, and private trust companies); banking and finance (real estate financing, asset leasing and financing, corporate finance, restructuring, financial services law and regulation, loans, debentures and mortgages, and receivership); corporate, commercial and securities (capital markets, M&A, pension schemes, private equity funds, unit trusts, investment funds and IPOs); property and development (hotels, resorts and mixed-use developments, condominiums and timeshares, government approvals and exchange control, private and commercial mortgages, real property taxes, subdivision planning and structuring, second-home acquisitions and sales, and title insurance and opinions); and insurance (captive insurance, and domestic and external insurance).

## Authors

**Judith Whitehead KC** is the managing partner of GrahamThompson. Formerly a litigation partner concentrating on family law, she focuses on high-net-worth private clients, and negotiations with the government on large investment projects. Her practice areas include private clients, trusts and estates, property and development, and immigration and naturalisation. Judith is a member of The Bahamas Bar Association, the International Bar Association, and the board of directors of The Lyford Cay Foundations Inc, and serves in corporate governance capacities for various entities in the financial services industry. She has served in the role of Acting Supreme Court Justice, and is a former director of the World Services Group.

**Michaela Sumner-Budhi** is a partner at GrahamThompson, with extensive experience in transactional and litigation practices. Her work for GrahamThompson has spanned the firm's litigation, employment and labour, property, commercial, and financial services practice areas. Her specialisations include risk management, medical ethics, medical, medical malpractice, commercial, and labour law. She has served on the Hospitals and Health Care Facilities Licensing Board as chair-person, the Compliance Sub-Committee of the National Stem Cell Ethics Committee, and the National Medical Ethics Committee for the COVID-19 pandemic.

**Sean McWeeney Jr.** is a partner in GrahamThompson's financial services and private client practices. His practice is organised around two pillars: technology law, including data protection and privacy, e-commerce, media, digital policy and information and communications technology; and private client work, including estate planning, digital estate planning, probate and estate administration.

**Charisma Romer-Cartwright** is a partner in GrahamThompson's corporate and financial services and private clients and trusts practices. She regularly advises on trust-related matters, investment funds, corporate and regulatory-related matters, and commercial transactions. She has processed hundreds of cross-border trust and estate planning transactions. She is also a TEP member of The Society of Trust and Estate Practitioners.

**Hubert Edwards** is an associate in GrahamThompson's corporate and financial services, dispute resolution and tax practices. His practice focuses primarily on banking, capital markets, including matters such as CRS and AML/CFT, civil and commercial litigation, property dispute litigation, regulatory and tax matters. He has lectured and presented on anti-

money laundering, corporate governance and regulatory subjects. He has also written extensively and presented on fiscal, economic and national development issues. A chartered accountant with extensive experience in financial services, he is a former deputy managing director of a commercial bank and a former banking regulator.

## 1. Legal System

### 1.1 Legal System and Judicial Order

As a former colony under British rule, the foundation of Bahamian law and the legal system of The Bahamas is the common law of England.

The Bahamas is a parliamentary democracy based on the Westminster system of government consisting of three branches: the executive, a bicameral parliament, and the judiciary. The relationship between each branch is governed by the principle of separation of powers and the operation of each branch is enunciated in a written constitution.

The judiciary of The Bahamas comprises the Magistrates' Court, the Supreme Court, the Court of Appeal, and the Judicial Committee of His Majesty's Privy Council.

The Magistrates' Court is presided over by stipendiary and circuit magistrates who exercise summary jurisdiction in criminal matters and civil matters involving amounts not exceeding BSD20,000. Currently, there are 17 Magistrates' Courts throughout The Bahamas, with most located in New Providence (the most populous island in The Bahamas).

The Supreme Court bench consists of a Chief Justice and not more than 20 additional justices. The Supreme Court has unlimited original jurisdiction in civil and criminal matters and such appellate jurisdiction as may be conferred upon it by law.

The Court of Appeal, the highest resident court within The Bahamas, is made up of not more than six justices of appeal, inclusive of its President, and has jurisdiction in criminal, constitutional, and civil matters.

The Judicial Committee of His Majesty's Privy Council is the highest court for The Bahamas, which sits in England to hear appeals from the Court of Appeal.

## 2. Restrictions on Foreign Investments

### 2.1 Approval of Foreign Investments

The prior approval of the government of The Bahamas is required before a foreign investor invests in The Bahamas. All non-Bahamians are required to submit a formal investment proposal to the Bahamas Investment Authority (BIA), which serves as the secretariat of the National Economic Council and The Bahamas Investments Board.

#### Investment in Bahamian Business

The current investment policy reserves certain sectors of the Bahamian economy for investment by Bahamians, as follows:

- wholesale and retail operations;
- commission agencies engaged in the import/export trade;
- real estate and domestic property management agencies;
- domestic newspapers and magazine publications;
- domestic advertising and public relations firms;
- security services;
- domestic distribution of building supplies;
- construction companies, except for special structures for which international expertise is required;
- personal cosmetic/beauty establishments;
- commercial fishing within the exclusive economic zone of The Bahamas;
- auto and appliance service operations;
- public transportation inclusive of locally solicited charter boat tours;
- landscaping; and
- commercial motorised watercraft/commercial leisure boating activity.

(International investors may engage in the wholesale distribution of any product the investor produces locally.)

The following sectors are open to foreign investment; the list is non-exhaustive, and investors are encouraged to communicate their intended investment activity to the BIA:

- touristic resorts;
- upscale condominium, timeshare, and second-home development;
- information and data processing services;
- assembly industries;
- hi-tech services;
- ship repair and other services;
- light manufacturing for export;
- agro-industries;
- food processing;
- mariculture (the salt-water farming of fish, other animals, and plants, with the purpose of human consumption);
- banking and other financial services;
- captive insurance;
- aircraft services;
- pharmaceutical manufacture; and
- offshore medical centres.

In addition to BIA approval, Exchange Control Regulations and policies may bear upon a particular transaction and in certain instances may require that foreign investment inflows are granted approval, that entities wholly or partially owned by foreign investors are appropriately designated, and that "Approved Investment Status" is granted to foreign investors or lenders with respect to their investment or loans. Over recent years (including in early 2024), the Central Bank of The Bahamas has taken various steps to simplify or "relax" the Exchange Control regime and administrative arrangements, or to delegate authority for certain matters to local financial institutions, and a prudent investor or lender would want to obtain advice regarding what approvals may be required (or now dispensed with or delegated to local banks) in respect of their transaction.

#### Investments in Property

Subject to any exceptions in the International Person's Landholding Act, non-Bahamians acquiring real property or having an interest in real property must first apply for a permit from the Investment Board. Eligibility for a permit includes a due diligence review of the intended purchaser.

## 2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance

### Steps to Obtain Approval

A foreign investor interested in undertaking a significant development project or commercial enterprise would, as a first step be required to obtain BIA approval to invest in a business within The Bahamas. Such application must be supported, in addition to routine due diligence materials on the applicant, by a detailed investment proposal to the BIA. The proposal should include explicit details regarding the nature of the investment, the island on which the investment/business would take place, due diligence and financial details regarding the beneficial owners, employment projections for Bahamians and non-Bahamians, whether work permits or any concessions under the relevant legislation are required, and whether the investment will include the acquisition of land.

The proposal is reviewed by the BIA and, where required, based on internal administrative policies, referred to the National Economic Council for a decision. This process may take between one and six months, depending on the nature and complexity of the investment.

Following approval from the BIA, the investor will be directed to:

- comply with any other relevant legislation;
- make applications to the relevant ministries and departments to obtain the relevant approvals to undertake the proposed venture; and
- apply for a business licence under the Business Licence Act.

A business licence may be approved within 10 to 12 business days of receipt of an application with supporting information, though longer timelines are common for more complicated applications.

In addition to BIA approval, the investor must obtain the approval of the Central Bank of The Bahamas (the "Bank"), pursuant to the Exchange Control Regulations, to make the required investment for recognition of the beneficial owners of the enterprise and, in certain instances, be granted Approved Investment Status in relation to their foreign currency investment.

The timeframe for this process is between two and eight weeks.

### Consequences of Investing Without Approval

In as much as the prior approval of the BIA and the Bank are respectively required before a foreign investor makes a capital investment within The Bahamas, a major consequence of investing without the requisite approvals is that the investor cannot receive returns on capital.

The Bank, via the Exchange Control Regulations Act and the Exchange Control Regulations, has wide powers to make orders to prevent capital transactions involving the movement of funds to and from The Bahamas. The Bank also regulates and may restrict the conversion of Bahamian dollars to a foreign currency to make capital returns to non-Bahamians, where the underlying transaction/investment did not receive required approvals.

A failure to obtain from the Investments Board a Landholding Permit or Certificate, where such approval is required pursuant to the International Persons Landholding Act, may also result in the relevant transfer instrument or deed being null and void for all purposes of law.

### Sanctions

Sanctions under the Exchange Control Regulations Act for non-compliance with the Exchange Control Regulations include:

- imprisonment for one year upon summary conviction; and/or
- a fine ranging from BSD4,000 to a fine not exceeding three times the amount or value of the currency, security, payment, property, etc, in question.

Where a foreign investor fails to obtain a business licence under the Business Licence Act, they may be liable upon summary conviction to a fine of BSD5,000 and a sum of BSD100 for each day the offence continues subsequent to the date to which the conviction relates.

### 2.3 Commitments Required From Foreign Investors

Generally, the conditions attached to the approval of foreign investors are found within a Heads of Agreement (setting out key terms that form the basis on which two parties intend to form a contract) executed between the government of The Bahamas and the foreign investor. In this regard, certain factors such as the sector of the economy being considered for foreign investment, the environment or infrastructure of the area or island being considered, the nature and scope of the foreign investment, the number of jobs expected to be created and any applicable government concessions will help to determine the type of conditions for a particular foreign investment project.

For example, it is often the case that the government of The Bahamas will require within a Heads of Agreement that a certain number of jobs be filled by Bahamians, continuing education and training be made available to employees, suitable infrastructure and essential services be put in place, and safety measures implemented to protect a particular area or environment, just to name a few.

### 2.4 Right to Appeal

There is no specific legislative framework in place that gives investors the ability to challenge decisions if a particular investment is not authorised by the government of The Bahamas.

## 3. Corporate Vehicles

### 3.1 Most Common Forms of Legal Entity

The most common forms of legal entity within The Bahamas are companies incorporated under the Companies Act and the International Business Companies Act.

Some of the main characteristics of each type of company are outlined below.

#### Companies Incorporated Under the Companies Act

- minimum number of persons required to incorporate – two;
- minimum number of shareholders – two;
- minimum number of directors – two for private companies, three for public companies;
- minimum share capital – no;
- liability of members – limited by shares, limited by guarantee, limited by both shares and guarantee, or unlimited;
- share classes – multiple classes allowed;
- uses – local businesses, landholding, non-profits, and private trust companies;
- registered office – yes;
- registered agent – no;
- management and governance – outlined in the constitutional documents but otherwise subject to any unanimous shareholder agreement and legislative framework; and
- filing with the public registry – amongst other requirements pursuant to the legislation, an annual return that includes a list of the shareholders and a list of the directors and officers of the company is filed.

#### Companies Incorporated Under the International Business Companies Act

- minimum number of persons required to incorporate – two;
- minimum number of shareholders – one;
- minimum number of directors – one;
- minimum share capital – no;
- liability of members – limited by shares, limited by guarantee, limited by both shares and guarantee, or unlimited;
- share classes – multiple classes allowed;
- uses – local businesses, landholding, non-profits, and private trust companies;
- registered office – yes;
- registered agent – no;
- management and governance – outlined in the constitutional documents but otherwise subject to any unanimous shareholder agreement and legislative framework; and
- filing with the public registry – amongst other requirements pursuant to the legislation, a register of directors and officers is filed.

### 3.2 Incorporation Process

Within 48 hours from receipt of the relevant documents, a company may be incorporated under the

Companies Act and the International Business Companies Act. The main steps under both Acts are:

- reservation of the company name with the Registrar of Companies;
- filing of a memorandum of association with the Registrar of Companies;
- filing of the articles of association with the Registrar of Companies;
- filing of a statutory declaration with the Registrar of Companies; and
- payment of requisite stamp duty and incorporation fees.

## 3.3 Ongoing Reporting and Disclosure Obligations

### Companies Incorporated Under the Companies Act

Companies incorporated under the Companies Act are subject to annual reporting and disclosure requirements. The following lists must be submitted to the Registrar of Companies.

- A register of the managers and directors, and amendments thereto, along with their addresses and occupations.
- A listing of the shareholders of the company, their names and addresses, and the number of shares held by each person must be submitted to the Registrar following the annual ordinary general meeting of the company. A separate register containing the names and addresses of each shareholder as well as the names and addresses of persons who hold shares in a nominee capacity must be filed with the Registrar.
- A declaration of whether 60% of the shares of a company are beneficially owned by Bahamians must be made to the Registrar of Companies on an annual basis.
- A copy of a resolution of the members altering a company's memorandum or articles of association must be submitted to the Registrar.
- A written notice of the execution or termination of a Unanimous Shareholder Agreement must be filed with the Registrar of Companies within 15 days of the execution or termination of the agreement.

### Companies Incorporated Under the International Business Companies Act

Companies incorporated under the International Business Companies Act are subject to the following reporting and disclosure requirements.

- A written notice of the execution or termination of a Unanimous Shareholder Agreement must be filed with the Registrar of Companies within 15 days of the execution or termination of the agreement.
- A copy of the register of directors and officers of the company and a notice of a change in officers must be filed with the Registrar within 12 months of such change.
- The requisite resolutions amending the memorandum or articles of association of an international business company must be submitted to the Registrar within 28 days after such amendment.

### Recent Updates to Reporting and Disclosure Obligations

The Financial Action Task Force (FATF) adopted revisions to Recommendation 24 to reinforce global standards on the transparency of nominee shareholders and nominee directors. These revisions require jurisdictions to ensure that nominee arrangements are not misused to conceal beneficial ownership. The Bahamas, in adopting the provisions of Recommendation 24, amended the International Business Companies Act ("IBC Act"), the Companies Act (CA), and the Register of Beneficial Ownership Act ("ROBO Act") by the International Business Companies (Amendment) Act 2025, the Companies (Amendment) Act 2025, and the Register of Beneficial Ownership (Amendment) Act 2025, respectively, to impose restrictions concerning nominee director and nominee shareholder arrangements.

The recent amendments to the IBC Act and the CA require (i) disclosure of both the nominee and the person(s) on whose behalf the nominee holds the shares in the company's share register, and (ii) maintenance of declarations of trust in respect of the nominee relationship. The ROBO Act was amended such that both the nominee and the person(s) on whose behalf the nominee holds the shares are required to be disclosed in the Beneficial Ownership Secure System. Additionally, the CA and IBC Act were amended

such that the use of nominee directors is prohibited. Note, however, that the authors have taken the view that this restriction does not apply to the provision of directorial services where such directors are acting independently of the instructions of others and in the best interest of the company.

## 3.4 Management Structures

The directors of companies incorporated under the Companies Act and the International Business Companies Act are charged with the responsibility of managing the company. Generally, this rule is subject to any limitation as provided for in any unanimous shareholder agreement and the constitutional documents of the company.

### Companies Act

The typical management structure of a company is based on a single-tier system and consists of a board of directors responsible for appointing officers. However, subject to any limitation in the company's articles of association or a unanimous shareholder agreement, the directors may delegate their powers to a single director, a committee of directors, or officers, and specify their duties to manage the business and affairs of the company to them.

The officers are, however, restricted from issuing shares, declaring dividends, purchasing or redeeming shares, approving financial statements, or amending the company's articles of association.

### The International Business Companies Act

The usual management structure of an international business company is also based on a single-tier system and consists of a board of directors responsible for the appointment of officers. Subject to any limitations in the memorandum or articles of association or in a unanimous shareholder agreement, each officer or agent has similar powers and authority to the directors, except the power to fix emoluments of directors with respect to services provided to the company.

Directors of an international business company are also permitted to designate one or more committees, each consisting of one or more directors. The only limitations of such committees are the powers to fill a vacancy in the board of directors and appoint and remove officers or agents of the company.

## 3.5 Directors', Officers' and Shareholders' Liability

The directors owe a fiduciary duty to their companies and should avoid situations where their duty conflicts with their personal interests. In accordance with the Companies Act and the International Business Companies Act, directors, officers and agents must act honestly and in good faith with a view to the best interest of the company and exercise the care, diligence, and skill that a reasonably prudent person would exercise in comparable circumstances in performing their functions.

Where a current or former director or officer has acted in good faith with a view to the best interest of the company and, in certain cases, had reasonable grounds to believe that their conduct was lawful, the company may indemnify such person.

Section 58 of the International Business Companies Act provides that subject to any limitations in its memorandum or articles of association or any unanimous shareholder agreement, a company may indemnify against all expenses, including legal fees, and against all judgments, fines and amounts paid in settlement and reasonably incurred in connection with legal or administrative proceedings, any person who:

- is or was a party, or is threatened to be made a party, to any threatened, pending, or completed proceedings, whether civil or administrative, by reason of the fact that the person is or was a director or an officer of a company; or
- is or was, at the request of the company, serving as a director or officer, or in any other capacity is or was acting for another company or a partnership, joint venture, trust, or other enterprises, provided that such person acted honestly and in good faith with a view to the best interests of the company.

Also, under the common law of The Bahamas, there is the concept of piercing the corporate veil based on English common law principles.

## 4. Employment Law

### 4.1 Nature of Applicable Regulations

Employment relationships are governed principally by the implied and expressed terms of the employment relationship. In The Bahamas, these terms (where applicable) may be gleaned from the following sources:

- the employment contract;
- industrial agreements;
- common law (case law);
- the Employment Act and the Employment (Amendment) Act;
- the Health and Safety at Work Act;
- the Minimum Wages Act; and
- relevant provisions of the following pieces of legislation:
  (a) the Industrial Relations Act; and
  (b) the National Insurance Act.

In particular, where an employment relationship has been created by oral agreement, the terms of the employment relationship are espoused principally from English common law (as applicable), local common law, and local statute (in particular, the Employment Act and the Employment (Amendment) Act).

The privileges associated with the freedom to contract exist in The Bahamas. This freedom, however, is subject to the relatively inalienable rights of the parties created under the Employment Act. These basic rights represent and dictate the minimum standard of behaviour and expectations between an employer and employee.

### 4.2 Characteristics of Employment Contracts

The termination of employment relations is governed by Sections 26 to 28E of Part VI (redundancy, lay-offs, and short-time) of the Employment Act as amended, Sections 29 and 30 of Part VII (termination of employment with notice), Sections 31 to 32 of Part VIII (summary dismissal) and Sections 34 to 48 of Part X (unfair dismissal) of the Employment Act.

Although there are no minimum requirements for the duration of an employment relationship, the employer's duty upon the termination of a contract without cause varies depending upon the employee's tenure of service with the employer.

Generally, when terminating the employee without cause, the employer is required to give the employee reasonable notice of the termination. The Employment Act establishes the minimum notice requirements and provides the employer with the power to elect whether to give notice or to give a payment in lieu of such notice. For example, an employee who has been employed at least six months but less than 12 months is entitled to one week's notice or pay in lieu thereof, and an employee who was employed for 12 months or more is entitled to two weeks' notice or pay in lieu thereof if such employee does not hold a managerial or supervisorial position, or one month's notice or pay in lieu thereof if such employee does hold such a position.

In addition to this notice period (or payment in lieu thereof), the Employment Act places an obligation on the part of the employer to pay to the employee a sum representing the product of the dismissed employee's bi-weekly or monthly salary (depending on their role) and the number of years of such employee's service. This additional sum is usually referred to as "severance pay". Severance pay acknowledges the dismissed employee's years of service and is capped at six years for a non-managerial/non-supervisorial employee and 12 years for a managerial/supervisorial employee.

It is significant to note that the Employment Act does not confer an obligation on the part of the employer to give notice to an employee of less than six months' tenure.

Notice of termination can be given verbally. However, the employer must ensure that the notice of termination was properly and unequivocally communicated to the employee and that they exercised their complete obligations upon termination. Thus, the parties' conduct immediately after termination has been made orally may be evidence of the nature of the notice given.

Where notice is not properly given or is insufficient, an employee is entitled to claim damages for wrongful dismissal.

Where the employment contract confers a greater benefit on the employee regarding the duration of the notice period or the value of the pay in lieu of notice, then such provisions and/or benefits will apply. Where no notice period is provided for under the contract of employment, the calculation set out in the Employment Act will apply.

The Employment Act also mandates that employees have a right not to be unfairly dismissed. Whilst the question of whether the dismissal of an employee was fair or unfair is to be determined in accordance with the substantial merits of each case the Employment Act provides instances in which a dismissal will be deemed to be unfair which include dismissal:

- due to trade union membership, involvement in trade union activities or the refusal to become involved in a trade union/engage in trade union activities;
- due to pregnancy; and
- due to redundancy, but other employees were not similarly dismissed.

These categories are not closed and it is important to note that the rules of natural justice should be applied when seeking to terminate an employee.

### 4.3 Working Time

Under the Employment Act, the maximum number of daily work hours is eight, and weekly work hours is 40, except for employees who hold managerial or supervisorial positions or work in any industrial, construction, manufacturing or transhipment enterprise, or essential service. Employees are also entitled to 48 hours of rest, with at least 24 of such hours being consecutive.

Where the relevant employee is required or is permitted to work in excess of their daily work hours, they are entitled to overtime pay, which is calculated at 1.5 times their regular rate of wages and two times the regular rate of wages if the overtime is performed on a holiday.

### 4.4 Termination of Employment Contracts

Contracts of employment may be terminated by either party upon giving the other party reasonable notice of the termination, by the employer without notice as detailed previously or by the employer "for cause" when an employee commits a fundamental breach of the contract such that the nature of the breach is repugnant to the interests of the employer.

An employment contract may also be terminated on the grounds of redundancy. An employee's position is lawfully made redundant in the following circumstances:

- where the employer has ceased or intends to cease to carry on the business for the purposes of which the employee was employed;
- where the employer has ceased or intends to cease to carry on the business for the purposes of which the employee was employed in the place where the employee was employed; and
- where the requirements of the business for employees to carry out work of a particular kind, whether in the same place where they were employed or at all, have ceased or diminished or are expected to cease or diminish.

Except where an employee is terminated for cause, the employer is required to either give notice or pay in lieu of notice (see **4.2 Characteristics of Employment Contracts**).

Before the employer can lawfully terminate an employee or employees on the grounds of redundancy, the employer must:

- inform the relevant trade union, if applicable, or the employees' representative of the grounds for the redundancy and provide a written statement containing the reasons for the dismissal, the number and category of persons likely to be affected, and the period over which such dismissals are likely to be carried out;
- consult with the trade union, if applicable, or the employees' representative on the prescribed matters concerning the dismissal and the particulars of the grounds for the redundancy; and

- consult with the Minister of Labour in writing and provide the Minister with the information contained in the said written statement.

### 4.5 Employee Representations

Generally speaking, the role of an employee representative is not required by law.

Where the workforce is unionised, industrial agreements provide for the appointment of a representative, which would include, at a minimum, the purpose and functions as prescribed in the Industrial Relations Act. However, the extent of the rules and practices regarding employee representation depends on the terms negotiated between the relevant parties and thus may vary.

For those employment relationships to which an industrial agreement applies, a workplace representative is appointed who shall generally safeguard the interests of the employees and hear the collective views of the staff with a view of forwarding the same to the employer for their/its attention.

Trade unions are required by law to co-operate in ensuring effective communication and consultation with the employer regarding the employees' views and the problems they face in meeting the employer's objectives. The trade union is also obligated to keep all employees adequately informed of the main terms and conditions of the employment, job requirements, reporting requirements, disciplinary and grievance procedures, safety and health rules, and the conclusions reached through negotiations and consultation with the employer.

## 5. Tax Law

### 5.1 Taxes Applicable to Employees/ Employers

Contributions to the National Insurance Board (the Bahamian equivalent to social security) are the only taxes that must be paid on behalf of employees. Employees currently contribute the equivalent of 4.65%, and employers contribute the equivalent of 6.65% of an employee's salary up to the employable wage ceiling. New contribution rates anticipated from 1 July 2026 but not yet announced. The employable wage ceiling is BSD810 per week, from a previous ceiling of BSD740 per week.

### 5.2 Taxes Applicable to Businesses

#### Business Licence Tax

All persons (inclusive of companies) conducting business within The Bahamas must be granted a business licence. Although certain activities are exempt from the licence requirements under the Business Licence Act, generally, there is a modest business licence tax (calculated based on a percentage of the turnover for the preceding year) for companies conducting business within The Bahamas.

#### Value Added Tax (VAT)

All goods and most services supplied by a VAT-registered business in The Bahamas that are neither subject to the zero rate nor exempt from VAT are subject to VAT at the standard rate (presently 10%) or such other rate as prescribed by law for certain goods and services (eg, real estate transactions). Effective 1 April 2026, unprepared food items were exempted from VAT and the VAT charged on essential non-food items was reduced to 5%. The VAT charged on prescription and non-prescription drugs is also 5%. VAT is also charged on goods and some services that are imported from outside The Bahamas.

#### Stamp Duty

Stamp duty is payable in respect of certain transactions (namely transfers of personal property). A Stamp Duty may also arise on the conversion of funds from Bahamian dollars to United States dollars where such funds are to be used for remittance or transferred out of The Bahamas.

#### Qualified Domestic Minimum Tax Top-Up

The Domestic Minimum Top-Up Tax Act, 2024 came into force on 1 January 2024, applying to fiscal years of a Multinational Enterprise ("MNE Group") that began after 31 December 2023. However, the Act does not apply to a fiscal year of an MNE Group beginning before 1 January 2025, unless that Group is affected by an Income Inclusion Rule or an Undertaxed Profits Rule of a jurisdiction outside The Bahamas.

This Act incorporates into domestic law the Global Anti-Base Erosion Model Rules established by the OECD/G20 BEPS Project. In effect, in-scope MNE Groups with Constituent Entities in The Bahamas will be liable to pay a corporate tax of 15%, referred to as a domestic minimum top-up tax, as calculated under the GloBE Model Rules. The first filings are expected to occur within 18 months after 31 December 2025.

An agreement between the OECD and the United States of America (USA), which became effective in January 2026, resulted in the USA being recognised as a Qualified Side-by-Side (SbS) Regime. The agreement provides that MNE Groups headquartered in the USA are not subject to the application of the Income Inclusion Rule (IIR) or Untaxed Profit Rule (UTPR). As a result, where the UPE (ultimate parent entity) of a Group is located in the USA (or other Qualified SbS Regimes), there are two safe harbours, SbS Safe Harbour and UPE Safe Harbour, applicable for fiscal years commencing on or after 1 January 2026. The former eliminates top-up-tax by deeming any excess profits taxable under the IIR or UTPR, which is ordinarily available outside of the application of the SbS Regime, to be zero. The latter eliminates top-up-tax by deeming any excess profits taxable under application of the UTPR to be zero. The agreement has no effect on DMTT liability in The Bahamas. QDMTT continues to apply in The Bahamas with the need for a top-up-tax eliminated. QMDTT liability paid in The Bahamas is credited against the MNE Group's tax liability in the Qualified SbS Regime.

The Department of Inland Revenue (DIR) published notification requiring each Bahamas Constituent Entity in an MNE Group, which is in-scope for fiscal years 2024 and 2025, to complete and submit Form DMTT-24/25 with a deadline of 31 March 2026, and 30 April 2026, respectively.

### The Common Reporting Standard

The Automatic Exchange of Financial Account Information Act, 2016 was recently amended by the Automatic Exchange of Financial Account Information (Amendment) Act, 2026 (the "Amendment Act").

Pursuant to the Amendment Act, all Financial Institutions are now required to register as either a Reporting or Non-Reporting Financial Institution, no later than 90 days after the date on which it became a Financial Institution. An existing Financial Institution, which has not previously registered, is required to register as a Financial Institution no later than 15 June 2026.

Moreover, a Non-Reporting Financial Institution is required to notify the Competent Authority when it becomes a Reporting Financial Institution and vice versa, within 30 days of such change. A Financial Institution must also de-register within 90 days from the date on which it ceased to be a Financial Institution.

If a Reporting Financial Institution did not maintain any reportable accounts for a reporting period, it must also file a Nil return with the Competent Authority. This change applies to information returns that are to be submitted in respect of the 2025 calendar year.

It is of note that pursuant to the Automatic Exchange of Financial Account Information (Order) 2025, certain compliance and enforcement powers and functions were delegated to the Securities Commission of The Bahamas, the Central Bank of the Bahamas, and the Insurance Commission of The Bahamas (the "regulators"). The Amendment Act also introduced more stringent penalties for non-compliance (including an administrative fine of up to BSD300,000), and empowered the regulators to impose such penalties on their licensees and registrants for non-compliance.

The new reporting deadline is 30 June of the year immediately following the calendar year to which the information return relates. This accelerates the prior reporting deadline, which was previously 31 July. The reporting period is 1 May to 30 June of each year. The portal is accessible between 1 October and 31 August in any year.

## 5.3 Available Tax Credits/Incentives

The following is a non-exhaustive list of various pieces of legislation that provide tax concessions to persons who engage in business in The Bahamas.

### The Hotels Encouragement Act

The Hotels Encouragement Act allows duty-free entry within The Bahamas of approved materials for, inter

alia, the construction, rehabilitation, remodelling, equipping, and furnishing of a new or existing hotel or resort (taking into account both large and small-scale projects) together with a concession from real property taxes for a prescribed period.

Moreover, any entertainment facility, nightclub, restaurant, and shop within a designated area (described by an order of the responsible minister) is also afforded the same concessions.

The concessions under the Hotels Encouragement Act are geared towards any person or company or any group of persons or companies who are (acting in conjunction) prepared to undertake the construction or remodelling of a new or existing hotel or resort.

#### The Family Island Development Encouragement Act

The Family Island Development Encouragement Act allows persons to receive duty concessions on the importation of building materials (inclusive of plumbing, electrical, mechanical, and construction materials of all kinds) for residential and/or commercial development on certain islands within The Bahamas.

#### The Industries Encouragement Act

The Industries Encouragement Act allows for duty-free concessions for the importation of machinery, building, and other materials or appliances for an approved manufacturer who is manufacturing an approved product together with an exemption from real property tax for 15 years concerning any relevant factory premises.

The concessions under the Industries Encouragement Act are geared towards such manufacturers and products approved by the responsible minister to encourage the establishment and development of certain industries within The Bahamas.

#### Hawksbill Creek, Grand Bahama (Deep Water Harbour and Industrial Area) Act

The Hawksbill Creek, Grand Bahama (Deep Water Harbour and Industrial Area) Act allows for the Port Area known as Freeport, a free trade zone, to be free from certain taxes (eg, excise tax, stamp duties, and most customs duties) until 2054.

#### The City of Nassau Revitalisation Act

The City of Nassau Revitalisation Act allows incentives and duty concessions for owners of property situated in the city of Nassau (located on the island of New Providence) who are desirous of restoring, repairing, and upgrading the buildings, both commercial and residential.

#### The Bahamas Vacation Plan and Time-Sharing Act

The Bahamas Vacation Plan and Time-sharing Act allows duty-free concessions for persons who have been granted a developing owner's licence with respect to building supplies for the construction of timeshare facilities.

### 5.4 Tax Consolidation

This is not applicable in The Bahamas as there are no laws governing the same.

### 5.5 Thin Capitalisation Rules and Other Limitations

In The Bahamas this is not applicable as there are no laws governing the same.

### 5.6 Transfer Pricing

Transfer pricing is not applicable in The Bahamas as there are no laws governing the same.

### 5.7 Anti-Evasion Rules

There are no anti-evasion rules in The Bahamas as there are no relevant laws.

### 5.8 Tariffs

The Bahamas' tariff regime is in the form of taxes imposed on goods imported into the country. Most of the goods purchased by Bahamian residents are imported. These import duties are a significant source of income for the Bahamian government, and in some instances, provide a level of protection for Bahamian businesses. Items imported into the country that compete with locally produced goods are typically taxed at a higher rate.

The government has lowered or eliminated tariffs in the construction, agriculture, fisheries and renewable sectors to encourage economic activity.

The Bahamas is directly impacted by global developments and the levying of tariffs on goods imported into the United States increases the costs of those goods. The United States is The Bahamas' principal trading partner. Approximately 83.3% of the country's total imports in 2024 were from the United States, valued at an estimated BSD5 billion.

Any slowdown in the economy of the United States as a result of concerns around inflationary pressures and increased cost of living may impact The Bahamas' tourism industry.

## 6. Competition Law

### 6.1 Merger Control Notification

Merger control notification is not applicable in The Bahamas as there are no laws governing the same.

### 6.2 Merger Control Procedure

There is no merger control procedure in The Bahamas.

### 6.3 Cartels

The topic of cartels is not applicable in The Bahamas as there are no relevant laws.

### 6.4 Abuse of Dominant Position

Abuse of dominant position is not relevant in The Bahamas.

## 7. Intellectual Property

### 7.1 Patents

For the most part, the legal regime applicable to IP rights as outlined below includes:

- the Industrial Property Act and related rules;
- the Trade Marks Act and related regulations; and
- the Copyright Act and related amendments/regulations.

A patent for an invention is the title granted by the government to protect an invention. The right conferred by a patent excludes others from making, using, or selling the invention.

A patent is granted by the Bahamian government through the Intellectual Property Office through the following process:

- complete the relevant forms with the necessary supporting documents;
- file the completed forms at the Intellectual Property Office; and
- pay the applicable fees.

The entire process, from the date of submission to obtaining the Letters of Patent, could take up to one year.

Generally, the term of every patent shall be 20 years from the date of the application. However, an annual maintenance fee, in an amount as prescribed by the Intellectual Property Office, must be paid before the expiration of the first year from the date of filing the application and thereafter before the expiration of each successive year during the term of the patent. The failure to pay the annual maintenance fee will result in the lapse of the patent.

Unless provided for to the contrary, a holder of an exclusive licence under a patent (as similarly a patentee; ie, a person entered on the register of patents) has a right to take proceedings in respect of any infringement of the patent committed after the date of the licence and, in awarding damages or granting any other relief in such proceedings, the Supreme Court shall take into consideration any loss suffered or likely to be suffered by the exclusive licensee as such or, as the case may be, the profits earned by means of the infringement so far as it constitutes an infringement of the rights of the exclusive licensee as such.

### 7.2 Trade Marks

A trade mark is a mark, symbol or picture, or a combination used to distinguish goods to indicate that they are goods of the proprietor separate from the goods of others in the marketplace. A registered trade mark gives a proprietor exclusive rights to use the mark for the designated services of the mark.

The registration of the trade mark is governed by the Trade Mark Act, regulations (to be promulgated) and the policies set by the Intellectual Property Office.

To register a trade mark, the process is as follows:

- complete the relevant forms with the necessary supporting documents;
- file the completed forms at the Intellectual Property Office; and
- pay the applicable fees.

The entire application process – inclusive of the publishing of the mark in the official gazette, and the final approval and registration of the mark – can take up to 18 months.

A person who has filed an application for protection of a trade mark in a Convention country (any country that is a member of the World Trade Organization; the Convention of the Union of Paris; or any other treaty the Minister responsible for trade marks may by Order designate) has a right to priority, for the purposes of registering the same trade mark under the Trade Marks Act, for a period of six months from the date of filing of the first such application.

The registration of a trade mark is for ten years but may be renewed from time to time in accordance with the provisions of the Trade Marks Act.

Under the Trade Marks Act, persons shall only be entitled to institute proceedings to prevent or recover damages for the infringement of a registered trade mark.

In any legal proceeding in which the validity of the registration of a registered trade mark comes into question and is decided in favour of the proprietor of such trade mark, the Supreme Court may certify the same, and if it so certifies, then in any subsequent legal proceeding in which such validity comes into question, the proprietor of the said trade mark, on obtaining a final order or judgment in their favour, shall have their full costs, charges, and expenses as between attorney and client, unless in such subsequent proceedings the court certifies that they ought not to have the same.

Similarly, in addition to the statutory penalties of a monetary fine or the forfeiture of all goods in respect of which an offence was committed, the Supreme Court can make such order as it sees fit with respect to suitable remedies.

### 7.3 Industrial Designs

The definition of "design" for the purposes of the Industrial Property Act means features of shape, configuration, pattern or ornament of an article, or features of a pattern or ornament applicable to articles insofar as such features appeal to and are judged solely by the eye.

Generally, design copyright in a design exists for five years from the date of deposit. However, applications for extensions can be made under the Industrial Property Act.

Every claim for design copyright in a design must be accompanied by a representation or, at the Registrar General's option, a specimen of the design, and must include certain information as specified by the Industrial Property Act. It is anticipated the Industrial Property Act will be amended to reflect applications the new regime and for applications to be made to the Industrial Property Office

Similarly, there are various remedies available through the Supreme Court and applicable to patents under the legislation.

### 7.4 Copyright

A copyright is a property right that, unless specifically excluded by the Copyright Act, may subsist in the following categories of work of authorship:

- literary works;
- musical works inclusive of any accompanying words;
- dramatic works inclusive of any accompanying music;
- artistic works;
- motion pictures and other audio-visual works;
- choreographic works; and
- sound recordings.

Generally, copyright in any work expires after 70 years from the end of the calendar year in which the author dies, save for those limited exceptions outlined in the Copyright Act when the period varies.

Although there is no formal system for copyright registration, this is usually made by the owner of the copyright or of any exclusive right in the work, together with the application and the applicable fee for examination and consideration.

An infringement of copyright shall be actionable at the suit of the copyright owner, and, subject to the Copyright Act, any action for such infringement includes all such relief by way of damages, injunctions, accounts, or otherwise.

### 7.5 Others

The government has signalled its intention to continue to modernise the country's approach to addressing copyright, trade mark and patent protections, including areas like geographical indications, false trade descriptions, and new plant varieties, and join 11 new international conventions in the near future. It is anticipated that additional legislation will follow.

## 8. Data Protection

### 8.1 Applicable Regulations

The Data Protection (Privacy of Personal Information) Act, 2003 (DPA 2003) remains the primary legislation governing the protection of a living individual's personal data in The Bahamas.

The Act applies to data controllers, defined as persons that determine the purpose for which and the manner in which any personal data is used or is to be used.

The Minister with responsibility for information privacy and data protection may make regulations to:

- provide additional safeguards to protect sensitive personal data;
- prescribe offences or penalties with respect to contravention or non-compliance with the DPA 2003;
- modify the application of an individual's right of access to personal data; and
- prescribe circumstances in which prohibition, restriction or authorisation ought to prevail over listed exceptions to the right of access to personal data.

Though for the purposes of this section the DPA 2003 will be the legislation referenced as it is the one currently in force, it should be noted that in December 2025, parliament enacted the Data Protection Act 2025 (DPA 2025). Once it is brought into force, the DPA 2025 will repeal and replace the DPA 2003.

The DPA 2025 substantially modernises the Bahamian data protection framework and brings it in line with its regional counterparts such as Jamaica and the Cayman Islands, as well as the EU's General Data Protection Regulation. Key changes under the DPA 2025 include, inter alia:

- expanded categories of sensitive personal data including financial, sexual orientation, medical, genetic, and biometric data;
- new statutory concepts of pseudonymisation, and profiling in the context of automated decision-making;
- explicit lawful bases for processing personal data (eg, consent, contract, legal obligation, vital interests, public function, and legitimate interests);
- expanded data subject rights including a right to data portability and a right to compensation;
- registration and record-keeping obligations on data controllers and processors (where applicable);
- data breach reporting obligations;
- extraterritorial reach over foreign data controllers offering goods or services to, or monitoring, data subjects in The Bahamas;
- establishment of a Data Protection Appeal Tribunal and Data Protection Oversight Committee;
- a prohibition on the unlawful selling or renting of personal data; and
- increased administrative penalties for data breaches.

### 8.2 Geographical Scope

A foreign company targeting customers within The Bahamas will be governed by the provisions of the DPA 2003 where it is deemed a data controller and establishes a legal presence within The Bahamas for the purpose of processing personal data in the context of that establishment or, where no legal presence is established within The Bahamas, such data controller uses equipment in The Bahamas for processing

data otherwise for the purpose of transit through The Bahamas.

### 8.3 Role and Authority of the Data Protection Agency

The office of the Data Protection Commissioner (DPC) is established by the DPA 2003 as a corporation solely to enforce data protection rules as enacted by the DPA 2003. Its function is to regulate data controllers and processors and provide internationally accepted rules to ensure that the personal information of citizens is collected, kept up to date, stored, used, disclosed, and disposed of lawfully.

The DPC is also empowered to encourage trade associations and other bodies to prepare codes of practice for dealing with personal data and to approve such codes of practice.

Under the DPA 2003, the DPC has the authority to do the following:

- receive complaints of possible contraventions to the Act;
- investigate contraventions to the Act;
- issue enforcement notices to data controllers;
- issue prohibition notices to prevent the transfer of personal data from The Bahamas to a place outside The Bahamas;
- issue notices to third parties to provide information to it that would assist it in performing its functions;
- upon receipt of a warrant from the Magistrates' Court, empower authorised persons to:
  (a) enter the premises of data controllers and data processors to inspect the premises and any data therein and to inspect, examine, operate, and test any data equipment therein;
  (b) require any person on the premises of a data controller or a data processor to disclose and produce data or data material under their control;
  (c) inspect and copy or extract information from data, or inspect and copy or take extracts from data material; and
  (d) require persons to give any of its authorised officers information regarding the procedures employed for complying with the provisions of the Act; and
- prosecute summary offences committed under the DPA 2003.

## 9. Looking Forward

### 9.1 Upcoming Legal Reforms

**GrahamThompson**

**GrahamThompson** has been one of the pre-eminent law firms in The Bahamas since 1950. The firm operates four offices conveniently located throughout The Bahamas. It is well regarded for its work with high-net-worth private clients. GrahamThompson's key practice areas include: private clients, trusts and estates (estate and trust structuring, foundations, trust company licensing, and private trust companies); banking and finance (real estate financing, asset leasing and financing, corporate finance, restructuring, financial services law and regulation, loans, debentures and mortgages, and receivership); corporate, commercial and securities (capital markets, M&A, pension schemes, private equity funds, unit trusts, investment funds and IPOs); property and development (hotels, resorts and mixed-use developments, condominiums and timeshares, government approvals and exchange control, private and commercial mortgages, real property taxes, subdivision planning and structuring, second-home acquisitions and sales, and title insurance and opinions); and insurance (captive insurance, and domestic and external insurance).

## Authors

**Michaela Sumner-Budhi** is a partner at GrahamThompson, with extensive experience in transactional and litigation practices. Her work for GrahamThompson has spanned the firm's litigation, employment and labour, property, commercial, and financial services practice areas. Her specialisations include risk management, medical ethics, medical, medical malpractice, commercial, and labour law. She has served on the Hospitals and Health Care Facilities Licensing Board as chair-person, the Compliance Sub-Committee of the National Stem Cell Ethics Committee, and the National Medical Ethics Committee for the COVID-19 pandemic.

**Nia Rolle-Campbell** is a partner in GrahamThompson's private client and trusts and tax practices. Her practice focuses on advising high-net-worth individuals and families and fiduciaries on complex asset protection and estate planning matters. She advises trustees on fiduciary obligations and family offices on cross-border structuring issues. Her experience includes addressing multi-generational governance and the needs of globally mobile families. She is a member of STEP and is a Civil and Commercial Mediator for ADR-ODR International Ltd.

**Eryn Wilmott** is a pupil at GrahamThompson (GT) in the law firm's litigation practice. Her supervising attorneys are GT partners Michaela Sumner-Budhi and John Minns, and her mentor is GT partner Tanya Hanna.

## Moving The Bahamas Forward

The Bahamas has been a well-established destination from the 1950s and continues to enjoy a stable government and a parliamentary democracy based on the Westminster model. Investors rely on a seasoned and experienced legal infrastructure underpinned by a well-regarded court system with ultimate appeal to the Privy Council in the UK. World-class housing, internationally accredited education and medical facilities, and easy accessibility to the United States make it an attractive destination for ultra-high-net-worth homeowners and investors. Immigration and residency options include permanent residence and annual residence. For business owners, the Commercial Enterprises Act facilitates expedited approvals for a variety of entrepreneurial ventures that can be operated both within and outside of The Bahamas.

On 28 May 2025, the Prime Minister of The Bahamas, the Hon. Philip Davis KC, tabled "Budget 2025/2026: Expanding Opportunities Island by Island" in the House of Assembly. The government's budget communication has made it clear that the government's focus during this budget cycle is on security, opportunity, affordability and reform with the aim of allowing The Bahamas, its citizens and residents to exploit new opportunities and usher in a new era of progress and renewal.

A general election was held on 12 May 2026. The government's 2026/2027 budget communication is expected to be tabled in the House of Assembly in a few weeks.

## *Real property*

### *Overview*

The most significant recent development in Bahamian land law is the introduction of two complementary pieces of legislation: the Land Adjudication Act, 2025 and the Registered Land Act, 2025. Together, these Acts create the statutory framework for the new system of land adjudication and registered title in The Bahamas.

Both Acts were brought into force and deemed effective from 1 January 2026.

The new regime is intended to operate in two stages. Firstly, the Land Adjudication Act provides the process for identifying and determining the rights and interests in land, and secondly, the Registered Land Act provides the framework for registering those rights and regulating future dealings with registered land.

### *The Land Adjudication Act, 2025*

The Land Adjudication Act provides for the systematic adjudication of rights and interests in land in The Bahamas, the demarcation of boundaries, and related matters.

The Act applies where the Minister declares an area to be an adjudication area. That declaration must be published in the Gazette and must also be publicised more broadly, including through newspapers and an official government website. For Family Islands, notice must also be posted in the relevant administrator's office. Lands held in common under the Commonage Act cannot be declared adjudication areas.

An adjudicator (a Bahamian counsel and attorney of at least seven years' standing with relevant experience) is appointed, along with local assessors. The area is divided into sections and claimants are required to submit claims within specified timeframes and to identify boundaries.

Once adjudication begins, civil proceedings relating to interests in land in the section generally cannot be commenced without the adjudicator's written consent, and existing proceedings may be stayed.

Key roles include the demarcator (boundaries and rights of way), surveyor (demarcation index map), and records officer (investigates claims and prepares the adjudication record).

The Act distinguishes absolute title (good documentary title or sufficient open and peaceful possession) from provisional title (where absolute title is not established). Relevant possession periods are 12 years (private land), 30 years (Crown land), and 60 years (foreshore). After inspection and objections are dealt with, the adjudicator certifies the record as final and delivers it to the Registrar of Lands to support first registration under the Registered Land Act. Appeals to the Supreme Court are limited to errors of law or procedural non-compliance.

### *The Registered Land Act, 2025*

The Registered Land Act 2025 supports the second stage of the framework. It provides for the registration of titles to land and dealings in registered land and applies to parcels adjudicated under the Land Adjudication Act.

The Act establishes the Land Registry, which is responsible for maintaining the new land registration system. The Registry is to keep the following items.

- The Land Register.
- Registry Map.
- All mutation forms (alterations to maps).
- All parcel files (documents supporting entries in the Land Registry, including instruments and plans).
- An alphabetically organised index of names of all proprietors of land, leases and charges showing the numbers of the parcels in which they are interested.
- A register and a file of powers of attorney.

The Land Register is the central record. It will contain a register for every parcel adjudicated under the Land Adjudication Act and for every lease required to be registered. Each register will state whether the land is private land or Crown land and, where the land is private land, whether title is absolute or provisional.

Each register has three sections.

- Property – identifies the land or lease and refers to the Registry Map and filed plans.
- Proprietorship – records of the proprietor and any inhibition, caution or restriction.
- Encumbrances – records encumbrances and adverse rights.

First registration occurs once the adjudication record is final and delivered to the Registrar, who prepares and signs the register for each parcel and registrable lease.

Registration with absolute title vests ownership in the registered proprietor, subject to registered interests and overriding interests. Provisional title remains subject to the recorded qualification but may later be upgraded.

Overriding interests can bind registered land even if not noted on the register (for example, certain easements, short leases, statutory rights, limitation or prescription rights, and rights of persons in actual occupation or receiving rents and profits).

The Act regulates dealings in registered land, so the register is continuously updated, reducing reliance on repeated historical title investigations once land is on the register. The Act also provides protections such as inhibitions, cautions and restrictions. A caution may be lodged by certain claimants and generally prevents inconsistent dealings without consent or a court order. Finally, the Act includes rectification and indemnity provisions for specified errors, omissions, fraud or mistakes, subject to statutory limits and protections.

*Registrar of Lands*

The Registered Land Act provides for the appointment of a Registrar of Lands, who is responsible for the administration of the Land Registry. The Registrar may be assisted by a Deputy Registrar or Assistant Registrars and Registration Officers as required.

Following the passage of the Acts, a Registrar of Lands was appointed effective 19 January 2026. This role includes responsibility for the administration of the new Land Registry and the systematic adjudication of land throughout The Bahamas.

*The previous unregistered land system*

Prior to these reforms, The Bahamas operated an unregistered land system derived from the conveyancing laws of England and Wales prior to 1925.

Under that system, the seller of land must deduce title extending to a root title being no less than 30 years in date, unless title begins with a Crown grant, Crown lease or a certificate of title granted by the court under the Quieting Titles Act, whichever period is shorter.

As a result, purchasers customarily instruct counsel to investigate titles, review the chain of ownership, identify defects or encumbrances and issue a title opinion confirming whether the seller has good and marketable documentary title. Instruments affecting land are filed for record in the Registry of Records to establish priority under the Registration of Records Act 1928.

### *Conclusion*

The reforms mark a major shift from The Bahamas' historically unregistered land system, under which purchasers generally rely on documentary title investigations, title opinions and, where required, title insurance. While the Acts are in force, practical implementation appears to be ongoing, and further operational guidance will be needed to confirm how and when the new system will be fully functioning in practice. Once fully implemented, the new system should improve transparency, certainty and efficiency in land transactions. It should also reduce reliance on repeated back-title investigations for registered parcels, since the Land Register will become the central record of ownership and registrable interests.

### *Estate planning*

*Usufruct and the evolution of estate planning in The Bahamas*

The enactment of the Usufruct Interest Act, 2026 is one of the more interesting developments to emerge from The Bahamas' private client sector in recent years. Not necessarily because usufruct itself is new – civil law jurisdictions have used the concept for centuries – but because of what its enactment says about the direction of international wealth planning and how The Bahamas sees its role within that evolving landscape.

For a long time, offshore estate planning was largely built around common law structures. Trusts became the cornerstone of cross-border wealth preservation, succession planning and asset protection, particularly for families connected to the United Kingdom, North America and other common law jurisdictions. The Bahamas continues to maintain an exceptionally strong reputation in the trust space and remains one of the leading trust jurisdictions internationally.

What has changed over the past decade is the profile of international wealth itself. Private wealth is increasingly global, increasingly mobile and increasingly concentrated in jurisdictions that do not necessarily share common law traditions. Latin America is perhaps the clearest example. Families from Brazil, Mexico, Colombia and elsewhere are often sophisticated users of offshore structures, but they frequently approach ownership, succession and family wealth through an entirely different legal lens.

One of the recurring challenges in cross-border estate planning is not whether a structure works technically, but whether the family itself is comfortable with it conceptually. Many civil law clients understand direct ownership intuitively. They understand splitting economic rights from ultimate ownership. They understand family succession through retained lifetime benefits. Trusts, while highly effective, can sometimes feel less natural because they require a different way of thinking about ownership altogether.

By introducing the usufruct interest into this jurisdiction, The Bahamas enhances its competitiveness in global wealth structuring, providing an additional

mechanism for succession planning, asset protection, and intergenerational wealth transfer.

In particular, the legislation responds to a clear market demand, especially from civil law regions such as Latin America, where usufruct is a familiar and widely used planning tool. Its introduction positions The Bahamas as a jurisdiction capable of bridging common law and civil law legal traditions, thereby attracting a broader client base without displacing its existing strengths, particularly the strength and flexibility of its trust regime.

*What is a usufruct?*

To understand why this matters, it is necessary to begin with the concept of ownership itself. Under Roman and civil law traditions, ownership has historically been viewed as comprising three distinct rights:

- usus – the right to use property;
- fructus – the right to enjoy the fruits or income generated by the property; and
- abusus – the right to dispose of or ultimately consume the property.

In common law jurisdictions, these three rights are generally consolidated into full ownership. Civil law systems, however, permit these rights to be separated and allocated between different persons.

In a usufructuary arrangement, the usufructuary retains the rights of usus and fructus, namely the ability to use the asset and derive economic benefit from it, while another party, often referred to as the bare or naked owner, retains the right of abusus, residual ownership interest and ultimately receives full ownership once the usufruct terminates. In practical terms, usufruct allows a person to transfer underlying ownership while continuing to enjoy the economic benefits of the asset during their lifetime.

This concept has long been familiar in many civil law jurisdictions, where usufruct structures are commonly used in succession planning. A parent, for example, may transfer ownership of shares, real estate or investment assets to children while retaining the right to occupy the property, receive dividends or maintain economic control during their life.

*Does the usufruct replace the trust?*

One of the most important questions arising from the introduction of usufruct legislation is whether it diminishes the relevance of trusts in The Bahamas. The answer is unequivocally no. Trusts continue to occupy a central role in sophisticated estate planning and remain one of the most effective tools available for asset protection, intergenerational succession, confidentiality and governance.

Indeed, many of the core advantages of trusts cannot be replicated by usufruct alone. Trusts allow for discretionary distributions, fiduciary oversight, complex family governance arrangements and long-term wealth preservation across multiple generations. They remain particularly valuable where family dynamics are complex or where asset protection considerations are paramount.

Usufruct serves a different purpose and rather than replacing trusts, it introduces an additional planning layer that may be used independently in some cases or integrated into broader structures in others. The most interesting developments are therefore likely to emerge through hybrid planning arrangements.

For example, a Bahamian trust may continue to hold family real estate while usufruct rights are granted to the settlor, allowing the settlor to retain the use and economic benefit of the property during their lifetime. Upon the termination of the usufruct, the trust would thereafter hold the asset free from those retained rights for the benefit of the next generation in accordance with the terms of the trust.

Similarly, ownership of underlying shares or investment assets may be transferred into trust for the benefit of future generations while senior family members retain usufruct rights over dividend income or other economic returns during their lifetime. Such structures can facilitate gradual succession planning while preserving continuity, economic security and, in some cases, a degree of family control during transitional periods.

*Bridging civil law and common law concepts*

For common law practitioners, the closest comparison to usufruct is often a life interest trust, sometimes

referred to as an interest in possession trust. Under a traditional life interest trust structure, one beneficiary, commonly a surviving spouse or parent, is entitled to benefit from trust assets during their lifetime, usually through a right to receive income generated by the trust or to occupy trust property. Another beneficiary, often children or future generations, holds the residual entitlement to the trust capital once the life interest comes to an end.

A common example would involve a family home or investment portfolio being settled into trust for the benefit of a surviving spouse during his or her lifetime, with the underlying assets ultimately passing to the children upon the spouse's death. The surviving spouse retains the economic enjoyment of the assets, while the next generation effectively holds the future ownership interest.

The similarity to usufruct is immediately apparent. In both cases, economic benefit and ultimate ownership are separated between different people. However, a life interest trust operates through fiduciary relationships and the separation of legal and beneficial ownership, whereas usufruct creates a direct proprietary division of rights in the asset itself.

Historically, offshore planning has often required civil law families to adapt themselves to entirely common law structures. While trusts remain highly effective, they can sometimes feel conceptually unfamiliar to families accustomed to direct ownership models or civil law succession principles. Usufruct provides a framework that many international families intuitively understand while still allowing them to benefit from the stability, sophistication and flexibility of The Bahamas as an international financial centre.

The introduction of usufruct should also be viewed in the context of The Bahamas' broader track record of successfully integrating civil law concepts into its common law framework. The enactment of the Foundations Act in 2004 represented a similar moment of legal convergence. While foundations are traditionally associated with civil law jurisdictions, The Bahamas was able to incorporate the concept into its legislative framework in a way that preserved the integrity of its common law system while expanding its attractiveness to international clients. That earlier development demonstrated both the jurisdiction's willingness and ability to adapt civil law constructs for use within a common law offshore environment. Usufruct follows a similar trajectory, reinforcing the idea that The Bahamas is not constrained by legal tradition and can accommodate multiple conceptual approaches to wealth structuring.

### *Usufruct and digital assets*

The legislation is not confined solely to traditional forms of property such as real estate or shares in private companies. Rather, it contemplates application across a wide range of asset classes, including financial assets and intellectual property. This flexibility is significant because modern wealth itself is increasingly diverse.

The legislation is particularly interesting because it contemplates the application of usufruct arrangements to digital assets. That is a notable development and one that reflects how seriously The Bahamas is engaging with modern wealth structures. Increasingly, large estates include cryptocurrency holdings, tokenised investments, intellectual property, online businesses and other digital assets that derive value less from physical possession and more from access rights, governance rights and economic participation.

The real value of digital wealth often lies not in holding the asset itself, but in controlling the income or benefits generated from it. Staking rewards, licensing income, governance participation and token economics are all examples of rights that can potentially be separated from ultimate ownership. One can easily envisage structures where ownership of digital assets passes to the next generation while senior family members retain economic participation during their lifetime. Equally, governance rights connected to decentralised projects or tokenised ecosystems may eventually become divisible in ways that resemble traditional usufruct principles. Although usufruct is rooted in ancient Roman law concepts, it may ultimately prove highly adaptable to modern digital wealth precisely because it focuses on separating use, economic benefit and ultimate ownership.

### *Conclusion*

More broadly, the introduction of usufruct says something important about the direction of the Bahamian private client industry itself. International financial centres are increasingly competing on tax neutrality or technical expertise, as well as their ability to accommodate different legal traditions and different types of international families. The jurisdictions likely to remain competitive over the next decade are those capable of operating comfortably across both common law and civil law concepts. The Bahamas is positioning itself accordingly.

Importantly, this does not represent a departure from the jurisdiction's traditional strengths. The usufruct does not replace trusts. It is expanding the language of estate planning in The Bahamas. The trust industry remains central to Bahamian private wealth planning and will continue to be for the foreseeable future. What has changed is that advisers now have greater flexibility in how they structure succession arrangements for internationally connected families. As wealth becomes increasingly international, increasingly digital and increasingly multi-generational, that flexibility is likely to become far more valuable than rigid adherence to any single legal tradition.

**G&P Law** was founded in 2018 by Georgi Georgiev and Dimitar Petrov, and has since grown into a full-service legal consultancy. In December 2025, Petya Norova joined the firm as a partner. A total of 17 professionals are based in G&P Law offices in Sofia, Plovdiv and Varna. The firm advises clients on corporate and commercial matters, M&A, employment, compliance, dispute resolution, real estate, energy and renewable projects, and provides legal services for medical and aesthetic centres. The lawyers also have expertise in tax, regulatory matters, intellectual property, data protection, and the legal aspects of innovative and technology-driven businesses, delivering integrated legal solutions for complex projects. Recent work includes advising Go Group Consultancy (Italy), Photomate s.r.o. (Czech Republic), SM-ecar Ltd, Scandia Invest JSC, Next DC, Sofia Chamber of Commerce, Serpact, MINA Sofia, Doka, Adverity, Synergon Energy, as well as many other local and international clients.

## Authors

**Marin Sarafov** is a senior associate at G&P Law and head of the corporate department. He advises corporate clients and investors on company law, commercial and contract law, corporate and M&A transactions, supporting market entry, structuring and business growth in Bulgaria. Marin gained valuable experience at an international corporate law firm and works closely with both local and foreign investors to provide clear, pragmatic and business-oriented legal guidance. He is a member of the Sofia Bar Association.

**Petya Norova** is a partner and head of the real estate department at G&P Law. She specialises in real estate and construction law, zoning and planning, property disputes, expropriation and regulatory matters, with additional expertise in corporate and commercial law. She advises on complex real estate and renewable energy projects, covering the full project life cycle. Petya has led transactions involving EUR2 million in property acquisitions and EUR8 million in renewable energy assets; she advises on corporate restructuring and insolvency matters, and authors practical articles on real estate law. She is a member of the Sofia Bar Association.

**Iva Georgieva** is an associate at G&P Law specialising in IP, corporate and commercial law, personal data protection, AML measures, and regulatory compliance. She advises clients on trade mark portfolio management and protection, corporate maintenance, and the implementation of compliance frameworks, including GDPR and AML policies and procedures. Iva has participated in international projects, including cross-border company acquisitions, supporting the IP and corporate aspects of transactions. After graduating from Sofia University St Kliment Ohridski in 2023, she furthered her studies at a German university, focusing on international and comparative law.

**Eduard Milchev** is an associate at G&P Law who specialises in litigation and dispute resolution, employment and social security law, contract law, administrative law and private international law. He has experience in advising foreign clients within international corporate structures, and has participated in transactions involving acquisitions of Bulgarian companies by foreign investors, particularly in the IT, healthcare, industrial and critical infrastructure sectors. Eduard has been involved in legal due diligence covering corporate, employment and dispute-related risks, as well as in drafting and negotiating transaction documents. He is a member of the Sofia Bar Association.

## 1. Legal System

### 1.1 Legal System and Judicial Order

The Bulgarian legal system belongs to the continental (civil) law tradition. The most significant distinction between the legal system of Bulgaria and those of other common-law jurisdictions is the absence of a doctrine of binding judicial precedent. This means that, in the event of a dispute brought before a court, the court is not legally bound by previous judicial decisions rendered in identical or similar cases. While courts may take existing case law into consideration, they are under no obligation to follow it.

Bulgaria follows the principle of separation of power among the branches of government with judicial power comprising the courts, the prosecution service, and the investigative authorities.

Judicial proceedings are generally subject to a three-tier court system, as follows:

- District court – acts as the court of first instance for cases with a monetary value (generally) below EUR12,500.
- Regional court – acts as an appellate court for the district court, or as the court of first instance for cases with a monetary value (generally) over EUR12,500.
- Court of Appeal – acts as an appellate court in cases where the regional court has acted as the court of first instance in higher-value disputes.
- Supreme Court of Cassation – the highest judicial authority exercising supervisory jurisdiction to ensure the uniform and correct application of the law.

In certain cases, judicial proceedings are limited to two instances: (i) claims with a value not exceeding approximately EUR2,500; and (ii) administrative cases. Administrative disputes are adjudicated within a separate two-tier system of administrative courts, structured as follows:

- administrative court – as first-instance court; and
- supreme administrative court – the highest judicial authority in administrative matters.

For businesses, disputes may also be resolved outside the state court system through arbitration. However, arbitration is available only where the parties have expressly agreed to submit their disputes to arbitration. The parties enjoy substantial procedural autonomy, determining (i) the rules governing the arbitration proceedings; (ii) the procedural framework itself; and (iii) the applicable law.

Court proceedings may occasionally be prolonged. However, where the parties co-operate effectively with the court, disputes can often be resolved within a relatively short timeframe.

## 2. Restrictions on Foreign Investments

### 2.1 Approval of Foreign Investments

Foreign investment in Bulgaria can fall in a specific approval regime, including Foreign Direct Investment Screening (FDI Screening) under Regulation (EU) 2019/452.

FDI Screening became operational in Bulgaria in July 2025, through the Bulgarian Investment Promotion

Act (BIPA), which enforces that, in some cases, investors' endeavours need to undergo prior approval.

An investment must undergo FDI screening when the following conditions under BIPA are met.

- The investor must qualify as a "foreign investor" by being:
  - (a) a non-EU individual and legal entity established outside the EU; or
  - (b) an EU-based entity that is directly or indirectly controlled by a non-EU person or that acts on behalf of a non-EU person in relation to the investment; and
- the transaction must qualify as a "foreign direct investment", ie:
  - (a) be an investment that establishes or maintains lasting and direct links between the investor and a Bulgarian enterprise, not just a "one time" deal with no actual after-effect on the economy; or
  - (b) be an expansion of an existing investment, eg, by increasing production capacity, diversifying production, or establishing a new place of business; and
- it must fall within sectors or activities that may affect security or public order, eg:
  - (a) critical infrastructure, whether physical or virtual, including energy, transport, water, etc; or
  - (b) critical technologies and dual-use items including, artificial intelligence, etc; or
  - (c) supply of critical inputs, including energy or raw materials, as well as food security; or
  - (d) access to sensitive information, including personal data, or the ability to control such information; or
  - (e) the freedom and pluralism of the media; and
- at least one of the following quantitative or structural thresholds must be met:
  - (a) the investment results in the acquisition of at least 10% of the capital of a company operating in Bulgaria, or the value of the investment exceeds EUR2 million; and/or
  - (b) the investment results in the acquisition of at least 10% of the capital of a Bulgarian undertaking that performs hi-tech activities, regardless of the investment amount; and/or
  - (c) the investment qualifies as a "new investment" (eg, establishment of a new enterprise, greenfield-related expansion of an existing enterprise, diversification of production, or a major change in production processes, and the amount of the investment exceeds EUR2 million).

FDI screening may still be triggered in certain special circumstances even where the thresholds are not met, such as for investments:

- from Russia or Belarus; or
- relating to critical oil-related infrastructure; or
- cases where national security authorities request or propose screening due to potential security concerns.

Some investors, such as those from countries that are part of the EU or the European Economic Area, enjoy a more favourable regime and are treated as low risk.

### 2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance

If the above criteria are met, the investor should file an application and supporting documents at the Bulgarian Investment Agency, being the point of contact for the matter.

The application is reviewed by the Interagency Screening Council (ISC) at the Bulgarian Council of Ministers in a statutory 45 calendar-day period (extendable once by up to 30 days).

The ISC may either:

- approve the investment;
- initiate a comprehensive review; or
- reject the approval altogether.

What happens if the investment is rejected? In the case of a rejection, the investment is prohibited because it is considered to pose a risk to national security or public order.

Depending on the timing of the rejection, if it is issued:

- before the transaction is finalised – then the transaction cannot be legally finished and is not binding; or
- after the transaction is finalised – then the authorities may order measures to unwind or neutralise the investment.

In the case of non-compliance in the procedure (eg, by providing inaccurate and/or misleading information), the investor can be subject to a fine of 5% of the investment value (but no less than approximately EUR25,500), and additional restrictions may be imposed to ensure public order and national security.

### 2.3 Commitments Required From Foreign Investors

The Bulgarian FDI screening regime expressly allows the competent authority to approve a transaction subject to some conditions (commitments) where risks are identified but can be adequately managed.

Although BIPA does not provide an exhaustive list of the types of commitments, these can include:

- governance and control commitments –
  (a) restrictions on the percentage of shares that may be acquired; and/or
  (b) certain strategic decisions remain subject to approval by Bulgarian-resident directors; and
- information and data security commitments –
  (a) data localisation to be done within Bulgaria or the EU; and/or
  (b) restrictions will be imposed on cross-border data transfers, etc.

### 2.4 Right to Appeal

The authority's decision can be challenged by the investor before the Bulgarian administrative court in cases of:

- a refusal;
- challenging the conditions imposed by the authority; and
- certain procedural irregularities affecting the review process, as a fair procedure is guaranteed for all.

The scope of the legal challenge here lies in proving and providing evidence that there are no risks to national security or public order, or that they can be adequately mitigated.

Even though the courts are usually deferential on national security assessments, placing them above all else, they can annul unlawful or insufficiently reasoned decisions.

## 3. Corporate Vehicles

### 3.1 Most Common Forms of Legal Entity

While Bulgarian legislation provides for several forms of legal entities, the most common types of corporate vehicles are:

- the limited liability company (LLC);
- the joint stock company (JSC); and
- the newly implemented variable capital company (VCC).

#### Limited Liability Company (LLC)

Best use scenario:

- small-to-medium enterprises;
- family-owned businesses; and
- project companies involving a single holding parent company.

When to avoid:

- for investment capital endeavours;
- for heavily regulated business activity and licensing; and
- for project companies when more participants are involved.

The LLC was the conservative "go-to" option for most small and medium-sized enterprises. This was mainly for lack of a better option in the past, and is now a tradition, regardless of its faults.

An LLC is a capital corporate form consisting of the traditional: (i) decision-making body (a general meeting (GM) of shareholders/a sole owner); and (ii) an executive management body (be it singular or collective).

The shareholders' liability is limited to the extent of paying in the amount for subscribing to shares in the capital. After that, shareholders are practically free from monetary liabilities – after the LLC is fully incorporated, it becomes liable for each and all relations it is a party to, living its separate corporate life.

The minimum number of shareholders for an LLC is practically one, with a minimum capital amount of EUR1, while each share cannot be less than EUR0.01. In the case of several shareholders, comprising a GM, internal rules for decision-making are adopted in the form of the articles of association (AoA), which become public when the LLC is established. Major decisions are made via convening a general meeting (GM) and voting. Structural decisions require a shareholders' majority of three quarters of the capital, while other topics usually require 50% + 1 vote for validity. Shareholders can additionally sign an internal shareholders' agreement to arrange for other topics like task distribution, deliverables, etc.

What to watch out for:
Although this is the most common form, its old legal framework and operative issues make it less than ideal for a big business and this can often lead to a deadlock situation, such as:

- participation of new shareholders (investors) is dependent on the other shareholders' confirmation, making it uncertain and remedied only by internally imposed penalties;
- share transfers require a special form of notarisation in Bulgaria (or legalisation procedures for foreign notarisations) and subsequent filings at the registry;
- deals concluded by management without the respective GM authorisation are still considered valid and binding for the company, creating risk of unauthorised and damaging deals; and
- inheritance of shareholding is largely dependent on the confirmation of the other shareholders, which can leave the heirs of founders out of the company.

### Joint Stock Company (JSC)

Best use scenario:
- big enterprises with IPO perspectives;
- public companies in large industries;
- project holding companies; and
- for a specialised/licensed activity – banking, insurance, etc.

When to avoid:
- for small enterprises or low starting funds; and
- when the aim is flexibility in management and speed of decision-making over structure.

The JSC remains the most well-regulated (but constrictive and slow-to-use) option for big businesses and IPO endeavours. In some cases, this is the only option for public companies and specialised enterprises (eg, banks).

Its corporate structure includes a GM as the decisions-making body and a board of directors in a one-tier system; or a GM as the decisions-making body and a management board and supervisory board in a two-tier system. The management tier system is freely chosen upon incorporation.

The minimum number of shareholders is one, but the minimum capital is in the amount of EUR25,000 making the entry point a bit higher to reach. Specialised enterprises (pension funds, insurance companies, hospitals, banks, etc) need starting capital of at least EUR4–5 million.

Shares in the JSC can be either registered (materialised, hard copy) or dematerialised (virtual, kept at a specialised authority, eg, a central depository). Shares can also be issued in different classes, with different rights and obligations assigned to each class – like a voting veto or extra dividends. Shareholding must be duly reflected in the shareholders' book, making it a central document on calculating majority rights for voting. Pre-emptive rights, like right of first refusal (RoFR), drag along, tag along, etc, if implemented, must be fully described in the company's AoA.

What to watch out for:
The JSC offers a mix of pros and cons, such as:

- a simple share-transfer form, not needing a notary, but RoFR restrictions may apply and the shareholder's book entry is subject to the executive director's support;

- the management body must be a collective (at least three persons), which is safer for decision-making, but not ideal for fast decisions;
- depending on the types of shares, dematerialised shares make the JSC eligible for IPO and stock-market participation, but the shareholders will always be dependent on an investment broker to accommodate the transaction; and
- reporting standards are higher, with the necessity of a third-party audit over financial reports, making running costs higher.

### Variable Capital Company (VCC)

Best use scenario:
- a start-up;
- for venture capital participation with several investment rounds;
- for fintech, or other fast-growing industries where the product is key; and
- where flexibility on management and control is required.

When to avoid:
- when an LLC/JSC is needed to meet statutory requirements;
- for an IPO listing – the company must first be transformed into a JSC; and
- for small-to-medium and family-owned businesses, where an LLC works better.

The VCC's aim is to service the start-up scene, offering a mix of both LLC and JSC characteristics. Venture companies, start-ups and scalable enterprises are the intended target for this legal form. The capital, being labelled as "variable", is not fixed but always changing, with a view to constant growth because of investments.

The VCC has only been in use since 2025 and Bulgarian business is still somewhat hesitant to engage, as better understanding of corporate and financial affairs is required.

The emphasis in the VCC is on speed, servicing the market and flexibility. The AoA of the VCC can be "moulded" to best suit the needs of the shareholder while, of course, remaining within the confines of the law.

Intended only as a "start-up" vehicle, there are two thresholds at which the VCC should be transformed either into an LLC or JSC:
- when the annual turnover (or assets) exceed approximately EUR2,050,000; and
- when there are more than 50 persons on the staff.

The minimum number of shareholders is again one. There is no explicit minimum starting capital stated in the law, and no requirement for opening a bank account to begin with. As with other corporate entities, however, the single share amount should not be less than EUR0.01.

No shareholders will be visible in the Commercial Register; only the management body is.

The VCC uses the conveniences of the other corporate forms in:
- low starting costs (like an LLC);
- choosing the best management approach – either singular, board (as in a JSC) or a mix;
- avoiding notary certifications of share transfers and implementing a shareholders' book (like a JSC); and
- vesting, employee stock ownership plans (ESOPs) and other employee incentives.

What to watch out for:
- loss of controlling rights on the part of the founder(s) when investors buy in;
- passing both statutory thresholds (staff number and EUR2,050,000 annual turnover/assets); and
- maintaining proper vesting policies for staff and executive members.

## 3.2 Incorporation Process

### LLCs

LLC incorporation can take between a week and 1.5 months depending on several factors.

The LLC's incorporation consists of:
- signing several documents (resolutions, AoA, statutory declaration);
- opening a bank account at a Bulgarian bank to pay in capital; and
- filing and review at the Commercial Register (CR).

The main delay comes with the bank, as all company-related participants must satisfy statutory know-your-customer (KYC) requirements, which can sometimes take up to three weeks, even when the prep work is done beforehand.

After that, all documents are filed at the CR for review, which takes around two business days.

#### JSCs

The timing is similar with a JSC, but with caveats in case of licensed activity.

JSC establishment requirements are similar to those of LLCs, including the need for a capital bank account.

Where specific activities (banking, insurance, etc) are practised, the respective licensing is required, which can take up to six months, depending on the regulator.

#### VCCs

VCC incorporation is the fastest.

Since there is no formal requirement for a bank account to pay the capital into, the establishment of a VCC depends mostly on document preparation and filing at the CR, which takes approximately two business days.

The preparation required in finding the best solutions to implement in the AoA is the more difficult and time-consuming task.

### 3.3 Ongoing Reporting and Disclosure Obligations

#### All Companies

All company forms must follow basic corporate housekeeping.

Any changes in structure must be filed at the CR, for example, changes:

- in the company's name or address;
- to the AoA;
- to the capital;
- to the shareholders; and
- in management.

Additionally, companies must file the name of their ultimate beneficiary under the local anti-money laundering legislation, especially when foreign companies participate.

Each company must file its approved annual financial report and, in some cases, this must be audited.

All of the above are applicable to LLCs, while JSCs and VCCs have extra obligations.

#### *JSCs*

JSCs are subject to higher reporting standards and must, in most cases, present third-party audited reports.

Internally, the management body undertakes to provide timely reporting on operational matters when requested by the GM (and/or the supervisory board in a two-tier system).

In the case of a licensed activity being carried out, the regulators usually require more frequent reporting and can carry out activity inspections.

#### *VCCs*

VCCs borrow the best practices from JSCs, but require "bullet-proof" accounting.

The accounting team, engaged in servicing the VCC, is central to operations. It will be obliged to reflect how shareholding and monetary contributions are distributed in the company, while the shareholders' book states who owns what.

### 3.4 Management Structures

#### LLCs

LLCs can have either one or several managers.

It is advisable for relations between the company and the appointed manager(s) to be strictly governed and laid out in a management agreement, supplementing the legislative framework. Basic limitations on financial thresholds, authorisations and internal liability matters can be described therein.

Where several managers are appointed, the company can be represented (i) by each manager individually;

(ii) jointly by all; or (iii) in another mixed form (eg, by two out of three managers).

There are no prohibitions for management members to be shareholders or vice versa.

### JSCs

A JSC can be managed either in a single- or two-tier style.

However, a JSC is managed by a board, whichever system is chosen. Board members are appointed for a mandate of up to five years, with no prohibition on being reappointed.

#### *Single-tier system*

In the case of a single-tier system, the company is managed and represented by a board of directors (BoD) consisting of three to nine persons. The BoD's members are elected and appointed by the GM, while the BoD itself adopts internal rules and regulations for its work. The BoD may appoint a single executive director, who takes on the responsibility of representing the company before third parties.

#### *Two-tier system*

When using a two-tier system, the management body consists of a:

- management board; and a
- supervisory board, which observes the work of the management board and sets the standards.

Here, the supervisory board's members (three to seven persons) are elected by the GM, while the management board's members (three to nine persons) are elected by the supervisory board. To avoid a conflict of interests, no board member can be part of both the supervisory and management boards at the same time. It is either one or the other.

### VCCs

A VCC can use either a single or group of managers, as chosen by the founder/shareholder(s).

Choices vary between:

- appointing a single manager;
- having multiple managers who work independently; or
- having a collective board with collective liability, or any mix of the above.

Supervisors, observers, secretaries, etc, can also be appointed.

All management types and work rules must be duly reflected in the AoA.

## 3.5 Directors', Officers' and Shareholders' Liability

Until the implementation of the VCC, Bulgarian corporate entities worked on the principle that the managing body was only internally liable to the company (shareholders), while all deals with third parties concluded by said management without the GM's authorisation, were considered valid and binding. In any case, creditors of the company may pose their claims only before the company itself, not its management.

### LLCs

#### *Managers and officers*

The above rule for only internal liability of the manager works in full force in an LLC.

Legislation makes little differentiation between officers and managers, CEOs, COOs, CFOs, etc (the latter are internal differentiations based on a contractual level). The important distinction is who is registered as a company representative at the CR.

Managers' liability towards third parties and authorities is severely limited under the legal framework, which does state, however, that managers can be fined for non-compliance of financial reporting. In some cases, managers can be personally liable for certain tax breaches.

#### *Shareholders*

Once shareholders have subscribed for shares, they are free from other monetary obligations.

All shareholders do have basic statutory operative obligations towards the company, such as, (i) to participate in the GM/management and to follow its resolutions; and (ii) to provide support for the company's activity realisation, etc.

Shareholders can be penalised and/or outright removed if they damage the company in any way or work against its interests, all subject to a GM resolution.

### JSCs

#### *Managers*

Management responsibilities and liabilities in JSCs are stricter.

Members of the BoD (or management board) are expected to present a guarantee in the form of a monetary sum in the amount of three times their gross annual salary.

Being a collective body, the liability itself is distributed equally between BoD members by default, regardless of internal distribution of roles as CEO, COO, CFO, etc, unless appealed before the GM.

Board members have strict rules imposed over confidentiality, non-competition, and carrying out their duties in a professional manner.

#### *Shareholders*

JSC shareholders are obliged to pay the respective share subscription price and participate in the company's affairs by voting at the GM and following its resolutions, much like the shareholders of an LLC.

### VCCs

#### *Managers*

Management of a VCC is a fairly new concept in terms of Bulgarian corporate liability standards.

While the above rules for LLCs and JSCs are applied respectively, the VCC introduces the concept of "piercing the corporate veil" in Bulgarian legal practice. This means that the appointed manager may be personally responsible before third parties for misconduct in the company affairs.

The law provides that the appointed manager (or BoD member) will be assessed on how they:

- perform their duties with the care of a prudent businessperson, balancing the risks of the business with the expected return for the company; and
- avoid any conflict of interest between their own interests and those of the company.

At the same time, managers and/or shareholders exercising control, who have acted intentionally, will be jointly and severally liable to creditors for damages suffered as a result of the transactions and actions of the company.

#### *Shareholders*

Shareholders' liability is to pay the respective share subscription price and participate in the company's affairs by voting at the GM and following its resolutions, much like for the other company forms, unless there are additional stipulations in the AoA. If, as a result of their intentional actions, shareholders cause damage to the company, they may be liable to the company's creditors.

## 4. Employment Law

### 4.1 Nature of Applicable Regulations

Employment relationships in Bulgaria are primarily governed by specific pieces of legislation passed by the Bulgarian parliament, reflecting Bulgaria's civil law tradition. The Bulgarian Labour Code establishes mandatory minimum standards regarding the formation, performance and termination of employment relationships. The legal framework is supplemented by the Social Security Code, the Health and Safety at Work Act, the Labour Migration and Labour Mobility Act in relation to third-country nationals and certain cross-border employment situations, the Protection Against Discrimination Act, and various secondary legislation, mainly ordinances, regulating specific aspects of employment conditions.

As an EU member state, Bulgaria has implemented the principal EU directives governing employment law matters. Consequently, Bulgarian employment legislation reflects common European standards in areas such as working time, fixed-term and part-time work, transparent and predictable working conditions, gender equality, etc.

Bulgarian employment law is predominantly statutory and is characterised by a high degree of mandatory

regulation. The parties may agree on terms that are more favourable to the employee than those prescribed by law, but contractual provisions that reduce the statutory level of protection are generally unenforceable (even null and void).

Although judicial decisions do not constitute a formal and generally binding source of law, the case law of the Bulgarian Supreme Court of Cassation and the Bulgarian Supreme Administrative Court plays an important role in ensuring the consistent interpretation and application of employment and social security legislation.

Employment relationships are established through individual written employment contracts, which must comply with the mandatory requirements of the Labour Code. Collective bargaining agreements may also apply where concluded at enterprise, sectoral, industry or municipal level. Such agreements regulate matters including remuneration, working conditions and benefits, and bind employers that are parties to the agreement or otherwise become bound under the applicable statutory rules. Internal workplace rules and employer internal policies may further regulate the organisation of work, provided they comply with mandatory legislation and any applicable collective bargaining agreement.

## 4.2 Characteristics of Employment Contracts

### Specific Requirements

Employment contracts must be concluded in writing before the employee commences work. The written form is mandatory under the Bulgarian Labour Code and cannot be replaced by an oral agreement. Before the employee starts work, the employer must provide the employee with a signed copy of the employment contract and a copy of the notification submitted to the Bulgarian National Revenue Agency (NRA) as evidence that the employment agreement was registered with the NRA. Failure to comply with these requirements may expose the employer to administrative sanctions.

The Bulgarian Labour Code prescribes the mandatory minimum content of an employment contract. The contract must specify, among other things:

- the parties;
- the place of work;
- the job position and nature of the work;
- the date of signing the employment agreement and the date of commencement of work;
- the duration of the contract (indefinite period or fixed-term employment); and
- the paid annual leave and additional paid annual leave (if any) entitlement.

Employment contracts may be concluded for either an indefinite or a fixed term (permitted only in the expressly provided circumstances).

#### *Probation*

The parties may also agree on a probationary period of up to six months for the benefit of the employer, the employee or both.

#### *Amendments*

Employment contracts may generally only be amended by mutual written agreement between the employer and the employee. Unilateral amendments by the employer are permitted only in the limited circumstances expressly provided for by Bulgarian labour legislation.

#### *Restrictive covenants*

Post-termination restrictive covenants are recognised only to a limited extent under Bulgarian law. While confidentiality obligations and, in appropriate circumstances, carefully drafted non-solicitation clauses may remain enforceable after the termination of employment, non-compete obligations are considered unenforceable (even null and void). Restrictive covenants are generally permissible during employment.

## 4.3 Working Time

### Standard Terms

Bulgarian employment law prescribes both normal and maximum working time. The standard working week is 40 hours, organised as an eight-hour working day over a five-day working week. Part-time employment arrangements are also recognised and may be agreed by the parties. Depending on the nature and organisation of the work, Bulgarian legislation also permits shift work, flexible working hours, aggregated calculation of working time, open-end working time

and on-call duties, subject to the statutory conditions applicable to each arrangement. Bulgarian employment legislation also provides for reduced working hours for certain categories of employees, including those performing work under hazardous or otherwise harmful working conditions, as well as in other cases expressly provided for by operation of the law.

#### *Rest periods*

Employees are entitled to statutory minimum rest periods. As a rule, employees are entitled to a minimum uninterrupted daily rest period of 12 hours between two working days and a minimum uninterrupted weekly rest period of 48 consecutive hours in a five-day working week.

#### *Regulation of night work*

Night work is subject to specific statutory regulation. Night working hours are shorter than daytime working hours, and employees performing night work are entitled to additional remuneration, enhanced health and safety protection and periodic medical examinations. Special restrictions apply to certain categories of employees, including minors and pregnant employees.

#### *Overtime*

Overtime work is generally prohibited unless it falls within the limited exceptions expressly provided for by the Labour Code, such as work required for national defence, the prevention or mitigation of disasters, etc.

### 4.4 Termination of Employment Contracts

#### Grounds for Termination

Bulgaria is not an "employment at will" jurisdiction. Employment contracts may be terminated only on the grounds and in accordance with the procedures expressly provided for by the Labour Code. Depending on the applicable legal basis, an employment contract may be terminated:

- by mutual agreement, by either party upon notice;
- without notice in the circumstances prescribed by law;
- upon expiry of a fixed-term contract; or
- by operation of law.

#### Dismissals

Employer-initiated dismissals are permissible only on statutory grounds, which broadly fall into business-related reasons (eg, closure of the enterprise, redundancy, reduction in workforce, etc).

Bulgarian employment law imposes strict substantive and procedural requirements on dismissals. Depending on the legal ground relied upon, the employer may be required to apply statutory selection criteria and conduct a statutory selection process where only part of the workforce is affected, or obtain prior approval from the Labour Inspectorate or consult the competent medical authorities in cases involving employees entitled to protection against specific unilateral termination grounds (eg, pregnant female employees or employees in advance in-vitro treatment, etc). Failure to comply with the applicable legal requirements may result in the dismissal being declared unlawful by the courts.

Employees may challenge the lawfulness of their dismissal before the competent court. Where a dismissal is found to be unlawful, the court may order the employee's reinstatement and award compensation of up to six months' gross remuneration for the period during which the employee was unemployed as a result of the unlawful dismissal.

#### Severance

Bulgarian law does not provide for a general statutory entitlement to severance pay upon termination of employment. However, employees are entitled to receive all outstanding remuneration accrued up to the termination date, including compensation for any unused paid annual leave and payment in lieu of notice (if applicable).

#### Collective Redundancies

Collective redundancies are specifically regulated by Bulgarian labour legislation, which implements the relevant EU legislation. Where the statutory thresholds are met, employers must initiate prior information and consultation procedures with employee representatives and trade unions, where such representatives exist, with a view to discussing measures to avoid or reduce the proposed redundancies and mitigate their consequences. The employer must also notify

the competent Employment Agency. Non-compliance with the strict collective dismissal legal framework may result in material administrative sanctions for the employer but does not affect the lawfulness of each individual termination of employment.

### 4.5 Employee Representations

Bulgarian employment law recognises several forms of employee representation but does not require employers to establish a permanent employee representative body comparable to a "works council" (popular in other EU countries). Employee representation is primarily exercised through trade union organisations and employee representatives.

#### Trade Unions

Trade unions have statutory rights to represent and protect the collective interests of their members, conduct collective bargaining, negotiate and conclude collective bargaining agreements, and monitor employers' compliance with employment legislation and collective bargaining agreements. In parallel, employees may elect representatives for information and consultation purposes, who represent all employees and their interests, irrespective of trade union membership.

#### Employee Representatives

The Labour Code requires employers to provide information and conduct consultations with employee representatives in the cases prescribed by law, particularly where proposed measures are likely to affect employees' interests. These include, among others, collective redundancies, transfers of undertakings, etc.

Employees also elect health and safety representatives, who participate in monitoring compliance with occupational health and safety requirements, workplace risk assessments and the development of preventative measures, while co-operating with the employer and the competent public authorities on occupational health and safety matters.

## 5. Tax Law

### 5.1 Taxes Applicable to Employees/ Employers

In the context of employment relationships under Bulgarian law, the following public receivables must be paid:

- income tax;
- social securities contributions;
- health insurance contributions; and
- contributions to the Guaranteed Workers' and Employees' Receivables Fund – not applicable for 2026, until the adoption of the State Budget Act for 2026 by the National Assembly.

Income tax is withheld and paid by the employers. It represents 10% of the remuneration paid to the employee, deducted with the contributions for health insurance and social securities owed by the employee, and the tax benefits, if any. Since documentation and payments are made by employers, employees are not obliged to declare their incomes to the NRA, unless they receive any payments on the basis of other relations. Other taxes may also apply to employees if they work and receive remuneration or other payment on the basis of other contracts different from employment agreements.

The following social contributions (charges) are usually paid in the context of employment relationships:

- pension contributions – between 12.8% and 20.8% of the insurance income depending on several factors, eg, date of birth;
- general illness and maternity contributions – 3.5% of the insurance income;
- unemployment contributions – 1% of the insurance income; and
- work-related accident and professional illness contibutions – defined in the State Budget Act.

The insurance income is defined by the gross wage. If the gross wage is below the minimum for the state, payments will be made on the basis of the minimum gross wage. The State Budget Act usually defines a maximum insurance income, and for any payments received over that maximum, no social charges will be paid.

Social securities contributions are usually divided between employees and employers in a certain ratio. Employers pay all social charges for work-related accidents and professional illnesses.

Health insurance charges amount to 8% of the insurance income and they are divided 60:40 between employers and employees.

## 5.2 Taxes Applicable to Businesses

Companies doing business in Bulgaria could be liable for the following taxes if they qualify as local entities:

- corporate income tax;
- value added tax;
- withholding tax on dividends and liquidation shares;
- taxes on interests for some foreign companies; and
- qualified domestic minimum top-up tax on large multinational companies.

### Corporate Income Tax

The corporate income tax rate is 10% of the annual profits of a company. The income of a company according to its accounts is transformed by the application of different components, eg, permanent tax differences, temporary tax differences, etc, to define company profits. Local entities and foreign entities that have branches and places of economic activity in the territory of Bulgaria will be liable for corporate income act on the income of those branches/places of economic activity.

### Value Added Tax

The standard VAT rate is 20% of the price of transactions or services provided. It is applicable for any taxable supply, import of goods, and some intra-community acquisitions in Bulgaria, including new vehicles and excise tax goods. Certain supplies could be charged a zero rate, eg, export of goods, international transport services, etc.

Any company performing independent economic activities in the territory of Bulgaria, having turnover amounting to more than EUR51,130 for the previous 12 months is obliged to register for VAT purposes. The registration could also be voluntary prior to reaching a turnover of EUR51,130. Registered companies are entitled to tax credit.

### Withholding Tax

Taxes on dividends and liquidation shares distributed by local entities to foreign companies could be withheld in the territory of Bulgaria. The tax rate is 5% of the gross amount of the dividends and liquidation shares. These taxes do not, however, apply to companies which are local entities in another EU or EEA member state.

### Minimum Top-Up Tax

Bulgaria has introduced the qualified domestic minimum top-up tax on large multinational companies in its Corporate Income Tax Act, as implementation of the OECD Pillar Two Safe Harbours. However, this does not provide a blanket "guaranteed safe harbour" to corporate taxpayers under the OECD framework.

## 5.3 Available Tax Credits/Incentives

In Bulgaria, VAT must be declared and paid to the NRA by the seller of goods or services who is registered for VAT purposes. Almost any seller who is registered for VAT purposes is entitled to VAT credit. This means that sellers are entitled to deduct the VAT they were charged for supplies to them from the VAT they declare, and pay the difference to the NRA.

Certain exceptions to this rule are listed in the VAT Act, for example, entities which perform intra-community acquisitions or which are voluntarily registered for VAT purposes, etc, will not benefit from VAT credit.

VAT credit should also not be used for certain transactions, for example, VAT-exempt supplies, acquisitions or imports of motorcycles and lightweight cars, as well as the supply of any goods or provision of services for maintenance, repair, improvement and operation of motorcycles and cars.

The Bulgarian Corporate Income Tax Act provides for several tax incentives to encourage specific economic activities, for example:

- tax relief for conducting manufacturing activities in municipalities with unemployment rates higher than the national average;
- tax relief as a state aid to farmers – this could be applied via income tax credit of up to 60% on the taxable income of the farmer;

- for income tax purposes, accounting expenses for donations; and
- in order to avoid double taxation, income derived from dividend distribution from other entities registered under Bulgarian law or in another member of the EU or the EEA, is not recognised as company income.

The aforementioned tax incentives are the most common examples, but do not represent the complete list.

### 5.4 Tax Consolidation

This is not applicable in Bulgaria.

### 5.5 Thin Capitalisation Rules and Other Limitations

The Bulgarian Corporate Income Tax Act regulates thin capitalisation as a means to restrict recognition of interest expenses when a company is financed through a disproportionately high amount of debt compared to its equity. These rules aim to limit the risk of distributing the profits of the company through interest, resulting in the deduction of the tax base for corporate income tax.

These rules do not apply for bank credit and financial leasing, unless the parties to the financing are related parties or the financing was guaranteed with the participation of related parties.

Thin capitalisation rules apply in cases where the capital raised exceeds the equity of the respective company three times.

### 5.6 Transfer Pricing

Transfer pricing rules are applicable in the territory of the Republic of Bulgaria to serve as a guarantee for market prices in transactions between related, including affiliated, parties.

In cases of audits by the NRA, it is the companies that bear the burden of proof that the terms, and especially the price of a transaction, meet the requirements to be defined as market price.

Several methods to define market price can be used – for example, the comparable uncontrolled prices method, market prices method, value-added method, net transaction profit method, or allocated profit method.

In cases of groups of companies, transfer pricing policies must be introduced.

### 5.7 Anti-Evasion Rules

The rules for anti-evasion of taxes under Bulgarian law include several institutes, besides the transfer pricing rules described above. The anti-evasion measures under the Corporate Income Tax Act include, for example:

- the general prohibition of anti-evasion transactions or sets of transactions – when one or more supply transactions, including those between unrelated parties, are entered into under terms that could result in tax avoidance;
- the identification of specific cases as tax avoidance transactions, eg, when there is a significant excess of quantities of materials, raw materials, and other production costs compared to what is customary for a business, and there are no objective reasons for this, etc; and
- the definition of sham transactions as tax avoidance schemes per se.

These rules could also apply to individuals and personal income tax (eg, when transactions are between related parties).

The burden of proof in cases of audits by the NRA is borne by the taxable entity or person.

### 5.8 Tariffs

Bulgaria is a member state of the EU and applies the EU tariff rules, including the Union Customs Code (UCC) and the Common Customs Tariff (CCT).

The tariff rates and policies are defined by the EU's Common Commercial Policy and CCT, WTO agreements and bilateral agreements with other states, the EU's free trade agreements and preferential trade arrangements, the EU's general preferential scheme, EU anti-dumping and anti-subsidy investigations, geopolitical and economic measures, etc.

The most unfavourable or more stringent tariff treatment applies to:

- goods from Russia and Belarus – to mitigate the EU's economic dependency on these states;
- agricultural products – as part of the protection rules for the agricultural sector; and
- the import of steel and aluminium from China, Russia and Brazil – as anti-dumping measures.

## 6. Competition Law

### 6.1 Merger Control Notification

Merger control in Bulgaria is governed by the Bulgarian Competition Protection Act (CPA) and administered by the Bulgarian Commission for Protection of Competition (CPC). Concentrations meeting the statutory jurisdictional thresholds are subject to mandatory prior notification and may not be implemented before obtaining clearance from the CPC.

#### What Constitutes a Concentration?

A concentration arises where a transaction results in a lasting change of control over an undertaking. This includes mergers between previously independent undertakings, acquisitions of direct or indirect sole or joint control over one or more undertakings or parts thereof, and the establishment of a full-function joint venture performing, on a lasting basis, all the functions of an autonomous economic entity. The acquisition of a minority shareholding does not, in itself, constitute a notifiable concentration.

#### When is Notification Required?

Bulgarian merger control applies not only to domestic transactions but also to foreign-to-foreign transactions, provided that the statutory thresholds are met. Notification is mandatory where the aggregate Bulgarian turnover of all undertakings concerned exceeds EUR12.78 million (BGN25 million) during the preceding financial year and either:

- the Bulgarian turnover of each of at least two undertakings concerned exceeds EUR1.53 million (BGN3 million); or
- the Bulgarian turnover of the target undertaking exceeds EUR1.53 million (BGN3 million).

Turnover is assessed at group level in accordance with the CPA.

Since November 2025, the CPA has also permitted voluntary notification in respect of concentrations that fall below the mandatory thresholds. In addition, the 2025 amendments introduced a call-in power enabling the CPC to require notification of a below-threshold transaction within six months of its completion, where the combined Bulgarian turnover of all participants exceeds EUR12.78 million (BGN25 million) and the transaction raises concerns that effective competition may be significantly impeded, in particular as a result of the creation or strengthening of a dominant position.

The CPA imposes a standstill obligation on notifiable concentrations. Transactions requiring notification may not be implemented before the CPC grants clearance. Failure to notify, or implementation of a transaction prior to clearance (gun-jumping), may result in fines of up to 10% of the aggregate group turnover of the acquiring undertakings for the preceding financial year.

### 6.2 Merger Control Procedure

#### Notification

Merger control proceedings are conducted before the CPC. A notification must generally be submitted after the transaction documents have been executed, a public tender offer has been announced, or control has been acquired, but before any steps are taken to implement the transaction. Exceptionally, upon request of the parties, the CPC may assess a concentration prior to signing where the parties can demonstrate a genuine intention to conclude the transaction or have publicly announced an intention to make a tender offer.

In cases of a merger or the acquisition of joint control, the notification must be filed jointly by the parties. In cases of sole control, the obligation falls on the acquirer alone.

The notification must be submitted in the standard form approved by the CPC and include comprehensive information regarding the parties and their corporate groups, the ownership and control structure, the nature and legal basis of the transaction, the relevant markets, etc.

A filing fee of EUR1,022.58 applies upon submission, together with an additional fee of 0.1% of the combined Bulgarian turnover of all participating undertakings for the preceding year – capped at EUR30,677.51 (BGN60,000) – payable if the concentration is cleared.

### Review

The proceedings are initiated within five working days of receipt of the notification if all the required documents and information are provided. Following receipt of a complete notification, the CPC will carry out a "Phase I" preliminary review, lasting for 25 business days. If the CPC concludes that the concentration does not raise competition concerns, it issues an unconditional clearance decision or, where appropriate, clears the transaction subject to commitments offered by the parties.

Where the transaction gives rise to serious doubts as to its compatibility with effective competition, the CPC will open a "Phase II" in-depth investigation, to be completed within 90 business days (although this can be slightly extended).

A notifiable concentration may not be implemented before clearance is granted, subject only to the limited statutory exceptions provided by the CPA. Clearance decisions do not carry an expiry date under Bulgarian law but remain valid only for as long as the circumstances on which the CPC based its assessment have not materially changed prior to actual closing.

Final decisions of the CPC are subject to judicial review before the Administrative Court – Sofia Region, the judgments of which may be appealed on points of law before the Supreme Administrative Court (the decisions of which are final).

## 6.3 Cartels

### Prohibition

The CPA prohibits agreements between undertakings, decisions of associations of undertakings and concerted practices that have as their object or effect the prevention, restriction or distortion of competition on the relevant market. These rules largely mirror the legal framework set out in Article 101 of the Treaty on the Functioning of the European Union (TFEU). Where the relevant conduct can affect trade between EU member states, the CPC applies both the CPA and Article 101 TFEU in accordance with Regulation (EC) No 1/2003.

The prohibition applies to both horizontal and vertical arrangements, irrespective of whether co-ordination results from a written or oral agreement, a decision of an association of undertakings or a concerted practice. It covers, among other practices, direct or indirect price-fixing or the fixing of other trading conditions, the allocation of markets or sources of supply, limitations or control of production, etc. Agreements infringing the prohibition are null and void to the extent of the restriction.

The CPA applies on the basis of the effects doctrine. Accordingly, it applies to agreements and practices implemented both within and outside Bulgaria where they have the object or effect of preventing, restricting or distorting competition on the Bulgarian market.

### Exemptions

The CPA recognises exemptions corresponding to those under EU competition law. Agreements that contribute to improving the production or distribution of goods or promoting technical or economic progress, while allowing consumers a fair share of the resulting benefits, may benefit from exemption where all statutory conditions are satisfied.

### Investigations and Sanctions

The CPC is responsible for investigating and sanctioning infringements of the prohibition. It has extensive investigative powers, including the power to require information, conduct unannounced inspections, obtain oral explanations and seize evidence. Undertakings participating in prohibited agreements may be fined up to 10% of their total turnover for the preceding financial year.

### Judicial Review

Final decisions of the CPC are subject to judicial review before the Administrative Court – Sofia Region, the judgments of which may be appealed on points of law before the Supreme Administrative Court (the decisions of which are final).

### 6.4 Abuse of Dominant Position

#### Legislation

The CPA prohibits the abuse of a monopoly, dominant or collective dominant position. The rules are contained in Chapter Four of the CPA and largely correspond to Article 102 of the TFEU. Significant legislative amendments regarding the abuse of a monopoly, dominant or collective dominant position entered into force on 26 June 2026. Where the conduct is capable of affecting trade between EU member states, the CPC applies both the CPA and Article 102 TFEU in accordance with Regulation (EC) No 1/2003.

#### Definition of Dominant Position and Abusive Conduct

A dominant position exists where an undertaking, having regard to factors such as its market share, financial resources, access to the market, technological advantages and commercial relationships, is able to behave independently of its competitors, suppliers or customers. Following the June 2026 amendments, an undertaking holding a market share of at least 50% is presumed to be dominant, unless it demonstrates that it does not possess the characteristics of dominance prescribed by the CPA. The burden of rebutting the presumption rests on the undertaking. Prior to the June 2026 amendments, however, the burden of establishing the existence of a dominant position rested on the CPC.

The 2026 amendments also introduced a statutory concept of collective dominance. Two or more undertakings may be found jointly dominant where economic interdependence or other factors enable them to act, to a significant extent, independently of their competitors, suppliers and customers, and thereby restrict competition.

The CPA prohibits abusive conduct capable of preventing, restricting or distorting competition and harming consumers. Examples include the direct or indirect imposition of unfair purchase or selling prices or other unfair trading conditions, limiting production, etc. The amendments of 26 June 2026 also introduced a separate prohibition on the imposition of excessive prices by undertakings holding a monopoly, dominant or collective dominant position.

The CPA applies on the basis of the effects doctrine. Accordingly, it applies to unilateral conduct carried out both within and outside Bulgaria where it has the object or effect of preventing, restricting or distorting competition on the Bulgarian market.

#### Investigations and Sanctions

The CPC is responsible for investigating and sanctioning infringements of the prohibition on abuse of monopoly, dominant and collective dominant positions. It may conduct inspections, require information, order the cessation of the infringement, impose behavioural or structural remedies, and levy fines of up to 10% of the undertaking's total turnover for the preceding financial year.

#### Judicial Review

Final decisions of the CPC are subject to judicial review before the Administrative Court – Sofia Region, the judgments of which may be appealed on points of law before the Supreme Administrative Court (the decisions of which are final).

## 7. Intellectual Property

### 7.1 Patents

Under Bulgarian law, a patent is an exclusive right granted for an invention that is new, involves an inventive step, and is industrially applicable. Patent protection is governed primarily by the Patent and Utility Model Registration Act.

The patent holder has the exclusive right to the invention, which includes the right to use the invention, the prohibition on third parties using it without the patent holder's consent, and the right to dispose of the patent.

Patent protection is obtained through registration with the Patent Office of the Republic of Bulgaria. The application undergoes a formal examination and a substantive examination to determine whether it meets the requirements for patentability. The term of protection is 20 years from the filing date, provided that annual maintenance fees are paid.

Patent rights may be enforced through civil proceedings and, in certain circumstances, criminal proceedings.

Available legal remedies include interim relief and court claims through which one may seek a declaration and/or cessation of the infringement, compensation for damages, seizure and destruction of the infringing goods, publication of the court decision, and reimbursement of legal costs. Customs measures against infringing goods are also possible.

## 7.2 Trade Marks

A trade mark is any sign capable of distinguishing the goods or services of one person or undertaking from those of others that is capable of being represented in the State Register of Trademarks in a manner that enables the clear and precise determination of the subject matter of the protection afforded by the registration. Such signs may consist, for example, of words, including personal names, letters, numerals, drawings, figures, the shape of goods or their packaging, colours, sounds, or any combination of such signs.

### Protection

Trade mark protection is governed by the Marks and Geographical Indications Act (MGIA). Trade mark rights are acquired through registration before the Patent Office of the Republic of Bulgaria (PORB). The registration process includes both a formal examination and a substantive examination. If the trade mark complies with the requirements set out in the MGIA, it is published in the next issue of the official bulletin of the PORB. From the date of publication, a three-month opposition period begins to run. If no opposition is filed within this period, the trade mark proceeds to registration.

Protection is granted for an initial period of ten years from the filing date and may be renewed indefinitely for successive ten-year periods. Registered trade marks become vulnerable to revocation if they are not put to genuine use within a continuous period of five years following registration.

### Enforcement

Trade mark ownership may be enforced through civil proceedings and, in certain circumstances, criminal proceedings, and customs intervention against counterfeit goods may also be sought.

Available legal remedies include:

- interim relief and court claims through which one may seek a declaration and/or cessation of the infringement;
- compensation for damages;
- seizure and destruction of the infringing goods;
- hand-over of the items involved in the violation;
- publication of the court decision; and
- reimbursement of legal costs.

## 7.3 Industrial Designs

Under Bulgarian law, a design protects the visible appearance of a product or part of it, as determined by the characteristics of its shape, lines, design, ornamentation, colour scheme, or a combination thereof. Design protection is governed by the Industrial Design Act.

Protection is obtained through registration before PORB. To be registrable, a design must be new and possess individual character (be original). The registration process includes both a formal examination and a substantive examination. If it is determined that the design applied for is eligible for registration, the applicant is sent a notice granting a one-month period to pay the fees for registration, issuance of the registration certificate, and publication. Once the applicant pays the fees, the design is registered.

The initial term of protection is five years from the filing date and may be renewed for additional five-year periods up to a maximum term of 25 years.

Design rights may be enforced through civil proceedings and, in certain circumstances, criminal proceedings. The same legal remedies are available as for trade mark infringement (see **7.2 Trade Marks**).

## 7.4 Copyright

Under Bulgarian law, copyright protects original literary, artistic, musical, audio-visual, photographic and other creative works, including computer software

and databases that satisfy the originality requirement. Databases may benefit from copyright protection where they constitute original intellectual creations and may also be protected through the sui generis database right where a substantial investment has been made in terms of both quantity and quality. Copyright protection is governed by the Copyright and Related Rights Act.

Copyright arises automatically upon creation of the work and does not require registration or any other formalities. In principle, only individuals can be copyright holders, while legal entities can be copyright holders only in cases specified by law.

As a general rule, copyright protection lasts for the lifetime of the author and for 70 years after their death. For certain works, such as anonymous works, computer databases, and films, the 70-year term begins at different points in time.

Copyright may be enforced through civil proceedings and, in certain circumstances, criminal proceedings.

The same legal remedies are available as for trade mark infringement (see **7.2 Trade Marks**).

### 7.5 Others

Under Bulgarian law, other intellectual property rights and related assets may include trade secrets, know-how, domain names and confidential business information.

#### Trade Secrets

Trade secrets are protected under the Trade Secret Protection Act. A trade secret is any commercial information, know-how, or technological information that simultaneously meets all of the following requirements:

- it is secret in the sense that, as a whole or in the precise configuration and assembly of its components, it is not generally known or readily accessible to persons within the circles that normally deal with this type of information;
- it has commercial value because it is secret; and
- reasonable measures have been taken to keep it secret by the person who lawfully controls the information.

A trade secret holder is any natural or legal person who lawfully controls a trade secret.

Enforcement mechanisms include interim relief and court claims through which one may seek a cessation or prohibition of use; prohibition of the production, offering for sale and use of the infringing goods; destruction of the infringing goods; prohibition of the provision of services that have significantly benefited from the trade secret; as well as an award of damages for the losses suffered and reimbursement of legal costs. Contractual confidentiality obligations and unfair competition rules may provide additional protection.

#### Know-How and Business Information

Know-how and business information may be protected through previously executed contractual arrangements. Their protection may be enforced through legal proceedings for breach of contractual obligations.

#### Domain Names

Domain names may be protected through their registration with the relevant registrars. Protection of domain names may be enforced by initiating proceedings before the World Intellectual Property Organization (WIPO) or in accordance with the dispute resolution procedures established by the relevant registrar.

## 8. Data Protection

### 8.1 Applicable Regulations

The protection of personal data in Bulgaria is primarily governed by Regulation (EU) 2016/679 or the General Data Protection Regulation (GDPR), which applies directly and without the need for national implementing legislation, and the Bulgarian Personal Data Protection Act (PDPA), which has very limited application and supplements the GDPR in areas where EU member states are permitted to adopt national rules. The Bulgarian legal framework also includes sector-specific legislation governing the processing of personal data in particular fields, such as electronic communications, healthcare, financial services and employment (primarily the legal basis for processing of such personal data).

The GDPR's core principles – lawfulness, fairness and transparency, purpose limitation, data minimisation, storage limitation, integrity and confidentiality, and accountability – apply in full.

The Commission for Personal Data Protection (CPDP) is the national supervisory authority responsible for monitoring and enforcing compliance with data protection legislation. It exercises the full range of investigative and corrective powers conferred by the GDPR, including the power to conduct inspections, issue warnings and reprimands, order corrective measures and impose administrative fines.

The PDPA supplements the GDPR by regulating matters left to national law.

### 8.2 Geographical Scope

The GDPR applies in Bulgaria on the basis of both the establishment and the targeting criteria, giving it broad extraterritorial effect.

Under the establishment criterion, the GDPR applies to the processing of personal data carried out in the context of the activities of an establishment of a controller or processor in the EU, irrespective of whether the processing itself takes place within the EU.

Under the targeting criterion, the GDPR also applies to controllers and processors not established in the EU that process the personal data of data subjects in the EU, where the processing activities relate to the offering of goods or services to those individuals – irrespective of whether payment is required – or the individuals' behaviour is monitored, in so far as that behaviour takes place within the EU.

The GDPR also applies to the processing of personal data by a controller that is not established in the EU where the law of a member state applies by virtue of public international law.

Controllers and processors subject to the GDPR solely by virtue of the targeting criterion are generally required to designate a representative established in a member state of the EU, unless one of the exemptions provided for in the GDPR applies.

### 8.3 Role and Authority of the Data Protection Agency

The CPDP is the independent national supervisory authority responsible for monitoring and enforcing compliance with the GDPR and PDPA. It is established as an independent public authority and performs its functions free from external influence, in accordance with the requirements of the GDPR.

The CPDP is entrusted with supervising the application of data protection legislation across both the public and private sectors.

The CPDP exercises the full range of investigative, corrective, authorisation and advisory powers conferred by the GDPR. In particular, it may carry out planned or ad hoc inspections, investigate complaints submitted by data subjects, require controllers and processors to provide information and documentation, conduct audits, etc, during investigations. Following an investigation, the CPDP may issue warnings and reprimands, ordering controllers or processors to comply with the GDPR.

The CPDP also has extensive enforcement powers. It may impose administrative fines in accordance with the GDPR, taking into account factors such as the nature, gravity and duration of the infringement, etc.

As a member of the European Data Protection Board (EDPB), the CPDP co-operates with the supervisory authorities of other EU member states through the GDPR's consistency and co-operation mechanisms.

Decisions of the CPDP are subject to judicial review before the Bulgarian administrative courts. In addition to the supervisory proceedings before the CPDP, data subjects may seek judicial protection and compensation for material and non-material damages arising from infringements of data protection legislation in accordance with the GDPR and Bulgarian law.

## 9. Looking Forward

### 9.1 Upcoming Legal Reforms

Since Bulgaria joined the Eurozone in January 2026, much of its legislation is being adapted.

So far, Bulgaria has managed to maintain its position as a favourable investment location due to its:
- EU presence;
- low corporate tax; and
- investor-friendly reforms.

However, fast-paced industries such as fintech and crypto still rely on the approval of government regulators (even after the Markets in Crypto-Assets Regulation (MiCA) entered into force), which are generally conservative.

In detail, the following legislative reforms are expected:
- Both FDI screening and merger control remain dynamic topics, being the latest spheres to undergo legislative amendments.
- Corporate law is expected to expand by implementing the EU-Inc form, but the timing of this is uncertain.
- Employment law-related legislative developments are likely to continue to be driven by the implementation of EU initiatives and evolving labour market practices, particularly in relation to platform work and pay transparency.
- Tax is not expected to change much, other than in terms of annual increases in the amounts of social, pension and health securities due.
- The Bulgarian competition law framework has recently undergone significant reform following amendments to the Bulgarian Competition Protection Act, which came into force on 26 June 2026. The principal developments are expected to arise from the interpretation and application of the new provisions by the Commission for Protection of Competition and the Bulgarian courts.
- The intellectual property sphere is to undergo further legislative amendments due to the heavy usage of AI in all spheres of business.
- Principal developments in personal data protection are expected to result from the evolving European digital regulatory framework, including the progressive application of the AI Act, the Data Act and the Data Governance Act.

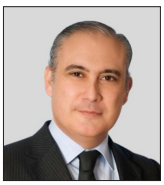
**Contributed by:** Nelson Raposo Bernardo, Joana Andrade Correia, Manuel Esteves de Albuquerque and Júlio Martins Júnior, **Raposo Bernardo & Associados**

**Raposo Bernardo & Associados** is an international full-service law firm, with practices in Africa (Angola, Cabo Verde, Guinea Bissau, Mozambique, and São Tomé and Príncipe) and Europe (Portugal and Spain). In Cabo Verde, the firm has a team of 12 lawyers based both locally and abroad, offering more than 20 years' experience of participating in the most innovative and relevant projects. They regularly represent the interests of national and international players – including investment and commercial banks, investment funds, financial intermediaries, government entities, and public sector and private agents – in legal matters concerning banking, energy, aviation, pharmaceuticals, tourism and leisure, and construction and infrastructure. The firm's expertise includes advising on operations such as corporate finance and major project finance, large M&A transactions, privatisations, PPP projects, large infrastructure projects and drafts of banking, financial markets and insurance legislation. It also works closely with major international law firms.



## Authors

**Nelson Raposo Bernardo** is the managing partner of Raposo Bernardo and has more than 30 years' experience as a lawyer in high-profile and complex legal operations and transactions. He is head of the firms' banking and projects practices, and co-head of the corporate practice. He is also an assistant professor of corporate and commercial law at the Law School of the University of Lisbon, and regularly lectures on entrepreneurship, start-up and management courses at INDEG/ISCTE. Nelson also has experience in legislating and has led several legislative reform committees, in several countries, on banking, finance, insurance, projects, start-ups and venture capital.

**Joana Andrade Correia** is a partner and co-head of Raposo Bernardo's corporate and M&A department. She has led multiple domestic and international operations, including corporate restructurings and M&A transactions for key players in different sectors, such as aviation, banking and finance, pharmaceuticals, energy and infrastructure. She has also worked on several projects to review and reform legislation. Joana's recent work includes advising a major European private airline on the privatisation of a public airline; advising a major European hotels and resorts group on its business incorporation in Portugal and the opening of two hotels; and advising a leading Iberian paper print company on a merger transaction.

**Manuel Esteves de Albuquerque** is of counsel at Raposo Bernardo and has extensive experience in public law regarding administrative law, public procurement, public works contracts and regulation. He has advised on real estate investments and respective due diligence, and worked on the creation of real estate investment structures and the drafting and negotiation of sale and purchase agreements; he is also experienced in derivatives, regulation and compliance. Manuel's experience includes advising on the sale and purchase of retail and logistic parks and tourism projects, and advising clients in the energy and power projects and trading sectors.

**Júlio Martins Júnior** is of counsel at Raposo Bernardo and a member of the Cabo Verdean and Portuguese Bar Associations. He has more than 20 years' experience in corporate law and finance-related operations, particularly in relation to sales and acquisitions of shares and assets, financing operations, licensing and regulation, and M&A. Júlio has been involved in major international investment projects in Cabo Verde. His recent transactions include advising over 30 banks operating in the country on financing contracts for large infrastructure and equipment, and advising the second-largest bank in the world, in terms of assets, on a loan agreement for an international credit transaction.

## 1. Legal System

### 1.1 Legal System and Judicial Order

Cabo Verdean law is based on the civil law system. The Constitution of Cabo Verde and relevant legislation provide for a judiciary independent from the executive. The judicial system in Cabo Verde is based on three levels of appreciation by different courts:

- First Instance Courts (trial court);
- Courts of Appeal; and
- the Supreme Court.

As a rule, any case shall be presented at the First Instance Courts and, depending on several factors (such as the value of the case or the subject matter), the party that loses the case may appeal to the Court of Appeal, and subsequently (as a second level of appeal) to the Supreme Court, which only analyses questions of law.

## 2. Restrictions on Foreign Investments

### 2.1 Approval of Foreign Investments

There are no restrictions on the entry of foreign investments. All investors have the same rights, regardless of their nationality, and are subject to the same duties and obligations under the laws of Cabo Verde. A national partner is not required, and there are no limitations on the distribution of profits or dividends abroad.

The rules governing foreign investment are similar to those applicable to domestic investment. No special registration or notification to any authority regarding foreign investment is required. However, there may be mandatory registration/approvals for specific activities – such as in the banking, finance, aviation, maritime and telecommunications sectors – that are applicable for both foreign and domestic investment.

### 2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance

There are no restrictions on the entry of foreign investments, and the rules governing foreign investment are similar to those applicable to domestic investment.

### 2.3 Commitments Required From Foreign Investors

See **2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance**.

### 2.4 Right to Appeal

The law recognises the right of an investor to challenge any decision of the administrative authorities in court. The scope of the legal challenge depends on the nature of the decision by the administrative authority.

As a rule, the First Instance Court has a mandatory deadline of three years to issue a decision.

## 3. Corporate Vehicles

### 3.1 Most Common Forms of Legal Entity

The following types of company are the most relevant provided for in the Cabo Verde Companies Code, and are frequently chosen by foreign investors aiming to start their own enterprise structure in Cabo Verde. The choice of one of these structures depends on many factors, such as:

- the type of business to be implemented;
- the simplicity or size of the operations;
- the amount of capital to be invested;
- the possibility to transfer ownership freely; and
- disclosure rules about the aforesaid ownership.

The most commonly used forms are public limited companies and limited companies, since they are more operational.

#### Public Limited Companies (Sociedade Anónima)

A public limited company (*sociedade anónima*, or SA) is the form traditionally adopted by larger companies. It is primarily characterised by the fact that it has a more complex organisational structure than, for example, the limited company. The public limited company form also provides greater flexibility when it comes to share capital insofar as no special procedure is required for the transfer of shares.

This type of company has the following characteristics.

- Minimum share capital of EUR0.01.
- A minimum of two shareholders. A single-shareholder public limited company incorporation is permitted if the single shareholder is another company.
- As a general rule, public limited companies are incorporated by means of a private document (articles of association). Additional formalities may apply if the shareholders perform contributions in kind.
- As a rule, the transfer of shares is free and may be carried out by means of an agreement between the parties.
- The governing bodies of a public limited company are as follows.
  - (a) A management board, generally with a minimum of three members. Management can be entrusted to one director if the turnover for two consecutive years is expected to be less than CVE10 million. In addition to the election of the effective members of the board of directors, substitute directors must be elected in numbers not exceeding one third of the effective directors – this means three effective members and one substitute member, or one effective member and one substitute.
  - (b) A shareholder meeting.
  - (c) A supervisory board (three members) or one auditor – a member of the supervisory board or the auditor must be certified.
  - (d) An auditor (for large companies).
- Shareholders' liability is limited to capital subscribed, but shareholders are jointly and severally liable for all contributions contained in the by-laws.
- Flexibility of capital – only registered shares are allowed, which are transferred by endorsing the share certificate in the name of the transferee. Notice must be given to the company for the purposes of registration in the share book. Book-entry shares are transferred by registration in the transferee's bank account. The only limit on the free transfer of shares may arise from any pre-emption rights that have been established by the shareholders in the articles of association.

#### Limited Companies (Sociedade por Quotas)

This type of company has the following characteristics.

- A minimum share capital of EUR0.01.
- A minimum of two shareholders as a rule, although single-shareholder limited liability company incorporation is permitted.
- As a general rule, limited companies are incorporated by means of a private document (articles of association). Additional formalities may apply if the shareholders perform contributions in kind.
- The transfer of shares may be carried out by means of an agreement between the parties, except when the incorporation has been made through public deed.
- The company is governed by management, with one or more directors. An auditor is not manda-

tory, but companies that do not have a supervisory body must appoint a certified auditor to carry out the statutory audit if their turnover is greater than CVE10 million and/or the number of employees is more than ten.
- Shareholders' liability is limited to capital subscribed, but shareholders are jointly and severally liable for all contributions contained in the by-laws.
- The transfer of shares must be made by written agreement between the parties. The articles of association may set limits or conditions on the transfer of shares or pre-emptive rights in favour of other shareholders or the company itself.

### 3.2 Incorporation Process

The procedural steps to set up a company are as follows.

- Approval of name – the first step in this type of process is to gain approval for the name of the company to be set up, and to indicate what type of company it will be.
- Head office of the company – the company must indicate the location where it will carry out its commercial activity.
- Corporate structure – the identification documents or commercial certificates, according to whether individuals or legal entities are involved, of the shareholders or quota-holders who will make up the corporate structure of the company are required. If the individuals or legal entities are foreign, the above documents must be legalised at the Cabo Verdean consulate in the country of origin, or apostilled. If the shareholders or quota-holders are legal entities, it will also be necessary for the written resolution approving the setting up of the Cabo Verdean company and the shareholding to be held by the legal entity in question.
- Powers of attorney – if the share/quota-holders are not available to travel to Cabo Verde to sign the documentation necessary for the process of incorporating the company, they will have to execute powers of attorney granting powers to representatives in Cabo Verde to deal with the respective legal steps of incorporation.
- The articles of association – this document establishes the rules that will govern the operation of the company.
- Composition of the corporate bodies – the members who will form the first board of directors must be indicated at the moment of incorporation.
- Commercial licence – after dealing with the deed of incorporation and respective commercial registration, an application must be made requesting the issue of the commercial licence.
- Commercial representation – foreign branches of commercial companies may choose to be represented in Cabo Verde through branches, agencies, delegations or other forms of representation. Representations are authorised to carry out activity in Cabo Verde in accordance with the applicable time limit.

### 3.3 Ongoing Reporting and Disclosure Obligations

The ongoing reporting and disclosure obligations depend on the company's sector of activity. Companies that operate in finance, banking, insurance and communications are subject to different levels of ongoing reporting and disclosure obligations.

Companies that are not subject to special legal regimes must report the following:

- annual accounts, which are to be filed annually with the commercial registry and must be publicly available;
- a statement of commencement of activity from the tax authorities;
- a statement of commencement of activity for social security purposes; and
- any amendment to the articles of incorporation.

### 3.4 Management Structures

For a *sociedade anónima*, the management must be structured as a board of directors, with a minimum of three members or an executive board of directors. Where the share capital does not exceed EUR90,691, the board of directors can be replaced by a single director.

For *sociedades por quotas*, management is discharged by one or more managers, who must be individuals, designated by the shareholders.

### 3.5 Directors', Officers' and Shareholders' Liability

Directors can face civil and criminal liability.

#### Directors' Civil Liability

Members of the board of directors can be held liable towards the company for damages caused by acts or omissions resulting from disrespect of their legal or contractual duties, unless the directors can prove that they did not act wilfully or maliciously.

As an expression of the business judgement rule, liability is waived if directors can prove that they acted in an informed manner, free of any personal interest and using the criterion of corporate rationality. A director who does not exercise the right of opposition conferred by law, when able to do so, will be jointly liable for the acts they could have objected to.

Directors are not liable towards the company if the act or omission is part of a resolution of the general meeting, even if that resolution is voidable. However, directors will not be released from liability on the favourable opinion or consent of the supervisory body.

#### Directors' Criminal Liability

Under Cabo Verdean law, only crimes expressly provided for in the law can be punishable. Companies and individuals can be held criminally liable.

Directors can be liable for any action wilfully performed on behalf of the company whenever such action qualifies as a crime, and even if the relevant type of crime requires (to qualify as such) certain elements that can only occur in the company or if an agent acts in its own interest and the director acted in the company's interest.

#### Misdemeanour Proceedings

Certain actions of the directors can qualify as misdemeanours and incur fines and accessory penalties applicable to the relevant agent (either a company or generally a director acting on behalf of the company).

## 4. Employment Law

### 4.1 Nature of Applicable Regulations

The employment relationship is regulated by the Labour Code (Legislative Decree No 5/2007 of 16 October). Several other laws regulate important issues, such as work-related accidents and sickness.

Nevertheless, the parties may agree some special situation conditions for the employment relationship in employment agreements, provided such conditions do not violate the Labour Code. It is also possible to have collective bargaining agreements with more favourable conditions for employees.

Civil servants or public employment relationships are subject to special regulation.

### 4.2 Characteristics of Employment Contracts

As a rule, no written document is required and the employment relationship can be proved by any means.

Some types of contract must be in writing – ie, fixed-term or part-time and certain top management contracts. The contract not being in writing does not render it invalid, but it can lead to the contract being requalified as a full-time, permanent contract.

### 4.3 Working Time

The minimum and maximum working times are regulated by the Labour Code. The normal working period may not exceed eight hours per day and 44 hours per week, and a minimum of 12 consecutive hours of rest must be respected.

The Labour Code provides that, by a unilateral decision of the employer, a single schedule of seven hours of daily work may be established during the months of July to September, between 6am and 3pm on the same day. During daylight saving time, the employee shall be allowed an interval of not less than 15 minutes. The employer may also choose to maintain normal working hours by extending rest time between the morning and afternoon periods, but in such case the afternoon period may not pass 7.30pm each day. As a rule, the daily working period shall be interrupted by an interval with a maximum duration of one hour

so that the employee does not work more than five consecutive hours.

Overtime hours are also regulated by the Labour Code. Such hours are considered to be work outside the normal period of work to which the employee is bound, and can only be done in the following circumstances:

- in the case of an increase in work that does not justify the recruitment of other employees;
- in the case of force majeure; or
- if there are serious reasons that make it necessary in order to prevent serious harm.

## 4.4 Termination of Employment Contracts

The employment contract is extinguished by:

- mutual agreement of the parties;
- expiry;
- collective dismissal;
- individual dismissal for just cause; or
- termination by the employee.

### Mutual Agreement of the Parties

It is always lawful for the employer and the employee to terminate the employment contract by mutual agreement, which must be executed in writing. The parties are free to enter into an agreement with or without compensation and to fix the date of termination – ie, to establish that the termination will be immediate or in the future. However, if the parties intend to give immediate effect to the termination agreement, the employer shall agree compensation with the employee, taking into consideration the type and duration of the employment contract, remuneration and the possibility of finding a new job. The compensation to be agreed between the parties may be paid in cash or in goods, in a single instalment or in several instalments.

The employee can always claim cancellation of the agreement or any of its clauses, by judicial proceedings, if they consider that there has been an error, malicious act or coercion in its conclusion.

### Expiry

The employment contract expires as follows:

- once the period has expired;
- if there is a supervening, absolute and definitive impossibility of the employee performing the work for which they were hired;
- by the occurrence of any extinctive facts, not dependent on the will of the parties; or
- upon the retirement of the employee.

The expiry of the contract due to the expiry of the initial or renewal period gives the employee the right to compensation of the following amounts:

- 21 days of basic remuneration if the contract lasts one year;
- 15 days of basic remuneration for each full year of the contract, in addition to the first year; and
- 1.75 days of basic remuneration for each month of the contract term up to one year.

In undetermined-duration and fixed-term contracts with a duration of more than five years, the employee is entitled to compensation in the amount of ten days of basic remuneration for each full year after the first five years and one day of compensation for each month of duration of the contract up to one year.

### Collective Dismissal

The employer may terminate the employment contracts of two or more employees on the grounds of reduced business or permanent closure of the company, establishment or part of the company structure for economic, conjectural or technological reasons.

The employer intending to make a collective dismissal shall communicate its intention in writing to the unions representing the employees. If the employees are non-unionised, the company shall notify the employees directly. The communication shall include the following information:

- the grounds for collective dismissal;
- the expected date for the termination of the contracts;
- the criterion for the selection of employees; and
- the number and professional category of the employees covered by the collective dismissal.

The employees covered by the collective dismissal are entitled to compensation, the amount of which depends on the date the employee was hired.

### Individual Dismissal for Just Cause

Under certain circumstances, the employer can terminate the contract for just cause. The concept of just cause includes disciplinary dismissal and other forms of dismissal, provided that they are justified according to the law.

For dismissal based on unlawful conduct of the employee, the concept of just cause is the centrepiece of the matter and consists of the impossibility in practice of continuing the employment relationship due to the seriousness of the employee's misconduct. When dismissed with disciplinary cause, the employee is not entitled to any compensation.

If the dismissal is not justified according to the law or if the employer does not comply with the proper proceeding, the termination of the contract can be considered null and void. The contract remains in force, which can lead to reinstatement or compensation.

### Termination by the Employee

The employee may terminate the employment contract at any time without any reason or explanation, but is obliged to give prior notice to the employer, which varies between 15 days and two months depending on the duration of the contract.

## 4.5 Employee Representations

The right to form an employee representative body in any company, regardless of its size, is guaranteed by the Cabo Verdean Constitution. The initiative depends completely on the employees, which means that employers are under no obligation to implement this form of representation.

# 5. Tax Law

## 5.1 Taxes Applicable to Employees/ Employers

Employees are subject to personal income tax (PIT) under two tax methods:

- the declarative (self-assessment) method; and
- the final withholding method.

Employees are taxed according to category A (employment income), based on their residence or non-residence status. For PIT purposes, an employee is deemed resident in Cabo Verde if they:

- spend more than 183 days in aggregate in Cabo Verde during a calendar year; or
- stay fewer than 183 days therein and maintain a residence said to be the habitual residence in Cabo Verde with reference to December 31st of a given year.

### Declarative Method

Under the declarative method, individuals are taxed according to their annual income statement. This method is mandatorily applicable to taxpayers taxed under category B (business and professional income) with standard organised accounting, and to taxpayers taxed under category C (rental income). This method is also applicable to dependent workers (category A) who opt to file their tax return on income obtained abroad by resident taxpayers, and on income obtained in Cabo Verde by non-resident taxpayers that could not be taxed at flat rates.

Income will be subject to taxation at rates ranging between 16.5% and 27.5%, as follows:

- up to CVE960,000 – 16.5%;
- CVE960,000 to CVE1.8 million – 23.1%; and
- over CVE1.8 million – 27.5%.

An exemption from taxation applies to net income of up to CVE220,000 annually.

### Final Withholding Method

The final withholding method is used to collect taxes when taxpayers are not obliged to submit their annual income statement in the following cases.

#### *Category A – employment and pensions*

This income is generally subject to monthly withholding tax (WHT). Employment income is specifically defined in the PIT Code and covers all payments in connection with work (employment contract), such as

salary, bonuses, commissions, pensions, allowances (eg, cost-of-living and housing allowances) and benefits in kind (eg, company cars), regardless of where the payment originates. Board members' remuneration is taxed as employment income.

The following types of income are exempt from PIT:

- per diems for national and international trips, for the portion that does not exceed the limits set for the public services;
- lunch allowance, up to CVE250 per day;
- the use of a personal car, up to CVE120,000 per year;
- a cash shortage allowance, of up to 15% of the monthly salary;
- a family allowance, of up to CVE500 per month, for each dependant or equivalent and ancestors; and
- redundancy payments, which are taxable on the portion that exceeds one and a half times the average remuneration paid during the last months of employment, multiplied by the number of years of employment.

As a rule, the monthly WHT is levied as final taxation, unless the taxpayer opts to file the tax return, in which case the tax withheld has the nature of an advance payment on account of the final annual income tax liability. The monthly tax withholdings due are calculated by applying the following progressive WHT rates and the corresponding deduction to the taxable income:

- up to CVE80,000 – WHT is 15% with a CVE5,500 deduction;
- CVE80,000 to CVE150,000 – WHT is 21% with a CVE10,300 deduction; and
- over CVE150,000 – WHT is 25% with a CVE16,300 deduction.

Employees and managers or directors of the company are liable to social security contributions of 8.5% on their gross remuneration. Employers are liable to social security contributions of 16% on the same gross remuneration received by employees and managers or directors of the company.

### *Category B – business and professional income*

Business and professional income earned by individual entrepreneurs is taxed under the following regimes:

- standard organised accounting;
- Special Regime for Small and Micro-Sized Companies (SRSMC); and
- single act (*ato isolado*).

Business and professional income earned by individual entrepreneurs under standard organised accounting is subject to WHT at the rate of 20% as an advance payment on account of the final annual income tax liability.

Net income is computed under the rules applicable to companies, with the adjustments provided for in the PIT Code and subject to income tax at the applicable PIT rates.

Net income is computed according to the declaration-based method (*método declarativo*), where tax is levied on the aggregate base of the relevant income categories in the household, minus personal deductions and allowances.

Business and professional income earned by individual entrepreneurs under the SRSMC is subject to a flat rate of 4%. Under this regime, micro and small-sized companies are subject to a Single Special Tax (SST) of 4% levied on the gross amount of sales obtained in each taxable year, to be paid quarterly. SST replaces the corporate income tax (CIT), fire brigade surtax and VAT, as well as the contribution to social security due from the company.

Under the PIT Code, a single act is considered a taxable operation performed twice during the tax year.

### *Category C – rental income*

Rental income is subject to WHT at the rate of 20% as an advance payment on account of the final annual income tax liability. To compute the net income, taxpayers may deduct maintenance and repair expenses of up to 30% of gross rental income.

*Category D – investment income*

In general, investment income is subject to a flat rate of 20%, although dividends and interest on bonds are subject to a flat rate of 10%.

A special tax regime contained in the Tax Benefits Code provides for the following:

- an exemption from taxation on interest on term deposits received by Cabo Verdean emigrants;
- income derived from bonds or similar products (except debt securities listed in the securities market) obtained before 31 December 2017 benefits from a 5% flat rate; and
- dividends from shares listed in the stock exchange, placed at the disposal of their holders before 31 December 2017, are exempt from PIT.

*Category E – capital gains*

Capital gains earned by individual taxpayers are subject to a flat rate of 1% in the case of gains on the disposal of immovable property, intellectual property or shareholdings. A flat rate of 20% applies in the case of gains on gambling, lottery participation, betting, and prizes awarded in sweepstakes or contests.

## 5.2 Taxes Applicable to Businesses

Cabo Verde's corporate income tax (CIT), called *imposto sobre o rendimento das pessoas colectivas*, is levied on profits obtained within the Cabo Verdean territory and those obtained outside by resident companies (worldwide principle). Non-resident companies with a permanent establishment (PE) in Cabo Verde are also subject to CIT on Cabo Verdean-source income attributable to the PE.

Taxable profit is computed according to the local accounting rules and adjusted for tax purposes. For the purposes of determining taxable income, CIT payers can be taxed under two methods/regimes, as follows.

- A special regime for micro and small-sized companies:
  (a) micro-sized companies are entities that employ up to five persons, with an annual turnover (gross amount of sales and services) that does not exceed CVE5 million;
  (b) small-sized companies are entities that employ between six and ten persons, with an annual turnover of between CVE5 million and CVE10 million; and
  (c) micro and small importers import goods with a customs value that does not exceed the value of turnover on an annual basis for the purpose of qualifying under the simplified scheme for micro and small-sized companies.
- A standard organised accounting regime – the standard/normal regime under which the computation of profits follows the local accounting rules.

Resident companies are subject to a tax rate of 20%, where taxable income corresponds to the profit minus any tax benefits and any losses carried forward, as stated in the tax return. The tax rate of 20% is also applicable for PEs of non-resident companies.

Micro and small-sized companies are subject to SST of 4% levied on the gross amount of sales obtained in each taxable year, to be paid quarterly. The SST replaces the CIT, fire brigade surtax and VAT, as well as the contribution to social security attributable to the company.

Non-resident companies without a PE are subject to WHT rates applicable for each income category stipulated in the Tax Code, which range between 1% and 20%. The CIT rate is increased by a fire brigade surcharge, called *taxa de incêndio*, of 2% on the tax due, leading to a final tax rate of 20.40%. This surcharge is levied in the municipalities of Praia (Island of Santiago) and Mindelo (Island of São Vicente).

### Permanent Establishment

Non-resident companies deemed to have a PE in Cabo Verde are also subject to tax in Cabo Verde. Under Cabo Verdean tax law, a non-resident company is deemed to have a PE if one of the following applies:

- it has any fixed installation or permanent representation located in Cabo Verde through which activities of a commercial, industrial or agricultural nature, fishing or the rendering of services, among others, are carried out (including agricultural, fishing and cattle-raising explorations);

- quarries or any other places of natural resource extraction are involved; or
- it carries out its activity in Cabo Verde through:
  (a) employees, or any other personnel hired for that purpose, for a period (continuous or not) of not less than 183 days within a 12-month period;
  (b) a person (a dependent agent) who is not an independent agent acting in the Cabo Verdean territory on behalf of a company, with powers to intermediate and conclude binding contracts for that company, within the scope of its business activity; or
  (c) a building site or a construction installation if it lasts for more than 183 days, as well as activities of co-ordination, supervision and inspection related to the building site or its construction installation.

A PE is also recognised in the case of:

- commissionaire arrangements;
- preparatory or ancillary activities carried out by closely related enterprises through a fixed installation; and
- independent agents acting exclusively, or almost exclusively, on behalf of one or more closely related enterprises.

A PE of a non-resident is taxed as a resident company.

## 5.3 Available Tax Credits/Incentives

### Foreign Investor Status (Estatuto do Investidor Externo)

Foreign Investor Status previously granted some tax benefits at the level of the investor (eg, exemption from WHT on distribution of profits and on interest related to the financing of the investment), but was revoked by the New Investment Law effective as of 1 January 2013. Those tax benefits already granted, or for which recognition has been requested prior to the entry into force of the Tax Benefits Code and the Investment Code, are maintained. Investment projects submitted for analysis and approval to the competent authorities prior to the entry into force of the Tax Benefits Code continue to be regulated under the legislation in force at the date of their respective submissions.

### Contractual Tax Benefits

There are exceptional incentives – regarding customs duties, CIT, PIT, property tax and stamp duty – for investments that fulfil all of the following conditions.

- The promoter of the investment possesses technical and managerial capacities.
- The invested amount exceeds CVE3 billion (EUR27,207,183). The relevant amount is CVE1.5 billion (EUR13,603,591) for investments located in a municipal area where the average GDP per capita is lower than the national average (with reference to the last three years).
- They create, directly, at least 20 qualified jobs (ten in the case of investments located in a municipal area where the average GDP per capita is lower than the national average, with reference to the last three years). A qualified job requires professional or higher education, or specialised technical training, certified by a national or foreign entity, including management positions.

The concession of contractual tax benefits is subject to approval by the Council of Ministers upon agreement.

### Differentiated Merit Projects (DMP)

DMP status was established by Law 80/IX/2020, of 26 March, and is granted to investments that cumulatively meet the following requirements, among others:

- represent an investment equal to or higher than CVE1.5 billion (EUR13,603,591);
- contribute, in net terms, to the improvement of the balance of payments;
- use technology, production and commercialisation processes that minimise environmental impacts or promote environmental sustainability; and
- have a recognised productive social effect, particularly in the creation of at least five qualified jobs (those that require specialised technical training, either professional or of higher education, including management positions).

Investment projects with DMP status are granted the following benefits:

- a reduced customs duty rate of 5% on the importation of materials, goods and equipment mentioned in Article 15 of the Tax Benefit Code;
- customs duty exemption on the importation of raw materials, consumables, finished and semi-finished materials and other products to be incorporated in products manufactured by the company – in the case of industrial investment (ie, projects of companies registered in the Cadastro Industrial), the exemption is also applicable to packaging and wrapping materials used in products manufactured by the company;
- CIT tax credit of 30% of the eligible investments effectively made (capped at 50% of the CIT assessed);
- stamp tax exemption on the borrowing of funds for the investment;
- property tax (IUP) exemption on the acquisition of real estate aimed exclusively at the installation of the investment project; and
- other non-tax incentives established in specific legal diplomas.

DMP investment projects implemented in municipal areas where the GDP per capita is lower than the national average have the following additional benefits:

- CIT credit of 40% of the eligible investments effectively made (capped at 50% of the CIT assessed); and
- IUP exemption on the acquisition of real estate used in the development of the company's main activity, including any developing needs arising throughout the first five years following the acquisition.

### Direct Investment Made in Cabo Verde by Emigrants

Direct investment made by emigrants shall benefit from the following tax incentives, as established by Law 73/IX/2020, of 2 March:

- exemption from taxation (as contained in the CIT Code) of dividends and profits distributed to the emigrant investor arising from authorised foreign investment; and
- exemption from customs duties on the acquisition of materials for construction, extension or refurbishment of a first residential house, including furniture, appliances and other imported goods, under certain conditions.

The regime applies to emigrant investors permanently living abroad, and to former emigrant pensioners and retired people receiving pensions and similar income from their country of immigration.

Investment in tangible assets or intangibles in Cabo Verde is eligible under the conditions contained in the regime – eg, the incorporation of entities or branches in Cabo Verde, the acquisition of shareholdings, or the granting of loans or other forms of financing of entities in which a shareholding is held.

### Industrial Activity

The following tax and customs benefits are provided for industrial activity.

#### *CIT benefits*

A CIT credit is available for up to 20% of the eligible investments made in an industrial activity. Any unused tax credit may be carried forward for ten years, subject to certain limitations. Eligible investments include the acquisition of new fixed assets, patents and licences regarding technologies.

#### *IUP benefits*

Industrial activities may benefit from an exemption from IUP on the acquisition of immovable property used exclusively for industrial purposes; however, the recognition of such tax exemption should be approved by the municipality.

#### *Customs duty benefits*

Industrial activities benefit from an exemption from customs duties on the importation of construction materials, machines, utensils, semi and fully finished materials, products and raw materials used in the production of goods.

#### *Stamp duty benefits*

Financing transactions of industrial projects are exempt from stamp duty.

### International Business Centre (IBC) of Cabo Verde

The Cabo Verdean Agency for Foreign Investment is the entity responsible for granting licences to operate within the IBC, upon previous proposal of the Zona Franca Comercial S.A. The following tax benefits are applicable to entities licensed to operate in the IBC on income from industrial or business activities and services (note that these tax benefits are not applicable to entities engaged in tourism, banking, insurance, real estate or construction).

#### *CIT benefits*

Reduced CIT rates of 5%, 3.5% or 2.5% are applicable, respectively, to entities that create ten, 20 or 50 jobs. The CIT rate is 2.5% in the case of the creation of four jobs for entities licensed to operate within the IBC. Entities licensed to operate within the IBC will benefit from reduced CIT rates until 2030.

#### *Shareholders' benefits*

Shareholders of entities licensed to operate within the IBC are exempt from taxation on dividends and interest received.

#### *VAT and customs duty benefits*

All the exemptions contained in the VAT regulation and customs law apply. An exemption from customs duties applies with respect to certain goods, equipment and materials used within the scope of the activity developed and licensed under the IBC.

### Maritime Transport (Tonnage Tax)

Cabo Verdean tax legislation contains a special regime for the assessment of the taxable profit applicable to maritime transport activities (tonnage tax).

Entities licensed in the IBC that carry out activities related to the international maritime transport of persons or goods may opt for a special regime for the assessment of taxable profit, provided that they fulfil the following conditions:

- all the ships and vessels owned by the taxpayer must be registered in the International Register of Ships of Cabo Verde (further regulation shall be published), and all the activity carried out must be eligible; and
- at least 85% of the total income derives from activities carried out with other entities licensed and operating in the IBC or with non-resident entities.

Under the tonnage tax regime, the taxable profit shall be determined by applying the following daily amounts to each eligible ship or vessel:

- up to 1,000 net tonnes – the daily taxable income for each 100 net tonnes is CVE646;
- from 1,001 to 10,000 net tonnes – CVE566;
- from 10,001 to 25,000 net tonnes – CVE307; and
- above 25,000 net tonnes – CVE103.

No tax credits are available.

If there is a change from the tonnage tax regime to the general CIT regime, the tax value of the assets held corresponds to the value resulting from the application of the general rules contained in the CIT Code, as if the taxpayer had not applied the special regime. In addition, tax losses or any tax credits carried forward that originated during the taxable periods to which the special regime applied are disregarded.

### Internationalisation of Cabo Verdean Companies

A regime that provides for tax and financial incentives for investment projects in order to promote the internationalisation of Cabo Verdean companies is in force. The following incentives, to be granted under a contract of not more than three years, apply to internationalisation projects undertaken before 31 December 2020 by companies whose head office and place of effective management are in Cabo Verde.

#### *CIT benefits*

Investments that are eligible for the regime of tax benefits for internationalisation may benefit from:

- a reduction in their CIT rate of up to 50%, applicable until the term of the investment contract; and
- an exemption from CIT on income obtained by qualified expatriate employees.

In addition, a deduction for the creation of employment ranging between CVE26,000 and CVE35,000 for each new job created may apply.

*IUP benefits*
An exemption from IUP may be available on the acquisition of immovable property for the establishment or expansion of the activity of the investor.

*VAT and customs duty benefits*
Exemptions provided for in the VAT Code apply, as well as customs duties incentives as provided for in the general applicable legislation.

*Stamp duty and other benefits*
An exemption from stamp duty is available on the incorporation of companies or an increase of share capital of existing companies, and on financing transactions.

An exemption from notary and registration fees is available on the incorporation and registration of companies.

### Touristic Utility Status (Estatuto de Utilidade Turística)
Cabo Verde may grant Touristic Utility Status to the following types of touristic projects:

- installation, granted to new tourist resorts and facilities;
- operation and exploitation, granted to existing tourist resorts and facilities; and
- refurbishment, granted to existing tourist resorts and facilities in connection with improvements and expansions.

Touristic Utility Status generally allows for the following tax incentives and benefits:

- CIT credit of up to 30% of the eligible investments made in tourism, touristic promotion activities and real estate tourism project investment;
- an exemption from IUP on the acquisition of real estate used for the construction and installation of touristic projects, if granted by the municipality;
- a reduced rate of 5% of customs duties on the importation of materials and equipment used in touristic projects; and
- exemptions from stamp duty on the financing of tourism investments.

### Tax Incentives for Renewable Energies
There is a regime for the promotion of independent production and self-production of electricity based on renewable energy sources, which are considered to include water, wind, solar, biomass, biogas or industrial, agricultural or urban waste, oceans and tides, and geothermal. Under the regime, renewable energy producers may benefit from the following.

*CIT benefits*
A CIT credit is available for up to 20% of the eligible investments made in renewable energies projects.

*Customs duty benefits*
A reduced rate of 5% of customs duties and other customs charges applies on the importation of capital goods, raw materials and supplies, finished and semi-finished products, and other materials that are incorporated or used in the production of goods or services involved in the production of electrical energy from renewable sources.

*IUP and stamp duty*
Exemptions from IUP and stamp duty are granted on the acquisition of immovable property and other assets related to the investment project or its financing.

*Interest rate support for micro production of renewable energies*
Interest rate support of 50% is granted on the interest on loans borrowed from financial institutions by families and by duly incorporated micro and small companies for the acquisition of equipment and installation services aimed at the micro production of renewable energy in accordance with the applicable legislation. This support shall apply to final consumers covered by the normal low voltage category.

### Shipping Transport Industry Incentives
*CIT benefits*
A CIT credit is available for up to 30% of the eligible investments made in shipping, air and sea transportation projects.

*Customs duty benefits*
A reduced rate of 5% from customs duties applies on the importation of shipping material for the mainte-

nance, production and repair of shipping and respective equipment.

### *IUP and stamp duty*

Exemptions from IUP and stamp duty are granted on the acquisition of immovable property and other assets related to the investment project or its financing.

### Job Creation Incentives

Entities taxed under the verification method are entitled to deduct the following amounts for each permanent job created:

- CVE26,000 for each job created in the municipalities of Boa Vista, Praia and Sal;
- CVE30,000 for each job created in the remaining municipalities; and
- CVE35,000 in the case of a disabled person.

### Media, Telecommunications and the Internet

The importation of goods, materials, equipment, vehicles and other equipment exclusively for the purpose of telecommunications and media is exempt from customs duties.

### Incentives for the Importation of Vehicles

The importation of the following heavy vehicles for the collective transport of passengers is exempt from VAT and excise duty if such vehicles are not aged more than six years, and is subject to a reduced rate of 5% of customs duties:

- heavy passenger vehicles for the collective transport of passengers comprising more than 30 seats, including the driver, when imported by duly licensed companies operating in the respective sector;
- heavy passenger vehicles for the collective transport of passengers comprising more than 12 seats, including the driver, when imported by a public transporter with the respective permit that is in the process of replacing licensed vehicles, as contained in the General Legal Regime of Transport in Motor Vehicles (*Regime Jurídico Geral de Transportes em Veículos Motorizados*);
- heavy passenger vehicles intended for school transport, duly equipped, comprising more than 23 seats, including the driver, when imported by an educational entity duly authorised by the competent ministry, local authorities and public transporter, provided that those vehicles are duly licensed and authorised by the competent authorities; and
- heavy goods vehicles with three or more axles, as well as heavy vehicles with two or three axles, intended solely for towing trailers and semi-trailers for the carriage of goods (in this specific case, there is no limitation regarding the age of the vehicle).

During 2026, the import of heavy passenger vehicles, properly equipped, with more than 30 seats, including the driver's seat, exclusively intended for the transportation of tourists and luggage is exempt from excise duties and VAT. This exemption applies when the importation is carried out by public carriers duly licensed by the Directorate General of Road Transport. This incentive does not apply to vehicles aged more than six years.

These imports are also subject to customs duties at the reduced rate of 5%.

During 2026, the import of light passenger vehicles, in new condition, intended exclusively for the operation of taxi services is exempt from excise duties and subject to a reduced import duty rate of 5%.

The import of four-by-four (4x4) vehicles for adventure tourism is also exempt from excise duties for 2026 when imported by companies operating in the adventure tourism sector and duly licensed by the competent authorities.

### Incentives Under the Young Start-Ups Programme

#### *Incentives for corporate finance*

Resident or non-resident entities with a PE in Cabo Verde that make cash capital contributions to companies eligible under the Young Start-Ups Programme, or to companies based in municipal territories where the average GDP per capita in the last three years is below the national average, as well as to micro and small companies, can deduct part of these contributions up to 2% of the tax assessed in the previous tax year, provided that:

- there are no overdue wages;
- their tax and contributory situation is regularised;
- they are not taxed under indirect tax methods; and
- authorisation is granted to all their bank accounts.

The deduction cap shall apply even if the company makes capital contributions in more than one eligible company. This benefit is not cumulative with the tax benefit regarding the conventional remuneration of share capital.

*Other incentives*

The following incentives are applicable to entities that carry out, an economic activity eligible under the Young Start-Up Programme directly and as their main activity, approved by Resolution No 34/2017 of 25 April:

- a CIT rate of 5%, applicable in the first five years of activity, starting 1 January 2019, except in the case of information, communication and technology and research and development enterprises, whose rate is 2.5% regardless of the location of the head office or place of effective management;
- an exemption from customs duties, excise duty and VAT on the importation of one vehicle, with a maximum age of five years, for the transport of goods, comprising up to three seats in the cabin, including the driver, intended exclusively for the respective activity;
- an exemption from import duties on the importation of raw and subsidiary materials, materials and finished and semi-finished products intended for incorporation into products manufactured within the scope of industrial projects – the incentive shall apply if the entities are certified and registered at the Industrial Registry during the installation, expansion or remodelling phase;
- financial incentives, support for capacity-building, and other institutional support provided for in the legislation of micro and small companies;
- an exemption from stamp duty on financing agreements for the development of the respective activities; and
- a reduction of 50% of the fees due on notarial acts and registrations due on the purchase and sale of real estate for the respective installation.

Eligible companies whose places of effective management are located outside the municipalities of Praia, São Vicente, Sal and Boa Vista shall benefit from a tax credit of 50% of the CIT assessed (not applicable to ICT and R&D activities). Eligible companies shall benefit from the incentives provided for in Article 13 (exemption from property tax), Article 15 (exemption from customs duties) and Article 332 (training, internships and scholarships) of the Tax Benefits Code, and from the incentives for employers hiring young people.

Eligible companies shall be subject to the payment of autonomous taxation under the general terms contained in the CIT Code.

### Incentives for Electric Mobility

The importation of electric vehicles, including two-wheel vehicles, is exempt from VAT, customs duties and excise duties. The exemption from VAT and customs also applies to the importation of new rechargeable batteries for electric vehicles, including their connectors, shields, connecting cables and meters, intended exclusively for charging.

Parking fees for such electric vehicles are also exempt from VAT.

### Incentives for the Industrial Production of Inerts

During 2026, the import of machines, equipment and their accessories and separate parts for the industrial production of inerts, as well as all types of materials intended for the industrial production of inerts, are exempt from customs duties and VAT, including the extraction of minerals, applicable to projects located in the islands of Brava, Fogo, Maio, São Nicolau and Santo Antão.

### Tax Benefits Regarding the Recovery of Business and Insolvency

There are CIT, PIT, stamp duty and property tax benefits for companies under recovery of business and insolvency procedures.

### Foreign Tax Credit

Cabo Verdean tax law allows a foreign tax credit to mitigate the double taxation on foreign income taxed in another jurisdiction. The tax credit is equal to the lesser of the income tax paid abroad or the CIT frac-

tion calculated before the deduction is given, corresponding to incomes that may be taxed in the country concerned, net from any costs or losses, directly or indirectly incurred, for the purposes of its realisation. Foreign tax credit cannot exceed the tax outlined in the tax treaty, if applicable.

## 5.4 Tax Consolidation

The group taxation regime may apply if one of the companies directly or indirectly holds at least 75% of the statutory capital of the others and more than 50% of the voting rights. The option to apply this special taxation regime for groups of companies can only be made when such groups meet the following cumulative requirements:

- tax resident in Cabo Verde;
- subject to the normal regime of taxation at the highest corporate tax rate;
- maintain a minimum holding participation of 75%;
- all companies have been held by the parent company for more than one year (excluding newly incorporated companies);
- not dormant for more than one year;
- not dissolved or insolvent;
- no tax losses in the three years prior to the regime application, unless the companies have been held by the parent company for more than two years; and
- the tax period is not different from that of the parent company.

Furthermore, the parent company must not be controlled by any other Cabo Verde-resident company that meets the criteria to be a parent company, and should not have opted out of this regime in the past three years.

## 5.5 Thin Capitalisation Rules and Other Limitations

There is a limitation on the tax deductibility of net financing expenses, which are only deductible up to the higher of the following limits:

- CVE110 million; or
- 30% of earnings before depreciation, net financing expenses and taxes.

## 5.6 Transfer Pricing

There is a transfer pricing regime which establishes that commercial transactions between associated enterprises should be subject to identical terms and conditions to those that would be accepted and agreed between independent entities (the arm's length principle).

Taxpayers must keep information and documentation regarding their transfer pricing policies on hand. The following taxpayers must prepare a transfer pricing documentation file:

- entities classified as "Large Taxpayers";
- entities considered to be taxed under a privileged tax regime, as defined in the General Tax Code;
- PEs of non-resident entities; and
- other entities designated as such by the tax authorities.

## 5.7 Anti-Evasion Rules

Cabo Verdean law provides for anti-evasion rules.

## 5.8 Tariffs

Cabo Verde's tariff regime is fairly open and liberal, with its customs regime based primarily on the Economic Community of West African States (ECOWAS) Common External Tariff (TEC), although the nation has not yet fully adopted all of its regional components. The regime of national tariffs and customs is regulated by the Customs Code (*Código Aduaneiro*), complemented by specific taxation tools like Import Duty (*Direitos de Importação*) and other indirect taxes like VAT (IVA).

### Structure of Import Duties

Import duties in Cabo Verde tend to range between 0% and 50% of the goods' value, depending on their nature and classification. The standard structure has the following layers:

- Import Duty (*Direito de Importação*) is an ad valorem tax on the cost, insurance and freight value;
- Environmental Tax (*Taxa Ecológica*) is applied to some products – eg, cars, plastics or second-hand electrical goods;

- Consumption Tax (*Imposto sobre Consumos Especiais* – ICE) is applied to items such as alcohol, tobacco and luxury items; and
- VAT (IVA) at an overall rate of 15% is applied to imports, unless exempt.

Cabo Verde also provides tariff relief or exemptions under specific conditions, such as for:

- basic necessity foodstuffs and medicines;
- equipment and materials for development projects or investment under tax incentive laws; and
- products of countries with which Cabo Verde has preferential trade arrangements, specifically the European Union under the EU–Cape Verde Special Partnership, and selected African nations under AGOA and ACP-EU.

Tariffs are at a maximum on goods that are aimed at sustaining local industry or non-essential or luxury goods, including:

- vehicles (second-hand ones in particular), with heavy taxes and green charges;
- alcoholic beverages and tobacco products, with ICE and other import duties;
- textiles and apparel, at times to sustain local capacity; and
- plastic goods and electronics, notably second-hand, to protect the environment.

## 6. Competition Law

### 6.1 Merger Control Notification

The Competition Authority (*Autoridade da Concorrência*, or AdC) in Cabo Verde regulates or controls mergers between companies or entities.

Certain sectors also have specific entities that may regulate certain operations, as follows:

- the Central Bank of Cabo Verde for the finance and insurance sectors;
- the Civil Aviation Authority for the aviation sector; and
- the Multisectoral Regulatory Agency for the Economy for the telecoms sector.

### 6.2 Merger Control Procedure

Mergers that meet the criteria set out in the Cabo Verde Competition Act are subject to prior notification to the AdC.

### 6.3 Cartels

See **6.2 Merger Control Procedure**.

### 6.4 Abuse of Dominant Position

See **6.2 Merger Control Procedure**.

## 7. Intellectual Property

### 7.1 Patents

A patent is an exclusive right that can be granted to any type of invention in any field of technology, whether it is a product or a process, or to new processes for obtaining products, substances or compounds that already exist. There are three patentability requirements in the Industrial Property Code:

- novelty;
- inventive step; and
- industrial application.

A patent shall confer the exclusive right to use the invention anywhere in the national territory, and shall also confer on its owner the right to prevent third parties from manufacturing, offering, stocking, trading or using the product that is the subject of the patent without their consent, and from importing or holding it for any of these purposes.

The registration of a patent is filed with the Institute of Quality Management and Intellectual Property (IGQPI).

Generally, patent rights will be enforced and validated before the First Instance Courts. Whoever illegally violates the industrial property rights of another person, with criminal intent or by mere blame, must pay compensation to the injured party for the damages resulting from the violation. For this purpose, the IP right-holder must prove the causality of the infringement for the damages calculation. The injured parties can also resort to criminal courts for criminal cases.

The length of protection is 20 years.

### 7.2 Trade Marks

Trade marks are signs used in trade to identify products and services, and can consist of a sign or set of signs capable of being represented graphically – ie, words (including names of people), designs, letters, numbers, sounds, and the shape of the product or its packaging. A trade mark may also consist of advertising slogans for goods or services to which they refer, irrespective of copyright protection afforded to them, provided they are of distinctive character.

The registration of the trade mark grants the right-holder the ownership and exclusive use of the trade mark for the products and services that the mark designates.

The registration of a trade mark is filed with the IGQPI.

Generally, trade mark rights will be enforced and validated before the First Instance Courts. Anyone who illegally violates the industrial property rights of another person, with criminal intent or by mere blame, must pay compensation to the injured party for the damages resulting from the violation. For this purpose, the IP right-holder must prove the causality of the infringement for the damages calculation. The injured parties can also resort to criminal courts for criminal cases.

Protection lasts for ten years from the date of the respective concession and can be renewed indefinitely for equal periods.

### 7.3 Industrial Designs

A design shall mean the ornament or aesthetic aspect of an article, including the appearance of the whole, or part, of a product resulting from the features of, in particular, the lines, contours, colours, shape, texture or materials of the product itself and its ornamentation. Designs that are contrary to public order, public health or morality cannot be registered.

The registration of an industrial design is filed with the IGQPI. The scope of the protection conferred by the registration shall cover all designs that do not give a different overall impression to an informed user. Registration of a design shall confer on its holder the exclusive right to use it, and shall prohibit its use by third parties without the holder's consent, if such acts are carried out for commercial purposes.

Generally, industrial design rights will be enforced and validated before the First Instance Courts. Anyone who illegally violates the industrial property rights of another person, with criminal intent or by mere blame, must pay compensation to the injured party for the damages resulting from that violation. For this purpose, the IP right-holder must prove the causal relationship between the infringement and the injury for the damages calculation. The injured parties can also resort to criminal courts for criminal cases.

### 7.4 Copyright

Copyright is defined as the exclusive right of authors of literary, artistic and scientific works to enjoy, use and exploit such works or to authorise their enjoyment, use or exploitation by third parties, either in whole or in part. Copyright shall comprise economic rights and personal rights, with the latter being known as moral rights. As a rule, copyright is recognised regardless of registration of the work, its deposit or any other formality.

Copyrighted works are enforced before the First Instance Courts. If the right-holder has their right infringed, they can request compensation. Whoever illegally violates the copyright of another person, with criminal intent or by mere blame, must pay compensation to the injured party for the damages resulting from the violation. For this purpose, the copyright-holder must prove the causality of the infringement for the damages calculation. The injured parties can also resort to criminal courts for criminal cases.

Non-patrimonial damages may also be compensated if caused by the infringer's acts.

Generally, protection is for the lifetime of the author plus 50 years following their death, even if it is a posthumous work. The length of protection for copyright in works of photography or applied arts is 25 years after such works are produced.

### 7.5 Others

Software, databases and trade secrets are protected under the regime of industrial and intellectual rights.

## 8. Data Protection

### 8.1 Applicable Regulations

In Cabo Verde, the personal data protection legislation currently in force is the Constitution of the Republic of Cabo Verde and Law 133/V/2001, of 22 January.

The Constitution establishes that all citizens shall be guaranteed the right to personal identity, the development of personality and civil capacity, which may only be limited by a judicial decision and in the cases and terms established in the law, and that all citizens shall have the right of access to computerised data that affects them and for the same to be rectified and updated, as well as the right to be informed about the purposes of the data, in the terms of the law.

The Constitution also grants the right of habeas data to ensure knowledge of the information contained in files, computer archives and registers that affects subjects, and to be informed about the purposes of the data and for the same to be rectified or updated.

Law 133/V/2001, of 22 January, establishes the general legal framework for the protection of individuals with regard to the processing of personal data. It applies to the processing of personal data wholly or partly by automated means, and to the processing of personal data other than by automated means contained in manual files or part of manual files. The law shall also apply to the processing of personal data carried out:

- in the context of the activities of an establishment of the controller situated within the national territory;
- outside the national territory in places where the Cabo Verdean law applies by virtue of international public law; and
- by a controller who is not established on the national territory, who, for purposes of processing personal data, makes use of automated or other types of equipment situated in the national territory, except where such equipment is used only for purposes of transit.

### 8.2 Geographical Scope

Law 133/V/2001, of 22 January, applies in an international context where there are any international treaties in place.

### 8.3 Role and Authority of the Data Protection Agency

The competent authority is the *Comissão Nacional de Protecção de Dados* (the National Commission of Data Protection, or CNPD), which is an independent administrative entity that exercises its authority throughout the national territory.

Generally, the CNPD is the national authority endowed with the power to supervise and monitor compliance with the laws and regulations in the area of personal data protection, with strict respect for human rights and the fundamental freedoms and guarantees enshrined in the Constitution and the law.

## 9. Looking Forward

### 9.1 Upcoming Legal Reforms

Some reforms are expected in relation to the Recovery of Business and Insolvency Code.

# Trends and Developments

Nelson Raposo Bernardo, Joana Andrade Correia, Manuel Esteves de Albuquerque and Júlio Martins Júnior
**Raposo Bernardo & Associados**

**Raposo Bernardo & Associados** is an international full-service law firm, with practices in Africa (Angola, Cabo Verde, Guinea Bissau, Mozambique, and São Tomé and Príncipe) and Europe (Portugal and Spain). In Cabo Verde, the firm has a team of 12 lawyers based both locally and abroad, offering more than 20 years' experience of participating in the most innovative and relevant projects. They regularly represent the interests of national and international players – including investment and commercial banks, investment funds, financial intermediaries, government entities, and public sector and private agents – in legal matters concerning banking, energy, aviation, pharmaceuticals, tourism and leisure, and construction and infrastructure. The firm's expertise includes advising on operations such as corporate finance and major project finance, large M&A transactions, privatisations, PPP projects, large infrastructure projects and drafts of banking, financial markets and insurance legislation. It also works closely with major international law firms.

## Authors

**Nelson Raposo Bernardo** is the managing partner of Raposo Bernardo and has more than 30 years' experience as a lawyer in high-profile and complex legal operations and transactions. He is head of the firms' banking and projects practices, and co-head of the corporate practice. He is also an assistant professor of corporate and commercial law at the Law School of the University of Lisbon, and regularly lectures on entrepreneurship, start-up and management courses at INDEG/ISCTE. Nelson also has experience in legislating and has led several legislative reform committees, in several countries, on banking, finance, insurance, projects, start-ups and venture capital.

**Joana Andrade Correia** is a partner and co-head of Raposo Bernardo's corporate and M&A department. She has led multiple domestic and international operations, including corporate restructurings and M&A transactions for key players in different sectors, such as aviation, banking and finance, pharmaceuticals, energy and infrastructure. She has also worked on several projects to review and reform legislation. Joana's recent work includes advising a major European private airline on the privatisation of a public airline; advising a major European hotels and resorts group on its business incorporation in Portugal and the opening of two hotels; and advising a leading Iberian paper print company on a merger transaction.

## Minority Shareholders' Protection and the Balance of Powers in the Commercial Companies Code of Cabo Verde

### *Introduction*

The protection of minority shareholders constitutes one of the fundamental pillars of modern corporate governance. In commercial companies, especially those where share capital is concentrated, the relationship between majority and minority shareholders tends to generate tensions inherent to the distribution of decision-making power. One of the main challenges is ensuring that the majority principle – indispensable for the efficient operation of the company – does not turn into an instrument of oppression against shareholders who do not control the majority of votes.

The Commercial Companies Code of Cabo Verde, approved by Legislative-Decree No 2/2019, demonstrates a clear concern with this matter. The preamble of the statute itself expressly identifies the reinforcement of minority shareholders' protection as one of the core objectives of the corporate reform, highlighting the need to increase transparency, strengthen the right to information, and expand the accountability mechanisms for directors.

The protection of minorities is not merely a matter of internal justice among shareholders. It is also an essential requirement for attracting investment, developing the capital market, and strengthening investor confidence. The Corporate Governance Principles of the Organisation for Economic Co-operation and Development (OECD) recognise that the effective protection of minority shareholders is an indispensable condition for the existence of efficient and transparent markets.

In this context, it is important to analyse how the Cabo Verdean legal framework seeks to ensure the balance between the legitimacy of majority power and the protection of the rights of corporate minorities.

### *The principle of equality of shareholders*

The first guarantee of minority shareholders is found in the very principle of equal treatment of shareholders.

Although the Code recognises contractual freedom in the organisation of the company, it simultaneously establishes limits intended to prevent arbitrary discrimination among shareholders. Article 22 establishes a minimum set of fundamental rights for all shareholders, including:

- the right to participate in profits;
- the right to vote;
- the right to information; and
- the right to participate in the appointment of corporate bodies.

This principle is particularly important because it prevents the majority from using its position to exclude certain shareholders from participating in corporate life.

Protection is reinforced by Article 23, which declares null and void any clauses that exclude a shareholder from participating in profits or completely exempt them from corporate losses. The underlying logic is simple: whoever participates in the business risk must benefit proportionally from the results obtained by the company.

The model adopted by the Cabo Verdean Commercial Companies Code demonstrates that modern corporate governance not only demands business efficiency: it also demands transparency, accountability and respect for the rights of those who, despite not holding control of the company, remain its legitimate owners.

### *The right to information as an instrument of supervision*

Among all the protection mechanisms for minority shareholders, the right to information assumes a central importance. No shareholder can properly exercise their rights without knowing the economic and financial situation of the company.

In limited liability companies (*sociedades por quotas*), Article 181 recognises the right of shareholders to obtain information on corporate business, consult company books and documents, and inspect its assets. The legislator goes even further by prohibiting the articles of association from excluding or unjustifiably limiting this right. Information cannot be refused when there is suspicion of practices capable of gen-

erating liability for the directors or when it is necessary to assess the company's accounts.

In joint stock companies (*sociedades anónimas*), the protection is even more robust. Article 248 grants any shareholder the right to consult management reports, accounts from recent financial years, minutes of general meetings, remuneration of corporate bodies, and other essential elements to understand the company's reality.

Furthermore, shareholders holding at least 5% of the share capital, or 2% in listed companies, may request additional information on specific corporate matters. This reduction of the threshold to 2% in companies issuing securities reflects the legislator's clear concern with the shareholder dispersion typical of companies open to the market.

The solution is aligned with the OECD principles, which advocate for the timely and transparent disclosure of relevant information to investors.

Ultimately, the right to information assumes an instrumental function relative to all other protection mechanisms for minority shareholders. The exercise of voting rights, the challenging of corporate resolutions, the promotion of liability actions against directors, or the supervision of corporate activity inevitably presuppose prior access to adequate, complete and reliable information. For this reason, modern corporate governance tends to consider transparency not just as a duty of the company, but as a structural guarantee of balance between the majority and the minority. The regime established by the Cabo Verdean Commercial Companies Code reflects this concern, providing shareholders with effective instruments to reduce information asymmetries that traditionally favour those who hold control of the company, and thereby reinforcing trust, accountability and the integrity of corporate life.

### *The judicial inquiry as a protection mechanism*

The right to information would be ineffective if there were no mechanism capable of reacting to its violation. For this reason, the Code provides for the possibility of recourse to the court whenever requests for information are refused, or when the information provided is incomplete or false.

In limited liability companies (*sociedades por quotas*), Article 182 allows the shareholder to request a judicial inquiry. In joint stock companies (*sociedades anónimas*), the regime is even more developed, with Article 250 allowing any shareholder to judicially request an inquiry into the company when the requested information is refused or provided inadequately.

The court may order the provision of the information, appoint an independent investigator, dismiss directors responsible for irregularities, appoint a judicial administrator, or even dissolve the company in extreme situations.

From a corporate governance perspective, the judicial inquiry plays an essential role in the external supervision of corporate activity. The OECD Principles recognise that shareholders must have effective mechanisms to obtain redress when their rights are violated and to hold those exercising management or control functions accountable. The regime established by the Cabo Verdean Commercial Companies Code implements this guidance by granting minority shareholders a procedural instrument capable of overcoming information blockages and situations where corporate bodies are captured by the majority.

The possibility of judicial intervention does not protect individual interests alone. It also contributes to promoting a culture of transparency, integrity and good governance, strengthening investor confidence and the long-term sustainability of commercial companies.

### *Protection against the abuse of the majority*

One of the greatest risks for minority shareholders is the possibility of the majority using its voting power to approve resolutions that are favourable to the majority's private interests.

The Code combats this challenge through the legal concept of the abuse of the majority. Under the terms of Article 67, resolutions are voidable if they create special advantages for certain shareholders or third parties to the detriment of the company or other shareholders, when such advantages represent a

manifest excess of the limits imposed by good faith or by the economic purpose of the voting right.

The rule constitutes a general clause for the protection of minorities and allows the court to review situations in which a resolution, although formally valid, is substantially unfair. The legislator goes even further by establishing that the shareholders who formed the abusive majority are jointly and severally liable for the damages caused to the company or to the other shareholders.

Ultimately, the regime of the abuse of the majority represents a mechanism of balance between two fundamental values of corporate law: the decision-making efficiency inherent to the majority principle and the protection of the legitimate interests of minorities. The Code recognises that the majority must govern the company, but rejects the idea that it can do so without limits. In this sense, the concept of abuse by the majority plays a central role in the architecture of Cabo Verdean corporate governance, functioning as a guarantee that controlling power will be exercised in a responsible, transparent manner compatible with the interests of the company and all of its shareholders.

### *The right to challenge corporate resolutions*

The protection of minorities also requires the possibility of judicially contesting illegal decisions. The Code provides for a complete regime of nullity and voidability of corporate resolutions.

Article 65 identifies the situations of nullity, including resolutions whose content violates mandatory rules or that were adopted in irregularly convened meetings. In turn, Article 68 grants standing to challenge voidable resolutions to any shareholder who did not vote in favour of the decision in question.

This possibility represents an essential guarantee of judicial supervision over the exercise of majority power.

### *The liability of directors as an instrument for protecting minorities*

In commercial companies, directors occupy a central position in the corporate governance structure. Although they are frequently elected with the support of majority partners or shareholders, their function does not consist of representing private interests, but rather of ensuring the pursuit of the company's interest, acting with independence, diligence and loyalty.

Article 77 of the Commercial Companies Code establishes that directors must perform their duties with the diligence of a prudent and orderly manager and with loyalty to the company, taking into account the interests of the company itself, the shareholders and the employees. These duties constitute true legal standards of conduct intended to guide the exercise of management power and to prevent situations of abuse, undue favouring, or private appropriation of corporate opportunities.

The duty of loyalty assumes particular relevance, as it requires directors to place the interests of the company above their personal interests and the interests of the shareholders who nominated them for the position. Consequently, directors must avoid conflicts of interest and refrain from using inside information for their own benefit, and cannot divert business opportunities belonging to the company nor favour certain shareholders to the detriment of the rest.

From this perspective, the liability of directors constitutes a central element of the corporate governance architecture adopted by the Cabo Verdean Commercial Companies Code.

### *The derivative action (ação social ut singuli)*

One of the most relevant innovations of the Code is the strengthening of the so-called derivative action (*ação social ut singuli*).

Under the terms of Article 83, shareholders holding at least 5% of the share capital can directly bring a liability action against directors for the benefit of the company itself, when the company fails to do so. In listed companies, this threshold is reduced to just 2% of the share capital.

By granting procedural standing to minority shareholders to act in defence of the corporate interest, the legislator recognises that the supervision of management should not be a monopoly of the majority. On the contrary, all shareholders must be able to con-

tribute to the protection of corporate assets and to the accountability of directors who violate the duties inherent to the exercise of their functions.

From this perspective, the derivative action for liability not only protects the individual interests of minority shareholders; it plays a broader function of reinforcing transparency, management integrity and the accountability of board bodies, contributing to a culture of greater responsibility in the conduct of corporate affairs. This is a solution that finds a clear parallel in the OECD Principles of Corporate Governance, according to which shareholders must have effective mechanisms to demand the accountability of directors and to react to behaviours capable of harming the company or compromising investor confidence.

### *The participation of minorities in corporate governance*

Another relevant aspect is the possibility of direct participation by minority shareholders in the composition of corporate bodies. Article 316 provides for special election mechanisms for directors, designed to ensure minority representation.

Under certain circumstances, a minority representing at least 10% of the share capital may directly appoint a director. In the area of supervision, Article 339 allows shareholders holding at least 10% of the share capital to judicially obtain the appointment of special auditors to sit on the audit board (*conselho fiscal*). These solutions seek to ensure that the minority has an effective voice within the corporate bodies.

By ensuring that minorities have institutional channels to make their voices heard and to monitor the management of the company, the Cabo Verdean legislator has promoted a model of balance of powers more consistent with the principles of transparency, accountability and equitable treatment of shareholders enshrined by international best practices of corporate governance.

### *Conclusion*

The reform introduced by the Commercial Companies Code of Cabo Verde represents a relevant step in the process of modernising Cabo Verdean corporate law and reinforcing the guarantees granted to minority shareholders. Far from questioning the legitimacy of the majority principle as the foundation for corporate decision-making, the legislator sought to frame it within a system of checks and balances intended to ensure that the exercise of corporate power remains compatible with the principles of good faith, loyalty, transparency and the pursuit of the corporate interest.

The various mechanisms analysed throughout this article reveal a consistent concern with preventing situations of abuse of power and promoting a governance model based on accountability and the equitable treatment of shareholders. Their articulation demonstrates that the protection of minority shareholders does not constitute an isolated concern of the legislator, but rather a structuring element of the corporate governance architecture established by the Code.

On the other hand, the increasing internationalisation of markets and the consolidation of international standards of corporate governance show that the quality of the legal framework for investor protection constitutes a determining factor for attracting investment, developing the private sector and strengthening economic institutions. In this field, the Cabo Verdean regime reveals a significant convergence with the principles advocated by the OECD, particularly regarding transparency, the protection of shareholder rights, and the accountability of management bodies.

It is in this balance between authority and control, between power and responsibility, that one of the essential foundations of modern corporate governance and the trust necessary for the sustainable development of business activity resides.

Often referred to as "Africa in miniature", Cameroon has a relatively diversified economy and significant structural strengths. These include abundant natural resources (forests, oil, gas, minerals and fertile agricultural land), a strategic geographic position in Central Africa with direct access to the Atlantic Ocean, and a young and rapidly growing population of approximately 30 million. Taken together, these advantages position Cameroon as the leading economic power within the CEMAC region.

For its economic and social development, Cameroon adopted a long-term vision in 2009 with the aim of becoming "an emerging, democratic and united country in its diversity by 2035". This ambitious vision seeks to achieve near double-digit economic growth, to reach the threshold of 25% as the share of manufacturing output in GDP (*Produit Interieur Brut* – PIB), to significantly reduce poverty to below 10% by 2035, and to further consolidate democratic governance while strengthening national unity in the context of diversity. The first phase of implementation of this vision was through the Growth and Employment Strategy Paper (GESP) (*Document de Strategie pour la Croissance et l'Emploi* – DSCE), which served as the country's overarching policy framework for the period 2010–2019.

With the GESP reaching its term on 31 December 2019, the Cameroonian government adopted a new strategic framework on 1 January 2020: the National Development Strategy 2021–2030 (NDS30). This sets out the key aspects of the structural transformation of the economy, with 18 priority sectors identified by the government.

According to the IMF Staff Report No 26/81 for the 2026 Article IV Consultations, published in May 2026, Cameroon's economy has demonstrated notable resilience to external economic shocks in recent years. Growth in 2025 was estimated at 3.1%, which was below expectations due to election-related unrest that disrupted trade, services and investment. However, inflation declined to an average of 3.4% by end-December 2025, driven by moderation in food and transport prices.

### Investment Incentives

By virtue of Ordinance No 2025/002 of 18 July 2025, Cameroon has adopted a new regulatory framework governing investment incentives. According to the provisions of Article 1, the Ordinance aims to encourage, promote and attract productive investment. It seeks to develop activities geared towards fostering strong, sustainable and inclusive economic growth, as well as employment. The Ordinance applies equally to both domestic and foreign investors. Investment projects initiated by public companies operating in competitive sectors are also eligible under the provisions of the Ordinance.

Pursuant to the provisions of Article 3 of the Ordinance, the investment sectors eligible for the benefits provided under this law are defined on the basis of national strategic priorities, in particular, those relating to the following sectors:

- agriculture, livestock and fisheries;
- heavy industry, automotive and manufacturing;
- education and health;
- air, rail and maritime transport;
- tourism and leisure; and
- digital data storage and processing infrastructure.

The upstream oil, mining and gas sector, as well as the trade and distribution sector, are governed by sector-specific legislation which also offers various incentives.

Moreover, the legislation has extended several targeted customs duty exemptions from 1 January 2026, in particular:

- 24 months for medical equipment;
- 12 months for equipment related to renewable energy and water; and
- extension of these exemptions to digital start-ups and equipment intended for persons with disabilities.

These measures reflect a clear orientation towards the promotion of sectors deemed priorities, namely health, the energy transition and technological innovation. In parallel, there has been a tightening of export taxation, with:

- a 5% tax on the free-on-board (FOB) value of mineral ores; and
- a 10% levy on marble and clinker.

This approach confirms a policy of maximising the local value of natural resources and limiting the export of unprocessed raw materials.

### Taxation

The Finance Law for FY 2026 defines the conditions for budgetary and financial balance, while also improving the business environment and promoting tax compliance.

#### *The concept of significant economic presence*

One of the major innovations lies in the introduction of a digital taxation regime based on the concept of significant economic presence. In accordance with the provisions inserted into the General Tax Code (in particular, Articles 5 bis and 5 ter), non-resident companies providing digital services in Cameroon are now liable to taxation once they exceed certain thresholds, for example:

- local turnover in excess of approximately XAF75,000 (or the equivalent threshold in XAF); or
- more than 1,000 active users, customers or accounts.

Such entities are subject to either:

- a withholding tax of 3% on their gross turnover; or
- failing that, a flat-rate tax equivalent to 10%.

This mechanism brings Cameroon closer to international trends in the taxation of the digital economy, particularly in systems inspired by OECD practices and those of certain other African jurisdictions.

#### *Strengthening of tax audits and digitalisation of the administration*

The 2026 Finance Law also introduces tools to enhance the effectiveness of tax audits:

- a mandatory annual certified tax review for companies with a turnover exceeding XAF1 billion;
- introduction of real-time taxation mechanisms;
- increased use of AI by the customs administration; and
- broader access to beneficial ownership registers.

### Public-Private Partnerships (PPPs)

Law No 2023/008 of 25 July 2023, establishing the general framework for public-private partnership contracts, constitutes the most significant reform of Cameroon's PPP regime in over a decade. It replaces the 2006 framework and introduces a clearer distinction between three categories of PPP:

- publicly funded PPPs;
- concession-based PPPs (build–operate–transfer or BOT, build–own–operate or BOO, concession, lease, etc); and
- mixed-payment PPPs.

This clarification addresses a difficulty long encountered by investors and banks alike: uncertainty sur-

rounding the remuneration mechanisms for private partners. The financing models and revenue streams now have a clearer legal basis, which improves the bankability of projects.

The reform is accompanied by another major change, Decree No 2025/01081/PM of 17 June 2025 on the maturation of public investment projects. This instrument requires that a project obtain a maturity visa prior to any implementation.

For PPPs, this entails, in particular, a prior financial viability study and a comparative analysis of procurement methods. In current practice, investors must therefore engage in discussions with public authorities at a very early stage, in order to anticipate the constraints associated with the maturation process.

Cameroon continues, moreover, to develop several major structural projects. The expansion of the Port of Kribi, the Douala–Ngaoundere railway corridor and the post-Nachtigal energy projects, illustrate this momentum. Going forward, significant needs are anticipated in energy infrastructure, solar mini-grids and medium-sized hydroelectric projects.

In parallel, on 25 February 2025, the Council of Ministers of the Central African Economic Union (*Union Économique de l'Afrique Centrale* – UEAC) adopted a directive establishing the legal and institutional framework for PPPs in the CEMAC Zone. The adoption of this instrument follows the elaboration of a public procurement strategy (Decision No 03/24-CEMAC-UEAC-CM).

## Mining Sector

Cameroon's mining sector, long regarded as underexploited and governed by fragmented and at times outdated legislation, is undergoing a profound transformation following the adoption of Law No 2023/014 of 19 December 2023 enacting the Mining Code, together with its eight implementing decrees issued at the end of 2024. This reform is part of a broader drive to modernise extractive governance, seeking to reconcile economic attractiveness, environmental sustainability and national sovereignty. The new mining legislation marks a departure from previous extractive approaches, placing local communities, transparency and accountability at the heart of the legal framework.

### *Key projects in the starting phase*

Cameroon is launching an investment programme of unprecedented scale for its mining sector. According to the annex to the Finance Law relating to major infrastructure projects, the government plans to mobilise XAF1,748 billion over the period 2026–2030 to develop three strategic iron ore deposits: Mbalam (XAF747 billion), Kribi-Lobe (XAF431 billion) and Bipindi-Grand Zambi (XAF570 billion).

The Mbalam iron ore mining project in Cameroon launched its first exports in February 2026. With regard to the Kribi-Lobe iron ore project, Sinosteel has already invested XAF120 billion, with first exports expected in July 2027. As regards exploitation of the Bipindi-Grand-Zambi iron ore mine in the Océan Division, South Region, operations commenced with a stockpile of over 600,000 tonnes of ore by the end of 2025. However, on a provisional basis, the commencement of actual production operations is scheduled for the second half of 2026.

Furthermore, the advancement of the Minim Martap industrial bauxite project, which is set to produce 6.4 million tonnes of bauxite over a 20-year lifespan, was officially launched on 22 March 2026.

### *State participation and joint ventures*

*Société Nationale des Mines* (SONAMINES), which is mandated to safeguard the State's interests in mining ventures, continues to assert its role as a strategic shareholder in key projects. It holds equity stakes in several mining companies, including Colomine Mining Corporation (Cominicor), Camalco Mining SA, and Sinosteel Corporation.

In accordance with the Mining Code, the State is entitled to a non-dilutable free carried interest of 10% in the share capital of mining companies operating in Cameroon.

## Land Sector

For many years, thousands of Cameroonians have cultivated land without any documentation recognised by the State. Land disputes represent one of the prin-

cipal sources of social tension in the Cameroonian countryside.

### *New rules for large-scale land acquisitions*

In response to these challenges, the State has, since the end of 2025, embarked upon some significant regulatory reforms. Through a series of five circular letters, the Ministry of State Property, Land Tenure and Land Affairs (*Ministère des Domaines*, *du Cadastre et des Affaires Foncières* – MINDCAF) has introduced major new requirements, including the obligation to obtain a "letter of no objection" from first-degree traditional chiefs for any application for land registration or concession exceeding ten hectares, by circular dated 26 December 2025 (Circular Letter No 0003/MINDCAF/CAB/LC of 2 April 2025 instituting a "letter of no objection" from the territorially competent second or first-degree Traditional Authority Chief for the validation, at divisional level, of applications for direct land registration or concession of national domain land for areas equal to or greater than 20 hectares).

### *The creation of new legal instruments for land security*

The reform introduces two new administrative documents intended to constitute "preliminary evidence" of occupation or use of a plot of national domain land – Circular Letter No 0001/MINDCAF/CAB/LC of 20 February 2026 sets out the conditions for the issuance of a Certificate of Recognition of Customary Land Rights ("ARDFC") and a Certificate of Peaceful Enjoyment of Land ("AJPTER"). These documents represent an intermediate step in the process of obtaining a land title, which remains the only official certification of real property ownership in Cameroon. The ARDFC is intended to promote the land rights of customary communities and family groups, while the AJPTER aims to better protect the occupation and use rights of land users.

### *Strengthened sanctions for the non-development of allocated land*

With regard to land forming part of the State's private domain, the 2026 Finance Law introduces a new forfeiture mechanism that more strictly governs the acquisition of such plots. It establishes a direct link between non-compliance with the obligations attached to the allocation instrument, the loss of rights, and the revaluation of the price of plots returned to the market – with a progressive revaluation scale of between 10% and 30% applied to the initial sale value. Forfeiture is declared one year after the date of allocation of the domain plot, by decision of the minister responsible for State property. This mechanism is expressly designed to combat land speculation and to compel beneficiaries of public land to put it to effective use.

## Protection of Personal Data

Cameroon has adopted Law No 2024/017 of 23 December 2024 on the protection of personal data, marking a significant step forward in the structuring of the legal framework governing the digital sector.

Modelled on the European GDPR, this Law requires in particular:

- the explicit consent of the data subjects;
- the securing of data;
- the regulation of international data transfers; and
- in certain cases, the designation of a data protection officer.

### *Progressive compliance*

Article 73 of the Law provides for a transitional period of 18 months from the date of its promulgation, allowing public and private sector actors to comply with the new requirements. This gradual approach reflects a determination to ensure a controlled regulatory transition within an economic environment that was still taking shape until 23 June 2026.

### *Regulatory authority*

This authority, which is expected to be established by decree, will play a central role in national digital governance. Overall, this reform forms part of a broader trend towards digital sovereignty, the protection of sensitive data, gradual alignment with international standards, and the safeguarding of investment in the digital economy. It also introduces new compliance obligations for companies operating in the technology and financial sectors.

### *Intellectual property and personal data*

Cameroon has also undertaken significant reforms in the areas of intellectual property and the digital economy.

The legal framework has been strengthened by Law No 2024/002 of 24 July 2024, authorising Cameroon's accession to the WIPO Copyright Treaty. This development is gradually bringing Cameroonian law in line with international standards regarding the protection of digital content, software and works distributed online.

### Energy and Infrastructure: Strengthening the Strategic Role of the State

Cameroon's energy sector is principally governed by Law No 2011/022 of 14 December 2011 regulating the electricity sector, supplemented by its implementing decree No 2012/2806/PM of 24 September 2012.

Recent developments in the sector, in particular the restructuring of incumbent operators and discussions surrounding new management models, illustrate:

- a strengthening of the State's role in the governance of energy infrastructure;
- a drive to improve the performance of public services;
- a gradual opening towards public-private partnership mechanisms; and
- an increased emphasis on national energy security.

### Employment

To promote job creation, particularly for recent graduates, the financial law 2026 strengthens existing tax incentives and extends the scheme to include work-study contracts:

- Exemption – Tax and employer contributions on the salaries of recent graduates (in their first job or on a work placement) for a period of three years.
- Tax credit – 20% of training and supervision costs incurred, capped at XAF25 million for individuals.
- Exemption from social security contributions and employer's contributions on wages paid to disabled employees.

**INQ Law**

**INQ Law** is a Toronto-based boutique law firm specialising in health, data, and business law. The firm's data practice spans global privacy, freedom of information, cyber-preparedness, data governance, and artificial intelligence. Its health practice covers clinical practice, privacy, health research, risk management, and regulatory matters. INQ also advises on corporate commercial matters, board governance, charities, not-for-profits, and intellectual property.

## Authors

**Brent Arnold** is a partner at INQ, with over 20 years of experience specialising in cybersecurity, privacy, and commercial litigation. He has appeared before all levels of court in Ontario, including the Supreme Court of Canada, and has been recognised in Canadian legal directories. Brent is a respected thought leader and speaker, serving as chair of the Canadian Internet Society and holding leadership roles in multiple legal and technology organisations. His expertise lies at the intersection of law and technology, where he provides practical guidance on managing complex litigation, cyber-risk and data breach response.

**Tamara Adler** is an associate at INQ Law. Her practice focuses on privacy, cybersecurity, and privacy incident response; health information protection; complex enterprise technology agreements; data sharing; and freedom of information. She routinely advises clients on a broad range of issues involving privacy, cyber preparedness, breach response, privacy risk mitigation, complex enterprise technology and AI service arrangements, including the review and interpretation of layered vendor contract frameworks. Prior to joining INQ Law, Tamara held roles across litigation, public policy, and private practice.

**Carole Piovesan** is managing partner at INQ Law, where she focuses her practice on privacy, cyber-incident response, data governance and AI risk management. She regularly counsels clients on a wide range of matters related to privacy, cyber-readiness and breach response, data governance, ethical AI and responsible innovation. She is a member of the OECD.AI Policy Observatory and has contributed to numerous organisations including the Global Partnership on AI, the Standards Council of Canada's Data Governance Collaborative, and the National Advisory Council on AI in Healthcare.

**Michael Pascu** is a senior manager at INQ focused on AI and data governance. He has provided advisory services on data strategy, data ethics, and AI and data governance across Canada's public sector, financial services and insurance sectors. Michael is focused on helping clients explore the full potential of their data and technologies to mitigate risk and drive growth through data-driven insights and the use of AI and advanced analytics techniques.

## Evolving AI Regulation in Canada

Canada was an early mover in artificial intelligence. It became the first country to adopt a national AI strategy in 2017, and in 2019 Canada introduced one of the first binding rules for government use of automated decisions, the Treasury Board Directive on Automated Decision-Making.

A general AI law has proved harder to secure. The country's most ambitious attempt, the Artificial Intelligence and Data Act (AIDA), introduced as Part 3 of Bill C-27, did not survive the dissolution of parliament before the 2025 federal election. The privacy bill that followed, Bill C-36, was tabled in June 2026 and deliberately omits AI, though it does include positive obligations for the use of automated decision-making systems in certain circumstances. AI is therefore governed through a combination of federal policy, privacy law, provincial statutes, and sector-specific oversight, and businesses must work within all of them.

### *Federal developments*

The federal government has the longest record of regulating its own use of AI. Under the Treasury Board Directive on Automated Decision-Making, departments must complete a mandatory algorithmic impact assessment that scores each system's risk and attaches matching obligations for transparency, human oversight, and recourse. Separate Treasury Board guidance sets out how institutions may use generative AI responsibly.

For the private sector, the federal approach has so far been voluntary. A 2023 Code of Conduct invites developers of advanced generative AI systems to adopt common measures on safety and accountability until formal regulation arrives. In June 2026 the government also launched a renewed national strategy, AI for All, a signal that AI remains a federal priority even without a dedicated statute.

AIDA itself would have gone much further. Introduced in 2022, it proposed a risk-based framework centred on regulating "high-impact" AI systems, placing obligations on organisations that design and deploy them. Bundled with two privacy statutes in Bill C-27, the AI provisions proved the most contested part of the package, which helps explain why the government later chose to legislate privacy on its own.

Bill C-36 still bears on AI, even though it creates no AI statute. If enacted, it would repeal the private-sector privacy provisions of the Personal Information Protection and Electronic Documents Act (PIPEDA) and require organisations that use automated systems "to make a prediction, recommendation or decision about the individual that could have a legal or similarly significant effect on them, the organisation must, on request by the individual, provide them with an explanation of the prediction, recommendation or decision". The bill was first read in June 2026 and remains before parliament. Privacy law remains a key mechanism for AI accountability by the federal government.

### *Provincial developments*

The provinces have not waited for Ottawa. Quebec has gone furthest: under the reforms to its privacy law known as Law 25, its private-sector privacy statute requires an organisation that makes a decision based exclusively on automated processing to inform the individual concerned. On request, the person must be told which personal information was used and the main factors behind the decision, and must be allowed to submit observations to a member of staff able to review it. These rights have applied since September 2023, and the regime is now backed by significant administrative penalties.

Ontario has concentrated on the public sector. Its Bill 194 received Royal Assent in 2024 and enacted the Enhancing Digital Security and Trust Act, 2024, which lets the government set requirements for public-sector use of AI, including accountability frameworks and risk management. Much of the operative detail is left to future regulations that have yet to be published. Alberta's Protection of Privacy Act, also applicable to public bodies, has provisions governing automated decision-making systems similar to those in Quebec's Law 25. Other provinces, such as British Columbia, have created dedicated AI portfolios and published guiding principles for their own use of the technology.

Alberta, Saskatchewan and Manitoba have each issued, or are considering issuing, guidance to gov-

ernment public sector or government employees in using generative AI.

### *Sector-specific oversight*

Regulators and standard-setting bodies are also weighing in on AI governance. Several developments matter for businesses operating in Canada:

- The Office of the Superintendent of Financial Institutions (OSFI) has finalised Guideline E-23, extending its model-risk expectations to systems built on AI and machine learning, with effect from 2027. In collaboration with other key institutions relevant to financial services, OSFI has also endorsed the EDGE principles (which set out Explainability, Data, Governance and Ethics as four pillars for responsible AI adoption in financial services) and the AGILE Framework (a five-part framework consisting of Awareness, Guardrails, Innovation, Learning, and Ecosystem Resiliency, building on EDGE to capture AI's benefits while managing fast-evolving risks).
- Through the Standards Council of Canada, the country helped develop ISO/IEC 42001, the first international management-system standard for AI.
- Provincial law societies, including those in Ontario, British Columbia, and Alberta, have issued guidance on the use of AI in legal practice, and the federal Privacy Commissioner has published principles for generative AI.

### *Looking ahead*

The best route ahead appears to be a layered approach, built from federal policy, privacy law, provincial statutes, and sectoral rules. Whether the federal government will revive a dedicated AI law is uncertain, but any new bill is unlikely to mirror the 2022 model. A separate consultation on copyright and AI continues, and public trust remains a recognised barrier to wider adoption. In the meantime, organisations should assume that meaningful obligations already exist; the immediate task is to identify where automated decisions are made about individuals and to be ready to explain and contest them.

## Data Governance and Compliance Trends

In Canada, data governance is shifting from policy-based privacy and data compliance to evidence-based accountability. Where businesses were once expected to maintain policies and include key data protection terms in contracts, now, irrespective of what a business does, there is a much weightier expectation from boards, vendors servicing businesses, and customers alike, to demonstrate how personal information is governed across its entire life cycle.

This is particularly crucial as businesses implement analytics tools and processes, and cloud infrastructure, onboard integrated digital platforms, and adopt AI. In this environment, privacy compliance turns on whether the business is able to consistently identify what data it holds, why it is authorised to use it, where it is stored or transferred, who has access to it, whether it remains accurate, and whether it is able to show how decisions about personal information uses are documented and reviewed.

### *Bill C-36*

Bill C-36 aims to modernise the federal private-sector privacy framework by enacting the proposed Protecting Privacy and Consumer Data Act. The bill echoes this evidence-based accountability trend by pointing to a more structured accountability model that requires businesses to maintain a privacy management programme; document their privacy policies, practices, and procedures; and provide those materials to the regulator upon request. It also proposes privacy impact assessment (PIA) requirements for certain higher-risk activities, including transfers or disclosures of personal information outside Canada or when choosing to rely on the proposed legitimate interest exception to consent.

The practical point is that businesses operating in Canada need to show:

- what was assessed;
- what risks were identified;
- what mitigations were chosen; and
- why the business considered the use and mitigations appropriate.

These proposed elements indicate that compliance is becoming less about having the right policy on file and more about being able to demonstrate, through both records and repeatable processes, that risks are

identified, assessed, managed and revisited as the business, technology, and data uses evolve.

### *Vendor and cloud governance*

A related trend is that vendor and cloud governance are now central to data compliance risks. For most businesses, data flows through cloud providers, like software-as-a-service (SaaS) tools and other outsourced services. Recent breach incidents, including the PowerSchool breach, which affected at least 80 Canadian school boards across seven provinces and one territory, illustrate how a single technology vendor incident can create broad, multi-jurisdictional privacy and governance consequences.

These incidents explain why regulators and customers scrutinise third-party vendors, credential controls, breach response, contractual protections, and understanding of where sensitive info sits in vendor ecosystems. Bill C-36 adds to this trend by signalling heightened expectations regarding the personal information of minors, reinforcing the need for businesses to maintain clear records of data flows, service providers, cross-border transfers, and other related data-handling obligations. Age verification methodologies are expected.

Vendor management remains a core part of privacy, security and accountability. Businesses need to flow through appropriate security and data handling requirements to third and fourth party vendors. In addition, they need to show they understand and document how vendors handle sensitive information, because vendor choices increasingly affect legal compliance, breach exposure, customer trust, and a business's ability to show control over its data.

### *AI trends in data governance*

AI is also driving a slowly emerging trend towards stronger data governance. This reflects the operational reality that AI systems depend on accurate, reliable, and well-governed data to produce the insights businesses are seeking. As a result, AI governance is being built not only through AI-specific rules, but through existing privacy laws, regulator guidance, procurement requirements, sector expectations, cybersecurity controls, and contracts that address key privacy considerations, including legal authority for use, retention periods, and oversight.

For businesses adopting AI at scale, the key questions are not just about the tool's legality but also about data use, purpose, authority, safeguards, transparency, and human review. Overall, it is apparent that AI is making data governance harder to avoid. Businesses that cannot explain what data they have, where it came from, how it can be used, and who is accountable for the output will struggle to move AI from experimentation to reliable adoption.

Regulators are also becoming increasingly critical of how AI is developed and used. For example, the federal, British Columbia and Alberta Privacy Commissioners' Offices jointly found that the development of some of OpenAI's ChatGPT models contravened PIPEDA and the Personal Information Protection Acts of British Columbia and Alberta, and Quebec's private-sector Privacy Act. Businesses will need to be increasingly aware of not only their own data practices but stay abreast of the practices of AI developers, to be able to responsibly procure AI tools in a privacy-complaint manner.

Some businesses are pushing ahead with AI pilots despite poor data governance, unclear data ownership, weak retention practices, incomplete inventories, and limited oversight; this helps explain why many pilots are expensive, difficult to scale up, and ultimately unsuccessful.

Other businesses remain stationary: they want to adopt AI, but hesitate to do the unglamorous data-governance work required to make it viable, including mapping and cleaning data, confirming authority for secondary use, reviewing vendor contracts, and assigning accountability for AI-generated outputs.

In practice, businesses that move the fastest will not be the ones that implement the most AI tools, but the ones that recognise that data-governance readiness is the foundation of AI readiness, and invest accordingly.

## Cross-Border Data Considerations

Canada's federal privacy framework was built to be permissive. It does not prohibit transferring person-

al information outside Canada, a flexibility that has suited businesses well. However, federal and provincial privacy laws, as well as the use of AI, do create requirements and considerations organisations should be aware of. For any organisation moving data into or out of Canada, understanding what requirements they are subject to is a necessity.

### *The PIPEDA baseline*

Under PIPEDA, there is no general restriction on transferring personal information outside Canada. Instead, the law follows a principle of accountability: organisations that collect data remain responsible for it, wherever it travels. In practice, a business must ensure that any foreign service provider offers a comparable level of protection to that offered by PIPEDA, and it must be transparent in letting individuals know that their information may be processed and accessed outside the country.

In practice, the limitation of this is enforcement. The federal privacy regulator has historically been able to investigate and make recommendations, but not to issue binding orders or significant penalties. This has led to the real pressure on cross-border transfers increasingly coming from the provinces rather than from Ottawa.

### *Provincial requirements*

Businesses often assume cross-border rules are a federal matter, but that is not exclusively the case. Quebec, Alberta and British Columbia each have their own private-sector privacy laws which supplant PIPEDA, and Alberta is expected to strengthen its regime in 2026 based on their 2025 review of their privacy laws.

Quebec's Act Respecting the Protection of Personal Information in the Private Sector (Law 25) is one of the most stringent privacy laws in Canada. Law 25 treats a transfer from a Quebec office to one in Ontario in much the same way as a transfer overseas, with obligations applying the moment the data leaves the province. Before transferring personal information out of Quebec, an organisation must carry out a PIA and satisfy itself that the receiving jurisdiction offers equivalent protection. For any company with a Quebec footprint, this has become the practical national standard.

### *Cross-border data risks*

A pressing concern for multinational organisations is who can compel access to the data they have. Storage of data or transferring data to other jurisdictions means potentially being subject to foreign access laws. The US CLOUD Act allows American authorities to require disclosure of data in the possession, custody or control of US-based companies, regardless of where that data physically sits. Information stored in a Canadian data centre may still be at risk of access if the provider is a US-parented cloud or technology firm.

This creates a direct, unresolved tension in Canada. An honest assessment of a US-controlled provider may struggle to conclude that "equivalent protection" exists, because the data remains exposed to foreign legal process that Canadian law cannot override. This may add another legal consideration for vendor selection.

### *Artificial intelligence as a cross-border data engine*

Adopting AI is, almost always, a decision to move data, frequently offshore and under foreign jurisdiction. This is the area businesses most often overlook. The questions that matter most are practical:

- Training data – Is Canadian personal information being sent abroad to train a model, and on what legal basis?
- Where the model runs – Processing data through a foreign-hosted system is itself a cross-border transfer, even if the user is in Canada.
- Automated decisions – Where AI informs decisions about individuals, transparency and human-oversight expectations apply, and these are harder to meet when the system is operated abroad.
- Vendor due diligence – The jurisdiction and corporate ownership of an AI provider now carry direct privacy consequences.

Using AI without asking where the data goes, and whose laws govern it, is a compliance problem waiting to happen.

### *Upcoming changes and considerations*

The most significant upcoming change with possible cross-border data implications is the federal govern-

ment's Bill C-36, which aims to strengthen privacy requirements in several key areas, namely the disclosure or transfer of personal information outside of Canada. Organisations will be required to carry out PIAs and implement measures to mitigate any risks they identify. This is a step-up from the accountability principle in PIPEDA, which essentially only required ensuring foreign service providers offered a comparable level of protection.

Businesses will need to be diligent about mapping their data flows to determine if personal information is leaving the country, which would trigger their obligation to conduct a PIA.

Bill C-36 significantly increases the consequences of non-compliance with privacy obligations, creating actual penalties for non-compliance. While the international data transfer provisions are excluded from the penalty structure, Bill C-36 still requires organisations to protect personal information, including against privacy risks from transferring personal information to a service provider. This likely includes risks from cross-border data transfer to service providers, and contravention of that provision is within the scope of the penalty-issuing powers.

### Practical Implications for Businesses Operating in the Digital Economy

Canada's regulatory environment for AI and data protection has changed materially in the past 18 months. Businesses operating in the Canadian digital economy face a more demanding compliance posture than at any prior point under PIPEDA, driven by new federal legislation, active privacy enforcement, provincial reform, and tightening constraints on cross-border data flows. Compliance programmes built to the pre-2024 federal standard are already inadequate.

#### *A fragmented jurisdiction requires jurisdiction-specific analysis*

The compliance landscape governing AI and personal data in Canada is fragmenting rather than converging towards a single framework. Businesses will need to comply with different privacy regimes offering different rights and imposing different obligations.

At the federal level, Bill C-36 proposes the Protecting Privacy and Consumer Data Act (PPCDA) to replace PIPEDA. The proposed legislation recognises privacy as a fundamental right, shifts the default to express consent, conditions any legitimate interest exception on a documented PIA, introduces a private right of action, and introduces rights to deletion and explanation of automated decisions. Enforcement would pass to a new Digital Safety and Data Protection Commission of Canada, with penalties up to CAD25 million or 5% of global revenues.

Quebec's Law 25, already in force since September 2024, applies to any organisation collecting or using the personal information of Quebec residents regardless of where the organisation is incorporated. It requires documented PIAs before deploying any technology involving personal information, designation of a person responsible for personal information protection, and a privacy-by-default governance framework, with penalties reaching the greater of CAD25 million or 4% of worldwide revenues.

Alberta, British Columbia and Ontario are each conducting parallel statutory reviews. Until those processes are resolved, national-level generalisations are an unreliable basis for compliance planning.

#### *Existing law already governs AI*

Previous assumptions that AI governance obligations would crystallise only upon passage of dedicated AI legislation have been discredited by privacy regulators seeking to enforce existing privacy regimes. The joint Office of the Privacy Commissioner of Canada (OPC) investigation into OpenAI's ChatGPT, (findings published 6 May 2026), concluded that ChatGPT's initial training violated Canadian privacy law through over-collection, invalid consent, and inadequate individual redress. The volume of OPC complaints doubled year-on-year to 3,044 filings, and breach reports affected more than 20 million Canadians in the same period. The federal Voluntary Code of Conduct on Responsible Generative AI, though not yet enforceable, is being used by the OPC as a reference standard in complaint proceedings.

PIAs, data minimisation analyses, valid consent architecture, human oversight protocols, and processor

agreements governing AI tools are being treated as already required under existing law. The OPC has designated AI governance a priority enforcement area, and the PPCDA's forthcoming mandatory privacy management programme will codify obligations that well-governed organisations are already meeting.

### *Cloud procurement carries legal exposure*

The most structurally difficult compliance problem arises from the interaction between Canadian privacy law and the US Clarifying Lawful Overseas Use of Data Act (CLOUD Act), which authorises US federal law enforcement to compel American cloud providers to disclose customer data regardless of where it is stored (subject to the signing of a bilateral treaty, which has been under negotiation for some time). A Canadian data residency contractual term will not constitute a legal barrier to a valid CLOUD Act order. The Upper Harbour Canadian Technology Sovereignty Index 2026 found that 80% of tools offering Canadian data residency remain CLOUD Act-exposed because their parent entities are US-incorporated; a growing number of Canadian organisations are therefore actively migrating away from US cloud providers.

Quebec's transfer impact assessment requirement has applied since September 2023, and Bill C-36 would introduce an equivalent federal obligation. Survey evidence suggests most organisations subject to the Quebec requirement have yet to complete even their first assessment. Canada's EU adequacy status, re-confirmed in January 2024, is contingent on maintaining protections broadly equivalent to the GDPR; a prolonged gap between PIPEDA and the PPCDA's coming into force could invite review with material consequences for transatlantic data flows.

### *Practical priorities*

Three steps are recommended under both current and anticipated law. An inventory of AI systems in deployment, classified by risk and jurisdictional exposure, is the necessary first step and prerequisite for the impact assessments Law 25 already requires. Transfer impact assessments for personal information disclosed to US-parented service providers should be completed immediately; the analysis will support the cross-border documentation the PPCDA will require federally. CLOUD Act response protocols should be incorporated into vendor due diligence and master service agreements, addressing what data would be produced, under what process, and with what notice to affected individuals and regulators.

The PPCDA's proposed privacy management programme and documentation requirements for automated decisions are the most reliable design template for governance frameworks being built today. Organisations that align their programmes to the proposed federal standard will satisfy current OPC enforcement expectations and be better positioned when the new legislation comes into force.

# 1. Legal System

## 1.1 Legal System and Judicial Order

The Cayman Islands is a common law jurisdiction, which is based on the English model. It comprises statute law and binding case precedents. English and British Commonwealth case authorities are generally persuasive, but not binding, on the Cayman Islands courts.

Cayman Islands law is derived from several sources:

- primary legislation – ie, local statutes passed by the Legislative Assembly of the Cayman Islands or its predecessors, and approved by the Governor of the Cayman Islands; for example, the Companies Act (As Revised) of the Cayman Islands (the "Companies Act") and the Private Funds Act (As Revised) of the Cayman Islands;
- secondary legislation – ie, legislation enacted pursuant to local statutes; examples include the Companies Winding-Up Rules (2023 Consolidation) and the Private Funds Regulations (As Revised) of the Cayman Islands;
- statutes passed by the United Kingdom (UK) Parliament that have been expressly extended to the Cayman Islands;
- Orders of His Majesty's Privy Council that are applicable to the Cayman Islands; and
- any relevant remaining English and British Commonwealth common law and rules of equity established by settlement not having been replaced by local or UK statute.

The Grand Court of the Cayman Islands (the "Grand Court") is the superior court of record of first instance for the Cayman Islands. The caseload of the Grand Court is divided into five divisions: Civil, Family, Admiralty, Financial Services and Criminal. Appeals from the Grand Court are to the Cayman Islands Court of Appeal (which usually sits three times annually). The final court of appeal is the Privy Council in England.

# 2. Restrictions on Foreign Investments

## 2.1 Approval of Foreign Investments

### Foreign Investments in the Cayman Islands

#### *Local operating business*

Approval from the Cayman Islands authorities may be required if foreign investors are investing in a Cayman Islands company that conducts local business (ie, with businesses and individuals located in the Cayman Islands) (a "Local Company"). This is necessary where a foreign investor will hold greater than 40% voting or economic interest in a Local Company. The Local Companies (Control) Act (As Revised) of the Cayman Islands (LCCA) provides that a Local Company must have 60% Caymanian shareholders and directors, who maintain 60% of the economic and voting control. An application must be made to the Trade and Business Licensing Board (the "Board"), established pursuant to the Trade and Business Licensing Act (As Revised) of the Cayman Islands (TBLA), to obtain a special licence under the LCCA or waiver of its provisions to permit greater than 40% foreign ownership and control.

#### *Entities registered or incorporated in the Cayman Islands conducting business outside the jurisdiction*

There is no prohibition on foreign investors investing in Cayman Islands entities that do not fall within the category of a Local Company – ie, entities registered or incorporated in the Cayman Islands but not doing business with businesses and individuals in the Cayman Islands.

Certain categories of entities, such as those registered under the Mutual Funds Act (As Revised), may require minimum investment thresholds, but there are no restrictions on foreign investors making an investment in a Cayman Islands mutual fund.

#### *Property in the Cayman Islands*

There are no restrictions on foreign investors purchasing property in the Cayman Islands.

### 2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance

#### Local Operating Business

To the extent a Local Company is unable to procure the required 60% local participation, it must apply to the Board for an LCCA licence. The application must be submitted together with supporting due diligence documents and evidence that the Local Company sought local participation (eg, copies of published advertisements in the Cayman Islands newspapers). The Local Company must also disclose any responses received from Caymanians. The Board must consider, among other things, the existing local business in the Cayman Islands and the benefit to the Cayman Islands and Caymanians. The application process generally takes approximately three to six months. An LCCA licence may be issued for up to 12 years and may be subject to such terms and conditions as the Board sees fit. A Local Company holding an LCCA licence must file a return of shareholdings as at 31 December with the Board in January annually. Once expired, the licence cannot be renewed.

Any Local Company with less than 60% local participation that does not hold an LCCA licence and is not otherwise exempted or licensed to operate in the Cayman Islands under another law, commits an offence and is liable (i) on summary conviction to a fine of KYD200 (USD243.90) and (ii) on conviction on indictment to a fine of KYD1,000 (USD1,219.51), in each case, for each day the offence continues.

### 2.3 Commitments Required From Foreign Investors

In respect of Local Companies, the Board does not condition approval on commitments from foreign investors. However, subject to any general directions from the Cabinet of the Cayman Islands, the Board may have regard to certain matters (such as the advantage or disadvantage resulting from the applicant carrying on business in the Cayman Islands) when deciding whether to grant a licence.

### 2.4 Right to Appeal

To the extent a Local Company is dissatisfied with a decision of the Board, it may, within 28 days of the communication of the decision (or such longer period as the Appeals Tribunal may allow), appeal to the Appeals Tribunal established under the TBLA. Any notice of appeal must specify the decision being appealed, the Board's reasons and the grounds of appeal. The Appeals Tribunal may then decide whether to allow the appeal and fix a hearing date.

The Appeals Tribunal's decision will be communicated to the appellant and the Board within 28 days of the hearing. A further appeal may be made to the Grand Court from a decision of the Appeals Tribunal on a point of law only.

## 3. Corporate Vehicles

### 3.1 Most Common Forms of Legal Entity

The Cayman Islands has several types of corporate vehicles or legal structures available for conducting business in or outside of the Cayman Islands. Common types of entities are outlined below.

#### Exempted Companies

Exempted companies are incorporated under the Companies Act and are the most common form of Cayman Islands vehicle used when carrying on business mainly outside of the Islands. They offer a flexible and tax-efficient structure for companies to operate in the global market. The main constitutional documents are its memorandum and articles of association that set out the rules for the governance and operation of the company. The issued share capital can be entirely nominal (for example, a single share) and shareholder liability is typically limited to amounts unpaid on shares. There are no restrictions on the number of directors or shareholders.

#### Ordinary Non-Resident and Ordinary Resident Companies

Ordinary companies are incorporated under the Companies Act but, unlike exempted companies, are subject to the LCCA and must comply with local licensing, reporting and disclosure obligations in the Cayman Islands.

Ordinary non-resident companies cannot engage in business activities within the Cayman Islands. Ordinary resident companies may conduct business locally. Both must file a list of shareholders annually with

the Registrar of Companies. Ordinary resident companies must also file an annual list of shares held by Cayman Islands residents with the applicable immigration board to comply with the LCCA's 60% local ownership requirement.

### Overseas Companies

Overseas companies (usually referred to as foreign companies) have been incorporated in another jurisdiction and intend to carry on business in the Cayman Islands. They must register with the Registrar of Companies pursuant to Part IX of the Companies Act, which is necessary to enable them to hold land, carry on business locally, or act as the general partner of a Cayman Islands ELP (for which they are commonly used).

### Segregated Portfolio Companies

A segregated portfolio company (SPC) is a form of exempted company incorporated under the Companies Act, which may create one or more segregated portfolios to segregate the assets and liabilities held within or on behalf of each segregated portfolio from those of other segregated portfolios and from the general assets of the SPC. The SPC remains a single legal entity; any segregated portfolio does not constitute a separate legal entity. SPCs are commonly used for mutual funds and other investment vehicles seeking asset and liability segregation.

### Limited Liability Companies

A limited liability company (LLC) is formed and registered under the Limited Liability Companies Act (As Revised) of the Cayman Islands (the "LLC Act") and combines characteristics of an exempted company and an ELP, similar to a Delaware LLC. LLCs are corporate entities with separate legal personality and limited liability. They offer particular flexibility regarding operation, management, member rights and profit sharing, and can be used for a variety of purposes including as investment vehicles.

### Exempted Limited Duration Companies

An exempted limited duration company (LDC) is a form of exempted company incorporated under the Companies Act. An LDC exists for a fixed period (not exceeding 30 years) specified in its memorandum of association and must have at least two members. LDCs are uncommon but may be used where a project must be completed within a certain timeframe. Upon expiry, the LDC will be deemed to have commenced voluntary winding up.

### Exempted Limited Partnerships

An exempted limited partnership (ELP) is registered under the Exempted Limited Partnership Act (As Revised) of the Cayman Islands (the "ELP Act") and is the most common partnership structure in the Cayman Islands, providing a flexible vehicle for investors to pool capital for investment activities outside the Cayman Islands. It is frequently used as a private equity fund, hedge fund or feeder fund. The respective rights and obligations of the general partner and limited partners are set out in an ELP agreement. Limited partners have limited liability, with all management responsibility vesting in the general partner who is liable for the ELP's debts and liabilities if the ELP's assets are inadequate.

### Limited Liability Partnerships

A limited liability partnership (LLP) is formed and registered under the Limited Liability Partnership Act (As Revised) of the Cayman Islands. It is the preferred structure for professional firms in the Cayman Islands, having a separate legal personality and affording limited liability to its partners. An LLP is not a body corporate and differs from a UK LLP which is structurally more akin to a corporate rather vehicle. The LLP, rather than the partners, is liable for its debts and losses. A partner may be liable for their own negligent acts or omissions where they have assumed an express duty of care and acted in breach of it. An LLP must be established by at least two persons for any lawful purpose. Any person, including natural persons, a body corporate or other partnerships, may be a partner. As there is no requirement to carry on business "with a view to profit", an LLP may be a helpful option for not-for-profit organisations.

### Foundation Companies and Companies Limited by Guarantee

A foundation company is incorporated under the Foundation Companies Act (As Revised) of the Cayman Islands (the "Foundation Companies Act") as a body corporate with legal personality distinct from its members, beneficiaries, directors, officers, super-

visors and founder. Accordingly, it has capacity to sue and be sued and to hold property. Uniquely, it is possible for a foundation company not to have any members, provided that its constitution so permits and it continues to have one or more supervisors. A foundation company may be formed for any lawful object, which need not be beneficial to other persons and must be limited by shares or by guarantee with or without share capital. It is a highly flexible vehicle and can, if so desired, include features of a common law trust within a corporate framework. Foundation companies are typically used for wealth management, estate planning and asset protection, and are often incorporated as companies limited by guarantee to avoid the need for probate.

A company limited by guarantee has members rather than shareholders, whose liability is typically limited to USD1, and can hold property, sue and be sued. Companies limited by guarantee are rarely incorporated for commercial purposes, and are more typically used for non-profit or club scenarios.

#### Trusts (Including Unit Trusts)

Unlike the vehicles described above, a trust does not have separate legal personality and so a trust itself cannot hold property in its own name. Rather, legal title to property held upon the terms of the trust is vested in the trustees of the trust and it is the trustees who enter into transactions in that capacity and who can sue and be sued. The primary legislation is the Trusts Act (2021 Revision) (the "Trusts Act"), which incorporates conflict of laws provisions (the "Trusts (Foreign Element") Provisions") particularly relevant in instances where a trust has been established by a settlor domiciled outside the Cayman Islands in a jurisdiction that does not permit testamentary freedom.

Trusts can be established for various objectives, such as wealth management, estate planning, philanthropic endeavours (Charitable Trusts) and employee incentivisation schemes, much like foundation companies.

Cayman permits the establishment of non-charitable purposes trusts created pursuant to the Cayman Islands Special Trusts (Alternative Regime) Act 1997 (known as STAR Trusts), the purposes of which may be to benefit or carry out, as the case may be, a mixture of persons and purposes so long as they are lawful and not contrary to public policy.

It is also possible to establish a trust for use as an investment vehicle. Such a structure would usually take the form of a unit trust under which the investors (the unitholders) contribute assets to the trustee to be managed and invested in accordance with the terms set out in the trust deed and any accompanying contractual documents.

### 3.2 Incorporation Process

It is necessary to engage a licensed corporate services provider to assist with the incorporation process.

#### Exempted/Ordinary Resident/Ordinary Non-Resident Companies/Other Companies

To incorporate a company, the corporate services provider prepares and files the memorandum and articles of association with the Registrar of Companies, together with the appropriate filing fees. For exempted companies only, a statement confirming that the company's operations will be conducted mainly outside the Cayman Islands is also required. The initial subscriber shareholder is typically an affiliate of the corporate services provider and will transfer the subscriber share after incorporation or it will automatically be repurchased following the issuance of further shares. Once the Registrar has processed the documents, the company is deemed incorporated and a Certificate of Incorporation is issued.

#### Exempted Limited Partnerships

To register a Cayman Islands partnership as an ELP, the corporate services provider, on behalf of its general partner, must submit to the Registrar of Exempted Limited Partnerships in the Cayman Islands a statement setting out certain prescribed information and pay the appropriate filing fees. A Certificate of Registration issued by the Registrar of ELP is conclusive evidence that the requirements of the ELP Act have been complied with in respect of the formation and registration of an exempted limited partnership.

#### Limited Liability Companies

To form and register an LLC, a registration statement must be submitted by the corporate services provid-

er to the Registrar of Limited Liability Companies in the Cayman Islands which sets out basic information regarding the limited liability company and the appropriate filing fees. A Certificate of Registration issued by the Registrar of Limited Liability Companies is conclusive evidence that the requirements of the LLC Act have been complied with in respect of the formation and registration of an LLC.

### Timing

The registration and issue of a Certificate of Incorporation (exempted/resident/non-resident companies) or Certificate of Registration (ELPs, LLC) generally takes three to five business days but can be expedited by paying an express fee to provide the certificate within one business day.

## 3.3 Ongoing Reporting and Disclosure Obligations

### General – Companies Act

Companies in the Cayman Islands are subject to certain disclosure and reporting obligations depending on the type of vehicle and the activities undertaken. The Companies Act governs the formation, operation and dissolution of exempted companies.

Exempted companies must have a registered office in the Cayman Islands with a licensed and regulated corporate services provider and are required to file certain documents and information with the Registrar of Companies.

Exempted companies must notify the Registrar of Companies of the following:

- changes to the company name;
- increase or reduction in the authorised share capital;
- changes of directors and officers;
- changes in the registered office;
- amendments to the memorandum and articles of association of the company; and
- changes to the beneficial ownership register (if any) of the company.

Notices of all special resolutions referenced in the Companies Act that are passed by one or more shareholder(s) of the company must also be filed with the Registrar of Companies within a prescribed timeframe – ie, within 15 days from the effective date of the special resolution.

### Annual Requirements

An annual return (in the case of exempted companies) or an annual list of members and summary of certain specified items relating to share capital (in the case of ordinary companies) must be submitted to the Registrar of Companies in January of the year following incorporation and in each January thereafter, and the appropriate annual fee paid.

### Financial Statements

All companies must keep proper books of account, including material underlying documentation such as contracts and invoices, sufficient to give a true and fair view of the company's affairs and explain its transactions. Books must be retained for a minimum of five years. A company that knowingly and wilfully contravenes these requirements is subject to a penalty of USD6,100. The books need not be kept at the registered office, but the company must provide its registered office with information regarding its books annually or as prescribed. If the company is not a bank, trust company, building society, money services business, credit union, insurance company, corporate manager, mutual fund administrator or regulated fund, its accounts need not be audited as a matter of Cayman Islands law.

### Beneficial Ownership

On 24 November 2023, the Parliament of the Cayman Islands passed the Beneficial Ownership Transparency Act (As Revised) (the "BOT Act") which came into force on 31 July 2024.

The BOT Act modifies the beneficial ownership regime in place since 2017, aligning it with equivalent regimes in other jurisdictions, such as the US Corporate Transparency Act. The BOT Act extends the regime to most Cayman Islands entities and removes a number of exemptions that existed previously.

In-scope entities must identify and monitor changes to their beneficial owners and reportable legal entities (as defined in the BOT Act), establish and maintain a beneficial ownership register with their corporate ser-

vice provider (CSP), and provide certain "required particulars" in a timely manner. The CSP files the register details with the Cayman Islands competent authority (the "Competent Authority") each month. Various administrative fines and sanctions, including restriction notices, apply for non-compliance. The previous regime applied only to companies, LLCs and LLPs. The BOT Act has broader scope and applies to all Cayman Islands "legal persons", including companies, LLCs, LLPs, limited partnerships, ELPs and foundation companies, and any other legal person that may be prescribed ("Legal Persons"). Non-Cayman Islands entities (including those registered as foreign persons in the Cayman Islands, typically to act as the general partner of an ELP) and certain other categories (eg, certain charities and not-for-profits) are carved out.

Under the BOT Act, a "beneficial owner" is an individual who (i) ultimately owns or controls (directly or indirectly) 25% or more of the shares, voting rights or partnership interests in the Legal Person; or (ii) otherwise exercises ultimate effective control over the management of the Legal Person; or (iii) is identified as exercising control of the Legal Person through other means. A person operating solely in the capacity of a "professional adviser" or "professional manager" (both terms defined in the Act) will not be considered a beneficial owner.

Where no natural person is identified as a "beneficial owner", a "senior managing official" (such as a director or CEO) must be named in the entity's beneficial ownership register.

Most exemptions under the previous regime are removed or significantly restricted in favour of certain "alternative routes to compliance", under which the Legal Person need not report beneficial owners or establish a register, but must report limited "required particulars".

Legal Persons able to apply an alternative route to compliance include those that are: (i) listed, or a subsidiary of a listed entity, on the Cayman Islands Stock Exchange (CSX) or an approved stock exchange; (ii) licensed under a regulatory law (note this is limited to certain Cayman Islands regulatory laws); (iii) a fund registered under the Private Funds Act (As Revised) or the Mutual Funds Act (As Revised); or (iv) otherwise exempted by Cabinet (none currently).

Entities falling outside categories (i)-(iv) above (or otherwise opting not to apply an alternative route to compliance) are considered "in-scope" and are required to establish and maintain a beneficial ownership register.

The required particulars are largely unchanged from the previous regime, with two additions: the Legal Person must also report (i) the nationality of all beneficial owners; and (ii) the nature of the individuals or reportable legal entity's ownership or control (whether by economic interests, voting interests, or as a senior managing official).

### Economic Substance Act (As Revised)

The Cayman Islands has enacted economic substance legislation in compliance with the OECD's Inclusive Framework on Base Erosion and Profit Shifting (BEPS). Where an entity conducts a "relevant activity" in a "relevant financial period", it must (i) file an economic substance notification with the Registrar of Companies before 31 January each year, and (ii) file an economic substance return with the Department for International Tax Cooperation no later than 12 months from the last day of the entity's financial year end.

The Economic Substance Act applies economic substance requirements to the following categories of geographically mobile "relevant activities" previously identified by the OECD (and adopted by the EU):

- banking;
- insurance;
- shipping;
- fund management;
- financing and leasing;
- headquarters;
- distribution and service centres;
- holding company; and
- intellectual property.

### Automatic Exchange of Financial Account Information

The Cayman Islands has signed an inter-governmental agreement to improve international tax compliance

and the exchange of information with the United States (US IGA). The Cayman Islands has also signed a multilateral competent authority agreement to implement the OECD Standard for Automatic Exchange of Financial Account Information – Common Reporting Standard (CRS and together with the US IGA, AEOI). In addition, the Cayman Islands has enacted the Crypto-Asset Reporting Framework (CARF) Regulations, which came into force on 1 January 2026, implementing the OECD's framework for the automatic exchange of tax information on transactions in crypto-assets between participating jurisdictions. The Cayman Islands' commitment to commence CARF exchanges begins in 2027.

Cayman Islands regulations have been issued to give effect to the US IGA and CRS (collectively, the "AEOI Regulations"). The CRS regulations were amended with effect from 1 January 2026 by the Tax Information Authority (International Tax Compliance) (Common Reporting Standard) (Amendment) Regulations, 2025, which implement the OECD's amended CRS and bring new financial assets, products and intermediaries within scope, including specific electronic money products and central bank digital currencies. The amendments also strengthen due diligence and reporting requirements and advance the CRS reporting deadline. Pursuant to the AEOI Regulations, the Cayman Islands Tax Information Authority (TIA) has published guidance notes on the application of the US IGA and CRS.

All Cayman Islands "FIs" are required to comply with the registration, due diligence and reporting requirements of the AEOI Regulations, unless they are able to rely on an exemption that allows them to become a "Non-Reporting FI" (as defined in the relevant AEOI Regulations) with respect to one or more of the AEOI regimes, in which case only the registration requirement would apply under the CRS. The different types of Non-Reporting FI under each AEOI regime are specified in the applicable AEOI Regulations.

Cayman Islands FIs are also required to appoint a Principal Point of Contact (PPoC) located in the Cayman Islands who is authorised to liaise with the TIA for CRS purposes. A PPoC may be either a natural person or a legal person, but must maintain a physical address in the Cayman Islands (not merely a mailing or correspondence address). FIs registered with the TIA prior to the commencement of the CRS Amendment Regulations who had not yet appointed a PPoC in the Cayman Islands were given until 31 January 2027 to do so.

### Anti-Money Laundering and Countering of Terrorist and Proliferation Financing

The Cayman Islands has enacted legislation aligned with international principles in preventing and detecting money laundering (AML) and combating terrorist and proliferation financing (CFT and CPF respectively) and breaches of applicable sanctions regimes.

The principal legislation includes the Misuse of Drugs Act (As Revised), the Proceeds of Crime Act (As Revised) (PCA), the Terrorism Act (As Revised) and the Proliferation Financing (Prohibition) Act (As Revised). These statutes create offences relating to the laundering of the proceeds of crime.

The Anti-Money Laundering Regulations (AMLRs) apply to anyone carrying out "relevant financial business in or from the Cayman Islands", forming a business relationship or carrying out a one-off transaction. What constitutes "relevant financial business" is set out under Section 2 of the PCA and includes, among others, the following activities:

- banking or trust business carried out by a person who is licensed under the Banks and Trust Companies Act (As Revised);
- insurance business and the business of an insurance manager, an insurance agent, or an insurance broker within the meaning of the Insurance Act (As Revised);
- mutual fund administration or the business of a regulated mutual fund within the meaning of the Mutual Funds Act (As Revised); and
- various other investment, financial, trading and lending activities falling within Schedule 6 of the PCA.

As a general rule, entities that are registrable under FATCA/CRS will also be subject to the AML Regime.

The AMLRs provide that a financial services provider carrying out relevant financial business in or from the Cayman Islands cannot form a business relationship or carry out a one-off transaction unless they maintain certain AML/CFT/CPF/sanctions policies and procedures, having regard to money laundering, terrorist or proliferation financing and sanctions risks.

### Virtual Assets in the Cayman Islands

The Virtual Asset (Service Providers) Act (as amended, the "VASP Act") provides the framework for the conduct of virtual asset services in the Cayman Islands and for the registration and licensing of entities that provide virtual asset services.

The virtual asset service providers regime, which includes subsidiary and related regulatory and financial services legislation (together, the "VASP Regime") has been implemented in phases. The core phase one provisions of the VASP Act requiring registration came into effect on 31 October 2020, focused on anti-money laundering and countering the financing of terrorism (AML/CFT) measures. Related enforcement provisions and offences came into effect on 31 January 2021.

The VASP (Amendment) Act was published on 19 December 2024 and the legislation enacting Phase 2 of the VASP regime commenced on 1 April 2025. On this date, the licensing provisions of the VASP Act as well as the Virtual Asset (Service Providers)(Amendment) Act, 2024 and the Virtual Asset (Service Providers) (Amendment) Regulations, 2025 also came into force, along with CIMA's Rule – Virtual Asset Custodians and Trading Platforms and Statement of Guidance – Virtual Asset Custodians and Trading Platforms, and the licensing component of CIMA's Regulatory Policy – Registration or Licensing of Virtual Asset Service Providers. In February 2026, CIMA also published the Rule and Statement of Guidance – Market Conduct for Virtual Asset Service Providers, establishing comprehensive requirements on integrity, conflicts of interest, client asset safeguards, marketing and promotions, client onboarding, complaints handling, public disclosures, cross-border transactions and market abuse.

The VASP (Amendment) Act provides the regulatory basis for phase two of the Cayman Islands' VASP Regime, which relates to the introduction of a licensing regime for virtual asset trading platforms and virtual asset custodians. A third phase is also envisioned to address remaining elements of the regulatory framework.

Specifically, a currently registered person who, at the commencement of the VASP (Amendment) Act, is engaged in the provision of virtual asset custody services or the operation of a virtual asset trading platform shall apply for a licence within 90 days of the commencement of the VASP (Amendment) Act.

Additionally, the VASP (Amendment) Act introduces new operational requirements for all VASPs, including:

- Directors: There must be at least three directors, including one independent director.
- Business Plan Changes: Prior written approval from CIMA is required for any changes to the approved business plan or to provide additional virtual asset services not included in the original application.
- Litigation Notification: CIMA must be notified within 30 days of any litigation proceedings brought against them in any jurisdiction.
- Fiat Currency: Fiat currency held on behalf of clients must be in a bank regulated by CIMA or another regulator in a non-high-risk jurisdiction, ensuring segregation from the provider's own funds.
- Misleading Representations: It is now an offence for VASPs to make or permit misleading representations about their virtual asset activities.

In March 2026, the Cayman Islands enacted legislation introducing a regulatory framework for tokenised funds, whereby equity or investment interests in mutual funds and private funds may be represented by digital tokens on a blockchain. The Mutual Funds (Amendment) Act, 2026, Private Funds (Amendment) Act, 2026, and Virtual Asset (Service Providers) (Amendment) Act, 2026, clarify that the issuance of digital tokens by regulated tokenised mutual funds and private funds does not constitute virtual asset issuance under the VASP Act, impose annual record-keeping confirmation obligations on fund operators in respect of digital tokens, require the operator's approval for any transfer of tokenised interests, or mandate spe-

cific risk disclosures in offering documents, including cybersecurity and transferability risks.

### Cayman Islands Removed from FATF Grey List and EU AML List

On 27 October 2023, the Financial Action Task Force (FATF) confirmed that the Cayman Islands had been removed from the FATF's increased "monitoring list" (often referred to as the FATF Grey List). This decision came after the Cayman Islands demonstrated its commitment to international standards by satisfying all FATF Recommended Actions and successfully completing an on-site inspection by the FATF in 2023.

On 12 December 2023, the European Commission published a Delegated Regulation amending its list of "high-risk third countries" (the "EU AML List"), providing for the removal of the Cayman Islands. The removal was made effective on 7 February 2023.

The removal from both the FATF and EU AML Lists affirms that the Cayman Islands has robust and effective AML/CFT/CPF regimes in place, reflecting the jurisdiction's commitment to maintaining a compliant financial sector that aligns with global standards. The Cayman Islands is now preparing for its 5th Round Caribbean Financial Action Task Force Mutual Evaluation, with an on-site visit scheduled for December 2027.

### Cayman Islands Sanctions Regime

Sanctions Orders are extended by Statutory Instrument to the British Overseas Territories, including the Cayman Islands, to give effect to sanctions regimes implemented by the UK government ("Sanctions Orders").

Sanctions Orders apply to any person or body incorporated or instituted in the jurisdiction, as well as any British citizen or subject ordinarily resident. They generally restrain persons from dealing in funds or economic resources owned or controlled by, or making funds or economic resources available to Designated Persons. For example, a fund making a redemption payment to a Designated Person would not be permitted.

Since March 2022, significant sanctions measures with respect to Russia's invasion of Ukraine have been published by the UK, USA and the EU. A number of Cayman Islands vehicles have been impacted as a result of direct or indirect exposure to Russian individuals and/or entities. While these entities have been able to apply to the Governor for a specific licence to permit otherwise prohibited activities, until recently, licences could only be granted under specified licensing grounds, and no ground existed to deal with difficulties regarding frozen investments held in Russia and sanctioned investors on registers. In November 2025, a new sanctions reporting obligation was introduced, requiring any Cayman Islands person holding funds or economic resources owned, held or controlled by a Designated Person to file a frozen assets report with the Financial Reporting Authority annually. In December 2025, the Sanctions (Miscellaneous Amendments) (Overseas Territories) Order 2025 came into force, amending the definition of "relevant firm" under various sanctions regimes to incorporate new categories including crypto-asset exchange providers, custodian wallet providers, high-value dealers, art market participants, insolvency practitioners and letting agents, thereby increasing the scope of AML/CTF compliance related to sanctions across the British Overseas Territories.

On 14 March 2024 a new divestment-specific licensing ground came into force, which may provide an opportunity for entities to apply for a specific licence to exit a frozen shareholder/LP and freeze the redemption/withdrawal proceeds in a frozen bank account in a British Overseas Territory or the UK.

### Cayman Islands Country-By-Country Reporting

The Tax Information Authority (International Tax Compliance) (Country-By-Country Reporting) Regulations (As Revised) (the "CbCR Regulations") implement the OECD/G20's Base Erosion and Profit Shifting Action 13 Report requirements and largely follow the OECD Model Legislation.

The CbCR Regulations apply to any constituent entity ("Constituent Entity") that is "resident in the Islands" and forms part of a multinational enterprise group ("MNE Group"). A Constituent Entity is resident if it is incorporated or established in the Cayman Islands,

has a place of effective management there, or is subject to financial supervision in the Cayman Islands.

An MNE Group is broadly defined as a collection of two or more enterprises required to prepare consolidated financial statements (or that would be so required if equity interests were publicly traded) that (i) includes enterprises "tax resident" in at least two jurisdictions or an enterprise subject to tax via a permanent establishment in another jurisdiction and (ii) had total consolidated group revenue of at least USD850 million in the preceding fiscal year.

Any Constituent Entity resident in the Cayman Islands and forms part of an MNE Group must make a notification to the DITC and, if it is the "Ultimate Parent Entity" or "Surrogate Parent Entity", must file a country-by-country report in the standard OECD form.

The Cayman Islands' Country-by-Country Reporting regime underwent operational changes over 2025 and 2026 following the DITC's migration to a new online portal. The legacy CbCR portal was taken offline in July 2025, with CbCR functions going live on the replacement DITC Portal in stages between August and December 2025. All MNE Groups with Cayman Constituent Entities were required to complete a mandatory one-off re-registration by 30 November 2025. Updated CbCR Guidelines (Version 1.3) were issued in August 2025, consolidating prior guidance on registration, notification, reporting procedures, and technical matters including the treatment of investment funds and partnerships. To accommodate the transition, the DITC extended the filing deadline for MNE Groups with 2024 fiscal year reports due between 31 July and 31 December 2025, granting them until 27 February 2026 to file. The substantive scope of the regime remains unchanged.

## 3.4 Management Structures

### Companies

Companies are generally managed by a board of directors. Subject to the memorandum and articles of association, the board: (i) may be appointed by shareholders, with existing directors able to appoint additional or replacement directors; (ii) can delegate certain powers to committees or individual directors; and (iii) may appoint officers to handle day-to-day operations.

The approval of the company's shareholders is required for certain matters, including:

- changing the company name;
- amending the memorandum and articles of association;
- approving a merger or consolidation in relation to the company;
- altering the company's share capital;
- approving a transfer by way of continuation to another jurisdiction; and
- winding up the company on a voluntary basis.

Board meeting procedures (eg, notice, quorum) are set out in the articles of association, with decisions generally made by simple majority. The articles typically also provide for action by unanimous written resolution of the directors.

### Limited Liability Companies

LLCs are typically managed by their members, or by non-member managers appointed by the members, who shall undertake and have exclusive responsibility for the management, operation and administration of the business and affairs of the LLC, subject to the terms of its LLC agreement.

### Exempted Limited Partnerships

The management and operation of an ELP is typically set out in its ELP agreement. The ELP must have at least one general partner responsible for management and operation of the ELP. Limited partners are typically passive investors and may lose limited liability if they engage in the conduct of the ELP's business (subject to certain "safe harbour" exceptions).

## 3.5 Directors', Officers' and Shareholders' Liability

The main rules regarding the liability of directors and officers are found in the Companies Act and common law, and include the following.

### Directors' Duties

As a matter of Cayman Islands law, a director of a Cayman Islands company is in the position of a fiduci-

ary with respect to the company. Accordingly, directors and officers owe the following fiduciary duties:

- to act in good faith in what the director or officer believes to be the best interests of the company as a whole;
- to exercise powers for the purposes for which those powers were conferred and not for a collateral purpose;
- directors should not improperly fetter the exercise of future discretion;
- to exercise powers fairly as between different sections of shareholders;
- to exercise independent judgement; and
- not to put themselves in a position in which there is a conflict between their duty to the company and their personal interests.

However, the company's articles of association may permit a director to vote on a matter in which they have a personal interest provided they disclose the nature of interest to the board.

Directors also owe a non-fiduciary duty of care, requiring them to act as a reasonably diligent person having both the general knowledge, skills and experience reasonably expected of a person in that role and the actual knowledge, skills and experience of the particular director.

A director (even where appointed by individual shareholders) is obliged to act in a manner that the director believes to be in the best interests of the company as a whole (even though it may not be in the best interests of the appointing shareholder).

### Breach of Duty

In the event of breach, directors may be personally liable to account to the company. Companies often indemnify directors and officers against liability incurred in carrying out their functions, except for liability resulting from actual fraud or wilful default. Articles of association may also exculpate directors from liability for negligence, default or breach of duty, except in cases of actual fraud or wilful default.

### Shareholder Liability

Subject to any express provision in the articles of association of the company to the contrary, a shareholder does not owe any fiduciary duty to the company or to any other shareholder in exercising any rights or authorities, or performing any obligations under the articles of association.

The liability of the shareholders of a company limited by shares is limited to the amount unpaid on the shares held by them.

### Piercing the Corporate Veil

The concept of "piercing the corporate veil" is recognised in the Cayman Islands only in exceptional circumstances, including, as example and without limitation, where a company's separate legal personality has been used:

- for an illegal or improper purpose; and
- for the purposes of fraud.

## 4. Employment Law

### 4.1 Nature of Applicable Regulations

The Labour Act (As Revised) establishes minimum employment standards but does not preclude an employer from setting terms and conditions above the minimum. It also establishes remedies for unfair dismissal and entitlement to severance pay, prohibits discrimination and regulates the employees' health, safety and welfare.

The Labour Act requires employers to:

- register the workplace by written notice to the Director of Labour in the Cayman Islands;
- furnish each employee with a written statement of working conditions containing specific information referenced in **4.2 Characteristics of Employment Contracts**;
- provide reasonable training to employees during their probationary period;
- maintain prescribed employee work accounts where there are ten or more employees;

- safeguard the health, ensure the safety, contribute to the welfare and provide special protective measures for employees as specified;
- notify the Director of Labour of major industrial accidents and any occupational disease involving employees;
- not discriminate; and
- provide certain minimum employee entitlements including:
  (a) an hourly minimum wage of KYD8.75 (USD10.67);
  (b) paid vacation leave (the amount depends on length of service);
  (c) public holiday pay;
  (d) up to ten paid sick leave days annually;
  (e) paid maternity and adoption leave;
  (f) at least 24 consecutive hours of rest in each seven consecutive days;
  (g) overtime pay for hours worked in excess of a standard workday/week; and
  (h) specified advance notice of termination of employment except for certain good causes.

Redress for unfair dismissal may be sought before the Labour Tribunal. An employee is not precluded from bringing a common law action before the courts, though any Labour Tribunal compensatory award would be deducted from any court damages.

The Workmen's Compensation Act (As Revised) provides for the payment of compensation by the employer to any workman who suffers personal injury by accident arising out of and in the course of employment. This is an insurable risk and is normally covered by an employer's insurance.

### 4.2 Characteristics of Employment Contracts

While the Labour Act does not require that an employment contract be entered into between an employer and an employee, the Labour Act requires an employer to furnish each employee with a written statement of working conditions containing the following information:

- job title, a brief statement of the general responsibilities and duties of the employee and of any special requirements or conditions of the job;
- regular hours of work, together with any particular terms or conditions relating to the hours of work;
- rate of remuneration, or the method for calculating it;
- intervals that remuneration is paid;
- in the case of employees whose pay is normally stated on some basis other than hourly, the hourly equivalent save that in the case of persons remunerated wholly or in part by commission, the rate of commission should be stated;
- period of employment, if other than indefinite;
- period of probation, if any;
- employee's holiday entitlement or the method for calculating it;
- employee's entitlement to sick leave; and
- length of notice the employee is obliged to give and is entitled to receive to terminate the contract of employment.

### 4.3 Working Time

There is no minimum or maximum working time applicable to salaried employees.

### 4.4 Termination of Employment Contracts

#### Employer's Notice

Unless the contract of employment is for a fixed term, or the dismissal is for good cause, misconduct, or failure to perform duties in a satisfactory manner, every employer must give advance written notice to an employee whose employment it intends to terminate:

- For an employee still serving a probationary period, at least 24 hours' notice must be given.
- In all other cases, the period of notice must be at least equal to the interval between pay days (eg, if paid every two weeks then two weeks' notice must be given). However, notice need not exceed 30 days in any circumstances, unless the employment contract provides for longer notice.

Once appropriate notice is given, the employer may terminate employment early provided the employee is paid for the notice period. This is subject to severance pay and unfair dismissal provisions.

An employee whose employment is terminated by the employer for any reason shall receive payment

for each day of unused vacation leave accrued at the time of termination.

#### Employee's Notice

The employee must be given notice as specified in the employment contract or, if not stated, notice equal to the interval between pay days or 30 days, whichever is less. If the employee fails to give appropriate notice, the employer may:

- dismiss the employee prior to the date the employee intended to leave by the number of hours or days the notice falls short; and
- forfeit all unused vacation leave accrued by the employee during the current employment year.

### 4.5 Employee Representations

The Cayman Islands currently has no form of employee representation legislation.

## 5. Tax Law

### 5.1 Taxes Applicable to Employees/ Employers

The Cayman Islands currently has no form of income, corporate or capital gains tax and no estate duty, inheritance tax or gift tax.

### 5.2 Taxes Applicable to Businesses

On 1 July 2021, 130 members of the OECD/G20, including the Cayman Islands, signed a historic agreement for a "two pillar solution" to address the tax challenges arising from globalisation and the digitisation of the economy ("Two Pillar Solution").

As the name suggests, the Two Pillar Solution is a two-pronged approach, aimed to bring about "a fairer distribution of profits and taxing rights among countries and jurisdictions with respect to the world's largest Multinational Enterprises (MNEs)".

Pillar One (the first prong) would provide a new right to tax large multinationals in the jurisdictions they operate in ("Pillar One"), while Pillar Two (the second prong) would introduce a new global minimum effective tax rate of 15%, ensuring that large multinationals pay a minimum level of tax in those jurisdictions ("Pillar Two").

Since July 2021, the Inclusive Framework on BEPS has been working towards the implementation of the Two Pillar Solution. While Pillar One is still being developed, Pillar Two is taking shape.

On 11 July 2023, an Outcome Statement was agreed by 138 members of the OECD/G20 Inclusive Framework (including the Cayman Islands), recognising significant progress towards the Two Pillar Solution.

Pillar Two's Outcome Statement says:

"The global minimum tax under Pillar Two establishes a floor on corporate tax competition which will ensure a MNE is subject to tax in each jurisdiction at a 15% effective minimum tax rate regardless of where it operates, thereby ensuring a level playing field. This global minimum tax framework under Pillar Two is already a reality, with over 50 jurisdictions taking steps towards implementation".

While the Cayman Islands was one of the initial signatories to the agreement for a Two Pillar Solution, Pillar Two has not yet been adopted nor has a public announcement been made regarding the introduction of a minimum effective tax rate within the Cayman Islands. The Cayman Islands has, however, been confirmed for a fifth consecutive year under the OECD's BEPS Action 5 review as having introduced economic substance requirements that meet all aspects of the standard, with no issues identified in relation to effectiveness in practice.

Please refer to **5.1 Taxes Applicable to Employees/ Employers**.

### 5.3 Available Tax Credits/Incentives

Please refer to **5.1 Taxes Applicable to Employees/ Employers**.

### 5.4 Tax Consolidation

Please refer to **5.1 Taxes Applicable to Employees/ Employers**.

### 5.5 Thin Capitalisation Rules and Other Limitations

The Cayman Islands currently has no thin capitalisation rules.

### 5.6 Transfer Pricing

The Cayman Islands currently has no transfer pricing rules.

### 5.7 Anti-Evasion Rules

Please refer to **5.1 Taxes Applicable to Employees/ Employers**. Considering the various taxes that are not applicable in the Cayman Islands, the Cayman Islands also has no anti-evasion rules.

### 5.8 Tariffs

The Cayman Islands does not have a tariff regime but Customs & Border Control (CBC) impose customs duties on certain imported goods to generate revenue. Those considering importing goods should consult CBC for current information.

## 6. Competition Law

### 6.1 Merger Control Notification

The Cayman Islands has merger control legislation for the following markets and sectors that are operating and providing services within the Cayman Islands (together, the "Utilities Markets and Sectors"):

- electricity markets, including the generation, transmission, distribution and supply of electricity;
- fuels markets;
- information and communications technology markets, including broadcasting and content services; and
- water sector, including the production, distribution, supply and treatment of water.

The Utility Regulation and Competition Office (OfReg) was established pursuant to the Utility Regulation and Competition Act (As Revised) (URCA), with the responsibility to:

- promote appropriate, effective and fair competition;
- protect the short- and long-term interests of consumers in relation to utility services and in so doing:
  (a) supervise, monitor and regulate any service provider providing any of the referenced utility services;
  (b) ensure that utility services are satisfactory and efficient and that charges imposed in respect of utility services are reasonable and reflect efficient costs of providing the services; and
  (c) publish information, reports and other documents relating to utility services (ie, keep the public informed of the different utilities service providers);
  (d) promote innovation and facilitate economic and national development.

### 6.2 Merger Control Procedure

The utilities service provider must notify OfReg prior to the merger, providing a transaction description and corporate and financial due diligence documents of the entities involved, including any beneficial owners holding 15% or more voting interest.

To approve any merger transaction, OfReg must consider whether such merger transaction would have material adverse effects on the consumer and citizens of the Cayman Islands.

If the merger transaction will not have a material adverse effect, OfReg is required under URCA to consent to the merger transaction.

If the merger transaction would have adverse effects, OfReg has the option to:

- declare the merger incompatible and deny consent;
- give consent, subject to an order that certain conditions must be satisfied to avoid or eliminate such material adverse effects; or
- give consent without issuing an order if OfReg is satisfied that the efficiencies put forward by the parties to the merger transaction outweigh any potential harm to consumers and citizens of the Cayman Islands.

### 6.3 Cartels

The Cayman Islands has anti-competitive legislation for the utilities markets and sectors. The URCA prohibits the agreements by service providers in the utilities markets and sectors that prevent, restrict or distort competition.

### 6.4 Abuse of Dominant Position

The Cayman Islands currently has no rules governing unilateral conduct or economic dependency.

## 7. Intellectual Property

### 7.1 Patents

#### Patents

*What may be registered*

The Cayman Islands' patent regime is provided by the Patents Act (2018 Revision) (the "Patents Act"). It provides for the recordal and extension ("extension") of:

- UK-registered patents; and
- UK-designated European Patent Convention (EPC) patents

to the Cayman Islands.

While the Patents Act contemplates that European Patents with Unitary Effect may also be extended, since the UK's departure from the EU, they are unlikely to be properly registrable with the Cayman Islands Intellectual Property Office (CIIPO) or enforceable at law. It is not currently possible to register new patents (subject to an examination process) in the Cayman Islands.

*Rights, subsistence duration*

The owner of an extended patent has equivalent rights and remedies to those available in the UK. Protection is effective from the time the right arose in the UK and subsists while in force in the UK, though no local infringement proceeding may be sustained for actions prior to local extension. Relevant local fees must be paid to maintain the extension.

*Extension process*

A patent owner, through their local registered agent, may apply to the Registrar of Patents to extend their patent rights to the Cayman Islands, by submitting:

- a copy of the certificate issued by the UK or other qualifying registry (such as the details of a patent's particulars as obtained from the UK Intellectual Property Office);
- the form of application as prescribed in the Patents Regulations (As Revised); and
- registration and Cayman Islands Gazette fees.

If the Registrar of Patents is satisfied that the application is in order, they will record the extension of the patent accordingly.

All owners of patents which are (or will be) recorded at the CIIPO must have a registered agent in the Cayman Islands. The CIIPO maintains a list of approved registered agents for this purpose.

*Disputes/enforcement*

Disputes related to patent infringement are heard in the Grand Court. Remedies include declarations, injunctions, damages, or an account of profits.

If a bad faith assertion of patent infringement is made, an aggrieved party may bring a claim for injunctions, equitable relief, or damages (including aggravated and/or exemplary damages). The Cayman Islands is a "costs-shifting" or "loser pays" jurisdiction, where the losing party pays the winning party's legal costs.

### 7.2 Trade Marks

The Trade Marks Act (As Revised) (the "Trade Marks Act") provides for the registration of trade marks, certification marks, and collective marks (collectively the "Marks") in the Cayman Islands.

The Trade Marks Act defines the different types of Marks as:

- "trade mark" any sign capable of being represented graphically which is capable of distinguishing goods or services of one undertaking from those of another undertaking and may consist of words,

designs, numerals, letters or the shape of goods or their packaging;
- "certification mark" a mark indicating that the goods or services in connection with which it is used are certified by the proprietor of the mark in respect of origin, materials, mode of manufacture of goods or performance of services, quality, accuracy or other characteristics; and
- "collective mark" a mark distinguishing the goods or services of members of an association which is the proprietor of the mark from those of other undertakings.

Applications are made to the CIIPO, which maintains the Trade Marks Registry, by a local registered agent. It is no longer possible to extend UK or EU Marks to the Cayman Islands.

Subject to payment of relevant fees, mark registration subsists for ten years from the date of registration, with the ability to renew. Failure to pay the annual fee by 31 March will result in suspended rights until the fee and any penalty fee are paid.

The owner, through their registered agent, may apply to register a Mark by submitting:

- an application in the form set out in the Trade Marks Regulations;
- a copy of the requested Mark;
- the classes and description of the goods to be covered; and
- registration and Cayman Islands Gazette fees.

If the Registrar of Trade Marks is satisfied that the application is in order, they will register the Mark.

All applicants for trade marks, or owners of trade mark rights which are (or will be) recorded at the CIIPO must have a registered agent in the Cayman Islands. The CIIPO maintains a list of approved registered agents for this purpose.

An action for infringement may be brought by the proprietor (and, in certain circumstances, by licensees). Remedies include injunctions, damages, an account of profits, declarations, removal of infringing signs, delivery-up and disposal of infringing goods. Groundless threats of infringement may also give rise to a claim by the aggrieved party.

The Cayman Islands is a "costs-shifting" or "loser pays" jurisdiction; that is, the losing party typically is obliged to pay the legal costs (or a proportion of them) of the winning party.

Cayman Islands law also provides for an action in "passing off", protecting unregistered trade marks. A passing-off action requires: (i) goodwill; (ii) misrepresentation; and (iii) damage. Similar relief to trade mark infringement is available when passing off is established.

## 7.3 Industrial Designs

Designs are protected by the Design Rights Registration Act (As Revised) (the "Design Rights Act"), providing for the extension to the Cayman Islands of existing registered UK and EU design rights. The Cayman Islands does not currently have a registrar of origin, so design rights cannot be registered directly.

### Rights, Subsistence, Duration

The owner of an extended design has equivalent rights and remedies to those in the UK. Protection is effective from the time the right arose in the UK and subsists while in force there, though no local infringement proceeding may be sustained for actions prior to local extension. Relevant local fees must be paid.

In relation to EU-derived rights, caution must be exercised that such rights remain in force or otherwise enforceable in the UK post-Brexit as this will expressly limit their enforceability.

### Extension Process

A design right owner, through their local registered agent, may apply to the CIIPO for extension by paying relevant fees and demonstrating the right is currently held in, and derived from registration in, the UK or the EU.

If the Registrar of Design Rights is satisfied that the application is in order, they will record the extension of the design right accordingly.

All owners of design rights which are (or will be) recorded at the CIIPO must have a registered agent in the Cayman Islands. The CIIPO maintains a list of approved registered agents for this purpose.

### Disputes/Enforcement

Disputes relating to design rights infringement are heard in the Grand Court. Remedies include declarations, injunctions, damages, or an account of profits.

Bad faith assertions of design rights infringement may give rise to a claim for injunctions, equitable relief, or damages. The Cayman Islands is a "costs-shifting" jurisdiction.

## 7.4 Copyright

The Copyright (Cayman Islands) Order, 2015 and the Copyright (Cayman Islands) (Amendment) Order, 2016 (together, the "Copyrights Orders") extend certain provisions of the UK Copyright, Designs and Patents Act 1988 to the Cayman Islands (principally, Part I), subject to modifications.

The copyright regime provides for the protection of:

- original literary, dramatic, musical, or artistic works (LDMA):
  - (a) "literary works" expressly include tables, compilations, computer programs (and their preparatory design materials), and databases;
  - (b) "dramatic works" include works of dance or mime;
  - (c) "musical works" expressly refers to the music (excluding any words or action intended to be sung, spoken, or otherwise performed with the music);
  - (d) "artistic works" include graphic works (paintings, drawings, diagrams, maps, charts, plans, engravings, etchings, lithographs, woodcuts) photographs, sculptures, collages, works of architecture, or works of artistic craftsmanship;
- sound recordings, films, or certain broadcasts; and
- the typographical arrangement of published editions.

The duration of copyright protection varies depending on the type of work and other factors. Protection for original LDMA works is ordinarily 70 years beyond the life of the author; other works vary between 25 and 70 years. It is not currently possible or necessary to register copyright in the Cayman Islands. Copyright may be enforced by court action, generally in the Grand Court. Remedies for copyright infringement include damages, injunctions, delivery-up of the infringing work, right to seizure of infringing work or any other remedy that would be available in respect of any other property right. Criminal sanctions for copyright infringement are also available.

## 7.5 Others

Software and databases are principally protected as copyright works (see **7.4 Copyright**). In certain circumstances, the law of confidential information may provide further protection for computer code or algorithms.

Trade secrets are protected by an action for breach of confidence. An action for breach of confidence classically requires three elements:

- the information itself is properly confidential;
- the information was imparted in circumstances importing an obligation of confidence; and
- there has been an unauthorised use/misuse of that information.

When a breach of confidence action is made out, typical remedies include injunctions, damages or an account of profits, and declarations.

# 8. Data Protection

## 8.1 Applicable Regulations

The Cayman Islands Data Protection Act (As Revised) (DPA) is the main applicable legislation modelled on the UK's Data Protection Act 1998 with elements of the GDPR. Its requirements are broadly similar to the GDPR, but less onerous.

## 8.2 Geographical Scope

Like the GDPR, the DPA has extraterritorial effect, applying to any "data controller" established in the Cayman Islands and to any "data controller" on whose behalf personal data is processed in the Cayman Islands for any purpose other than mere transit.

The DPA could apply to an overseas business marketing goods or services to Cayman Islands residents, and collecting their personal data, but extraterritorial effect requires an indication that the business is actively targeting Cayman Islands residents. Data controllers must comply with the data protection principles, which are broadly similar to Article 5 of the GDPR and provide, for example, that personal data must be processed fairly, only for specified lawful purposes, and must be adequate, relevant and not excessive. Other notable requirements include responding to access/correction requests and notifying personal data breaches.

The DPA does not apply directly to data processors, but those who wish to appoint data processors are required to ensure that data processors give certain contractual assurances with respect to the personal data that they process.

### 8.3 Role and Authority of the Data Protection Agency

The relevant regulator is the Ombudsman. Breach of the DPA can lead to remedial action, penalties and criminal sanctions. The Ombudsman may order rectification, blocking, erasure, destruction or updating of inaccurate data. Monetary penalties are capped at KYD250,000.

## 9. Looking Forward

### 9.1 Upcoming Legal Reforms

The Cayman Islands Ministry for Financial Services has previously issued consultation papers on proposed amendments to the ELP Act. The proposed amendments intended to introduce additional structural flexibility and efficiencies for ELPs and include:

- provisions to facilitate statutory mergers between one or more ELPs, between one or more ELPs and/or one or more exempted companies or LLCs or between one or more ELPs and one or more foreign entities provided such foreign entities have separate legal personality, consistent with the existing Cayman Islands statutory merger regimes applying to exempted companies and LLCs; and
- a provision to facilitate the conversion of an exempted company or an LLC to an ELP.

The consultation ended on 20 February 2024, and updates are expected in due course.

The Companies (Amendment) Act, 2024, came into force on 1 January 2026, introducing a number of important enhancements to the Companies Act, including streamlined capital reduction procedures (allowing solvent companies to reduce share capital by special resolution supported by a solvency statement without court approval), expanded continuation provisions for overseas bodies corporate, and new procedures for conversion and re-registration between entity types.

The Proceeds of Crime (Amendment) Bill, 2026, published on 31 March 2026, proposes to establish the Inter-Agency Coordination Committee on a statutory footing, introduce statutory definitions for self-laundering and standalone money laundering offences, and require competent authorities to submit annual performance reports.

**Garnham Abogados** is a specialised boutique firm based in Santiago, Chile, comprising six partners and an equal number of associates, supported by a dedicated professional team. This structure enables a genuinely multidisciplinary approach to taxation, corporate and M&A as well as labour and administrative law. Guided by the core principles of innovation, technical rigour and a global outlook, the firm advises on complex, often cross-border matters. Its lawyers act for a diverse client base, including domestic and foreign corporations, SMEs, high-net-worth individuals and investment funds. By preserving its agility and close partner involvement, Garnham Abogados has earned market recognition for its personalised attention and timely responses. The firm also shows a strong commitment to social responsibility through its active membership of the Pro Bono Foundation, having been recognised twice as Pro Bono Firm of the Year.

## Authors

**Patrick Humphreys** is a founding partner of Garnham Abogados and leads the tax advisory practice. He advises on corporate taxation, business reorganisations and cross-border structuring, with particular experience in double taxation treaties and the Multilateral Instrument, as well as private wealth planning and VAT, including the taxation of digital platforms. Patrick is the academic director of the Master's degree in Tax Management and Administration at Universidad Adolfo Ibáñez and teaches double taxation treaties at the University of Lima. He also serves as director of the Scientific Committee of IFA Chile and is a regular speaker at leading international tax conferences in the region.

**Daniela Gazmuri Larraín** is a partner at Garnham Abogados and leads the corporate and M&A practice. She advises on complex M&A transactions, securities matters, business reorganisations, corporate governance, compliance and financial regulation. Admitted in 2011, Daniela earned her law degree with highest honours from Universidad de los Andes and holds an LL.M. in Corporate Law from New York University (NYU). Before joining the firm, she was a corporate associate at Noguera, Larraín & Dulanto. Alongside her transactional practice, Daniela teaches Commercial Law at Universidad Adolfo Ibáñez and is an active member of the International Bar Association (IBA).

**Paula Lühr** is an associate at Garnham Abogados, whose practice covers both tax and corporate law. She primarily advises clients on domestic and cross-border corporate taxation and assists with business reorganisations and wealth planning. Paula earned her law degree from the Pontificia Universidad Católica de Chile, where she served as a teaching assistant in Civil Law. Before joining the firm, she built a solid legal ground working as a corporate paralegal at IGneous and completing an internship at the Supreme Court of Chile.

**Ian Hinzpeter** is an associate at Garnham Abogados, focusing on the corporate and M&A practice. He supports the team in advising clients on general corporate matters, mergers and complex commercial transactions. Ian obtained his law degree from the Pontificia Universidad Católica de Chile in 2023, having served for four years as a teaching assistant in Economic Law. Before joining the firm, he developed a strong analytical background as a research assistant at the UAI Competition Centre and as a reviewing assistant for a FONDEDOC project on artificial intelligence and law.

**Camila Leviante** is an associate at Garnham Abogados, focusing on the tax litigation practice. Admitted in 2023, she earned her law degree with highest honours from Universidad Diego Portales, where she received the Academic Excellence Award as the top-ranking graduate of her class. Camila gained early practical experience in civil dispute resolution at the Metropolitan Region's specialised civil office. To further strengthen her procedural and courtroom skills, she completed a postgraduate diploma in Labour Law, Procedural Reform and Litigation at her alma mater.

**Beatriz Riveros** is a law graduate and a dedicated member of the tax litigation practice at Garnham Abogados. She obtained her law degree from the Universidad de Chile, where she served as a teaching assistant for Introduction to Law I and II. Before assuming her current role, Beatriz gained experience within the firm as a tax litigation paralegal and a corporate law intern. She previously developed a broad litigation and financial background working as a civil litigation paralegal at López Escobar Del Río and completing a financial law internship at Cariola Diez Pérez-Cotapos.

**José Luis Bravo** is an associate at Garnham Abogados, focusing on administrative law. He earned his law degree from the Pontificia Universidad Católica de Chile, where he served as a teaching assistant for Procedural Law and the Private Law Clinic. Demonstrating a strong academic commitment, he has also prepared law students for their final degree examinations in administrative, civil and procedural law. Before joining the firm, José Luis worked as an associate at MOMAG Abogados and further developed his practical experience through clinical work at the Metropolitan Legal Assistance Corporation.

## 1. Legal System

### 1.1 Legal System and Judicial Order

Chile's legal framework is built on a civil law tradition, where written legislation is the primary source of legal rules. The main sources of law are the Constitution, statutes enacted by Congress and regulations issued by the executive branch. Court decisions are important in practice, especially decisions of the Supreme Court and appellate courts, but they do not operate as binding precedent in the same way as in common law jurisdictions.

This gives the Chilean system a strong emphasis on formal documents, statutory requirements and procedural compliance. For foreign investors, contracts, corporate documents, permits and regulatory filings should be carefully prepared and consistently maintained. In commercial practice, however, interpretation by regulators and courts can be highly relevant, particularly in regulated sectors such as mining, energy, banking, insurance, telecoms, healthcare and environmental matters.

The country has strong public institutions and sophisticated courts. Indeed, the ordinary court system is headed by the Supreme Court, which has national jurisdiction and supervises the administration of justice. Below it are the Courts of Appeals, which operate regionally and hear appeals and certain constitutional or urgent remedies. At first instance, civil, criminal, labour, family and other courts hear disputes according to their subject matter and territorial jurisdiction.

Separately, Chile has specialised courts for areas that require technical expertise. Many business disputes begin outside the ordinary courts, through regulators, administrative agencies or arbitration. Specialised venues include:

- tax and customs courts
- environmental courts
- the Tribunal for the Defence of Free Competition
- the Public Procurement Court, and
- administrative and regulatory procedures before sector authorities.

Finally, Chile also has a Constitutional Court, which safeguards the supremacy and respect of the Constitution by reviewing the constitutionality of laws.

In practice, foreign companies should plan for a system that is formal and document driven. Early local advice is valuable when structuring transactions, obtaining permits, responding to regulators or choosing dispute resolution mechanisms.

## 2. Restrictions on Foreign Investments

### 2.1 Approval of Foreign Investments

Chile is generally open to foreign investment and does not operate a broad foreign investment screening regime. In most sectors, a foreign investor may incorporate a Chilean company, acquire shares or assets, capitalise a local subsidiary, or enter commercial arrangements without obtaining prior approval merely because the investor is foreign.

The main statute is Law No 20,848 on Foreign Direct Investment in Chile. It is not an authorisation regime. Rather, it creates a framework to promote and facilitate foreign investment and establishes InvestChile, the Foreign Investment Promotion Agency. InvestChile supports foreign investors by providing information, guidance and facilitation services, and by issuing certificates that allow qualifying investors to access certain statutory benefits. In general terms, the law covers transfers of foreign capital or assets into Chile of at least USD5 million, as well as investments that give the foreign investor at least 10% of the voting rights or an equivalent equity interest in a Chilean entity.

In practice, the InvestChile certificate is used to evidence the investor's status and access certain statutory rights and benefits. Once the investor has complied with the applicable legal procedures and tax obligations, these benefits include the right to remit abroad the invested capital and the net profits generated by the investment. They also include the right to access the formal foreign exchange market, made up of banks and authorised financial institutions, to convert the foreign currency used for the investment and to obtain the foreign currency needed to remit capital and net profits abroad.

The certificate may also be relevant to the exemption from sales and services tax, on the importation of qualifying capital goods, where the statutory requirements for that benefit are met. In addition, foreign investors have the right not to be subject to arbitrary discrimination, directly or indirectly. Generally, they are subject to the same ordinary legal regime that applies to Chilean investors. The certificate is therefore useful, but it is not normally a condition to closing the investment.

Chile also benefits from a broad network of international agreements that can be relevant to foreign investors. These include free trade agreements, double tax treaties and investment-related arrangements that may improve legal certainty, reduce tax friction and facilitate cross-border business.

There are, however, sector-specific rules. These apply because the activity is regulated, not because the investor is foreign. Foreign investors should expect ordinary permits and approvals in regulated sectors such as energy, mining, telecoms, banking, insurance, health, infrastructure, environment, utilities, etc.

### 2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance

Because Chile has no general pre-closing foreign investment approval process, the first step for most investors is not a filing with an investment screening authority. Instead, the practical focus is usually on corporate implementation, tax registration, banking arrangements, foreign exchange reporting, competition clearance if applicable, and sectoral permits.

Where the investor wants to obtain the InvestChile certificate under Law No 20,848, it must submit information showing that the investment has been made and describing its amount, destination and nature. InvestChile must issue the certificate within 15 days after receiving the complete application.

Foreign capital transfers are also subject to Central Bank reporting rules. Transfers connected with loans, deposits, investments or capital contributions above the relevant threshold must generally be made through the formal foreign exchange market and reported under the Central Bank's foreign exchange regulations.

Sanctions depend on the rule that has been breached. Failure to obtain an InvestChile certificate does not invalidate the investment, but it may prevent the investor from relying on the specific benefits linked to that certificate. Failure to comply with foreign exchange reporting rules may trigger consequences under Central Bank regulations.

The most serious exposure arises where a business operates in a regulated sector without the required sectoral permit, as each sector is governed by its own statutes and regulatory authorities.

### 2.3 Commitments Required From Foreign Investors

Chile does not usually require foreign investors to make special commitments as a condition for investing. The ordinary principle is that foreign investors operate under the same legal framework as Chilean investors, subject to the rules that apply to the relevant industry.

Obtaining an InvestChile certificate is a documentary and does not involve the investor negotiating commitments with the authority. This is different from foreign investment regimes in some other jurisdictions where approval may be conditioned on behavioural undertakings or national security commitments.

In practice, commitments may still arise in specific contexts. They usually come from sector regulation, concession contracts, public procurement rules, environmental approvals, tax or customs benefits, financing arrangements or agreements with public authorities. For example, a regulated energy or infrastructure project may have construction milestones, service obligations, environmental mitigation measures, reporting duties and performance guarantees.

Chile does not generally impose commitments because capital is foreign. However, a foreign-owned project may still be subject to extensive conditions because the underlying business is regulated, uses public resources, requires environmental approval, or receives a public benefit.

### 2.4 Right to Appeal

Since Chile does not have a general foreign investment screening system, there is usually no investment approval decision to appeal. Disputes are more likely to arise in relation to a specific administrative act, such as the denial of a sectoral permit, a refusal to grant a benefit, a sanction imposed by a regulator, or a disagreement over the InvestChile certificate.

If InvestChile does not issue the certificate within the statutory 15-day period after receiving a complete application, the general rules of Chilean administrative procedure apply. Depending on the circumstances, judicial review may also be available where the decision is unlawful, arbitrary or affects protected rights.

Sectoral regimes may contain their own appeal procedures and deadlines. Foreign investors should not assume that appeal rights are uniform across sectors. The correct route depends on the authority involved, the type of decision, the wording of the applicable statute and whether the decision has already been formally notified.

## 3. Corporate Vehicles

### 3.1 Most Common Forms of Legal Entity

#### Sociedad por Acciones(SpA)

The *sociedad por acciones* (SpA) is the most flexible and commonly used vehicle for foreign investors entering Chile. It may be formed by one or more shareholders, whether individuals or legal entities, Chilean or foreign. Shareholder liability is generally limited to the amount of their capital contributions, and Chilean law does not impose a general minimum capital requirement.

It is principally governed by Articles 424 et seq. of the Commercial Code and its by-laws, and, on a supplementary basis, the provisions applicable to *Sociedades Anónimas Cerradas* (closely held corporations).

SpAs are especially suitable for start-ups, private equity investments, holding companies and wholly owned subsidiaries. Its by-laws may provide a simple management structure, such as one or more managers, or a more formal structure, such as a board of directors. Shares are generally transferable, although the by-laws may include restrictions, rights of first refusal or other shareholder protections.

#### Sociedad de Responsabilidad Limitada (Limitada)

The *sociedad de responsabilidad limitada* (*limitada*) is a traditional private company governed mainly by Law No 3,918 and, on a supplementary basis, by the Commercial Code and Civil Code. It is a partnership-style company, commonly used for closely held businesses, professional services, family-owned companies and joint ventures where the participants want control over the admission of new partners.

A *limitada* requires at least two partners and, in general, no more than 50. Partners may be individuals or legal entities, Chilean or foreign. Their liability is usually limited to the amount of their agreed contributions, unless the by-laws provide for a higher level of responsibility. The company name must include the word *limitada*. If it is omitted, the partners may become jointly and severally liable for the company's obligations.

There is no general minimum capital requirement for a *limitada*. Contributions may be made in cash, assets or, in some cases, work or services contributed by the partners. The by-laws may also define the company's business purpose, management powers and internal control mechanisms with considerable flexibility.

In practice, a *limitada* is less flexible than SpAs when ownership changes are expected. Amendments to the by-laws and transfers of partnership interests usually require the consent of all partners. This makes the structure less efficient for venture capital or fast-growing businesses, but useful where the partners want a stable and closed ownership structure.

#### Sociedad Anónima (SA)

The *sociedad anónima* (SA) is a capital company governed mainly by Law No 18,046 and, on a supplementary basis, by the Commercial Code and Civil Code. It has its own legal personality, separate from its shareholders, and is commonly used for larger companies, regulated businesses and entities that may seek institutional financing or access to capital mar-

kets. An SA requires at least two shareholders, who may be individuals or legal entities, Chilean or foreign.

The capital of an SA is divided into shares, and shareholder liability is generally limited to the amount subscribed or paid for those shares. There is no general minimum capital requirement. Contributions may be made in cash or assets, but shares may not be issued in exchange for personal work or services.

An SA is managed by a board of directors. Closed corporations must have at least three directors, while open corporations must have at least five. Directors must be natural persons, may be Chilean or foreign, and are removable by the shareholders.

There are three main types of SA

- open corporations, whose shares are traded or registered with the Financial Market Commission;
- special corporations, which are subject to specific statutory regimes; and
- closed corporations, whose shares are not traded on a stock exchange.

For foreign investors, an SA is usually appropriate where a more formal governance framework, external financing, institutional shareholders or a future listing is expected.

## 3.2 Incorporation Process

Companies in Chile may be incorporated through the traditional notarial and registry route. This involves preparing a public deed or notarised instrument and, within 60 days after the signing, registering an extract with the relevant Commercial Registry and publishing the extract in the Official Gazette (*Diario Oficial*). The same route is used for many amendments, including changes to by-laws or corporate form.

In practice, the traditional process often takes one to three weeks, depending on the complexity of the by-laws, the availability of signatories and the timing of tax and bank procedures. Foreign shareholders usually need Chilean tax identification numbers and powers of attorney if they will not sign in Chile. Documents executed abroad normally need apostille or legalisation and, where applicable, Spanish translation.

## 3.3 Ongoing Reporting and Disclosure Obligations

### Private-Company Filings

Private Chilean companies are not subject to the same ongoing public disclosure regime as listed companies. However, key corporate changes must be formally documented and registered or published when required. This includes amendments to by-laws, changes to capital, transformations, mergers, divisions and dissolution.

### Tax, Accounting and Ownership Information

Private companies must keep accounting records, file tax returns and comply with electronic invoicing and tax reporting obligations. They are also expected to keep updated corporate books or electronic records showing shareholders, partners, capital and corporate decisions. Financial statements of purely private companies are generally not filed publicly, but they are relevant for tax, banking, financing and shareholder purposes.

Chile has increased the practical importance of ownership transparency, particularly for tax, banking, anti-money laundering and compliance checks. Companies may be asked to identify their controllers, ultimate beneficial owners and politically exposed persons when dealing with banks, notaries, public authorities, regulated counterparties or public procurement processes.

## 3.4 Management Structures

### Flexible Management in SpAs and Limitadas

The SpA offers the most flexible management structure. It may be managed by one or more managers, a board of directors or another structure set out in the by-laws. This flexibility is one reason why foreign investors often choose SpAs for subsidiaries, holding companies and joint ventures.

A *limitada* is usually managed by one or more partners or by appointed managers. The articles of association should clearly state who may bind the company, whether they may act individually or jointly, and whether their powers are limited.

### Board Structure of an SA

An SA has a more formal one-tier board structure. The board of directors manages the company, and the board appoints a general manager to handle day to day operations. Shareholders exercise their powers mainly through shareholders' meetings, including approval of major corporate matters and, in many cases, election of directors.

Chile does not use a classic two-tier board system with a separate supervisory board and management board. Instead, oversight is built into directors' duties, shareholder rights, external auditors or inspectors of accounts, and regulatory supervision for listed or regulated companies. Public companies are subject to more detailed governance rules and market supervision by the Financial Market Commission.

## 3.5 Directors', Officers' and Shareholders' Liability

### Duties of Directors and Officers

Directors and officers must act with diligence, loyalty and in the company's interest. In an SA, the legal framework is more developed and includes duties relating to conflicts of interest, related-party transactions, use of corporate information and responsibility for damage caused by breach of duty. Directors may face civil liability, regulatory sanctions and, in serious cases, criminal exposure depending on the conduct involved.

Managers of SpAs and *limitadas* are also exposed to liability if they exceed their authority, breach the by-laws, act negligently or misuse company assets. In practice, liability risk often arises in areas such as tax compliance, labour obligations, insolvency, environmental matters, consumer protection and regulated activities. Foreign investors should ensure that local managers have clear delegated powers, reporting lines and compliance controls.

### Shareholder Liability and Veil Piercing

Shareholders and partners are generally protected by limited liability. This protection is strongest when the company has a real separate existence, proper accounts, documented decisions and arm's-length dealings with related parties. Routine undercapitalisation, poor record-keeping or confusion between company and shareholder assets can create litigation and tax risk.

Chilean law recognises the possibility of disregarding the corporate form in exceptional cases, often described as piercing the corporate veil. Courts tend to apply this concept cautiously, usually where the company is used for fraud, abuse of rights, simulation, evasion of legal obligations or harm to creditors. Limited liability is reliable, but it should not be treated as a shield for sham structures or improper conduct.

# 4. Employment Law

## 4.1 Nature of Applicable Regulations

### Main Sources of Employment Law

Employment relationships in Chile are governed mainly by the Chilean Labour Code, which sets mandatory minimum standards for contracts, wages, working time, termination, collective bargaining, unions and workplace protections. The Constitution and international treaties ratified by Chile also form part of the broader framework, especially on non-discrimination, freedom of association, procedural fairness and fundamental rights at work.

Generally, Chilean labour law applies to work performed in Chile, regardless of the nationality of the employer or employee. Choice-of-law clauses or foreign contract templates will not usually override mandatory Chilean labour protections where the work is performed in Chile.

Employment agreements, internal workplace regulations, company policies and collective bargaining agreements are also relevant, but must operate within mandatory labour law. Recent reforms, including Law No 21,643, known as "*Ley Karin*", have increased the practical importance of workplace policies, prevention protocols, and investigation procedures for sexual harassment, workplace harassment,and workplace violence.

### Administrative and Judicial Practice

The Labour Directorate is central in day-to-day employment matters. It conducts inspections, may impose fines, and issues administrative opinions on

labour rules. Its criteria are not equivalent to court judgments, but they are highly influential in practice and are commonly considered when assessing compliance, preparing internal policies, or responding to inspections.

Labour courts decide disputes such as unfair dismissal, unpaid benefits, workplace harassment, anti-union practices and fundamental rights claims. Although Chile is a civil law jurisdiction, Supreme Court case law is relevant in practice, particularly through the special appeal for unification of case law, a mechanism specific to Chilean labour procedure that seeks to align conflicting interpretations by higher courts. Statutory rules, administrative criteria, and evolving court practice should therefore be monitored together when managing a workforce in Chile.

## 4.2 Characteristics of Employment Contracts

### Written Contract and Essential Terms

An employment contract may exist even if it has not been signed in writing. If a person provides services personally, under subordination and dependence, and receives remuneration, Chilean law may treat the relationship as employment regardless of the label used by the parties. In practice, direction, control, supervision, or integration into the organisation may be relevant.

The employer must normally put the contract in writing within 15 days from the employee's start date. For contracts for a specific task, work or service, or for contracts lasting less than 30 days, the period is generally five days. Failure to document the contract on time may create evidentiary problems and expose the employer to administrative fines.

The contract must include minimum terms such as identification of the parties, start date, nature and place of services, remuneration and payment terms, working time and distribution, contract duration, and any other agreed covenants. Remote work and telework are regulated under Law No 21,220. Remote, hybrid, cross-border management, or digital supervision arrangements should therefore be documented carefully.

### Duration and Types of Contracts

Employment contracts are commonly indefinite, fixed-term, or for a specific task, work or service. Indefinite contracts are the standard form for ongoing roles. Fixed-term contracts are permitted, but their duration and renewal are regulated, and misuse may cause the relationship to be treated as indefinite.

Companies should be careful when using contractor or consultancy arrangements for individuals who, in practice, work like employees. Chilean authorities and courts look at the reality of the relationship, not only the contract title. This is particularly relevant for managers, sales representatives, technical staff and remote workers.

## 4.3 Working Time

### Ordinary Working Hours

As of 26 April 2026, the ordinary weekly working limit in Chile is 42 hours for most employees subject to working time restrictions. Law No 21,561 introduced a gradual reduction of the working week, from 45 to 44 hours in 2024, to 42 hours in 2026, and finally to 40 hours in 2028.

As a general rule, ordinary working hours may not exceed ten hours per day. Employees are also entitled to a daily meal break, which is generally not treated as working time, and to weekly rest, usually on Sundays and public holidays, subject to statutory exceptions for certain industries and shift systems.

Certain employees may be excluded from working time limits, especially senior managers or employees who work without immediate supervision. However, this exception is interpreted restrictively in practice. Employers should not assume that remote work or a senior title automatically removes working time protections.

### Overtime and Practical Controls

Overtime is permitted only in limited circumstances and must generally be agreed in writing. It is capped at two hours per day and is usually paid with a 50% surcharge over the ordinary hourly wage, unless a more favourable arrangement applies. Employers must also maintain reliable attendance and working time records.

In practice, overtime exposure is a common issue in labour inspections and dismissal disputes. Companies should review timekeeping systems, remote work arrangements and managerial exemptions carefully. Electronic attendance systems must meet Labour Directorate requirements, including technical, security, reliability and data protection standards. Employers should verify that the system is authorised for use in Chile before implementing it. Certain sectors, such as interurban freight transport, are subject to special attendance and working-time control rules.

## 4.4 Termination of Employment Contracts

### Individual Termination

Chile is not an "employment at will" jurisdiction. Employers must rely on legal grounds and comply with formalities, including written notice stating the cause and supporting facts. If challenged, the employer must prove both the legal ground and the facts described in the dismissal letter.

Common grounds include mutual agreement, resignation, expiry of a fixed term, completion of the agreed work, employee misconduct, and the company's "business needs". Business needs may include economic, organisational, technological, or restructuring reasons, but must be real, consistent, and properly documented.

Where dismissal is based on business needs, the employee is generally entitled to severance for years of service, subject to statutory caps, plus payment in lieu of prior notice if notice is not given. Accrued salary, unused holidays, and other pending amounts must also be paid. Employers should verify that social security contributions are fully paid, as unpaid contributions may trigger liability under Chile's dismissal nullity rules.

If a court finds the dismissal unjustified, severance may be increased by statutory surcharges. Poor documentation, inconsistencies in the dismissal letter, or weak evidence can materially increase termination costs and risks.

### Collective Redundancies

Chile does not have a general statutory collective redundancy procedure comparable to other jurisdictions. There is no universal requirement to file a collective redundancy plan or obtain prior approval simply because several employees are dismissed.

However, collective dismissals are not informal. Each employee must be dismissed under an individual legal ground, usually business needs, and must comply with notice, severance, documentation, and payment requirements. Employers should also identify protected employees, such as union representatives, pregnant employees, or employees on protected leave.

Where unions are present, consultation may reduce conflict and manage anti-union or fundamental rights risks. In practice, planning, evidence of the business rationale, consistent selection criteria, and careful communication are critical.

## 4.5 Employee Representations

### Unions and Collective Bargaining

Employee representation in Chile is mainly organised through trade unions. Union membership is voluntary, but unions have important statutory rights once formed, including representation of members, collective bargaining, information rights, and protection for certain union leaders.

Collective bargaining is regulated by the Labour Code and may result in a collective bargaining agreement covering wages, bonuses, benefits, working conditions and other matters. For employers, it is a structured process with formal timelines, negotiation stages, and rules on strikes and employer conduct.

### Health and Safety Committees

Chile does not impose a general works council system for all employers. However, under Law No 16,744, workplaces or companies with more than 25 employees must generally have a joint health and safety committee, known as a c *omité paritario de higiene y aeguridad*. This committee includes employer and employee representatives and plays a practical role in accident prevention, workplace risk management, and health and safety compliance.

### Information, Consultation, and Workplace Practice

Employers may also have information and consultation duties in specific contexts, particularly in collec-

tive bargaining, internal workplace rules, health and safety, and dealings with unions. In practice, the level of employee representation depends on the workforce profile, union presence, sector, and company history. Companies should assess representation requirements early, maintain consistent communication, and train local management on lawful interaction with employees, unions and mandatory committees.

## 5. Tax Law

### 5.1 Taxes Applicable to Employees/ Employers

#### Employee Taxation

Individuals domiciled or resident in Chile are generally taxed on worldwide income, while non-residents are taxed only on Chilean-source income. Residence is usually triggered by spending more than 183 days in Chile within any twelve-month period. Domicile turns on intention and factual links such as family, business or economic interests.

Foreigners who become resident or domiciled in Chile are taxed only on Chilean-source income for their first three years, a period the Chilean Tax Authority (SII) may extend under special circumstances upon request. This matters for expatriate executives and is worth weighing before relocation packages are agreed.

Employment income is subject to payroll tax (*impuesto único de segunda categoría*). It is a progressive monthly tax on salaries and similar employment income, rising through brackets from an exempt band to a top rate of 40%, and is charged after mandatory social security and health contributions are deducted. The employer withholds and remits it.

#### Social Security and Employer Costs

Employees make mandatory social security contributions, which the employer withholds. These mainly cover pension, health and unemployment insurance, up to statutory caps.

Employers also bear their own mandatory costs, including unemployment insurance, work-accident and occupational-disease cover, and disability and survivorship insurance. These are not income taxes, but they add materially to hiring costs in Chile.

### 5.2 Taxes Applicable to Businesses

#### Corporate Taxation and Residence

A Chilean company is resident and generally taxed on its worldwide income; a foreign company is taxed only on Chilean-source income unless it operates through a permanent establishment or other taxable presence in Chile. Such income includes local assets or activities, shares or rights in Chilean entities, certain royalties and services connected with Chile and, in some cases, indirect transfers of foreign entities whose value derives substantially from Chilean assets.

Business profits are subject to corporate income tax (i *mpuesto de primera categoría*). Under the general regime that applies to most medium and large companies, including most foreign corporate investors, the rate is 27%. It is charged annually on net taxable income — broadly, accrued income less costs and expenses connected with the business, reasonable and properly supported.

Chile has simplified regimes for small and medium enterprises (p *equeñas y medianas empresas*, PYMEs) and presumptive income regimes for specific small-scale activities. These are generally not designed for foreign corporate investors and are often unavailable to holding companies or to businesses earning a relevant part of their income passively.

#### Profit Distributions and Withholding Tax

Dividends and profit remittances paid to non-residents are generally subject to additional tax or withholding tax (*impuesto adicional*) at 35%, subject to the integration rules and any applicable treaty. Profits passing between Chilean companies are generally not taxed again at corporate level, though tax attributes must be tracked for later distribution to individuals or foreign owners.

For example, a Chilean subsidiary earning USD100 of profit pays USD27 of corporate income tax. On distribution to a foreign shareholder, additional tax is charged at 35% on the gross. If the shareholder is tax resident of a country with which Chile has a double taxation treaty, the USD27 credit is generally available

in full, leaving USD8 to pay and a combined burden of 35%; regarding countries without a double taxation treaty, only 65% of the credit applies under the semi-integrated regime, raising the total to maximum of 44.45%.

Interest is generally subject to 35% additional tax, though a 4% rate can apply to interest paid to qualifying foreign banks or financial institutions. Royalties, technical services, software and other cross-border payments may attract different domestic rates, often modified by treaties.

### VAT, Services and Other Taxes

Chile applies value added tax (VAT or IVA) at 19%. It generally applies to sales of goods, some sales of real estate, services provided or used in Chile, and imports. Foreign investors should watch services supplied from abroad. Payments to foreign consulting firms supporting a local project may be subject to additional tax. Where an exemption applies, such payment will normally be subject to VAT instead. Treaty relief can reduce withholding tax, but does not reach VAT, if applicable.

VAT cash flow matters in capital-intensive projects. Imports are generally subject to VAT, but qualifying foreign investment projects can apply to the Ministry of Finance for an exemption on imported capital goods. Exporters are generally exempt from VAT on exports and may recover related input VAT, subject to formal procedures.

Other business taxes can include municipal business licences, stamp tax on loans and credit documents, real estate tax, environmental taxes, a mining royalty or specific mining tax and customs duties. Chile has not enacted the OECD's Pillar Two global minimum tax (the GloBE rules) or an equivalent domestic top-up tax. Even so, multinational groups operating in Chile should take specialist advice, as they may be affected indirectly where the ultimate parent's jurisdiction has adopted Pillar Two.

## 5.3 Available Tax Credits/Incentives

Chile's tax incentives are narrowly targeted and form-heavy, usually requiring advance certification, supporting evidence, specific filings and strict deadlines. An incentive does not apply automatically simply because the activity is economically worthwhile.

For foreign corporate investors, the most useful incentives often relate to VAT and investment cash flow. Exporters may recover input VAT linked to their export operations, and capital-intensive projects may seek VAT relief on imported capital goods, subject to Ministry of Finance approval and the applicable requirements.

Chile also offers an R&D tax incentive: eligible taxpayers can credit part of certified research and development spending against corporate income tax, provided a competent public agency certifies the project and the statutory requirements are met. It can suit technology, mining, energy and life-sciences investors carrying out genuine R&D in Chile.

Further benefits exist for specific industries, regions or activities, including export mechanisms and customs or free-zone rules, each reviewed case by case as the SII scrutinises substance, documentation and compliance.

## 5.4 Tax Consolidation

Chile has no general tax consolidation or fiscal unity regime. Each Chilean company is a separate taxpayer that files its own returns, and a Chilean parent generally cannot offset one subsidiary's profits against another's tax losses.

Tax losses can generally be carried forward by the company that generated them, subject to limits and anti-avoidance rules. Reorganisations designed mainly to transfer or monetise losses may be challenged. For groups, this makes the initial choice of vehicles, financing and structure especially important.

## 5.5 Thin Capitalisation Rules and Other Limitations

Chile's thin capitalisation rules discourage excessive debt financing, especially where cross-border lending benefits from reduced withholding rates. They rest on an excess-indebtedness test usually described as a three-to-one debt-to-equity ratio.

As a general rule, they apply whenever a Chilean borrower carries significant foreign related-party debt, including guarantees, back-to-back financing or other arrangements that may count as related under the Income Tax Law. If that debt exceeds the permitted ratio, interest and similar payments linked to the excess may face an extra tax charge.

Thin capitalisation is only one limit, as deductions generally must relate to the business, be incurred to earn income, reasonable, and be properly documented and not barred by special rules.

### 5.6 Transfer Pricing

Chile has a developed transfer pricing regime broadly aligned with the OECD arm's-length principle. It covers dealings between Chilean taxpayers and foreign related parties, including goods, services, loans, guarantees, royalties, cost-sharing, restructurings and dealings with entities in low-tax jurisdictions.

Taxpayers must show that related-party terms match what independent parties would have agreed in comparable circumstances. Depending on size and group profile, reporting may include annual sworn statements, local and master files and country-by-country reporting.

The SII can adjust prices, margins or deductions where it considers the arm's-length standard has not been met, so transfer pricing should be built into the operating model from the outset – particularly for management services, technical assistance, financing, distribution margins and intellectual property.

### 5.7 Anti-Evasion Rules

Chile has both a General Anti-Avoidance Rule and several specific ones. The general rule, in the tax code, lets the tax authority challenge abusive or simulated arrangements that reduce, avoid or defer tax contrary to the purpose of the law. Taxpayers may choose lawful, efficient structures, but their arrangements should have commercial substance and a defensible rationale.

Specific rules include controlled foreign company rules for certain passive income, indirect-transfer rules for Chilean assets, transfer pricing adjustments, SII valuation powers, thin capitalisation and the disallowed expenses regime (*régimen de gastos rechazados*), under which some non-deductible expenses trigger extra tax, especially where they benefit owners or related parties.

Foreign investors should also weigh beneficial ownership, treaty-shopping, substance, documentation and local representation. Any foreign person or entity that invests, holds assets or carries out taxable activities in Chile generally needs a Chilean tax identification number (*Rol Único Tributario*, RUT) and, often, a representative resident in Chile.

### 5.8 Tariffs

Chile has an open, trade-oriented customs regime. As a general rule, imports carry a 6% ad valorem customs duty on the cost, insurance and freight (CIF) value of the goods. But Chile's extensive network of free trade agreements means many goods enter duty-free or at reduced rates where origin requirements and documentation are met, so the effective average tariff is often well below the headline rate.

Imports are also generally subject to 19% VAT on the CIF value plus any customs duties. A VAT-registered importer carrying out taxable activities can usually recover this as input VAT, though the timing creates a cash-flow cost – so capital-goods exemptions and customs planning may matter at the investment stage.

Chile does not generally use tariffs as a broad protectionist tool for particular domestic sectors. Special rules, surcharges or restrictions can apply to used, regulated, agricultural, hazardous, pharmaceutical and food products, and to items under technical, sanitary or environmental controls. Customs treatment should be checked before shipment, especially where timely import of machinery or specialised equipment is critical.

## 6. Competition Law

### 6.1 Merger Control Notification

Chile has a mandatory merger control regime under Decree Law No 211 of 1973 (DL 211), which is the main statute governing competition law. Certain merg-

ers, acquisitions and joint ventures must be notified to the *Fiscalía Nacional Económica* (FNE) before they are completed.

A transaction must be notified when two cumulative conditions are met. First, the transaction must qualify as a concentration operation under DL 211. This includes mergers, acquisitions of rights that allow decisive influence over another business, acquisitions of assets or contracts that transfer a business activity, and the creation of an independent and permanent joint venture.

Second, the transaction must meet the Chilean sales thresholds set by the FNE. Notification is required where:

- the combined sales in Chile of the parties reached at least UF (*Unidad de Fomento*, an inflation-indexed Chilean unit of account) 2.5 million (USD107.6 million) in the financial year before notification; and
- at least two of the parties each generated sales in Chile of at least UF 450,000 (USD19.4 million) in that same period.

There is no market share threshold for mandatory notification. However, market shares are important in the FNE's substantive review. Foreign-to-foreign transactions may also be caught if they produce effects in Chile and the sales thresholds are met.

Transactions below the thresholds may be notified voluntarily. This can be useful where the parties expect competition concerns or want greater certainty before closing.

## 6.2 Merger Control Procedure

Merger filings are submitted to the FNE. Chile allows ordinary and, in certain cases, simplified notifications. The applicable route depends on the complexity of the transaction and whether the parties overlap in their activities in Chile.

In practice, preparing the filing can take several weeks, especially where the parties need to collect Chile-specific sales data, market information, internal documents and details of competitors, customers and suppliers.

Once the FNE accepts the filing as complete, the review proceeds in two phases.

- Phase I: the FNE has 30 business days to approve the transaction unconditionally, approve it subject to remedies offered by the parties, or open an extended investigation.
- Phase II: if the FNE considers that the transaction may substantially reduce competition, it may extend the review for a maximum of 90 additional business days.

At the end of Phase II, the FNE may approve the transaction, approve it subject to remedies or prohibit it. A prohibition decision may be challenged before the Competition Tribunal (*Tribunal de Defensa de la Libre Competencia*, TDLC).

Chile's regime is suspensory. The parties cannot close a notified transaction until the clearance decision is final. Closing while FNE approval is still pending is treated as gun jumping (implementation of a transaction prior to clearance).

## 6.3 Cartels

### Anti-Competitive Agreements and Practices

DL 211 prohibits any act, agreement or practice that prevents, restricts or hinders competition, or tends to produce those effects. This broad rule applies to formal contracts, informal understandings and coordinated conduct between competitors.

Cartels are treated as especially serious infringements. Chilean law specifically targets hard-core cartel conduct, including:

- price fixing;
- output or production restrictions;
- market, customer or quota allocation; and
- bid rigging in tender processes.

For these hard-core cartels, the unlawful nature of the conduct does not depend on proving market power, intent or actual anti-competitive effects. Other agreements or concerted practices may also be unlaw-

ful where they give competitors market power and involve commercial conditions or exclusion of actual or potential competitors.

### Enforcement and Penalties

The FNE investigates cartel conduct and may bring cases before the TDLC, representing the general public interest. The FNE has broad investigative powers and may also enter out-of-court settlements where appropriate to protect competition.

Cartel conduct can lead to fines, orders to amend or terminate unlawful agreements, and restrictions on contracting with the state or obtaining state concessions. Individuals may also face criminal penalties. Under the economic crime's framework, cartel conduct is classified as a serious economic offence and may lead to imprisonment and disqualification from holding managerial positions.

Chile has a leniency programme, known as *delación-compensada*, which may exempt or reduce sanctions for parties that provide valuable information to the FNE.

## 6.4 Abuse of Dominant Position

DL 211 prohibits the abusive exploitation of a dominant position by one or more economic agents. The law does not define dominance through a fixed market share threshold. Instead, dominance is assessed case by case, considering the structure of the market, barriers to entry, alternatives available to customers, buyer power and the company's ability to behave independently of competitors.

The law gives examples of abusive conduct, including fixing purchase or sale prices, tying the sale of one product to another, allocating market areas or quotas, and imposing similar abusive practices. In practice, the analysis focuses on whether the conduct harms the competitive process, not merely whether it disadvantages a particular competitor or contractual counterparty.

### Related Exclusionary Conduct

Chile also sanctions predatory practices and certain forms of unfair competition where they are carried out with the purpose of reaching, maintaining or increasing a dominant position. Predatory pricing typically involves selling below a relevant cost benchmark to exclude competitors or deter entry, with the expectation of strengthening market power later.

Unfair competition is also regulated separately by Law No 20,169 on Unfair Competition. Examples may include misleading advertising or improper use of another company's reputation. These acts become competition-law concerns when they are linked to the creation or reinforcement of market dominance.

### Territorial Reach and Economic Dependency

Chile does not have a broad standalone economic dependency regime. However, dependency may be relevant where a dominant supplier, customer or platform uses its position to exclude competitors or distort competition in a Chilean market.

The conduct does not need to occur physically in Chile. Chilean authorities may examine foreign conduct if it produces, or tends to produce, anti-competitive effects in Chile. Companies with strong market positions should therefore document the business justification for exclusivity arrangements, refusals to supply, rebates, tying, pricing policies and distribution restrictions.

# 7. Intellectual Property

## 7.1 Patents

Patents in Chile protect technical inventions that are new, involve an inventive step, and are capable of industrial application. Protection may cover products, processes, machines, chemical compounds and other technical solutions, but not abstract ideas, discoveries, business methods, or medical treatment methods as such.

The main statute is Law No. 19,039 on Industrial Property. A patent lasts 20 years from the filing date and is not renewable. In limited cases, additional protection may be available where there has been an unjustified administrative delay.

Applications are filed with the *Instituto Nacional de Propiedad Industrial* (INAPI), Chile's National Institute

of Industrial Property. The process includes formal examination, publication, possible opposition, technical examination by an appointed expert, responses to objections, and final grant or rejection. Patent prosecution often takes several years, so foreign applicants should file early and coordinate Chilean filings with their international patent strategy, including PCT national phase deadlines.

Patent enforcement is mainly through civil proceedings, with remedies including injunctions, damages, seizure, removal, or destruction of infringing goods and other court-ordered measures. Patent cases are technical and usually require expert evidence. In practice, strong claim drafting, good prosecution records, and early evidence-gathering are critical to effective enforcement.

## 7.2 Trade Marks

Trade marks in Chile protect signs that distinguish goods or services in the market. They may include words, names, logos, labels, slogans, letters, numbers, images, sounds, and other distinctive signs. Chile follows a registration-based system, so foreign businesses should not assume that overseas trade mark rights are enough.

Trade mark registrations last ten years from registration and may be renewed indefinitely for further ten-year periods. Chile also recognises cancellation for non-use, so businesses should keep evidence of real market use, such as invoices, packaging, advertising, distributor materials and Chile-facing online activity.

Applications are filed with the INAPI using the Nice Classification. The process involves filing, formal review, publication, a possible opposition period, substantive examination, and grant or refusal. Straightforward applications may be completed within several months, but oppositions or objections can extend the process significantly.

Enforcement may be civil or criminal, especially in counterfeiting cases. Remedies include injunctions, damages, seizure, destruction of counterfeit goods and orders to stop infringing use. Trade mark disputes are common in Chile, particularly involving former distributors, imitation packaging, online infringement and imported counterfeit goods. Early clearance, registration and market monitoring are therefore essential.

## 7.3 Industrial Designs

Industrial design protection covers the external appearance of a product, such as its shape, configuration, ornamentation, pattern, lines, colours, or visual presentation. It protects how a product looks, not how it works. Functional innovations should be considered under patent or utility model protection instead.

Industrial designs are protected under Law No. 19,039 and generally last 15 years from the filing date. Because novelty is important, businesses should file before publicly disclosing the design through websites, catalogues, trade fairs, product launches, or distributor presentations. Premature disclosure can create avoidable risk.

Applications are filed with the INAPI and must include suitable representations of the design. The process typically involves filing, formal review, publication, possible opposition, examination, and grant or rejection. The quality and clarity of the images filed are important, because they define the practical scope of protection.

Industrial designs are enforced through civil actions and, in some cases, criminal procedures. Remedies may include injunctions, damages, seizure, removal, or destruction of infringing products. In practice, design rights are most useful where the registered design clearly captures the commercial appearance of the product and where infringement can be shown through a close visual comparison. They are often used together with trade mark and unfair competition claims.

## 7.4 Copyright

Copyright in Chile protects original literary, artistic and scientific works, including books, music, photographs, audiovisual works, drawings, architecture, software and some databases. It protects the expression of a work, not the underlying ideas, facts, methods, or concepts.

Copyright is governed mainly by Law No. 17,336 on Intellectual Property. Protection arises automati-

cally when the work is created, so registration is not required for the right to exist. As a rule, copyright lasts for the life of the author plus 70 years, although specific rules may apply to certain categories of works.

Registration is available and is often useful as evidence of authorship, ownership, date, and content of the work. For companies, the key practical issue is ownership. Works created by employees, contractors, designers, software developers or advertising agencies should be covered by clear written assignment or licence provisions.

Copyright may be enforced through civil and criminal actions. Remedies include injunctions, damages, seizure or removal of infringing copies, destruction of unlawful copies, and criminal penalties in serious cases. In practice, many disputes arise from unclear ownership rather than deliberate piracy, so good contracts and record-keeping are as important as enforcement.

### 7.5 Others

Software is protected mainly by copyright in Chile. Source code, object code and related documentation may be protected, but the underlying idea, function, algorithm, or business method is not protected merely because it appears in software. Software-related inventions may be patentable only where they meet the usual technical requirements.

Databases may be protected by copyright where their selection or arrangement is original. Chile does not provide a broad standalone database right equivalent to the EU-style sui generis database right. As a result, valuable datasets are commonly protected through contracts, access controls, confidentiality obligations, technological measures and, where applicable, trade secret rules.

Trade secrets protect confidential technical or business information that has commercial value because it is secret and has been subject to reasonable measures to keep it confidential. No registration is required. Examples include formulas, source code, customer lists, pricing models, business plans and manufacturing processes.

In practice, trade secret protection depends on discipline. NDAs, employment and contractor clauses, restricted access, cybersecurity controls, internal classification and exit procedures are all important. Once information becomes public, protection may be lost.

Foreign companies should also consider whether to register.cl domain names, obtain plant variety rights where relevant, and make use of customs measures for counterfeit goods. A practical Chilean IP strategy should combine early registration, clear ownership contracts, confidentiality controls and active market monitoring.

## 8. Data Protection

### 8.1 Applicable Regulations

#### Current Legal Framework

Data protection in Chile is recognised as part of the constitutional right to privacy and protection of personal data. The main statute currently in force is Law No 19,628 on the Protection of Private Life (commonly referred to as the Data Protection Law or LPD), which regulates the processing of personal data by both private entities and public bodies.

Under the current LPD, the general rule is that personal data may be processed when the data subject has consented or when the processing is authorised by law. The law also grants individuals basic rights to access, correct, cancel or block the use of their data, and it contains specific rules for economic, financial, banking and commercial information, which are particularly relevant for credit reporting and consumer finance.

#### Reform Under Law No 21,719

A major reform which substantially amends the LPD and creates a new institutional framework for data protection in Chile will enter into force on 1 December 2026, giving companies a transition period to adapt their policies, contracts, security measures and internal governance.

Law No 21,719 brings Chile closer to international standards, especially the European Union's General

Data Protection Regulation (GDPR). It strengthens data subject rights, introduces clearer principles for processing, regulates international transfers in more detail, creates obligations relating to security incidents and impact assessments, and establishes a dedicated supervisory authority. For foreign companies, the practical message is that Chile is moving from a relatively light-touch privacy regime to a more active compliance model.

In practice, businesses operating in Chile should use the transition period to map the personal data they collect, review consent and privacy notices, assess vendor and processor arrangements, and prepare procedures for handling data subject requests and security breaches. Companies that already comply with GDPR-type standards will be better positioned, but local review will still be needed because Chilean rules will have their own scope, procedures and enforcement mechanisms.

## 8.2 Geographical Scope

### Application to Foreign Companies

Chile's current LPD is mainly framed around processing activities carried out in Chile and databases or operations connected with the country. In practice, a foreign company will usually need to consider Chilean data protection rules if it collects personal data from individuals located in Chile, contracts with Chilean customers, operates through a Chilean subsidiary or branch, or uses Chilean service providers to process personal data.

The issue is becoming more important because digital business models often allow foreign companies to target Chilean consumers without having a strong physical presence in the country. E-commerce platforms, fintech businesses, software providers, online advertising networks and health or education platforms may all collect personal data from Chilean users. Even where enforcement has historically been limited, contractual, consumer protection and reputational risks can arise if privacy practices are not aligned with Chilean expectations.

### International Transfers and Practical Compliance

Cross-border transfers are common in Chile, especially where multinational groups use regional or global systems for human resources, customer management, cloud hosting, analytics or cybersecurity. Companies should identify where Chilean personal data is stored, who can access it and whether third-party processors are located abroad.

Law No 21,719 will make this analysis more important by introducing a more developed framework for international data transfers and by empowering the new authority to oversee those transfers. Foreign businesses targeting Chile should therefore prepare Chile-specific privacy notices, review intra-group transfer mechanisms and ensure that contracts with processors clearly address confidentiality, security, permitted use of data and incident reporting.

## 8.3 Role and Authority of the Data Protection Agency

### Current Enforcement Position

Chile does not currently have a single public data protection authority with broad supervisory and sanctioning powers comparable to European data protection regulators. Enforcement under the current LPD has therefore been fragmented and, in many cases, dependent on court actions brought by affected individuals.

Some public bodies have limited powers that can touch on privacy issues. The Council for Transparency has a role in relation to public-sector transparency and access to information, including the protection of personal data held by public bodies. The National Consumer Service may also become involved where data practices affect consumers, for example in digital services, marketing, financial products or unfair contract terms.

### New Agency From 2026

Law No 21,719 creates the Data Protection Agency as a specialised public authority responsible for protecting personal data rights and supervising compliance with the amended LPD. The Agency is designed as a technical, decentralised and autonomous public body, linked to the President through the Ministry of Economy, Development and Tourism.

Once the reform enters into force on 1 December 2026, the Agency will become the central regulator for

data protection in Chile. Its functions will include oversight, issuing guidance and instructions, handling certain claims, maintaining compliance-related records, supervising international transfers and imposing sanctions for infringements.

This will be a significant practical change for companies. Businesses should expect more formal regulatory expectations, greater scrutiny of privacy governance and a stronger need to document compliance decisions. Multinational companies should also anticipate that Chilean privacy compliance will become a board-level and operational risk issue, rather than a purely contractual or policy matter.

## 9. Looking Forward

### 9.1 Upcoming Legal Reforms

Reforms are under way across several of the fields covered above. Some already enacted and being phased in, others still before Congress. The current administration has made a pro-investment, growth-focused agenda its priority, and this shapes much of what follows. The items below set out the direction of travel rather than settled law, and the current position should be confirmed before any decision is taken.

#### Tax

The most significant proposal is the tax bill introduced in March 2026 under the government's National Reconstruction and Economic Development plan (*Plan de Reconstrucción Nacional y Desarrollo Económico*). It would cut corporate income tax gradually from 27% to 23%, move back towards a fully integrated system – so owners could credit the full corporate tax against their final tax – and remove tax on certain capital gains from financial investments. Smaller companies would keep the reduced transitional rate already in force under separate legislation. The bill is at an early stage and may change or be rejected.

#### Investment permits and the Environment

Reducing "*permisología*" – the delay and complexity of obtaining permits – is a central policy theme. The Framework Law on Sectoral Authorisations (*Ley Marco de Autorizaciones Sectoriales*), enacted in 2025, is expected to shorten authorisation timelines (by some estimates between 30% and 70%), and further measures are under discussion to streamline the Environmental Impact Assessment System (*Sistema de Evaluación de Impacto Ambiental*, SEIA), speed up sectoral permits and maritime concessions, and compensate investors where an approval is later revoked by the courts. A reform of the Environment Superintendence is also progressing. Together these aim to unlock a large pipeline of stalled mining, energy and green-hydrogen projects.

#### Employment and Pensions

Two reforms already in force continue to raise the cost of employment. The 2025 pension reform (Law No. 21,735) adds a new employer contribution that rises in steps to 7% of pay, on top of the existing 1.5% disability and survivors' insurance, reaching its full rate around 2033. Separately, the working week is being cut in stages from 45 to 40 hours through 2028. Both should be built into workforce budgeting.

#### Data Protection

Chile's new Personal Data Protection Law (Law No. 21,719) takes full effect on 1 December 2026. Closely modelled on the EU's GDPR, it creates an independent Data Protection Agency, strengthens individual rights, requires breach notification and introduces fines of up to roughly 4% of annual turnover. Any business handling employee, customer or supplier data in Chile should begin compliance work well before that date.

#### Other Developments and Outlook

Investors should also watch the expanding criminal liability of companies, financial-technology (fintech) regulation and various sector-specific rules. Given the tight fiscal position and a divided Congress, the timing and final shape of these reforms remain uncertain, so up-to-date local advice is advisable before any material investment.

**Garnham Abogados**

**Garnham Abogados** is a specialised boutique firm based in Santiago, Chile, comprising six partners and an equal number of associates, supported by a dedicated professional team. This structure enables a genuinely multidisciplinary approach to taxation, corporate and M&A as well as labour and administrative law. Guided by the core principles of innovation, technical rigour and a global outlook, the firm advises on complex, often cross-border matters. Its lawyers act for a diverse client base, including domestic and foreign corporations, SMEs, high-net-worth individuals and investment funds. By preserving its agility and close partner involvement, Garnham Abogados has earned market recognition for its personalised attention and timely responses. The firm also shows a strong commitment to social responsibility through its active membership of the Pro Bono Foundation, having been recognised twice as Pro Bono Firm of the Year.

## Authors

**Patrick Humphreys** is a founding partner of Garnham Abogados and leads the tax advisory practice. He advises on corporate taxation, business reorganisations and cross-border structuring, with particular experience in double taxation treaties and the Multilateral Instrument, as well as private wealth planning and VAT, including the taxation of digital platforms. Patrick is the academic director of the Master's degree in Tax Management and Administration at Universidad Adolfo Ibáñez and teaches double taxation treaties at the University of Lima. He also serves as director of the Scientific Committee of IFA Chile and is a regular speaker at leading international tax conferences in the region.

**Paula Lühr** is an associate at Garnham Abogados, whose practice covers both tax and corporate law. She primarily advises clients on domestic and cross-border corporate taxation and assists with business reorganisations and wealth planning. Paula earned her law degree from the Pontificia Universidad Católica de Chile, where she served as a teaching assistant in Civil Law. Before joining the firm, she built a solid legal ground working as a corporate paralegal at IGneous and completing an internship at the Supreme Court of Chile.

## The National Reconstruction and Economic and Social Development Bill: A Policy Reset with Regional Significance

Chile is in the middle of its most ambitious economic reset in a decade. The National Reconstruction and Economic and Social Development Bill – tabled by President José Antonio Kast in April 2026 and quickly dubbed the "mega-reform" – gathers more than 40 measures across tax, housing, employment, environmental permitting and institutional reform into a single legislative vehicle. On 20 May the Chamber of Deputies passed it in general (principle stage) and in particular (article-by-article stage). In the Senate, a more fragmented chamber means the debate is likely to run well past the government's original June timetable, with several provisions still under discussion.

For anyone weighing up Chile from abroad, it is not only the tax cuts alone that have grabbed the headlines. Rather, it is the attempt to move several levers at the same time: corporate tax, capital mobility, housing demand, labour costs, permitting timelines and fiscal discipline. And this is not a rescue mission. Chile drew net foreign direct investment of around USD14.5 billion in 2025, up roughly a tenth on the year, with inflows averaging some USD16 billion a year over the past five. The bill is aimed not at an investment drought but at the structural frictions that have stopped solid fundamentals from converting into faster growth.

### *The macro backdrop: why now*

Growth has disappointed since the mid-2010s. Having run comfortably above 4% a year in the previous decade, it has since settled into the low single digits, and the OECD's December 2025 Outlook trimmed its 2026 forecast for Chile to 2.2%, even as it marked up its projection for fixed capital formation. The diagnosis is by now familiar: weak productivity, and too much friction in the path of investment.

The government has been careful to attach a fiscal counterweight to the giveaways. Alongside the bill sit spending cuts of roughly 1.2% of GDP – a 3% across-the-board trim to ministerial budgets plus around USD1 billion in cross-ministry savings – and ministers have leaned hard on the message that consolidation is part of the growth plan rather than an afterthought. The Autonomous Fiscal Council is likely to be quoted often during the Senate stage, while the credibility of the whole package will hinge on whether those savings actually materialise.

### *Why the bill has investors' attention*

None of this happens in a vacuum, and Chile starts from a strong base, underpinned by OECD membership, a rule-of-law record that sits at or near the top of the region, investment treaties with 37 countries, CPTPP membership since February 2023 and vast copper and lithium reserves that all keep international capital interested. The bill's task is to turn those advantages into something investors feel day-to-day: lower rates, clearer rules and less time lost to bureaucracy.

Chile still carries one of the steadier institutional reputations in Latin America. But over the last few years, investors have had to factor in slower growth, glacial permitting and a recurring, occasionally anxious, national conversation about whether the tax system was about to change yet again. The bill tackles these worries head-on, pairing a lighter tax burden with measures meant to reduce administrative bottlenecks and make the rules more predictable.

It is aimed less at one-off deals than at groups thinking about Chile as a base for regional operations. When a capital allocation committee compares jurisdictions, the headline rate is only the start of the conversation. They also want to know how quickly a permit can be secured, how likely the rules are to hold, whether headcount can grow at a cost they can forecast, and whether local capital and property markets offer a clean way out later. This bill seeks to address each of these concerns at once.

It also helps to remember that the measures do not land evenly. Developers and housebuilders are drawn to the VAT relief and the demand-side incentives; labour-heavy operations look hardest at the employment credit; mining and energy groups care most about tax stability and permitting; and financial investors tend to fix on capital-gains treatment and the windows to regularise offshore assets. The same bill may be read very differently depending on where you sit.

### *The bill's architecture: five pillars*

It helps to read the bill as five pillars, each touching a different part of the investment decision.

- Reconstruction – roughly USD400 million flows to the regions worst affected by the 2024-2026 wildfires, chiefly Valparaíso, Biobío and Ñuble. This is mostly a domestic fiscal measure, but it supplies the political urgency and cross-party support that help carry the wider package.
- Construction and housing – a temporary VAT exemption on first sales of new homes, adjustments to the DFL 2 incentive regime (a tax incentive program for economic housing) and a new simplified rental income tax.
- Formal employment – a tax credit of up to 15% of gross wages for lower-paid workers, usable against several tax liabilities.
- Investment-focused tax changes – the headline corporate rate cut, a return to full integration, capital-gains relief and a new 25-year stability statute.
- Regulatory streamlining – reform of the environmental permitting process, building on the Framework Law on Sectoral Authorisations enacted in 2025.

The breadth is intentional. Tax, permits and labour reforms rarely move together, their combined effect is likely to matter more than any single measure in isolation.

### *Tax competitiveness: rate, integration and capital gains*

Tax is the densest part of the bill. The corporate rate – the *impuesto de primera categoría* – would fall from 27% to 23% in a phased reduction: 25.5% for 2027, 24% for 2028 and 23% from 2029, for large companies and SMEs alike. This brings Chile closer to its regional peers and, over time, closer to the average corporate burden across OECD economies.

The less prominent measures within the chapter may matter more. For foreign investors, the rate cut is the obvious draw, but full integration may matter just as much. Chilean tax has long been technically excellent and quietly exhausting to model; the semi-integrated regime introduced in the last decade made the effective burden on distributed profits genuinely hard to explain to a head office, especially if they are within a country with which Chile does not have a double taxation treaty in force. A return to full integration removes some of that friction, which makes pricing a deal – and comparing Chile with Peru, Mexico or Colombia – a far more straightforward exercise.

A third measure carries outsized symbolic weight: scrapping the 10% tax on capital gains from listed securities with stock-exchange presence, restoring their non-taxable treatment where they qualify. For portfolio investors, funds eyeing listed exits and anyone building equity positions locally, this lifts after-tax returns and should help deepen a market that has long been thinner than the economy warrants.

A word of balance is in order. The same bill hands the tax authority sharper teeth, with broader powers to verify information and audit. The compliance climate therefore tightens even as the headline burden eases – an entirely familiar pairing, and a reason to put tax governance in order before, not after, taking up the new reliefs.

### *The 25-year stability statute: echoes of DL 600*

The provision likeliest to move the needle for large investors is a tax-stability mechanism consciously modelled on the old Decree Law 600, which framed foreign investment in Chile for decades until it stopped taking new entrants in 2016. Set out in Article 33 of the bill, the new instrument would let investors – foreign or domestic – committing USD50 million or more sign an investment contract with the state that locks in the applicable tax terms for up to 25 years from the start of operations.

It is deliberately more generous than the current Foreign Investment Law (Law 20,848, 2015). That statute guarantees the essentials – non-discrimination, free repatriation of capital and access to the formal foreign-exchange market – but stops short of contractual tax invariability. The proposed regime reaches further, covering the corporate rate and base, the mining royalty and its calculation, VAT on capital-goods imports and withholding on profit remittances – a wider perimeter than DL 600 ever offered.

For a large copper or lithium development the appeal is plain. A project that needs USD1.5-2 billion of capital, international project finance and a 20-year production life depends on tax assumptions that must survive several elections. Locked-in terms are exactly what credit committees, export credit agencies and multilateral lenders want to see before they close senior debt, and exactly what Chile has struggled to promise in recent years.

One caveat has already emerged. During the Chamber debate the government signalled that it could trim the stability period from 25 to 20 years and raise the minimum investment threshold, leaving the detail to the Senate. The regime is a real opportunity worth building into project planning, but its final shape – duration, threshold, the taxes it covers – is not yet fixed, and investors holding legacy DL 600 or other invariability rights will need to weigh how the old and new frameworks interact before opting in.

### *Permitting reform: from bottleneck to bankable timeline*

If there is one area of the bill likely to resonate with investors and developers in Chile, it is permitting. Two reforms matter here, and they work as a pair.

The first is already law: the Framework Law on Sectoral Authorisations (Law 21,770, LMAS), published in September 2025. It overhauls roughly 380 permits spread across 16 ministries, imposes binding deadlines on the administration and is projected to cut processing times by between 30% and 70%. InvestChile has put the private pipeline under its watch at a record USD56.2 billion across 474 projects at the end of 2024, much of it committed but stalled – capital the reform is meant to release.

The second is the reform of the Environmental Impact Assessment System (SEIA) inside the current bill. Even when sectoral permits come through quickly, environmental review has long been the real source of delay, capable of stranding a major project for years. So, the two reforms compound: faster sectoral permits only translate into faster spending if environmental approvals keep pace. For a greenfield mine, a wind farm or a transmission line, the combination could turn permit risk – for years one of the heaviest discounts in any Chilean valuation – into something a sponsor can plan around, aligning construction with financing rather than guesswork.

The catch is political. Anything that speeds approvals invites the charge of weakening environmental safeguards, and the SEIA provisions have already drawn fire from green groups and several senators; opposition deputies have even floated taking parts of the bill to the Constitutional Court. This is the corner most likely to be reworked, and the one worth watching most closely.

### *Housing, real estate and construction*

Housing is where the bill bites soonest, and is a sector where foreign institutional money – real estate funds, residential platforms and development lenders – has been quietly building a presence. The residential market has had a rough few years: unsold stock piling up, affordability squeezed by higher interest rates and the special construction VAT credit scaled back since 2025.

The proposed twelve-month VAT exemption on first sales of new homes, expected to run from the date the law is published, lets developers reduce effective prices and shift stock. Some analysis suggests the effective discount could land somewhere between 3% and 8%, depending on pass-through and input-VAT treatment – enough, in a price-sensitive market, to get sales moving and to rescue projects that were sitting just short of viable. Developers holding finished or near-finished units stand to gain most; those still early in the pipeline have more time to plan around the window.

There is a technical sting worth flagging. Sales made under the exemption do not allow recovery of input VAT on construction costs, which instead gets capitalised into the cost base. Whether the exemption actually helps a given developer therefore turns on its input-VAT position and how price-sensitive its buyers are – the sort of analysis that rewards running the numbers properly before deciding when to sell into the window.

The bill also adds a flat 5% income tax on rental income from qualifying DFL 2 dwellings from the third

property onwards. In place of today's murkier mix of ordinary taxation and patchy compliance, that points towards a more predictable regime for anyone contemplating residential portfolios or build-to-rent at scale – though the anti-fragmentation and related-party rules, still to be finalised, will decide how those structures really work.

### *Formal employment and labour costs*

For labour-intensive businesses, the formal employment credit is among the most immediately practical measures in the bill. As drafted, it is worth up to 15% of gross wages for workers in a defined band – broadly, from around the minimum wage to roughly one and a half times it – and, crucially, it can be set against monthly provisional income tax, VAT and corporate income tax. That makes it a live operating saving, not a notional incentive.

It bites hardest in construction, logistics, manufacturing, services and tourism, where payroll at those wage levels is the norm and where the gap between formal and informal work creates real compliance risk. A company that expands or formalises headcount within the band can expect a genuine cut in effective labour cost without touching its underlying wage structure – and, at scale, the credit can tip the calculus towards formal, direct employment over looser arrangements.

One drafting detail is worth tracking. The lower house rejected the government's attempt to scrap the SENCE training tax credit, a corporate incentive for employee training; the government is expected to bring back a modified version in the Senate, and how that lands will shape the wider menu of labour incentives, particularly for training-heavy industries.

### *Capital mobility and regularisation windows*

Two temporary mechanisms will interest investors carrying offshore or historically tangled positions. The first is a one-off declaration regime for previously undisclosed foreign assets or income, charged at 10%, or 7% where the assets are repatriated and reinvested in qualifying Chilean instruments. The second is a substitute-tax option for certain accumulated corporate profit balances, offered at a preferential rate in lieu of ordinary treatment.

In a transaction these windows can change the diligence. They alter how legacy tax exposure is priced and indemnified between buyer and seller, and while they remain open, they give a seller the chance to clean up before completion, often trimming indemnity demands and smoothing the mechanics. Once the windows close and the strengthened audit powers are fully in force, unresolved offshore exposure becomes a good deal riskier.

### *The road through the Senate*

The bill is not home yet. It has cleared the Chamber and moved to the Senate, where the governing coalition is just short of a majority and where, by most accounts, passage will turn on courting undecided senators one at a time. Formal Senate debate is set to follow the President's State of the Nation address on 1 June, and the government has openly conceded that the timetable may need to slip beyond June.

If the Senate were to reject the idea of legislating, the action would move to a joint committee (*comisión mixta*) of senators and deputies – a forum where the government would hold a structural six-to-four edge, which is why analysts see that route as politically manageable. The stated aim is enactment before the 30 September budget deadline, though few treat that as a sure thing.

The provisions most likely to change are the pace of the rate cut, full integration – where concerns over who really benefits will generate the most debate – and the SEIA reform; the stability statute and the employment credit appear to enjoy broader cross-party support. The practical lesson is to treat any headline enactment date as provisional until the law is published in the Official Gazette (*Diario Oficial*), and to follow the committee stage rather than the press releases.

### *Outlook: what it means for investors*

Put together, the package is the most ambitious pro-investment signal Chile has sent in a decade. Lower corporate tax, full integration, capital-gains relief, locked-in stability, faster permits and housing incentives all target the frictions that the OECD, the IMF and InvestChile have been pointing to for years.

The practical message for the next couple of years is not that any single measure is transformative, but that several things are being improved at once, and which one matters depends on where an investor sits. Mining and energy investors will focus on the stability statute and permitting; housing and construction on the VAT window and the rental regime; labour-intensive businesses on the employment credit; and financial investors on capital-gains treatment and the regularisation windows. The common thread is predictability, the quality that a regionally compelling but lately hesitant market has most needed to put back on the table.

Whether it delivers depends on the final text and on whether the fiscal arithmetic holds up under scrutiny. For now, the right approach is to follow the Senate committee, not the headlines, and to read the bill as a strong statement of direction rather than a settled outcome.

**Zhong Lun Law Firm** is one of the largest top-notch full-service law firms in China, with more than 2,200 professionals and over 400 equity partners in major offices across Beijing, Shanghai, Shenzhen, Hong Kong, Tokyo, New York, Los Angeles and San Francisco. Its top-tier litigation and arbitration practice is highly regarded for handling complex cross-border disputes, international arbitration and enforcement matters before leading courts and arbitration institutions, supported by deep expertise in compliance and investigations, construction and infrastructure, cross-border M&A, trade and regulatory matters. It has been ranked Band 1 in dispute resolution in Chambers Greater China Region and Chambers Global for consecutive years, and was named China (PRC Firms) Dispute Resolution Law Firm of the Year by Chambers in 2017, 2019, 2023 and 2025. The firm has advised multinational corporations, financial institutions and major Chinese enterprises on complex and challenging civil and commercial disputes that have had significant social impact.

## Authors

**Jun Gao** is a partner at Zhong Lun Law Firm and head of the firm's compliance and regulatory department. He specialises in international arbitration, cross-border dispute resolution, compliance investigations and regulatory matters, with extensive experience representing multinational corporations in complex multi-jurisdictional disputes. Mr Gao is a fellow of the Chartered Institute of Arbitrators and a member of the International Chamber of Commerce Arbitration and ADR Committee, and serves as an arbitrator of the SIAC, HKIAC, CIETAC and several other leading arbitration institutions.

**Fan Xu** is a trainee lawyer at Zhong Lun Law Firm, specialising in international dispute resolution and commercial arbitration. She has valuable hands-on experience handling contractual disputes and corporate compliance matters across various trade sectors, assisting domestic and multinational corporate clients in conducting legal risk assessments and preparing arbitration submissions.

## Shift in International Commercial Arbitration Amid Global Restructuring

### *Core characteristics of the current global economic and political landscape*

Over the past few years, the underlying dynamics of global business operations have undergone profound changes. The process of economic integration that once characterised the global economy has gradually slowed, with regionalisation and fragmentation emerging as the new dominant trends, and protectionist tendencies continuing to intensify across multiple major jurisdictions. At the same time, ongoing geopolitical conflicts have further accelerated the reshaping of the global economic landscape, leaving businesses operating across borders to face an external environment that is more complex and uncertain than ever before.

### *Current landscape of Chinese enterprises' overseas expansion*

Against this backdrop, the overseas expansion of Chinese enterprises has entered a new phase of development. The internal demand for economic transformation and upgrading within China is driving an increasing number of companies to extend their business operations into emerging markets and high-risk jurisdictions such as South-East Asia, Africa and Latin America. As the scale of overseas investment and trade continues to expand, Chinese enterprises are encountering not only a substantial rise in the volume of cross-border commercial disputes but also a significant surge in their complexity, with the legal and compliance issues involved becoming ever-more diverse.

### *Fundamental transformation of international commercial arbitration*

As the preferred method for resolving cross-border commercial disputes, international commercial arbitration is also undergoing a profound transformation. It is no longer merely a post-dispute adjudication mechanism used to resolve disputes over contract performance, but has gradually evolved into a comprehensive governance platform that integrates the application of law, political considerations, anti-corruption compliance, and public policy balancing. This transformation is both a proactive response to the changing landscape of global business risks and an inevitable result of the arbitration system's own adaptation to the times.

This article focuses on key developments in the field of international commercial arbitration from 2025 to 2026, with a particular emphasis on analysing the core innovations in the International Chamber of Commerce (ICC)'s forthcoming anti-corruption umbrella report ("the Report") and its newly revised arbitration rules. Additionally, the article will explore the industry's reflections on and efforts to address the trend towards the judicialisation of arbitration. It will also provide a targeted analysis of the challenges faced by Chinese enterprises amid this wave of change, and propose feasible response strategies.

## Anti-Corruption: From Peripheral Issue to Core Pillar of Arbitration Proceedings

Anti-corruption was once merely a marginal issue that occasionally arose in international commercial arbitration; arbitral tribunals typically viewed it as a criminal matter unrelated to contractual disputes and did not examine it in depth. However, in recent years, with the intensification of the global anti-corruption movement and the exposure of a series of major corruption arbitration cases, this issue has risen to become a central pillar of arbitration proceedings. The Report marks a significant step forwards for the international arbitration community in combating corruption, providing unified operational guidance to replace the previously fragmented approaches in practice.

### *Shift in arbitral tribunal's role: from passive neutrality to active discharge of duties*

#### *Limitations of traditional practice*

Traditional arbitration practice strictly adheres to the nemo judex sine actore principle, meaning that an arbitral tribunal will only examine relevant issues when a party explicitly raises allegations of corruption. This passive and neutral stance has allowed a vast amount of corruption hidden behind commercial transactions to evade scrutiny – the case of *Nigeria v P&ID* serves as a sobering example of this.

In 2010, the Nigerian government signed a natural gas processing contract without a public tender with P&ID, a shell company based in the British Virgin Islands. After P&ID initiated arbitration in 2012, the proceed-

ings were conducted in secret and with unusual haste. The arbitral tribunal ultimately ruled that Nigeria was liable for compensation, and as of 2023, Nigeria's total debt had risen to approximately USD11 billion.

It was not until 2019 that Nigeria first raised allegations of bribery and sought to have the award set aside. The High Court of England and Wales found that P&ID had committed serious irregularities, including bribing officials, submitting false evidence, and stealing the opposing party's internal legal documents to manipulate the arbitration. Ultimately, the court set aside the award on the grounds that it was contrary to public policy.

In his ruling, Judge Knowles noted that without oversight, the arbitration process would become less reliable and more susceptible to fraud. This inevitably raises the question – does the arbitral tribunal have sufficient tools at its disposal to ensure the fairness of its awards?

### *Highlights of the report*

This landmark case underscores the necessity of the ICC's long-standing efforts to standardise and systematise anti-corruption practices in international arbitration. As early as 2019, the ICC Committee on Arbitration and ADR established the "Task Force Addressing Issues of Corruption in International Arbitration", which spent nearly seven years compiling this Report.

The final guidelines establish a logically coherent three-stage framework for investigating corruption:

- the first stage involves a preliminary review of the issues, focusing on issues such as whether the arbitral tribunal should initiate an investigation sua sponte, and the impact of parallel proceedings;
- the second stage focuses on evidentiary issues, systematically addressing the burden of proof and the assessment of such evidence;
- the third stage clarifies the tribunal-specific aspects of the corruption inquiry, including the legal consequences of a corruption finding and arbitrators' obligations; and
- the Report provides international arbitration practitioners with a comprehensive operational framework for combating corruption.

### *Factors to consider before conducting a sua sponte investigation*

When deciding whether to initiate a corruption investigation of its own motion, the arbitral tribunal may take into account multiple key factors:

- the severity and credibility of corruption risk indicators present in the case;
- the potential impact of the alleged corrupt conduct on the validity of the arbitration agreement;
- the relevance of the conduct to the core dispute in the case;
- the applicable legal framework and fundamental principles of procedural fairness; and
- the impact of the investigation on the cross-border enforceability of the final award.

This balanced approach addresses the expectations that the arbitration system will combat corruption while preventing unnecessary delays and increased costs resulting from procedural abuse. For enterprises, suspicious conduct in transactions will be subject to more rigorous scrutiny. Therefore, it is essential for companies to maintain higher compliance standards throughout the entire transaction process.

### *Integrating experience and evidence: red flag methodology*

Corrupt conduct is inherently covert, and direct evidence is often difficult to obtain. This has long been the greatest challenge in proving corruption in arbitration. To address this critical issue, the ICC Report develops the "red flag methodology", integrating scattered practical experience into a systematic set of tools for evidence evaluation.

### *ICC's three-step assessment framework: Identify–Validate–Assess*

This methodology provides the arbitral tribunal with a clear three-step operational framework, for a more standardised and transparent review of corruption allegations:

- Identification – Comprehensively review all facts and circumstances in the case that may indicate the presence of corruption risks.
- Verification – Verify the authenticity, accuracy and relevance of these risk indicators one by one.
- Assessment – Integrate all verified information and weigh it against counter-evidence to form a comprehensive judgment.

The Report categorises red flags into two main types to help arbitration tribunals conduct more targeted reviews. General red flags are primarily related to environmental factors, including a specific country's reputation for integrity, inherent corruption risks within an industry, and the current government's anti-corruption environment. Specific red flags are more direct, primarily involving the counterparty's background and qualifications, relationships with public officials, and unusual terms and payment arrangements in the transaction itself.

### *Bidirectional evaluation system of red flags and green flags*

The Report also introduces a two-way assessment system based on red flags and green flags. A single serious red flag indicator – such as a large, undisclosed payment made without a legitimate business justification – may carry significant probative value. Conversely, the accumulation of multiple seemingly minor red flag indicators can also be sufficient to raise reasonable suspicion of corruption. Accordingly, the accused party may refute the allegations by providing a legitimate business explanation (ie, a "green flag").

This is vividly illustrated in the case of *Metal-Tech v Uzbekistan*, where the arbitral tribunal identified four mutually corroborating red flags: a consultant of questionable credentials; a service fee of USD4 million with little relation to the actual work performed; the close familial relationship between a consultant and the then-prime minister of Uzbekistan; and fund transfers conducted through opaque offshore shell companies. The claimant failed to present any sufficiently compelling green flags to rebut these suspicions, as it could not produce evidence of the actual consulting services rendered or any other reasonable commercial justification for the anomalous arrangements. Ultimately, the arbitral tribunal dismissed Metal-Tech's claim on the grounds of corruption; however, given that Uzbekistan had also engaged in corrupt practices, it ordered both parties to bear their own costs in accordance with the principle of equity.

### *Practical challenges in applying the red flag methodology*

Although this methodology offers strong practical guidance, it still faces some significant challenges in real-world application:

- the assessment of red flag indicators involves a degree of subjectivity, and there are currently no uniform quantitative standards for determining the weighting of different indicators;
- some parties may abuse this mechanism by intentionally filing a large number of false red flag allegations to delay the arbitration proceedings; and
- arbitral tribunals lack the power to compel discovery, making it difficult to obtain key evidence held by third parties, and differences in business culture across countries may also lead to misjudgments.

## *Co-ordination of parallel proceedings*

In international commercial arbitration cases involving corruption, the emergence of parallel proceedings is a common occurrence. A single act of corruption may trigger various types of legal proceedings – such as, criminal investigations, civil lawsuits and regulatory reviews – simultaneously across multiple jurisdictions.

### *Stay of proceedings*

The primary issue raised by parallel proceedings is whether arbitration proceedings should be stayed pending the outcome of those parallel proceedings. Generally speaking, the threshold for staying arbitration is very high. First and foremost, the tribunal must determine whether there is a mandatory legal obligation to stay the proceedings. In the absence of such mandatory legal obligation, the tribunal will further consider:

- the degree of correlation between the core issues of the parallel proceedings and the arbitration dispute;
- the current stage and estimated duration of the parallel proceedings;

- the potential impact of the parallel proceedings' outcome on the arbitration;
- the procedural fairness of the parallel proceedings, and whether the accused party has been afforded a full and fair opportunity to participate and present its case;
- whether the parallel proceedings are conducted in the arbitral seat – decisions from parallel proceedings in the seat have a decisive impact on the subsequent validity of the award;
- the accessibility of evidence in the parallel proceedings;
- the potential irreparable harm or unfair tactical advantage that a stay may cause to either party; and
- the overall impact of the stay on procedural efficiency and the finality of arbitral awards.

*Criteria for evidence sharing*

In addition to the issue of stay of proceedings, parallel proceedings also involve the co-ordination of evidence sharing. Evidence obtained by law enforcement agencies generally carries significant probative value; however, the arbitral tribunal must still safeguard the opposing party's right to cross-examine such evidence. With regard to evidence transferred from arbitration to parallel proceedings, a balance must be struck between the duty of confidentiality and the statutory duty of disclosure; where necessary, the tribunal should issue detailed confidentiality orders and redact sensitive commercial information.

*Effect of decisions or judgments in parallel proceedings*

Decisions or judgments rendered in parallel proceedings do not automatically have preclusive effect on an arbitration, and the arbitral tribunal retains its independent authority to determine the facts. When assessing the validity of findings from parallel proceedings, the arbitral tribunal focuses on three core criteria:

- due process – whether the parallel proceedings followed due process of law;
- consistency of evidentiary standards – whether the standard of proof applied in the parallel proceedings aligns with the standard used in the arbitration to address corruption issues; and
- territorial connection – whether the location of the parallel proceedings is the same as the seat of arbitration, as this directly impacts the risk of a subsequent judicial review of the award.

### Conflicts of Interest and Disclosure: Changes in the Latest Revised ICC Arbitration Rules

Disclosure of conflicts of interest is the cornerstone of fairness in international commercial arbitration. Particularly in cases involving corruption, undisclosed hidden financial ties can directly serve as channels for the transfer of benefits, undermining the legitimacy of the award. The traditional model, in which the disclosure obligation rests solely with the arbitrator, has resulted in a large number of potential conflicts of interest failing to be identified at an early stage of the proceedings. The newly revised ICC Arbitration Rules ("the ICC Rules"), effective 1 June 2026, have reformed the disclosure regime, establishing a new framework involving multiple parties.

#### *Proactive party participation in disclosure: from unilateral obligation to collective governance*

*Key innovation of the ICC Rules*

The most significant innovation of the ICC Rules is the inclusion of the parties themselves in the conflict-of-interest governance framework. At an early stage following the initiation of arbitration proceedings, each party must submit a list to the secretariat identifying any person or entity that may have a conflict of interest, along with specific supporting reasons. This change helps improve efficiency and reduce the risk of issues arising at a later stage.

*Dual reinforcement of disclosure obligations*

The ICC Rules do not relieve arbitrators of their core disclosure obligations but instead establish a dual safeguard mechanism. On the one hand, arbitrators are still required to independently fulfil their comprehensive disclosure obligations and disclose all circumstances known to them that may affect their independence; on the other hand, the parties are explicitly required to assist the arbitrators in fulfilling their disclosure obligations, thereby assuming a more proactive role in this regard.

*Two critical clarifications*

The ICC Rules also provide two key clarifications. First, they explicitly codify the "when in doubt, disclose" principle, requiring arbitrators and parties to prioritise disclosure whenever there is any doubt regarding the existence of a conflict of interest, rather than making their own judgement as to whether it is material. Second, they clarify that disclosure in itself does not constitute evidence of a lack of independence or impartiality, thereby avoiding undue deterrence of good-faith disclosures and encouraging all parties to make candid disclosures.

*Institutionalisation of the multi-party disclosure principle*

The new rules formally institutionalise a multi-party disclosure mechanism, with the underlying rationale for this reform being that "prevention is better than cure". By comprehensively screening for potential risks early in the proceedings, the system aims to reduce conflicts of interest at their source and prevent parties from subsequently seeking to set aside arbitral awards on these grounds. This not only enhances the efficiency and certainty of the arbitration process but also effectively prevents corruption from infiltrating the proceedings through improper relationships, thereby further strengthening the international credibility of ICC arbitration.

## Structural Reflection: Countering the Judicialisation of Arbitration and Returning to Its Commercial Essence

The core value of international commercial arbitration lies in its flexibility, efficiency, and business-oriented approach. However, in recent years, there has been a clear trend towards judicialisation in arbitration proceedings. At the same time, while strengthened anti-corruption measures and conflict-of-interest regulations are crucial for maintaining the credibility of arbitration, they may also objectively increase the risk of procedural complexity. How to strike a balance between strengthening institutional constraints and returning to the essence of business deserves further exploration.

*Signs and drawbacks of arbitration judicialisation*

The judicialisation of arbitration is primarily manifested in procedural rules aligning with those of court litigation. An increasing number of arbitral tribunals are adopting court-style practices such as discovery, cross-examination during hearings, and document formatting, resulting in protracted and rigid proceedings. The involvement of a large number of former judges and litigation attorneys also leads to arbitration proceedings that tend to overlook commercial and industry practices, thereby diluting the commercial nature of arbitration.

This undermines arbitration's core competitiveness, causing commercial parties to increasingly favour other more efficient dispute resolution methods. For small and medium-sized enterprises in particular, the high costs in terms of time and money create a "barrier to entry". Therefore, arbitral tribunals should prioritise the practical needs of commercial transactions rather than mechanically applying legal rules, which may result in awards that lack commercial logic.

*Global consensus on returning to commercial sense*

Leading international arbitration institutions, represented by the ICC, collectively advocate that arbitral tribunals should move away from pure proceduralism and apply a business-oriented mindset throughout the entire proceedings. The ICC states that the amendments to the Arbitration Rules aim to enhance efficiency, clarity and usability, ensuring that ICC arbitration continues to meet the needs of global entities and to strengthen parties' confidence in the fairness and efficiency of dispute resolution.

In the future, the international arbitration community is expected to advance the arbitration regime in a more business-friendly direction by focusing on the following areas:

- encouraging the participation of practitioners with industry experience, expertise in anti-corruption compliance, and cross-cultural competence;
- streamlining procedures, promoting documents-only proceedings, and optimising the emergency arbitrator mechanism; and
- integrating ADR methods, such as mediation and expert determination, with arbitration to form a multi-tiered dispute resolution system.

## Risks and Proactive Strategies for Cross-Border Arbitration

The number of international arbitration cases involving corruption allegations continues to rise. Corruption allegations not only influence arbitration proceedings as grounds for claims or defences but also directly challenge the basis of arbitral awards; as a result, anti-corruption has become a highly disruptive risk factor in international arbitration.

### *Core risks facing enterprises operating in high-risk cross-border environments*

Specifically, businesses face the following risks.

- Risks of corruption allegations in high-risk jurisdictions: potential conflicts may exist between local business practices and international anti-corruption standards, which could lead to inadvertent involvement in third-party misconduct.
- Risk of the arbitral tribunal conducting a proactive investigation: even if neither party raises the issue of corruption, the arbitral tribunal may still conduct a proactive review if there are evident red flags.
- Risk of the award being set aside: failure to proactively identify and disclose conflicts of interest may lead to avoidable challenges to the award.

### *Key measures for prevention and response*

To avoid the risks mentioned above, companies are advised to proactively take the following measures.

- Contract refinement: incorporate ICC standard anti-corruption clauses and clarify parties' compliance obligations, liability for breach of contract, and audit and inspection rights.
- Due diligence: strengthen background checks on counterparties and third-party intermediaries, and establish a warning mechanism for corruption risks.
- Procedural participation: proactively fulfil disclosure obligations under the Rules and emphasise the selection of arbitrators with relevant business backgrounds or experience.

## Conclusion: Future Direction of International Commercial Arbitration

International commercial arbitration is transforming from purely post-dispute adjudication to preventative risk governance by promoting the proactive participation of all parties. This trend also reflects a central theme in the development of international arbitration – striking a balance between safeguarding the public interest and upholding the commercial nature of arbitration. It is essential to bear in mind that the vitality of arbitration lies in its commercial nature. While strengthening anti-corruption measures, caution must be exercised against the risk of excessive judicialisation, with the core objective always remaining the pursuit of efficient and practical commercial solutions.

For Chinese enterprises, proactively adapting to new international arbitration rules is crucial. On the one hand, businesses must strengthen internal compliance systems to prevent corruption; on the other hand, continuous improvement of cross-border dispute resolution strategies should be prioritised, with a focus on proactively identifying conflicts of interest rather than passively waiting for them to arise.

**Baker McKenzie S.A.S.** was established in 1949 and is recognised as one of the foremost international law firms. With a presence in 45 countries through 75 offices, including in 36 of the top 40 global economies, the firm employs nearly 5,000 lawyers and around 13,000 staff. Renowned for transactional law services, it offers a comprehensive global platform, industry-specific expertise, and profound local market insights allowing seamless co-ordination on complex, multi-jurisdictional matters through deep regional integration. The firm is the preferred choice for multinational corporations and both domestic and international private equity firms, and is valued for its integrated global, Latin American and local Colombian market expertise. Serving a diverse clientele, the firm specialises in advising high-profile multinational companies, particularly in heavily regulated industries such as oil and gas, energy, healthcare, life sciences, automotive, agrifood, chemicals and real estate. In Colombia, the firm is frequently instructed on sophisticated transactions and projects involving cross-border elements and regulatory complexity. With a focus on delivering sector-specific counsel, it is at the forefront of legal services, driving innovation and excellence in a complex global market.

## Authors

**Jaime Trujillo** has advised clients on transactional matters, including M&A and private equity deals, in both public and private acquisitions and in divestitures for over 25 years. He was acting global chair of Baker McKenzie in 2018 and 2019, and was a member of Baker McKenzie's global executive committee from 2017 to 2021. He has also been the chair of Baker McKenzie's financial committee and for the Latin America region, as well as the managing partner in Colombia. Between 2013 and 2016, he was the leader of Baker McKenzie's Latin America M&A/private equity practice group and has advised on some of the most relevant M&A transactions in Colombia.

**Juan David Velasco** is a transactional tax partner and wealth management practice group leader at Baker McKenzie in Colombia. He has advised numerous public and private companies, as well as private equity and venture capital firms, on multi-jurisdictional tax-related aspects of investment, project finance, M&A and disposition of business interests and corporate reorganisations. He also works with high net worth individuals on private wealth management, tax-efficient estate-planning strategies and cross-border asset-protection structures. His practice focuses on international tax, transactional tax, M&A tax, taxation of private equity and venture capital, taxation of digital economy, taxation of compensation and benefits, and wealth management.

# 1. Legal System

## 1.1 Legal System and Judicial Order

Colombia's legal system follows the civil law tradition. The branches of government are the legislative, the executive and the judiciary. The ordinary judiciary structure is:

- the *Corte Suprema de Justicia*;
- the *Tribunales Superiores de Distrito Judicial*; and
- the *Juzgados*.

# 2. Restrictions on Foreign Investments

## 2.1 Approval of Foreign Investments

Foreign investments in Colombia do not require approval from the authorities. The country generally has a liberal approach to foreign investment, with a few exceptions.

Foreign investment is not allowed in activities directly related to defence, national security, and the processing or disposal of toxic, dangerous or radioactive waste that is not generated in the country. Colombian companies can also be fully foreign owned, except for those in the national broadcast television sector, where foreign ownership is capped at 40%.

Although foreign investment is not subject to approval from governmental authorities, all investments made by non-residents in Colombia must be registered in a timely way with the Colombian Central Bank, either directly or through the local financial institutions through which the funds are transferred. Foreign investments include, among others, the acquisition of equity interests in Colombian companies and contributions to local joint ventures or trusts.

To complete this process, foreign investors must register the investment by submitting a foreign exchange declaration (*declaración de cambio*).

The registration process requires the submission of certain information, such as:

- the value of the investment;
- the number of shares or membership interests acquired;
- the destination of the investment; and
- the origin of the funds.

Depending on the type of investment, deadlines for registration will vary. Registering foreign investment ensures access, through the formal exchange market, to convertible currency to remit dividends and repatriate the investment.

## 2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance

Although foreign investment is not subject to approval from governmental authorities, all investments made by non-residents must be registered with the Colombian Central Bank. Failing to properly complete this registration may lead to penalties being imposed. Under the Colombian exchange regime, the *Superintendencia de Sociedades* (Superintendency of Corporations) has the authority to audit international investment records and impose sanctions for non-compliance. Although Decree 1746 of 1991 authorises penalties of up to 200%, the *Superintendencia de Sociedades* typically enforces penalties that reflect the severity of the violation.

## 2.3 Commitments Required From Foreign Investors

This section is not applicable in Colombia.

## 2.4 Right to Appeal

This section is not applicable in Colombia.

# 3. Corporate Vehicles

## 3.1 Most Common Forms of Legal Entity

The most common form of legal entity in Colombia is the simplified stock corporation (SAS) due to its flexible regime and the freedom that its shareholders have to establish the terms and conditions for its functioning and internal governance structure. Corporations (*sociedades anónimas*, or SA) and foreign company branches are vehicles that are also used.

## SAS

### *Benefits and most common uses*

The SAS offers greater flexibility than other types of corporate vehicles in Colombia. Its incorporation process is simple, there are fewer administrative requirements, and shareholders have greater freedom to determine operational terms and internal structure. The SAS is used for almost any business (except those that, by law, require a corporation).

### *Incorporation process*

An SAS can be incorporated by a private document registered with the relevant chamber of commerce or by public deed (if assets contributed for the incorporation of the SAS require transfer by means of a public deed, such as real estate assets, the SAS must be incorporated by means of a public deed granted before a Colombian notary public).

### *Term*

The term can be indefinite.

### *Number of partners/shareholders*

An SAS must have a minimum of one shareholder, and there are no limits on how many shares they can hold. There is also no limit on the maximum number of shareholders.

### *Liability*

Liability is limited to shareholder contributions, except in situations involving company fraud or abuse that harms third parties.

### *Capital requirements*

Shareholders have a maximum term of two years from incorporation to pay for the subscribed shares.

### *Governance*

The shareholders of an SAS appoint managers responsible for the company to represent it before third parties (called legal representatives). Although the SAS may have a board of directors, it is not a requirement.

### *Other relevant matters*

The SAS does not need a legal reserve, and a statutory auditor is only required if their profits are above 3,000 minimum monthly wages.

## SA

### *Benefits and most common uses*

A corporation or SA offers a more traditional structure. Its shares can be registered and traded on the national stock market. Banking institutions and listed companies must be corporations by law.

### *Incorporation process*

An SA can only be incorporated by a public deed granted before a Colombian notary public and registered with the relevant chamber of commerce. By-law amendments would have to be formalised by public deed.

### *Term*

The term must be limited but may be extended by the shareholders.

### *Number of partners/shareholders*

There must be a minimum of five shareholders in an SA. Under Colombian law, no shareholder may have 95% or more of the outstanding capital of the corporation.

### *Liability*

Shareholder liability is limited to the amount of their contributions. However, in cases of fraudulent actions, overvaluations of contributions in kind and wilful misconduct, or actions of a parent company giving rise to the bankruptcy of an affiliate, the liability of shareholders could be extended.

### *Capital requirements*

At the moment of incorporation, shareholders have to subscribe to at least 50% of the authorised capital and make an initial payment of at least one third. The balance must be paid within one year from the date of incorporation.

### *Governance*

An SA must have a board of directors. This must consist of at least three members and their alternates, as well as a legal representative.

### *Other relevant matters*

An SA must have a legal reserve and statutory auditor.

### Foreign Company Branch

#### *Benefits and most common uses*

Branches are a great alternative for foreign companies that want to have a permanent presence in Colombia. A branch office is an extension of the company's home office and is not a separate legal entity. Branches are widely used by investors in the hydrocarbons sector.

#### *Incorporation process*

The home office issues a resolution, which is formalised in a public deed granted before a Colombian notary public and registered with the chamber of commerce.

#### *Term*

The term is limited to the duration of the home office, but can be extended as long as it is within the duration of the home office.

#### *Number of partners/shareholders*

The branch is not a separate entity from the foreign company. The foreign company is therefore the sole owner.

#### *Liability*

As it is not a separate entity from the foreign company, the home office is liable for the assets and liabilities of the branches. They are jointly and severally liable for tax obligations.

#### *Capital requirements*

The allocated capital must be fully paid, and any increase in capital requires an amendment to the by-laws approved by the foreign company's competent corporate body. However, increasing supplementary investment does not need a by-law amendment and can be made in cash from abroad.

#### *Governance*

Branches do not have any separate governance bodies from their home office. A legal representative/general agent acts on behalf of the company.

#### *Other relevant matters*

A branch must have a legal reserve and statutory auditor.

## 3.2 Incorporation Process

Once the shareholders identify the type of corporate vehicle that best suits their needs, the incorporation process is generally simple and expeditious. The incorporation of corporations and branches does not require authorisation from governmental authorities, as a rule. However, there are specific cases where authorisation from governmental authorities would be required.

Companies and branches must be registered in the commercial registry kept by the corresponding chamber of commerce of the municipality where it is to be domiciled.

For purposes of incorporating a corporate vehicle in Colombia, the following main steps must be completed.

- An incorporation document must be prepared containing the company's by-laws and the names of the shareholders and identification documents. If the shareholders are foreign entities, apostille identification documents are needed. Depending on the type of vehicle, this may be completed through a private document or a public deed.
- The new entity must be registered with the corresponding chamber of commerce of the municipality where it is to be domiciled, by filling out the *Registro Único Empresarial y Social* (RUES) form.
- The new entity must be registered with the tax authorities by completing the form to obtain a tax identification number (NIT). The chamber of commerce also handles the processing of the national tax registry (RUT) used for registering entities with the Tax and Customs National Authority (DIAN). The RUT includes general taxpayer information, along with tax and customs obligations. To obtain this registration, the requisite fees and taxes must be paid to the chamber of commerce.
- Acceptance letters for the positions of legal representatives, substitutes and board members must be obtained, if these appointments are made in the incorporation document, along with copies of the ID documents for the appointed positions.

These documents must be filed with the chamber of commerce. Once all documentation is submitted, the

registration process with the chamber of commerce often takes between one and two weeks.

### 3.3 Ongoing Reporting and Disclosure Obligations

Companies are required to report changes in management to the chamber of commerce within a month of the change being completed. Additionally, companies must register if they are under the control of another entity and report any changes to such controlling structure within 30 business days. Any amendments to the company's name, legal address or social activity must be registered. Any changes in capital, whether increases or decreases, must also be reported to the chamber of commerce.

Private companies are required by Colombian law to fulfil the following main periodic obligations.

- Companies, foreign company branches, and commercial establishments must renew their commercial registration (*matrícula mercantil*) with the chamber of commerce by March 31st each year.
- Companies are required to convene an annual meeting of the General Shareholders Assembly to approve the year-end financial statements, annual reports and dividend distribution. The annual meeting must be summoned with at least 15 business days' notice for corporations (SA) and at least five business days' notice for simplified stock corporations (SAS).
- If the company is under permanent supervision or control by the companies regulator (*Superintendencia de Sociedades*), or if the company has received a special request for information, it has to submit the financial statements along with their notes, management report, statutory auditor's report and other required documents to the *Superintendencia de Sociedades*. In addition, companies in a business group must provide consolidated or combined financial statements to the *Superintendencia de Sociedades*, as applicable.
- The financial statements, notes and report must be filed with the chamber of commerce, unless these have already been submitted to the *Superintendencia de Sociedades*.
- The ultimate beneficial owner (UBO) of the company must be registered in the single registry of UBOs administered by the Colombian tax authority. The UBO must be an individual person. Identifying the ultimate parent company alone is not sufficient to meet Colombian regulatory requirements.
- Companies registered in the Public Contracting Register (RUP) must annually renew their registrations.
- Companies that meet certain specific criteria are also required to implement compliance programmes to mitigate the risks of money laundering, financing of terrorism, financing of the proliferation of weapons of mass destruction as well as corruption and transnational bribery.

### 3.4 Management Structures

Companies are operated and managed according to the rules set out in their by-laws, except for foreign company branches, which must follow the rules established in the by-laws of the home office. Except as set out below, there is freedom to establish the conditions for the operation and management of local vehicles.

Legal entities must appoint at least one legal representative, who is an authorised officer and is empowered to act on behalf of the company. Except for simplified stock corporations, all other entities are obliged to appoint an alternative to the legal representative as well. The legal representative is usually appointed by the board of directors; if the company does not have a board of directors, the legal representative is appointed by the shareholders. The by-laws may establish limits to the powers of the legal representative by means of including events in which the legal representative may require prior authorisation of the shareholders or the board of directors to carry out or perform certain actions (ie, entering into contracts exceeding a certain amount).

Simplified stock corporations (SAS) are not required to have a board of directors. However, for corporations (SA), a board of directors is mandatory and must be composed of at least three members, with their alternates. Decisions taken by the board of directors and by the shareholders must be approved according to the majority rules set out in the company's by-laws, and both shareholder and board decisions must be

recorded in minutes, which must also be incorporated into the corresponding company's minutes ledger.

A foreign branch does not have any separate governance bodies from its home office. Instead, a legal representative or general agent acts on behalf of the company, suggesting more centralised control from the parent company.

### 3.5 Directors', Officers' and Shareholders' Liability

Shareholders of corporations (SA) and simplified stock corporations (SAS) are only liable up to the amount of their respective contributions. However, it is possible to pierce the corporate veil if the company is used to defraud the law or to the detriment of third parties. In these cases, the shareholders and administrators who have carried out, participated in or facilitated the fraudulent acts are liable too. However, piercing the corporate veil involves a high burden of proof, and the specialist company court rarely finds sufficient evidence to do so.

The business judgement rule applies to administrators and usually does not interfere with the normal course of business of administrators or companies. However, the law establishes certain duties for administrators that they need to uphold, with the most important being acting with loyalty and diligence and in the interest of the company. If shareholders consider that an administrator has not acted accordingly, they can commence a corporate action for liability (*acción social por responsabilidad*), and an administrator who has breached their duties can be liable for the damages caused to the company.

## 4. Employment Law

### 4.1 Nature of Applicable Regulations

Even though Colombia follows a civil law system, consistent case law can also be binding precedents on the parties to a dispute. Employment relationships are governed by:

- the law;
- the employment contracts;
- the collective bargaining agreements (where applicable); and
- in some cases, by consistent case law (where not expressly regulated by law).

### 4.2 Characteristics of Employment Contracts

Employment agreements in Colombia can be agreed verbally. Although not required by law, for evidence purposes it is advisable to formalise the terms of the employment relationship in writing and ensure that the written agreement contains certain minimum information (eg, initiation date, type of contract and events of termination for cause). Some provisions are only valid if agreed in writing, such as:

- trial period;
- the characterisation of salary as being "comprehensive" (*salario integral*); and
- fixed-term duration of the employment agreement – this type of arrangement can only have a total duration of four years.

### 4.3 Working Time

The ordinary working hours are those agreed by the parties, or, in the absence of an agreement, the established legal maximum, which is currently 44 hours per week (this is being gradually reduced so that, by 15 July 2026, it will be 42 hours).

Overtime work is that exceeding the ordinary working hours of the company and, in all cases, that exceeding the legal maximum working hours. Overtime work may never exceed two hours a day and 12 hours a week. The labour reform, approved by Congress in June 2025, eliminated the requirement for employers to obtain authorisation from the Ministry of Labour for employees to work overtime. Overtime work must be remunerated as follows:

- daily overtime work (between 6.01am and 7pm) – 25% over the value of daily ordinary work;
- nightly overtime work (between 7.01pm and 6am) – 75% over the value of daily ordinary work; and
- regular night work (not overtime) – 35% over the value of daily ordinary work.

Employers and employees may mutually agree on legally defined special flexible schedules or shifts that

are tailored to the business activities of the employer and the duties of the employees. Depending on the types of schedules or shifts, overtime payments may not apply.

Employees classified as direction, trust and/or management personnel are not entitled to receive overtime surcharges.

### 4.4 Termination of Employment Contracts

Generally, Colombia is an employment-at-will jurisdiction, as an employment agreement may be terminated by the unilateral decision of either of the parties, with or without just cause. Employment can also be terminated by mutual consent of the parties, by the termination of the fixed-term agreed upon or by failure to extend the probation period.

For probationary purposes, the employer should provide written notification to the employee in the case of employment termination.

In some cases, the employer must give the employee advance notice of no less than 15 days. These include where the employer terminates the employment agreement due to recognition of a retirement pension if the employee is still providing services. Apart from those very specific cases, employment law does not require advance notice for the termination of employment contracts, except in the case of non-renewal of fixed-term contracts. Notice of non-renewal of a fixed-term contract must be provided at least 30 calendar days in advance of the date of the expiry term. If it is not, the contract will be automatically renewed.

Employers must pay employees amounts due immediately upon termination (eg, salaries, outstanding vacations, accrued social benefits, outstanding commissions, and any other labour benefit owed). The exact amounts vary depending on the agreed salary structure (eg, comprehensive salary (*salario integral*) or ordinary salary plus mandatory benefits structure) and the termination scenario (eg, dismissal without just cause, mutual consent or resignation).

Unilateral termination without cause will give rise to the payment of statutory severance. The formula to calculate the statutory severance upon unilateral termination without cause depends on the employee's monthly salary, whether the labour contract is for a fixed or indefinite period of duration, and the actual time of duration of the employment.

For indefinite-term contracts, the legal severance for dismissal is as follows:

- for employees who earn less than ten minimum legal monthly salaries (for 2026, COP17.509 million or USD4,669), the severance is equivalent to 30 days of salary for the first year of service and 20 additional days of salary for each additional year of service, proportionally per fraction;
- for employees who earn ten minimum legal monthly salaries or more, the severance is equivalent to 20 days of salary for the first year of service and 15 additional days of salary for each additional year of service, proportionally per fraction;
- for employees who had more than ten years of service as of 27 December 2002, the severance is equivalent to 45 days' salary for the first year of service and 40 additional days of salary for each year subsequent to the first, proportionally for fractions of the year; and
- for employees who had ten years of service or more as of 31 December 1990 and are entitled to reinstatement, the severance is equivalent to 45 days of salary for the first year of service and 30 additional days of salary for each year subsequent to the first, proportionally for fractions of the year.

For agreements entered into under a fixed period or for the duration of a specific job or activity, the severance is equivalent to the salaries corresponding to the unexpired period of the contract, or to the term remaining for the completion of the specific job or activity, which cannot be less than 15 days of salary.

Under Colombian law, a collective dismissal occurs when an employer unilaterally and without just cause terminates the employment agreements of a certain percentage of its employees within a period of six consecutive months, without the required authorisation from the Ministry of Labour. These percentages, which are established by law, vary depending on the size of the company's workforce.

To proceed with a collective dismissal, the employer must obtain prior authorisation from the Ministry of Labour. The Ministry can, at its discretion, approve or reject this request. In practice, the Ministry is often reluctant to grant such authorisation, typically taking more than 12 months to review the request and possibly denying it. Mass layoffs conducted without authorisation from the Ministry of Labour, or in cases where such authorisation has been denied, will be considered void. Consequently, employees must be reinstated with back-pay for salaries and labour benefits accrued but not paid during the period of unemployment.

### 4.5 Employee Representations

In Colombia, works councils/employee representative bodies do not exist as such. However, employees have the right to form or join unions.

A union must have a minimum of 25 members, each of whom must be at least 14 years old, in order to be formed. These requirements must be certified at an initial constitution meeting and executed with the intention to become unionised employees, at which time the employees will sign a foundation minute. The foundation minute is one of the requirements that must be fulfilled to register the union with the Ministry of Labour.

To become part of an already existing union, employees must be at least 14 years old and meet the requirements established in the by-laws of the union.

Unions are authorised to enter into collective bargaining agreements on behalf of the affiliated employees. In addition to the provisions agreed upon between the parties, the collective bargaining agreement must indicate:

- the company or establishment;
- industry and trades covered thereby;
- the place or places where it is to govern;
- the date on which it takes effect, its duration, and the causes and methods of its renewal and termination; and
- the responsibility for non-performance.

Irrespective of the kind of union or the number of affiliates working for an employer, negotiation is held primarily by each union within an entity. An employee may belong to more than one union, and unions of the same or a different nature may coexist in the same company.

Recent reforms formally enable multi-level collective bargaining beyond the company level, including negotiations at the level of groups of companies, branches of economic activity, or entire sectors. The new rules mandate unified bargaining agendas and negotiating tables when multiple unions or employers participate above the company. They also introduce criteria to determine representativeness and allow higher-level agreements to set sector-wide minimum standards of protection. While company level agreements remain in force, higher level agreements prevail when they provide more favourable conditions, in line with the principles of favourability, progressivity and non-regressivity.

The new regulatory design leaves several practical and institutional questions unresolved, particularly regarding how employer representativeness will be determined in heterogeneous sectors, how competing employer associations will be co-ordinated, and how differentiated treatment for micro, small and medium-sized enterprises will operate in practice. The new regime also raises issues concerning the extension of sector-level agreements for all employees within the sector, regardless of union membership, coupled with limitations on the ability to renounce benefits. It also gives rise to questions about its economic impact, as well as the absence of clear rules on the exercise of the right to strike in multi-employer or sectoral negotiations.

## 5. Tax Law

### 5.1 Taxes Applicable to Employees/ Employers

Employees are subject to payment of income tax, at rates that depend on the employee's total income and/or compensation earned during the corresponding fiscal year and that range from 0% to 39% of the employee's taxable income.

Employers are required to withhold the applicable income tax when the salary is paid to the corresponding employee.

Both the employee and employer must make contributions to the social security system. For the healthcare system, a contribution of 12.5% of the employee's base salary must be made, of which the employee contributes 4% and the employer 8.5%. For the pensions system, a contribution of 16% of the employee's salary must be made, of which the employee contributes 4% and the employer contributes 12%.

Employers must also make mandatory contributions to certain private and public entities that provide services to the community related to welfare, education and children's rights (locally referred as *parafiscales*), which collectively amount to 9% of the employee's salary.

## 5.2 Taxes Applicable to Businesses

The main taxes applicable to companies, and the current applicable rates, are as follows.

### Corporate Income Tax (CIT)

The general CIT rate for 2026 is 35%. This tax is imposed on the total income (generated or not in Colombia) of the Colombian company (ie, companies incorporated in Colombia, domiciled in Colombia or having their place of effective management in Colombia) and on the income of foreign non-resident companies generated in Colombia. An additional surcharge ranging from 5% to 15% is applicable to companies in the hydrocarbons and mining sectors. Industrial users of a free trade zone (FTZ) are subject to a special CIT rate of 20%. Since the 2023 fiscal year, local companies are subject to a minimum effective tax rate of 15% of accounting profits. If the tax liability calculated on net taxable income results in an effective tax rate of lower than 15% of accounting profits, the taxpayer must increase the tax liability until it reaches the minimum.

### Capital Gains Tax

In Colombia, a company must pay capital gains tax when it sells fixed assets held for two years or more or upon liquidation if the company was incorporated for a term of two years or longer, at a rate of 15%.

### Withholding Tax (WHT)

The WHT system is a general mechanism of advance tax collection. All corporate entities are required to collect or withhold taxes from payments made to third parties. The WHT collection agents must collect the applicable WHT amounts, and every month must deposit the withheld amounts to the tax authority, file monthly WHT returns and issue WHT certificates to the withheld third parties. The withheld third parties, who are also subject to CIT declaration/payment, may credit the withheld taxes in their annual CIT return. The WHT rates vary depending on the nature of the payment. The general WHT rate on payments made to foreign non-residents is 20%.

### Value Added Tax (VAT)

The standard VAT rate in Colombia is 19% of the invoiced amount. This tax is applicable to:

- the sale of movable assets;
- the provision of services in Colombia or from abroad (if the beneficiary is located in Colombia); and
- the importation of assets or goods that have not been expressly excluded – certain services are exempt from VAT, such as medical services, educational services, internet connectivity, and in some cases energy, gas and water utilities.

### Industry and Commerce Tax

This is a municipal tax applicable to all individuals, legal entities and de facto companies who carry out industrial, commercial or service activities within the jurisdiction of the relevant municipality. The rates vary from 0.2% to 0.7% calculated over the gross income for industrial activities and 0.2% to 1.6% calculated over the gross income for commercial and services activities.

### National Stamp Tax

This is an indirect levy triggered by the execution of certain legal acts, documents and contracts that generate legal effects in the country. As a general rule, any private agreement may be subject to this tax, even if does not require the involvement of a notary or public authority. Dormant since 2010 (when its rate was reduced to 0%), the tax was temporarily reactivated by the government at a 1% rate by Decree 175

of 14 February 2025, issued pursuant to temporary exceptional state powers of national commotion. This amendment applied until 31 December 2025. As of 1 January 2026, the rate has reverted to 0%, and the tax is currently not effectively triggered in practice.

According to recent doctrine by the DIAN and consistent with jurisprudence of the Council of State, for contracts with an undetermined amount, the triggering events are the signing, granting or acceptance of the document, while the taxable base is defined by each payment or credit made under the contract. Therefore, payments made before 22 February 2025 – the effective date of the Decree – are subject to a 0% rate while those made from that date through the end of the year will be taxed at 1%. Starting 1 January 2026, the rate should revert to 0%.

## 5.3 Available Tax Credits/Incentives

Colombia offers the following tax incentives to local and foreign companies.

### Double Taxation Treaties

Colombia has entered into an extensive network of double taxation treaties.

### Foreign Tax Credit Applicable to All Colombian Companies

Foreign income taxes may be credited by Colombian companies against their local CIT liability, subject to certain limitations.

### CIT Exemptions

The following income generated locally by a Colombian company is exempt from CIT:

- income obtained from eco-tourism services;
- income related to the sale of social interest or priority housing, provided that the taxpayer obtains the corresponding governmental permit; and
- income of companies incorporated in the departments of La Guajira, Norte de Santander and Arauca (ZESE) until 2024 will have a five-year CIT exemption.

### Tax Credit Applicable to Certain Investments

A 30% tax credit is available for investments made in certain scientific and/or technological projects or in professional training projects of governmental, public or private institutions.

### Special CIT Rate for Free Trade Zones

These are geographically delimited areas in the Colombian territory that have a special tax and customs regime. Companies that have this status can access tax benefits such as the application of a preferential (lower) income tax rate, 0% VAT and tariffs on foreign goods, and 0% VAT on domestic goods, among others.

### Tax Benefits for Investments in Non-Conventional Energy Sources

Tax incentives exist to encourage the generation of energy from clean and renewable sources. The following are the main tax incentives:

- income from the sale of electric power generated from wind, biomass or agricultural waste is exempt from CIT, provided the seller issues and negotiates greenhouse gas reduction certificates;
- income tax deduction of 50% of the value of the investment made in energy generation projects from non-conventional sources;
- VAT exemption on the acquisition of goods and services necessary for the development of non-conventional energy projects;
- exemption from payment of import duties on machinery, equipment, materials and inputs necessary for the production of energy from non-conventional sources; and
- accelerated depreciation incentive for machinery, equipment and civil works necessary for the development of non-conventional energy generation projects.

### The CFC and CHC Regimes

Colombia offers two additional tax incentive regimes that are particularly relevant for multinational structures and cross-border investments: the controlled foreign company (CFC) regime and the Colombian holding company (CHC) regime.

#### *The CFC regime*

The CFC regime is aligned with OECD BEPS Action 3 and targets foreign entities controlled by Colombian tax residents. Under the Colombian tax code, passive

income obtained by such entities may be attributed and taxed in Colombia. However, the regime offers an incentive by excluding active income from taxation. In addition, income effectively distributed is not subject to additional taxation if already reported, allowing for deferral and avoidance of double taxation. These features position the CFC regime as a compliant yet flexible structure for managing offshore investments.

*The CHC regime*

The CHC regime offers a full income tax exemption on dividends and capital gains derived by a CHC from qualifying foreign subsidiaries, as long as the CHC holds at least 10% participation and meets certain substance requirements. Dividends paid by the CHC to non-residents are considered foreign-sourced and may benefit from WHT relief. This regime is a powerful incentive to set up regional holding platforms in Colombia, aiming to boost inbound and outbound foreign direct investment.

## 5.4 Tax Consolidation

Tax consolidation is not allowed in Colombia.

## 5.5 Thin Capitalisation Rules and Other Limitations

Thin capitalisation rules (when the level of debt of a company is much greater than its equity capital) are applicable in Colombia based on the following:

- debt-to-equity ratio – for income tax purposes, a taxpayer generally may not deduct interest paid on loans that are acquired, directly or indirectly, from related parties and that exceed a 2:1 debt-to-equity ratio, considering the taxpayer's net equity on December 31st in the preceding year; and
- loans from third parties – where a related party acts as guarantor or provides a guaranty, participates in a back-to-back operation, or substantially acts as a creditor in any other transaction, loans from third parties are subject to the thin capitalisation limitation.

## 5.6 Transfer Pricing

Transfer pricing rules are applicable in Colombia.

## 5.7 Anti-Evasion Rules

The following are some of the key anti-evasion rules applicable in Colombia.

### Indirect Sales

Colombia has an indirect transfer regime. The regime taxes the indirect disposal of assets located in Colombia, through the transfer, by any means, of shares, participations or rights in foreign entities, as if the Colombian underlying assets were directly transferred. Secondary legislation clarifies the tax basis calculation and WHT obligations on indirect transfers.

### General Anti-Abuse Rule

This rule grants the DIAN the power to recharacterise operations that have no business purpose. This encompasses transactions that are artificial, have no economic or commercial purpose or are aimed at obtaining a tax advantage. The burden of proof for this purpose is on the DIAN.

### Limitation-on-Benefits Rule

Colombia has an anti-abuse clause that contains a limitation-on-benefits rule, whereby only one tax benefit can be applied to a single economic event. Otherwise, a taxpayer will lose the higher benefit applied.

## 5.8 Tariffs

Colombia operates a multi-tiered tariff system based on the Most Favoured Nation (MFN) principle, with the following general structure:

- 0–5% – applied to capital goods, industry inputs and raw materials not (or scarcely) produced domestically;
- 10% – applicable to most manufactured products; and
- 15–20% – imposed on consumer goods and others categorised as "sensitive" products.

In addition, Colombia implements targeted higher tariffs to protect specific sectors:

- automobiles – tariff set at 35% to support local assembly operations;
- agricultural goods (eg beef, rice, dairy) – tariffs can reach as high as 80–98%, drastically limiting imports outside regulated quotas; and

- steel products – a 35% safeguard tariff on imports (specifically from China, Turkey and Russia) was instituted in 2024 to counteract price undercutting and subsidy-driven dumping.

### Preferential Trade Agreements

*Free trade agreement (FTA) with the United States (effective May 2012)*

This involves a gradual elimination of tariffs, currently benefiting about 70% of US agricultural exports, with remaining tariffs phased out over a 19-year period.

*Trade agreement with the EU (active since 2014)*

This involves nearly 100% tariff elimination for EU-manufactured goods and broad agricultural liberalisation, though sensitive products – such as poultry, rice and pork – remain protected via safeguard mechanisms.

## 6. Competition Law

### 6.1 Merger Control Notification

Any transaction, regardless of its legal form (eg, shares or asset purchase, acquisition of IP rights, etc), that meets the requirements below is subject to pre-merger control by the *Superintendencia de Industria y Comercio* (Superintendency of Industry and Commerce; SIC).

- The transaction entails a change of control in one or more undertakings involved in the transaction. "Control" is defined in antitrust law as the possibility of influencing another party's commercial policies and strategies or disposing of key assets. Minority shareholdings may grant control under this definition in certain circumstances (ie, through veto rights).
- The parties to the transaction (eg, buyer and seller) are active in Colombia either in the same economic activity (resulting in a horizontal overlap for the transaction) or on different levels of the same value chain (creating vertical links).
- In the fiscal year immediately preceding the transaction, the parties had revenues in Colombia or total worldwide assets in excess of the value set yearly by the SIC. In 2026, this value is equivalent to COP85.6 billion or USD22.8 million.

If these conditions are met, parties require an authorisation from the SIC prior to closing the transaction. The type of submission for obtaining this clearance will depend on the parties' combined market share. If market shares in all relevant markets in Colombia are below 20%, a short-form notification is available. If the combined share in at least one relevant market in Colombia is equal to or exceeds 20%, a full filing (or pre-assessment request) will be required.

### Joint Ventures

As per SIC precedent, joint ventures (JVs) are economic concentrations (fulfilling the first criteria above) if they:

- are permanent or long-lasting;
- involve the joint development of a non-complementary activity of the parties; and
- are fully functional in terms of financial and administrative capacity.

If the JV meets these requirements and additionally meets the local overlap and thresholds test, it will be subject to pre-merger control.

### 6.2 Merger Control Procedure

For short-form notifications, the SIC has ten business days from the date on which the authority receives all the required information to review it and issue a letter acknowledging receipt of the submission. The authority has up to five years from the date of closing to challenge the implied approval through the short form.

For full filings, the SIC has an initial stage (Phase 1) to review and decide on the submission, which lasts 30 business days from the date the necessary information is submitted. During this phase, the SIC may either approve the transaction or proceed to a more detailed review (in a second phase). During Phase 1, the SIC also posts a notice on its website to inform third parties about the transaction, allowing them ten business days to file any challenges and relevant information.

If the SIC considers that the transaction requires further review and analysis, it will move the submission to Phase 2. This second phase lasts three months from the date the required information is submitted.

The SIC can extend this term at least once. In this phase, the SIC requests additional information from other authorities, competitors, clients and suppliers to perform its market analysis. If the SIC issues a request for further information (RFI) to the parties during Phase 2, this resets the three-month period, but only the first RFI has this effect; subsequent RFIs do not suspend the duration of the review.

### 6.3 Cartels

Colombian competition law generally prohibits anti-competitive agreements between competitors, such as price fixing, bid rigging and market allocation, among others.

Antitrust laws apply to any market agent, whether domestic or foreign, whose conduct has or may have an effect, even if partially, in any market in Colombia.

Penalties for companies engaging in anti-competitive agreements can be of up to 100,000 minimum monthly salaries (COP175 billion or USD46.3 million). Fines against individuals can be as high as 2,000 minimum monthly salaries (roughly COP3.5 billion or USD927,614 at current exchange rates). The SIC can impose fines against corporate officers and employees who executed, authorised or tolerated the conduct.

### 6.4 Abuse of Dominant Position

Colombian competition law generally prohibits anti-competitive behaviour (ie, behaviour that is restrictive regardless of the existence of a dominant position) and abuses of dominance (eg, tying, discrimination and market access obstruction, among others).

Penalties for companies engaging in abusive unilateral conduct can be of up to 100,000 minimum monthly salaries (COP175 billion or USD46.3 million). Fines against individuals can be as high as 2,000 minimum monthly salaries (roughly COP3.5 billion or USD927,614). The SIC can impose fines against corporate officers and employees who executed, authorised or tolerated the conduct.

## 7. Intellectual Property

### 7.1 Patents

A patent is an exclusive right granted to an inventor over their invention. In Colombia, the patent protection period lasts for 20 years from the filing date, and it cannot be renewed.

The registration process begins with the submission of the application to the SIC, along with the required registration fees. Following this, the office carries out formal and substantive examinations to ensure compliance with legal requirements and to assess the invention's novelty, inventive step and industrial applicability. If all criteria are satisfied, the patent is granted.

Enforcement of patent rights may involve cease-and-desist letters and conducting mediation hearings as out-of-court remedies. Judicial remedies include filing for injunctions, ordering seizures and pursuing infringement lawsuits, which enable the patent holder to seek monetary compensation for damages.

### 7.2 Trade Marks

A trade mark identifies goods or services and can be categorised into types such as word, stylised and figurative trade marks, or even other non-traditional ones such as colour or sound marks. Protection is valid for ten years from the registration date and can be renewed indefinitely every subsequent ten years.

The registration process involves filing an application with the Trade Mark Office, paying the required fees and undergoing a formal examination. Following this, the trade mark is published to allow for opposition for 30 days. Afterwards, the office conducts a substantive examination to assess the trade mark's distinctiveness demanding the application for clarifications on claimed products or colours. The Office then issues a resolution granting or denying the registration of the trade mark.

Enforcement activities for trade marks include issuing cease-and-desist letters and holding mediation hearings as out-of-court remedies. Judicial remedies include filing for injunctions, seizures and infringement actions, through which the owner can seek monetary

compensation for damages of unauthorised use of registered trade marks.

### 7.3 Industrial Designs

Industrial design protects the ornamental aspects of a product, focusing on its aesthetic appearance rather than its technical or functional features. The protection for industrial designs lasts for ten years from the filing date and cannot be renewed.

The registration process for industrial designs begins with filing an application and paying the required fees. This is followed by a formal examination and publication of the design for opposition purposes. After the opposition period, a substantive examination takes place, which results in a resolution either granting or denying the registration of the design.

Enforcement of industrial design rights may involve sending cease-and-desist letters and conducting mediation hearings as out-of-court remedies. Judicial remedies include filing for injunctions, seizures and infringement actions, allowing the owner to seek monetary compensation for damages incurred due to the infringement.

### 7.4 Copyright

Copyright protects the original expression of artistic, scientific or literary works. It encompasses both moral and economic rights, with moral rights protected indefinitely and economic rights protected for the lifetime of the author plus 80 years from the work's creation.

In Colombia, registering works with the National Copyright Office (*Dirección Nacional de Derecho de Autor*) has declaratory but not constitutive effects. However, it is advisable to register works to establish evidence of ownership.

Enforcement of copyright involves activities such as cease-and-desist letters and conducting mediation hearings as out-of-court remedies. Judicial options include filing for injunctions, seizures and infringement actions, allowing the owner to seek monetary compensation for damages caused by the infringement.

### 7.5 Others

Other protected IP rights include trade secrets or unlawful and anti-competitive practices between competitors in the market where there are no IP registrations or copyrights, which can be enforced via unfair competition actions. Trade secrets encompass undisclosed information usable in productive, industrial or commercial activities, capable of transmission to third parties.

Software is safeguarded under copyright law in Colombia and follows similar procedures.

## 8. Data Protection

### 8.1 Applicable Regulations

Law 1581 of 2012 is the primary regulation governing data protection in Colombia. It adopts a consent-based approach for the processing of personal data concerning Colombian data subjects. It covers various important matters, including:

- requirements for valid consent for the processing of personal data;
- special treatment and protection of sensitive personal data;
- rights of data subjects regarding their personal data;
- transmission and transfer of personal data to third parties;
- obligations imposed on data controllers and processors; and
- penalties for violations of the data protection regulations.

Additionally, Decree 1377 of 2013 (compiled in Decree 1074 of 2015) supplements these provisions by imposing additional obligations related to the minimum content requirements for privacy policies, notices, data transmission and transfer agreements, and specifications for international data transfers.

### 8.2 Geographical Scope

The SIC has consistently ruled that Colombian data protection laws apply to any company that processes personal data in Colombia. According to the definition of "processing" in Law 1581 of 2012 (which includes

data collection), any company, whether local or foreign, that collects or processes personal data from Colombian residents is subject to the provisions and obligations of Colombian data protection law.

In several cases, the SIC has explicitly stated that even the act of collecting data through cookies from web or mobile browsers falls under the scope of Colombian data protection regulations. Therefore, any foreign entity engaged in online data collection from Colombian individuals must comply with local data protection laws.

### 8.3 Role and Authority of the Data Protection Agency

The data protection authority in Colombia is the SIC.

## 9. Looking Forward

### 9.1 Upcoming Legal Reforms

#### Tax Reform

Given Colombia's political cycle (presidential elections will be taking place in mid-2026), it is common for new administrations to promote comprehensive tax reforms at the beginning of their term. In this context, it is reasonably expected that a new tax reform may be proposed in the short term, with the objective of adjusting fiscal policy, strengthening government revenues and addressing structural budget needs.

#### Reform to the General Data Protection Regulation in Colombia

A bill of law is currently being discussed in the Chamber of Representatives, which seeks to reform and modernise the personal data protection regime in Colombia. Among other aspects, the bill proposes to:

- incorporate a new legal basis for the processing of personal data, such as the performance of a contract or compliance with a legal obligation;
- expand the definition of sensitive personal data to include geolocation data, genetic data and neurodata;
- reduce the deadline for reporting security incidents or data breaches from 15 business days to 72 hours; and
- establish the obligation for controllers or processors operating on a large scale to enable a contact channel and appoint a representative before the SIC.

#### Consumer Protection Legislative Outlook

A bill of law proposes a comprehensive reform of Colombia's Consumer Protection Statute. The bill aims to modernise and strengthen consumer rights across both traditional and digital markets.

Key proposals include:

- empowering local authorities to impose sanctions;
- requiring transparency in credit offers (eg, disclosing the annual cost of financing);
- mandating the display of product reparability indexes; and
- prohibiting tied sales, deceptive environmental claims (greenwashing) and discriminatory profiling in customer service.

#### Technology

Colombia continues to move towards AI regulation through ongoing legislative initiatives. In July 2025, the government introduced a new AI bill establishing a risk-based regulatory framework, aligned with international standards.

The bill includes specific IP implications, notably:

- AI developers must obtain explicit authorisation to use protected works, images or voices for training models; and
- exceptions may apply only under limited legal grounds, subject to case-by-case assessment.

The proposed system also introduces sanctions (fines and operational suspensions) for misuse of AI systems, reinforcing compliance obligations for companies. These developments reflect a broader shift from policy-oriented governance towards binding regulatory controls, especially concerning data use, training practices and IP protection.

In parallel, the Colombian Criminal Code was amended to classify AI-driven impersonation, such as deepfakes, as an aggravated offence. The amendment will

enter into force in July 2026, marking a key milestone in addressing the misuse of generative AI technologies in Colombia.

### Impact of Global Trade Developments

Colombia was expected to adopt a new customs code – focused primarily on the sanctioning and enforcement framework – before 20 June 2026, in compliance with a Constitutional Court judgment which mandated Congress to replace the current regime. The reform seeks to modernise, simplify and elevate the customs framework to statutory level, introducing clearer definitions of infractions, reducing the number of sanctionable conducts, and embedding principles such as proportionality, good faith and legal certainty. It also aims to strengthen anti-contraband controls while promoting voluntary compliance through mechanisms such as post-clearance audits and more balanced sanctioning rules (including fewer automatic seizures and no double penalties for the same conduct).

# Trends and Developments

**Baker McKenzie S.A.S.**

**Baker McKenzie S.A.S.** was established in 1949 and is recognised as one of the foremost international law firms. With a presence in 45 countries through 75 offices, including in 36 of the top 40 global economies, the firm employs nearly 5,000 lawyers and around 13,000 staff. Renowned for transactional law services, it offers a comprehensive global platform, industry-specific expertise, and profound local market insights allowing seamless co-ordination on complex, multi-jurisdictional matters through deep regional integration. The firm is the preferred choice for multinational corporations and both domestic and international private equity firms, and is valued for its integrated global, Latin American and local Colombian market expertise. Serving a diverse clientele, the firm specialises in advising high-profile multinational companies, particularly in heavily regulated industries such as oil and gas, energy, healthcare, life sciences, automotive, agrifood, chemicals and real estate. In Colombia, the firm is frequently instructed on sophisticated transactions and projects involving cross-border elements and regulatory complexity. With a focus on delivering sector-specific counsel, it is at the forefront of legal services, driving innovation and excellence in a complex global market.

## Authors

**Jaime Trujillo** has advised clients on transactional matters, including M&A and private equity deals, in both public and private acquisitions and in divestitures for over 25 years. He was acting global chair of Baker McKenzie in 2018 and 2019, and was a member of Baker McKenzie's global executive committee from 2017 to 2021. He has also been the chair of Baker McKenzie's financial committee and for the Latin America region, as well as the managing partner in Colombia. Between 2013 and 2016, he was the leader of Baker McKenzie's Latin America M&A/private equity practice group and has advised on some of the most relevant M&A transactions in Colombia.

**Juan David Velasco** is a transactional tax partner and wealth management practice group leader at Baker McKenzie in Colombia. He has advised numerous public and private companies, as well as private equity and venture capital firms, on multi-jurisdictional tax-related aspects of investment, project finance, M&A and disposition of business interests and corporate reorganisations. He also works with high net worth individuals on private wealth management, tax-efficient estate-planning strategies and cross-border asset-protection structures. His practice focuses on international tax, transactional tax, M&A tax, taxation of private equity and venture capital, taxation of digital economy, taxation of compensation and benefits, and wealth management.

## Colombia's Political Climate

Colombia is currently in the fourth and last year of its first-ever left-wing government, under President Gustavo Petro. This period has been marked by strident announcements by the administration, rather than tangible achievements: President Petro has announced extensive and business-averse reforms in key sectors such as healthcare, pensions, employment, energy and utilities, but has failed to pass most of them through Congress.

Nonetheless, he has managed to pass some of the less disruptive proposals: for example, a comprehensive pensions reform was approved by Congress in June 2024, and a wide-ranging labour reform was approved by Congress in June 2025. Although the pensions reform was supposed to become effective as of 1 July 2025, the Constitutional Court ruled that the reform failed to properly comply with a formal requirement during its approval process. As a result, the reform remains suspended until the Constitutional Court formally decides whether the defect was properly remedied by Congress in a subsequent approval process completed in the second half of 2025.

This pushback in Congress and the courts reflects positively on the Colombian system of checks and balances. However, President Petro's leadership approach has polarised the nation, downplayed security and added an undesirable level of unpredictability to the business climate. Additionally, other adverse factors such as constrained GDP growth and persistently high inflation and interest rates, together with the recent government decision to temporarily suspend the "structural budgetary balance rule" and failure to pass a new tax reform, have further contributed to this instability.

Colombia held parliamentary elections in March 2026, resulting in a new Congress that is expected to remain fragmented, meaning that the approval of major reforms is likely to continue facing political constraints in the coming years. The political landscape is now focused on the upcoming presidential elections, which are scheduled to take place before the end of the first half of 2026. The outcome of these elections will be decisive for businesses in Colombia, as it will shape the direction of policy across several areas, including hydrocarbon exploration, energy transition, and the management and financing of the healthcare and pension systems.

Despite the challenges facing the industry, several significant transactions were executed over the past year. While there was a decline in the number of transactions, the overall value of deals increased. Among the most notable transactions were the completion of Davivienda's acquisition of Scotiabank's retail operations in Colombia, following receipt of the relevant regulatory approvals, as well as the integration of Tigo and Movistar's operations in Colombia. This integration involved several related transactions, including Millicom's acquisition of the Colombian government's equity stake in Colombia Telecomunicaciones (Coltel), following Telefónica's earlier divestment of its participation a few months prior, and Millicom's acquisition of EPM's stake in Tigo. In addition, the increase in the ownership stake of Brookfield Renewable Partners and the Qatar Investment Authority in Isagen SA ESP was also notable. In terms of sector activity, the most dynamic industries included software, renewable energy, and banking and financial services.

## Regional and Local Climate

After several years of shifting to the left, recent elections have led to a number of countries moving towards more centrist and right-leaning administrations, which, to varying degrees, have reintroduced more market-oriented policies. However, this has resulted in a more heterogeneous and less predictable investment landscape, where investment conditions must be assessed on a country-by-country basis. This is especially pertinent because large investors usually do not view individual countries in the region (except Brazil) as separate markets but rather categorise them into three or four major markets (eg, Southern Cone, Andean Region, Pacific Rim countries, Caribbean Rim countries). Consequently, events in a specific country in the region tend to influence investment decisions in other countries that are considered part of the same market.

Brazil – traditionally a key driver of deal activity in the region – continues to play a central role, although its economic recovery and growth trajectory have been more gradual than initially expected. Meanwhile, Mex-

ico has emerged as a primary focus for investment in the region, benefiting from its proximity to the United States and the structural impact of nearshoring. In turn, investors are increasingly prioritising opportunities in Mexico over expansion into other Latin American markets.

## Trends and Developments in M&A and Corporate

### *Regional scale targets*

In recent years, there has been a noticeable shift in M&A transactions towards targets with regional, multi-jurisdictional operations. Investors are looking for companies that offer regional scale and have a presence beyond Colombia. This trend is particularly evident in sectors such as energy, telecommunications and healthcare, where companies have successfully expanded their operations into the Andean region and Central America.

Colombian companies with a proven track record of regional expansion are particularly attractive to investors. These companies provide an opportunity to gain a foothold in multiple markets and leverage regional synergies. The focus on regional scale reflects a broader strategic shift among investors, who are seeking to diversify their portfolios and mitigate country-specific risks by investing in companies with a broader geographic reach.

### *Dominance of strategic investors*

Strategic investors have been at the forefront of M&A activity in Colombia and the broader Latin American region. These investors are typically more resilient to short-term market fluctuations and economic instability because they have a long-term investment horizon. Unlike financial investors, who may be more sensitive to short-term economic changes and volatility, strategic investors are focused on the bigger picture and their long-term strategic goals.

One significant advantage that strategic investors have is access to cheaper financing. Many of these investors have substantial cash reserves and can secure financing at preferential rates, making it easier for them to pursue and close deals even in challenging economic conditions. However, the dominance of strategic investors in the M&A market has also led to increased antitrust scrutiny. Regulators are more vigilant about potential anti-competitive effects, which can prolong the deal-making process and lead to more frequent use of carve-outs to address regulatory concerns.

### *Pre-organisation carve-outs*

Carve-outs have become a prevalent trend in the Colombian M&A market. Companies are increasingly engaging in pre-sale reorganisations to create portfolios that are easier to sell, more attractive to investors and subject to less regulatory scrutiny. By isolating specific business lines or assets, sellers can unlock hidden value by excluding underperforming units from transactions and focus on high-growth segments.

Carve-outs allow sellers to highlight and capitalise on high-performing parts of their business, making them more appealing to potential buyers. By separating out specific business units or assets, companies can set competitive prices for these parts, enhancing their attractiveness and facilitating smoother transactions.

### *Earn-outs and deferred payments*

The economic instability and higher costs of capital have made it challenging to accurately value businesses, leading to an increased use of earn-outs and deferred payment mechanisms in M&A transactions. Earn-outs and deferred payments are payment structures that allow the final purchase price to be contingent on the future performance of the acquired business. These mechanisms help bridge the valuation gap between buyers and sellers and mitigate the risks associated with past performance volatility and uncertain future outcomes.

However, while earn-outs and deferred payments offer a practical solution to valuation challenges, they also come with potential downsides. These structures can lead to future disputes and litigation if the agreed-upon performance targets are not met or if there are disagreements over the calculation of earn-outs. Despite these risks, the use of earn-outs and deferred payment mechanisms have continued to gain traction in the Colombian M&A market as investors seek to navigate economic uncertainty, although they still account for a relatively small proportion of overall transactions.

### *Artificial intelligence (AI) in due diligence*

Identifying how target companies are relating and adapting to AI developments has become a key part of conducting due diligence. It has become important to identify whether the target has incorporated AI tools and applications into its business and whether the AI tools being used comply with intellectual property (IP) regulations and are not misusing IP rights from third parties.

Buyers conducting due diligence in IP-related companies are also seeking to understand whether the IP rights of the target are properly protected from potential misuses of third parties' AI developments.

### *Integration of AI*

The adoption of AI is transforming the M&A landscape by streamlining processes, enhancing decision-making and improving efficiencies. Advanced AI tools now go beyond traditional data analysis by generating summaries, flagging risks, automating contract review, and supporting valuation through predictive analytics, which is helping legal professionals and investors make more informed decisions. This technological advancement is expected to continue shaping the M&A market in the years to come.

In the Colombian legal sector, AI is increasingly being used in due diligence, document preparation and deal execution overall.

### *ESG considerations*

Environmental, social and governance (ESG) factors are playing an increasingly critical role in M&A and corporate-related processes. Investors now have more sophisticated tools to assess and verify compliance with ESG standards, while local regulations increasingly provide companies with clearer guidance on both implementing ESG practices and reporting on their compliance with such ESG standards. Accordingly, investors are prioritising thorough due diligence on ESG matters to ensure that potential targets align with their own ESG values, have sustainable business models and are not exposed to significant reputational risks. This focus on ESG integration is becoming a key driver in decision-making processes, as investors seek to mitigate risks and capitalise on opportunities related to sustainability.

### *The National Artificial Intelligence Policy*

Following the adoption of the National Artificial Intelligence Policy in 2025, Colombia has continued advancing towards a more structured regulatory and institutional framework for AI, with particular emphasis on IP, copyright and digital risks.

Colombia has recently proposed multiple bills in the Senate requesting regulatory updates from the Colombian Copyright Office, as the current law from 1982 applies only to content created by human beings. However, ongoing discussions are now exploring hybrid authorship models that recognise collaboration between humans and AI, which may become part of future reforms.

In parallel, administrative authorities, such as the Colombian Trade Mark Office, have begun incorporating AI into IP administration processes, particularly in trade mark examination and similarity searches. At the same time, they are strengthening compliance requirements for technology transfer agreements involving data and AI systems.

### *Guidelines on cybersecurity, privacy and proportionate use, regulating the development and use of AI in Colombia*

On 20 May 2025, Congress introduced Bill No 422 to regulate AI. The bill draws on international models such as the EU Artificial Intelligence Act and a Brazilian bill. It outlines incentives, risk classifications and accountability mechanisms for AI development and deployment in Colombia:

- national AI oversight and regulatory authority – the Ministry of Science, Technology and Innovation will be the agency responsible for supervising and regulating the development and use of AI;
- adaptation and review – the Ministry will periodically review and update the law to ensure that it remains relevant in light of technological advancements;
- regulatory sandboxes – these controlled environments will allow for the testing of AI innovations under flexible regulatory conditions, promoting responsible experimentation;

- incentives for AI research and development – the bill seeks to implement programmes and funding to support AI research; and
- protection of fundamental rights – continuous monitoring and oversight will be carried out to classify and mitigate risks, ensuring the safe development and use of AI.

Since late 2024, the Colombian Congress has formed a special Bicameral Commission on Artificial Intelligence to support, analyse and build consensus regarding AI-related legislative initiatives.

The commission, established by Resolution 02 on 11 September 2024, monitors legislative proposals and assesses future initiatives. It is currently working to shape AI legislation and strengthen the regulatory framework for technological development.

## Developments in IP Matters

### *Pending comprehensive AI legislation (2026 status)*

As of early 2026, multiple AI bills, including those introduced in July and October 2025, remain under review by Congress and have not yet been enacted, reflecting an active but still transitional regulatory environment. Recent proposals include significant penalties, such as fines of up to 3,000 minimum wages, operational suspension, or closure of AI-related activities for non-compliance.

### *AI innovation programmes (2026)*

Initiatives such as the Colombia Inteligente 2026 call, launched by the Ministry of Science, Technology and Innovation, promote AI research and development across strategic sectors, focusing on food security, energy transition, healthcare sovereignty, and science for peace. These initiatives aim to strengthen research, technological development, and the adoption of AI, contributing to progress in the following areas:

- biodiversity management and bioeconomy;
- intelligent agrifood systems;
- renewable energy and energy transition;
- AI technologies for educational transformation in the regions; and
- risk management and wildlife conservation through AI.

### *Trade marks classification and practice updates*

Recent developments in IP in Colombia demonstrate the adoption of the new Nice Classification (13th edition), which introduces changes in product classification, including:

- rescue, safety and emergency goods moving from Class 9 to Class 12; and
- electrically heated garments moving from Class 11 to Class 25.

Adjustments in the classification of food products. The Colombian Trade Mark Office has begun incorporating AI to enhance the efficiency and speed of trade mark searches. At the same time, the international IP system is increasingly integrating advanced tools, including image similarity search, automated assistance in the Vienna Classification, retrieval of word marks, and pre-examination data extraction.

In parallel, Official Communication No 002 of 2025, issued by the Trade Mark Office, established stricter compliance expectations for technology transfer processes involving personal data or technologies designed to process such data. Furthermore, a legal interpretation released in February 2026 provided additional clarity on key aspects such as cross-border data flows, allocation of responsibilities, contractual structures and accountability requirements.

Taken together, these developments are not isolated changes but rather part of a broader transformation of Colombia's IP framework. They signal a shift towards a more integrated and sophisticated system, where AI adoption, data governance and regulatory compliance interact to reshape how IP is managed both at an operational and strategic level.

## Trends in Employment and Compensation Matters

### *Sexual harassment in the workplace*

An employer's Workplace Coexistence Committee is no longer competent to investigate cases of sexual harassment. These cases must be exclusively handled by senior management and the human resources department, and employers must now establish a separate internal procedure led by the human resources function to receive and address cases and complaints

of sexual harassment in the workplace and consequently update workplace regulations.

### *New labour inspection model*

Employers must align with the new labour inspection model established by the Ministry of Labour. This model, referred to as the "Inspection with Purpose", modernises labour and social security inspections and introduces a human rights-based approach. Its primary objective is to unify inspection criteria at the national level and ensure consistent and equitable enforcement actions aimed at eliminating discrimination in the workplace.

The new model incorporates principles such as in dubio pro operario, a preventative approach, and the recognition of violence and rights violations, including discrimination, xenophobia, ableism and ageism. Employers must prepare for inspections based on six mandatory approaches: differential, gender, disability, ethnic (with an anti-racist perspective), life-course and intersectional. These inspections (preventative, reactive or Ministry-initiated) will be unannounced and prioritised in cases of potential labour violations, violence or infringements of trade union rights. Employers must also certify discrimination-free conditions, maintain accessible documentation, and ensure information availability for oversight.

In addition, inspections under the "Inspection with Purpose" framework will be conducted directly by the "Elite Inspection Group". This specialised group, with a differential and gender-based approach, will be responsible for carrying out site visits, urgent protection measures, and other procedures associated with the new model.

### *Shift from comprehensive salaries to ordinary salaries*

A noticeable market trend has emerged involving the execution of addenda to employment agreements to transition employees from a comprehensive salary scheme (*salario integral*) to an ordinary salary structure. This development is largely driven by the significant increase in the statutory minimum wage for 2026, which directly affects the minimum threshold required to maintain a valid comprehensive salary arrangement.

Under Colombian law, a comprehensive salary must be at least 13 times the statutory minimum wage. As a result, increases in the minimum wage raise the legal floor for employees to remain under this compensation scheme, prompting employers to reassess existing arrangements.

For 2025, the statutory minimum wage was COP1,423,500, and the statutory minimum comprehensive salary was COP1,750,905.

For 2026, the statutory minimum wage is COP18,505,500, and the statutory minimum comprehensive salary is COP22,761,765.

### *Mandatory registration of vacancies*

New regulation introduces obligations regarding the registration of job vacancies. Employers must report all vacancies within ten business days of their creation through authorised providers of the Public Employment Service, including minimum required information such as occupation code, candidate profile, salary, location, qualification level and work modality (on-site, remote or hybrid).

Employers may refrain from publishing certain strategic vacancies, including executive roles, special projects or internal promotions, where valid justification exists. Compliance will be subject to oversight by the Administrative Unit of the Public Employment Service.

### *Standards for workplace lactation rooms*

New rules strengthen requirements for workplace lactation rooms, making them mandatory for larger employers (those with capital exceeding 1,500 minimum wages or more than 50 female employees). Key obligations include registration with health authorities, defined certification and inspection timelines, appointment of a trained person in charge, and mandatory record-keeping on use, cleaning and maintenance.

These requirements apply regardless of hybrid work arrangements, and employers must comply within a non-extendable three-month transition period.

**Contributed by:** Jaime Trujillo, Juan David Velasco, Natalia Ponce de León and Angelica Navarro, **Baker McKenzie S.A.S.**

## Developments in Tax Matters

### *Wealth tax*

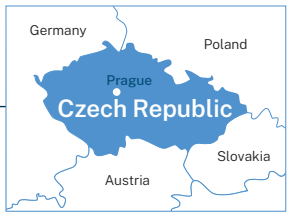
Colombia levies a wealth tax under two separate regimes:

- a permanent regime applicable to resident individuals and non-resident individuals and entities on their assets held in Colombia (with several exceptions, such as shares in Colombian entities); and
- a temporary regime applicable to legal entities for fiscal year 2026.

The temporary regime applicable to legal entities was enacted under the State of Economic, Social and Ecological Emergency declared in early 2026, with the purpose of raising additional revenues to address the fiscal impact of climate-related events and other emergency expenditures. Under this regime, the tax applies exclusively for fiscal year 2026 to legal entities, and other income tax filers with net equity as of 1 March 2026 equal to or greater than 200,000 UVT (approximately COP10.47 billion).

The taxable base corresponds to the net equity, defined as total assets minus liabilities, determined as of that date, subject to certain exclusions. The triggering event is the possession of such net wealth as of 1 March 2026.

The applicable tax rate is generally 0.5%. However, a higher rate of 1.6% applies to entities operating in the financial and extractive sectors. The tax is assessed on a one-time basis and must be paid during 2026.



## Developments in Personal Data Protection

### *Standard contractual clauses for international transfer and transmission of personal data*

In late 2025 and early 2026, the Data Protection Authority formally incorporated the Ibero-American Data Protection Network (RIPD) model contractual clauses into Colombian regulations. Until now, these clauses had only been considered a recommended best practice, as a mechanism for the transfer and/or transmission of personal data in Colombia.

The model clauses may only be amended to add to or strengthen the rights and safeguards set forth therein; that is, they may not be modified to reduce, limit or alter the guarantees granted. Likewise, non-compliance with the model clauses may be interpreted, beyond a mere contractual breach, as a failure to comply with the orders and instructions issued by the Data Protection Authority and, consequently, as a violation of the Colombian personal data protection regime.

**Tenacta, advokátní kancelář, s.r.o.**

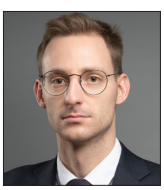
**Tenacta, advokátní kancelář, s.r.o.** is a Prague-based law firm with a legal team of around 20 professionals, focused on complex transactions, restructurings, real estate, and high-value disputes. The firm combines extensive experience in M&A, corporate law, litigation, and insolvency. Over the past year, the team has advised on transactions with an aggregate value exceeding approximately EUR2 billion, acting on acquisitions, divestments, joint ventures, and corporate reorganisations across a broad range of sectors, including energy, defence, industrials, media, technology, automotive, sports, and entertainment. The firm regularly advises domestic and international clients on cross-border matters. Tenacta also has a strong track record in dispute resolution, real estate, development, and insolvency. The firm handles high-value disputes with a combined value exceeding approximately EUR220 million. Its work includes complex real estate and development projects, precedent-setting insolvency matters, shareholder disputes, administrative litigation, and cases involving land use, zoning restrictions, and cultural heritage protection.

## Authors



**Petr Mlejnek** is a partner at Tenacta and is widely recognised in the market as a lead adviser on complex and high-impact M&A transactions. He has advised on transactions with an aggregate value exceeding EUR5 billion. Drawing on his extensive experience, he advises clients not only on the legal aspects of transactions, but also on their commercial strategy and negotiations.

**Robert Klenka** is a partner at Tenacta specialising in dispute resolution, restructurings, insolvency, and complex commercial litigation. He regularly advises domestic and international clients on high-stakes disputes, distressed situations, and strategic restructurings across a broad range of industries. He has extensive experience representing creditors, investors, and corporate clients in complex domestic and cross-border proceedings, including insolvency-related disputes, post-M&A litigation, and matters involving significant financial exposure. Robert is ranked by Chambers Europe 2026 in both Restructuring & Insolvency (Band 2) and Dispute Resolution (Band 4).

**Matěj Manderla** is a partner at Tenacta specialising in civil and commercial law, with a particular focus on transactions, insolvency and restructuring, and dispute resolution. He has extensive experience in structuring and securing acquisition projects, including legal due diligence and transaction financing. His real estate practice includes property acquisitions, lease negotiations, and disputes relating to access rights and tenancy matters. Matěj has also advised on transactions and disputes involving various securities, including shares and promissory notes. In dispute resolution, he has represented clients in cases concerning lease termination validity, damages claims, and other complex commercial disputes.

**Jan Wagner** is a senior associate at Tenacta Legal specialising in M&A, corporate and real estate law. Jan is involved in the structuring of transactions, drafting and negotiating transaction documentation, as well as navigating complex legal and regulatory challenges and the commercial and strategic aspects of transactions. The transactions he works on are generally particularly demanding due to their specific legal issues and complex documentation. He plays a key role in negotiations and the successful execution of these transactions.

# 1. Legal System

## 1.1 Legal System and Judicial Order

### Introduction

The Czech Republic is a civil law jurisdiction based primarily on codified legislation. The legal system relies principally on statutes enacted by Parliament and supplemented by implementing regulations, international treaties and European Union law. Unlike common law systems, judicial decisions do not formally constitute an independent source of law. Courts therefore primarily apply and interpret legislative provisions rather than establish legal rules through judicial precedent.

The current legal framework developed significantly following the political and economic transformation after 1989 and the subsequent accession of the Czech Republic to the European Union in 2004. For businesses operating within the jurisdiction, this has resulted in a relatively predictable legal environment aligned with broader European regulatory standards.

### Sources of Law

The Czech legal system operates through a hierarchical structure of legal rules and instruments. Constitutional order forms the highest level of the legal framework and establishes fundamental principles concerning the organisation of the state, separation of powers and protection of individual rights.

The principal sources of law include:

- constitutional acts;
- international treaties incorporated into the legal order;
- directly applicable European Union regulations;
- statutes adopted by Parliament; and
- subordinate legislation issued by ministries and administrative authorities.

The constitutional order of the Czech Republic consists primarily of:

- the Constitution of the Czech Republic;
- the Charter of Fundamental Rights and Freedoms; and
- constitutional legislation adopted by Parliament.

Ordinary legislation forms the principal legal framework for business activities. The legislation most commonly affecting commercial operations includes:

- the Civil Code (Act No 89/2012 Coll.);
- the Business Corporations Act (Act No 90/2012 Coll.);
- the Labour Code (Act No 262/2006 Coll.);
- the Trade Licensing Act (Act No 455/1991 Coll.);
- the Insolvency Act (Act No 182/2006 Coll.);
- the Competition Protection Act (Act No 143/2001 Coll.);
- the Administrative Procedure Code (Act No 500/2004 Coll.);
- the Civil Procedure Code (Act No 99/1963 Coll.);
- the Income Tax Act (Act No 586/1992 Coll.);
- the VAT Act (Act No 235/2004 Coll.); and
- the Accounting Act (Act No 563/1991 Coll.).

These legal acts regulate key aspects of commercial activity, including establishment of companies, corporate governance, contractual relationships, employment matters, taxation and insolvency proceedings.

### Judicial Decisions and Interpretation of Law

Although judicial decisions are not formally recognised as a source of law, decisions of higher courts play an important practical role in ensuring legal consistency and predictability.

Lower courts generally follow established judicial interpretation, particularly where legal provisions contain ambiguities or require further clarification.

The most significant judicial institutions include:

- the Constitutional Court;
- the Supreme Court; and
- the Supreme Administrative Court.

### Court Structure

The Czech judicial system consists of four levels of ordinary courts:

- district courts;
- regional courts
- high courts; and

- the Supreme Court and the Supreme Administrative Court.

*District courts*

District courts generally function as courts of first instance for most civil and criminal matters. These courts commonly hear contractual disputes, employment disputes, debt recovery proceedings and standard commercial claims.

*Regional courts*

Regional courts perform both first instance and appellate functions (reviewing of district court decisions). More complex commercial matters, insolvency proceedings and administrative matters are commonly heard at this level in the first instance.

Regional courts frequently deal with:

- corporate disputes;
- insolvency proceedings;
- intellectual property disputes; and
- significant commercial litigation.

*High courts*

High courts act as appellate courts reviewing first instance decisions of regional courts.

*Supreme Court*

The Supreme Court represents the highest judicial authority in ordinary civil and criminal matters. It primarily addresses questions concerning legal interpretation rather than factual issues and seeks to ensure uniform application of law.

### Administrative Judiciary

Court review regarding administrative matters commences before regional courts, with appeals and cassation review falling within the jurisdiction of the Supreme Administrative Court.

Administrative courts commonly review disputes concerning:

- tax matters;
- licensing decisions;
- public procurement procedures;
- regulatory sanctions;
- immigration issues; and
- decisions of administrative authorities.

## 2. Restrictions on Foreign Investments

### 2.1 Approval of Foreign Investments

#### Introduction

The Czech Republic generally maintains an open investment regime and foreign investors are typically treated equally to domestic investors. Foreign individuals and legal entities may establish companies, acquire ownership interests, purchase assets and conduct business activities without general restrictions based solely on foreign ownership. Under the Act No 34/2021 Coll., on the Screening of Foreign Direct Investments (the "FDI Screening Act"), a foreign investor is strictly defined as an individual or entity that is not a citizen of the Czech Republic or another EU member state, does not have its registered office in the Czech Republic or another EU member state, or is directly or indirectly controlled by such a person. The regulations also apply to trustees of trust funds under similar conditions.

Historically, the Czech Republic has promoted foreign investment and has been regarded as an attractive jurisdiction for both European and non-European investors due to its central geographical location, developed infrastructure and stable legal framework. Nevertheless, increasing concerns regarding national security, strategic technologies and protection of critical infrastructure have led to the implementation of foreign investment screening mechanisms consistent with broader European Union initiatives.

Foreign investments may therefore become subject to review where they involve sensitive sectors or where national security considerations arise.

#### Investments Subject to Review

Most ordinary investments do not require governmental approval. However, specific transactions involving strategic sectors may be subject to mandatory review procedures under the FDI Screening Act.

Under the FDI Screening Act, review requirements generally arise where a foreign investor acquires an

"effective degree of control" over the target's economic activity. For the purposes of the FDI Screening Act, an effective degree of control includes, in particular:

- the ability to dispose of at least a 10% share of voting rights in the target entity, or to exercise corresponding influence over the target entity, including through persons acting in concert or subject to common control with the foreign investor;
- membership of the foreign investor, or a person closely connected to the foreign investor, in a corporate body of the target entity;
- the ability of the foreign investor to exercise ownership rights over assets through which the relevant economic activity is carried out; or
- any other level of control enabling the foreign investor to gain access to information, systems, or technologies relevant to the protection of the security of the Czech Republic or its internal or public order.

Attention is generally paid to investments involving strategic or security-sensitive sectors. Pursuant to Section 7 of the Czech FDI Screening Act, prior approval of the Ministry of Industry and Trade is mandatory in particular where the foreign investment concerns:

- entities active in production, research, development, innovation or life-cycle management of military material;
- critical infrastructure operators;
- providers of regulated services subject to a higher level of cybersecurity obligations;
- dual-use goods and technologies listed under applicable EU export control regulations; and
- other activities or assets considered essential from the perspective of the security or public order of the Czech Republic.

The assessment focuses primarily on the substance and practical effects of the transaction rather than purely formal ownership structures.

### Competent Authority

Foreign investment reviews are conducted primarily by the Ministry of Industry and Trade of the Czech Republic.

The Ministry may also co-operate with other governmental authorities depending on the nature of the transaction, including:

- security authorities;
- intelligence services;
- defence authorities;
- cybersecurity authorities; and
- other specialised regulatory bodies.

As a result, the review process frequently includes legal, economic and security considerations.

### Timing Considerations

Where approval requirements apply, investors generally need to obtain clearance before completing the transaction.

Parties commonly address regulatory approval requirements through transaction documentation by including:

- conditions precedent;
- co-operation obligations;
- information-sharing requirements;
- long-stop dates; and
- termination mechanisms.

Failure to identify applicable review requirements at an early stage may significantly affect transaction timing and completion certainty. Failure to comply with the FDI Screening Act can result in severe sanctions. The Ministry may prohibit the continued existence of the foreign investment and order the sale of the target entity or asset. Furthermore, carrying out an investment without the required approval or consultation proposal may result in a fine of up to 1% of the investor's total net turnover, while violating conditions or a prohibition decision can lead to a fine of up to 2% of the turnover.

## 2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance

### Introduction

Where a transaction falls within the foreign investment review framework, investors are generally required to submit an application for approval or a proposal for

consultation to the Ministry of Industry and Trade prior to completion of the investment.

The filing process aims to provide authorities with sufficient information to assess whether the proposed investment may affect public security or public order.

### Filing Requirements

Applications commonly include information regarding:

- the investor;
- ownership and control structure;
- beneficial ownership information;
- financing arrangements;
- business activities of the target entity;
- strategic relevance of the transaction; and
- expected control rights following completion.

Authorities may request additional documentation if the information submitted is considered insufficient.

The extent of required information generally depends on the complexity of the transaction and the sensitivity of the sector involved.

### Review Process

The review process generally consists of several stages:

- Initial Review: Authorities perform a preliminary assessment to determine whether the transaction raises concerns affecting national interests.
- Additional Assessment: Where concerns arise, authorities may conduct a more detailed review involving consultation with relevant governmental institutions.
- Decision Stage: Following completion of the assessment, authorities may:
  (a) approve the investment without conditions;
  (b) approve the investment subject to commitments;
  (c) prohibit the investment; or
  (d) impose corrective measures.

The overall timing of the procedure may vary depending on transaction complexity and the extent of governmental review required.

### Consequences of Non-Compliance

Failure to comply with mandatory filing obligations may lead to various consequences.

Potential sanctions include:

- administrative fines;
- suspension of implementation of the transaction;
- corrective measures;
- restrictions or prohibition of shareholder and voting rights;
- orders requiring the sale of the target entity, the target asset, or the acquired interests; and
- other remedial measures.

Authorities may also review transactions ex-officio for up to five years after completion where concerns arise that a filing should have been made.

### Transaction Risk Allocation

In practice, parties commonly allocate regulatory risks contractually.

Transaction documents frequently address:

- responsibility for preparing filings;
- co-operation obligations;
- allocation of costs;
- handling of regulatory requests; and
- consequences of delayed approval.

Careful allocation of regulatory risk has become increasingly important in cross-border transactions involving strategic sectors.

## 2.3 Commitments Required From Foreign Investors

Authorities may approve an investment subject to specific commitments where concerns relating to public security or strategic interests are identified.

The objective of such commitments is generally to modify the investor's original intent to ensure it does not threaten the security of the Czech Republic or its internal or public order, while allowing the investment to proceed.

The specific scope of commitments varies depending on the nature of the investment and the risks identified during the review process. The need for commitments can also be triggered by comments received from other EU member states or an opinion from the European Commission.

### Typical Commitments

Commitments may include:

- implementation of specific security measures;
- restrictions on access to sensitive information;
- cybersecurity obligations;
- reporting obligations;
- limitations concerning technology transfers;
- preservation of strategic assets within the Czech Republic; and
- requirements concerning management or operational arrangements.

Additional obligations may arise where critical infrastructure or sensitive technologies are involved.

### Practical Considerations

In practice, commitments are determined individually and authorities generally seek measures proportionate to the identified risks. The negotiation of commitments takes place before the matter is submitted to the government for a resolution, and the standard statutory review period is suspended during these negotiations.

Investors should therefore assess potential regulatory concerns at an early stage and consider whether transaction structures or operational arrangements may require modification.

## 2.4 Right to Appeal

Administrative decisions issued in connection with foreign investment screening may generally be challenged through administrative procedures and judicial review mechanisms. However, an administrative appeal (remonstrance) cannot be filed against a decision that was conditioned by a government resolution, nor can such a decision be reviewed in administrative review proceedings. Furthermore, a lawsuit or a request to reopen the proceedings against such a decision cannot be granted suspensory effect.

The availability of review serves as an important safeguard against unlawful or disproportionate administrative decisions.

### Administrative Review and Judicial Proceedings

Investors may challenge decisions concerning:

- procedural irregularities;
- incorrect legal interpretation;
- insufficient factual findings; or
- disproportionality of imposed measures.

Administrative courts generally examine whether authorities acted in accordance with applicable legislation and procedural requirements.

### Limits of Judicial Review

Although judicial review is available, courts frequently grant authorities a relatively broad degree of discretion where matters of national security or public policy are involved.

As a result, courts may show deference to governmental assessments involving sensitive security considerations. Judicial proceedings are also subject to strict rules protecting classified information. The presiding judge may allow participants access to classified parts of the file only to the extent necessary, provided it does not threaten state security, its sovereignty, territorial integrity, democratic foundations, lives or health of persons, or the activities of intelligence services or the police. Additionally, evidence cannot be obtained through witness testimony if relieving a person of their confidentiality obligation could threaten or seriously disrupt the operations of intelligence services or the police.

### Practical Implications

Because judicial proceedings may require considerable time and face evidentiary limits regarding classified intelligence, investors commonly seek to resolve concerns during the review process itself rather than rely exclusively on subsequent litigation.

Early identification of potential regulatory issues frequently reduces transaction risk and improves completion certainty.

## 3. Corporate Vehicles

### 3.1 Most Common Forms of Legal Entity

#### Introduction

The most commonly used corporate vehicles in the Czech Republic are the limited liability company (*společnost s ručením omezeným* – s.r.o.) and the joint stock company (*akciová společnost* – a.s.). Both a private limited liability company and a joint stock company provide separate legal personality and limited liability protection. In a private limited liability company, shareholders generally do not bear personal liability beyond their unpaid capital contributions. In a joint stock company, shareholders do not bear personal liability for the company's obligations at all. In both structures, the company itself is liable for its debts and obligations with all of its assets. Both forms are available to domestic and foreign investors on substantially equal terms.

#### Limited Liability Company

The limited liability company is the most frequently used legal form and is generally considered the standard structure for small and medium-sized enterprises, holding structures, subsidiaries of foreign investors and joint ventures. The structure is widely used due to its relatively simple administration and flexibility in internal governance arrangements. The limited liability company may be established by one or more shareholders, and the minimum statutory contribution may be lower than EUR1. Shareholders are generally liable only up to unpaid contributions registered in the Commercial Register.

The company is managed by one or more managing directors, while the supreme corporate body is the general meeting of shareholders. A supervisory board is optional. The internal governance structure is relatively flexible and may be extensively tailored in the constitutional documents, including voting arrangements, transfer restrictions, profit distribution mechanisms or veto rights.

Compared to a joint stock company, the limited liability company is subject to lower administrative and regulatory requirements. Corporate formalities are generally simpler, disclosure obligations are more limited, and the structure is easier and less costly to maintain. For this reason, the limited liability company is commonly used for SPVs and ordinary operating businesses, private holding structures and closely held companies with a limited number of shareholders.

At the same time, the limited liability company may become less practical in situations involving a larger number of investors, more sophisticated financing arrangements or frequent transfers of ownership interests.

#### Joint Stock Company

The joint stock company is a more formalised and capital-oriented corporate vehicle typically used for larger or more complex business structures, including investment platforms, regulated businesses, financing structures and holding companies with multiple investors.

Ownership interests in a joint stock company are represented by shares, which facilitates transfers, investor entry and exit mechanisms, pledge structures and more sophisticated shareholder arrangements. Shareholders do not bear personal liability for the company's obligations, with their economic risk generally limited to the value of their shares.

A joint stock company may be established by one or more shareholders. The minimum registered capital requirement amounts to approximately EUR80,000.

Czech law allows both:

- a dualistic governance system consisting of a board of directors and supervisory board; and
- a monistic governance system consisting of an administrative board.

In both systems, the general meeting remains the supreme corporate body.

Compared to a limited liability company, the joint stock company structure is generally considered more suitable for larger shareholder projects, private equity and venture capital investments, joint ventures involving multiple strategic investors, management incentive structures, financing transactions and situations where future capital raising is contemplated.

The joint stock company is also typically preferred where:

- a greater number of shareholders is expected;
- ownership interests are intended to be more easily transferable;
- sophisticated shareholder and investment arrangements are required;
- external financing, IPO, or bond issuances are contemplated; or
- the parties seek a governance framework perceived as more appropriate for larger corporate groups or institutional investors.

For these reasons, the joint stock company structure is frequently used for larger holding platforms, investment structures, infrastructure and development projects, and businesses preparing for future strategic investment or potential public offering.

### Others Form

Other legal forms recognised under Czech law include general partnerships, limited partnerships and co-operatives, although these are used less frequently in ordinary commercial practice. Foreign investors may also establish a branch office, although a branch does not constitute a separate legal entity.

## 3.2 Incorporation Process

The incorporation process in the Czech Republic is generally straightforward and may often be completed within several business days where standard structures are used and no regulatory approvals are required.

The incorporation process generally includes:

- preparation and execution of constitutional documentation;
- payment of minimum capital contributions;
- obtaining the relevant trade licences or other business authorisations;
- registration in the Commercial Register; and
- subsequent registration of the ultimate beneficial owner.

Constitutive documents typically regulate matters including the company name, registered office, business activities, governance arrangements, ownership structure and rules relating to the management and operation of the company.

Depending on the type of company, minimum share capital requirements may apply. Capital contributions are generally paid to a special bank account established for the company prior to incorporation. The opening of such account is commonly connected with internal compliance procedures and AML/KYC checks performed by the relevant financial institution, particularly in cases involving foreign shareholders or more complex ownership structures.

The incorporation process also typically includes the appointment of managing directors, members of the board of directors, supervisory board members or other corporate officers, depending on the selected corporate form and governance structure.

A company generally acquires legal personality upon registration in the Commercial Register.

Following incorporation, the company is generally required to complete a number of post-incorporation registrations and compliance steps, including:

- tax registrations;
- registrations with social security and health insurance authorities;
- registration of the ultimate beneficial owner;
- obtaining any industry-specific permits, licences or regulatory approvals; and
- fulfilment of ongoing accounting and reporting obligations.

The overall timing of incorporation may vary depending on factors including:

- foreign ownership structures;
- regulated business activities;
- documentation and apostille/legalisation requirements;
- complexity of capital contributions;
- timing of bank onboarding and AML procedures; and
- licensing or regulatory approval requirements, if applicable.

### 3.3 Ongoing Reporting and Disclosure Obligations

Companies in the Czech Republic are subject to several continuing reporting and disclosure requirements.

Typical obligations include:

- filing annual financial statements;
- maintenance of beneficial ownership information;
- accounting compliance; and
- tax reporting obligations.

Companies must also register certain changes in the Commercial Register without undue delay. Such changes commonly include:

- appointment or removal of directors;
- amendments to constitutional documents;
- changes in registered capital; and
- changes concerning registered offices.

Beneficial ownership information must also be maintained and updated. Failure to comply with reporting obligations may result in administrative sanctions and practical complications in dealings with authorities or commercial counterparties. In particular, where the beneficial owner is not properly registered, the relevant beneficial owner may be prevented from exercising voting rights or receiving profit distributions. Czech law further provides mechanisms allowing courts to review discrepancies between the actual beneficial ownership structure and the information recorded in the register of beneficial owners. Incorrect or incomplete registration may therefore lead to judicial proceedings concerning inconsistencies in the registered data and related corporate consequences.

Additional obligations may apply to regulated entities and businesses operating within specific sectors.

### 3.4 Management Structures

Management structures differ depending on the selected legal form.

In both private limited liability companies and joint stock companies, the general meeting composed of the shareholders acts as the highest corporate authority and decides fundamental matters relating to the company.

A private limited liability company generally operates through a relatively simple management structure consisting of one or more executive directors responsible for the company's day-to-day management and external representation.

A joint stock company may adopt either:

- a dual-board structure consisting of a management board and supervisory board; or
- a monistic (one-tier) structure consisting of an administrative board.

The choice of governance structure frequently depends on shareholder expectations, internal group policies and the desired allocation of management and supervisory functions.

The Business Corporations Act also allows significant flexibility in adjusting internal governance arrangements through constitutional documentation.

### 3.5 Directors', Officers' and Shareholders' Liability

Members of corporate bodies are generally required to act with due managerial care, in good faith and in the best interests of the company.

Directors are expected to exercise appropriate care, maintain sufficient information for decision-making purposes and avoid conflicts of interest. Failure to comply with these duties may result in personal liability.

Potential consequences may include:

- liability for damages;
- obligations to return benefits received;
- restrictions on performing management functions; and
- specific insolvency-related consequences.

Although Czech law does not formally recognise the common law doctrine of "piercing the corporate veil", certain statutory rules may, in specific circumstances,

result in personal liability of shareholders, members of corporate bodies or other individuals connected with a company. Such liability typically arises from breaches of statutory duties rather than from a general disregard of the company's separate legal personality.

Such situations may arise particularly in connection with:

- breaches of duties in insolvency situations; and
- breaches of duties by members of corporate bodies, including breaches of the duty of due managerial care.

However, in the context of ordinary business activities, separate legal personality and limited liability remain fundamental principles of Czech corporate law.

## 4. Employment Law

### 4.1 Nature of Applicable Regulations

Employment relationships in the Czech Republic are governed primarily by statutory law, particularly the Labour Code, which represents the principal source of regulation for employment matters. The Labour Code establishes mandatory rules concerning employment relationships, working conditions, employee protections and employer obligations.

Additional regulation may arise from:

- implementing legislation;
- sector-specific regulations;
- collective bargaining agreements;
- internal employer regulations; and
- individual employment agreements.

Employment law in the Czech Republic is generally characterised by a relatively high level of employee protection. Many statutory provisions are mandatory and cannot be excluded or reduced by agreement to the detriment of the employee.

Employment agreements and internal regulations may therefore supplement statutory rules only where they provide terms more favourable to employees.

European Union legislation also significantly influences Czech employment law. EU law has shaped numerous areas including:

- working time regulation;
- equal treatment requirements;
- anti-discrimination rules;
- employee health and safety;
- data protection in employment relationships; and
- employee rights in corporate transformations.

Although judicial decisions do not formally constitute an independent source of law, decisions of higher courts play an important practical role in interpreting employment legislation and promoting consistency in application.

### 4.2 Characteristics of Employment Contracts

Employment contracts must generally be concluded in writing.

Czech law requires employment contracts to contain certain mandatory elements, including:

- type of work to be performed;
- place of work; and
- commencement date.

Additional provisions are frequently included concerning:

- remuneration;
- working hours;
- probationary periods;
- confidentiality obligations;
- benefits;
- notice arrangements; and
- intellectual property matters.

Employment contracts may be concluded either for an indefinite period or for a fixed term.

Indefinite employment relationships remain the standard form of employment and are generally preferred in practice.

Fixed-term employment contracts are subject to statutory restrictions intended to prevent the repeated or

abusive use of temporary employment arrangements. Under Czech labour law, a fixed-term employment relationship may generally be agreed for a maximum period of three years and may be renewed or extended no more than twice between the same employer and employee. As a result, the overall duration of successive fixed-term employment relationships between the same parties will typically not exceed nine years.

Probationary periods may also be agreed between the parties. The maximum duration of the probationary period depends on the position of the employee involved.

## 4.3 Working Time

### Introduction

Employment relationships are also subject to mandatory rules concerning working conditions and employee welfare.

Standard working time generally amounts to 40 hours per week, although shorter working schedules may apply depending on operational conditions and specific sectors. Work exceeding this limit is considered overtime. Overtime may only be required for serious operational reasons and is subject to statutory limits. Employees are generally entitled either to additional pay or compensatory time off for overtime work. Certain groups of employees, such as part-time employees, enjoy enhanced protection against overtime requirements.

### Annual Leave and Additional Absences

Employees are generally entitled to paid annual leave. The statutory minimum annual leave entitlement amounts to four weeks, although employers frequently provide more generous arrangements as part of compensation and retention policies.

Employees may also be entitled to additional absences in situations including:

- illness;
- maternity and parental leave;
- family care obligations; and
- certain personal circumstances.

## 4.4 Termination of Employment Contracts

Termination of employment relationships is subject to relatively detailed regulation and employee protection requirements.

Employment may generally terminate through:

- agreement between the parties;
- notice;
- immediate termination in specific circumstances; or
- expiration of a fixed-term arrangement.

Employers cannot generally terminate employment without legally recognised grounds where termination occurs through notice procedures.

Permitted grounds commonly include:

- organisational restructuring;
- redundancy;
- long-term incapacity;
- serious breaches of obligations; and
- other statutory circumstances.

Formal procedural requirements must also be observed.

These commonly include:

- written notice;
- proper identification of termination grounds;
- observance of notice periods; and
- notification requirements where applicable.

Employees dismissed for organisational reasons may become entitled to statutory severance payments depending on the circumstances and duration of employment. Statutory severance payments may also apply in certain health-related cases, including where the employment relationship is terminated due to a work-related injury, occupational disease or where the employee is no longer medically fit to perform the work as a result of occupational health reasons.

Special protections also apply to certain categories of employees, including:

- pregnant employees;

- employees on parental leave;
- employees temporarily incapable of work; and
- employees affected by work-related injuries or occupational diseases.

Failure to comply with statutory requirements may result in termination being declared invalid.

### 4.5 Employee Representations

Employee representation is not automatically mandatory in all businesses; however, Czech law permits employees to establish representative bodies where statutory requirements are satisfied.

Forms of employee representation commonly include:

- trade unions; and
- works councils.

Trade unions generally exercise broader rights than works councils and may participate actively in negotiations concerning working conditions and collective agreements.

Employee representatives may also possess rights relating to:

- access to information;
- consultation procedures;
- workplace conditions;
- organisational restructuring; and
- collective redundancies.

Employers may therefore be required to inform or consult employee representatives before implementing particular decisions affecting employees.

In practice, the significance of employee representation varies substantially depending on the size of the employer, the industry involved and historical labour practices within the relevant sector.

While employee representation structures are common in larger organisations and industrial businesses, smaller employers frequently operate without formal representative bodies.

## 5. Tax Law

### 5.1 Taxes Applicable to Employees/ Employers

Please note that this tax overview is intended to provide only a brief and high-level summary of selected legal and regulatory aspects. We do not provide tax, accounting, or audit services, and any references to tax or accounting matters are included for general informational purposes only.

Individuals who are tax residents of the Czech Republic are generally subject to taxation on their worldwide income, while non-residents are generally taxed only on income derived from Czech sources.

Employment income is generally subject to personal income tax and mandatory social security and health insurance contributions. Employers are responsible for withholding and remitting employment-related taxes and contributions on behalf of employees.

Mandatory payments in employment relationships generally include:

- personal income tax;
- social security contributions; and
- public health insurance contributions.

The applicable level of taxation and contributions depends on various factors, including income levels, available exemptions and specific employee circumstances.

Cross-border employment arrangements may additionally require consideration of:

- double taxation treaties;
- social security co-ordination rules;
- tax residency issues; and
- permanent establishment risks.

### 5.2 Taxes Applicable to Businesses

Companies with a registered seat or place of effective management in the Czech Republic are generally subject to corporate taxation on worldwide income. Non-resident entities are generally taxed only on Czech-source income.

The principal taxes affecting businesses include:

- corporate income tax;
- value added tax (VAT);
- withholding tax;
- real estate taxation; and
- sector-specific taxes where applicable.

Corporate income tax applies to taxable profits derived from business activities and other taxable income sources.

Businesses exceeding statutory thresholds may become subject to mandatory VAT registration. Voluntary registration may also be available in certain circumstances.

Withholding taxes may also apply to certain categories of payments, including:

- dividends;
- interest; and
- selected cross-border payments.

The Czech Republic has implemented Pillar Two of the OECD's Two-Pillar Solution in line with the EU Directive on global minimum taxation. Czech legislation introduced both the top-up tax rules applicable to multinational enterprise groups and a Qualified Domestic Minimum Top-up Tax (QDMTT). The Czech QDMTT has also been included on the OECD central record as a regime meeting the requirements for safe harbour status.

### 5.3 Available Tax Credits/Incentives

The Czech Republic offers several tax incentives and tax relief mechanisms, particularly in the areas of investment support, research and development, and employment. Investment incentives may include corporate income tax relief, cash support for job creation and employee training, especially in manufacturing, technology centres, and strategic service sectors.

A significant incentive is the R&D tax deduction, allowing taxpayers to deduct eligible research and development expenses from their tax base in addition to standard accounting treatment. Tax relief is also available for certain environmentally friendly investments and vocational training activities.

### 5.4 Tax Consolidation

In the Czech Republic, there is no general tax consolidation regime for corporate income tax purposes. Companies within a group are generally taxed separately and cannot consolidate profits and losses for income tax purposes.

However, Czech law recognises consolidation from an accounting perspective. Under the Czech Accounting Act, a parent company may be required to prepare consolidated financial statements if it controls one or more subsidiaries and the group exceeds certain statutory thresholds relating mainly to assets, turnover and number of employees. Small groups are generally exempt unless a public-interest entity is involved.

### 5.5 Thin Capitalisation Rules and Other Limitations

Czech tax law contains thin capitalisation and related interest limitation rules that restrict the tax deductibility of financing costs under certain circumstances.

First, the Czech Income Tax Act includes specific thin capitalisation rules applicable primarily to related-party financing. As a general rule, interest on loans and credits from related parties may become tax non-deductible if the borrower's debt-to-equity ratio exceeds statutory thresholds. For most companies, the ratio is generally 4:1, while stricter rules apply to banks and insurance companies. These rules aim to prevent excessive debt financing within corporate groups.

### 5.6 Transfer Pricing

Transfer pricing rules are applicable in the Czech Republic and apply to transactions between related parties, both domestic and cross-border.

The Czech transfer pricing framework is based primarily on the arm's-length principle and broadly follows the Organisation for Economic Co-operation and Development Transfer Pricing Guidelines. Under Czech tax law, prices agreed between related parties must correspond to prices that would have been agreed between independent parties under compa-

rable conditions. If the pricing deviates from market conditions and the taxpayer cannot properly justify the difference, the Czech tax authorities may adjust the taxpayer's taxable income accordingly.

Related-party transactions commonly subject to transfer pricing scrutiny include intercompany financing, management and support services, licensing arrangements, supply and distribution transactions, business restructurings, and transfers of intangible assets. Transfer pricing rules apply not only to multinational groups but also to domestic group structures.

Although Czech legislation does not generally impose a universal statutory obligation to prepare transfer pricing documentation, taxpayers are expected to maintain sufficient supporting documentation demonstrating compliance with the arm's-length principle. In practice, tax authorities frequently request transfer pricing documentation during tax audits. Czech practice generally follows the OECD-recommended master file and local file approach.

The Czech tax authorities actively focus on transfer pricing audits, particularly in cases involving recurring losses, low-profit entities, significant related-party financing, or transactions with entities located in low-tax jurisdictions. Penalties, late-payment interest, and additional tax assessments may arise where transfer prices are considered inconsistent with market conditions.

### 5.7 Anti-Evasion Rules

Tax authorities in the Czech Republic possess broad powers to review compliance with tax obligations and to verify the accuracy of tax reporting. The principal authority responsible for tax administration is the Financial Administration of the Czech Republic.

Tax authorities may conduct various forms of review, including:

- routine tax inspections;
- targeted tax audits;
- requests for explanations; and
- reviews of specific transactions.

Tax audits may focus on a wide range of issues, including:

- corporate income tax calculations;
- VAT compliance;
- transfer pricing arrangements;
- deductibility of expenses;
- withholding tax obligations; and
- cross-border transactions.

Where tax authorities identify deficiencies, they may impose:

- additional tax assessments;
- penalties;
- late payment interest; and
- administrative sanctions.

Taxpayers generally have procedural rights during tax proceedings and may provide explanations, evidence and supporting documentation.

Disputes with tax authorities may be challenged through administrative procedures and judicial review mechanisms.

The dispute process commonly involves:

- administrative objections;
- appeals;
- proceedings before regional administrative courts; and
- review by the Supreme Administrative Court.

### 5.8 Tariffs

The Czech Republic does not operate an independent national tariff regime. As a member state of the European Union, it forms part of the EU Customs Union and applies the Common Customs Tariff established at the EU level. Consequently, customs duties and trade measures are determined primarily by European legislation rather than domestic law.

Goods imported from countries outside the European Union may be subject to customs duties depending on factors including:

- classification of goods;

- country of origin;
- customs value; and
- applicable preferential trade arrangements.

Goods moving within the European Union are generally not subject to customs duties due to the principle of free movement of goods.

Higher tariffs and protective measures are commonly associated with sensitive sectors, including:

- agricultural products;
- food products;
- textiles;
- steel products; and
- selected manufacturing industries.

In addition to ordinary tariffs, imports may also be affected by trade defence measures such as anti-dumping duties or safeguard measures intended to protect European industries.

Recent geopolitical developments, supply chain concerns and strategic trade considerations have increased the importance of customs compliance and international trade regulation for businesses operating in the Czech market.

## 6. Competition Law

### 6.1 Merger Control Notification

Competition law in the Czech Republic is governed primarily by the Competition Protection Act together with directly applicable European Union competition rules. Merger control seeks to prevent concentrations that could significantly restrict effective competition within relevant markets.

Certain mergers and acquisitions are subject to mandatory notification where statutory thresholds are satisfied.

The notification obligation generally applies to:

- mergers between previously independent undertakings;
- acquisitions of direct or indirect control over another undertaking;
- acquisition of substantial business assets; and
- creation of full-function joint ventures performing autonomous economic activities on a lasting basis.

Concentration must generally be notified where one of the following turnover thresholds is met:

- the combined net turnover achieved in the Czech Republic by all participating undertakings exceeds CZK1.5 billion, and at least two of the participating undertakings each achieved net turnover in the Czech Republic exceeding CZK250 million; or
- the net turnover achieved in the Czech Republic by at least one participating undertaking exceeds CZK1.5 billion and the worldwide net turnover achieved by another participating undertaking exceeds CZK1.5 billion.

However, an amendment to the Czech Competition Act is currently under discussion and may modify the existing merger control regime. Under the current governmental proposal, the standard notification thresholds would increase to a combined Czech turnover of CZK2.5 billion and at least CZK350 million Czech turnover achieved by at least two participating undertakings. At the same time, the proposed amendment would introduce a “call-in” mechanism enabling the Czech Competition Authority (ÚOHS) to require notification even for transactions falling below the statutory thresholds where the transaction could potentially result in a substantial distortion of competition.

The assessment is therefore primarily turnover-based, while market shares are generally relevant only for the substantive competition analysis rather than jurisdictional filing thresholds.

The concept of control is interpreted broadly and may arise not only through share acquisitions but also through contractual arrangements or other mechanisms allowing decisive influence over commercial activities.

Joint ventures may also become subject to notification where the joint venture performs independent and

lasting economic functions rather than merely supporting the activities of parent entities.

Transactions satisfying applicable notification thresholds generally may not be implemented before obtaining regulatory approval.

Consequently, transaction documentation commonly includes:

- conditions precedent;
- co-operation obligations;
- information-sharing provisions, often structured on a "counsel-to-counsel only" basis in order to protect trade secrets and competitively sensitive information; and
- long-stop arrangements.

The parties must, however, ensure that pre-closing co-operation and information exchange are structured so as to avoid unlawful "gun-jumping", including premature implementation of the transaction or the exchange of competitively sensitive information beyond what is necessary for the transaction process.

Early competition law assessment frequently assists parties in avoiding delays and implementation risks.

## 6.2 Merger Control Procedure

Merger notifications are submitted to the Office for the Protection of Competition, which represents the principal Czech competition authority responsible for merger review and competition enforcement.

Notification filings generally include information concerning:

- transaction structure;
- ownership arrangements;
- business activities of the parties;
- market definitions;
- competitors;
- customers; and
- economic data relating to affected markets.

### Review

The review procedure commonly consists of multiple stages.

#### *Initial review phase*

Following submission, the authority performs an initial assessment intended to determine whether the transaction raises substantive competition concerns. Where no material concerns arise, approval may typically be granted during the initial review stage.

Straightforward transactions frequently involve:

- limited market overlaps;
- minimal vertical relationships; or
- insignificant market shares.

#### *Second-phase investigations*

Where potential competition concerns arise, the authority may initiate a more detailed investigation.

Such investigations may involve:

- requests for additional information;
- market testing procedures;
- consultation with competitors and customers; and
- more detailed economic assessment.

The authority may ultimately:

- approve the transaction without conditions;
- approve the transaction subject to commitments;
- prohibit the transaction; or
- impose corrective measures.

Commitments may include both structural and behavioural remedies. Examples may include:

- divestment obligations;
- access commitments;
- supply obligations; and
- operational restrictions.

Parties remain generally prohibited from implementing the transaction before receiving clearance.

Failure to observe this requirement may result in substantial financial penalties and additional corrective measures.

### 6.3 Cartels

Czech competition law prohibits agreements and co-ordinated conduct that prevent, restrict or distort competition.

The prohibition applies to both formal agreements and informal arrangements where undertakings co-ordinate market behaviour. Prohibited conduct commonly includes:

- price-fixing arrangements;
- market-sharing agreements;
- restrictions of production or output;
- bid-rigging practices; and
- exchanges of commercially sensitive information.

Competition law may apply regardless of where the relevant conduct occurred if the conduct produces effects within the Czech market. Consequently, foreign businesses with no physical presence in the Czech Republic may nevertheless become subject to Czech competition rules where their activities affect competition within the jurisdiction. The assessment generally focuses on:

- the purpose of the conduct;
- market conditions;
- economic effects; and
- the impact on competition and consumers.

Certain forms of conduct are considered particularly serious because they are generally regarded as harmful by their nature. Businesses frequently face competition risks in connection with:

- trade association activities;
- information exchanges;
- distribution arrangements;
- co-operation agreements; and
- procurement procedures.

The Office for the Protection of Competition possesses broad investigatory powers and may conduct inspections and request documentation. Violations may result in:

- significant financial penalties;
- behavioural remedies;
- invalidity of agreements; and
- reputational consequences.

Leniency mechanisms may also be available to participants in cartel arrangements who voluntarily co-operate with authorities.

### 6.4 Abuse of Dominant Position

Competition law additionally prohibits abuse of a dominant position by undertakings possessing substantial market power.

Dominance itself is not prohibited. Competition concerns arise only where market power is exercised in a manner that restricts competition or harms consumers. The assessment of dominance typically considers factors, including:

- market share;
- barriers to market entry;
- economic strength;
- customer dependence; and
- competitive conditions.

Examples of potentially abusive conduct may include:

- predatory pricing;
- discriminatory treatment of business partners;
- refusal to supply;
- tying arrangements;
- exclusivity requirements; and
- unfair contractual conditions.

As with cartel regulation, the assessment focuses primarily on the effects of conduct within the Czech market rather than solely on the location where the conduct occurred. Although Czech law does not recognise economic dependency as an entirely separate concept to the same extent as some other jurisdictions, conduct involving imbalances in bargaining power may nevertheless raise competition concerns where market power exists.

In practice, abuse investigations frequently involve complex economic analysis and detailed examination of market conditions. Businesses with substantial market positions therefore commonly implement internal competition compliance programmes and review

commercial practices regularly in order to minimise regulatory risk and ensure compliance with applicable competition rules.

## 7. Intellectual Property

### 7.1 Patents

Patent protection in the Czech Republic applies to technical solutions that are new, involve an inventive step and are capable of industrial application. Patent protection aims to provide inventors with exclusive rights to exploit inventions and prevent unauthorised use by third parties. Patent protection generally extends for a period of up to 20 years from the filing date, provided that applicable maintenance fees are paid throughout the duration of protection.

Patent rights are generally obtained through registration procedures before the Industrial Property Office. Applicants typically submit:

- an application form;
- technical description of the invention;
- claims defining the scope of protection; and
- supporting documentation where required.

Applications are examined to determine whether statutory requirements are satisfied.

The Czech Republic also participates in broader international frameworks, allowing applicants to seek protection through:

- European patent procedures; and
- international filing systems.

Patent owners generally possess exclusive rights relating to:

- manufacturing products;
- commercial use;
- licensing arrangements;
- sale of protected products; and
- prevention of unauthorised exploitation.

Patent rights may be enforced through judicial proceedings. Available remedies commonly include:

- injunctions;
- damages;
- surrender of unjust enrichment;
- destruction of infringing goods; and
- other corrective measures.

In serious cases, patent infringement may also give rise to criminal liability under Czech law, particularly where the infringement is intentional and causes substantial damage or unlawful gain. Criminal sanctions may include fines, prohibition of activity, confiscation of goods, or imprisonment.

### 7.2 Trade Marks

Trade marks protect signs capable of distinguishing goods or services of one undertaking from those of another.

Trade mark protection serves an important commercial purpose because it enables businesses to establish brand identity and market recognition.

Trade mark registration generally provides protection for ten years from the filing date and may be renewed repeatedly for additional ten-year periods.

Protection may be obtained through:

- national registration procedures;
- European Union trade mark systems; or
- international registration mechanisms.

Applications generally undergo examination intended to assess whether registration requirements are satisfied and whether conflicts with prior rights exist.

Rights-holders may generally prevent unauthorised use of identical or confusingly similar signs in commercial activities. Available enforcement measures commonly include:

- injunctions;
- damages;
- seizure of infringing products;
- removal of products from the market; and
- destruction of infringing materials.

In serious cases, trade mark infringement may also result in criminal liability, particularly where the infringement is intentional and carried out on a commercial scale.

### 7.3 Industrial Designs

Industrial design protection applies to the visual appearance of products rather than their technical functionality.

Protection seeks to safeguard the aesthetic aspects of products where these create a distinctive overall appearance.

Industrial design protection generally applies initially for a limited period and may subsequently be renewed up to a maximum duration of 25 years.

Registration procedures generally require submission of:

- applications;
- visual representations of the design; and
- identification of products concerned.

The Czech Republic additionally participates in European systems allowing broader territorial protection. Rights-holders generally possess exclusive rights concerning use of protected designs and may prevent unauthorised commercial use by third parties.

Available remedies commonly include:

- cessation of infringing activities;
- damages;
- destruction of infringing products; and
- additional corrective measures.

Criminal law remedies may also apply in serious cases of intentional infringement, similarly to the protection available for patents and trade marks under Czech law.

### 7.4 Copyright

Copyright protection applies to original literary, artistic and scientific works as well as certain related subject matter. Protected works commonly include:

- written works;
- music;
- visual works;
- audiovisual content;
- architectural works;
- computer programs; and
- other original creative works.

Unlike certain industrial property rights, copyright protection generally arises automatically upon creation of a work and does not require registration.

Economic rights generally continue for a period of 70 years following the death of the author.

Copyright owners possess rights relating to:

- reproduction;
- distribution;
- communication to the public;
- modification; and
- commercial exploitation.

Moral rights also exist and generally protect the personal relationship between authors and their works. Rights-holders may seek various remedies where infringement occurs. Available measures commonly include:

- injunctions;
- damages;
- unjust enrichment claims;
- removal of infringing materials; and
- publication of corrective statements.

### 7.5 Others

Additional forms of intellectual property protection exist under Czech law and may be particularly important in technology-driven and commercially sensitive industries.

#### Software, Databases

Software is generally protected under copyright law because computer programs are commonly regarded as literary works for legal purposes. Databases may benefit from:

- copyright protection; and

- separate database rights where statutory requirements are satisfied.

### Trade Secrets

Trade secrets also receive legal protection where information satisfies specified conditions.

Protected information generally must:

- possess commercial (competitive) value;
- be identifiable and valuable;
- not be generally available in the relevant business circles;
- relate to an enterprise; and
- be subject to reasonable confidentiality measures.

Trade secrets frequently include, for example:

- technical know-how;
- customer information;
- business strategies;
- manufacturing processes; and
- commercial data.

Rights-holders may seek remedies where confidential information is unlawfully obtained, disclosed or used. Available remedies commonly include:

- injunctions;
- damages;
- destruction of materials; and
- additional corrective measures.

In practice, businesses operating in the Czech Republic frequently rely on a combination of intellectual property rights and contractual protections to safeguard commercially valuable assets and technology.

## 8. Data Protection

### 8.1 Applicable Regulations

Data protection in the Czech Republic is governed primarily by the European Union General Data Protection Regulation (GDPR), together with national implementing legislation and sector-specific rules. Since the GDPR applies directly throughout all EU member states, the Czech framework is closely aligned with broader European standards and principles.

The legal framework establishes core principles governing the processing of personal data, including:

- lawfulness, fairness and transparency;
- purpose limitation;
- data minimisation;
- accuracy;
- storage limitation;
- integrity and confidentiality; and
- accountability.

Organisations processing personal data must ensure that an appropriate legal basis exists for processing activities. Legal bases commonly include:

- consent of the individual;
- performance of contractual obligations;
- compliance with legal obligations;
- legitimate interests; and
- protection of vital interests.

Organisations are additionally required to satisfy various compliance obligations, which may include:

- provision of privacy notices;
- implementation of security measures;
- maintenance of internal documentation;
- breach notification procedures; and
- protection of data subject rights.

Data subjects possess various rights under the applicable framework, including rights concerning:

- access to personal data;
- rectification of inaccurate information;
- erasure of data;
- restriction of processing;
- data portability; and
- objection to processing activities.

Businesses increasingly consider data protection issues not merely as regulatory requirements but also as important components of broader risk management and corporate governance practices.

### 8.2 Geographical Scope

Data protection rules may apply beyond the territorial boundaries of the Czech Republic.

The GDPR possesses broad extraterritorial application and may apply not only to entities established within the European Union but also to foreign organisations where they:

- offer goods or services to individuals located within the European Union; or
- monitor behaviour occurring within the European Union.

As a result, foreign companies targeting customers or users located in the Czech Republic may become subject to Czech and European data protection requirements despite lacking a physical presence in the jurisdiction.

Businesses operating internationally commonly encounter issues relating to:

- customer databases;
- online services;
- marketing activities;
- employee information; and
- cloud-based systems.

Cross-border transfers of personal data outside the European Economic Area are also subject to specific legal requirements. Such transfers generally require:

- adequacy decisions;
- standard contractual clauses;
- binding corporate rules; or
- other recognised safeguards.

International businesses increasingly assess data transfer arrangements carefully due to evolving regulatory expectations and enforcement activity.

### 8.3 Role and Authority of the Data Protection Agency

Data protection regulation in the Czech Republic is supervised by the Office for Personal Data Protection.

The authority performs various supervisory and enforcement functions, including:

- monitoring compliance with data protection legislation;
- investigating complaints;
- conducting inspections;
- issuing recommendations and guidance;
- reviewing compliance measures; and
- imposing corrective measures.

The authority possesses broad investigatory powers and may request documents and information from organisations involved in data processing activities.

Where non-compliance is identified, available measures may include:

- warnings;
- corrective orders;
- processing restrictions;
- temporary prohibitions; and
- administrative fines.

The level of sanctions generally depends on factors including:

- seriousness of violations;
- duration of non-compliance;
- degree of co-operation; and
- measures adopted to mitigate consequences.

In practice, enforcement activities frequently focus on transparency obligations, security measures, direct marketing practices and processing activities involving sensitive categories of personal information.

## 9. Looking Forward

### 9.1 Upcoming Legal Reforms

The Czech legal environment continues to evolve through both domestic legislative initiatives and implementation of broader European regulatory developments.

Many expected reforms arise directly from European Union policies and are likely to influence the legal environment across multiple sectors.

Key developments are expected to include:

- implementation of additional EU digital regulatory measures;
- further development of artificial intelligence regulation;
- expansion of cybersecurity requirements;
- continued implementation of OECD and EU tax initiatives;
- sustainability-related reporting obligations; and
- ongoing digitalisation of public administration.

Particular attention is expected to focus on artificial intelligence and digital regulation.

European initiatives concerning AI governance are expected to create additional compliance obligations affecting businesses involved in:

- technology development;
- automated decision-making;
- data processing; and
- digital services.

Cybersecurity regulation is also expected to remain an important area of development. Businesses operating in critical sectors and digital environments may face additional compliance obligations concerning risk management, incident reporting and security measures.

Expected amendments to Czech competition law are likely to strengthen the powers of the Czech Competition Authority (ÚOHS). The proposed changes include broader investigatory and enforcement powers, increased procedural flexibility, expanded use of interim measures, and wider market monitoring competences. The amendment is also expected to introduce additional tools enabling the authority to intervene more effectively in digital and rapidly evolving markets.

Employment law developments may continue focusing on:

- remote working arrangements;
- flexible working models;
- digital workplace issues; and
- employee protections in changing work environments.

Tax regulation is also expected to continue evolving through implementation of international initiatives concerning transparency, minimum taxation standards and cross-border reporting requirements.

Although many anticipated reforms originate outside the Czech Republic itself, particularly at the European level, they are expected to have a direct practical impact on businesses operating within the Czech market. Consequently, companies increasingly monitor legislative developments proactively and incorporate regulatory changes into long-term compliance and business planning strategies.

## 1. Legal System

### 1.1 Legal System and Judicial Order

The Dominican Republic is a civil law jurisdiction. The judicial system is organised on a territorial basis and has a hierarchical structure. There are ordinary courts and courts of exception, which hear specific cases.

The ordinary courts are the Courts of First Instance (trial courts) and the Courts of Appeal. The Courts of First Instance have jurisdiction over civil, criminal, commercial and administrative cases at the trial level. The Courts of Appeal hear appeals to judgments rendered by trial courts and review issues of law and errors of procedure. The Supreme Court of Justice is the highest court. It holds the ultimate authority and serves as the highest judicial body in the country. It is responsible for evaluating the correct interpretation and application of laws.

The courts of exception are the Justice of the Peace (*Juzgado de Paz*) and the Land Courts (*Tribunal de Jurisdicción Original/Tribunal Superior de Tierras*).

Specialised courts address specific areas of law, for instance, the Superior Electoral Court (*Tribunal Superior Electoral*) is the highest authority in electoral contentious matters, while the Superior Administrative Court (*Tribunal Superior Administrativo*) has jurisdiction over disputes arising between the administration and private individuals.

The Constitutional Court is the supreme organ of interpretation and control of the constitutionality. Decisions rendered by the Constitutional Court are binding.

## 2. Restrictions on Foreign Investments

### 2.1 Approval of Foreign Investments

Foreign investments do not require prior approval from the authorities except when a regulated sector requires regulatory approval both for domestic and foreign investment. In general, the Dominican Republic affords standard national treatment to foreign investors. There are no exchange control restrictions and there is the right to free transfer of funds abroad.

Foreign investment is regulated by Law No 16-95, which was enacted to promote foreign investment in the Dominican Republic and provides equal treatment for foreign and local investors. It includes attractive benefits for foreign investors. Under said Law, foreign investment is allowed in all sectors, with the exception of those linked to the disposal of certain hazardous materials or waste not produced in the country, activities that affect public health or the environment, or the production of material and equipment linked to national defence and security.

In order for foreign investors to obtain the benefits set out in Law No 16-95, interested parties must register their investment with the Prodominicana of the Export and Investment Center of the Dominican Republic (CEI-RD), after completing their investment.

### 2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance

In the Dominican Republic, the registration of a foreign investment is done before the One-Stop Investment Window (*Ventanilla Única de Inversión*- VUI) of the CEI-RD. Foreign investors investing without registration would not benefit from the incentives offered by the Law. Failure to register is not subject to sanctions.

In order to register an investment, a foreign investor must submit an application and other required formalities to the CEI-RD within 180 calendar days from the date on which the investment is made. The CEI-RD is required to evaluate the application and, if the registration requirements are met, issue the corresponding certificate of registration within 15 business days. However, in practice, this process is often longer, as the review and evaluation of the application are very rigorous.

### 2.3 Commitments Required From Foreign Investors

The applicable legal framework does not condition the approval of an application to register an investment to certain commitments. However, in order to benefit from the Investment Residency Permit Programme, a minimum investment of USD200,000, its equivalent in Dominican pesos, or any other currency accepted by the Central Bank of the Dominican Republic, must be made in the Dominican Republic to the share capital of a newly incorporated or existing company.

### 2.4 Right to Appeal

An investor may challenge the decision not to authorise an investment. Any administrative acts may be appealed before the bodies that issued them (by way of a reconsideration request), or before the entity which is hierarchically superior to the issuing body, within the 30 days of the notice of the decision subject to the appeal. The applicant may also appeal before the Superior Administrative Court within the aforementioned 30 days.

In the event that an application is rejected, if the applicant decides to submit a reconsideration request before the CEI-RD, or, where applicable, before the hierarchically superior entity, the applicant may subsequently withdraw their reconsideration request and instead file an appeal before the Superior Administrative Court.

## 3. Corporate Vehicles

### 3.1 Most Common Forms of Legal Entity

#### Main Corporate Vehicles for Doing Business in the Dominican Republic

The most common types of corporate vehicles used in the Dominican Republic for doing business with limited liability are:

- stock corporations (*sociedades anónimas* or S.A.s);
- simplified stock corporations (*sociedades anónimas simplificadas* or S.A.S.s), which are a sub-type of corporations; and
- limited liability companies (*sociedades de responsabilidad limitada* or S.R.L.s).

These corporate vehicles may be incorporated with a minimum of two shareholders, which can be legal or natural persons, domestic or foreign.

#### S.R.L.s

S.R.L.s were conceived as corporate vehicles suitable for medium and small businesses. It is a hybrid between a partnership and a corporation. The capital for S.R.L.s is formed by non-negotiable shares, and a restriction on the entry of new shareholders is one of its principal features.

S.R.L.s use the concept of a limited liability company by separating the personal assets of its members from those of the company. S.R.L.s may be managed by one manager (*gerente*), two managers or a board of managers acting as a collegiate body, who may or may not be shareholders, who may be individuals, domestic or foreign.

The minimum capital requirement for an S.R.L. is DOP200, since Law No 479-08 on Commercial Companies and Sole Proprietorships with Limited Liability ("Law No 479-08"), as amended, requires a minimum of two shareholders and a minimum value per share of RDD100 each.

In S.R.L.s, the maximum number of shareholders is 50.

### S.A.s

S.A.s are typically reserved for large businesses. Due to their characteristics, corporations are the ideal vehicle for companies that wish to pursue venture capital, accumulate a large number of shareholders, and/or eventually pursue an initial public offering. Corporations must be mandatorily managed by a board of directors composed of at least three members and are required to have a statutory auditor (*comisario de cuentas*).

The minimum capital requirements for an S.A. are:

- authorised capital: DOP30 million; and
- paid-in capital: DOP3 million (a minimum of 10% of the authorised capital shall be subscribed and paid).

### S.A.S.s

S.A.S.s are a subtype of corporations (S.A.), suitable for medium or large investments and businesses that will not venture into the stock market. The management and control of an S.A.S. is more flexible than that of a corporation. The provisions of Law No 479-08, apply supplementarily for all situations not described in the by-laws.

Management and control rules for Dominican S.A.S.s are flexible as they will be governed by its by-laws. In that sense, they may be managed by a sole director (president), a board of directors or any other management body or structure.

The minimum capital requirements for an S.A.S. are:

- authorised capital: DOP3 million; and
- paid-in capital: DOP300,000 (a minimum of 10% of the authorised capital shall be subscribed and paid).

## 3.2 Incorporation Process

### Incorporation of a Company

The main steps for incorporating a Dominican company or registering a branch of a foreign entity are as follows.

- Registration of the company's trade name with the National Office of Industrial Property (ONAPI), prior to the incorporation of the company. For branch registration, this step is not mandatory but highly advisable.
- Registration in the Mercantile Registry of the relevant Chamber of Commerce and Production of the jurisdiction of the seat of the company. Upon registration, the company's Mercantile Registry Certificate is issued and the company is deemed to be duly incorporated.
- Once registered at the Mercantile Registry, the company must then be registered with the National Taxpayers' Registry (*Registro Nacional de Contribuyentes* or RNC, by its Spanish acronym) at the local tax department. The tax department will issue a certificate validating the company's registration and assigning an RNC number to the company.

In addition, as secondary steps in order to do business, a company with employees should register with the Ministry of Labour and the National Social Security Treasury (TSS); other registrations may be applicable depending on the activity of the company and if it operates within a regulated sector.

### Tax for the Incorporation of Companies

Currently, a 1% tax is imposed on the authorised share capital upon the incorporation of Dominican companies. This tax does not apply to the registration of foreign branches. However, pursuant to Law No 30-26 on Pro-Economic Growth Measures, Tax Simplification, and Mitigation of the International Crisis ("Law 30-26"), this tax will be abolished with effect from 2027.

### Timeframe

Local registration of a foreign legal entity typically takes four to six weeks after the relevant filings take place, while the incorporation of a Dominican company could take around six to eight weeks from the date of execution of the incorporation documents until effective registration with the RNC.

## 3.3 Ongoing Reporting and Disclosure Obligations

### Reporting and Disclosure Obligations

Private companies are subject to reporting and disclosure obligations. Every year, the board of directors or the manager or managers, as applicable, must prepare an annual management report. In addition, where companies have a statutory auditor, the statutory auditor must also prepare an annual report. Companies must hold an annual shareholders' meeting, within the first 120 days after the end of the fiscal year, to discuss and approve the accounts of the previous fiscal year. The audited financial statements (when applicable), the annual management report, the resolutions to be submitted to the shareholders and the statutory auditor's report (when applicable) mustl be made available to the shareholders at the company's registered address during the 15 days preceding the meeting.

Changes in management, statutory auditor and/or shareholders, capital increase, domicile change, amendments of by-laws, dissolution, mergers, the minutes of shareholders meetings and any other relevant corporate documents, must be registered before the Mercantile Registry, which is a public registry. The registration of documents in the Mercantile Registry grants these documents effectiveness against third parties. There is, however, no governmental agency in charge of enforcing these filings or corporate governance in general, unless it is a listed company or regulated sector.

In addition, companies are subject to monthly and annual tax reporting and filings.

### Notice of Relevant Changes

Companies should register the general information regarding the company (domicile, share capital, shareholding structure, management, etc) with the corresponding Mercantile Registry and the Tax Department (DGII, by its Spanish acronym). Relevant changes to the company's registered information should also be reported.

### Financial Statements

All commercial entities that borrow funds from third parties, issue securities of any nature or have gross income greater than 100 minimum wages must have their financial statements audited in accordance with the norms of the Certified Public Accountants Institute of the Dominican Republic.

### Ultimate Beneficiary

Under Anti-Money Laundering and Terrorism Act ("Law No 155-17"), companies must disclose to DGII general information on the ultimate beneficial owners of the company. A "beneficial owner" is defined as the natural person who exercises final effective control over a legal person or that holds at least 20% of the share capital of said legal person, including the natural person for the benefit of whom a transaction is carried out. The disclosure of the company's ultimate beneficial owner(s) is conducted through the filing of form RC-02 (necessary to register changes in the RNC of the DGII) and is also requested as part of the annual tax declaration forms (IR-2) and other applicable tax forms.

### Tax Compliance Officer

Legal entities must register with the DGII the individual responsible for ensuring compliance with the company or legal entity's tax obligations, (ie, a tax compliance officer). This individual must accept their appointment at an annual shareholders' or members' meeting and must sign the RC-02 form.

The individual designated as responsible for the company or legal entity's tax obligations must hold one or more of the positions specified by law, that is, president, vice-president, director, manager or legal representative. According to the notice issued by the DGII regarding the registration of the tax compliance officer, this individual may not be someone unrelated to the administration, control or operations of the business or entity. If this update is not completed, the DGII will assign this responsibility ex officio to the individual designated as manager or director, or to the individual with the largest ownership interest in the company.

## 3.4 Management Structures

The company's by-laws shall determine the rules in connection with its management structure. Directors are appointed by the shareholders. The management structures available for the more commonly used corporate vehicles are set out below.

- S.A.s are managed mandatorily by a board of directors composed of at least three members, and supervised by one or more statutory auditors (*comisario de cuentas*).
- S.A.S.s' rules of management and structure are governed by their by-laws. They may be managed by a sole director (president), a board of directors or any other management body or structure. A statutory auditor is optional, unless the company issues the securities allowed by the law for this legal form, in which case it is mandatory.
- S.R.L.s can have one sole manager, two managers or a board of managers. Managers can only be individuals. A statutory auditor is optional and is not customary.

## 3.5 Directors', Officers' and Shareholders' Liability

### Liability of Directors

Directors shall be liable, towards the company or toward third parties, for any infringement of the law, breach of the company's by-laws, defaults in their management, including negligence, or any torts and damages against shareholders or third parties resulting from their acts or omissions vis-à-vis shareholders or third parties.

Directors are under a general duty of loyalty, duty of acting as a good businessperson (duty of care), duty of non-compete and duty of confidentiality. Directors' related transactions (and shareholders transactions in S.A.S.s and S.R.L.s) are regulated by the law and certain director-related transactions (and shareholders transactions in case of S.R.L.s) are prohibited.

Available civil claims in damages for directors' liability include both individual claims by the aggrieved party (shareholder or third parties) in accordance with general civil liability rules of law, as well as a company's claim in damages for directors' liability that, individually or collectively, shareholders may seek.

In addition to civil liability, the law also provides for directors' criminal liability. Provisions on liability vary depending on the company type in question.

### Criminal Liability of Legal Entities

Under Law No 74-25, establishing the Dominican Criminal Code, which was enacted on 3 August 2025 and is set to take effect in early August 2026, legal entities may now face criminal liability. Specifically, a legal entity may be held criminally responsible for offences arising from wrongful acts or omissions committed by its officers, representatives, or employees acting on its behalf, where such conduct is attributable to the entity's failure to exercise adequate oversight, direction, or supervision.

### Relieving Directors From Liability: Statute of Limitations

The statute of limitations for the civil claims in damages provided in the law is two years from the date of the default or breach of duty.

### Piercing the Corporate Veil

The general principle is that companies have separate legal personality, independent from that of their shareholders. However, in limited cases, the legal personality of the company may be pierced, thus making its shareholders and/or its directors and/or officers liable.

According to Law No 479-08, the corporate veil can be pierced when there is reason to believe that the company is used to commit fraud against the law, violate public order or to commit fraud to the detriment of the rights of shareholders or third parties.

The Tax Code abides by the "substance over form" concept, and thus, under said principle the corporate veil may be pierced.

Additionally, Section 11 of the Tax Code, as amended by recently enacted Law No 25-24 amending Section 11 of the Dominican Tax Code ("Law No 25-24"), establishes joint and several tax liability for directors and shareholders of a company in connection with the company's tax obligations. Law No 25-24 provides that presidents, vice-presidents, directors and managers of a company and representatives of entities without legal personality will be jointly and severally liable if they have evaded or neglected their responsibilities or permitted tax non-compliance, whether intentionally or negligently. Shareholders of a legal entity, as well as the ultimate beneficial owners, will

also be jointly and severally liable for the entity's tax debts, in cases of negligence, up to the limit of their investment (equity). Moreover, Law No 24-25 introduces joint and several tax liability for companies within the same economic group when the group is deemed to have been created solely for the purpose of evading tax obligations.

The Labour Code also includes a provision for piercing the corporate veil in the case of companies that constitute an economic group where fraud is involved. When there are one or more companies that are under the direction, control or administration of other companies or that constitute an economic group, then all companies will be jointly and severally liable with respect to the labour obligations of its employees in the event of fraud.

## 4. Employment Law

### 4.1 Nature of Applicable Regulations

#### The Labour Law Regime

Since the Dominican Republic is a civil law jurisdiction, the nature of legal rules governing the employment relationship are mainly statutory. The Dominican labour law regime is governed essentially by the Labour Code and resolutions issued by administrative labour authorities. Case law is used to interpret and further clarify labour law provisions but are subordinate to the same.

The provisions of the Dominican Labour Code are public policy, and therefore any contractual clauses and legal provisions contrary to the same are considered to be void and without effect. Hence, internal labour handbooks and employment agreements are valid, provided they do not contravene the Labour Code. An employment agreement does not have to be in writing (except for labour agreements for a determined period of time or for a specific project), but proven by the facts, which is what prevails.

Dominican labour law is territorial and applies to all employees that work in Dominican territory, whether they are foreign or national, even if they have been hired in a foreign country.

#### Collective Bargaining Agreements

Collective bargaining agreements may establish more favourable conditions for the workers, which are deemed to be included in and automatically modify the individual employment contracts.

### 4.2 Characteristics of Employment Contracts

Employment agreements can be concluded verbally or in writing. Labour agreements for a determined period of time or for a specific project need to be executed in writing. Pursuant to the Dominican Labour Code, an employment contract is one whereby a person undertakes to render a personal service to another, under their immediate or delegated dependence and direction, in exchange for a remuneration.

The duration of employment contract is regulated as follows:

- for an indefinite time;
- for a limited time; or
- for a specific job or service.

All labour contracts are presumed to be made for an indefinite time period. Contracts for a limited time and for a specific job or service can only be entered into when the nature of the work requires it and/or under the conditions foreseen by the Dominican Labour Code.

The existence of an employment contract is presumed (until proven to the contrary) in any personal employment relationship. The employment contract may be purely consensual in nature, the validity of the verbal agreement is established by law, and practice is consistent with this criterion since the simple agreement of the parties is sufficient for an employment relationship to take place.

Under the Labour Code what prevails are the facts over what is in writing; thus, what prevails is not the employment contract that is made in writing, but the one that is executed according to the facts, which will allow the establishment of the nullity of any contract in which the parties have proceeded in simulation or fraud of labour laws.

## 4.3 Working Time

### Working Hours

There is a maximum working time applied to salaried employees. The working week will end at 12pm on Saturday, and, in principle, it must not exceed eight hours per day or 44 hours per week, except for the exceptions provided via resolution of the Minister of Labour.

The aforementioned general rule is not applicable (unless agreed otherwise) to the following workers:

- those that act as representatives or agents of the employer;
- those that are appointed to management or inspection positions;
- those that work in rural establishments run by members of a same family or one person; and
- those who perform intermittent activities or activities that solely require their presence in the workplace.

Workers are not allowed to remain for more than ten hours a day at their place of work. In addition, after four hours of continuous work, there must be a rest period of one hour, and after five hours, a rest period of one and a half hours. All workers have the right to an uninterrupted weekly rest of 36 hours.

### Overtime

The employer must pay 35% over the normal wage for overtime between 44 and 68 hours per week and 100% for overtime surpassing 68 hours per week.

The working day may be extended, but only to the extent necessary to avoid a serious disturbance to the normal operation of the employer's company, in the cases specified by the law.

## 4.4 Termination of Employment Contracts

Dominican labour law can be considered an "employment at will" jurisdiction, as it allows unilateral termination without cause by either party in indefinite term agreements but establishing the payment of severance and acquired rights when effected by the employer.

Generally speaking, termination of the employment contract is divided into two groups in the case of indefinite term agreements: termination without cause; and termination with cause.

- Termination with cause: termination by the unilateral decision of the employer is justified if the employer is able to prove the existence of a just cause as defined by the Labour Code. Otherwise, termination of employment is considered unjustified, and the employer is required to pay severance as described below.
- Termination without cause: any of the parties in an employment contract has the right to end a contract for an indefinite time via advance notice to the other and without alleging cause.

When the employer exercises their right of dismissal without a cause, it has ten days to pay the worker severance (advance notice and severance) as provided by the Labour Code, plus other acquired rights, as follows:

- advance notice;
- severance pay;
- mandatory Christmas bonus;
- compensation for vacation, if applicable; and
- a profit bonus, within 120 days of the closing of the fiscal year.

## 4.5 Employee Representations

It is not mandatory for employees to be represented by someone other than themselves. In principle, employees do not have to be informed or consulted by management with respect to decisions regarding the company's operations. However, if decisions that may affect employees' working conditions are to be taken, the employees must be informed of such decisions.

Employees have the right, but not the obligation, to unionise for the representation of their professional interests within their workplace, and employers may not restrict the right of workers to join or refrain from joining a union, or to withdraw from a union to which they belong. The exercise of the right to unionise is an individual prerogative of each worker.

## 5. Tax Law

### 5.1 Taxes Applicable to Employees/ Employers

An employer is under the obligation to withhold income tax on salaries paid to its employees.

All natural and legal persons residing or domiciled in the Dominican Republic will pay income tax on revenue of Dominican source and on revenue of foreign source originating from financial investments and gains.

Currently, individuals residing in the Dominican Republic are subject to income tax ranging from 15% to 25% of their taxable net income for each fiscal year. The exempted annual income is adjusted every year according to the inflation rate for the previous year published by the Central Bank of the Dominican Republic. The annual income of up to DOP416,220 is exempted from income tax and, above that sum, the following scale would apply.

- Annual income from DOP416,220.01 to DOP624,329.00: 15% for the sums exceeding DOP416,220.01.
- Annual income from DOP624,329.01 to DOP867,123.00: DOP31,216.00 plus 20% for the sums exceeding DOP624,329.01.
- Annual income from DOP867,123.01 and above: DOP79,776.00 plus 25% for the sums exceeding DOP867,123.01.

Notwithstanding the foregoing, pursuant to Law 30-26, effective 1 January 2027, annual income of up to DOP480,000.00 shall be exempt from income tax. Annual income in excess of such amount shall be subject to the following progressive income tax rates:

- From DOP480,000.01 to DOP685,000.00: 15% of the amount exceeding DOP480,000.
- From DOP685,000.01 to DOP910,000.00: DOP30,750.00, plus 20% of the amount exceeding DOP685,000.00.
- From DOP910,000.01 to DOP4,800,000.00: DOP75,750.00, plus 25% of the amount exceeding DOP910,000.00.
- In excess of DOP4,800,000.00: DOP1,048,250.00, plus 27% of the amount exceeding DOP4,800,000.00.

Individuals shall be considered resident of the Dominican Republic for tax purposes if they are in the Dominican Republic for over 182 days, continuously or not, during a fiscal year.

National or foreign individuals who come to reside in the Dominican Republic will only be subject to the payment of income tax on their revenues of foreign source from investments and financial gains from the third year or taxable period to be counted from the period on which they became residents. Additionally, if a non-resident employee receives income from a Dominican source, those amounts shall be subject to local taxes, specifically income tax, amounting to 27% for foreign/non-resident individuals and entities.

Complimentary compensation given to an employee is subject to income tax (27%) over the gross amount of such compensation. Housing, transportation, mobile phone charges, among others, is considered as complimentary compensation. Unlike the income tax withholding on the salaries of employees, this tax is to be covered by the employer and not by the employee.

All companies that have salaried employees must be registered with the Social Security Treasury (TSS) and make their payments on a monthly basis as follows.

- Family health insurance (SFS): 10.13% of the quotable salary (7.09% shall be covered by the employer and 3.04% by the employee).
- Pension fund (AFP): 9.97% of the quotable salary (7.10% covered by the employer and 2.87% by the employee).
- Occupational risk insurance (SRL): the employer must pay a fixed fee of 1% on the salary of the employee and an additional variable fee of up to 0.6% on the salary of the employee depending on the risk level of the activities performed by the company.

In addition, the employer must pay the National Institute of Technical Professional Training (INFOTEP) 1%

of its employee payroll and the employee must pay 0.5% deductible from bonuses.

### 5.2 Taxes Applicable to Businesses

Dominican tax laws are territorial.

All natural and legal persons residing or domiciled in the Dominican Republic will pay income tax on revenue of Dominican source and on revenue of foreign source originating from financial investments, gains and technical assistance services. For these purposes, technical assistance services refer to the provision of independent management, technical, and consulting services involving the furnishing of non-patentable know-how. Companies incorporated in the Dominican Republic are considered resident for tax purposes as well as foreign entities' branches registered locally and permanent establishments. If the individual or legal entity is not considered resident for tax purposes, then it would pay tax on each revenue of Dominican source and would be taxed on its gross income.

A "permanent establishment" is defined as a fixed place of business in which a natural person, legal entity or foreign entity carries out all or part of its activities, such as: headquarters, offices, branches, commercial agencies, factories, workshops, mines, oil or gas wells, quarries or any other place of extraction of natural resources, assembly projects, including supervision activities thereof. It also includes construction or supervision activities derived from the sale of machinery or equipment when their cost exceeds 10% of the sale price of said goods, business consulting services, provided they exceed six months within a fiscal year, and representatives or agents, when the representatives or agents of a legal entity would generate a risk of a taxable presence for such legal entity when they carry out all or almost all of their activities in the Dominican Republic on behalf of the legal entity.

The main applicable taxes to companies doing business, among other, are set out below.

- Income tax: any earning or benefit obtained from a good or activity and all the benefits, profits received or accrued, and capital gains made by the taxpayer, whatever their nature, origin or denomination, shall be deemed as "income". The applicable annual income tax on the net income of legal entities, resident or with a registered permanent establishment in the Dominican Republic is 27%. Pursuant to Law No 30-26, on a transitional basis, taxpayers whose reported income equals or exceeds DOP1 billion shall be subject to an income tax rate of 30% for fiscal years 2026, 2027, and 2028. Beginning with fiscal year 2029, the rate will revert to 27%.
- VAT: the transfer of industrial goods and services (ITBIS, which is the local VAT equivalent) tax rate applicable to the transfer of products, the import of industrialised goods and the provision of services to the local market is 18%.
- Tax on assets: 1% tax on the value of its assets (not adjusted for inflation, and applying the deduction for depreciation, amortisation and reserves for uncollectable accounts). Pursuant to Law No 30-26, companies operating in the agricultural sector are fully exempt from the assets tax.
- Capital gains tax: this tax must be paid by any individual or legal entity that transfers or disposes of capital assets subject to this tax. To determine the capital gain, the fiscal cost of the respective good or capital asset will be deducted from the sale price or disposal value. The rate is 27% for companies. Pursuant to Law No 30-26, capital gains derived from the transfer of real estate by individuals are subject to a flat 10% tax. Exemptions apply where: (i) the transferred property is the seller's primary residence, and the full proceeds are reinvested in a new primary residence within six months (with a proportional exemption if only a portion of the proceeds is reinvested); or (ii) the seller is aged 65 or older, regardless of reinvestment. Law No 30-26 expressly incorporates digital assets and crypto-assets into the Tax Code as capital assets.
- Real estate transfer tax: 3% tax on the greater of the acquired real estate property's total value or its fiscal value, applicable to acts of real estate property transfer (purchase and sale agreements, exchanges, deeds in lieu, adjudications, contributions to trusts, etc).
- Transfer tax (motor vehicles): 2% tax on the greater of the acquired motor vehicle's total value or its fiscal value.

- Withholdings on dividends: dividends from Dominican sources are subject to a single and definitive withholding of 10%. Those dividends from foreign sources are considered financial gains and are taxed at a rate of 27% for companies and 25% for individuals.

Other withholding obligations include:

- 27% on payments made abroad; with the exception of: (i) royalties and rights paid to non-residents, which are subject to 15% on the gross amount as a final tax; and (ii) software licences, online advertising services and data storage rights paid to non-residents, which are subject to 15% on the gross amount as a final tax, unless the payment constitutes a genuine transfer of software ownership by the developer or owner of the programme, in which case it is exempt.
- 10% on interest paid to non-resident individuals or companies;
- withholding on employees' salaries based on a progressive scale with a cap up to 27% effective 1 January 2027, and other contributions to the National Social Security System and INFOTEP; and
- 15% on fees, commissions and other payments for the provision of services in general.

Custom duties and tariffs apply to the importation of goods, with the exceptions and provisions established in different international treaties signed by the country.

In connection to Pillar Two of the Global Anti-Base Erosion Model Rules (GloBE) published by the Organisation for Economic Co-operation and Development (OECD), the Dominican Republic's income tax rate applicable to MNE (Multinational Enterprises) complies with the minimum global tax set forth by the OECD, ie, 15% (the Dominican Republic's current rate for corporate income tax is 27%). Likewise, the current rate for taxes over the payment of interests, dividends and royalties is 10% (higher than the 9% proposed by the OECD for the same concept). In this context, since the Dominican Republic already complies with Pillar II of the GloBE rules, the introduction of domestic top-up tax is not required. Nevertheless, as explained in **5.8 Tariffs**, there are certain special tax regimes that grant an exemption from corporate income tax, such as the free trade zones regime.

## 5.3 Available Tax Credits/Incentives

### Tax Incentives

The main tax incentive regimes are for:

- free trade zones;
- comprehensive border development;
- tourism development; and
- renewable energy.

### Free Zones

Free zones are granted the following tax incentives and exemptions for legal entities classified as free zone companies according to the procedure established by law:

- tax on the incorporation of companies and on capital increases;
- income tax;
- import duties, tariffs, custom rights and other taxes affecting raw materials, equipment, parts of buildings, etc, destined for construction, preparation or operation within free zones;
- all existing export and re-export taxes, with certain exceptions those regarding import tariffs;
- construction taxes, taxes on loan agreements and on registration and transfer of real estate property from the date of formation of the free zone operator;
- free zones are exempted from giving their employees a yearly company bonus; however, free zones are still required to pay to their employees a Christmas bonus;
- consular fees; and
- taxes on assets and ITBIS.

### Comprehensive Border Development

Law No 12-21 creates the special zone for comprehensive border development (SBDZ) and an incentive regime, which covers the Dominican Republic provinces of Pedernales, Independencia, Elías Piña, Dajabón, Montecristi, Santiago Rodríguez and Bahoruco, providing the following tax incentives and exemptions for legal entities classified according to the procedure established by law.

- Selective tax on consumption, applicable to telecommunications and insurance services for the facilities of the project located in the SBDZ.
- Tariffs and ITBIS on machinery and equipment imported or acquired in the local market, as applicable, required for the installation and start-up of the company.
- ITBIS on the acquisition and import of inputs and raw materials used in the production of goods exempt from ITBIS in accordance with current tax legislation.
- 50% of ITBIS on the acquisition and import of inputs and raw materials used in the production of goods which are not exempt from ITBIS in accordance with the current tax legislation.
- Tariff on the import of inputs and raw materials used for the production of goods, only when they are not produced in the Dominican Republic.
- Real estate transfer tax and other taxes related to real estate operations on the land and infrastructure where the classified project will be developed.
- Taxes, fees and registration rights related to the capital gain and transfer of shares in companies with registered offices within the SBDZ.
- Exemption from the obligation to withhold and pay to the Tax Department payments abroad for technological innovation services required by the classified project exclusively during construction and start-up.

### Tourism Development

Under Law No 158-01 for the Promotion of Tourism Development, companies domiciled in the Dominican Republic that qualify to benefit from the incentives of such law are exempt from paying:

- income tax, as established under Law No 158-01;
- national and municipal taxes charged for using and issuing construction permits, including the acts of land purchase, provided they are used as authorised by Law No 158-01; and
- import taxes and other taxes, such as rates, rights, surcharges, including ITBIS that are applicable to the equipment, materials and furniture that are necessary for the first equipment and commissioning and the tourist facility in question.

### Renewable Energy

All projects of public, private or mixed facilities that generate energy from the following renewable sources may benefit from the incentives provided in Law No 57-07 on Incentives to the Development of Renewable Energy Sources and its Special Regimes, as amended, upon prior approval, according to the procedure established by law:

- wind farms with an initial installed capacity that does not exceed 50 MW;
- hydroelectric facilities of which hydroelectric capacity does not exceed 5 MW;
- electro-solar (photovoltaic) installations of any type and of any power level;
- solar thermal installations (concentrated solar energy) of up to 120 MW of power per plant; and
- facilities that produce energy from biomass up to a generated power capacity of 150 MW.

The main applicable incentives for the renewable energy regime are:

- an exemption from import taxes and VAT; and
- a ten-year income tax exemption; and
- a reduction of taxes on external financing: a 5% reduction of the tax for payment of interest from external financing, only in relation to interest payments to financial institutions.

## 5.4 Tax Consolidation

Tax consolidation is available and can be requested by the interested party or declared ex-officio by the Tax Administration to prevent tax evasion or to clearly reflect the income of any of the organisations or companies of an economic group.

## 5.5 Thin Capitalisation Rules and Other Limitations

The Dominican Republic has thin capitalisation rules. The maximum debt-to-equity ratio for the purposes of deduction of interest is 3:1. Per the Dominican Tax Code, the amount for interest deduction may not exceed the value resulting from multiplying the total amount of interest accrued in the tax period (1) by three times the relationship between the average annual equity balance (C) and the annual average bal-

ance of all debts (D) of the taxpayer that accrue interest: 1×3 (C/D).

## 5.6 Transfer Pricing

Transfer pricing rules are applicable, whereby transactions between related parties are regulated. Transactions between a resident and a related natural person, legal person or entity must be carried out in accordance with the prices that would have been agreed between independent parties in comparable transactions and under the same or similar circumstances.

Such rule also applies when a resident conducts commercial or financial transaction with:

- a related resident; or
- physical or legal persons or entities domiciled, incorporated or located in territories with preferential tax regimes, low or no taxation, or tax havens, whether the latter are related or not.

When the prices agreed for commercial or financial transactions between companies in scope of this provision do not adjust to the values of similar transactions between independent companies, the Dominican Tax Administration may challenge them and make the corresponding adjustments.

Taxpayers must file a transfer pricing information return (DIOR) with respect to transactions with its related parties, which must be filed annually within 180 days after the fiscal closing date.

When operations made with related parties exceed DOP12,193,981.70 in the fiscal year, the taxpayer must have prepared a transfer pricing study or report on the process of the assessment of prices agreed between the related parties at the time of filing the DIOR.

## 5.7 Anti-Evasion Rules

Tax evasion is incurred by those who, through actions or omissions that do not constitute any of the infractions provided for in the Tax Code, produce or could produce an illegitimate decrease in tax revenue, the improper granting of exemptions or damage to the creditor of the tax obligation.

Tax evasion is considered an infraction under the Dominican Tax Code and is sanctioned with a monetary penalty of up to two times the amount of the omitted tax, without detriment to the possibility of the Tax Administration ordering the closing of the establishment of the offender, if applicable.

## 5.8 Tariffs

The applicable tariff regimes in the Dominican Republic are established by Customs Law No 168-21. Ad valorem duties on imported goods are set forth under Law No 146-00 on Tariff Reform, as amended.

The importation of goods into the Dominican Republic is subject to the following.

### Custom Duties (Tariffs)

Goods are subject to seven different tariff rates, depending on the type of good: 0%, 3%, 8%, 14%, 20%, 25% and 40%.

### Excise Tax (ISC)

Excise Tax is the tax applied to the transfer of certain domestically produced goods at the manufacturing level, as well as their importation, and the provision or leasing of specific services, such as telecommunications services, insurance services and financial transactions. Imported goods such as alcohol, tobacco, hydrocarbons, among others, are subject to this tax. The rate will depend on the type of product or service offered.

Alcoholic products are taxed through fixed amounts determined by the volume of pure alcohol content, along with an additional 10% ad-valorem based on the suggested retail price.

Tobacco products are subject to fixed amounts depending on the cigarette type, plus a 20% ad-valorem applied to the suggested retail price.

Telecommunications services are taxed at a rate of 10%, while insurance services generally carry a 16% tax. Pursuant to Law No. 30-26, the tax rate applicable to life insurance is reduced progressively: 11% in 2027, 6% in 2028, and fully exempt as of 2029. Non-life insurance services remain subject to the standard 16% rate. Hydrocarbons are taxed through specific

amounts per gallon, in addition to a 16% ad-valorem. Other goods are taxed based on the fixed amounts established under the Tax Code.

### Value Added Tax (ITBIS)

The ITBIS rate applicable to the transfer of products, the import of industrialised goods and the provision of services to the local market is 18%, calculated based on the net transfer price of the good or service, in accordance with the Tax Code.

The Dominican Republic has five trade agreements:

- the Dominican Republic–Central America–United States Free Trade Agreement (DR-CAFTA);
- the CARIFORUM–European Union Economic Partnership Agreement (EPA);
- the Dominican Republic–Central America Free Trade Agreement (TLC RD/CA);
- the Dominican Republic–Caribbean Community (CARICOM) Free Trade Agreement; and
- the Trade Agreement between the Dominican Republic and the Republic of Panama.

The Dominican Republic grants preferential tariffs to countries with which it has a free trade agreement, which benefit from reduced or zero tariffs on most goods. Additionally, certain sectors benefit from tariff or custom duty exemptions, including free trade zones, renewable energy projects, tourism development, non-profit organisations.

Tariffs are often higher on:

- agricultural products (poultry, rice, beans, dairy, onions and garlic, sugar, corn and wheat flour) to protect local producers;
- beverages (beer, rum) to protect local industries; and
- textiles (higher on Asian and other non-preferential countries).

Because of recent global developments, the Dominican economy may face both potential benefits and difficulties. Higher gold prices may boost export revenues, while higher tariffs and a slowdown in global trade could negatively affect the textile and manufacturing industries, potentially resulting in reduced investment inflows.

The United States is the Dominican Republic's most significant bilateral trading partner, representing 53.5% of the country's total exports, valued at over USD7.6 billion in 2025.

The Dominican Republic is among the countries with the lowest reciprocal tariff rate (10%).

## 6. Competition Law

### 6.1 Merger Control Notification

As a general rule, Competition Law No 42-08 does not create a notification regime for merger and acquisition transactions but companies in specific industries are subject to the requirements established by their corresponding regulators and sectorial laws.

Mergers and acquisitions are subject to notification in the case of telecommunications companies, insurance, reinsurance and insurance intermediation companies, as well as financial intermediation entities, companies which are the beneficiaries of public concessions for electricity generation and mining, pension fund administrators and companies making public offerings.

### 6.2 Merger Control Procedure

Law No 42-08 does not set forth a merger control procedure but companies in specific industries are subject to the requirements established by their corresponding regulators and sectorial laws.

In the case of telecommunication companies, written notice should be given to the authorisations department of the Institute of Telecommunications (*Instituto Dominicano de las Telecomunicaciones* – INDOTEL) prior to the closing of any transaction which implies, directly or indirectly, the loss or possibility of loss, on the part of the seller or assignor, of corporate control, or the possibility of forming the corporate will of the company which holds the authorisation to operate as a telecommunication service provider in the Dominican Republic. If INDOTEL determines that prior authorisation is required in order to execute the trans-

action, the telecommunications service provider must comply with the procedure provided for in INDOTEL's Regulation for Authorisations.

Authorisation of change of control is issued by INDOTEL via a resolution. The process takes at least 97 business days.

In the case of free zone companies, a change in their shareholding structure requires a formal notice to be given to the National Council of Free Export Zones (*Consejo Nacional de Zonas Francas de Exportación* – CNZFE), which may be given after the transaction has closed or the change is effective. This notice is not legally mandated and is made purely for informational purposes. No prior authorisation is required for changes to the shareholding structure of a free zone company.

## 6.3 Cartels

Law No 42-08 governs anti-competitive agreements and practices. It prohibits all practices, acts and agreements between competitor economic agents, be it express or implicit, in writing or verbal, that have for effect imposing unjustified barriers in the market.

Law No 42-08 is a public policy law whose purpose is to promote and defend effective competition with the aim of increasing economic efficiency in goods and services markets with a view to generating benefits and value for consumers and users of said goods and services in the Dominican territory. It is applicable to all economic agents, legal or natural persons, governed by private or public law, for profit or non-profit, foreign or domestic, that do business in Dominican territory. It is also applicable to:

- acts, agreements or conducts, including those derived from a dominant position, that originate outside the Dominican territory, if they have restrictive effects on competition within the national territory; and
- acts, agreements and administrative provisions that have the effect of restricting competition.

Law No 42-08 basically regulates:

- concerted practices;
- abuse of dominant position; and
- unfair competition.

The National Commission for the Defence of Competition (*ProCompetencia*) is the authority in charge of ensuring the protection of free competition in the Dominican Republic.

In certain regulated sectors, the applicable sectorial laws contain provisions regarding the defence of free competition that delegate functions in this area to the regulator of the sector in question (eg, INDOTEL in matters of telecommunications).

## 6.4 Abuse of Dominant Position

### Economic Dependence

The abuse of economic dependency, the economic subordination of one contracting party to the other in a given contract, is not regulated. There are legal provisions, such as Consumer Protection Law No 358-05, that prohibit abusive clauses in adhesion contracts in commercial relations with consumers (B2C). The commercial or contractual relationships between professionals (B2B) are governed based on the principle of "the free will to contract" and Article 1134 of the Dominican Civil Code, which establishes that legally formed agreements have the force of law between the parties.

### Abuse of Dominant Position

Law No 42-08 prohibits the abuse of dominant position. Pursuant to the provisions of this Law, dominant position is defined as the control of the relevant market enjoyed by an economic agent, by itself or jointly with others, that gives it the power to hinder the maintenance of effective competition or allows it to act in said market regardless of the behaviour of its competitors, clients or consumers.

The possession of a dominant position in the market or its increase, by itself, does not constitute an offence under the law, only its abuse.

## 7. Intellectual Property

### 7.1 Patents

A patent is an exclusive right granted by the Dominican state to inventions and utility models and gives the inventor exclusivity for its exploitation for a fixed period of time. According to Law No 20-00 on Industrial Property ("Law No 20-00"), an invention is any idea or creation of the human intellect capable of being applied to industry that meets the patentability conditions set forth in the applicable legal framework and may refer to a product or a procedure. To be patentable, the invention must be capable of industrial application, be novel and have an inventive level.

Likewise, a utility model is considered to be any new form, configuration or disposition of elements of any artifact, tool, instrument, mechanism or other object, or of any part of it, that allows a better or different operation, use or manufacture of the object that incorporates it, or that provides some usefulness, advantage or technical effect.

The right to the patent belongs to the inventor and is obtained through its registration before ONAPI's inventions department. However, it can be transferred.

The Dominican Republic is a contracting party to the Patent Cooperation Treaty (PCT). The PCT is an international co-operation agreement that allows applicants to apply for patent protection for an invention in multiple countries at the same time by filing an "international" patent application before the national patent office of the contracting state of the nationality or domicile of the applicant or before the International Office of the World Intellectual Property Organization (WIPO). Consequently, the Dominican Republic can be automatically designated in any international application, and nationals and residents of the Dominican Republic have the right to file applications under the PCT.

The patent application must contain the details of the applicant and the inventor(s), and a Spanish translation of the specification, including the description, claims, drawings and sequence listing, if applicable, and the priority claim declaration and certified copy of the priority document, if applicable. Once filed, ONAPI's inventions department oversees the formal examination of merits of the application.

The scope of the patent protection is to exclude third parties from the exploitation of the invention. However, legislation contemplates some limitations as long as they do not unreasonably conflict with the normal exploitation of the patent or cause unreasonable prejudice to the legitimate interests of the patent holder, taking into account the legitimate interests of third parties.

The law establishes criminal and economic sanctions for the infringement of a patent. The owner of a patent can initiate civil or criminal actions before a court with jurisdiction against any person who infringes the rights granted by the law, including petitioning for conservatory measures.

The invention patent has a duration of 20 non-extendable years, commencing from the filing date of the application in the Dominican Republic. However, under DR-CAFTA and Law No 20-00, the titleholder of a patent may request a patent term adjustment (PTA) if there is an unreasonable delay in the patent granting process incurred by ONAPI's inventions department. Compensation may be requested for a maximum of three years if ONAPI incurs in a delay of more than five years in the granting of the patent or more than three years from the date of the request for an examination on the merits. To maintain a patent or a patent application, the applicant must pay annual fees.

The utility model patent expires after 15 non-extendable years, commencing from the filing date of the patent application in the Dominican Republic.

### 7.2 Trade Marks

Law No 20-00 defines a trade mark as any sign or combination of signs capable of graphic representation that allows the products or services of a company to be distinguished from the products or services of other companies.

The right to the exclusive use of a trademark is acquired through its registration before ONAPI.

After the trade mark application is filed before ONAPI, the distinctive signs department proceeds with the formal evaluation of the merits. Once the trade mark is approved, it is published in the Official Gazette of ONAPI. After the publication, any third party may file an opposition against the application for registration, within a period of 45 days from the notice's publication date. After this period has elapsed, and if no oppositions are filed, ONAPI proceeds to grant and register the trade mark.

Upon registration, a trade mark is valid for ten years from the date on which the registration certificate is issued and may be renewed for successive periods of ten years following the expiration date. The owner has a grace period of six months to proceed with the renewal, after the expiration date.

The law establishes criminal and economic sanctions for unauthorised commercial use of a registered trade mark or a fraudulent imitation of a trademark, in relation to the products or services that it distinguishes, or to related products or services. The owner of a registered trade mark can initiate administrative actions against applications or registered trade marks that affect their trade mark, or file civil actions before the relevant court against any person who infringes the rights granted by law, including petitioning for conservatory measures.

### 7.3 Industrial Designs

According to Law No 20-00, an industrial design is any collection of lines or combinations of colours, or any two-dimensional or three-dimensional external shape that is incorporated into an industrial or handicraft product, including parts intended for assembly in a complex product, the packaging, presentation, graphic symbols and typographic characters, excluding computer programs, to give it a special appearance, without changing the destination or purpose of said product.

The right to obtain the protection of an industrial design belongs to the designer(s).

The protection is acquired via registration before the inventions department of ONAPI, provided that it is a new design and has a unique character.

The protection of an industrial design does not include the elements or characteristics of the design determined solely by the performance of a technical function that does not incorporate any arbitrary contribution of the designer or that its reproduction is necessary to allow the product that incorporates it to be mechanically assembled or connected with another product of which it constitutes a part or integral piece. The scope of its protection is to exclude third parties from the exploitation of the industrial design.

The application must be filed before ONAPI, including the details of the applicant, the designer, a brief description of the visible characteristics that appear in each graphic or photographic representation, and the drawings and/or photographs of the industrial design. Once the application is filed, ONAPI's inventions department proceeds with the evaluation of the application to verify if meets the requirements established to grant protection over the industrial design.

The duration of the registration is five years, and it may be extended for two additional periods of five years by paying the established extension fee.

### 7.4 Copyright

Copyright is regulated by Law No 65-00 on Copyright.

Pursuant to Law No 65-00, copyright includes the protection of literary and artistic works, the literary or artistic form of scientific works, including all creations of the mind in the indicated fields, whatever the mode or form of expression, dissemination, reproduction or communication, or gender, merit or destiny.

It is important to note that, unlike trademarks, the author's right is an immanent right that is born with the creation of the original work. The formalities that Law No 65-00 enshrines are to give publicity and greater legal certainty to the holder of the rights, and the omission does not harm the exercise of their rights. Therefore, the registration of these works is not mandatory.

The National Copyright Registry of the National Office for Copyright (ONDA, by its Spanish acronym) is in charge of the registration of the works, performances, productions, including phonograms and broadcasts

protected by Law No 65-00, acts and contracts that refer to copyright or related rights.

The limitations and exceptions to copyright are of restrictive interpretation and may not be applied in such a way that they violate the normal exploitation of the work or cause unjustified damage to the interests of the owner of the respective right.

The owner of the copyright or a related right, successors in title, or whoever has the conventional representation of the same, has the right to decide how they will initiate and proceed in the exercise of the rights conferred by law. Law No 65-00 contemplates administrative sanctions, such as fines and civil and criminal liability for violation of copyright.

The copyright over a work is divided into moral and economic rights. Regarding moral rights, the author has a perpetual, imprescriptible and inalienable right to claim paternity over the work. While, economically, the rights correspond to the author during their life and to the spouse and successors for 70 years from the death of the author. For some works, such as anonymous and collective works, the protection starts from the publication or from its creation, if it is not published within 50 years from its creation.

Protection for a computer program is 70 years from publication or from its creation, if it is not published within 50 years from its creation.

## 7.5 Others

### Computer Programs

Software, or computer programs, as they are regulated by Law No 65-00 on Copyright, are protected in the same terms as literary works, whether source programs or object programs, or by any other form of expression, including technical documentation and user manuals.

A computer program is defined by Law No 65-00 as the expression of a set of instructions through words, codes, plans or in any other way that, when incorporated into an automated reading device, is capable of making a computer or other type of machine execute a task or obtain a result.

The protection of software extends to both operating and application programs, in source code or in object code, as well as technical documentation and user manuals.

### Databases

In the Dominican Republic, databases are also recognised as literary works.

The protection extends to the bases or compilations of data or other materials that are legible by machine or in any other way that, further to the selection or provision of its contents, constitute creations of an intellectual nature. However, the protection does not extend to the compiled data or information.

### Trade Secrets

Trade secrets are regulated by Law No 20-00 on Industrial Property. They are identified as business secrets and defined as any undisclosed commercial information that a natural or legal person possesses that can be used in any productive, industrial or commercial activity, and that is likely to be transmitted to a third party.

According to the law, a business secret shall be recognised as such for purposes of its protection when the information which constitutes it:

- is not generally known or easily accessible by persons who are in the circles that normally manage the respective information; and
- has been subject to reasonable measures taken by its legitimate owner to keep it secret.

Law No 20-00 establishes that actions considered unfair competition with respect to a business secret are:

- exploiting it without the authorisation of the legitimate owner; and
- a business secret to which access has been obtained subject to a confidentiality obligation, resulting from a contractual or employment relationship.

It is important to take into account that the law does not establish specific sanctions for the violation of

rights over business secrets, therefore, it is presumed that any remedy falls on the civil liability regime for violating the provisions of the aforementioned law or for breach of contract in the event of a confidentiality agreement or contractual relationship between the owner of the secret and the person who exercises the infringement.

## 8. Data Protection

### 8.1 Applicable Regulations

The Dominican Republic's Constitution recognises the fundamental nature of an individual's right to honour, respect and non-interference in one's private life. It also enshrines the fundamental principles that govern the treatment of personal data, notably, the principles of reliability, legality, integrity, security and purpose.

Law No 172-13 on the Protection of Personal Data is the general law for the protection and processing of personal data. This Law:

- governs the collection, storage, safekeeping, use and access rights to personal data recorded in files, databases and registries for the issuance of public or private reports; and
- regulates the incorporation and operation of Dominican credit bureaus.

Monetary and Financial Law No 183-02 imposes on banks and other regulated financial institutions:

- secrecy requirements;
- a legal obligation to maintain confidentiality regarding deposits received from the public and to refrain from revealing information in a detailed or segregated manner that could reveal the identity of their customers or account holders; and
- a confidentiality obligation, which prohibits banking entities from releasing personal banking data, except for the reasons provided for under the Law.

Additionally, the Dominican Republic's legal system has, in writing, some of the general principles instituted by the General Data Protection Regulation (GDPR), using consent as the justification for the processing of personal data. Hence, it is important to point out that the Dominican Republic is a consent-based market with respect to the processing of personal data.

### 8.2 Geographical Scope

Even if processing of information is carried out abroad, if a foreign company targets customers in the Dominican Republic, there is a risk that customers may claim the collection of data takes place in the Dominican Republic and, accordingly, the provisions of Law No 172-13 would apply to the collection and treatment of data in the Dominican Republic.

The "treatment of personal data" is defined as:

- any operations or processes that allow for personal data processing, such as the collection, creation, storage or organisation of personal data;
- the evaluation or analysis of such personal data; or
- the transmission of such personal data.

Law No 172-13 applies to all data controllers that collect information in the Dominican Republic and is of public order (ie, mandatory, and the parties may not opt out of its provisions). The definition of treatment is considerably broad under Law No 172-13 and includes operations and procedures that entail the collection of information as well as its processing per se.

Personal data may only be transferred internationally if the owner of the data expressly authorises such transfer. The processing and transfer of personal data is unlawful when the owner of the data has not given their free, explicit and conscious consent, which shall be in writing or by other means to equate to it. Said consent must appear expressed in a provable way.

### 8.3 Role and Authority of the Data Protection Agency

#### Data Protection Authority

The Dominican Republic does not have a national data protection authority. However, Law No 172-13 provides that databases and registries, whether public or private, intended to provide credit reports (ie, credit bureaus) are subject to the inspection and supervision of the Superintendency of Banks. Hence, save for the Superintendency of Banks of the Dominican Republic, which regulates personal data matters in

connection with banking matters, there is no data protection authority that supervises compliance with the legal framework.

### Habeas Data

In that sense, most of the claims must be resolved utilising the general or common procedures that Dominican courts have instituted. The Constitution of the Dominican Republic provides any person with the opportunity to initiate a "habeas data" claim. A habeas data claim is a legal action through which any person can confirm the existence of their personal data in registries, as well as the content of said data. Through habeas data, in the event of falsehood or discrimination, the person may also request the suspension, rectification, confidentiality or update of the data.

## 9. Looking Forward

### 9.1 Upcoming Legal Reforms

#### Proposed Amendment to Competition Law No 42-08

A draft bill recently submitted to the Executive Branch by *ProCompetencia* would comprehensively overhaul and repeal Competition Law No 42-08, introducing, among other reforms, a pre-merger notification regime for the first time. Under the proposal, parties to mergers, acquisitions, or other transactions involving the acquisition of control would be required to notify the Antitrust and Economic Competition Authority (*Autoridad Nacional Antimonopolio y Competencia Económica* – ANACE) - the proposed new name for the current regulator, *ProCompetencia*- prior to closing.

Two key features of this proposal merit attention. First, the introduction of an ex-ante merger control regime represents a significant change for a small economy such as the Dominican Republic, where minimum efficient scale often represents a significant share of the relevant market. A more practical approach would be to focus on policies that enable robust ex post enforcement against abuses of dominant position, among others, in order to preserve transactional efficiency. Second, the filing threshold is drawn too broadly. Notification would be triggered whenever the parties - jointly or individually - generated gross revenues exceeding DOP200 million in the prior fiscal year, a low bar that risks capturing transactions that raise no genuine competition concerns, unnecessarily increasing costs and extending closing timelines. This concern is further compounded by the absence of an automatic inflation adjustment mechanism, which would leave any future threshold adjustment to ANACE's board's discretion, without a safeguard against its progressive erosion in real terms.

**Flor Bustamante Pizarro & Hurtado** (FBPH) was formed through the merger of partners from four established Ecuadorian law firms. With offices in Quito, Manta and Cuenca, the firm comprises more than 45 lawyers supported by a multidisciplinary team of professionals from different practice areas. FBPH's partners and senior lawyers have up to 38 years of experience advising domestic and international clients on complex legal matters across a broad range of industries. FBPH advises on corporate and commercial matters, M&A, banking and finance, tax, labour, competition, arbitration, energy and natural resources, telecommunications, environmental law and regulatory matters. The firm has extensive experience assisting foreign investors entering the Ecuadorian market, as well as Ecuadorian companies expanding internationally. Its work covers acquisitions, project development, financing transactions, regulatory compliance, dispute resolution and day-to-day corporate advisory. FBPH regularly works alongside leading international law firms on cross-border transactions and complex domestic matters.

## Authors

**Sebastian Corral Guevara** is a corporate lawyer with over 12 years of experience advising national and international companies in the chemical, oil and gas, mining, energy, software and financial sectors. His practice focuses on corporate and commercial law, M&A, regulatory matters, project development and investment structuring. He holds a Law degree from PUCE, a Specialization in Corporate Law and a Master's in Law from Universidad Andina Simón Bolívar. He is currently pursuing a Master's in Renewable Energy, with a focus on energy efficiency. He is admitted to practise law in Ecuador.

**Miguel Pizarro Páez** focuses on corporate, commercial, labour, energy, intellectual property and international co-operation matters. Throughout his career, he has participated in the establishment and operation of energy and commercial companies, as well as environmental NGOs in Ecuador; he has conducted corporate audits and advised on M&A processes. For several years, Miguel served as legal counsel for Latin America for a US-based international conservation organisation. He holds a Juris Doctor from PUCE (2001), completed postgraduate studies in Buenos Aires and holds a Master's in International Law, Foreign Relations and Foreign Trade from ISDE (Madrid) and is admitted to practise law in Ecuador.

**María Fernanda Mencías Pérez** has extensive experience as in-house and external corporate counsel, focusing on the oil and gas sector. She served as in-house counsel for one of the largest international oilfield services companies in Ecuador, advising operations in Ecuador, Peru, Colombia and Venezuela on contracts, corporate, labour, environmental, and health and safety matters. She has led compliance programmes, managed cross-border litigation and represented companies before administrative authorities. Her practice focuses on oil and gas, M&A, environmental and migration law. She received Schlumberger Excellence Awards (2006, 2007) and the Compliance Winner Award (2008), and is admitted to practise law in Ecuador.

**José Cisneros Pazmiño** has over 20 years of experience advising clients in the hydrocarbons, industrial fishing, cosmetics and construction sectors, with a focus on tax planning, tax litigation, labour disputes and contractor liability claims against the Ecuadorian state. He has taught at PUCE and served as a consultant to the United Nations Development Programme (UNDP). José's practice focuses on tax, labour and administrative law. He holds a Juris Doctor from PUCE and a Specialization in Public Finance and Tax Law from Universidad de Belgrano, and is admitted to practise law in Ecuador.

**Contributed by:** Sebastian Corral Guevara, Miguel Pizarro Páez, María Fernanda Mencías Pérez, José Cisneros Pazmiño, Roque Bustamante Espinosa and Jorge Pizarro Páez, **Flor Bustamante Pizarro & Hurtado**

**Roque Bustamante Espinosa** has practised law since 1991, focusing on mining, oil and gas, and energy. He has represented foreign investors from North America, Europe and Australia in Ecuador and led major M&A transactions, including AB InBev's acquisition of SABMiller. He has also advised on complex litigation, environmental and labour matters in the natural resources sector. He served as President of the Board of the Chamber of Mines of Ecuador and as Professor of Economic Law at UDLA. He holds a Juris Doctor from PUCE and a Master's in Intellectual Property from the University of New Hampshire. Admitted to practise law in Ecuador.

**Jorge Pizarro Páez** He advises national and multinational companies on corporate and commercial matters, with extensive experience in M&A transactions (representing both buyers and sellers), mergers, spin-offs, public procurement in the telecommunications, hydrocarbons and food sectors, commercial contracts, the dissolution of works councils, and collective and individual labour disputes. He also serves as director of international foundations operating in Ecuador. His practice focuses on Corporate and Commercial Law, Energy, Oil & Gas, M&A, Labour and Telecommunications. He holds a Juris Doctor from PUCE. Admitted to practise law in Ecuador.

# 1. Legal System

## 1.1 Legal System and Judicial Order

Ecuador follows the civil law tradition, derived from the Roman-Germanic legal system and characterised by comprehensive statutory codification. The Constitution of the Republic of Ecuador, enacted in 2008, is the supreme law of the land and establishes both the principle of constitutional supremacy and the hierarchy of legal norms. Accordingly, the order of precedence is:

- the Constitution;
- international treaties and conventions;
- organic laws; ordinary laws;
- regional regulations and district ordinances;
- executive decrees and regulations; ordinances; agreements and resolutions; and
- other acts and decisions of public authorities.

Justice is administered through the Judicial Branch (*Función Judicial*), whose principal bodies are as follows.

- The National Court of Justice: The highest court within the ordinary judicial system, it is composed of 21 justices organised into specialised chambers. The Court primarily hears cassation appeals and other extraordinary remedies, develops binding case law in the circumstances established by law, and exercises the jurisdiction conferred upon it by the Constitution and the Organic Code of the Judiciary.
- Provincial courts of justice: These are appellate courts organised into specialised chambers according to subject matter. They hear appeals against judgments rendered by first-instance courts. Constitutional amendments approved in the 2024 referendum provide for the creation of specialised constitutional chambers within the provincial courts, subject to the enactment of the corresponding implementing legislation and institutional measures.
- First-instance courts and judicial units: These are specialised courts. In cantons where the judicial workload does not justify specialised courts, multi-jurisdictional judicial units exercise jurisdiction over several matters.
- Other specialised courts: Ecuador also has administrative litigation courts and tax litigation courts, which hear disputes involving public administration and tax matters, respectively
- Constitutional Court: This is the highest authority for constitutional review and interpretation. It is an autonomous constitutional body that does not form part of the judicial branch. Its principal powers include abstract constitutional review, constitutional interpretation, the resolution of constitutional conflicts of competence, the adjudication of extraordinary actions for constitutional protection, and the selection and review of constitutional judgments.
- Council of the Judiciary: This is the governing body responsible for the administration, management, discipline, evaluation and judicial career system of the judicial branch.

The Attorney General's Office and the Public Defender's Office are autonomous organs of the judicial branch under the Organic Code of the Judiciary. The Attorney General's Office directs criminal investigations and exercises public criminal prosecution, while the Public Defender's Office provides legal representation to individuals who cannot afford private counsel.

In addition to the ordinary judicial system, the Constitution recognises the jurisdiction exercised by the authorities of indigenous communities, peoples and nationalities within their ancestral territories, in accordance with their traditions and customary law, provided that such jurisdiction is exercised consistently with the Constitution and internationally recognised human rights.

Ecuador also recognises domestic and international arbitration, as well as mediation, as constitutionally protected alternative dispute resolution mechanisms. Arbitration is governed by the Constitution, the Arbitration and Mediation Act, and the international treaties ratified by Ecuador.

## 2. Restrictions on Foreign Investments

### 2.1 Approval of Foreign Investments

As a general rule, foreign investments do not require prior governmental approval in Ecuador. Foreign investors enjoy equal treatment and may invest in most economic sectors under the same conditions applicable to Ecuadorian nationals, subject to compliance with generally applicable legal and regulatory requirements.

The Ecuadorian Constitution recognises foreign investment as complementary to domestic investment and guarantees equal rights and obligations for foreign individuals within Ecuadorian territory. Likewise, the Organic Code of Production, Trade and Investment (*Código Orgánico de la Producción*, *Comercio e Inversiones* – COPCI) grants foreign investors the same legal treatment, rights and protections afforded to domestic investors.

Notwithstanding the foregoing, certain sectors and activities remain subject to constitutional or statutory restrictions.

#### Restricted Border and National Security Areas

Foreign individuals and foreign legal entities may not acquire ownership rights or concessions over land located within national security zones, nor over protected natural areas, except in the cases expressly authorised by law. These restrictions also apply to Ecuadorian companies with foreign shareholders, unless one of the statutory exceptions applies, such as where the foreign individual or shareholder has been legally domiciled in Ecuador for at least five consecutive years or in the case of certain family relationships with Ecuadorian nationals.

These restrictions do not constitute an investment approval regime. Rather, they establish statutory prohibitions subject to limited legal exceptions.

#### Strategic Sectors

Investments in strategic sectors are not prohibited for foreign investors. However, activities involving sectors reserved under the Constitution – such as energy in all its forms, telecommunications, non-renewable natural resources, hydrocarbon transportation and refining, biodiversity and genetic heritage, the radio spectrum and water resources – may only be carried out pursuant to the legal framework governing each sector and, where applicable, following the corresponding governmental authorisation, delegation or contractual arrangement.

The Constitution permits the state, on an exceptional basis and whenever the national interest so requires, to delegate participation in strategic sectors to mixed-economy companies or private operators under the conditions established by law.

Accordingly, while Ecuador does not maintain a general foreign investment screening or approval regime, foreign investors must comply with the sector-specific authorisations, licences, permits and contractual requirements applicable to regulated activities before commencing operations.

Ecuadorian law also allows domestic and foreign investors to enter into investment contracts with the Ecuadorian state under the Organic Code of Production, Trade and Investment. These agreements may provide legal stability regarding certain tax and regulatory conditions, subject to the requirements established by law.

### 2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance

Ecuador does not maintain a general foreign investment approval regime. Accordingly, foreign investors are not required to obtain governmental approval solely because they are foreign or because they intend to acquire an interest in an Ecuadorian company.

Where a foreign investor acquires shares or equity interests in an Ecuadorian company, no prior governmental approval is required. The Ecuadorian company must, however, comply with the applicable corporate reporting obligations before the Superintendence of Companies, Securities and Insurance (*Superintendencia de Compañías*, *Valores y Seguros* – SCVS), including reporting the foreign shareholder, its ownership chain up to the ultimate beneficial owner, the foreign shareholder's certificate of legal existence, and the appointment of an attorney-in-fact or representative in Ecuador for corporate transparency and regulatory

purposes. These are reporting and disclosure obligations and should not be construed as an investment approval requirement.

A different regime applies where a foreign company intends to conduct business directly in Ecuador through a branch. Under Article 6 of the Companies Act, a foreign company carrying on business in Ecuador must appoint a permanent attorney-in-fact authorised to represent it before Ecuadorian authorities and courts. Where the company intends to execute public works, provide public services or engage in the exploitation of natural resources, it must also establish a legal domicile in Ecuador through the registration of a branch.

Assuming that all foreign corporate documents have been duly legalised or apostilled and submitted, the branch registration process generally takes between six and nine weeks.

Investments in strategic or regulated sectors – including hydrocarbons, mining, financial services, telecommunications, transportation and other regulated activities – remain subject to the licences, permits, concessions or contractual arrangements established by the applicable sector-specific legislation. Such requirements apply irrespective of the nationality of the investor and should not be regarded as a foreign investment approval regime.

### 2.3 Commitments Required From Foreign Investors

Ecuador does not generally require foreign investors to undertake specific commitments as a condition for investing. However, investments in regulated sectors remain subject to the obligations established under the applicable legislation, licences, concessions or investment agreements. Depending on the sector, these may include minimum investment commitments, environmental and social obligations, health and safety standards, technical requirements, reporting obligations and, where applicable, local employment or local content requirements.

In practice, environmental permitting and regulatory compliance are among the principal conditions applicable to large-scale projects in sectors such as mining, hydrocarbons, infrastructure and energy.

### 2.4 Right to Appeal

Ecuador does not maintain a foreign investment approval regime. Accordingly, foreign investors generally do not challenge investment approvals as such. Where an administrative licence, permit, concession or other sector-specific authorisation is denied, the applicant may file the administrative appeals provided under the Organic Administrative Code and, once the administrative stage has concluded, seek judicial review before the administrative litigation courts.

Where applicable, investors may also rely on the dispute resolution mechanisms available under investment treaties or investment contracts entered into with the Ecuadorian state.

## 3. Corporate Vehicles

### 3.1 Most Common Forms of Legal Entity

Corporate entities in Ecuador are primarily governed by the Companies Act, the Commercial Code and, where applicable, the Organic Law on the Popular and Solidarity Economy. Following the reforms introduced in 2020 and 2023, most corporate forms may be incorporated by a single shareholder or partner. In practice, foreign investors most commonly operate through a simplified stock corporation (*sociedad por acciones simplificada* – S *AS*), a joint-stock company (*sociedad anónima* – SA) or a branch of a foreign company, depending on the nature and scale of the investment.

#### SAS

The SAS is currently the most flexible and widely used corporate vehicle in Ecuador. It may be incorporated by one or more individuals or legal entities, has no minimum share capital requirement and may be incorporated through a private document, including electronically through the SCVS. Shareholders' liability is limited to the amount of their capital contributions.

Unless otherwise provided in the by-laws, the company is not required to have a board of directors, allowing considerable flexibility in its governance structure. Owing to its simplified incorporation process and con-

tractual flexibility, the SAS is generally the preferred vehicle for start-ups, wholly owned subsidiaries, holding companies, joint ventures and most private investment projects.

Unless the founders elect otherwise under the applicable legal regime, the incorporation of an SAS is effected through registration with the SCVS. Where contributions include real estate, a public deed and registration with the relevant Land Registry are required.

### SA

The SA remains the preferred vehicle for large businesses, regulated industries, projects involving multiple investors and companies requiring more sophisticated corporate governance structures. Capital is divided into freely transferable shares, and shareholders' liability is limited to the amount of their contributions. Since the 2023 reforms, it may also be incorporated as a single-shareholder company.

The minimum share capital is USD800. The company's governance generally consists of the shareholders' meeting, one or more legal representatives and, where established by the by-laws, a board of directors.

This corporate form continues to be widely used for regulated businesses, financial institutions, companies seeking external financing and projects involving institutional or strategic investors.

### Limited Liability Company (Compañía de Responsabilidad Limitada – Cía Ltda)

A limited liability company may have up to 15 partners. Equity interests are not freely transferable and generally require the approval of the remaining partners, reinforcing the intuitu personae nature of this corporate form. The minimum capital is USD400, and the liability of the partners is limited to the amount of their contributions.

This vehicle is typically used for closely held, family-owned or professional businesses where maintaining the composition of the ownership structure is an important consideration.

Compared to the SA, its governance is generally more rigid. In particular, managers appointed in the articles of association enjoy greater stability, as their removal may be subject to the grounds and procedures established in the Companies Act and the company's by-laws, rather than being freely revocable at any time.

### Branch of a Foreign Company

A foreign company may conduct business directly in Ecuador through a branch. To do so, it must obtain authorisation from the SCVS, appoint a permanent legal representative domiciled in Ecuador and allocate capital of at least USD2,000.

Although a branch does not have separate legal personality from its parent company, it is treated as a local taxpayer and is generally subject to the same tax and regulatory regime applicable to Ecuadorian companies carrying out the same activities.

### Mixed-Economy Company (Compañía de Economía Mixta)

A mixed-economy company combines public and private capital and is primarily used for projects involving the state or the provision of public services. It is governed by the Companies Act and the special rules applicable to mixed-capital entities.

Public and private shareholders must be represented on the board of directors in proportion to their capital contributions. Where the public sector holds more than 50% of the share capital, the chair of the board must be appointed from among the directors representing the public sector.

In practice, the SAS has become the preferred corporate vehicle for most domestic and foreign private investments due to its simplified incorporation process and governance flexibility, whereas the traditional SA remains the preferred structure for regulated businesses, companies with more sophisticated governance requirements and projects involving institutional investors.

## 3.2 Incorporation Process

The incorporation process depends on the type of corporate vehicle selected. In practice, the incorporation of a SAS is significantly faster than that of traditional

corporate forms, while the establishment of a branch of a foreign company involves additional corporate approval and registration requirements.

### SAS

The incorporation of an SAS may be completed electronically through the online platform of the SCVS. Where the founders use the standard incorporation model provided by the SCVS, the process may be completed within one business day.

Where customised by-laws are adopted or non-standard provisions are included, the incorporation documents are subject to review by the SCVS prior to registration, which may increase the incorporation timeline. The incorporation of the company shall be carried out before the SCVS itself. It may be incorporated by private act, except in specific cases such as incorporation involving the transfer of a real estate property, which require certain formalities due to the nature of the transaction.

When a foreign legal entity incorporates an Ecuadorian company (including an SAS, SA or *Cía Ltda*), acting as a shareholder or partner, an additional report is required for the purposes of corporate transparency. They must submit an affidavit before a notary, duly apostilled, setting out the full shareholding structure, an apostilled power of attorney for a representative resident in Ecuador and an apostilled certificate of legal existence. The SCVS usually takes 2–3 weeks to review these documents. For foreign shareholders or partners who are natural persons, only their passport is required.

The subsequent process is the same as for traditional companies: obtaining the Tax ID number (*Registro Único de Contribuyentes* – RUC) and the municipal licence.

### SAs and Cía Ltdas

The incorporation of traditional corporate entities generally involves the following steps:

- reservation of the corporate name before the SCVS;
- preparation and agreement of the company's by-laws;
- execution of the incorporation instrument, which may take the form of either a public deed or a private document, depending on the applicable legal requirements and the type of company being incorporated – notarial fees, where a public deed is required or elected, and Commercial Registry fees, where registration is required, are subject to the official tariff schedule established by law;
- registration with the Commercial Register and creation of a company profile (and company administrator) with the SCVS;
- registration before the Internal Revenue Service (*Servicio de Rentas Internas* – SRI) to obtain a Taxpayer Identification Number (*Registro Único de Contribuyentes* – RUC);
- obtaining access credentials to the SRI electronic platform for tax compliance purposes; and
- obtaining an operating licence from the corresponding municipal authority.

### Branch of a Foreign Company

A foreign company wishing to establish a branch in Ecuador must obtain prior authorisation from the SCVS. The parent company must adopt the corresponding corporate resolutions approving the establishment of the branch, confirming that its corporate purpose and constitutional documents allow it to establish branches abroad, appointing a permanent attorney-in-fact domiciled in Ecuador and allocating the statutory minimum capital to the branch.

Foreign corporate documents must be duly apostilled or legalised and, where executed in a language other than Spanish, officially translated before being submitted to the Ecuadorian authorities. Once the branch has been authorised, it must be registered with the corresponding Commercial Registry, obtain an RUC and complete any additional registrations or permits required for the proposed business activity.

Depending on the corporate vehicle selected and the specific circumstances of each case, the incorporation process may take from one business day (for the electronic incorporation of a standard-form SAS) to approximately 6–9 weeks (for the establishment of a branch of a foreign company), assuming that all required documentation has been duly executed,

apostilled or legalised (where applicable), translated where necessary and submitted in a timely manner.

In practice, the electronic incorporation system implemented by the SCVS has significantly reduced the time required to incorporate SAS companies, making them the preferred legal form for most new businesses in Ecuador. However, the most appropriate corporate structure should be determined on a case-by-case basis, taking into account the specific needs, objectives and regulatory considerations of each business.

## 3.3 Ongoing Reporting and Disclosure Obligations

Private companies incorporated in Ecuador are subject to a number of ongoing corporate, financial and disclosure obligations before the SCVS, the SRI and, where applicable, other regulatory authorities. The principal reporting and compliance obligations include the following.

### Corporate Filings

These involve:

- reporting the appointment, removal or replacement of directors, managers, legal representatives and other corporate officers;
- registering amendments to the company's by-laws with the Commercial Registry or the Companies Registry maintained by the SCVS, as applicable;
- obtaining prior authorisation from the SCVS for those corporate acts that require regulatory approval under the Companies Act or applicable SCVS regulations; and
- maintaining updated corporate information before the SCVS, including the company's registered office, electronic notification address and other relevant corporate information.

### Financial Reporting

Companies subject to the control of the SCVS must annually file their financial statements during the first quarter of the following fiscal year. Depending on the statutory thresholds established by the SCVS, the financial statements must be accompanied by an external audit report issued by an audit firm duly qualified before the SCVS. Companies are also required to file the shareholders' or partners' resolutions approving the management report, annual financial statements and, where applicable, distribution of dividends.

### Shareholding Transparency

Companies must keep the SCVS and the SRI informed of changes in their shareholding structure and comply with the applicable beneficial ownership and corporate transparency reporting requirements. Where a shareholder is a foreign legal entity, the Ecuadorian company must report the ownership chain up to the ultimate beneficial owner, together with the supporting corporate documentation required by the SCVS.

### Tax and Regulatory Compliance

Companies must comply with the shareholder and beneficial ownership reporting obligations established by the SRI, in addition to the ordinary tax filing obligations applicable under Ecuadorian tax legislation.

Companies must also maintain in force the municipal operating permits, licences and registrations required by the municipality where they conduct business. In addition, depending on the nature of their activities, companies may be subject to ongoing reporting obligations and periodic renewals before the competent sector-specific authorities. These may include, among others, environmental, mining, hydrocarbons, financial, telecommunications, health, food safety, transportation, customs or other regulatory authorities, each of which may require periodic filings, operational reports, inspections or licence renewals.

Failure to comply with these corporate, tax or regulatory reporting obligations may result in administrative fines, suspension or revocation of permits or licences, restrictions on the company's operations and other sanctions.

## 3.4 Management Structures

Ecuador follows a one-tier management system, under which there is no formal distinction between a supervisory board and a management board. Subject to the mandatory provisions applicable to each type of company, Ecuadorian corporate law grants shareholders and partners broad flexibility to determine the company's governance structure in the by-laws, including the number of directors or legal representa-

tives, their powers, term of office, method of appointment and decision-making procedures.

Companies may be managed by a sole legal representative or by two or more legal representatives. Depending on the provisions of the by-laws, legal representatives may act severally, jointly or successively. In practice, Ecuadorian companies commonly appoint a general manager as the principal legal representative and a president as the alternate legal representative, although other management structures may be freely adopted.

In the case of branches of foreign companies, management is entrusted to an attorney-in-fact (*apoderado*), who acts as the legal representative of the branch in Ecuador. The power of attorney granted by the foreign parent company must be duly apostilled or legalised and, where executed in a language other than Spanish, officially translated before being submitted to the SCVS for approval as part of the branch authorisation process.

Likewise, any subsequent revocation of the attorney-in-fact or the appointment of a new attorney-in-fact must also be approved by the SCVS, whose resolution authorises the corresponding registration with the Commercial Registry. In practice, the attorney-in-fact must expressly accept the mandate. This is usually done in the same letter requesting the approval of the power of attorney that is sent to the SCVS.

For local companies, shareholders or partners are also free to establish a board of directors in the by-laws, determine its composition, allocate its powers and regulate its internal operation. Ecuadorian law does not generally require private companies to have a board of directors. However, where a company voluntarily establishes a board of directors, it must comply with the gender diversity requirements introduced by the Violet Law (*Ley Violeta*). In general terms, companies with a board of directors composed of three or more members must ensure that, for every three members, one is a woman.

The by-laws generally determine the term of office of the legal representatives and directors, the scope of their authority and any internal limitations on their powers. As a matter of Ecuadorian corporate law, limitations contained in the by-laws generally cannot be invoked against good-faith third parties acting in reliance on the authority of the company's duly appointed legal representatives.

### 3.5 Directors', Officers' and Shareholders' Liability

As a general rule, Ecuadorian corporate law recognises the separate legal personality of companies. Accordingly, the company is solely liable for its obligations, while shareholders, directors, officers and legal representatives are not personally liable for the company's debts or obligations merely by virtue of their corporate position.

Likewise, in the case of branches of foreign companies, the attorney-in-fact (*apoderado*) appointed in Ecuador is not personally liable for the obligations of the branch solely by reason of acting as its legal representative.

Shareholders are generally liable only up to the amount of their capital contributions. Likewise, directors, managers and other officers are not personally liable for the company's obligations. However, under the Companies Act, directors and officers may incur personal civil liability where, through wilful misconduct, fraud, negligence or breach of their legal or statutory duties, they cause damage to the company, its shareholders or third parties. In addition, they may incur criminal liability where their conduct constitutes a criminal offence under the Comprehensive Organic Criminal Code (*Código Orgánico Integral Penal* – COIP), including fraudulent administration and other corporate offences.

Ecuadorian law also recognises the doctrine of piercing the corporate veil (*desestimación de la personalidad jurídica*). Pursuant to Companies Act, Ecuadorian courts may disregard the separate legal personality of a company where it has been used to commit fraud, abuse rights, evade legal obligations or cause damage to third parties, in which case liability may be extended to the persons responsible for such conduct.

However, the Companies Act expressly provides that piercing the corporate veil is an exceptional and sub-

sidiary remedy. Accordingly, it is not available where the law provides another direct legal mechanism to sanction, remedy or correct the alleged abuse or damage, including challenges, appeals or actions for nullity against the relevant corporate acts or decisions. The mere existence of unpaid debts, insolvency or contractual non-performance is not, in itself, sufficient to justify disregarding the company's separate legal personality.

Accordingly, the separate legal personality of the company and the limited liability of shareholders, directors, officers and legal representatives remain the general rule under Ecuadorian corporate law, while personal liability and piercing the corporate veil are exceptional remedies that apply only in the specific circumstances expressly provided by law.

## 4. Employment Law

### 4.1 Nature of Applicable Regulations

Employment relationships in Ecuador are governed by a predominantly statutory and protective legal framework. Ecuadorian labour law is considered a matter of public policy and is based on the constitutional principles of worker protection, equal treatment, job stability and the non-waivability of statutory labour rights. Consequently, the parties' contractual freedom is limited, and employment agreements may not derogate from the minimum rights and benefits established by law.

The principal sources governing employment relationships are, in hierarchical order, the Constitution of the Republic of Ecuador, international treaties and conventions (particularly those ratified by the International Labour Organization – ILO), the Labour Code, other applicable legislation, executive regulations, ministerial resolutions and administrative regulations issued by the Ministry of Labour. Judicial precedents issued by the Constitutional Court also play an important role in the interpretation and application of labour legislation.

Collective bargaining agreements constitute an additional source of labour regulation and are binding upon the parties. Where a collective bargaining agreement grants more favourable rights or benefits than those established by law or by an individual employment agreement, the more favourable provisions generally prevail in accordance with the pro operario principle.

Individual employment agreements govern the specific terms and conditions of the employment relationship, provided that they comply with the mandatory provisions of labour legislation. Any contractual provision that reduces or waives statutory labour rights is generally deemed null and unenforceable.

### 4.2 Characteristics of Employment Contracts

Ecuadorian employment contracts are governed by the Labour Code, which establishes mandatory minimum employment conditions that cannot be waived by agreement between the parties. Although Ecuadorian law recognises both written and verbal employment contracts, written agreements are required for a number of employment arrangements and are the standard practice in virtually all formal employment relationships.

In addition, employers are generally required to register employment contracts electronically with the Ministry of Labour within the statutory period following their execution.

A written employment contract should generally include the essential terms of employment, including the identity of the parties, the services to be performed, remuneration, working hours, place of work, commencement date and, where applicable, the duration of the employment relationship.

The Labour Code requires certain employment contracts to be executed in writing, including contracts involving technical or professional services, probationary periods, apprenticeship arrangements, group employment, contracts with adolescent workers and temporary employment arrangements such as eventual, occasional and seasonal contracts.

As a general rule, indefinite-term employment is the standard form of employment in Ecuador. However, the Labour Code also recognises specific temporary employment arrangements in limited circumstances, including eventual contracts, occasional contracts and seasonal contracts.

### 4.3 Working Time

The ordinary working time in Ecuador is eight hours per day and 40 hours per week. However, the Labour Code establishes several special working time regimes depending on the nature of the activity or the operational needs of the employer. These include reduced working hours (subject to prior authorisation from the Ministry of Labour in exceptional circumstances), extended working days of up to ten hours per day provided that the weekly limit of 40 hours is not exceeded, special shifts for activities requiring continuous operations, part-time employment, night work, transportation services and underground mining. Adolescent employees (15–18 years old) may work a maximum of six hours per day and 30 hours per week.

Night work performed between 7 pm and 6 am is subject to a 25% wage surcharge. Employees working continuous shifts are entitled to at least 48 consecutive hours of weekly rest.

Hours worked in excess of the ordinary working schedule constitute overtime. Supplementary hours worked immediately after the ordinary working day are generally limited to four hours per day and 12 hours per week and are compensated with a 50% surcharge (or 100% when worked between midnight and 6 am). Extraordinary hours worked on mandatory rest days or public holidays are generally paid with a 100% surcharge.

Remote work is recognised under Ecuadorian law and may be performed on an autonomous, mobile, partial or occasional basis. Employees enjoy the same rights as on-site workers, including the right to digital disconnection for at least 12 consecutive hours within each 24-hour period.

Although the Labour Code does not expressly recognise a compressed four-day work week, recent ministerial regulations have introduced procedures allowing flexible distribution of the 40-hour weekly working schedule, including daily shifts of up to ten hours in authorised cases.

### 4.4 Termination of Employment Contracts

Ecuador is not an employment-at-will jurisdiction. Employment contracts may only be terminated on the grounds expressly established in the Labour Code, including mutual agreement, expiration of a valid fixed-purpose contract, resignation, justified termination through the *visto bueno* procedure, force majeure, permanent incapacity or death of the employer or employee, and business closure in the circumstances provided by law.

Unjustified dismissal entitles the employee to statutory severance compensation, calculated according to the employee's length of service and remuneration, together with payment of all accrued employment benefits, including proportional 13th and 14th salaries, unused vacation and any other outstanding statutory entitlements.

Ecuadorian law does not establish a separate collective redundancy procedure. Workforce reductions are generally implemented through the ordinary termination mechanisms provided by the Labour Code, including business closure or force majeure where the statutory requirements are met. Collective bargaining agreements may establish additional obligations.

Trade unions participate in collective bargaining through the procedures established in the Labour Code. Once collective bargaining has commenced, employees participating in the process benefit from statutory protection against dismissal, while elected union officers enjoy special employment protection during their term of office and for one year thereafter.

### 4.5 Employee Representations

Under Ecuadorian labour law, employers are not generally required to inform or consult employees before adopting ordinary management decisions. Employee representation is mandatory only in specific circumstances expressly provided by law, such as collective bargaining, trade union activities and certain administrative or disciplinary proceedings.

Companies employing ten or more employees must establish a Joint Occupational Health and Safety Committee composed of an equal number of employer and employee representatives. Employee representatives

are elected by the workforce and enjoy legal protection against retaliation arising from the performance of their duties. The committee oversees compliance with occupational health and safety regulations, investigates workplace accidents and occupational diseases, promotes preventive measures and recommends corrective actions to improve workplace safety.

## 5. Tax Law

### 5.1 Taxes Applicable to Employees/Employers

#### Employees

Employees who qualify as tax residents in Ecuador are subject to personal income tax on their employment income under a progressive tax system. For the 2026 tax year, the applicable rates range from 0% to 37%, with the first tax bracket remaining exempt up to the statutory threshold established by the SRI.

The employer acts as a withholding agent and is responsible for calculating the employee's estimated annual personal income tax liability and withholding the corresponding amounts from the employee's remuneration throughout the year.

Employees must also contribute 9.45% of their remuneration to the Ecuadorian Social Security Institute (*Instituto Ecuatoriano de Seguridad Social* – IESS). These contributions are withheld by the employer and remitted to the IESS on the employee's behalf.

#### Employers

Employers are not subject to any additional income tax merely as a consequence of employing personnel. Ecuadorian companies are subject to corporate income tax on their taxable profits under the general tax regime applicable to legal entities. Corporate income tax is therefore separate from, and unrelated to, the existence of an employment relationship.

However, employers are required to:

- contribute 11.15% of each employee's remuneration to the IESS;
- withhold and remit the employee's personal income tax and employee social security contributions;
- register employees with the IESS and comply with the corresponding payroll reporting obligations; and
- comply with all mandatory labour-related payments established by law, including the 13th salary, the 14th salary, annual paid vacation, reserve funds (where applicable) and the statutory 15% employee profit-sharing.

Other than the employer's mandatory social security contributions and payroll withholding obligations, Ecuador does not impose a specific payroll tax on employers.

### 5.2 Taxes Applicable to Businesses

Companies incorporated in Ecuador are generally subject to taxation on their worldwide income, whereas branches of foreign companies and permanent establishments are taxed only on their Ecuadorian-source income.

The principal taxes applicable to companies doing business in Ecuador are the following.

#### Corporate Income Tax

As a general rule, Ecuadorian companies are subject to corporate income tax at a rate of 25% on their taxable profits. The rate may increase by three percentage points where the company's ownership structure involves residents of tax havens or low-tax jurisdictions in the circumstances established by law, or where the required corporate ownership information is not properly disclosed. Conversely, the rate may be reduced under various investment promotion regimes established by Ecuadorian legislation (see **5.3 Available Tax Credits/Incentives**).

#### VAT

VAT is levied on the transfer of goods, the provision of services and imports. The general VAT rate is 15%. Reduced rates also apply in specific cases, including 8% for certain tourism services during public holidays designated by the government, 5% for certain social housing construction services, and 0% for various essential goods and services, including basic food products, healthcare, education, medicines, books and certain transportation services.

### Withholding Taxes

Payments made abroad, including dividends, interest, royalties, technical services and other Ecuadorian-source income, may be subject to withholding tax. The applicable withholding rates depend on the nature of the payment, the tax residence of the recipient and the provisions of any applicable double taxation treaty. Higher withholding rates may apply where the recipient is located in a tax haven or a low-tax jurisdiction.

### Foreign Currency Outflow Tax (Impuesto a la Salida de Divisas – ISD)

Certain transfers of funds abroad are subject to the ISD, currently at a rate of 5%, unless a statutory exemption or reduction applies.

### Municipal Taxes

Businesses are also generally subject to municipal taxes and charges, including the municipal business licence tax (*patente municipal*) and, where applicable, the 1.5 per thousand tax on total assets, in accordance with the legislation of the relevant municipality.

### Other Taxes

Depending on the nature of their activities, businesses may also be subject to sector-specific taxes, regulatory contributions or special levies established under Ecuadorian law.

### OECD Pillar Two

As of the date of this publication, Ecuador has not implemented the OECD Pillar Two Global Anti-Base Erosion (GloBE) Rules, nor has it introduced a qualified domestic minimum top-up tax (QDMTT) that has been granted safe harbour status under the OECD's central record.

## 5.3 Available Tax Credits/Incentives

Ecuador offers a broad range of tax incentives aimed at promoting domestic and foreign investment. The principal incentives are contained in COPCI, the Organic Law for Economic Development and Fiscal Sustainability and other sector-specific legislation. The principal tax incentives include the following.

### Investment Contracts

Investors entering into an investment contract with the Ecuadorian state under COPCI may benefit from:

- a reduction of up to five percentage points in the corporate income tax rate;
- tax stability for the duration of the investment contract;
- legal stability regarding the incentives granted; and
- access to additional sector-specific incentives where applicable.

### Corporate Income Tax Reductions

Certain taxpayers may qualify for reductions in the corporate income tax rate, including:

- newly incorporated companies meeting the requirements established by law;
- micro, small and medium-sized enterprises (MSMEs);
- habitual exporters that maintain or increase employment levels; and
- companies investing profits in scientific, cultural or disability-support projects, which may benefit from a reduction in the corporate income tax rate of eight or ten percentage points.

### Special Economic Development Zones (Zonas Especiales de Desarrollo Económico – ZEDEs)

Companies established within ZEDEs may benefit from corporate income tax exemptions, customs incentives and other tax benefits, provided that they comply with the applicable investment, operational and employment requirements.

### Sector-Specific Incentives

Additional tax incentives are available for investments in sectors promoted by the Ecuadorian government, including renewable energy, tourism, certain agricultural and agro-industrial activities, exports and other strategic sectors. Depending on the applicable legislation, these incentives may include corporate income tax exemptions or reductions, accelerated depreciation, customs benefits, VAT incentives and other tax benefits.

The availability of each incentive depends on compliance with the specific statutory requirements applicable to the relevant investment, sector or promotion regime.

### 5.4 Tax Consolidation

Ecuadorian tax legislation does not provide for a tax consolidation regime. Each legal entity is treated as an independent taxpayer and must determine, file and pay its taxes separately, regardless of whether it forms part of a corporate group or has affiliated entities within or outside Ecuador. Consequently, taxable profits and tax losses cannot be consolidated or offset among different companies within the same group for Ecuadorian tax purposes.

Likewise, Ecuador does not permit the filing of consolidated corporate income tax returns. Each company must prepare and submit its own tax returns and comply individually with its tax obligations.

Although Ecuador recognises the concept of economic groups and related parties for certain tax and reporting purposes, particularly in connection with transfer pricing, disclosure obligations and anti-avoidance rules, these rules do not create a tax consolidation regime or allow the consolidation of taxable results among group companies.

### 5.5 Thin Capitalisation Rules and Other Limitations

Ecuador does not maintain a traditional thin capitalisation regime based on a statutory debt-to-equity ratio. Instead, the deductibility of financing costs is primarily governed by the Internal Tax Regime Law (*Ley de Régimen Tributario Interno* – LRTI) and its Regulations. However, an exception applies to financing granted by entities in the banking sector to related parties within the Ecuadorian banking sector, regulated by specific thin capitalisation rules.

Interest paid on financing granted by related parties in other sectors is deductible if it is below 20% of the annual profits of the debtor entity.

In the case of foreign financing, interest is generally deductible and exempt from withholding tax only to the extent that the applicable interest rate does not exceed the referential interest rate periodically published by the Central Bank of Ecuador (*Banco Central del Ecuador* – BCE). Interest exceeding the applicable BCE referential rate may be treated as non-deductible and may also trigger additional withholding tax consequences under Ecuadorian tax legislation.

As a general rule, interest expenses are deductible provided that they are incurred for the generation of taxable income, are properly supported by documentary evidence and comply with the arm's length principle where the financing is obtained from related parties. Financing transactions between related parties are also subject to Ecuador's transfer pricing rules where the applicable thresholds are met.

Interest paid to non-residents may also be subject to withholding tax and may benefit from relief under an applicable double taxation treaty, provided that the relevant statutory requirements are satisfied.

Ecuadorian tax legislation also contains general anti-avoidance rules, empowering the SRI to challenge financing arrangements lacking economic substance or entered into principally to obtain an undue tax advantage. Accordingly, intra-group financing structures should be supported by genuine commercial purposes and arm's length terms.

### 5.6 Transfer Pricing

Transfer pricing rules apply in Ecuador to transactions carried out between related parties, whether domestic or foreign. They also apply to transactions with persons or entities located in tax havens, low-tax jurisdictions or preferential tax regimes, regardless of whether a related-party relationship exists.

Under the Internal Tax Regime Law, such transactions must comply with the arm's length principle. Ecuadorian tax legislation recognises internationally accepted transfer pricing methods and uses the OECD Transfer Pricing Guidelines as a supplementary interpretative source, to the extent they are consistent with domestic law.

Taxpayers exceeding the applicable statutory thresholds for related-party transactions must file the Related-Party Transactions Annex and, where applicable, the Comprehensive Transfer Pricing Report. They must also maintain supporting documentation evidencing compliance with the arm's length principle, including local file documentation and, where appli-

cable, master file and country-by-country reporting obligations.

The SRI may review related-party transactions and adjust the taxpayer's taxable base where it determines that the agreed terms do not comply with the arm's length standard. Failure to comply with transfer pricing reporting or documentation obligations may result in penalties under Ecuadorian tax law.

## 5.7 Anti-Evasion Rules

Ecuadorian tax legislation contains both general and specific anti-avoidance rules designed to prevent tax evasion, abusive tax planning and the improper use of legal structures to obtain undue tax advantages.

The principal anti-avoidance mechanism is the General Anti-Avoidance Rule (GAAR), contained in the Tax Code and complemented by the Internal Tax Regime Law. Under these provisions, the SRI may disregard or recharacterise transactions that lack a valid business purpose and are implemented principally to obtain an improper tax benefit, subject to the applicable legal procedures and the taxpayer's due process rights.

Ecuadorian tax legislation also contains several specific anti-avoidance measures, including:

- transfer pricing rules applicable to transactions with related parties and, in certain cases, with entities located in tax havens or low-tax jurisdictions;
- enhanced tax rules applicable to transactions involving tax havens and preferential tax regimes;
- mandatory disclosure of the company's beneficial owners through the Beneficial Ownership Register;
- extensive information reporting obligations; and
- broad audit and reassessment powers granted to the SRI.

In addition, Ecuador's mandatory electronic invoicing system and withholding tax mechanisms facilitate the cross-checking of tax information and constitute important tools for detecting tax non-compliance.

Failure to comply with these rules may result in tax reassessments, penalties, interest and, where applicable, the imposition of administrative or criminal sanctions under Ecuadorian law.

## 5.8 Tariffs

Ecuador's tariff policy is determined by the Foreign Trade Committee (*Comité de Comercio Exterior* – COMEX), which approves the national customs tariff based on the Harmonized Commodity Description and Coding System (HS). Tariffs are administered by the National Customs Service of Ecuador (*Servicio Nacional de Aduana del Ecuador* – SENAE) and generally consist of ad valorem duties, although specific duties and mixed duties may apply in certain cases.

Import duties vary depending on the type of goods imported. As a general rule, capital goods, machinery and raw materials that are not produced locally are subject to reduced or zero tariff rates, whereas finished consumer goods that compete with domestic production are generally subject to higher tariffs.

Certain sectors of the Ecuadorian economy continue to benefit from greater tariff protection, particularly the agricultural, textile, footwear and selected manufacturing sectors. In addition, Ecuador applies the Andean Price Band System (*Sistema Andino de Franjas de Precios*) to certain agricultural products, including rice, sugar, dairy products, maize, oilseeds and related products. Under this mechanism, variable duties may be added to the applicable ad valorem tariff when international reference prices fall below predetermined thresholds, with the objective of protecting domestic producers against international price volatility.

As a member of the Andean Community (*Comunidad Andina* – CAN), Ecuador grants reciprocal tariff preferences to imports originating in Colombia, Peru and Bolivia. Ecuador also has trade agreements in force with the EU, the United Kingdom, the European Free Trade Association (EFTA), Chile, China and Costa Rica, under which qualifying goods may benefit from preferential tariff treatment, subject to the applicable rules of origin.

Ecuador has also recently strengthened its trade relationship with the United States through the Agreement on Reciprocal Trade (ART). While this is not a traditional free trade agreement, it is relevant to Ecuador's tariff and trade policy because it addresses trade

facilitation, market access, tariff and non-tariff barriers and related trade disciplines.

Ecuador's tariff regime has continued to evolve in recent years through the implementation of new trade agreements and the gradual reduction of tariffs applicable to a broad range of products covered by those agreements. At the same time, tariff protection continues to be maintained for sensitive sectors of the domestic economy, particularly agriculture and certain manufacturing industries.

## 6. Competition Law

### 6.1 Merger Control Notification

The Organic Law for the Regulation and Control of Market Power (*Ley Orgánica de Regulación y Control del Poder de Mercado* – LORCPM) establishes a mandatory and suspensory pre-merger control regime for certain economic concentration transactions.

The regime applies to transactions resulting in a change of control, including, among others:

- mergers;
- acquisitions of shares, quotas or assets conferring direct or indirect control over another undertaking;
- acquisitions of businesses or business units;
- the creation of full-function joint ventures; and
- any other transaction that results in the acquisition or transfer of control over an economic operator.

The notification must be submitted to the Superintendency of Economic Competition (*Superintendencia de Competencia Económica* – SEC) before the transaction is implemented whenever either of the following alternative thresholds is met:

- the combined turnover of the parties in Ecuador during the preceding financial year exceeds the threshold established by the market power regulation board (currently approximately USD80 million, depending on the applicable economic sector); or
- where the parties are active in the same relevant market, the transaction results in the acquisition or increase of a market share equal to or exceeding 30% of the relevant product or service market, whether at the national level or within a defined geographic market in Ecuador.

The notification obligation applies regardless of whether the transaction is structured as a share acquisition, asset acquisition, merger or joint venture. It may also apply to foreign-to-foreign transactions where the statutory jurisdictional thresholds are met and the transaction produces effects in Ecuador.

The transaction may not be completed until the SEC has issued its clearance decision. Implementing a notifiable concentration without prior approval may result in administrative sanctions and the adoption of corrective measures under the LORCPM.

### 6.2 Merger Control Procedure

The merger control procedure is conducted before the SEC under a mandatory pre-closing notification regime. The notification may be submitted by any of the parties involved in the transaction and must include the corporate, financial and market information required by the LORCPM and its implementing regulations.

Once the filing is deemed complete, the SEC conducts an initial review (Phase I) to determine whether the proposed transaction is likely to raise competition concerns. If the authority concludes that the transaction is not likely to create or strengthen market power or otherwise significantly restrict competition, it will authorise the transaction during this initial phase.

Where the SEC identifies potential competition concerns, the review proceeds to an in-depth investigation (Phase II). During this stage, the authority carries out a more detailed assessment of the relevant markets, the competitive effects of the transaction and any efficiencies put forward by the parties. The notifying parties may also propose structural or behavioural remedies to address the concerns identified by the SEC.

The procedure concludes with a reasoned decision either:

- authorising the transaction unconditionally;

- authorising it subject to structural or behavioural remedies; or
- prohibiting the concentration.

The transaction may not be implemented until clearance has been obtained from the SEC. Decisions issued by the SEC may be challenged through the administrative remedies provided under the LORCPM and, subsequently, before the Ecuadorian administrative courts.

### 6.3 Cartels

The LORCPM prohibits anti-competitive agreements and concerted practices between economic operators. The prohibition applies to both horizontal agreements (between competitors) and vertical agreements (between undertakings operating at different levels of the production or distribution chain), where they have as their object or effect the prevention, restriction or distortion of competition.

Particularly serious infringements include hardcore cartels, such as agreements between competitors to fix prices, allocate customers or markets, restrict production or output, or rig bids in public or private procurement procedures. These practices are considered the most serious restrictions of competition and are generally prohibited without the need to demonstrate their actual anti-competitive effects.

The LORCPM applies not only to conduct carried out within Ecuador, but also to conduct implemented abroad where it produces actual or potential effects in the Ecuadorian market, in accordance with the effects doctrine.

The SEC enjoys broad investigative powers. In the course of an investigation, it may:

- require the production of accounting records, correspondence (including electronic records), electronic data and any other documents relevant to the investigation;
- summon and interview the parties under investigation, their representatives, employees and third parties; and
- conduct inspections, with or without prior notice, at business premises. During an inspection, the SEC may examine documents, copy physical or electronic records and gather other relevant evidence.

Where the investigation involves a private residence, forced entry into business premises, seizure or retention of documents or access to confidential or legally protected information (including bank records), the SEC must obtain prior judicial authorisation in accordance with the LORCPM. The exercise of these investigative powers is expressly subject to the Constitution, due process and the protection of fundamental rights.

Any natural or legal person, whether public or private, is required to co-operate with the SEC by providing the information and documentation lawfully requested. Failure to comply may result in the administrative sanctions provided for under the LORCPM.

Decisions issued by the SEC may impose significant administrative fines, behavioural or structural remedies and cease-and-desist orders. Such decisions may be challenged through the administrative remedies established under the LORCPM and, subsequently, before the Ecuadorian administrative courts.

### 6.4 Abuse of Dominant Position

The LORCPM prohibits the abuse of a dominant position by one or more economic operators. Holding a dominant position is not unlawful in itself; only its abusive exercise is prohibited.

The LORCPM contains a non-exhaustive list of abusive practices, including unjustified refusals to deal, discriminatory or unfair commercial conditions, predatory pricing, tying and bundling practices, exclusive dealing arrangements and any other conduct capable of excluding competitors or exploiting customers, suppliers or consumers.

Unlike anti-competitive agreements, allegations of abuse of dominance are assessed on a case-by-case basis. The SEC examines, among other factors, whether the undertaking possesses substantial market power in the relevant market and whether the conduct has the object or effect of preventing, restricting or distorting competition.

The LORCPM also regulates situations of economic dependence. The abusive exploitation by an undertaking of another undertaking that is economically dependent upon it may constitute an infringement where the statutory requirements established in the LORCPM are met. The LORCPM applies irrespective of whether the conduct originates within or outside Ecuador, provided that it produces actual or potential effects in the Ecuadorian market, in accordance with the effects doctrine.

Where an infringement is established, the SEC may impose administrative fines and behavioural or structural remedies. Its decisions may be challenged through the administrative remedies provided under the LORCPM and, subsequently, before the Ecuadorian administrative courts.

## 7. Intellectual Property

### 7.1 Patents

Patent protection in Ecuador is primarily governed by the Organic Code of the Social Economy of Knowledge, Creativity and Innovation (*Código Orgánico de la Economía Social de los Conocimientos*, *Creatividad e Innovación* – COESCCI) and Andean Community Decision No 486, which applies directly in Ecuador.

Patents may be granted for inventions relating to products or processes in any field of technology, provided that they are novel, involve an inventive step and are capable of industrial application. Discoveries; scientific theories; mathematical methods; computer programs as such; diagnostic, therapeutic and surgical methods for the treatment of humans or animals; and plants and animals (other than non-naturally occurring microorganisms) are generally excluded from patent protection.

Patent rights arise upon registration and remain in force for 20 years from the filing date of the patent application, provided that the corresponding maintenance fees are duly paid.

Patent applications are examined by the National Intellectual Rights Service (*Servicio Nacional de Derechos Intelectuales* – SENADI). The registration procedure includes a formal examination, publication of the application for third-party opposition and a substantive examination of patentability before the patent is granted.

Patent owners may enforce their rights through administrative proceedings before SENADI and judicial proceedings before the competent courts. Available remedies include:

- preliminary and precautionary measures;
- cease-and-desist orders;
- the seizure or removal of infringing goods from the market;
- compensation for damages; and
- other remedies provided by the applicable intellectual property legislation.

Criminal remedies may also be available in the cases expressly provided by Ecuadorian law.

### 7.2 Trade Marks

Trade marks in Ecuador are primarily governed by COESCCI and Andean Community Decision No 486, which applies directly in Ecuador.

A trade mark is any sign capable of distinguishing goods or services in the marketplace, including words, names, letters, numbers, devices, colours, three-dimensional shapes, sounds, combinations of signs and any other sign capable of graphical or other appropriate representation. Ecuador applies the Nice Classification for the classification of goods and services.

Exclusive rights over a trade mark generally arise upon registration before SENADI. Registered trade marks are protected for ten years from the date of registration and may be renewed indefinitely for successive ten-year periods.

The registration procedure includes the filing of the application, a formal examination, publication for third-party opposition (generally within a 30-business-day opposition period) and a substantive examination of registrability before the mark is granted.

The owner of a registered trade mark has the exclusive right to prevent third parties from using identical or confusingly similar signs in relation to identical or related goods or services where such use is likely to create confusion or a likelihood of association. Well-known trade marks also enjoy the special protection afforded by Andean Community Decision No 486, even in certain circumstances where they have not been registered in Ecuador.

Trade mark rights may be enforced through administrative proceedings before SENADI and judicial proceedings before the competent courts. Available remedies include:

- preliminary and precautionary measures;
- cease-and-desist orders;
- the seizure, removal or destruction of infringing goods;
- border measures;
- compensation for damages; and
- where applicable, criminal remedies under Ecuadorian law.

### 7.3 Industrial Designs

Industrial designs in Ecuador are primarily governed by COESCCI and Andean Community Decision No 486, which applies directly in Ecuador. An industrial design is defined as the particular appearance of a product resulting from any combination of lines, colours, shapes, textures or materials, or from its two- or three-dimensional form, provided that such appearance does not alter the product's technical function or intended purpose.

Exclusive rights over an industrial design arise upon registration before SENADI. Protection is granted for a period of ten years from the filing date of the application and is not renewable. The registration procedure includes the filing of the application, a formal examination, publication for third-party opposition and a substantive examination to verify compliance with the applicable legal requirements, particularly the requirement of novelty, before registration is granted.

The owner of a registered industrial design has the exclusive right to prevent third parties, without authorisation, from manufacturing, offering for sale, marketing, importing or otherwise commercially exploiting products incorporating or reproducing the protected design.

Industrial design rights may be enforced through administrative proceedings before SENADI and judicial proceedings before the competent courts. Available remedies include:

- preliminary and precautionary measures;
- cease-and-desist orders, the seizure;
- removal or destruction of infringing goods;
- compensation for damages; and
- where applicable, criminal remedies under Ecuadorian law.

### 7.4 Copyright

Copyright in Ecuador is primarily governed by COESCCI. Copyright protection extends to all original literary, artistic and scientific works, regardless of the form of expression, including literary works, musical works, audiovisual productions, photographs, artistic works, architectural works, computer programs and databases that, by reason of the selection or arrangement of their contents, constitute original intellectual creations.

Copyright protection arises automatically upon the creation of the work and does not depend on registration. Although registration before SENADI is not constitutive of rights, it is commonly used as prima facie evidence of ownership and the date of creation in the event of a dispute.

As a general rule, copyright protection subsists for the life of the author plus 70 years following the author's death, after which the work enters the public domain.

Ecuadorian law distinguishes between moral rights and economic (patrimonial) rights. Moral rights, including the rights of authorship, integrity and disclosure, are perpetual, inalienable, unwaivable and imprescriptible. Economic rights, including the rights of reproduction, distribution, public communication, making available and transformation, may be assigned or licensed in accordance with the law.

Copyright may be enforced through administrative proceedings before SENADI and judicial proceedings before the competent courts. Available remedies include:

- preliminary and precautionary measures;
- cease-and-desist orders;
- the seizure or removal of infringing copies;
- compensation for damages; and
- where applicable, criminal remedies in cases such as piracy or counterfeiting.

### 7.5 Others

In Ecuador, computer software is protected under the copyright regime established by COESCCI and the applicable Andean legislation. Computer programs are protected as literary works, and copyright arises automatically upon their creation without the need for registration. Registration before SENADI is optional but may serve as prima facie evidence of ownership.

Databases are protected by copyright to the extent that the selection or arrangement of their contents constitutes an original intellectual creation. Copyright protection does not extend to the data or information contained in the database as such.

COESCCI and Andean Community Decision No 486 also protect undisclosed information and trade secrets, including manufacturing processes, formulas, technical know-how, business methods, customer lists and other confidential commercial information. Protection is available provided that the information is secret, (ii) has commercial value because it is secret and (iii) has been subject to reasonable measures by its lawful holder to preserve its confidentiality.

In practice, trade secret protection is commonly reinforced through confidentiality agreements, non-disclosure clauses and other contractual arrangements included in commercial, employment and services agreements. The unauthorised acquisition, use or disclosure of trade secrets may give rise to administrative and judicial remedies, as well as contractual liability and, where applicable, unfair competition claims.

Ecuadorian legislation also provides specific protection for other intellectual property rights, including layout designs (topographies) of integrated circuits and plant varieties, under the applicable provisions of COESCCI and the relevant Andean Community legislation.

## 8. Data Protection

### 8.1 Applicable Regulations

The protection of personal data in Ecuador is primarily governed by the Constitution of the Republic, the Organic Law on the Protection of Personal Data (*Ley Orgánica de Protección de Datos Personales* – LOPDP), published on 26 May 2021, and its General Regulation, published on 13 November 2023.

The Constitution recognises the fundamental right to the protection of personal data and provides that the collection, storage, processing, disclosure and transfer of personal data require either the data subject's authorisation or another legal basis established by law.

The LOPDP establishes a comprehensive legal framework broadly inspired by the principles of the EU General Data Protection Regulation (GDPR). It is based on the principles of lawfulness, fairness, transparency, purpose limitation, data minimisation, accuracy, storage limitation, integrity and confidentiality, accountability and proactive responsibility.

Personal data may only be processed where there is a valid legal basis, including the freely given, prior, specific, informed and unequivocal consent of the data subject or another legal basis expressly recognised by the LOPDP.

The LOPDP grants data subjects a broad catalogue of rights, including the rights of access, rectification, updating, erasure, objection, portability, suspension of processing and not to be subject to decisions based solely on automated processing where the legal requirements are met.

Controllers and processors are required to implement appropriate technical and organisational security measures, comply with the accountability principle, maintain appropriate governance measures and noti-

fy personal data security breaches to the competent authority where required by law.

The authority responsible for supervising and enforcing the LOPDP is the Superintendence for the Protection of Personal Data (*Superintendencia de Protección de Datos Personales* – SPDP), which is empowered to investigate infringements, issue administrative guidance and impose the sanctions established by law.

### 8.2 Geographical Scope

The LOPDP has an extraterritorial scope broadly comparable to that of the GDPR. The LOPDP applies to the processing of personal data carried out within Ecuador, irrespective of whether the controller or processor is established in Ecuador. It also applies to controllers or processors established outside Ecuador where the processing activities relate to:

- the offering of goods or services to individuals located in Ecuador; or
- the monitoring of the behaviour of individuals located within Ecuador.

Accordingly, a foreign company that targets customers in Ecuador or monitors the behaviour of individuals located in Ecuador may be subject to the obligations established by the LOPDP, including compliance with the applicable principles governing the processing of personal data and the recognition of the rights of data subjects.

International transfer of personal data is permitted where the requirements established under the LOPDP are satisfied. As a general rule, transfers may be carried out where the data subject has provided valid consent or where another lawful transfer mechanism applies, including transfers to jurisdictions providing an adequate level of protection, appropriate contractual safeguards, binding corporate rules for corporate groups or any other transfer mechanism recognised by Ecuadorian law.

### 8.3 Role and Authority of the Data Protection Agency

The authority responsible for supervising and enforcing Ecuador's data protection framework is the SPDP, an independent public authority with administrative, technical, operational and financial autonomy. The SPDP is responsible for overseeing compliance with the LOPDP and its implementing regulations. Its principal powers include:

- supervising compliance with the LOPDP;
- administering the National Data Protection Registry;
- issuing secondary regulations, technical guidance and administrative criteria concerning the application of the data protection framework;
- handling complaints and petitions submitted by data subjects;
- conducting investigations and administrative inspections;
- initiating and deciding administrative enforcement proceedings; and
- imposing the corrective measures and administrative sanctions provided by law.

Where the SPDP determines that an infringement has occurred, it may order corrective measures, require the adoption of compliance measures and impose administrative fines in accordance with the LOPDP.

Since becoming operational, the SPDP has progressively developed its supervisory and enforcement activities, particularly in relation to compliance programmes, privacy by design and by default, the processing of biometric data, and the implementation of appropriate technical and organisational security measures.

## 9. Looking Forward

### 9.1 Upcoming Legal Reforms

Several legislative and regulatory developments are expected to continue shaping Ecuador's legal framework in the short-to-medium term.

#### Tax

Further tax reforms remain likely as part of the government's fiscal policy and efforts to promote investment and strengthen tax collection. Recent reforms have focused on modernising tax compliance, expanding digital tax administration, updating withholding tax regimes and strengthening tax transparency

and reporting obligations. Additional amendments to the tax framework, particularly regarding investment incentives and electronic compliance obligations, may be expected.

### Labour

The Ministry of Labour continues to promote greater labour flexibility through regulations governing special working time arrangements and the flexible distribution of the statutory 40-hour working week. Although these changes have so far been implemented mainly through secondary legislation, further legislative reforms to modernise Ecuador's labour regime remain part of the public policy debate.

### Data Protection

Following the entry into force of the LOPDP and its General Regulation, the SPDP is expected to continue issuing secondary regulations and technical guidance, while progressively increasing its supervisory and enforcement activities. Companies should therefore expect a more mature regulatory environment and greater scrutiny of compliance programmes, international data transfers, cybersecurity measures and privacy governance.

### Competition

Following the recent institutional reforms that created the SEC, further secondary regulations and administrative guidance are expected to continue developing Ecuador's competition law framework, particularly in relation to merger control, investigations and enforcement procedures.

More generally, Ecuador is expected to continue strengthening its legal framework, with the objective of attracting foreign investment, promoting international trade and aligning its regulatory standards with international best practices.

**Soliman, Hashish & Partners** (SHP) is a full-service corporate law firm, recognised as a leading financial and corporate law firm in Egypt. SHP is renowned for its innovative, high-quality, and commercially astute approach to every task. SHP works exclusively with well-established multinational clients in a wide range of practice areas, including corporate, M&A, banking and finance, telecoms, media and technology, energy and electricity, construction, public procurement, dispute resolution, intellectual property rights and employment. SHP acts as local legal counsel to private and public sector entities, including governments, NGOs and leading multinational companies operating in a wide range of sectors. Over the years, SHP has represented over 1,000 leading multinational clients in Egypt's largest mega projects and has established strong relationships with decision-makers in the public and private sectors.

## Authors

**Mohamed Hashish** is managing partner at Soliman, Hashish & Partners. He has over 21 years of experience in handling corporate, M&A, restructuring, banking and finance, energy and electricity, TMT, construction and public procurement matters. Hashish has extensive experience in representing over 700 multinational clients across all business sectors. He has received 19 international awards, and is recognised as a leading lawyer by Chambers and Partners.

**Heba El Abd** is a managing associate at Soliman, Hashish & Partners, and a bilingual Arabic and English lawyer with more than six years of experience in handling corporate, M&A, employment, public procurement and TMT matters. Before joining Soliman, Hashish & Partners, Heba worked as an associate at a reputable law firm. Heba graduated from Cairo University with a BA in Law (English Section). During her studies, Heba took part in various internships at top-tier law firms in Egypt.

**Mariam Rabie** is an associate at Soliman, Hashish & Partners, fluent in Arabic, English and German. Her practice includes providing advice on M&A, antitrust, anti-dumping, telecommunications, media and technology, and intellectual property rights. Mariam graduated from the German University in Cairo (GUC) with a BA in International Law and Legal Studies. An experienced participant of many international moot court competitions, Mariam coached the participants of the Monroe E. Price Media Law moot court competition. As part of the antitrust team, Mariam was recently awarded first place for the Best Competition Research in Egypt held by the Egyptian Competition Authority under the auspices of the Egyptian Cabinet.

**Mohamed Selim** is a junior associate at Soliman, Hashish & Partners, and holds a law degree from Cairo University's Faculty of Law (English Section). Fluent in both English and Arabic, Selim leverages his linguistic proficiency with legal knowledge, making him qualified to navigate general corporate, corporate governance and employment matters. Before joining Soliman, Hashish & Partners in 2024, Selim gained practical experience through internships at leading law firms in Egypt. His participation in the Jessup Moot Court competition developed his oral advocacy capabilities, providing a solid understanding in dispute resolution in accordance with international law.

# 1. Legal System

## 1.1 Legal System and Judicial Order

The Egyptian legal system is primarily based on the French civil legal system, various other European codes, and religious law. In practice, religious law is applied only to personal status and family matters which are governed by the religious law of the individual concerned. The fundamental and organic law of Egypt is its constitution, which was passed in a referendum in January 2014 and amended in April 2019.

The Egyptian judiciary is highly independent, and judges are immune to dismissal, subject to no other authority but the law, and equal in rights and duties.

The judicial order under the Egyptian system is outlined below.

### Regular Courts

At the apex of the regular judiciary system in Egypt is the Court of Cassation, which was established in 1931 and is based in Cairo. The Court of Cassation is a court of law as opposed to a trial court and guarantees the uniformity and consistency of the implementation and interpretation of the law. Following this are the courts of appeal which have the competence to consider rulings by the courts of first instance falling under their jurisdiction, should these rulings be subject to appeal. Next are the first instance courts, also known as primary courts, which are strategically located in various district capitals. Complementing these are summary courts, which are found in central locations, coastal towns, and even within certain neighbourhoods. These courts' jurisdictions are determined based on two main factors: the monetary value involved in the legal matter and the specific geographic area over which the court has authority.

### State Council

The State Council is an independent judicial body competent to adjudicate administrative disputes and disciplinary proceedings. The judicial section consists of the Supreme Administrative Court, the Administrative Judiciary Court, the administrative courts, the disciplinary courts, and the State Commissioners' Authority, each competent to consider such submissions in accordance with the law.

### The Supreme Constitutional Court

The Supreme Constitutional Court is an autonomous and independent judicial body with its headquarters in Cairo. However, in cases of necessity, it may, upon the approval of its General Assembly, hold its sessions elsewhere in Egypt. The Supreme Constitutional Court is solely competent to decide on the constitutionality of laws and regulations, interpret legislative provisions, and adjudicate on disputes pertaining to the affairs of its members, on jurisdictional disputes between judicial bodies and entities that have judicial jurisdiction, on disputes pertaining to the implementation of two final contradictory judgments, one of which is rendered by a judicial body or an authority with judicial jurisdiction and the other is rendered by another, as well as on disputes pertaining to the execution of its judgments and decisions.

### The State Lawsuits Authority

The State Lawsuits Authority is an Egyptian judicial institution that resembles, in respect of competencies, the Attorney General in common law disciplines and particularly the United States Solicitor General.

The Authority represents the interests of the State in a variety of areas before national and international courts and arbitral tribunals. Under the applicable law, the Egyptian State Lawsuits Authority is granted the power to plead on behalf of the State even if the State itself does not wish to do so.

# 2. Restrictions on Foreign Investments

## 2.1 Approval of Foreign Investments

Foreign investments are subject to screening in Egypt based on specific criteria, including the investor's nationality and the company's activities, given that activities carried out by non-Egyptian investors, as well as the investor's nationality, may be restricted by relevant Egyptian laws and may require certain conditions to be met. Therefore, screening must be performed to ensure the satisfaction of these conditions and requirements. It is worth noting that foreign ownership restrictions are applicable in several sectors and locations such as:

- importation activities conducted for resale or trading purposes, noting, however, that these restrictions were recently relaxed – now permitting majority foreign ownership for a period of ten years, subject to renewal pursuant to certain conditions;
- commercial agencies or intermediary businesses; and
- carrying out business in the Sinai Peninsula.

It is worth noting that security clearance must be obtained for any foreigner to work or do business in Egypt. In practice, the General Authority for Investment and Free Zones (GAFI) usually approves changes in shareholding structures and the incorporation of companies without initially requiring a security clearance, with the exception of certain nationalities which are subject to advanced examinations, such as China, Russia, Ukraine, Nigeria, Israel, Iran, Belarus, Bangladesh, Iraq and Palestine, as such restricted nationalities require an advance security clearance. However, GAFI has recently started to relax the conditions of obtaining security clearance prior to incorporation with respect to some nationalities.

Aside from the security clearance, work permits must also be obtained for any foreign employees to be employed by the relevant company.

### 2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance

Prior to engaging in any business in Egypt, upon the incorporation application of the company, or upon the approval of a general assembly meeting for changes in the shareholding structure, a security clearance application is submitted to the relevant authority indicating all relevant data of the foreign investor.

Generally, investing in Egypt without obtaining a security clearance or any other necessary approvals for engaging in business may have legal ramifications, which could include legal penalties such as fines or other sanctions imposed by the relevant regulatory authority, restrictions on business operations and activities through a suspension imposed by the relevant governmental authority and the eventual disruption of any business plans the foreign investor may have made, severe financial losses, and contractual issues where certain contracts may be deemed null and void due to the lack of obtaining the necessary approvals, all of which may result in severe reputational damage to the business.

### 2.3 Commitments Required From Foreign Investors

In certain circumstances, the regulatory authorities may require certain conditions such as:

- a minimum capital for obtaining certain approvals and licences;
- the creation of a minimum number of jobs for Egyptian nationals; and
- requiring foreign investors to use a minimum percentage of local resources in their products.

### 2.4 Right to Appeal

Foreign investors have the right to appeal and review such decisions by way of referral to an administrative court, which has exclusive oversight over any administrative matter. Further, foreign investors may refer any dispute to international arbitration subject to certain conditions under the relevant Bilateral Investment Treaty (BIT), whereby any award issued in favour of investors will be enforceable vis-à-vis any assets owned by the Egyptian government outside Egypt.

## 3. Corporate Vehicles

### 3.1 Most Common Forms of Legal Entity

Both the Companies Law and the Trade Code provide several legal forms of business, similar to those legal forms that are available in North America and Europe, such as:

- branch of a foreign company;
- joint stock company (JSC);
- limited liability company (LLC); and
- one-person company (OPC).

The two most common types of companies selected by investors in Egypt are JSCs and LLCs, whereby the capital of a JSC shall be owned by at least three shareholders and constitute a minimum capital of EGP250,000. Whereas, for an LLC the minimum number of partners is two and no minimum capital is required. An LLC is usually the most recommended

corporate vehicle because an LLC has a simplified corporate structure compared to a JSC.

However, it is worth noting that depending on the activity of the company, a specific corporate structure may be required for certain activities such as banking activities. Further, depending on the company's activities, a company may be formed under different laws, such as the Capital Markets Law No 95 of 1992.

### 3.2 Incorporation Process

An incorporation application is submitted to the General Authority for Investment and Free Zones (GAFI), which is the regulatory authority overseeing the incorporation of companies in Egypt. Attached to such incorporation applications are a set of documents including corporate documents related to the shareholders or partners, passports of the directors or shareholders, the auditor's acceptance letter, certificate of non-confusion of the company's name, bank certificate and the lease agreement of the company's premises.

The Articles of Association and/or statutes of the company are then issued by GAFI after the provision of the relevant details such as share capital, auditor's information, address, duration of the company, directors/managers and the company's commercial register.

The incorporation process may vary depending on the readiness of all necessary documents required to be submitted at the time of incorporation. However, once all documents are ready, the incorporation process usually takes from one to two weeks. However, GAFI offers VIP services for the incorporation process for an additional charge of EGP10,000 (equivalent to approximately USD192).

### 3.3 Ongoing Reporting and Disclosure Obligations

Foreign investments are subject to review and screening by GAFI. All companies incorporated in Egypt that are entirely or partially owned by non-Egyptian investors (collectively, non-Egyptian-owned companies), regardless of the percentage of the ownership or the applicable legal regime, must regularly submit their Foreign Direct Investment (FDI) Data to GAFI, which includes information on, inter alia, foreign shareholders, corporate and financial information, pursuant to Decree No 2731 of 2019, as follows:

- within 30 days of the incorporation date or the date of any change in the non-Egyptian-owned company's capital, purpose, shareholding structure or board members (as the case may be);
- within 45 days of the end of each quarter of the calendar year; and
- within four months of the end of the relevant non-Egyptian-owned company's financial year.

Further, failure to satisfy the FDI requirement will entail a penalty fine of EGP50,000 for non-Egyptian-owned companies, in accordance with the Investment Law No 72 of 2017.

### 3.4 Management Structures

The one-tier management structure, where one governing body is responsible for management and decision-making, is widely considered the most common management structure in Egypt. For example, a JSC primarily consists of the board of directors, which is responsible for overseeing the operations of the company and making major decisions; they are elected or appointed by the shareholders of such company. Further, the executive management may be chaired by a CEO or managing director who is responsible for the day-to-day operations of the company and executing resolutions and decisions taken by the board of directors. Further, the general assembly of the company generally has the authority to elect or dismiss directors, approve financial statements, increase the company's capital and take other important decisions in relation to the company.

### 3.5 Directors', Officers' and Shareholders' Liability

The Companies Law No 159 of 1981, in general, does not recognise the concept of piercing the corporate veil, therefore, the liability of shareholders in a JSC or allotment holders in an LLC is strictly limited to the paid-in capital.

However, the aforementioned rule is subject to certain exceptions, such as if the number of shareholders in a JSC becomes less than three, then the concept of piercing the corporate veil shall apply to the remaining

shareholders in a JSC to legitimise their legal status by increasing the number of shareholders to reach the minimum required number.

## 4. Employment Law

### 4.1 Nature of Applicable Regulations

On 3 May 2025, the New Egyptian Labour Law No 14 of 2025 (the "Labour Law") was officially published in the Official Gazette. In accordance with its provisions, the Labour Law entered into force on the first day of the month following the lapse of 90 days from the date of its publication (ie, 1 September 2025). The Labour Law replaced the previous Labour Law No 12 of 2003.

Under the Labour Law, any condition or agreement that violates the provisions of the Labour Law and/or derogates from the employee's rights and entitlements, shall be considered invalid. However, in the event that a rule and/or a stipulation originating either from the employment contract, employment practice, or any other employer resolution or internal work regulation, grant the employee better rights and/or benefits not provided by the provisions of the Labour Law, the said rule and/or stipulation shall remain valid as it provides better benefits in the interests of the employee.

### 4.2 Characteristics of Employment Contracts

In accordance with the provisions of the Labour Law, an employer must conclude an employment contract with an employee. It must be drafted in Arabic and provided in four identical copies. The employment contract must include the following information:

- start date of the contract;
- employer's name and place of employment;
- employee's name, qualifications, profession or craft, social insurance number and residence;
- the nature and type of work to be carried out by the employee;
- agreed salary, method and time of payment; and
- any other benefits, in cash or kind.

Furthermore, according to the Labour Law, the employment contract may be issued in a bilingual format – Arabic and the employee's native language – provided that the employee is a foreign national and does not speak Arabic. However, in the event of any discrepancy between the two versions, the Arabic text shall prevail.

As stipulated above, the employment contracts shall be made in four counterparts: one retained by the employer, one by the employee, and one submitted to the competent Social Insurance Office, and one copy to be submitted to the competent administrative authority (ie, the Labour Directorate within the employer's jurisdiction or submitted online via the Directorate's email).

Pursuant to the Labour Law, in the absence of a written contract, both the employee and employer have the right to prove the employment relationship, its duration, and all associated rights through any means of proof. However, it is worth noting that, in the absence of a written employment contract, there is a presumption that the contract is concluded for an indefinite period.

The employment contract may be concluded for either a definite or indefinite period or for the execution of a specific task or project. Notably, the Labour Law does not determine the maximum or minimum duration of the employment contract.

### 4.3 Working Time

According to the Labour Law, the maximum applicable working hours of employees shall not exceed eight hours per day or forty-eight hours per week excluding rest breaks. These limits are regulated by public order rules and cannot be superseded or extended by any form of agreement.

The New Labour Law provides that overtime work is only allowed in cases of emergency, unusual and/or exceptional circumstances in work conditions, provided that:

- the employer notifies the competent Labour Office within the employer's jurisdiction and this shall be certified consequently by the Labour Directorate within seven days of the occurrence of extraordinary work conditions or exceptional circumstances, providing justifications for additional work and the duration of the required work; and

- the total daily working hours shall not exceed twelve hours, and the employees shall be entitled to monetary compensation.

Under the Labour Law, overtime work shall be compensated as follows:

- Overtime During Working Days: In addition to their regular pay, employees are entitled to receive a 35% increase in their salary for overtime during the day, and a 70% increase for overtime hours worked at night.
- Overtime During Weekends: In addition to their regular pay, employees are entitled to an additional 100% of their salary for overtime worked. The employer is also obliged to grant the employee a day off during the following week in place of the lost rest day.
- Overtime During Public Holidays: In addition to their regular pay, employees are entitled to either double their regular pay, or a compensatory day off, subject to a written request submitted by the employee in accordance with the Labour Law.

## 4.4 Termination of Employment Contracts

The Labour Law stipulates that an employee may be dismissed if they commit one of the following acts, which shall be deemed a gross misconduct ("Gross Misconduct"), including, inter alia:

- assumption of a false identity or submission of false documents;
- failure to follow safety instructions;
- disclosure of the secrets of the establishment at which they work, leading to the occurrence of serious damage to the establishment;
- competing with the employer in the same field;
- visible intoxication or being under the influence of drugs during working hours; and
- acts of aggression against the employer or general manager and/or committing serious aggression against any superiors either during work hours or related to work.

The authority to impose the penalty of dismissal lies within the competent labour court.

It is worth noting that the Labour Law stipulates that an employee shall be deemed to have resigned if he or she is absent from work without a legitimate excuse for more than 20 non-consecutive days within one year, or for more than ten consecutive days, provided that the employer, or its representative, has served the employee with a registered notice accompanied by an acknowledgement of receipt following ten days of absence in the first case and five days of absence in the second case.

There are different procedures for terminating employment contracts, depending on whether they are fixed or permanent, which will be further clarified in the following two sections.

### Termination of a Fixed-Term Employment Contract

An employer shall not have the right to terminate a fixed-term employment contract prior to its expiry, unless the employee commits a Gross Misconduct. The burden of proof rests with the employer to establish that such misconduct occurred.

As a general rule, the Labour Law provides that the employee shall not have the right to terminate a fixed-term employment contract early except in the following cases:

- If the employee resigns, in which case the resignation must be submitted to the employer, to be duly signed by the employee or their authorised representative, and certified by the competent administrative authority (the Labour Office within the employer's jurisdiction). The employment relationship will not terminate unless a formal decision of acceptance is issued by the employer.
- If the employment relationship exceeds five years, the employee may have the right to terminate the employment relationship by providing three months' notice in accordance with the Labour Law.

Where a fixed-term employment contract is terminated prior to the expiry of its term without a legally recognised ground, the assessment of compensation is generally subject to judicial discretion. In practice, courts may award compensation equivalent to the employee's salary for the remaining term of the contract or such other amount as reflects the actual

damages suffered, in accordance with the provisions of the Civil Code.

In addition, under the Labour Law, where an employer terminates a fixed-term employment contract that was concluded or renewed for a period exceeding five years, the employee shall be entitled to a severance gratuity equivalent to one month's salary for each completed year of service.

### Termination of a Permanent Employment Contract

An employer shall not have the right to terminate a permanent employment contract unless the employee commits a Gross Misconduct. The employer has the burden of proving that the employee has committed a Gross Misconduct.

Furthermore, should the employer intend to terminate a permanent employment contract, they are required to provide the employee with notice. The Labour Law establishes a standardised notice period for the termination of permanent contracts, set at three months, irrespective of the employee's length of service.

According to the Labour Law, if the employer terminates a permanent employment without proof of any Gross Misconduct by the employee, the said employee shall be entitled to compensation equivalent to the salary of at least two months for each year of service in addition to any other financial entitlements (if any).

Employees, under the Labour Law, shall be entitled to terminate the contract if the employer fails to fulfil a significant obligation arising from the Labour Law, the individual or collective employment contract, or the establishment's regulations. Furthermore, termination is permissible if the employee or their relatives experience assault by the employer or their representatives. In such instances, the termination is regarded as equivalent to dismissal by the employer without just cause. Accordingly, the employee will be entitled to compensation for unfair termination, in addition to other financial entitlements.

### Termination of Employment Due to Redundancy or Closure of the Establishment

Under the Labour Law, the employer shall have the right to completely or partially shut down the organisation or reduce its size by terminating the employment contracts of a number of employees to mitigate any economic crisis, provided that (i) a downsizing request is submitted to the competent authority for approval; and (ii) the competent syndication and the employees shall be notified of both the downsizing request and approval.

In this case, a dismissed employee shall be entitled to the following end-of-service indemnity:

- an indemnity equivalent to one month of their salary for the first five years; and
- an indemnity equivalent to one month and a half of their salary for the remaining period.

Should the employer fail to obtain the necessary approval from the competent authorities for the downsizing and proceed to reduce its size by terminating the employment contracts of several employees, those employees shall be entitled to monetary compensation, as such terminations will be considered unfair dismissals.

## 4.5 Employee Representations

The Egyptian Trade Union Law No 213 of 2017 grants the employees of an establishment the full right to establish, join or withdraw from a union committee, in accordance with the applicable Egyptian laws and internal regulations of the relevant union committee.

In order for a union committee to acquire legal personality and to be able to exercise its activities, it should be formed of at least 50 employees. As of the date on which the required documents are provided to the relevant administrative authority and provided that the establishment conditions are fully satisfied, the union committee shall be considered to be legally established under the Trade Union Law.

The union committee shall be entitled to directly exercise and manage the following matters with the relevant employer:

- resolving individual and collective disputes relating to their members;
- concluding collective labour agreements at the enterprise level;

- participating with the general trade union in the preparation of draft collective labour agreements, organised primarily under the Labour Law;
- participating in the discussion of projects of the production plans of the facility and assisting in their implementation;
- participating in the implementation, development and/or amendment of internal regulations and guidelines relating to the regulation of labour and employees' affairs in the establishment;
- implementing the services programmes determined by the general trade union; and
- organising and managing the union committee's affairs and activities freely, without restriction to this right.

## 5. Tax Law

### 5.1 Taxes Applicable to Employees/ Employers

The Egyptian Income Tax Law No 91 of 2005 provides that the monthly gross salaries of employees shall be subject to taxes, to be deducted from each employee's monthly gross salary, based on the relevant tax brackets of each employee's annual salary.

Further, in accordance with the Egyptian Social Insurance and Pensions Law No 148 of 2019, all Egyptian entities are required to register with the Social Insurance Authority and insure their employees.

The social insurance contribution's percentage is 29.75% of the monthly gross salary, capped at EGP16,700, which is required to be paid to the Social Insurance Authority as follows:

- 18.75% of the monthly gross salary shall be borne by the employer; and
- 11% of the monthly gross salary shall be borne by the relevant employee.

### 5.2 Taxes Applicable to Businesses

Business in Egypt is generally subject to certain taxes such as:

- corporate income tax at approximately 22.5 per cent;
- value-added tax (VAT) on goods and services at a 14 per cent standard rate;
- withholding tax on certain payments to non-residents such as dividends;
- property taxes;
- stamp duty on certain documentation, such as leases and deeds; and
- capital gains tax on general profits from the sale of assets.

Recent amendments were introduced in 2025 to VAT Law No 67 of 2016 (the "VAT Law") pursuant to Law No 157 of 2025. These amendments introduced new VAT treatments for certain products and services, including changes to the applicable VAT rates and exemptions from VAT for specific products and services.

Such amendments include, inter alia, amendments to the VAT rates applicable to contracting and construction services (ie, supply and installation) and crude oil, as well as VAT exemptions for natural mining and quarry materials in their natural state, excluding crude oil, and donation advertisements for non-profit hospitals and government medical institutes.

### 5.3 Available Tax Credits/Incentives

Under the Investment Law No 72 of 2017, there are a variety of general tax incentives foreign investors may benefit from, in addition to other additional incentives under the Investment Zones Incentives, such as the free zones or technological zones, which may enjoy certain incentives such as reductions on corporate income tax, custom duties exemption on imported materials and equipment, and reduced VAT rates on certain goods and services. It is worth noting that such incentives vary from one investment zone to the other and the nature of the activities of the business, which shall be confirmed by a local tax adviser.

Additionally, pursuant to the Tax Incentives for Small Businesses Law No 6 of 2025, a number of facilitations and incentives are introduced for small businesses with an annual turnover not exceeding EGP20,000,000. It is important to note that eligibility for these incentives is subject to certain criteria. These incentives may include exemptions and reliefs from stamp taxes, notarisation, and registration fees

related to company incorporation contracts, as well as credit facility and mortgage agreements pertinent to the company's operations. Moreover, the company may benefit from exemptions on capital gains tax as well as taxes on distributable profits. Tax rates applicable to the company are also reduced, and such companies are exempt from the obligation to maintain the records, books, and documents stipulated in the Unified Tax Procedures Law No 206 of 2020.

### 5.4 Tax Consolidation

Tax consolidation is not currently regulated under Egyptian law.

### 5.5 Thin Capitalisation Rules and Other Limitations

In accordance with the Income Tax Law (as amended), debt interest (interest expenses) paid by legal persons on loans and advances obtained by them is not a deductible cost to the extent that such loans and advances exceed two times the average equity rights as reflected in the financial statements prepared in accordance with Egyptian Accounting Standards.

Debt interest includes all amounts chargeable by the legal person in return for the loans, advances of any kind obtained thereby, bonds and bills. The loans and advances include, for the purposes of this item, bonds and any form of financing by debts through securities with fixed or variable interest. Equity includes the paid-up capital in addition to all reserves and dividends reduced by retained losses, provided that the difference of the adjusted account is not included in the reserves account and is determined to be non-taxable.

However, by way of exception to the above, Law No 30 of 2023 provides that interest on loans and advances obtained by legal persons shall remain deductible where the debt-to-average-equity ratio exceeds 2:1, provided that it does not exceed the applicable threshold prescribed below during the transitional period commencing in 2022 and ending with the close of the 2028 tax year:

- 4:1 for the 2023 tax year;
- 3:1 for the tax years 2024 through 2027; and
- 2:1 for the 2028 tax year.

### 5.6 Transfer Pricing

Under the Income Tax Law, if related companies place conditions in their commercial or financial transactions that differ from those between unrelated companies, that will reduce the tax base or transfer its burden from one taxable company to another exempt or non-taxable company, the Egyptian Tax Authority (ETA) shall be entitled to determine the taxable profit on the basis of the neutral price of the relevant transaction, which shall be deemed transfer pricing of transactions concluded between related companies under common ownership or control.

The ETA shall verify the proper application of neutral price (market price) by related persons in their transactions with respect to the exchange of goods, services, raw materials, capital equipment, the distribution of shared expenses, royalty returns and other commercial or financial transactions that are carried out.

A Transfer Pricing Decree was adopted in 2018 to provide new tax guidelines for cross-border transactions between related companies, requiring the submission of specific documents by the relevant companies.

### 5.7 Anti-Evasion Rules

As a general rule, the Egyptian Unified Tax Procedures Law No 206 of 2020 ("Unified Tax Law") provides that financiers, taxpayers and others shall abide by specific requirements, including the following:

- notifying of the commencement of the activity and registering with the ETA;
- obligation to keep paper or electronic books and records within the prescribed legal period, and issue tax invoices in accordance with the provisions of laws and regulations;
- enabling the ETA's employees to perform their duties with regard to the procedures of review, examination, completion and control;
- notifying the ETA of any changes in the activity or establishment within the specified legal period;
- determining the responsible person(s) dealing with the ETA, whether the individual concerned or a legal representative thereof;
- calculating the tax correctly in accordance with the laws and regulations;

- paying tax in the manner and within the time limit specified; and
- including the unified tax registration number in all correspondence and dealings with the ETA or third parties.

Further, legal persons who sell a commodity or provide a service shall register all their purchases and sales of goods and services on the electronic system, in a manner that ensures that the ETA can track the movement of transactions permanently, and determine the size, value, parties involved, and other matters necessary for assessing and collecting the prescribed tax.

## 5.8 Tariffs

Customs and tariffs in Egypt are governed by Law No 207 of 2020 (the "Customs Law") and Decree No. 218 of 2022 issued by the President of Egypt and amended by Presidential Decree No 67 of 2023 (the "Customs Tariff Decree"). Under the Customs Law, a customs tariff is defined as a table formulated based on the description and classification of goods. It sets forth the application rates of customs duty levied on such goods, in addition to the general interpretative rules governing the application of these duties. Simultaneously, the Customs Tariff Decree sets out the rules, categories, and schedules of the customs tariff, as well as any amendments or cancellations.

According to the Customs Tariff Decree, goods temporarily exported for repair are taxed upon re-import at 10% of the total repair cost, including transport and insurance. Additionally, goods exported for completion of manufacture are taxed upon re-import at the rate applicable to the final product, calculated on the cost of the finishing work plus transport and insurance.

With regard to the tourism sector, hotel and tourism establishments may import equipment and machinery (excluding private passenger cars) at a reduced 20% customs duty or the applicable import tax, whichever is lower, under conditions defined by the Minister of Finance.

According to the Customs Tariff Decree, the following goods benefit from reduced customs duty rates:

- infant formula manufacturers: 2% of the value or the applicable import tax, whichever is lower, on raw materials and inputs;
- Arab Petroleum Pipelines Company: 2% of the value or the applicable import tax, whichever is lower, on imports for projects, including machinery and transport (excluding passenger cars);
- Arab Organization for Industrialization companies: 5% of the value or the applicable import tax, whichever is lower, on components for overhauling locomotive turbine engines;
- electric/clean energy vehicle infrastructure: 2% of the value or the applicable import tax, whichever is lower, on:
  (a) EV or natural gas refuelling station equipment;
  (b) EV/gas conversion kits;
  (c) environmental monitoring equipment; and
  (d) renewable energy components (wind/solar);
- electric bus manufacturers: 2% of the value or the applicable import tax, whichever is lower, on batteries, electric motors, control units, auxiliary system units, steering units, battery cooling units, and air conditioning devices;
- mobile phone manufacturers: 2% of the value or the applicable import tax, whichever is lower on batteries, speakers, and cameras; and
- natural gas vehicles: 35% reduction on the applicable import tariff.

### Incentives for Local Assembly Industries

The Customs Tariff Decree sets out the conditions under which assembly industries may obtain permission to have their assembled products treated under customs supervision, with preferential treatment for customs duties. In this regard, completely disassembled parts imported for industrial assembly under the supervision of the Customs Authority may benefit from a reduced import duty. Specifically, it shall be subject to the customs duty applicable to the complete product, reduced by 10%.

Furthermore, where the local manufacturing component of the product reaches at least 10%, the imported foreign components may be subject to a reduced customs duty – lower than that applicable to fully finished product – based on a graduated scale. This reduction may reach up to 90%, or alternatively, the product may be subject to its individual component

duty rates, whichever results in a lower duty. However, this preferential treatment is contingent upon the local manufacturing percentage reaching 60%, a threshold that can be lowered to 40% by virtue of a decision from the Minister of Trade and Industry.

The local manufacturing percentage shall be calculated based on the contribution of the assembly line, as determined by a decision from the Minister of Trade and Industry for each assembly industry individually. This percentage shall be supplemented by the ratio of locally manufactured components to the total complete components constituting the final product, as specified by the General Authority for Industrial Development, in accordance with the project establishment licence issued.

Moreover, the Minister of Finance, upon the request of the Minister of Trade and Industry, may grant companies involved in assembling complex industrial products an advance reduction in customs duties of up to 40%, even prior to the fulfilment of the required local component levels. This preferential treatment is conditional on achieving the stipulated local component within a specified timeframe outlined in their industrial licence.

The General Authority for Industrial Development, in co-ordination with the Customs Authority, shall monitor these companies' compliance through annual reporting to the Minister of Finance. In the event that a company fails to meet its targeted local component level by year-end, the preferential treatment shall be revoked. Consequently, the company will be reassessed under the standard customs rules. It must also reimburse any resulting financial discrepancies along with statutory interest calculated at the highest applicable legal rate for the period in which the benefit was enjoyed.

## 6. Competition Law

### 6.1 Merger Control Notification

With respect to the amendments in late 2022 to the Antitrust Law No 3 of 2005 (the "Antitrust Law"), as amended, the pre-closing clearance for any transaction that constitutes an "economic concentration", subject to meeting the relevant criteria with respect to financial thresholds, has been newly introduced, replacing the post-notification regime. Under the new amendments, economic concentration is defined as any change of control or material influence as a result of a merger or acquisition or establishment of a joint venture.

### 6.2 Merger Control Procedure

In April 2024, the Egyptian Prime Minister issued Decree No 1120 of 2024, issuing the Executive Regulations of the Antitrust Law, whereby the application of the new amendments to the Antitrust Law has been introduced. The Egyptian Competition Authority was granted the authority to review and approve proposed mergers and acquisitions prior to entering into the transaction, provided that the said proposed transaction constitutes an "economic concentration" and meets the relevant criteria with respect to financial thresholds. The new pre-merger control system came into effect as of 1 June 2024.

Further, the Financial Regulatory Authority (FRA) was granted authority to review and approve any proposed mergers and acquisitions prior to their execution, provided that the persons concerned with the transaction exercise one of the activities under the FRA's supervision, including, inter alia, securities and capital markets activities, insurance, reinsurance or insurance brokerage activities, financial leasing activities, or microfinance activities.

### 6.3 Cartels

The Antitrust Law primarily governs anti-competitive agreements and monopolistic practices. It prohibits agreements between competitors, or between a party and any of its suppliers or clients, with the purpose of restricting competition such as price fixing and other forms of anti-competitive agreements. The Antitrust Law also sets penalties for any violation under the provisions thereof, such as nullity of certain agreements and fines on a case-by-case basis.

### 6.4 Abuse of Dominant Position

The Antitrust Law addresses the abuse of a dominant position by one entity or more within the market, such as unfair pricing, unwillingness to deal and discrimination.

## 7. Intellectual Property

### 7.1 Patents

According to the Intellectual Property Law No 82 of 2002 (the "Intellectual Property Law"), the following conditions must be met for an invention to be granted a patent:

- novelty;
- inventive step; and
- capability of economic exploitation.

The owner of the patented innovation has the right to prohibit others from using, making, selling, or importing the patent commercially once it has been registered. Generally, patent protection is valid for 20 years from the date of filing the application.

### 7.2 Trade Marks

According to the Intellectual Property Law, a trademark is a logo, mark, word or any visually perceptible sign that is used by a certain person, company, or group to differentiate their products and/or services from others in the market. In accordance with the Intellectual Property Law, the trademark registration serves simply as a kind of ownership evidence that can be challenged. The first use of the mark in the market establishes ownership of the trademark in accordance with Egyptian law and as established and confirmed by precedent.

According to the Intellectual Property Law, the trademark's protection period spans ten years, and can be extended for similar durations upon request by the owner during the final year of each protection period, provided that the corresponding registration fee is paid. However, if the owner fails to apply for renewal within six months after the protection period has ended, they can still apply for a renewal by paying the prescribed fee and an additional fee determined by the executive regulations of the Intellectual Property Law, not exceeding EGP500, otherwise the trademark shall be deleted.

### 7.3 Industrial Designs

According to the Intellectual Property Law, an industrial design is any arrangement of lines and each stereoscopic shape, with or without colours if it takes a distinctive appearance characterised by novelty and capable of industrial use. The Intellectual Property Law provides that the period of protection of the industrial design or model is ten years starting from the date of submitting the application for registration in Egypt. Protection is renewed for another five years if the owner of the design or model submits an application for renewal within the final year of the term. However, the owner has the right to apply for renewal within three months following the date of expiry of the protection period, otherwise the registration shall be cancelled.

The Intellectual Property Law stipulates that the registration of the industrial design or model grants the owners exclusive rights to prevent others from manufacturing, selling, or importing products that take the form of such design or model or include it. The right to prevent third parties from importing, selling, or distributing the aforementioned products shall be exhausted if the owner markets those products in any country or licences others to do so.

### 7.4 Copyright

Copyright constitutes the rights granted to authors and artists regarding their creative works under the Intellectual Property Law. A variety of works are protected by copyright under the aforementioned Law, including computer software, databases, advertisements, geographic maps, and technical drawings in addition to books, music, oil paintings, sculptures, and films. Copyright protection extends only to expressions and not to ideas, procedures, and methods of operation or mathematical concepts.

Moreover, there are neighbouring rights which are known as copyright-associated rights, and which enable innovators to spread their ideas and publish their works by providing performers, sound recording companies, and broadcasting organisations with legal protection. The protection of copyright and related rights extends to Egyptians and foreigners, both natural and legal persons, belonging to one of the member states of the World Trade Organisation (WTO). Under the aforementioned article, protection is granted:

- for performers: if one of the following conditions is met:

(a) if the performance takes place in a member state of the WTO;
(b) if the performance is captured in sound recordings, the producer of which belongs to a member state of the WTO, or the sound is first recorded in the territory of a member state of the WTO.
(c) if the performance is broadcast by a broadcasting organisation based in a member state of the WTO, and the broadcast is broadcast from a transmitter also located in a member state of the WTO.

- for producers of phonograms: if the sound is first recorded in a member state of the WTO; and
- for broadcasting organisations: if the headquarters of the broadcasting organisation is located in the territory of a member state of the WTO, and the broadcasting programme has been broadcast from a transmitter also located in the territory of a member state of the WTO.

### 7.5 Others

It is worth noting that plant varieties developed in Egypt or abroad, whether they are obtained in a biological or non-biological manner, shall enjoy protection in accordance with the provisions of the Intellectual Property Law upon their registration in the register of plant varieties that grant the right of protection. In order to enjoy protection, the variety must be characterised by novelty, distinction, homogeneity, and stability, and bear its own name. The Intellectual Property Law stipulates that the period of protection of plant varieties shall be 25 years for trees and grapes, and 20 years for other agricultural crops.

Further, undisclosed information shall be protected in accordance with the provisions of the Intellectual Property Law, provided that the following conditions are met:

- the information is confidential in nature, such that the details of the information or its composite components are not widely known or circulated among individuals in the specific industrial sector related to the information;
- its commercial value is derived from its confidential status; and
- its confidentiality relies on the effective measures undertaken by its lawful owner to maintain it.

## 8. Data Protection

### 8.1 Applicable Regulations

The general laws regulating data protection in Egypt are the Constitution, the Penal Code No 58 of 1937, and the Anti-Cybercrime Law No 175 of 2018 ("Cybercrime Law"). It is worth noting that the main legislation governing personal data is the Data Protection Law No 151 of 2020 ("Data Protection Law") which applies to any personal data that is subject to any electronic processing whether partially or entirely, with the exception of certain data that is processed by the Central Bank of Egypt.

The Data Protection Law prohibits personal data from being collected, processed, or disclosed by any means except with the explicit consent of the data subject. Further, the Data Protection Law places restrictions and conditions on the transfer of any "personal data" abroad, which is subject to a licence from the Data Protection Centre (DPC) and a certain level of protection not less than the one provided for under the Data Protection Law.

On 1 November 2025, the Executive Regulations of the Data Protection Law were published in the Official Gazette and made available to the public around 25 December 2025. Persons subject to the Data Protection Law are granted a grace period of one year as of the issuance date thereof to legitimise their position with the Executive Regulations.

### 8.2 Geographical Scope

The Data Protection Law applies to any processor, controller or handler, whether corporate or natural, who breaches the Data Protection Law if they are:

- an Egyptian national inside or outside Egypt;
- a non-Egyptian residing within Egypt; or
- a non-Egyptian outside Egypt if the act is punishable in any form in the country where it occurred and the data subject who is affected by the breach is an Egyptian national or a non-Egyptian residing in Egypt.

### 8.3 Role and Authority of the Data Protection Agency

The DPC is the regulatory authority empowered by virtue of the Data Protection Law to oversee and enforce the Data Protection Law, including the issuance of required licences, authorisations and certifications in accordance with the Data Protection Law.

## 9. Looking Forward

### 9.1 Upcoming Legal Reforms

In early April 2026, the Senate approved a draft new Antitrust Law introducing amendments to the current Antitrust Law, which has been approved in principle by the House of Representatives. This new Antitrust Law is expected to be issued soon, to replace the current Antitrust Law. The key amendments to be made include, inter alia, transferring the affiliation of the Egyptian Competition Authority (ECA) so that it becomes an independent regulatory body with a public legal personality, reporting directly to the President of the Republic rather than the Prime Minister. Further, the new draft grants the ECA the power to impose administrative financial sanctions without having to obtain a court ruling.

With respect to the Labour Law, it is worth noting that ministerial decrees further regulating certain employment-related matters are still pending issuance, including, inter alia, decrees relating to work and sanctions regulations and occupational health and safety.

Furthermore, it is worth noting that it has been reported that the Egyptian government is currently in the process of preparing an all-new Arbitration Law that will be proposed to the Egyptian House of Representatives.

**Soliman, Hashish & Partners** Soliman, Hashish & Partners (SHP) is a full-service corporate law firm, recognised as a leading financial and corporate law firm in Egypt. SHP is renowned for its innovative, high-quality, and commercially astute approach to every task. SHP works exclusively with well-established multinational clients in a wide range of practice areas, including corporate, M&A, banking and finance, telecoms, media and technology, energy and electricity, construction, public procurement, dispute resolution, intellectual property rights and employment. SHP acts as local legal counsel to private and public sector entities, including governments, NGOs and leading multinational companies operating in a wide range of sectors. Over the years, SHP has represented over 1,000 leading multinational clients in Egypt's largest mega projects and has established strong relationships with decision-makers in the public and private sectors.

## Authors

**Mohamed Hashish** is managing partner at Soliman, Hashish & Partners. He has over 21 years of experience in handling corporate, M&A, restructuring, banking and finance, energy and electricity, TMT, construction and public procurement matters. Hashish has extensive experience in representing over 700 multinational clients across all business sectors. He has received 19 international awards, and is recognised as a leading lawyer by Chambers and Partners.

**Heba El Abd** is a managing associate at Soliman, Hashish & Partners, and a bilingual Arabic and English lawyer with more than six years of experience in handling corporate, M&A, employment, public procurement and TMT matters. Before joining Soliman, Hashish & Partners, Heba worked as an associate at a reputable law firm. Heba graduated from Cairo University with a BA in Law (English Section). During her studies, Heba took part in various internships at top-tier law firms in Egypt.

**Mariam Rabie** is an associate at Soliman, Hashish & Partners, fluent in Arabic, English and German. Her practice includes providing advice on M&A, antitrust, anti-dumping, telecommunications, media and technology, and intellectual property rights. Mariam graduated from the German University in Cairo (GUC) with a BA in International Law and Legal Studies. An experienced participant of many international moot court competitions, Mariam coached the participants of the Monroe E. Price Media Law moot court competition. As part of the antitrust team, Mariam was recently awarded first place for the Best Competition Research in Egypt held by the Egyptian Competition Authority under the auspices of the Egyptian Cabinet.

**Contributed by:** Mohamed Hashish, Heba El Abd, Mariam Rabie, Mohamed Selim and Abdelaziz Mohamed,
**Soliman, Hashish & Partners**

**Mohamed Selim** is a junior associate at Soliman, Hashish & Partners, and holds a law degree from Cairo University's Faculty of Law (English Section). Fluent in both English and Arabic, Selim leverages his linguistic proficiency with legal knowledge, making him qualified to navigate general corporate, corporate governance and employment matters. Before joining Soliman, Hashish & Partners in 2024, Selim gained practical experience through internships at leading law firms in Egypt. His participation in the Jessup Moot Court competition developed his oral advocacy capabilities, providing a solid understanding in dispute resolution in accordance with international law.

**Abdelaziz Mohamed** is a junior associate at Soliman, Hashish & Partners with a strong academic foundation in corporate law, arbitration and regulatory compliance. His practice includes providing advice on M&A, antitrust, telecommunications, media and technology, intellectual property rights, corporate structuring and regulatory compliance. Abdelaziz has experience in legal research, contract drafting, corporate governance and due diligence. Prior to joining the firm, he completed multiple internships at leading law firms, which expanded his practical experience across a broad range of corporate and commercial matters. Abdelaziz earned his LLB from Cairo University Faculty of Law (English section) in 2024.

Over the past few years, the Egyptian government has been significantly improving the business environment in the country, which has resulted in various changes to the legal framework governing the establishment and operation of businesses in Egypt. Egypt has attracted more foreign direct investment (FDI) across multiple industries, predominantly within the financial services, technology and infrastructure sectors.

Egypt was ranked ninth in the top source and destination economies for FDI in 2025 by the UN Trade and Development in its World Investment Report. In 2025, Egypt was a principal driver in the growth of greenfield project value, recording a 30% increase in its value along with a 4% rise in number. Furthermore, the value of international project finance (IPF) deals in Africa increased as a result of construction megaprojects in Egypt. It is also worth noting that Egypt was ranked just outside the top ten primary destinations for greenfield projects in the digital economy in 2025, leading in Africa.

Further, in 2026, Egypt was ranked third out of 18 markets in the Middle East and North Africa region, and has globally ranked 27th out of 202 markets for investment openness, according to a Fitch Ratings report reviewed by the Cabinet's Information and Decision Support Center (IDSC), as reported on Egypt's state information service website.

Despite international and local crises faced by the country over the years (including revolutions, COVID-19, the Russia-Ukraine war, the Palestinian conflict, the Iran-Israel conflict, inflation, foreign currency shortages and the threat of potential recession), Egypt has continued to implement its best efforts to improve the legal environment to attract foreign investors and regulate certain activities under the current climate.

## Investment in Egypt

According to Investment Law No 72 of 2017 (the "Investment Law") and Prime Minister's Decree No 56 of 2022, companies seeking to establish strategic or national projects that contribute to development, as well as partnership projects between the private sector and the State, the public sector, or the public business sector in the fields of public utilities, infrastructure, new and renewable energy, roads, transportation, and ports, may apply for a single licence for the establishment, operation, and management of the relevant project (the "Golden Licence").

The Golden Licence is deemed sufficient for the operation of the investment project, without the need to obtain any additional licences, permits, or approvals. The Golden Licence Committee at the General Authority for Investment and Free Zones (GAFI) is responsible for co-ordinating with the relevant governmental authorities in Egypt to obtain all licences, permits, and approvals required by law for the establishment and operation of the investment project. According to Decree No 56 of 2022, the Golden Licence shall be granted by virtue of a decision of the Prime Minister for investment projects that satisfy at least two of the following required conditions:

- The investment project shall contribute to the growth of exports through exporting no less than 50% of its products abroad annually, within three years from the commencement of its activity.
- The investment project shall aim to reduce imports, industrial localisation, as well as increase the proportion of local components in its products, provided that the percentage of local components in its products, including raw materials and production requirements, constitutes at least 50%, and further provided that the aforementioned percentage be calculated by subtracting the value of the imported components from the product cost.
- The financing of the investment project shall be primarily dependent on the foreign currency transferred from abroad through any bank registered with the Central Bank of Egypt (CBE).
- The investment project shall be established in one of the undeveloped areas, including, inter alia, Southern Giza Governorate, the governorates of the Suez Canal Region: Port Said, Ismailia and Suez (east of the canal), border governorates, including the Red Sea Governorate to the south of Safaga, and Upper Egypt governorates.
- The investment project shall contribute directly to fields of technology transfer and localisation in Egypt, innovation support, and scientific research development.

**Contributed by:** Mohamed Hashish, Heba El Abd, Mariam Rabie, Mohamed Selim and Abdelaziz Mohamed,
**Soliman, Hashish & Partners**

- The main objective of the investment project shall be securing strategic goods for the country, thereby reducing reliance on imports.
- The investment project shall lessen environmental impact via reducing gas and temperature emissions and climate improvement.
- The investment project shall offer a labour-intensive investment project by employing not less than 500 Egyptian nationals.

It is worth noting that as of 2026, a total of 52 Golden Licences have been issued by GAFI, of which eight Golden Licences were granted in 2026 covering investment projects worth around USD1.2 billion.

Furthermore, amendments were introduced to the Executive Regulations of the Investment Law pursuant to Prime Minister's Decree No 2140 of 2023 with the aim of promoting foreign direct investment. These amendments include revisions to the Private Free Zones regime, most notably the introduction of a provision authorising the Cabinet to approve the establishment of projects within a Private Free Zone upon the proposal of the competent minister, following an assessment of the project by GAFI and subject to the satisfaction of certain prescribed conditions.

Furthermore, the aforementioned Decree lifted some of the requirements for establishing projects in the Private Free Zones, including:

- the requirement to check initially whether there is a location in the Public Free Zone that would accommodate the project;
- the minimum capital requirement of USD10 million, and the investment costs thereof not being less than USD20 million or its equivalent in a freely convertible currency;
- the minimum area requirement for the project being 20,000 square metres; and
- a minimum requirement of 500 employees; in addition, this Decree has introduced provisions regarding the inclusion of the services industry under the Private Free Zone system.

### Labour Law

It is worth noting that on 3 May 2025, the New Egyptian Labour Law No 14 of 2025 (the "Labour Law") was officially published, replacing the previous Labour Law No 12 of 2003. In accordance with its provisions, the Labour Law entered into force on the first day of the month following the lapse of 90 days from the date of its publication (ie, 1 September 2025).

The Labour Law has introduced key new changes to the previous Labour Law, including, inter alia, recognising new work models, such as remote work, increasing maternity leave, introduction of paternity leave, and increasing the maximum number of times female employees may take unpaid leave to take care of their child. Under the Labour Law, any condition or agreement that violates the provisions of the Labour Law and/or derogates from the employee's rights and entitlements, shall be considered invalid.

### Merger Control

The amendments made to the Antitrust Law No 5 of 2003 (the "Antitrust Law") in December 2022 replaced the post-notification regime for a transaction with the newly introduced pre-merger control system, whereby the Egyptian Competition Authority (ECA) is given the authority to review and approve proposed mergers and acquisitions prior to entering into the transaction. In April 2024, the Egyptian Prime Minister issued Decree No 1120 of 2024, enacting the Executive Regulations of the Antitrust Law and thereby implementing the new amendments. The new pre-merger control system went into effect as of 1 June 2024 and requires pre-approval from the ECA for transactions that constitute "economic concentration" between the contracting parties (namely, a change in control or material influence of a person resulting from a merger, acquisition or joint venture), subject to meeting the relevant criteria with respect to financial thresholds.

It is worth noting that any transaction that constitutes "economic concentration" shall be subject to the pre-closing clearance requirement from the ECA. By virtue of the new amendments, economic concentration is defined as any change of control or material influence as a result of a merger or acquisition or establishment of a joint venture.

Furthermore, the Financial Regulatory Authority (FRA)'s notification and pre-approval are required for any potential transaction that constitutes "economic

concentration" and fulfils the financial thresholds, provided that the concerned persons with the economic concentration exercise one of the activities under FRA's supervision, namely securities and capital markets, insurance, reinsurance or insurance brokerage activities, mortgage finance activities, financial leasing activities, securitisation and factoring activities, and microfinance.

It is worth noting that in early 2026, the Senate approved a draft new Antitrust Law introducing amendments to the current Antitrust Law, which has been approved in principle by the House of Representatives. This new Antitrust Law, which is expected to be issued soon, will replace the current Antitrust Law. The key features of the amendments to be made include, inter alia, transferring the affiliation of the ECA so that it becomes an independent regulatory body with a public legal personality, reporting directly to the President of the Republic instead of the Prime Minister. Further, the new draft grants the ECA the power to impose administrative financial sanctions without having to obtain a court ruling.

### Fintech

It is worth noting that fintech was newly introduced in 2020 in Egypt as part of the issuance of the new Banking Law No 194 of 2020 with the purpose of promoting financial inclusion and the digitalisation of the financial sector in Egypt. However, the applicability of obtaining a fintech licence for the banking sector is still pending the issuance of further regulations in this regard by the CBE. Fintech has since been further regulated in the non-banking financial services (NBFS) sector by the issuance of the new Fintech Law No 5 of 2022 and its Executive Regulation ("Fintech Law"), which facilitate the integration of technologies into NBFS and the regulatory framework for the licensing scheme for such services from the Financial Regulatory Authority (FRA). These services include, inter alia, insurtech, microfinance, robo-advisory, artificial intelligence, mobile applications and digital platforms.

In July 2023, the CBE issued regulations regarding the licensing and regulatory framework for digital banks in Egypt, which shall effectively allow for the establishment and operation of digital banks, in an effort to support innovation and transformation of the digital economy, whilst representing an important step in aligning with global developments in the financial technology industry.

Furthermore, in 2024, the FRA issued Decree No 57 of 2024, which establishes the rules for regulating the operation of robo-advisers for investment. A robo-adviser is an electronic system that provides financial advice to clients for the purpose of creating, managing, and rebalancing an investment portfolio using AI algorithms. The FRA highlighted that portfolio management companies are now authorised to provide automated investment advice via robo-advisers.

It is also worth noting that in 2024, the FRA issued Decree No 140 and 148 of 2024, establishing Special Purpose Acquisition Companies (SPACs) in Egypt, and has recently approved the first application for a SPAC, which is defined as a company licensed by the FRA solely to raise cash funds, through an initial public offering, for the sole purpose of acquiring or merging with an operating business within a specific timeframe.

Moreover, the FRA issued Decree No 227 of 2025, which sets out requirements for companies and entities licensed to conduct non-banking financial activities to strengthen their technological infrastructure and cybersecurity. These entities must submit policies and governance frameworks for information technology (IT), cybersecurity and risk management to the FRA, and conduct annual tests, with the reports submitted to FRA.

The FRA also issued Decree No 279 of 2025, establishing a registry for companies that provide technological systems for risk assessment in the non-banking financial sector. It requires that only companies listed in the registry can offer risk assessment services to licensed non-banking financial entities, sets the requirements and conditions for registration in the registry and imposes ongoing reporting and compliance obligations to the FRA, thereby enhancing oversight and standardisation of technology-driven risk evaluation in Egypt's non-banking financial sector.

In 2026, the FRA issued Decree No 28 of 2026, requiring companies licensed to carry out consumer

finance activities to provide insurance coverage for their clients up to 65 years of age who have obtained financing from such companies against the risks of death and total permanent disability. Additionally, FRA issued Decree No 35 of 2026 requiring companies licensed to carry out non-banking financial activities, whose issued and paid-up capital exceed EGP50 million, to conclude an annual insurance policy with one of the insurance companies operating in Egypt to cover liability risks of their board of directors and executive managers.

Furthermore, the FRA issued Decree No 40 of 2026 regulating the rules and procedures for issuing the investor identification number for trading in securities and financial instruments markets, including the obligations of the transacting parties.

### Data Protection

In 2020, Egypt introduced the Law on the Protection of Personal Data No 151 of 2020 ("Data Protection Law"), which regulates personal data that is processed electronically. Prior to the issuance of the Data Protection Law, data protection was only governed by the Constitution, the Penal Code No 58 of 1937 (the "Penal Code") and Law No 175 of 2018 on Anti-Cybercrime and Information Technology Crimes (the "Cybersecurity Law"). The Data Protection Law is modelled on the European General Data Protection Regulation (Regulation (EU) 2016/679) (GDPR), as it aims to establish various standards and rules that safeguard data protection and the rights of individuals in Egypt. There are certain types of personal data that are not subject to the Data Protection Law, including, inter alia, data held by the CBE.

It is worth noting that the Data Protection Law applies to any controller, processor or handler (natural or juristic) of personal data. It also applies to any of the aforementioned persons who breach the Data Protection Law if they are:

- an Egyptian national inside or outside Egypt;
- a non-Egyptian residing within Egypt; or
- a non-Egyptian outside Egypt if the act is punishable in any form in the country where it occurred and the data subject who is affected by the breach is an Egyptian national or a non-Egyptian residing in Egypt.

The Data Protection Law sets out the requirements governing the processing, handling and control of any personal data. As a general principle, such processing is contingent upon obtaining the consent of the data subject and licensing from the Data Protection Centre. It is noteworthy that the Data Protection Centre is designated as the regulatory authority responsible for overseeing the application and enforceability of the Data Protection Law. Moreover, the Data Protection Law regulates the cross-border transfer of personal data and prescribes certain conditions and standards that must be satisfied for the lawful transfer of personal data outside of Egypt.

In light of the above, it is worth noting that the Executive Regulations of the Data Protection Law was published in the Official Gazette on 1 November 2025, and made available to the public around 25 December 2025. Accordingly, persons subject to the Data Protection Law are granted a grace period of one year as of the issuance date thereof to legitimise their position with the Executive Regulations.

### Banking, Finance and Exchange Control

It is worth noting that the Egyptian Pound underwent a number of devaluations throughout 2022 in order to secure IMF loans.

Despite the fact that investors are freely allowed by law and the relevant and applicable Bilateral Investment Treaty to transfer dividends to their home country, the current shortage and unavailability of foreign currency in Egypt has made it difficult to transfer such proceeds and dividends of the investors to their home country. As a result, many foreign investors secured their own sources of foreign currency, with banks applying differing priority criteria for exchanging Egyptian pounds into foreign currency. However, it is worth noting that these restrictions have relaxed significantly in 2024, allowing foreign investors to secure foreign currency.

### Imports

As of December 2022, the CBE abolished the system of requiring importers to obtain letters of credit for their purchases and returned to the cash-against-

documents system for importing goods. This change alleviates the previously higher costs and time burdens on importers.

It is also worth noting that in 2023, by virtue of Law No 173 of 2023, foreign ownership restrictions on importation have been lifted, permitting limited liability companies, 51% of the allotments of which are owned by non-Egyptian partners, to register in the Importers' Registry, provided that the total duration of registration does not exceed ten years from the date of entry into force of the said law. However, this duration may be extended for one additional period not exceeding ten years by a decision from the Council of Ministers.

In conclusion, different legal developments have taken place across different regulations and sectors in Egypt. These measures reflect the Egyptian government's aim to foster a stable and well-regulated economy, not only for Egyptians, but also to promote foreign direct investment in Egypt. Notably, reports indicate that further changes are anticipated in the coming years, including the introduction of new labour and arbitration laws.

**Winston Taylor** is a transatlantic law firm built for the businesses, people and markets driving capital and innovation. The firm is present in the major commercial centres that matter to global clients: the USA, the UK, Europe, Latin America and the Middle East. With a team of over 1,400 lawyers, Winston Taylor brings deep experience in major litigation, critical transactions, strategic IP and private wealth, and has four focus sectors: technology, media and telecommunications, life sciences and healthcare, financial services, and projects, energy and infrastructure. Whatever the challenge, Winston Taylor is in the room with its clients, shoulder to shoulder in the everyday moments and the ones that change everything.

## Authors

**James Ross** is a partner in the tax team at Winston Taylor. He advises on a broad range of tax matters (both advisory and transactional), including the structuring and negotiation of M&A transactions, advising US-based clients on the structuring of acquisitions and inward investments in the UK and Europe, corporate restructuring matters, including financing and intellectual property holding structures, and assisting clients in relation to tax authority enquiries and audits. James has a particular focus on cross-border work. He works with a wide range of clients from large multinationals and private equity funds to privately held companies, family offices and private clients.

**Paolo Palmigiano** heads up Winston Taylor's UK competition, trade and foreign investment practice, and is a member of its European competition law team operating from the Brussels office. Qualified in England & Wales and Italy, Paolo has over two decades of experience advising on EU and UK competition law, both in private practice and in-house, in regulated sectors including telecommunications and media, financial services and payment systems, as well as in the tech and life sciences sectors. Paolo's extensive experience covers all areas of competition law, including cartels, abuse of dominance, investigations, mergers, state aid and follow-on damages claims.

**Debbie Cloake** is a senior counsel knowledge lawyer at Winston Taylor specialising in corporate transactions, including private company M&A, private equity, venture capital, public takeovers, equity capital markets and all aspects of company law.

**Helen Farr** is a partner at Winston Taylor who covers the full spectrum of employment law and human resources strategy at Winston Taylor, with extensive experience in complex advisory and litigation projects. Helen has particular expertise in working with clients in the financial, tech and professional services sectors. She has guided many banks and solo regulated firms through complex employment issues related to the introduction of the senior managers and certification regime, and on crossover employment and regulatory issues. Helen's focus is on strategic matters, including workplace discrimination of a sensitive nature, equal pay, team moves, boardroom disputes and employment cases involving financial services regulatory issues.

**Debbie Heywood** is a senior counsel knowledge lawyer at Winston Taylor specialising in data privacy, online safety, AI, technology and consumer protection.

**Louise Popple** is a senior counsel knowledge lawyer at Winston Taylor who advises clients on complex IP issues, specialising in brand protection and enforcement, format rights issues, anti-counterfeiting and drafting and negotiating complex IP-related agreements. She has particular expertise in the entertainment, consumer goods, life sciences and finance sectors.

## 1. Legal System

### 1.1 Legal System and Judicial Order

The UK is a common-law jurisdiction, primarily built on case law, where the outcomes of previous legal cases set precedents for future cases. The UK courts are arranged in a hierarchy. At the base are magistrates' courts and county courts, dealing with minor criminal offences and civil matters, respectively. Above these are the Crown Court and High Court, which handle more serious criminal cases and significant civil disputes.

The Court of Appeal sits above these courts and reviews cases from them to ensure the correct application of law. The Supreme Court is the highest court in the UK; it provides final judgments on points of national importance and clarifies laws that affect everyone.

There are also specialist tribunals – eg, for employment and immigration. These tribunals make decisions within their specific field but can be appealed to the higher courts.

While judges create common law, statues passed by the UK Parliament take precedence over all case law. This combination of statute law and common law ensures both a democratic input from Parliament and a detailed interpretation by judges based on precedent.

## 2. Restrictions on Foreign Investments

### 2.1 Approval of Foreign Investments

While the UK does not have a specific foreign investment regime, in 2022 it introduced the National Security and Investments Act 2021 (NSIA), which applies to investors of any country, including UK investors. There is a requirement for a mandatory notification if the target is active in one of 17 key sectors of the economy (and within the definition of those sectors in the Act). Clearance must be obtained prior to closing (with substantial fines for non-compliance).

The 17 sectors are:

- advanced materials;
- advanced robotics;
- artificial intelligence (AI);
- civil nuclear;
- communications;
- computing hardware;
- critical suppliers to government;
- cryptographic authentication;
- data infrastructure;
- defence;
- energy;
- military and dual use;
- quantum technologies;
- satellite and space technologies;
- suppliers to the emergency services;
- synthetic biology; and
- transport.

Notifiable transactions are those where there is an increase in shareholding or voting rights from:

- 25% or less to more than 25%;
- 50% or less to more than 50%;
- less than 75% to 75% or more; or
- the acquisition of voting rights that enables or prevents the passing of any class of resolution governing the affairs of the entity being acquired.

The Act also introduces a voluntary filing if the target is outside the definitions of the 17 key sectors, or is active in any sector but there are national security issues. Since filing is voluntary, there is no obligation to wait for approval before completing. However non-notified transactions that raise national security concerns might be called in for review by the government. Asset deals and IP licensing transactions can be subject to call-in if they raise national security issues, and it is possible to notify voluntarily.

The Act has extraterritorial application (therefore, for example, it will apply to acquisitions in the USA, Canada, EU, China or any other jurisdictions of non-UK entities that conduct activities in the UK or supply goods and services in the UK, even if they do not have a direct presence there).

### 2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance

Notifications are made to a dedicated government unit in the Cabinet Office, the Investment Security Unit (ISU), through a digital portal. The form to complete is not overly complex and, within a couple of weeks, the ISU will confirm whether the filing is accepted or if more information is needed. Once the Secretary of State confirms acceptance, a review period of 30 working days will start. This could end with a clearance or a call-in for an assessment period of a further 30 working days, at the end of which there can be clearance, clearance with conditions, prohibition or an extension of 45 working days for further review. With possible suspensions during the assessment period, full national security scrutiny can be estimated to be up to 21 weeks, or longer with the parties' agreement.

Closing a transaction that is subject to mandatory notification without notifying and obtaining clearance carries a heavy fine of up to 5% of the total global turnover of the acquirer, or GBP10 million (whichever is greater), and imprisonment of up to five years, and the transaction becomes void.

### 2.3 Commitments Required From Foreign Investors

The government has accepted commitments in several cases – eg, requiring certain capabilities to remain in the UK, information barriers for sensitive information and restricted access to sensitive areas.

### 2.4 Right to Appeal

If a company wishes to challenge certain decisions of the Secretary of State – eg, to approve, block or unwind a transaction – it can apply for a judicial review of the decision.

Judicial review is the mechanism by which the courts review the lawfulness of a decision taken by a public body. An application for judicial review can be brought on the grounds of illegality, procedural unfairness or unreasonableness/irrationality, or for a breach of a right protected by the European Convention of Human Rights.

Normally, an application for judicial review must be made "promptly and in any event within three months" of the decision under challenge. However, the NSIA modifies the term, and an application must be made within 28 days of any decision (extendable in exceptional circumstances).

## 3. Corporate Vehicles

### 3.1 Most Common Forms of Legal Entity

The three most common types of corporate vehicles in the UK are:

- a private company (Ltd) limited by shares;
- a public limited company (PLC); and
- a limited liability partnership (LLP).

There are other corporate vehicles – eg, companies limited by guarantee, unlimited companies, community interest companies and charitable incorporated organisations – but these are less common.

### Private Limited Companies

A UK private limited company is typically governed by one or more directors and operates in accordance with its Articles of Association, as prescribed by the Companies Act 2006 (CA2006). The liability of shareholders is limited, meaning that their financial responsibility for company debts does not exceed the unpaid amount on their shares.

A private limited company does not have a minimum share capital requirement, though it must always have at least one share in issue, and there must always be at least one shareholder. These companies are best suited to SMEs and are particularly appropriate for family businesses, start-ups and businesses seeking to keep their affairs private from public scrutiny.

### Public Limited Companies

A UK PLC is governed by the CA2006. Many PLCs are admitted on a stock market, typically the London Stock Exchange or the AIM Market, which will mean an additional regulatory framework applies (depending on the relevant market). A PLC must appoint at least two directors and a qualified company secretary. It is managed by a board of directors and is subject to more stringent regulations than a private limited company. A PLC must have a minimum of two shareholders, and shareholders' liability is limited to the amount that remains unpaid on the shares they hold. The minimum share capital threshold for a PLC is GBP50,000, with at least 25% of the nominal capital (and the whole of any premium) being paid up in cash upon incorporation. This type of entity is suitable for larger ventures looking to attract investment from public markets – being able to raise capital through equity offerings and sell shares to the public offers substantial opportunities for growth and expansion, making it an attractive option for businesses with ambitious scaling plans.

Some companies may start as private companies limited by shares and re-register as a PLC later, perhaps because they are looking to list on a public market.

### Limited Liability Partnerships

An LLP is a type of corporate vehicle that merges the flexibility of a partnership (as it is taxed as a partnership) with the benefits of limited liability for its members. The governance structure of an LLP is administered directly by its members, usually pursuant to an LLP agreement, which sets out each member's responsibilities, obligations and share of profits.

Members of an LLP enjoy limited liability protection – their personal exposure for the debts incurred by the LLP does not extend beyond their individual investments into the LLP unless they engage in wrongdoing or personal negligence. There are no statutory rules regarding minimum capital contributions in an LLP, but an LLP must always have at least two members. In the UK, LLPs are particularly favoured by professional services firms, including law practices and accountants.

## 3.2 Incorporation Process

The steps and timing for the incorporation of entities in the UK depend on the type of entity that has been chosen. All private limited companies, PLCs and LLPs must be registered at Companies House, the UK's registrar of companies, which operates under the CA2006. Online registration with Companies House is typically processed within 24 hours, while postal applications may take 8–10 days. A fee is payable. The information required for each is as follows.

- Limited companies:
  - (a) name – an appropriate company name that conforms with Companies House regulations must be chosen;
  - (b) documentation – the necessary documents, including the memorandum of association and articles of association, must be prepared;
  - (c) identity verification – all proposed directors who are individuals must verify their identity (using one of the Companies House-approved routes) prior to incorporation (if they have not done so already for another entity) and provide their personal code as proof;
  - (d) forms – Form IN01 must be completed, with details including the registered office, email address, principal business activities, director(s), secretary (if any), shareholder(s), person(s) with significant control, share capital and confirmation of lawful purpose; and
  - (e) registration – once the application has been processed by Companies House, a certificate of incorporation will be received confirming the

legal existence of the private limited company.

- PLCs:
  (a) name – an appropriate company name that conforms with Companies House regulations must be chosen;
  (b) documentation – the necessary documents, including the memorandum of association and articles of association, must be prepared;
  (c) identity verification – all proposed directors who are individuals must verify their identity prior to incorporation (if they have not done so already) and provide their personal code;
  (d) forms – Form IN01 must be completed, with details including the registered office, email address, principal business activities, directors (at least two), secretary, shareholder(s), person(s) with significant control, share capital and confirmation of lawful purpose;
  (e) minimum share capital – it must be ensured that there is a minimum allotted share capital of GBP50,000 (or the specified euro equivalent) with at least 25% of the nominal capital (and the whole of any premium) paid up in cash upon incorporation;
  (f) registration – once the application has been processed by Companies House, a certificate of incorporation will be received confirming the legal existence of the PLC;
  (g) trading certificate – before starting business or borrowing money, a trading certificate must be obtained from Companies House by demonstrating that the PLC has met the minimum share capital requirements, which can take several weeks after registration; and
  (h) listing – if the PLC is to be listed on a stock market, various requirements will need to be met, including the publication of a prospectus (or multilateral trading facility (MTF) admission prospectus) and there are ongoing rules and obligations; timing for this step can vary depending on market conditions and the PLC's readiness to list.
- LLPs:
  (a) name – an appropriate LLP name that conforms with Companies House regulations must be chosen;
  (b) designated members – at least two members must be chosen to be designated members, who are responsible for statutory compliance duties;
  (c) documentation – an LLP agreement is optional but recommended;
  (d) identity verification – all proposed members who are individuals must complete identity verification (if they have not done so already) and provide their personal code;
  (e) forms – Form LL IN01 must be completed, with details including the registered office, email address and information about its members and any person(s) with significant control; and
  (f) registration – once the application has been processed by Companies House, a Certificate of Incorporation will be issued confirming the legal existence of the LLP.

### 3.3 Ongoing Reporting and Disclosure Obligations

UK companies are subject to various ongoing reporting and disclosure obligations, which aim to ensure transparency and accountability.

Private limited companies, PLCs and LLPs are required to inform Companies House about any changes in directors or secretaries, amendments to articles, changes to share capital or beneficial ownership and certain resolutions of the shareholders. These filings must be made with Companies House within certain deadlines, often 14–30 days from the relevant event or change. Private limited companies, PLCs and LLPs need to file annual financial statements and annual confirmation statements.

Financial statements should reflect an accurate financial position and be filed within nine months of the end of their accounting reference period for companies and LLPs, or within six months for PLCs. Confirmation statements must be filed on a yearly basis to confirm that all information about the business held by Companies House is current and correct, including details on management, share capital, shareholders and the people with significant control. Filing misleading or false statements at Companies House, without reasonable excuse, is a criminal offence.

For PLCs, there are a number of further reporting and disclosure requirements that are set out by the market regulators.

If companies fail to comply with their ongoing reporting and disclosure obligations, various penalties and consequences may apply.

### 3.4 Management Structures

In the UK, entities are typically organised under a one-tier system, with a single board of directors responsible for both the strategic direction and the day-to-day management. Combining oversight with active management in a single body streamlines the decision-making process.

The board of directors is usually made up of executive and non-executive directors – executive directors are responsible for the daily operations of the company, and the non-executive directors bring an independent perspective and oversee the performance of the executive directors.

### 3.5 Directors', Officers' and Shareholders' Liability

Directors and officers of both private companies and PLCs have fiduciary duties towards the company, which include acting within their powers, promoting the success of the company for its members' benefit, exercising independent judgment and reasonable care, skill and diligence and avoiding conflicts of interest. The main rules that govern the duties of directors in the UK are set out in the CA2006.

If directors breach their fiduciary duties, they could face civil proceedings. In some cases, criminal liability may arise under company or insolvency legislation – eg, for fraud, wrongful trading or false filings at Companies House (or some other CA2006 breaches). If a PLC is listed on a stock market, its directors could face criminal liability for breaches of financial services or market regulation – eg, the Market Abuse Regulations, Financial Services and Market Act 2000 or Criminal Justice Act 1993.

In addition, there are some areas of legislation that impose personal liability on a company's directors for actions by the company or associated people, including in relation to health and safety, environmental matters, bribery, fraud, tax evasion and corporate manslaughter.

The principle known as "piercing (or lifting) the corporate veil" exists in English law. Typically, a company is seen as a distinct entity from its shareholders, although the court may decide to pierce this "veil". This principle is only applied by courts in exceptional circumstances where the company has been used as a vehicle for fraud or improper conduct, or where the individuals behind a company have abused the corporate structure to shield themselves from liability or to perpetrate wrongdoing. Case law provides that it can only be justified when the more conventional remedies are all seen to be inadequate.

## 4. Employment Law

### 4.1 Nature of Applicable Regulations

The legal rules governing the employment relationship are multifaceted and can be categorised as follows.

#### Statutory Law

This comprises legislation enacted by Parliament that sets out various rights and obligations for employers and employees. Key statutes include the Employment Rights Act 1996 (ERA1996), the Equality Act 2010 (EA2010), the Health and Safety at Work etc. Act 1974 and the Employment Rights Act 2025 (ERA2025). The ERA2025 represents a significant overhaul of UK employment law. It came into force on 18 December 2025; however, many of the changes will only take effect in 2026 and 2027.

The following laws, depending on the stage of employment in question, are of particular note.

- Recruitment:
  - (a) EA2010;
  - (b) Rehabilitation of Offenders 1974; and
  - (c) the Data Protection Act (DPA) 1998.
- Pre-employment checks:
  - (a) the Safeguarding Vulnerable Groups Act 2006; and
  - (b) the Immigration, Asylum and Nationality Act 2006.

- Employment offer:
  (a) ERA1996;
  (b) the Fixed-Term Employees (Prevention of Less Favourable Treatment) Regulations 2002; and
  (c) the Part Time Workers (Protection from Less Favourable Treatment) Regulations 2000.
- Training and development:
  (a) EA2010;
  (b) ERA1996;
  (c) the Education and Skill Act 2008; and
  (d) the Employees Study and Training Regulations 2010.
- Change in personal circumstances:
  (a) ERA1996;
  (b) ERA2025;
  (c) the Flexible Working Regulations 2014; and
  (d) the Employment Act 2002.
- Performance management:
  (a) EA2010; and
  (b) ERA1996.
- Industrial action:
  (a) ERA2025;
  (b) the Trade Union and Labour Relations (Consolidation) Act 1992 (TULR(C)A1992);
  (c) the Strikes (Minimum Service Levels) Act 2023; and
  (d) the Conduct of Employment Agencies and Employment Business (Amendment) Regulations 2022.
- Mergers and acquisitions:
  (a) the Transfer of Undertakings (Protection of Employment) Regulations 2006.
- End of employment:
  (a) ERA1996;
  (b) ERA2025;
  (c) EA2010;
  (d) TULR(C)A1992; and
  (e) the Collective Redundancies and the Transfer of Undertakings (Protection of Employment) (Amendment) Regulations 1999.

### Other Sources of Law and Regulation

The following are also important sources of legal rules that govern employment relationships.

- Case law (common law): The UK uses a common law system whereby judges make decisions interpreting statutes and cases establishing legal principles. Case law establishes precedent, which is then followed by other tribunals deciding employment disputes.
- Collective bargaining agreements: These are agreements made between employers (or employers' organisations) and trade unions representing workers. They govern key employment terms including pay, working hours, holidays and other working conditions.
- Employment contracts: Individual contracts between an employer and employee establish the contractual terms that apply to the employment relationship including duties, remuneration, benefits and termination procedures.
- Regulatory materials: Guidance from regulatory bodies, including the Health & Safety Executive or Information Commissioner's Office, also plays a significant role in shaping workplace practices.

## 4.2 Characteristics of Employment Contracts

An employment contract between an employee and employer is a legally binding agreement. An employee has the right to a "written statement of employment particulars" in accordance with Section 1 of the ERA1996. A Section 1 statement sets out the main terms of employment, and there is a list of mandatory terms that must be given to every employee.

An employer will be treated as having met its obligations to provide a Section 1 statement where it gives an employee a written contract containing information satisfying the employer's Section 1 obligations, and the document is provided no later than the beginning of employment.

From October 2026, the ERA2025 introduces a new right to be provided with a statement of a worker's right to join a trade union. This statement must be provided at the same time as the Section 1 statement.

The characteristics of a typical employment contract include:

- a job title and description;
- commencement date of the employment, duration and if it is intended to be for a fixed term;
- location of work;
- salary and benefits, including payment frequency;

- hours of work;
- probationary period and terms;
- notice period;
- holiday pay entitlement and procedures;
- sick leave policies and pay;
- notice period required for termination by either party;
- any training entitlement that the employer requires the worker to complete;
- disciplinary and grievance procedure;
- variation of terms – this explains how changes to the employment contract are made, typically requiring mutual agreement in writing; and
- any post-employment restrictions – non-compete or restrictive covenants.

### 4.3 Working Time

In the UK, the regulation of working hours for workers (which includes employees) is governed by the Working Time Regulations 1998 (as amended). Key aspects of these regulations include the following.

- Maximum weekly working time: Workers are protected by a 48-hour maximum working week, calculated over a reference period (typically 17 weeks). Some sectors are exempt from this, as are senior workers, who can determine their own working time. Workers can opt out of the maximum working week by signing a written statement, but they cannot be forced to do so. They may opt back into the regime at any time by giving notice to their employer.
- Night work limits: For night workers, there are special limits on working hours. Typically, night work should not exceed an average of eight hours in any 24-hour period.
- Rest periods and breaks: Workers have the right to rest breaks during work (a minimum of 20 minutes if the working day is longer than six hours) and daily and weekly rest periods (11 consecutive hours' rest in any 24-hour period and an uninterrupted 24 hours without any work each week or 48 hours each fortnight).
- Overtime regulation: Employers should decide whether overtime is voluntary or compulsory for a particular job and draft the employee's employment contract accordingly. There are no statutory provisions that require an employer to pay a particular overtime wage, but average pay over the total hours they have worked must not fall below the national minimum wage. Working time may have an impact on employees' holiday pay. Employers must ensure that total working time, including overtime, does not exceed the maximum weekly limit unless an opt-out agreement is in place.
- Record keeping: Employers must keep adequate records to show compliance with working time limits and health assessments for night workers.

### 4.4 Termination of Employment Contracts

The following conditions apply for termination of employment.

- There is no concept of "at will" employment in the UK, and employees have the right to be given notice when their employment terminates.
- As a requirement by law, employees must give their employer at least one week's notice that they are leaving if they have been employed for one month or more. An employee who has been continuously employed for more than one month, but less than two years, is entitled to receive one week's notice from their employer. Thereafter, they are entitled to receive an additional week's notice for each complete year of service, up to a maximum of 12 weeks.
- If an employer wants to, it can extend the notice period beyond the statutory notice period by including longer notice periods in the employment contract.
- An employee can be dismissed without any notice period if they have committed a serious breach of the employment contract that would justify this (eg, gross misconduct).
- All employees with more than two years' service may only be dismissed for one of the five legally fair reasons and be subject to a fair procedure. If the employer does not follow this procedure, the employee may have an entitlement to an ordinary unfair dismissal claim and can claim compensation as a result. The ERA2025 will reduce the qualifying period for unfair dismissal from two years to six months and completely remove the cap on compensatory awards. These changes apply from 1 January 2027.

- There are circumstances where employees with less than two years' service can claim automatic unfair dismissal. These include if the dismissal is for a reason like pregnancy or other discriminatory reason. The ERA2025 will, from 1 January 2027, introduce a further category of automatic unfair dismissal where the reason for dismissal is the employer's attempt to change certain core contractual terms (eg, a reduction in pay, changes to working hours or pension entitlements) and the employee refused to agree. This historically common practice by employers is known as "fire and rehire". It should be noted that there is a limited exception where employers can demonstrate the change was necessary to address serious financial difficulties that could not reasonably have been avoided.

In the case of redundancies, the following process must be followed.

- If an employer proposes to make redundant 20 or more employees within a period of 90 days or less at one establishment (ie, the employees' local workplace rather than the organisation as a whole), then it must consult collectively with elected employee representatives, as well as notify the Secretary of State. Consultation should start in good time before any redundancies are confirmed.
- Any dismissals should not take effect until at least:
  (a) 30 days after an employer's consultation obligations have been triggered, where between 20 and 99 redundancies are proposed; or
  (b) 45 days after an employer's consultation obligations have been triggered, where 100 or more redundancies are proposed.
- If an employee is made redundant and they have more than two years' service, they will qualify for a statutory redundancy payment.

### 4.5 Employee Representations

The following rules apply for collective consultation:

- an employer must collectively consult employees if they propose to make redundant 20 or more employees at one establishment within a period of 90 days or less;
- employers must consult with a trade union or employee representative about the redundancy process; and
- failure to comply with the legal requirement for collective consultation can result in claims to the employment tribunal. For dismissals taking place on or after 6 April 2026, the ERA2025 has doubled the maximum protective award for failure to comply with collective consultation obligations from up to 90 days' gross pay to up to 180 days' gross pay for each affected employee.

The following rules apply with respect to grievances and disciplinary hearings:

- employees and workers have a legal right to be accompanied, by a trade union representative or another employee, to grievance meetings or disciplinary hearings that can result in a disciplinary action against them;
- if an employee seeks the right to be accompanied, they must make a reasonable request;
- during a hearing, a representative may set out the employee's case, respond for the employee to any comments, talk to the employee during the hearing or take notes; and
- denying an employee the right to be accompanied could amount to a breach of an implied duty of trust and confidence and render the process unfair.

Rules apply with respect to TUPE (Transfer of Undertakings (Protection of Employment)), as follows:

- prior to a TUPE transfer, both the outgoing and incoming employers must inform and consult with staff representatives to set out any proposed changes and why the transfer is taking place; and
- an employer will consult with an employee regarding any changes relating to work practices that will take place as part of the transfer.

Applicable ICE Regulations (Information and Consultation of Employees) are as follows:

- where an employer has 50 or more employees in the organisation, the employees have the right to request a formal agreement to be informed and consulted on the operation of the business; and

- an elected employee representative may assist in conducting negotiations and requesting information from the employer.

From October 2026, the ERA2025 will introduce the following reform of trade union laws:

- statutory right for unions to access workplaces physically to meet, support, represent, recruit or organise workers or facilitate collective bargaining, and to communicate with workers both in person and digitally;
- duty to inform workers of the right to join a trade union; and
- enhanced protections against detriment short of dismissal for union representatives and employees who take part in industrial action.

## 5. Tax Law

### 5.1 Taxes Applicable to Employees/Employers

Employees are subject to income tax on earnings from their employment, which is charged at progressive rates of 20%, 40% and 45%. UK-resident individuals are generally taxable on their worldwide income; non-UK residents are taxed only on earnings in respect of duties performed in the UK, subject to any relief available under double tax treaties. Previously, individuals who became UK residents after at least three years of non-residence were entitled to claim "overseas workday relief", whereby earnings from duties performed outside the UK were taxable only if and when remitted to the UK (the so-called "remittance basis of taxation"). From 6 April 2025, the remittance basis was replaced with the four-year foreign income and gains (FIG) regime. The regime allows qualifying residents to claim relief from taxes on eligible FIG and is available for a maximum period of four consecutive years from when an individual became a UK tax resident. Relief under the regime can be claimed only on the following types of foreign income:

- profits of a trade carried on wholly outside the UK;
- profits of an overseas property business;
- dividends from non-UK resident companies; and
- interest – eg, interest paid on a foreign bank account.

Employers with a presence in the UK are generally required to withhold tax from payments to employees, and to account for it to HM Revenue & Customs (HMRC) through the pay-as-you-earn (PAYE) system.

Special rules apply to tax benefits in kind and earnings from employment-related securities (including share options).

National insurance contributions (NIC; ie, social security contributions) are charged on employees who are present in the UK. These are currently charged at a rate of 8% up to the "upper earnings limit" (currently GBP967 per week) and 2% above that threshold. The employer is liable for secondary contributions at a rate of 15%. Employer contributions apply to benefits in kind, and both employer and employee contributions may apply to benefits from employment-related securities that are readily convertible assets. The employer is required to account for NIC through the PAYE system.

### 5.2 Taxes Applicable to Businesses

A company that is resident in the UK is chargeable to corporation tax on its worldwide profits. A non-resident company is chargeable to corporation tax on profits of a trade carried on in the UK through a permanent establishment therein, as well as from profits of a UK property business and any profits from a trade of dealing in or developing UK land. A residual charge to income tax applies to the profits of a trade carried on in the UK other than through a permanent establishment – in practice, this only applies to companies that are not resident in territories with which the UK has a tax treaty.

For accounting periods commencing on or after 31 December 2023, the UK has implemented the Pillar 2 Income Inclusion Rule, known as the multinational top-up tax (MTT), and a qualifying domestic top-up tax. The undertaxed profits rule was introduced with effect from 31 December 2024.

The UK imposes withholding tax on UK-source interest, royalties and certain other payments of a recur-

rent nature ("annual payments") at a rate of 20%. There is no withholding tax on dividends, except dividends paid by companies within the real estate investment trust regime. Withholding tax liabilities may be reduced or eliminated under the UK's double tax treaties, and certain additional reliefs apply under domestic law with respect to withholding tax on interest.

Companies with a UK establishment are obliged to register for VAT and to charge VAT on taxable supplies of goods and services if the value of its taxable supplies exceeds the VAT registration threshold (currently GBP90,000). Non-established persons are liable to register if they make any taxable supplies in the UK.

### 5.3 Available Tax Credits/Incentives

The UK offers an "above the line" credit for expenditure on research and development, which was subject to significant reform with effect from 1 April 2024. The amount of the credit is 20% of the qualifying expenditure, which is itself subject to corporation tax in the hands of the recipient, subject to a cap in many cases at three times the amount of the company's PAYE and NIC liabilities for the accounting period plus GBP20,000.

The former super-deduction regime for SMEs has been retained for loss-making, R&D-intensive SMEs. This provides an enhanced 186% deduction for qualifying R&D expenditure, which may be surrendered in exchange for a repayable tax credit amounting to 14.5% of the surrenderable loss. Similar reliefs are available for companies in the creative sector.

An elective patent box regime applies for profits from qualifying patents, resulting in an effective tax rate of 10% on qualifying profits.

### 5.4 Tax Consolidation

The UK does not have a consolidation regime for corporation tax purposes. However, the group relief rules allow companies to surrender losses within a group. Broadly, companies are members of the same group for this purpose if one is a 75% subsidiary of the other, or both are 75% subsidiaries of a third company (which need not be a UK company). Both current and carried-forward losses arising on or after 1 April 2017 may be subject to group relief surrenders.

The transfer of capital assets (including intangible fixed assets and loan relationships) between group companies will generally be viewed for tax purposes as taking place on a no-gain/no-loss basis, although the gain that would otherwise have been taxable on the intra-group transfer may be brought back into charge by way of a "degrouping charge" if the transferee company leaves the group within the next six years. A company that disposes of an asset outside the group may elect for the gain to be reallocated to another group company (eg, a company that has losses it can use to offset the gain).

For VAT purposes, companies may elect to register as a group where one controls the other or the two companies are under common control (including control by an individual or partnership). The effect of group registration is that all supplies to third parties are treated for VAT purposes as made by the representative member of the group, all supplies between group members are disregarded, and all group members are jointly and severally liable for the group's VAT liabilities.

### 5.5 Thin Capitalisation Rules and Other Limitations

The UK polices thin capitalisation through transfer-pricing legislation. Interest expense exceeding an arm's length amount may be disallowed for tax purposes. The transfer pricing legislation provides that it should be read in line with the 2022 OECD Transfer Pricing Guidelines, which include the guidance on financial transactions approved in 2020. The capacity of companies within a group to bear interest expense is generally tested on a company-by-company basis, but, to the extent that a debtor company is unable to do so, other group companies can be treated as guarantors and, as such, may take interest deductions for such interest expense. HMRC will consider entering into advance thin-capitalisation agreements to provide certainty as to a company's interest deductibility position – these have statutory force as advance pricing agreements.

In addition, the UK has introduced a corporate interest restriction limiting interest deductions for UK group companies to the lower of 30% of tax EBITDA and the worldwide group's interest expense, subject to a GBP2 million de minimis. Where the worldwide group

has an interest – ie, an EBITDA ratio that is higher than 30% – the UK companies may make a "group ratio election", allowing it to claim interest deductions up to an equivalent ratio. Disallowed deductions may be carried forward indefinitely and utilised in future periods; unused allowances with respect to the interest:EBITDA ratio may be carried forward for up to five years, and unused allowances with respect to the worldwide interest expense may be carried forward for one year.

### 5.6 Transfer Pricing

The UK has transfer pricing rules that align with – and are to be interpreted in accordance with – the OECD transfer pricing guidelines. These apply to domestic UK-to-UK arrangements, as well as cross-border provisions, but the government has recently consulted on introducing an exemption for transactions between UK companies where no UK tax is at stake.

An exemption applies where the UK company is dormant. In addition, SMEs are exempt from transfer pricing rules with respect to transactions with residents of the UK and of territories with which the UK has a full tax treaty. HMRC may issue a transfer pricing notice to "turn on" the transfer pricing rules to a medium-sized enterprise in any circumstances, or to a small enterprise where a transaction results in profits benefiting from the patent box regime.

From 1 January 2026, the Finance Act 2026 introduced various reforms to the UK's transfer pricing, permanent establishment and diverted profits tax (DPT) rules, including an exemption from transfer pricing rules for domestic transactions between UK companies taxable at the same corporation tax rate and an improvement to the "acting together" rules, to prevent truly arms-length arrangements from being caught by the rules. The government considered bringing medium-sized enterprises fully within the ambit of transfer pricing, but decided not to proceed with this proposal.

### 5.7 Anti-Evasion Rules

The UK has numerous anti-avoidance rules, many of which operate to disregard or re-characterise arrangements whose main purpose, or one of whose main purposes, is the obtaining of a tax advantage. These include a general anti-abuse rule, which can counteract arrangements giving rise to a tax advantage where they are "abusive" – defined as arrangements that cannot reasonably be regarded as a reasonable course of action in relation to the relevant legislative provisions. The courts have established that legislation must be read purposively and applied to the facts as viewed realistically – principles that have frequently been applied to counteract perceived avoidance.

### 5.8 Tariffs

Since the end of the Brexit transition period on 31 December 2020, the tariff regime in the UK has been governed by the UK Global Tariff (UKGT). The UKGT applies to all countries and all goods imported into the UK, unless the UK has a free trade agreement (FTA) with the country of origin or an exception applies (eg, the goods are imported from certain developing countries). Broadly, the tariff rates under the UKGT follow the EU tariffs, with some exceptions for goods where the UK has no domestic production.

Examples of notable FTAs include:

- the Trade and Cooperation Agreement with the EU – this came into force on 1 May 2021 and removed tariffs from goods traded between the UK and the EU, provided that traders had "self-certified" their compliance with agreed rules of origin (ie, that the goods have originated in either the UK or the EU according to specific criteria); and
- the Comprehensive and Progressive Agreement for Trans-Pacific Partnership between the UK and nine countries in the Asia-Pacific region – this allows for tariff elimination and reduction on key sectors (eg, food and agricultural products and goods in digital trade).

Some goods are covered by a tariff-rate quota (TRQ), which allows a limited amount of a product to be imported at a lower or zero tariff rate, subject to certain qualifying criteria. TRQs primarily cover agricultural and fishery products, as well as processed foods and industrial goods.

The UK has removed Russia's Most Favoured Nation status, following its invasion of Ukraine, effectively imposing significantly higher tariffs on Russian goods. Additional duties of 35% are currently imposed on

a wide range of goods originating from Russia and Belarus, above any existing tariff rates.

On 24 April 2025, the UK introduced new restrictions, including a complete prohibition on the importation of Russian diamonds and prohibitions on the export to Russia of energy-related goods and security technology. In previous years, various other sanctions had been implemented to introduce restrictions on trade for goods (eg, oil, gold, iron and steel products), which continue to be in force.

The recent trade deal with the USA has led to various tariff adjustments. Under the deal, the USA will continue to impose a new 10% tariff on imports for most British goods but higher tariffs on the imports of British cars, steel and aluminium will be reduced.

## 6. Competition Law

### 6.1 Merger Control Notification

The UK's merger control regime is overseen by the Competition and Markets Authority (CMA), which will have jurisdiction to review a transaction where a relevant merger situation has been created. This will be the case where two or more enterprises cease to be distinct and either:

- the target has turnover in the UK of exceeding GBP100M (the "turnover test"); or
- at least one of the parties has a UK turnover of more than GBP10 and, as a result of the transaction, the parties have a combined share in excess of 25% of the supply of any goods and services in the UK or a substantial part of it (the "share of supply test").

There is also a "hybrid" test, where the CMA will have jurisdiction where one party to the transaction (usually the acquirer) has an existing UK annual turnover of GBP350 million or more and supplies or acquires at least 33% of a particular category of goods or services in the UK (or a substantial part of it). The other party must be connected to the UK.

The UK has a largely voluntary notification system, so even where any of the thresholds are met, the parties are not required to seek clearance before completion of the transaction. For entities that the CMA has designated as having strategic market status under the Digital Markets, Competition and Consumers Act 2024, there is a mandatory requirement to notify to the CMA M&A activity above GBP25 million.

The rules are triggered when enterprises cease to be distinct – ie, brought under common ownership or control. This covers any joint venture or acquisition of shares that give total or partial control over any other entity.

### 6.2 Merger Control Procedure

The parties will need to determine whether to notify to the CMA for clearance. If they choose to do so, the following steps must take place.

- The CMA must be informed of the transaction, and pre-notification discussions on a draft merger notice are entered into, which can last up to three months (longer in complex cases).
- The CMA must be provided with the draft, and any additional queries from the CMA must be responded to.
- When the CMA is satisfied that the draft notification is complete, the parties must make the transaction public and formally file the merger form, and the CMA will start the formal Phase 1 process.
- Phase 1 will take up to 40 working days, and the CMA will consider whether the transaction may lead to a "substantial lessening of competition" (SLC).
- If there are no competition concerns, the CMA will proceed to clearance and issue a decision, which will be publicly announced.
- If it is determined that there is the risk of an SLC, the CMA has a duty to refer to a more in-depth Phase 1 review.
- To avoid a Phase 2, it is open to the parties to offer remedies to address competition concerns, in the form of binding undertakings in lieu of reference (UIL).
- Generally, the CMA will accept UILs where the problem is easily severable (structural remedies – ie, divestment of all or part of the business). Behavioural remedies may also be considered.

- If UILs are offered, the CMA will begin the process of a detailed consideration of whether they are suitable. The timeframe for final determination is 50 working days from when the SLC decision was announced to the parties, with the possibility of a 40 working-day extension.
- If the CMA refers to Phase 2, a more in-depth and detailed examination of the possible SLC that was identified in Phase I is undertaken. The entire process is complex and time-consuming, and the CMA has up to 24 weeks from reference (extendable by up to eight weeks) to make a final decision.

If the parties choose not to notify for clearance, the CMA has up to four months from the later of completion of a non-notified merger and the time when the transaction became public to investigate. While considering whether to investigate an anticipated completed transaction, the CMA may make an initial enforcement order to prevent pre-emptive integration of the businesses or require the reversal of any action. This means that the parties are unable to begin to integrate the businesses until the CMA's investigation is complete (and clearance obtained) or the CMA confirms that it does not have jurisdiction.

If the CMA decides to look into a non-notified transaction, it will send the acquirer an enquiry letter requiring it to respond with details of whether one or both the jurisdictional thresholds are met and, if so, further substantial details relating to the transaction. If the thresholds are met, the CMA may decide to open a merger investigation and begin the process as set out in the foregoing.

If the parties believe that the transaction does not raise competition issues, or they take a decision not to notify formally, they can submit what is called a "briefing paper". This is a well-reasoned document of around 5–6 pages explaining why the parties do not propose to submit a notification to the CMA and why there are no competition issues.

If the CMA agrees with the parties' assessment, it will usually come back stating that it has no further questions. This is not public, and third parties are not contacted in relation to a briefing paper. A briefing paper can usually only be submitted after the transaction documentation is signed, and the CMA usually gives a response within a couple of weeks. There are no filing fees.

If the response is positive, and the CMA does not call in the transaction for a Phase 1 review, this gives some comfort to the parties, although the CMA reserves the right to open a Phase 1 investigation at a later stage – eg, if new facts come to light or complaints are raised. As mentioned in the foregoing, the CMA can open an investigation, even after a briefing paper, within four months of the deal being made public.

### 6.3 Cartels

Chapter 1 of the Competition Act 1998 prohibits agreements between undertakings, decisions by associations of undertakings, and concerted practices that may affect trade within the UK and have as their object or effect the prevention, restriction or distortion of competition. All agreements that infringe Chapter 1 are void.

Section 2 (2) of the Act sets out a non-exhaustive list of prohibited behaviour, comprising the following:

- directly or indirectly fixing purchase or selling prices or any other trading conditions;
- limiting or controlling production, markets, technical development or investment;
- sharing markets or sources of supply;
- applying dissimilar conditions to equivalent transactions with other trading parties, placing them at a competitive disadvantage; and
- making the conclusion of contracts subject to acceptance by the other parties of supplementary obligations that, by their nature or according to commercial usage, have no connection with the subject of such contracts.

Certain agreements may be exempt from the prohibition if they contribute to improving production or distribution, or promoting technical or economic progress, while allowing consumers a fair share of the resulting benefits. However, these agreements must not:

- impose restrictions that are not indispensable to the attainment of these objectives; or

- afford the undertakings concerned the possibility of eliminating competition in respect of a substantial part of the products in question.

If an agreement is investigated, the CMA can impose fines on undertakings that violate the prohibition of up to a maximum of 10% of their worldwide turnover.

### 6.4 Abuse of Dominant Position

Chapter 2 of the Competition Act 1998 prohibits any conduct by one or more undertakings that amounts to the abuse of a dominant position in a market within the UK, and partially prohibits it if it may affect trade within the UK.

An undertaking is considered dominant if it can act independently of competitive pressures (eg, setting prices, controlling supply or hindering competitors' ability to operate in the market). There is a rebuttable presumption of dominance if an undertaking has a share of the relevant market of more than 50%, and CMA guidance confirms that less than a 40% share is unlikely to create dominance.

Section 18 (2) of the Act sets out examples of abuse, including the following:

- directly or indirectly imposing unfair purchase or selling prices, or other unfair trading conditions;
- limiting production, markets or technical development to the prejudice of consumers;
- applying dissimilar conditions to equivalent transactions with other trading parties, thereby placing them at a competitive disadvantage; and
- making the conclusion of contracts subject to acceptance by the other parties of supplementary obligations that, by their nature or according to commercial usage, have no connection with the subject of such contracts.

If it can be shown that the behaviour is objectively justified, it will not be abusive even if competition is restricted. It is for the dominant undertaking to prove the justification. If conduct is investigated, the CMA can impose fines on dominant undertakings of up to 10% of their worldwide turnover.

## 7. Intellectual Property

### 7.1 Patents

Patents are exclusivity rights that protect products and processes of a technical nature. The subject matter of protection must be novel and inventive, and must satisfy several other statutory requirements, for the patent to be valid. Patents last 20 years, but protection may be extended in the case of a medicinal product by up to a further five years by a supplementary protection certificate. Patents are normally registered in national patent offices once granted, but the unitary patent (which has pan-European protection for 18 countries rather than a single country) is registered at the European Patent Office. Depending on the nature of the patent, it may be enforced in infringement proceedings in the national courts or the Unified Patent Court. Remedies for infringement typically include damages and injunction.

### 7.2 Trade Marks

Broadly, a trade mark is any sign capable of distinguishing the goods and services of one undertaking from those of others. A trade mark can consist of, for example, words (including personal, business and brand names), logos, patterns, letters, numerals, colours, sounds, motions, holograms, videos and the shape of goods or their packaging. Provided they are not cancelled, trade mark registrations subsist for ten years from the date of registration and can be renewed (potentially indefinitely) for successive periods of ten years on payment of a fee. No proof of use is required for renewal. Trade mark protection can be obtained by filing an application with (i) the UK IP Office or (ii) the World Intellectual Property Organization (WIPO) for an international mark designating the UK. The latter can be cheaper and administratively easier if applications for the same mark are being filed in numerous jurisdictions. Trade marks must be registered for specific goods and/or services.

Protection for one good/service will not necessarily mean that the owner can prevent third-party use of the same mark for other goods/services. Unlike some other jurisdictions, a trade mark does not need to have been used for an application to be filed. However, once registered, if a mark is not put to genuine use for a continuous period of five years in the UK, it can

be revoked on application of a third party (subject to various conditions).

Applications are examined to determine whether they meet the definition of a registrable trade mark. Following successful examination, applications are published to allow oppositions to be filed by any third parties who consider they have a conflicting prior right. The UK IP Office will not raise an objection on these grounds of its own volition. Assuming any objections and oppositions are successfully resolved, an application will be registered (usually within about five months). Now that the UK is no longer part of the EU, EU trade marks (EUTMs) no longer cover the UK. However, the UK legislated to fill the gap by creating a new UK mark (called a "comparable trade mark") for all EUTMs in existence as of 31 December 2020.

The UK law of passing off protects the goodwill generated through using a trade mark (whether that mark is registered or not). It can also be used to prevent false endorsements and some misleading claims of equivalence.

Trade mark and passing-off rights are enforced through the UK courts. Remedies for infringement include compensation, an injunction to restrain the infringement, delivery up/destruction of infringing materials, publication of the judgment and legal costs. Interim injunctions can also be obtained.

Brand owners are strongly advised to (i) conduct clearance searches before launching new brands in the UK to check that they will not be infringing anyone else's rights, and (ii) file trade mark applications before announcing/launching new brands. This could save the considerable costs and embarrassment of having to re-brand.

### 7.3 Industrial Designs

There are two main types of design protection available in the UK: a registered design and an unregistered design. Both protect the appearance of a product or its packaging, resulting from their features (including features resulting from the lines, contours, colours, shape, texture and/or materials of the product/packaging). Surface decoration is also protected. To be protected, a design must be new and have individual character, and not be dictated by the technical function of the product.

A design registration lasts for a maximum of 25 years and must be renewed every five years (on payment of a fee). Unregistered design protection subsists for three years from first disclosure. Registered protection is much stronger (in particular, unregistered designs are only infringed when copied). If registration is required, an application must be filed within 12 months of first disclosure of the design; otherwise, the design will be deemed not new.

Registered protection can be obtained by filing an application with (i) the UK IP Office or (ii) WIPO for an international design designating the UK. The latter can be cheaper and administratively easier if applications for the same design(s) are being filed in numerous jurisdictions. There is very little examination of design applications, and no opposition procedure. Multiple designs can be filed in the same application to save costs.

Since the UK is no longer part of the EU, pan-EU Registered and Unregistered EU Designs no longer cover the UK. However, any such designs in existence on 31 December 2020 continue to be protected in the UK for the life of the right.

Designs are enforced through the courts in the UK. Remedies for infringement include compensation, an injunction to restrain the infringement, delivery up/destruction of infringing materials, publication of the judgment and legal costs. Interim injunctions can also be obtained.

The UK also protects another form of unregistered design (called a "design right"). It is similar in scope to the unregistered design, although there are key differences – eg, a design right does not protect surface decoration.

### 7.4 Copyright

Copyright protects original literary, dramatic, musical and artistic works, as well as other subject matter (including sound recordings, films and broadcasts). It therefore protects original drawings, graphics, software code, literature and databases. Copyright gen-

erally lasts for the life of the author plus 70 years. Different rules apply to computer-generated works, films, sound recordings, broadcasts and non-UK works/authors. It is not possible to register copyright in the UK. Protection arises automatically once a work is recorded, in writing or otherwise (irrespective of whether it is recorded by or with the permission of the author).

The general rule is that the author of a literary, dramatic, musical or artistic work is automatically the first owner of copyright in it. However, where such a work is made by an employee in the course of their employment, their employer is the first owner of copyright. Ensuring that any works created by independent contractors, outside consultants and design agencies are automatically transferred to a business is key.

Copyright is enforced through the UK courts. Remedies for infringement include compensation, an injunction to restrain the infringement, delivery up/destruction of infringing materials, publication of the judgment and legal costs. Interim injunctions can also be obtained.

Copyright can be infringed in a number of ways, including by copying the whole or a substantial part of a work in which copyright subsists (with a substantial part being assessed qualitatively rather than quantitatively). Using even very small parts of a work can constitute infringement, but there are some "permitted uses".

### 7.5 Others

Copyright can subsist in original software text/code. Databases are protected under the law of copyright if they are original – ie, if, by means of the selection or arrangement of the contents of the database, the database constitutes "the author's own intellectual creation".

A separate right, called the database right, also protects databases for which there has been a "substantial investment" in "obtaining, verifying or presenting the contents of the database". Unlike copyright, there is no requirement for originality/creativity. "Investment" can mean "any investment whether in financial, human or technical resources". Like copyright, the database right is an automatic right that exists as soon as the database is fixed in recorded form.

Trade secrets protect certain commercially sensitive and confidential information, including industrial processes and recipes, against disclosure to or use by third parties without consent. These may be enforced against breach resulting in damages and injunction.

## 8. Data Protection

### 8.1 Applicable Regulations

The UK General Data Protection Regulation (UK GDPR) is the main legislation governing the processing of personal data. It is retained in EU law and largely mirrors the EU General Data Protection Regulation 2016 but has recently been amended by the Data (Use and Access) Act 2025 (D(UA)A), which renders the UK legislation slightly further apart from the EU's General Data Protection Regulation, although the two laws remain fundamentally similar. The UK GDPR places a range of obligations on those processing personal data and confers rights on individuals in relation to their personal data. The DPA 2018 supplements the UK GDPR (including where the UK was given discretion as to its implementation). It also implements the EU Law Enforcement Directive and covers the processing of personal data by the UK intelligence services. The Privacy and Electronic Communications Regulations 2003 as amended (PECR), based on the EU's ePrivacy Directive, set out additional rules governing the privacy of communications. In particular, they cover direct marketing and the use of cookies and similar technologies.

The Network and Information Systems Regulations 2018 (the "NIS Regulations") implement the EU's Network and Information Security (NIS) Directive 2016. They cover the security of IT systems and impose various cybersecurity and incident reporting obligations on relevant digital service providers and operators of essential services in designated sectors.

The Product Security and Telecommunications Infrastructure Act 2022 deals with the security of consumer-related products. Together with related secondary

legislation, it imposes security requirements throughout the supply chain.

A variety of other sector-specific cybersecurity laws may be relevant, and the D(UA)A also introduces new provisions relating to the sharing of personal and non-personal data, the detail of which will be brought in under secondary legislation.

### 8.2 Geographical Scope

Most of these laws have extraterritorial effect, applying to businesses operating in the UK, targeting or supplying the UK, or processing the personal data of UK individuals, regardless of the organisation's location. The UK GDPR applies to any organisation processing the personal data of UK individuals where the processing relates to offering them goods or services, or to monitoring their behaviour. It applies to the processing of personal data by a controller or processor in the context of an establishment located in the UK, regardless of where the processing takes place. There are strict rules around the export of personal data from the UK.

### 8.3 Role and Authority of the Data Protection Agency

The Information Commission (IC) is the agency in charge of enforcing data protection and cybersecurity rules, and it also produces guidance and codes of practice (notably the Children's Code, which covers the processing of children's personal data by online services). The IC has various powers. Under the UK GDPR, for example, it has a range of enforcement powers, including to impose fines for non-compliance of up to the higher of GBP17.5 million or 4% of annual global turnover. Data controllers are required to pay annual fees to the IC of between GBP52 and GBP3,763 depending on their size and subject to minor exceptions.

## 9. Looking Forward

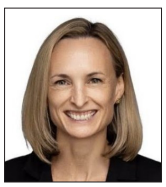
### 9.1 Upcoming Legal Reforms

The UK commenced a review of its design laws in 2025. This follows amendments to the EU design regime. The UK is expected to pass the Cyber Security and Resilience (Network and Information Systems) Bill in 2026. This will expand and update the scope of the current NIS Regulations largely (but not wholly) in line with the EU NIS2 Directive, which was enacted after Brexit. The government plans to legislate on AI, although this is expected to cover AI infrastructure rather than AI safety.

New restrictions on filing documents at Companies House are expected to take effect no earlier than November 2026. Only directors or employees of a company who have verified their identity at Companies House will be able to file on behalf of that company, other than authorised intermediaries who are registered with Companies House. Identity verification requirements for corporate directors, relevant legal entities with control and corporate members of LLPs, as well as new restrictions on the use of corporate directors, are expected to take effect at a similar time.

The UK government consulted on proposed amendments to the NSIA notification regime in 2025 and published its response in March 2026. The proposed changes will refine the scope of mandatory filings by introducing new sensitive sectors (including water, critical minerals and a standalone semiconductors category) while narrowing certain definitions, particularly in relation to AI, to focus the regime more closely on transactions that present genuine national security risks. The reforms are expected to be implemented later in 2026; until then, the existing NSIA rules remain in force.

# Trends and Developments



**Contributed by:**

**Winston Taylor**

**Winston Taylor** is a transatlantic law firm built for the businesses, people and markets driving capital and innovation. The firm is present in the major commercial centres that matter to global clients: the USA, the UK, Europe, Latin America and the Middle East. With a team of over 1,400 lawyers, Winston Taylor brings deep experience in major litigation, critical transactions, strategic IP and private wealth, and has four focus sectors: technology, media and telecommunications, life sciences and healthcare, financial services, and projects, energy and infrastructure. Whatever the challenge, Winston Taylor is in the room with its clients, shoulder to shoulder in the everyday moments and the ones that change everything.

## Authors

**James Ross** is a partner in the tax team at Winston Taylor. He advises on a broad range of tax matters (both advisory and transactional), including the structuring and negotiation of M&A transactions, advising US-based clients on the structuring of acquisitions and inward investments in the UK and Europe, corporate restructuring matters, including financing and intellectual property holding structures, and assisting clients in relation to tax authority enquiries and audits. James has a particular focus on cross-border work. He works with a wide range of clients from large multinationals and private equity funds to privately held companies, family offices and private clients.

**Claire Matthews** is a partner at Winston Taylor specialising in employee incentives. She advises clients on all forms of management and employee incentive arrangements, including option plans and other share awards, cash plans, crypto tokens and UK tax-favoured plans. Claire works with clients from start-ups to listed multinationals in a variety of sectors, in particular technology, energy and infrastructure and life sciences. During her career, as well as law she has worked in executive remuneration consulting and in-house reward, which gives her a 360 degree view of incentives, enabling her to partner with her clients to find the right solutions for their businesses.

**Karen Bail** is a senior associate at Winston Taylor specialising in employee incentives and advises on a full range of matters for both listed and private companies. Her experience includes advising on the roll-out of plans across multiple jurisdictions, executive remuneration, structuring of tax-favoured and non tax-favoured equity arrangements, IPOs, takeovers, mergers and acquisitions.

**Marianna Vlas** is a senior associate at Winston Taylor in the tax and incentives group specialising in employee incentives. Marianna advises on a full range of employee incentive matters, and has particular experience with takeovers, mergers and acquisitions and structuring of tax-favoured and non tax-favoured equity plans. Marianna regularly advises on HMRC compliance requirements related to equity arrangements.

While the UK has a vibrant start-up business culture, a perception has grown in recent years that it struggles to scale its successful businesses. Capital markets in the USA are often perceived to offer higher valuations than those in the UK, which have underperformed relatively in recent years, while pools of private capital are also seen as much deeper in the USA. One consequence of this has been a steady stream of UK start-ups flipping to the USA to access those pools of capital – a trend reinforced by the generous capital gains tax incentives available to US taxpayers for investments in US early-stage businesses.

### The EIS and VCT Regimes – Background and Recent Reforms

The UK government is seeking to tackle this challenge by enhancing the tax reliefs available for investments in early-stage companies. Chief among these is the Enterprise Investment Scheme (EIS), which offers 30% income tax relief to individuals making equity investments in early-stage trading companies, as well as a complete capital gains exemption on exit and the ability to defer tax on prior capital gains where the proceeds are used to make qualifying investments.

The EIS was introduced in 1994 and has become a well-established and well-used feature of the UK investment scene. The government had previously confirmed that it would continue until at least 2035 (having been scheduled to expire in 2025), and in its most recent Budget statement, it doubled the financial thresholds for qualifying companies.

From April 2026, therefore, companies can potentially receive EIS investments if they have gross assets of up to GBP30 million before the investment, and GBP35 million after it – an increase from the previous thresholds of GBP15 million and GBP16 million, respectively. The maximum investments under the EIS and other venture capital schemes have also increased from GBP5 million in a year and GBP12 million over the life of the company to GBP10 million and GBP24 million, respectively. These thresholds are increased to GBP20 million and GBP40 million for "knowledge-intensive companies" – which, broadly, are companies spending a certain proportion of their expenditure on research and development and which either develop intellectual property for exploitation or have a certain proportion of skilled employees.

The Venture Capital Trust (VCT) regime provides income tax relief for share subscriptions in listed vehicles that themselves subscribe for shares in companies eligible for EIS relief. The VCT thresholds for investee companies have been increased in line with the increases for EIS purposes, but the rate of VCT income tax relief has been reduced from 30% to 20%. The government's justification for this change is that it provides a better balance between the EIS and VCT regimes, given dividends from VCTs are exempt from tax, while dividends from EIS companies are not.

What will this mean in practice? The increased thresholds will mean that many companies looking to raise Series B or C rounds, and which were previously above the net asset thresholds, will now be able to do so using EIS, making them considerably more attractive

to UK-resident direct investors – though the reduction in the rate of tax relief for VCT investment may have the counteracting effect of reducing investment.

The expansion of EIS eligibility is a welcome statement of intent from the government. Attracting external capital into early-stage companies is, however, only part of the challenge. Equally important is the ability of those same companies to build and retain the talented teams needed to deploy that capital effectively – and it is here that the Enterprise Management Incentive (EMI) scheme plays a central and complementary role.

## The EMI Scheme: Background and Purpose

The EMI scheme was introduced in 2000 as a targeted measure to help smaller, higher-risk trading companies compete for talent against larger, more established employers in a context where cash compensation was often not a realistic option. The government's intention was to provide a straightforward, tax-efficient mechanism through which early-stage companies could offer equity participation to key employees without the tax charges that would ordinarily arise on the grant or exercise of share options. In that respect, EMI was a deliberate complement to the EIS – where EIS was designed to attract external capital into early-stage companies, EMI was designed to help those same companies build and retain the teams needed to deploy that capital effectively.

### *How the scheme works*

The basic architecture of the scheme has remained broadly stable since its introduction. Qualifying companies may grant options over shares worth up to GBP250,000 per employee by reference to the market value at the date of grant, without triggering an income tax or national insurance contribution charge at that point. Where options are granted at or above market value, no income tax charge arises on exercise either, so that the employee's liability is confined to capital gains tax on an eventual disposal – historically at the preferential 10% rate available under Business Asset Disposal Relief, though that rate has now increased to 18% as discussed below. The result, notwithstanding that increase, remains a highly attractive tax profile by comparison with unapproved options, under which both the discount at grant and the gain on exercise are subject to income tax and national insurance contributions.

Notably, the regime also permits options to be granted at an exercise price set below the market value of the shares at the date of grant – a flexibility that can prove particularly useful where a company wishes to maintain a uniform exercise price across its option pool, for instance following a funding round that has pushed share values higher. Granting at a discount does not in and of itself taint the tax-favoured status of the option. Income tax and, potentially, both employer and employee national insurance contributions will be payable on the discount element at the point of exercise, but depending on the circumstances, the overall economic cost of that treatment may prove less burdensome than requiring employees to fund the higher exercise price.

### *A period of policy neglect and uncertainty*

For much of its history, however, the EMI regime suffered from a degree of policy neglect. The individual limit of GBP250,000, the company-wide limit of GBP3 million in outstanding options and the qualifying employee headcount threshold of 250 full-time equivalent employees had all remained unchanged for many years, eroding in real terms as company valuations, team sizes and employee expectations increased. The cumulative effect was a scheme that, while still providing genuine value, was increasingly misaligned with the realities of the modern growth company talent market.

The most significant development prior to the current Budget was the government's confirmation, following the 2022 Budget, of the scheme's continued availability after a period of uncertainty arising from the loss of EU state aid approval at the time of Brexit. That uncertainty had cast a temporary shadow over the scheme and created unwelcome instability for companies and advisers seeking to structure long-term incentive arrangements. The restoration of certainty was consequently a significant moment for the market, re-establishing EMI as a reliable long-term planning tool for growth companies and their advisers.

Around the same time, changes introduced to the Company Share Option Plan (CSOP) – a less gener-

ous but more broadly available regime under which options must be granted at market value and exercised between three and ten years after grant – made the arrangement more accessible to companies, with advisers increasingly introducing it as an alternative to EMI during the period of uncertainty. The 2022 Budget doubled the individual CSOP limit from GBP30,000 to GBP60,000 and relaxed the requirements over the share class over which options can be granted, taking effect from April 2023, which enhanced its relative attractiveness during a time of uncertainty for EMI. The resolution of the EU state aid issue and the restoration of certainty around EMI was therefore warmly welcomed, and CSOP has since returned to its more customary role as the default arrangement for companies that do not qualify for EMI.

### *The most recent Budget: a significant recalibration*

The most recent Budget has built on this with a substantial package of increases to the EMI limits, including:

- the gross asset threshold for qualifying companies has been quadrupled to GBP120 million, complementary to the doubled EIS gross asset thresholds;
- the qualifying employee headcount threshold has been doubled to 500 full-time equivalent employees;
- the company-wide grant limit threshold has been doubled to GBP6 million in outstanding options; and
- the exercisability period for the options has been increased from ten to up to 15 years.

Taken together, these changes represent the most significant recalibration of the EMI regime since its introduction. The gross asset and headcount threshold increases, in particular, are sensible in policy terms: the companies most likely to benefit from EMI are broadly the same cohort as those targeted by the EIS, and an increased threshold for EMI provides room for growth and reduces the risk of a company finding itself able to raise EIS investment but unable to offer EMI options to its employees. These changes also signal clearly that the government views equity incentivisation as a central part of its wider strategy for supporting the UK's growth economy.

Importantly, the government has also confirmed that amendments made to existing EMI scheme arrangements on or after 6 April 2026 to bring live options within the revised thresholds will not of themselves affect the tax-favoured status of those options. This is a pragmatic and welcome clarification that will spare companies and their advisers from having to conduct a detailed tax risk analysis before taking advantage of the updated regime. It removes a potentially significant practical obstacle to the prompt adoption of the new limits by companies with existing live options.

### *Areas for further reform*

The government has also undertaken a call for evidence on how to ensure that the tax system supports and encourages entrepreneurship. The consultation document includes a number of questions that are intended to gauge the effectiveness of the EIS and VCT schemes. It is to be hoped that it will take the opportunity to simplify a relief that, while generous, has detailed and complex eligibility criteria – and many traps for the unwary.

This review would also be a good opportunity to open up the EIS and EMI regimes to a wider range of business sectors. Historically, EU state aid rules resulted in companies carrying on certain excluded activities being ineligible for EIS relief. The list of excluded activities has not been reviewed for some years and now looks rather out of date. The exclusion of companies carrying on financial activities, for example, was perhaps understandable when banking was considered to be in the nature of a utility, and therefore not something that ought to be subsidised, but it has long sat awkwardly alongside the UK's ambitions as a global hub for financial technology.

The exclusion prevents fintech businesses from accessing these valuable reliefs, thus constraining the development of an innovative sector in which the UK is particularly strong and which is one of the most talent-intensive sectors in the UK economy. Were the government to follow through, it would represent a meaningful expansion of the reach of the EIS and EMI schemes and a significant signal to one of the country's most innovative and internationally competitive sectors.

The government's call for evidence on entrepreneurship also touches on employee incentives, and there is a strong case for using that process to address remaining areas of improvement within the EMI framework, chief amongst these being:

- the working time requirement – under which an employee must commit at least 25 hours per week, or 75% of their working time, to the company – which continues to cause difficulty for individuals in portfolio roles or with other professional commitments;
- the personal grant limit of GBP250,000 – this being out of date and eroded by inflation; and
- the HM Revenue & Customs (HMRC) valuation process, which, whilst generally workable, has at points been subject to delays that create real difficulties for companies seeking to close incentive arrangements to a specific timetable.

These are not insurmountable problems, but they do represent friction in a scheme that is otherwise widely regarded by founders and advisers as one of the most effective instruments available to the government for building equity-aligned teams at the growth stage. Addressing them would bring the EMI framework more closely into line with the modern realities of how high-growth companies operate and recruit. The government's consultation provides a timely and appropriate vehicle through which to do so.

## PISCES: Addressing the Liquidity Challenge

One of the practical limitations of EMI – and of employee share schemes more generally – has always been the question of liquidity. Options and shares in private companies are, by their nature, illiquid, and employees who have built up a meaningful equity stake may face an indefinite wait before they are able to realise any value, typically dependent on a trade sale or a full listing. This is where the government's recent introduction of PISCES – the Private Intermittent Securities and Capital Exchange System – represents a potentially significant development.

PISCES is designed to create a regulated, intermittent trading venue for shares in private companies, operating between the worlds of fully private ownership and a public market listing. For companies whose employees hold EMI options or have exercised into shares, PISCES offers the prospect of periodic liquidity events without the cost, regulatory burden and disclosure obligations associated with a full IPO. This is a meaningful advance: one of the recurring criticisms of equity incentive schemes in the UK has been that the ultimate payoff is too remote and uncertain to be an effective motivational tool, particularly for employees who are not founders and who may be less willing to wait years for a return.

By providing a structured mechanism for employees to sell shares in the secondary market at defined intervals, PISCES has the potential to make EMI and other share schemes considerably more compelling in practice. It also offers a natural staging post for companies that are considering a full listing but are not yet ready to commit to the obligations that entails. The trajectory of reform across both employee incentives and capital markets is therefore an encouraging one, and the interaction between EMI and PISCES may prove to be one of the more consequential developments of the current policy cycle.

### *Revitalising public markets*

As well as providing a bridge for private companies towards a full listing in the form of PISCES, both the current government and its immediate predecessor have sought to ease some of the burdens associated with full public listings. To that end, the regulatory regime for listing companies in the UK was significantly overhauled in 2024. Data from the Financial Conduct Authority suggests IPO and listing activity picked up in the fourth quarter of 2025 after several years of broadly flat figures, but the number of listed companies has continued to decline, with delistings exceeding IPOs. Much of the blame for this is laid at the fact that the UK, unlike the USA and many other countries, still levies a transaction tax – stamp duty reserve tax (SDRT) – which is charged at 0.5% on the consideration paid under contracts for the sale of shares.

The recent Budget sought to address this concern by introducing a three-year SDRT "holiday" (in other words, a time-limited exemption) for dealings in newly listed shares. Many advisers will have hoped for an abolition of SDRT altogether (together with its sister

tax, stamp duty, which applies to paper-based transfers of unlisted shares). Budgetary concerns doubtless precluded such a radical step, but advisers can take some consolation from the forthcoming introduction of an online system for filing and paying stamp duty, dragging stamp duty into the 21st century and finally eliminating a notoriously bureaucratic procedure that added material delay and costs to M&A activity.

### Encouraging Entrepreneurship – The Wider Backdrop

The recent consultation on encouraging entrepreneurship also shows signs that the government is thinking about how to support larger companies that have grown beyond the VCT, EIS and EMI limits – particularly by encouraging successful entrepreneurs to reinvest in start-ups, as happens very commonly in the USA.

However, this consultation is taking place in an environment where capital gains taxes have been increasing, not falling. The main CGT rate is now 24%. Business asset disposal relief previously provided a 10% rate of tax for individuals disposing of business assets or certain shareholdings in the company that employed them – including, in particular, individuals who held shares as a result of exercising EMI options. That rate has now increased to 18%. Similarly, individuals subscribing for ordinary shares in unquoted companies can potentially claim "investors' relief" on a subsequent disposal, but the rate of tax in such circumstances has also been increased from 10% to 18%. The government has indicated that it had heard views that both these reliefs were ill-targeted. While this may be the case, the increase in rates has undoubtedly left an impression that the government is hostile to entrepreneurship – and rebutting this will be one of the challenges it will face when responding to the recent consultation and developing policy in this area.

**Baker McKenzie Paris** is a leading international law firm offering a comprehensive, multidisciplinary approach to legal services. Its top-tier teams combine expertise across key practice areas including tax, corporate, employment, data protection, intellectual property and antitrust. With a deep understanding of both national and international markets, the firm provides seamless, cross-border solutions tailored to its clients' strategic objectives. Baker McKenzie supports businesses at every stage of their development, from establishing operations in France to expanding globally, ensuring compliance, managing risk and unlocking opportunities. The firm's integrated, client-focused approach enables it to deliver innovative and practical advice, helping clients confidently invest, grow and succeed in the dynamic French and international business environment.

## Authors

**Véronique Millischer** is a partner at Baker McKenzie who is specialised in corporate tax, both domestic and international, and assists her clients (mainly large multinational groups) regarding the corporate tax aspects of French and international restructurings, international joint ventures, acquisitions of international groups by French groups (advice and organisation of due diligences) or acquisitions of French groups by foreign groups; the assistance provided in the context of groups restructurings/setting up of joint ventures implies negotiations on a regular basis with the French tax authorities, and in particular negotiations of tax rulings with the Ruling Department (Bureau des agréments et rescrits).

**Léna Sersiron** leads Baker McKenzie's French Competition and Distribution practice. She joined Baker McKenzie in 2003 and was co-opted as a partner in 2012. She is a worldwide Baker McKenzie Competition Steering Committee member. With over 20 years' experience, Léna Sersiron has a strong track record of successfully handling difficult and sensitive competition cases (investigations and subsequent litigation) at both EU and national levels. She has extensive knowledge related to inspections and the collection of digital evidence (forensic IT). She advises various clients on a wide array of competition subjects, including complex merger control operations (at a French and EU level). She also works on distribution law cases.

**Eléonore d'Anthonay** is a partner of Baker McKenzie's Employment Law team in Paris. Her expertise primarily covers collective labour relations, where Eléonore advises HR and legal departments on the management and strategic structuring of complex projects, including cross-border reorganisations, collective redundancies, collective bargaining negotiations and employee profit sharing schemes, as well as the employment and social aspects of merger and acquisition transactions, notably in the hotel and resort sector. Eléonore has solid experience in individual employment relations, in particular in managing dismissal procedures and handling internal investigations.

**Guillaume Nataf** joined the M&A department of Baker McKenzie in 2005. He was appointed counsel in 2015 and partner in 2017. Guillaume is an experienced lawyer in merger and acquisition transactions for French and foreign clients. He advises them on their French and cross-border M&A transactions, the negotiation of joint ventures and shareholders' agreements. He chairs the foreign direct investment (FDI) regulations practice in the Paris office and assists his clients in their filings and subsequent exchanges and negotiations with the FDI authorities in France and abroad to obtain required clearances.

**Contributed by:** Véronique Millischer, Léna Sersiron, Eléonore d'Anthonay, Guillaume Nataf, Olivia Chriqui-Guiot, Pauline Celeyron, Damien Berruyer and Nella Picou, **Baker McKenzie Paris**

**Olivia Chriqui-Guiot** joined the Competition and Distribution team of Baker McKenzie Paris in 2021 and has been serving as partner since 2025. Olivia has strong skills in merger control, at both the European and national levels. She regularly advises French and international companies active in various sectors on cases of abuse of dominant position, cartels and in the context of damages actions before French and European authorities and courts.

**Pauline Celeyron** is a partner in Baker McKenzie Paris's Intellectual Property practice. She advises clients on both contentious and non-contentious IP matters, with particular expertise in copyright and trade mark law. Pauline is recognised for her extensive experience in digital copyright, intermediary liability, notice-and-takedown regulations, trade mark portfolio management, anti-counterfeiting strategies and complex IP agreements. Since joining Baker McKenzie in 2015, she has supported clients across a wide range of industries, with a particular focus on the tech and luxury sectors.

**Damien Berruyer** joined Baker McKenzie Paris in 2018, in the Corporate/M&A group. One of his main focuses is to assist French private and listed companies in the context of general and more complex corporate law matters, in particular corporate governance, equity transactions and cash repatriation, as well as assisting them in the implementation of their global reorganisations.

**Nella Picou** joined Baker McKenzie in 2022. She is an associate and member of Baker McKenzie's Employment group in Paris. Nella advises French and foreign companies on all their employment issues. She also assists French and foreign companies with restructuring projects and changes to their legal structure. She regularly advises and represents clients in sensitive workplace matters, including internal investigations and cases involving allegations of harassment and discrimination, as well as broader issues of workplace misconduct and white-collar crimes.

# 1. Legal System

## 1.1 Legal System and Judicial Order

France operates under a civil-law system. This means that greater emphasis is placed on codes and statutes rather than on case law and practices, as is the case in common-law jurisdictions. The exception is French administrative law, which is primarily created by the French administrative courts.

France has a written constitution (*Constitution de la Cinquième République*, or the "French Constitution"), which forms the basis of the French legal system and uses a system of legal codification (notably including the Civil Code, the Commercial Code, the Criminal Code, the Labour Code and the Tax Code). French law has a dual system comprising the following:

- judicial/private law (*droit privé*), including civil and criminal law in particular; and
- public law (*droit public*), including administrative and constitutional law in particular.

In addition to the French Constitution and international treaties, there are different domestic sources of laws and regulations in France. French laws (*lois*) are adopted by the French Parliament, which is made up of the National Assembly (*Assemblée Nationale*) and the Senate (*Sénat*). Meanwhile, ordinances (*ordonnances*) and regulations (*règlements*, being *décrets* or *arrêtés*) are issued by the French government.

The court system in France is divided into two parts:

- judicial courts (dealing with civil and criminal laws), comprising courts of first instance (ie, civil, commercial, labour and criminal courts), courts of appeal and the Supreme Court of Appeal (*Cour de cassation*); and
- administrative courts (dealing with public laws), comprising courts of first instance, courts of appeal and the Council of State (*Conseil d'État*).

In addition, there is a Constitutional Council (*Conseil constitutionnel*), which is responsible for controlling the compliance of new laws and statutes with the French Constitution, as well as the regularity and validity of political elections. Finally, there are various independent regulatory authorities, such as the Financial Markets Authority (*Autorité des marchés financiers*), which regulates the French financial markets, and the French Competition Authority (FCA – *Autorité de la concurrence*), which oversees all antitrust, competition and merger control matters in France.

# 2. Restrictions on Foreign Investments

## 2.1 Approval of Foreign Investments

France has a foreign direct investment (FDI) review/approval process in place. The Office of Foreign Investment Control in France (*Bureau du contrôle des investissements étrangers en France*, or CIEF) within the Ministry of Economy, Finance and Industrial, Energy and Digital Sovereignty is in charge of such review.

French FDI regulations apply when a foreign investor undertakes any of the following types of investments in a French company or business engaged in activities deemed sensitive under French FDI rules:

- the acquisition of control (as defined by Article L. 233-3 of the French Commercial Code (FCC)) of an entity governed by French law or an establishment registered with the Trade and Companies Register (*Registre du commerce et des sociétés*) in France;
- the purchase, in whole or in part, of a business (*branche d'activité*) of an entity governed by French law;
- for non-EU investors, the crossing – by the investor, directly or indirectly, acting alone or in concert – of the 25% threshold of the voting rights of an entity governed by French law; and
- for non-EU investors, the crossing – by the investor, directly or indirectly, acting alone or in concert – of the 10% threshold of the voting rights of an entity governed by French law whose shares are listed on a regulated market.

The main sectors/industries relevant to such control are those related to defence and, more broadly, all activities likely to jeopardise French national interests with regard to critical infrastructures (eg, energy, transportation, public health, electronic communications, space operations, public health and critical raw materials). R&D relating to critical technologies – such

as cybersecurity, AI, robotics, additive manufacturing, semiconductors, quantum technology, energy storage, and biotechnologies and technologies related to the production of low-carbon energy and photonics – can also be considered sensitive activities.

As a general rule, intra-group operations (ie, those between entities ultimately under common control) are exempted subject to certain limitations.

French FDI clearance is a mandatory regime –ie, a foreign investment cannot be completed before FDI clearance is obtained. As such, French FDI clearances are generally provided as conditions precedent to closing a transaction.

French FDI authorities review and assess the transaction based on the nature and sensitivity of the French activities acquired by the foreign investor. The aim is to determine whether such acquisition is likely to prejudice the French national interests with regard mainly to national defence, public authority, public order or public security in the sectors deemed sensitive by French FDI regulations.

This assessment is a fact-based analysis on a multi-criteria basis. The nature and scope of the French target activities, as well as the identity of the foreign investor, its size, its industrial project for France, potential relationships with foreign states, etc, will be reviewed in depth. French FDI regulations do not apply different analysis criteria based on the nature of the investor or the stake acquired.

It should be noted that, at EU level, the FDI screening framework is currently undergoing significant reform. In particular, the revised EU FDI Screening Regulation, which seeks to establish a more harmonised baseline across EU member states ("Member States"), was formally adopted by the Council of the EU on 8 June 2026. Member States will have 18 months to implement the required national screening mechanisms ahead of its expected application in January 2028.

## 2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance

### Filing

The authorisation process takes place in one or two phases, depending on the nature of the French activities at stake and the risk assessment made by the FDI authorities with regard to French national interests.

#### *Phase I*

The FDI authorities have 30 business days from the receipt of a filing to notify the foreign investor of any of the following:

- the investment falls outside the scope of the FDI regulations;
- the investment falls within the scope of the FDI regulations and is unconditionally authorised; or
- the investment falls within the scope of the FDI regulations and requires further analysis to determine under what conditions it could be authorised (Phase II opening).

The FDI authorities may issue post-filing information requests, which suspend the review period until satisfactory responses are provided by the investor.

#### *Phase II*

The FDI authorities can, during or more generally at the expiry of the Phase I review, open a Phase II review should they consider that the transaction requires further analysis. The FDI authorities must render their decision within 45 business days from the opening of the Phase II review. During the Phase II review, the FDI authorities may grant or deny their clearance or grant their clearance subject to commitments from the investor. These commitments must be proportionate to the necessary protection of French national interests.

### Sanctions for Non-Compliance

The French FDI regime is "mandatory" - ie, any foreign investment made in breach of French FDI regulation would expose the foreign investor to a wide range of severe sanctions, including the following:

- the nullity of the French investment;
- injunctions to file for clearance;

- the obligation to unwind the investment or to amend the investment terms;
- the suspension of the French target's voting rights;
- a prohibition on distributing dividends by the French target;
- payment of financial penalties; and
- criminal penalties (imprisonment and fines).

### 2.3 Commitments Required From Foreign Investors

The French FDI authorities may condition their approval of a transaction on specific commitments from the foreign investor. The scope of these commitments can vary significantly depending on the national interests at stake. Notable examples include the following:

- maintaining the French target's sensitive activities and industrial capabilities on French territory, such activities to be carried out by a company incorporated under French law;
- ensuring that the French target company continues to operate the sensitive activities for the benefit of the sensitive clients on reasonable technical and commercial terms;
- protecting sensitive IP and sensitive information; and
- adapting the internal organisation and governance of the entity, creating certain specific committees to oversee/deal with critical topics, and segregating sensitive information.

For the most critical activities, the FDI authorities can ask for a golden share for the benefit of the French state or a French state body, etc.

### 2.4 Right to Appeal

The decisions of the FDI authorities are subject to judicial claim (*recours de plein contentieux*) before French administrative courts. As such, a foreign investor may challenge a denied authorisation or overly stringent conditions before French administrative courts.

## 3. Corporate Vehicles

### 3.1 Most Common Forms of Legal Entity

As it is particularly valued for its flexibility and streamlined governance framework, the most common type of corporate vehicle in France is the **simplified joint-stock company** (*société par actions simplifiée*, or SAS), the main features of which are as follows:

- *Governance*: One president and, optionally, one or several general manager(s) and/or deputy general manager(s), or any other type of collective body set up by the shareholder(s) in the articles of association (*statuts*) (for more detail, see **3.4 Management Structures**).
- *Shareholders' liability*: Form of company limited by shares, ie, the shareholders' liability is limited to the amount of their contribution to the share capital.
- *Share capital*: EUR1 minimum.
- *Number of shareholders*: One shareholder minimum.
- *Usual purpose*: Best suited for greenfield projects, private equity projects, start-ups and scale-ups, patrimonial holdings and group subsidiaries.

Even though they have become less commonly used in practice, the following corporate forms are also worth noting:

- the **limited liability company** (*société à responsabilité limitée*, or SARL): a form of company limited by shares, often used for businesses that have a strong personal aspect (intuitus personae) (eg, family businesses, etc);
- the **joint-stock company** (*société anonyme* – SA): a form of company limited by shares, nowadays best suited for listed companies and groups' holdings; and
- the **real estate civil company** (*société civile immobilière*– SCI): a form of company not limited by shares, mostly used to own/manage real estate properties.

The answers provided in the sections below will focus on the main rules applying to SAS companies only.

### 3.2 Incorporation Process

The main steps to incorporate an SAS are as follows:

- drafting and finalising the articles of association (which determine the registered address, the amount of contributions and resulting share capital, and the number of issued and paid-up shares (in

kind, in cash or in know-how for an SAS or SARL), the governance (including the appointment of the first legal representatives and/or statutory auditors, if any), the corporate purpose, the corporate name, etc) and the ancillary corporate documentation (eg, statement of parenthood and absence of convictions for each newly appointed legal representative, ultimate beneficial owner form, etc);
- obtaining the certificate confirming the deposit of the share capital (*certificat de dépôt des fonds*) issued by the depository bank or a notary;
- gathering of the ancillary supporting documents (eg, ID/passport of the newly appointed legal representative(s), title for the registered address, corporate excerpt (*extrait Kbis*)of the statutory auditors, if any, etc);
- executing the articles of association and ancillary corporate documentation;
- completing the dematerialised incorporation formalities, notably (i) publication in a French legal gazette
- (*journal d'annonces légales*), (ii) publication in the French Official Gazette (*Bulletin officiel des annonces civiles et commerciales*, or BODACC) and (iii) registration with the Trade and Companies Register and the French National Companies Register (*Registre national des entreprises*); and
- obtaining the incorporation extract (*extrait Kbis d'immatriculation*) from the clerk (*greffier*) of a French commercial court (*Tribunal de commerce*).

The incorporation process generally takes approximately two weeks from the filing of the incorporation application to the issuance of the company's registration extract. While the registration procedure is now largely digitalised, the filing can only be completed once all required corporate documents and supporting materials have been duly executed and collected, which may prove time-consuming in practice.

## 3.3 Ongoing Reporting and Disclosure Obligations

From a corporate standpoint, the main annual reporting obligation of a French company is the drawing up, approval (within six months as from the end of the fiscal year (FY)) and publication of its annual financial statements.

In addition, French companies are subject to reporting and disclosure obligations when the following corporate information is modified:

- any information disclosed in the company's commercial court register extract (*extrait Kbis*) (ie, the share capital, the legal representatives, the registered address or the statutory auditor of the company, etc);
- any information included in the company's articles of association; and/or
- the ultimate beneficial owner of a company.

## 3.4 Management Structures

The SAS is the most flexible form of company in France, notably with respect to its governance.

The FCC only requires one mandatory legal representative in the SAS: the president of the company (*président*). The president may be a natural or juristic person and is vested by law with the broadest powers to bind and represent the company vis-à-vis third parties in all circumstances, within the limits of its corporate purpose.

In addition to the president, the articles of association may allow for (i) the appointment of one or several general managers (*directeurs généraux*) or delegate general managers (*directeurs généraux délégués*), the powers of which shall be provided in the articles of association (in practice, they are often vested with the same individual powers as the president) and/or (ii) the setting up of a collective body (such as a board, management committee, strategic committee, supervisory committee, etc), the composition and powers of which shall be determined in the articles of association.

## 3.5 Directors', Officers' and Shareholders' Liability

### Civil Liability of Directors and Officers

Directors and officers may incur civil liability towards the company, its shareholders, or third parties:

- *Towards the company*: Directors and officers may incur civil liability essentially on account of violations of the laws or regulations applicable to the company or of its articles of association, or in case of tortious or negligent acts of management. A

civil liability claim can be brought by the company through its legal representatives (*action ut universi*) or, in case of failure of its legal representatives to bring such claim, by the shareholder(s), acting here in the interest of the company (*action ut singuli*).
- *Towards the shareholder*(s): Directors and officers may incur civil liability essentially in case of loss personally suffered by the shareholder(s) as a result of a fault by a director or officer of the company (and as long as such loss is distinct from the loss suffered by the company, if any).
- *Towards third parties*: Directors and officers may incur civil liability only where they have committed a fault that is detachable from their functions and personally attributable to them. This is the case where a director or officer intentionally commits a fault of particular gravity incompatible with the normal exercise of its corporate functions. In the absence of such a detachable fault, a third party may only obtain damages by bringing a claim against the company itself.

The civil liability of directors and officers can be covered by a D&O insurance scheme.

### Criminal Liability of Directors and Officers

Directors and officers may incur criminal liability, notably for the following:

- *Misuse of corporate assets* (*abus de biens sociaux*): This is the most frequently prosecuted offence, targeting directors and officers who, in bad faith, have used the company's assets or credit in a manner they knew to be contrary to the company's interest, for personal purposes or to favour another company or enterprise in which they had a direct or indirect interest.
- *Presenting or publishing misleading financial statements*: This targets directors and officers who have knowingly published or presented to shareholders, with a view to concealing the true financial position of the company, annual accounts that do not give a true and fair view of the results for the financial year, the financial position and the assets of the company.
- *Distribution of fictitious dividends*.

The criminal liability of directors and officers cannot be covered by a D&O insurance scheme under French law.

### Liability in Insolvency Proceedings

Where judiciary liquidation proceedings are opened, directors and officers may be exposed to the following:

- *Action for liability for insufficiency of assets* (*action en responsabilité pour insuffisance d'actif*): The court may order directors and officers to bear all or part of the company's debts where a management fault contributed to the insufficiency of assets.
- *Personal bankruptcy* (*faillite personnelle*) *or a ban on managing companies*: Courts may impose these in cases of particularly serious misconduct (including misuse of corporate assets, fraudulent or irregular accounting, and the abusive continuation of a loss-making business).

### Shareholders' Liability and the Concept of "Piercing the Corporate Veil"

#### *Principle of limited liability for SAS companies*

The legal personality of an SAS acts as a protective screen between the company's creditors and the personal assets of its shareholder(s). Therefore, the shareholder(s) of an SAS are liable for the company's debts only up to the amount of its/their contributions.

#### *French law equivalent of "piercing the corporate veil"*

French law does not formally enshrine the concept of piercing the corporate veil as a general doctrine, but recognises several mechanisms allowing courts to disregard the protection afforded by the company's legal personality in certain situations, notably the following:

- *Commingling of assets*(*confusion de patrimoine*): Courts may extend proceedings opened against a company to another entity or to a shareholder where their respective assets are so commingled as to be indistinguishable.
- *Abuse of legal personality to defraud creditors*: The *action paulienne* allows creditors to have acts performed in fraud of their rights declared unenforce-

able against them, including through the interposition of a company created for that sole purpose.
- *Personal liability of shareholders for their own wrongful acts*: A shareholder's liability towards third parties may be engaged where the shareholder has committed a fault that is detachable from its capacity as shareholder, which is an intentional fault of a particular gravity incompatible with the normal exercise of shareholder prerogatives.

## 4. Employment Law

### 4.1 Nature of Applicable Regulations

France has one of the most structured and employee-centric labour law systems in the world.

This statutory framework is supplemented by:

- applicable sector-level or company-level collective bargaining agreements (CBAs), which often provide more favourable provisions than the Labour Code;
- company policies and internal regulations, where mandatory;
- employment contracts, which may provide additional rights provided that they comply with mandatory legal and collective bargaining provisions;
- French case law, particularly decisions of the Supreme Court of Appeal (*Cour de cassation*), which plays a significant role in interpreting labour legislation; and
- EU law, including directly applicable regulations and directives implemented into French law.

Together, these sources regulate key aspects of the employment relationship, including hiring, remuneration, health and safety, discrimination, employee representation, disciplinary procedures and termination of employment.

### 4.2 Characteristics of Employment Contracts

As a general rule, a permanent employment contract (*contrat à durée indéterminée* – CDI) does not legally need to be in writing and may, in theory, be concluded verbally. However, in practice, employers almost always use written contracts to define the terms of employment and comply with their information obligations.

Certain types of employment contracts, including fixed-term contracts (*contrat à durée déterminée* – CDD) and part-time contracts, must be concluded in writing and contain mandatory statutory provisions. Failure to comply may result in the contract being reclassified as a permanent employment contract.

The employment contract generally specifies essential terms such as the employee's position, remuneration, place of work, working hours, probationary period (if any), notice period and applicable CBA.

The CDI is the standard form of employment in France. Fixed-term contracts are permitted only in specific cases expressly authorised by law (eg, temporary replacement of an absent employee or a temporary increase in business activity) and are subject to maximum duration and renewal rules. Probationary periods are permitted but must be expressly agreed in writing and cannot exceed the statutory or collectively agreed maximum duration.

### 4.3 Working Time

In principle, France has a 35-hour statutory working week, with overtime subject to additional compensation.

Overtime hours may be worked in addition to the legal working time, but only within two limits:

- the total working time in a single week must not exceed 48 hours; and
- the average weekly working time calculated over any 12 consecutive weeks must not exceed 44 hours. Overtime must generally be authorised by the employer and gives rise to either increased pay (typically 25% for the first eight overtime hours and 50% thereafter, unless otherwise provided) or equivalent compensatory time off.

Employees are also entitled to minimum rest periods, including:

- 11 consecutive hours of daily rest; and
- 35 consecutive hours of weekly rest, including the mandatory Sunday rest principle, subject to numerous exceptions.

Employees are entitled to a minimum of five weeks of paid annual leave per year, in addition to public holidays where applicable.

Several alternative working time arrangements exist, particularly for managerial employees.

For example, certain autonomous executives may work under a working time scheme set in a "days over the year" arrangement, under which working time is measured in days worked per year rather than hours, provided that specific legal conditions are met.

### 4.4 Termination of Employment Contracts

France is not an employment-at-will jurisdiction. An employer may terminate an employment contract only on legally recognised grounds and must comply with strict statutory procedures.

Individual dismissals must be based on a real and serious cause (*cause réelle et sérieuse*), which may be:

- personal, such as misconduct, repeated poor performance or incapacity; or
- economic, where justified by economic difficulties, technological changes, business reorganisation necessary to safeguard competitiveness, or cessation of business activity.

The dismissal procedure generally includes a written invitation to a pre-dismissal meeting, the meeting itself, and a formal dismissal letter stating the grounds for the dismissal. Failure to comply with either the substantive or procedural requirements may result in damages.

Employees dismissed for reasons other than serious or gross misconduct are generally entitled to:

- statutory or contractual notice (or payment in lieu thereof);
- statutory dismissal indemnity (depending on the applicable CBA and length of service); and
- payment of accrued but unused paid leave.

Where a dismissal is found to lack real and serious cause, compensation is awarded within the bounds of the statutory scale, which sets minimum and maximum amounts by seniority. Weak grounds or procedural missteps can therefore expose the employer to damages and, in limited cases (eg, null dismissals), to reinstatement.

Employment contracts may also be terminated by resignation, by retirement and by mutual agreement through a mutual termination agreement, which must be approved by the labour administration.

Collective redundancies are subject to additional requirements. Depending on the number of proposed redundancies and the size of the company, employers must consult the Social and Economic Committee (*comité social et économique*, or CSE) and, in larger-scale redundancy schemes (dismissing at least ten employees over a 30-day period in a company with 50 or more employees), prepare either a social plan (*plan de sauvegarde de l'emploi*) negotiated with employee representatives or established unilaterally and approved or validated by the labour administration.

Employers must also comply with obligations relating to redeployment, selection criteria, priority for re-employment, and information and consultation procedures. Failure to comply may result in the redundancy process being invalidated or give rise to significant financial liability.

As a negotiated alternative to compulsory redundancies, employers may also conclude a collective mutual-termination agreement (*rupture conventionnelle collective*), based on voluntary departures and subject to validation by the regional labour administration (*Direction régionale de l'économie, de l'emploi, du travail et des solidarités*, or DREETS).

### 4.5 Employee Representations

Under French law, employee representation is mandatory once certain workforce thresholds are met.

The principal employee representative body is the CSE, which must be established in any company employing at least 11 employees for 12 consecutive months.

The CSE's powers vary depending on the size of the company:

- *Companies with 11 to 49 employees*: The CSE primarily presents individual and collective employee claims relating to the application of labour law, CBAs and company policies, and promotes health, safety and good working conditions.
- *Companies with 50 or more employees*: The CSE has broader information and consultation rights. The employer must inform and consult the CSE before implementing decisions affecting the organisation, management or general operation of the company, including, for example:
  (a) collective redundancies and restructuring projects;
  (b) significant organisational or technological changes;
  (c) changes affecting working conditions or working time;
  (d) introduction of monitoring or surveillance systems;
  (e) implementation of technologies affecting employees; and
  (f) economic and financial matters, strategic business orientations and social policy.

The consultation must take place before the employer's final decision is implemented, allowing the CSE to issue a reasoned opinion (generally within one month). While the CSE's opinion is generally advisory and does not bind the employer, failure to comply with the information and consultation obligations may result in civil and criminal sanctions, suspension of the project by the courts in certain circumstances, and claims for damages.

For certain significant projects, the CSE may appoint independent experts (at the employer's expense in many cases) to assist it in the consultation process, particularly in relation to economic matters, health and safety, or major organisational changes.

In addition, trade unions may appoint union representatives in companies meeting the statutory conditions (generally at least 50 employees and where a representative trade union is established). Union representatives negotiate CBAs with the employer on matters such as remuneration, working time and working conditions.

Finally, employees benefiting from representative mandates (such as CSE members and trade union representatives) enjoy special protection against dismissal. Their dismissal requires prior authorisation from the labour inspectorate.

## 5. Tax Law

### 5.1 Taxes Applicable to Employees/ Employers

#### Tax Residency of Employees

From a French domestic legislation standpoint, an individual is considered to have their tax residence in France if one of the following criteria set out in Article 4B of the French Tax Code (*Code général des impôts*) is met:

- The individual has their household in France, or otherwise, this corresponds to the location of their main abode. *Note*: An individual is considered to have their household in France if they live there on a permanent basis, with their spouse (or civil partner and/or children) or alone. If no household can be identified, the location of the main abode is determined based on the individual's actual presence in France, irrespective of the accommodation conditions.
- The individual carries on a professional activity in France, whether as an employee or otherwise, unless such activity is of a secondary nature. *Note*: A professional activity is considered primary where it accounts for the majority of the individual's effective working time.
- The centre of the individual's economic interests is located in France. *Note*: An individual who derives a greater proportion of their income from French sources than from foreign sources is deemed to have the centre of their economic interests in France.

Individuals meeting at least one of the above criteria are, in principle, regarded as French tax residents under domestic law, unless they qualify as residents of another jurisdiction under an applicable double tax treaty.

French tax residents are, in principle, subject to tax on their worldwide income (ie, from both French and foreign sources), subject to the provisions of any applicable double tax treaty, whereas non-residents are taxed in France solely on their French-source income.

### Personal Income Tax

Personal income tax (*impôt sur le revenu*) is calculated on the basis of the household unit (*foyer fiscal*) and is assessed under a progressive scale. For the 2026 tax year (income earned in 2025), the brackets are as follows:

- 0% on income up to EUR11,600;
- 11% on the portion between EUR11,601 and EUR29,579;
- 30% on the portion between EUR29,580 and EUR84,577;
- 41% on the portion between EUR84,578 and EUR181,917; and
- 45% on income above EUR181,917.

The tax liability is calculated using a household quotient (*quotient familial*) system, which divides total household income by a number of "parts" determined by the composition of the household, thereby moderating the progressive effect for larger families. Non-residents are subject to a minimum withholding rate of 20% (or 30% on income exceeding a specific threshold) on French-source income, unless a tax treaty provides otherwise.

Surtaxes may also apply:

- *Exceptional contribution on high incomes* ("*contribution exceptionnelle sur les hauts revenus*", *or CEHR*): This additional 3% surtax applies on all types of income exceeding EUR250,000 (for single taxpayers) or EUR500,000 (for married taxpayers), and a 4% surtax applies on income exceeding EUR500,000 (for single taxpayers) or EUR1 million (for married taxpayers). This surtax applies to all types of income received.
- *Differential contribution on high incomes* ("*contribution différentielle sur les hauts revenus*", *or CDHR*): This additional surtax applies to French tax residents whose global taxable income, after some adjustments, exceeds EUR250,000 (for single taxpayers) or EUR500,000 (for married taxpayers). The purpose of the CDHR is to apply a minimum effective tax rate of 20% on income received by the taxpayers covered. In other words, where the amounts of income tax and CEHR result in an effective tax rate on the global taxable income (as adjusted for the purposes of the CDHR) of less than 20%, the differential contribution (CDHR) will be applied in order to reach this minimum effective tax rate of 20%.

Personal income tax on employment income is collected through a pay-as-you-earn mechanism (*prélèvement à la source*), with the employer withholding tax each month at a rate communicated by the French tax authorities. These withholdings are advance payments, and the final tax liability is determined upon filing of the annual income tax return. The CEHR and CDHR are not withheld and are paid directly by the individual when filing that return.

### Employee and Employer Social Contributions

Employees and employers are subject to a range of social contributions levied on gross salary.

The main contributions notably include for the employee the generalised social contribution (*contribution sociale généralisée*) and the social debt repayment tax (*contribution au remboursement de la dette sociale*), levied respectively at rates of 9.2% and 0.5% on 98.25% of the gross remuneration. Other social contributions borne by both employees and employers primarily relate to retirement (basic and complementary pension schemes), unemployment insurance, health and disability coverage, work accident insurance and family benefits.

Overall, employee social contributions typically represent approximately 22% to 25% of gross remuneration. However, as certain contributions are capped, the effective employee contribution rate decreases for higher levels of remuneration and may fall to around 10.1% on income exceeding EUR385,000 (2026). It should also be noted that a portion of these contributions is deductible from the taxable income base for personal income tax purposes.

Employers bear a significant social security burden, with contributions typically representing approximately 40% to 45% of gross remuneration. However, as certain employer contributions are also capped, the effective rate may decrease to approximately 25% to 30% on remuneration exceeding EUR385,000 (2026).

### Payroll Tax

Employers that are not subject to VAT, or that are subject to VAT on less than 90% of their turnover, are liable to payroll tax (*taxe sur les salaires*). This tax is calculated on total gross remuneration paid to employees and is levied at progressive rates:

- 4.25% on the portion of annual salary below EUR9,147;
- 8.50% on the portion between EUR9,147 and EUR18,259; and
- 13.60% on the portion above EUR18,259.

Banks and financial institutions are among the main taxpayers subject to payroll tax, given that a significant portion of their activity is VAT-exempt.

## 5.2 Taxes Applicable to Businesses

### Direct Tax

Under French tax law, French resident companies are taxed on a domestic basis, whereas non-resident companies are only subject to corporate income tax (CIT) on profits attributable to France (eg, through a French permanent establishment, or in respect of French-source dividends, royalties, rental income and certain real estate or share-related capital gains).

A distinction is made between non-tax-transparent and tax-transparent companies.

Non-tax-transparent companies are personally liable for CIT, at a standard rate of 25%, increased to 25.825% (through a 3.3% surcharge) where CIT due exceeds EUR763,000. A temporary non-deductible CIT surcharge also applies to companies or tax-consolidated groups with French-source turnover of at least EUR1 billion (for FYs closed as from 31 December 2025) or EUR1.5 billion (for FYs closed as from 31 December 2026). It is calculated on the average CIT due for the relevant and preceding FY, at 20.6% (turnover EUR1–3 billion) or 41.2% (turnover above EUR3 billion), with a smoothing mechanism to mitigate threshold effects.

Tax-transparent companies are not personally liable for CIT; however, they are required to calculate a taxable income. Their shareholders are then liable to CIT or income tax on their share of taxable profits – including non-resident corporate shareholders.

### Withholding Taxes

France imposes withholding taxes on certain payments to non-residents:

- dividends: 12.8% for non-resident individuals and 25% for non-resident companies;
- services rendered in France and paid to a foreign resident with no French presence: 25%;
- royalties: 25%; and
- profits deemed distributed by a French PE to its foreign head office: 25%.

Likewise, (i) French real estate capital gains, (ii) gains on shares in French real estate-oriented companies and (iii) gains on disposals of shares in French companies where the seller holds 25% or more of the share capital are subject to CIT at 25%. Interest payments to non-residents are not subject to withholding tax, unless paid in a non-cooperative jurisdiction.

These rates may be reduced or eliminated under applicable tax treaties or, for intra-EU flows, under the Parent-Subsidiary Directive (withholding tax exemption where the recipient holds at least 10% of the distributing company shares for a minimum of two years) and the Interest and Royalties Directive (withholding tax exemption where a direct shareholding of 25%+ exists between the paying and receiving entity, directly or through a common parent, for at least two years). These exemptions are subject to anti-abuse conditions and may be claimed upfront or a posteriori. Higher withholding tax rates apply for transactions with non-cooperative jurisdictions (see **5.7 Anti-Evasion Rules**).

### VAT

VAT is charged on the supply of goods and services at a standard rate of 20% (alternative rates of 10%, 5.5% or 2.1% may apply, depending on the nature of the

transactions). VAT incurred for business purposes can be offset or refunded. VAT applies to both French and foreign companies doing business in France. Special rules govern cross-border transactions.

### Transfer Tax

Transfer tax is applicable to certain asset transfers, with rates varying depending on the type of transaction:

- transfer of a stock company's shares: 0.1% (intra-group exemption available);
- transfer of a non-stock company interest (*part sociale*): approximately 3% (intra-group exemption available);
- transfer of shares in a real estate-oriented company: 5%;
- transfer of a going concern, client base or assimilated assets: approximately 5%; and
- transfer of real estate assets: generally, between approximately 5.9% and 6.4% (with a 0.6% surtax for office, commercial and warehouse assets located in Île-de-France); lower rates may be available subject to conditions.

Transfer tax applies to transactions executed in France or involving assets located in France, irrespective of the tax residence of the parties.

### Pillar Two Rules

France transposed into domestic law the Income Inclusion Rule (IIR) and the Qualified Domestic Minimum Top-up Tax (QDMTT), applicable from 1 January 2024, as well as the Undertaxed Payment Rule (UTPR), applicable from 1 January 2025, in order to ensure a global minimum effective tax rate of 15% for multinational groups with consolidated annual revenue of at least EUR750 million. France's Pillar Two rules have been granted transitional qualified status on the OECD's central record.

### Other Taxes

French resident companies and French permanent establishments may also be subject to other taxes in France. Notable examples include business property tax, companies' social security contribution, CVAE (*Cotisation sur la Valeur Ajoutée des Entreprises* – currently being phased out with full elimination scheduled for 2030), local property taxes and payroll tax (see **5.1 Taxes Applicable to Employees/Employers**).

## 5.3 Available Tax Credits/Incentives

Several tax credits and incentives are available to French resident companies and French PEs:

- *Tax losses*: Tax losses can be carried forward indefinitely (up to EUR1 million plus 50% of the taxable profit per FY) or carried back one year (up to EUR1 million).
- *Parent-subsidiary regime*: A 95% exemption applies to dividends received by a French parent from eligible French or foreign subsidiaries, where it holds at least 5% of the share capital of the distributing entity for at least two years. This results in an effective rate of approximately 1.3% (further reduced within tax-consolidated groups – see **5.4 Tax Consolidation**).
- *Long-term capital gains regime*: Capital gains on the disposal of qualifying equity participations (French or foreign) are effectively taxed at approximately 3.1%. Shares in real estate-oriented companies are excluded.
- *R&D tax credit* (*crédit d'impôt recherche*): Equal to 30% of eligible R&D expenses up to EUR100 million, and 5% above. Any excess credit is refunded after three years, or immediately for SMEs and newly created companies.
- *Innovation tax credit* (*crédit d'impôt innovation*): Available to SMEs at 20% of eligible expenses incurred for the design and prototyping of new products, capped at EUR400,000 per year.
- *Young Innovative Enterprise* (*jeune entreprise innovante*) *regime*: Open to SMEs incorporated for less than eight years, at least 50% owned by individuals or qualifying entities, and devoting at least 15% of their deductible expenses to R&D. Benefits include exemption from employer social contributions on qualifying R&D personnel, and potential property tax and Company Property Tax (*Cotisation foncière des entreprises*) exemptions for up to seven years.
- *IP box regime*: Optional 10% taxation on qualifying net income (nexus calculation) derived from the licensing, sublicensing or transfer of certain IP assets (mainly patents and copyrighted software).

Additional incentives may apply to specific investments and to investments made in specific geographic areas or in French overseas territories.

## 5.4 Tax Consolidation

France's tax consolidation regime allows eligible French groups to be taxed on a consolidated basis. To qualify, the group parent must hold, directly or indirectly, at least 95% of the share capital and voting rights of each member subsidiary. All group members must be subject to standard French CIT and share aligned FY opening and closing dates. Additionally, the parent must not itself be 95% held by another eligible French company. French subsidiaries held at 95% through an EU or EEA intermediary may also join the group under certain conditions ("*Papillon*" tax consolidation or horizontal consolidation).

Under this regime, the parent is solely liable for the group's CIT, calculated on the aggregate of the taxable profits and losses of all group members. Key benefits include:

- consolidation of the members' tax results, allowing losses of one member to be offset against the profits of another in the same FY;
- neutralisation of certain intra-group transactions, including capital gains on transfers of fixed assets (other than qualifying equity participations) and intra-group provisions;
- a 1% add-back rule on intra-group dividends eligible for the parent-subsidiary regime, in lieu of the standard 5% share of costs and expenses (subject to a one-year holding period); and
- carryforward or carryback of tax losses at group level.

## 5.5 Thin Capitalisation Rules and Other Limitations

### Related-Party Interest Limitation

Interest paid to related companies (ie, companies that directly or indirectly control the borrower, are controlled by it, or are under common control) is deductible only up to a periodically published safe harbour rate or, if higher, the arm's length rate.

### Anti-Hybrid Rules

In line with the EU Anti-Tax Avoidance Directive (ATAD 2), anti-hybrid rules neutralise mismatch arrangements, ie, payments that are deductible in one jurisdiction but not taxed in another.

### General Interest Deduction Limitation Rule (EBITDA Cap)

In line with the EU Anti-Tax Avoidance Directive (ATAD 1), a taxpayer's net financing charges for a given FY are deductible only up to 30% of tax-adjusted EBITDA or EUR3 million, whichever is higher. The same thresholds apply to tax-consolidated groups but are calculated and assessed on a consolidated basis (net financial expenses being likewise determined at group level).

Where a company or group is thinly capitalised (ie, average related-party debt exceeds 1.5 times accounting net equity), these thresholds are reduced to 10% of tax EBITDA and EUR1 million. A safe harbour may allow a taxpayer belonging to an accounting consolidated group to claim an additional deduction equal to 75% of the net financial expenses disallowed under the 30% cap.

Disallowed net financing charges may be carried forward indefinitely, while unused deduction capacity (where the threshold exceeds the net financial expenses) may be carried forward for up to five FYs.

### Consolidated Tax Group Specific Limitation

Within a tax-consolidated group, interest on debt incurred to acquire shares in a company from a related party, where that acquired company is part of, or subsequently joins, the group, is partially non-deductible over a period of eight FYs following the acquisition (the "*amendement Charasse*").

## 5.6 Transfer Pricing

### Legal Framework

France has comprehensive transfer pricing (TP) rules requiring transactions between affiliated enterprises to comply with the arm's length principle, allowing the French tax authorities to adjust taxable income accordingly. Companies must maintain documentation demonstrating such compliance.

### Documentation Requirements

In line with OECD BEPS Action 13, France applies tiered TP documentation obligations based on size thresholds. French entities (companies or PEs of foreign companies) with revenue or gross assets of at least EUR150 million – as well as their French affiliates (parent, subsidiary or member of the same French tax consolidated group) – must prepare a full master file and local file, to be provided upon request during a tax audit. The same entities must also file an annual TP form within six months of their corporate income tax return, the threshold being lowered to EUR50 million for this purpose.

### Country-by-Country Reporting

French-headquartered multinational enterprise (MNE) groups with consolidated annual turnover of at least EUR750 million must file a country-by-country report (CbCR) within 12 months of the end of the relevant FY. French entities belonging to a foreign-headquartered MNE meeting the same threshold may also be required to file, where the CbCR is not filed in a jurisdiction having an information exchange agreement with France.

### Advance Pricing Agreements and Dispute Resolution

Companies may secure their TP positions through unilateral, bilateral or multilateral Advance Pricing Agreements. France participates in the OECD's mutual agreement procedure (MAP) and the EU Arbitration Convention and is a signatory to the OECD Multilateral Instrument (MLI), which strengthens dispute resolution mechanisms – including mandatory binding arbitration – across France's bilateral tax treaties.

## 5.7 Anti-Evasion Rules

### General Anti-Abuse and Evasion Rules

French tax law includes a range of general anti-avoidance measures targeting artificial or tax-driven arrangements. Under the abuse of law (*abus de droit*) doctrine, the French tax authorities may disregard transactions that are fictitious or exclusively motivated by the circumvention of tax legislation, with penalties of up to 80%. The "mini" abuse of law rule, applicable to acts carried out from 1 January 2020 onwards, extends this approach to arrangements whose main – rather than exclusive – purpose is to avoid or reduce tax.

Certain preferential tax regimes are subject to specific anti-abuse rules targeting fraudulent schemes and absence of substance (eg, the parent-subsidiary regime specific anti-abuse rule). Flows involving residents of non-cooperative jurisdictions are generally subject to a 75% withholding tax rate (notably on interest payments, capital gains, fees and dividends) and denied tax deductibility or exclusion from certain tax regimes.

Finally, treaty benefits may be denied where obtaining them was one of the main purposes of an arrangement or where the recipient is not the beneficial owner of the income.

### CFC Rules

French controlled foreign corporation (CFC) rules apply to profits of foreign branches and subsidiaries that are more than 50% owned and established in tax-privileged jurisdictions, ie, where the local CIT payable is less than 60% of the French theoretical tax (a difference of more than 40%). Such profits are subject to CIT in France in proportion to the French resident company's shareholding. Within the EU, a safe harbour limits the application of the CFC rules to purely artificial arrangements aimed at circumventing French tax legislation.

### Mandatory Disclosure Rules (DAC6)

France has transposed the EU Directive on mandatory disclosure of cross-border tax arrangements (DAC6). Intermediaries (and, in certain circumstances, taxpayers) must report cross-border arrangements meeting one or more prescribed hallmarks to the French tax authorities within 30 days of the relevant trigger event. The reported information is automatically exchanged with the tax authorities of other Member States.

## 5.8 Tariffs

In France, customs tariffs are set at EU level by the Council on a proposal from the European Commission (EC). The level of duty depends on three factors: the product classification; its origin; and the possible application of trade agreements, quotas or restrictions.

Customs duties are calculated on the value of the product, and the applicable rate is set out in the Integrated Tariff of the European Union (TARIC). In principle, that rate is the same regardless of the product's origin. However, exceptions may arise from free trade agreements, tariff quotas, preferential origin regimes or trade defence measures.

## 6. Competition Law

### 6.1 Merger Control Notification

Transactions that constitute a concentration and meet the French thresholds must be notified to the FCA prior to their implementation.

#### Types of Transactions Covered

A concentration occurs under either of the following circumstances:

- two or more independent undertakings merge; or
- one or more persons or undertakings already controlling at least one undertaking acquire control of the whole or parts of one or more other undertakings.

Following a concentration, an undertaking may exercise decisive influence alone, in which case it will be deemed to have exclusive control. An undertaking may also exercise decisive influence jointly with another undertaking(s), in which case they will together be deemed to have joint control. Joint control over an undertaking arises from either parity in the voting rights or the ability for a minority shareholder to block certain strategic decisions (such as the adoption of the budget or business plan or the appointment of top management).

Creating a joint venture that performs all the functions of an autonomous economic entity on a lasting basis also constitutes a concentration.

#### Thresholds

Concentrations must be notified to the FCA when the following three thresholds are cumulatively met:

- the combined worldwide turnover exceeds EUR150 million;
- the domestic turnover of each of at least two parties exceeds EUR50 million; and
- the transaction does not fall within the jurisdiction of the EC.

Law No. 2026-403 of 26 May 2026 on the simplification of economic life will raise the French merger control notification thresholds for the first time since 2004. As from 1 September 2026, transactions must be notified to the FCA when:

- the combined worldwide turnover exceeds EUR250 million;
- the domestic turnover of each of at least two parties exceeds EUR80 million; and
- the transaction does not fall within the jurisdiction of the EC.

Furthermore, the specific thresholds applicable to the retail sector have also been increased by Law No. 2026-403, while those applicable to French overseas territories remain unchanged. The reform is expected to reduce the annual number of notifiable transactions by 20–30%, mainly in the retail sector.

#### Exemptions

There are no exemptions under French merger control rules. Filing is mandatory whenever the thresholds are met. However, a simplified procedure is available in certain unproblematic cases, such as the constitution of an offshore joint venture or a concentration leading to no horizontal overlaps or vertical links.

#### Review of Concentrations Under Thresholds

In line with the ECJ's *TowerCast* judgment of 16 March 2023 (C-449/21), the FCA can conduct sub-threshold reviews of concentrations that may lead to an abuse of dominant position prohibited by Article 102 of the Treaty on the Functioning of the European Union (TFEU) or constitute an anti-competitive agreement under Article 101 of the TFEU.

In addition, following the ECJ's decision in the *Illumina/Grail* matter, the FCA is pushing for a legal reform that would lead to the introduction of a call-in power, enabling the FCA to review transactions in strategic sectors that fall below the legal thresholds, particularly within the technology and healthcare industries.

### Criteria for Antitrust/Competition Review

The extent of the competitive assessment by the FCA will largely depend on the impact of the concentration on the market. Concentrations that are eligible for a simplified procedure (eg, operations that are unlikely to cause any harm to competition) will require significantly less information than standard filings.

In standard filings, the parties are expected to provide market share and competitor information and describe the competitive environment in which the new entity will compete post-concentration, including the existence of barriers to entry, the existence of countervailing buyer power, the potential entry of new players, and the existence of spare capacity.

## 6.2 Merger Control Procedure

The notification process is divided into the following three phases:

- *Pre-notification phase*: Pre-notification is not mandatory but is encouraged for cases that may raise concerns (eg, preliminary questions on controllability or if it is anticipated that the transaction will give rise to competition issues). The pre-notification phase takes about one to two weeks and can be longer for complex cases. The FCA indicates in its guidelines that a notification that has undergone an effective pre-notification phase is generally declared complete on the day on which it is submitted. Transactions eligible for the simplified procedure are notified directly, without pre-notification.
- *Phase I*: This phase takes about 25 workings days. If commitments are offered, this phase can be extended by a further 15 working days, and an additional 15 working days may be granted at the request of the parties. Following a Phase I review, the FCA can authorise the concentration (either unconditionally or subject to remedies) or, if serious doubts remain as regards anti-competitive effects, initiate an in-depth examination known as Phase II.
- *Phase II* (*for complex cases only where an in-depth analysis is necessary*): Phase II takes about another 65 workings days. If commitments or amendments to commitments are submitted less than 20 days before the decision deadline, the review period may be extended by 20 working days, up to a maximum of 85 working days. The parties may request a further extension of 20 working days.

Following a Phase II decision, the Minister of the Economy may call in the case to review the concentration on grounds other than that of maintaining competition, such as general interest, industrial development and employment concerns.

### Suspensory Filing

Filing is suspensory. Therefore, the transaction cannot be implemented prior to the FCA's clearance.

The FCA can impose a fine of up to 5% of the entity's French turnover for failure to notify or for early implementation. In the event of failure to notify operations, the party responsible for notification must resubmit the notification.

## 6.3 Cartels

Article L. 420-1 of the FCC prohibits agreements and concerted practices which have as their object or effect the prevention, restriction or distortion of competition in a market. It is the national equivalent to Article 101 of the TFEU.

In particular, such practice is prohibited where it (i) limits access to the market or the free exercise of competition by other undertakings, (ii) impedes the determination of prices by the free play of market forces by artificially encouraging the increase or reduction of prices, (iii) limits or controls production, markets, investment or technical development, or (iv) shares markets or sources of supply.

French competition law applies concurrently with EU competition law. In practice, the FCA, which is empowered to apply EU competition law, enforces national provisions in line with the decisional practice of the EC and the case law of the EU courts, reflecting the principles of effectiveness and the direct applicability of EU law within the national legal order.

The FCA has jurisdiction where it can be established that there is a sufficiently close connection between the alleged infringement and the French territory. Such a close connection will be established where the following cumulative conditions are met:

- the practice produces direct, substantial, actual or foreseeable effects in France, or is implemented or originates there;
- the FCA is in a position to bring the entire infringement effectively to an end; and
- the FCA is able to gather, potentially with the assistance of other authorities, the evidence required to establish the infringement.

The FCA may impose fines of up to 10% of the highest worldwide turnover, excluding VAT, achieved by the undertaking concerned in any of the years during which the anti-competitive conduct took place.

### 6.4 Abuse of Dominant Position

Article L. 420-2 of the FCC prohibits the abuse by an undertaking or a group of undertakings of its dominant position in the domestic market, in line with Article 102 of the TFEU. The demonstration of such an anti-competitive practice requires, as a preliminary condition, establishing that the undertaking concerned, or the group of undertakings, holds a dominant position in the market. Secondly, the abuse of such position is prohibited by French competition law, which may, in particular, consist in refusals to deal, tying practices or discriminatory conditions of sale.

The interplay between French and EU competition law described above equally applies here: the FCA, empowered to enforce both sets of rules, ensures a consistent approach with the EC's decisional practice and EU case law, in line with the principles of effectiveness and direct applicability of EU law.

French competition law also recognises a standalone practice of abuse of economic dependence, which does not exist under EU law. Such a practice is established where the following cumulative conditions are met:

- the existence of a situation of economic dependence, assessed *in concreto* on the basis of factual elements (ie, an undertaking must be unable, within a reasonable period of time, to obtain a technically and economically equivalent alternative to the contractual relationships concerned);
- an abuse of that situation of economic dependence – eg, through the imposition of unfair trading conditions; and
- an effect on the functioning or the structure of competition.

As set out above in relation to cartels, the FCA's jurisdiction over abuse of dominance cases is triggered where a sufficiently close connection with French territory can be established, based on the same cumulative criteria (effects, implementation or origin in France; ability to bring the infringement to an end; and ability to gather the required evidence).

The same sanctioning framework also applies, with fines of up to 10% of the highest worldwide turnover (excluding VAT) achieved by the undertaking concerned during any year in which the infringement took place.

## 7. Intellectual Property

### 7.1 Patents

#### Definition

A patent protects a technical invention (eg, a product, a process or a device), provided that it is new, involves an inventive step and is capable of industrial application. Discoveries, scientific theories, mathematical methods, aesthetic creations, business methods and computer programs "as such" are excluded from patentability.

#### Length of Protection

A French patent is protected on the French territory for 20 years from the filing date, subject to the regular payment of annuities. Supplementary protection certificates may extend protection for certain medicinal and plant protection products.

#### Registration Process

A French patent application is filed with the French National Industrial Property Institute (*Institut national de la propriété industrielle*, or INPI). The invention must be described in the patent application in a manner that is sufficiently clear and complete to enable a person skilled in the art to carry it out. The application is examined for formal requirements and patentability.

A search report is drawn up, and the application is generally published 18 months after filing. Protection may also be obtained in France through a European patent filed with the European Patent Office, with or without unitary effect where applicable.

### Enforcement and Remedies

The claims define the scope of the protection. Patent owners may bring civil infringement proceedings before the competent specialised judicial courts and may seek preliminary or permanent injunctions, seizure of evidence (*saisie-contrefaçon*), damages, recall or destruction of infringing goods, and publication of the judgment. Certain acts of patent infringement may also give rise to criminal liability, and customs measures may be available.

## 7.2 Trade Marks

### Definition

A trade mark is a sign used in the course of trade to distinguish the goods or services of one undertaking from those of others. It may consist, in particular, of words, names, logos, letters, numerals, colours, shapes, sounds or other signs, provided that it can be represented in the register in a manner enabling the competent authorities and the public to determine the clear and precise subject matter of protection. To be eligible for trade mark protection and ensure the function of guarantee of origin, the sign must also be distinctive (ie, it must be unrelated to the goods and services for which the protection is sought) and not be generic, descriptive, or common in relation to the goods or services in question. Moreover, the sign must also be lawful, non-deceptive and available (ie, distinct from prior third-party rights).

### Length of Protection

A French trade mark registration is valid for ten years from the filing date and may be renewed indefinitely for further ten-year periods, subject to renewal formalities and payment of fees.

A trade mark may be revoked, notably for non-use in case the mark has not been genuinely used for an uninterrupted period of five years or in case the sign has become the common commercial designation of the product or service at stake.

### Registration Process

A French trade mark application is filed with the INPI, specifying the sign and the goods and services, according to the Nice Classification, for which the protection is sought. The INPI examines absolute grounds for refusal and publishes the application, and third parties may file observations or oppositions based on earlier rights. If no refusal or successful opposition is raised, the mark is registered.

Protection in the French territory may also be obtained through an EU trade mark filed with the EUIPO, or through an international registration designating France or the EU under the Madrid system and filed with the WIPO.

### Enforcement and Remedies

The trade mark owner may prohibit unauthorised use of identical or similar signs for identical or similar goods or services provided that there is a use in the course of trade and such use is likely to generate likelihood of confusion in the public's mind.

The trade mark owner may also rely on enhanced protection for marks with a reputation allowing the owner to claim protection beyond the goods and services for which the trade mark is registered, provided that certain conditions are met.

The trade mark owner may seek injunctions, damages, seizure of evidence (*saisie-contrefaçon*), recall or destruction of infringing goods, and publication of the judgment. Customs measures and criminal sanctions may also be available.

## 7.3 Industrial Designs

### Definition

A design protects the appearance of the whole or part of a product resulting, in particular, from the features of lines, contours, colours, shape, texture or materials of the product or its ornamentation. To be protected as a registered design, it must be new and have individual character.

### Length of Protection

A French registered design is protected for an initial period of five years from filing and may be renewed in five-year periods up to a maximum of 25 years. At

EU level, an unregistered design is protected for three years from the date on which it was first made available to the public within the EU.

### Registration Process

A French design application is filed with the INPI and must identify the applicant, the product indication and reproductions of the design. The INPI conducts a formal examination and publishes the registration, subject to possible deferment of publication.

Protection may also be obtained by filing an EU registered design with the EUIPO or through an international design registration under the Hague system with the WIPO.

### Enforcement and Remedies

A design owner may bring infringement proceedings against unauthorised making, offering, placing on the market, importing, exporting, using or stocking of products incorporating the protected design.

Available remedies include injunctions, seizure of evidence (*saisie-contrefaçon*), damages, recall or destruction of infringing goods, and publication of the decision. Customs measures and criminal sanctions may also be available in appropriate cases.

## 7.4 Copyright

### Definition

Copyright protects original works of the mind, whatever their genre, form of expression, merit or purpose, including literary, artistic, musical, audiovisual, graphic and software works. Provided that it is original (ie, it bears the author's footprint) and expressed in a form (ie, ideas and concepts are not eligible for copyright protection), the work is protected from the date of its creation.

### Length of Protection

Economic rights last for the life of the author plus 70 years after death. Moral rights (eg, right of paternity, right of integrity) are perpetual, inalienable and imprescriptible under French law. Specific rules apply to collaborative works, collective works, audiovisual works, posthumous works and related rights.

### Registration Process

There is no copyright registration in France. Rights arise automatically from creation. In practice, authors or right holders may use evidence-preservation tools, such as deposits with a bailiff/commissioner of justice, the INPI e-Soleau envelope or trusted timestamping, to evidence the date and content of a work, but these are not constitutive of rights.

### Enforcement and Remedies

Copyright owners may act against unauthorised reproduction, representation or adaptation of their works and/or in case of infringement of their moral rights. Remedies include injunctions, seizure of evidence, damages, withdrawal, recall or destruction of infringing copies, publication of the judgment, and criminal sanctions in appropriate cases.

## 7.5 Others

### Software

Computer programs are protected by copyright as literary works, provided that they are original. Protection notably covers the source code, object code and preparatory design material, but not the ideas or principles underlying the program. In France, the economic rights in software created by employees in the performance of their duties are, unless otherwise agreed, vested in the employer.

### Databases

Databases may benefit from copyright protection where the selection or arrangement of their contents is original. In addition, the database producer may benefit from a sui generis right where there has been a substantial investment in obtaining, verifying or presenting the contents. The sui generis right generally lasts 15 years from completion or from the database being made available to the public, subject to renewal where a substantial new investment is made.

### Trade Secrets and Know-How

Trade secrets are protected where information is not generally known or readily accessible, has commercial value because it is secret, and has been subject to reasonable protective measures by its lawful holder. Protection does not require registration and lasts as long as these conditions remain satisfied.

## 8. Data Protection

### 8.1 Applicable Regulations

France's data protection framework is primarily based on the EU General Data Protection Regulation (GDPR), which applies directly across all Member States and has extraterritorial scope. The GDPR sets out the core principles governing the processing of personal data, including lawfulness, transparency, purpose limitation, data minimisation and security, as well as detailed obligations for controllers and processors.

This framework is complemented at national level by the French Data Protection Act (*Loi informatique et libertés*), as amended, which supplements the GDPR in areas where Member States retain flexibility (eg, certain processing conditions, enforcement procedures, and specific rules for public sector or sensitive data processing).

Together, these instruments establish a comprehensive regime governing the collection, use, storage and transfer of personal data. They apply not only to entities established in France, but also to foreign organisations that target individuals in the EU or monitor their behaviour.

In line with the GDPR, non-compliance may result in significant administrative fines, which can reach up to 4% of a company's global annual turnover, depending on the severity of the infringement.

### 8.2 Geographical Scope

EU and French data protection rules have a broad extraterritorial reach, meaning they can apply to foreign companies even if they have no physical presence in France or the EU.

Under the GDPR, these rules apply to any organisation that offers goods or services to individuals located in the EU, whether or not payment is required, or that monitors the behaviour of individuals within the EU – eg, through tracking or profiling techniques. As a result, a foreign company targeting customers in France – eg, through a website in French, pricing in euros or marketing campaigns directed at EU residents – will typically be subject to the GDPR and, where relevant, to certain provisions of French law.

In practice, this means that such companies must comply with the core requirements of the GDPR, including having a valid legal basis for processing personal data, providing clear and transparent information to individuals, implementing appropriate security measures, respecting data subject rights and complying with the rules governing international data transfers.

In addition, where they are not established in the EU, foreign companies may be required to appoint an EU representative and will need to engage with European supervisory authorities.

Overall, this extraterritorial framework ensures that foreign and EU-based companies are subject to equivalent data protection standards when they target individuals in France or elsewhere in the EU.

### 8.3 Role and Authority of the Data Protection Agency

In France, the authority responsible for enforcing data protection rules is the National Commission on Informatics and Liberty (*Commission nationale de l'informatique et des libertés*, or CNIL).

The CNIL is an independent administrative authority tasked with ensuring the proper application of the GDPR and the French Data Protection Act. Its role is both regulatory and supervisory. On the one hand, it issues guidance, recommendations and practical tools to help organisations understand and comply with their obligations. On the other, it monitors compliance through audits and investigations, which may be carried out on-site, remotely, or on the basis of documentary evidence.

The CNIL also has significant corrective and enforcement powers. It may issue warnings or formal notices, order organisations to bring processing operations into compliance, restrict or suspend certain data processing activities, and impose administrative fines. In line with the GDPR, these fines can reach up to EUR20 million or 4% of the undertaking's global annual turnover, whichever is higher, depending on the seriousness of the infringement.

In a cross-border context, the CNIL co-operates with other EU data protection authorities within the framework established by the GDPR, in particular through the "one-stop shop" mechanism, whereby a lead supervisory authority co-ordinates decisions concerning organisations operating in several Member States.

Overall, the CNIL plays a central role in both guiding organisations and enforcing compliance, ensuring the consistent and effective application of data protection rules in France and across the EU.

## 9. Looking Forward

### 9.1 Upcoming Legal Reforms

Several legislative developments are expected to influence the French legal and tax landscape in the short to medium term:

- *Finance Bill for 2027*: The Finance Bill for 2027 (*Loi de finances pour 2027*) is expected to be presented to Parliament in the autumn of 2026 and adopted by the end of the year. It is, at this stage, too early to anticipate the content of the measures that will be included, although this bill should be influenced by the sustained pressure on French public finances and the government's commitment to a credible deficit consolidation path. This bill will be the last finance bill before the 2027 presidential elections.
- *EU AI Act*: Key obligations applicable to high-risk AI systems, originally scheduled to enter into force on 2 August 2026, are now expected to be deferred to late 2027 under the EU's Digital Omnibus simplification package.
- *EU FDI Screening Regulation*: Formally adopted by the Council on 8 June 2026, the revised regulation will need to be implemented by Member States within 18 months, with expected application in January 2028.
- *Pay transparency*: The draft bill transposing EU Directive 2023/970 of 10 May 2023 is currently before the French Parliament and will replace the existing gender equality index with seven new indicators applicable to employers with 50 or more employees.
- *Merger control*: Following the ECJ's *Illumina/Grail* decision, the FCA is considering adopting new guidelines introducing a call-in power, enabling it to review below-threshold transactions in strategic sectors such as technology and healthcare.

# Trends and Developments

Hugo Sanchez de la Espada, Robin Gaulier, Magalie Dansac Le Clerc and Aurore Cormary
**Baker McKenzie Paris**

**Baker McKenzie Paris** is a leading international law firm offering a comprehensive, multidisciplinary approach to legal services. Its top-tier teams combine expertise across key practice areas including tax, corporate, employment, data protection, intellectual property and antitrust. With a deep understanding of both national and international markets, the firm provides seamless, cross-border solutions tailored to its clients' strategic objectives. Baker McKenzie supports businesses at every stage of their development, from establishing operations in France to expanding globally, ensuring compliance, managing risk and unlocking opportunities. The firm's integrated, client-focused approach enables it to deliver innovative and practical advice, helping clients confidently invest, grow and succeed in the dynamic French and international business environment.

## Authors

**Hugo Sanchez de la Espada** joined Baker McKenzie in 2005. He leads the Mergers & Acquisitions practice group in Paris. Hugo is also Chair of the CG&R (consumer, goods and retail) group in Paris. Hugo is an experienced lawyer in merger and acquisition transactions for French and foreign clients. He works particularly on acquisitions and sales of French or foreign companies or groups, on domestic, cross-border or multi-jurisdictional transactions as well as on joint venture operations, with a particular focus and expertise on the CG&R and healthcare/life sciences sectors. In addition, Hugo generally works in corporate law, as well as on private equity projects and group restructurings. He was seconded at the Baker McKenzie office in San Francisco for two years.

**Robin Gaulier** joined the Tax department of Baker McKenzie in Paris in 2019 and became counsel in July 2024. Robin advises French and international companies as well as private equity firms on domestic and international tax law. He is active in all corporate tax law matters. His practice is especially focused on M&A (tax structuring, tax due diligence, SPA and post-deal reorganisations). Prior to joining Baker McKenzie, Robin was a manager in the M&A Tax department of PwC in Paris from 2017 to 2019, and before that, was an associate in the Tax department of Gide in Paris from 2014 to 2017.

## France as a Business Destination

In 2026, France remains the leading European destination for foreign investments and, even in a more selective international environment, the country continues to draw substantial international capital. For the seventh consecutive year, France ranked first in Europe in 2025 by number of foreign investment projects, with 852 projects, ahead of the United Kingdom and Germany. These figures reflect a set of deep-rooted structural advantages: world-class infrastructure, a highly skilled workforce, a dynamic innovation ecosystem fuelled by initiatives such as French Tech, Choose France and the France 2030 investment plan, and a central geographic location within Europe.

At the same time, however, the French business environment is operating under greater pressure than in previous years, with political tensions, fiscal and high public debt constraints, and a more volatile international context impacting investment decisions directly.

## Political and Economic Context

France has experienced a period of significant political instability since the 2024 snap elections, with a succession of short-lived governments and difficult parliamentary arithmetic that long delayed budgetary decisions. A measure of stability has, however, returned with the appointment of Sébastien Lecornu as Prime Minister, allowing the government to push through some reforms and to maintain a credible trajectory to keep the public deficit under control.

France nonetheless remains under pressure to reduce its public deficit, which stood at 5.1% of GDP in 2025, with public debt projected to exceed 118% of GDP by end-2026. The government's consolidation efforts have, however, been acknowledged at both European and market levels: the European Commission has kept the excessive deficit procedure opened in 2024 suspended, recognising France's compliance with its commitments, and Standard & Poor's maintained France's "A+" sovereign rating with a stable outlook in May 2026. The political context nonetheless remains tense in the run-up to the 2027 presidential elections, which are likely to weigh on consumer and business confidence and complicate the adoption of structural reforms.

On the macroeconomic front, France is exposed to a deteriorating international environment, marked by new US tariffs and the economic fallout of the war in the Middle East, which has triggered a sharp rise in energy prices across Europe. France has, however, proved more resilient than its main neighbours: inflation stood at 2.8% in May 2026 below Italy and below the projected euro area average, supported by its largely decarbonised, nuclear-based electricity mix, which insulates the country from the doubling of gas prices triggered by the closure of the Strait of Hormuz. Activity has nonetheless slowed, with growth projected at 0.5–0.7% in 2026, unemployment rising to 8.1% in Q1 2026 and corporate insolvencies reaching a historic high. Looking ahead, the resolution of the conflict in the Middle East is expected to have a materially positive impact on the French economy, easing energy prices, restoring supply chain stability and improving overall business and consumer confidence across the euro area.

Despite this challenging environment, certain sectors continue to attract major investments and drive growth. French industry has shown remarkable resilience, with manufacturing output rebounding strongly in early 2026 (+1.3% in March and +0.4% in April) and helping the economy to avoid a technical recession. This momentum is supported by historically high levels of corporate investment, which are now more than 10% above pre-pandemic levels, and by the structural strength of strategic industrial sectors, including aerospace, naval, space and rail equipment, whose output now exceeds 2019 levels by nearly 28%. The defence sector, in particular, is operating at full capacity, supported by NATO members' rearmament commitments and heightened geopolitical tensions, with strong order intake at Thales and other prime contractors and a record contribution to French exports.

France is also emerging as Europe's leading hub for artificial intelligence and is set to become one of the continent's primary territory for AI infrastructure, supported by its abundant, decarbonised, nuclear-based electricity supply. The 2026 Choose France summit confirmed this dynamic, with a record EUR93 billion of announced foreign investments driven largely by AI projects, including Japanese group SoftBank's landmark commitment of up to EUR75 billion to develop

AI data centres across the country. Beyond infrastructure, France hosts some of Europe's most prominent AI players, most notably Mistral AI, which is now valued at around EUR11.7 billion following its 2025 fundraising rounds and stands as a key challenger to US and Chinese leaders in generative AI.

France's appeal also extends well beyond technology and innovation, as illustrated by its tourism sector: in 2025, France confirmed its position as the world's leading tourist destination, welcoming a record 102 million international visitors and generating EUR77.5 billion in international tourism receipts (up 9% year-on-year), with travel and tourism contributing approximately 9.1% of national GDP. In 2026, the French tourism market remains robust, underpinned by a structural shift in consumer preferences towards proximity tourism, in a context of heightened uncertainty and deep changes in consumption patterns, particularly in the travel sector where customers are increasingly looking for holidays that are closer to home, more responsible and more meaningful. This trend supports domestic and local tourism.

More generally, the continued attractiveness of France is also reflected in the dynamism of its M&A market, which started 2026 on a strong note, with the value of announced transactions involving a French party up 40% year-on-year in the first quarter of 2026, driven by a sharp rebound in outbound activity and a series of large strategic deals across the energy, healthcare, luxury and retail sectors. Notable deals include Engie's USD21.3 billion offer for UK Power Networks, Servier's USD2 billion acquisition of Day One Biopharmaceuticals and Kering's sale of its beauty division to L'Oréal for EUR4 billion. Industrial players, supported by solid balance sheets, are now leading the deal flow in a market where private equity firms remain cautious due to elevated portfolio valuations and tighter financing conditions.

## Setting Up a Business in France: Legal Framework and Corporate Structures

France offers a wide range of corporate forms to accommodate different business needs. The most commonly used vehicle for domestic and foreign investors is the simplified stock corporation (*société par actions simplifiée* – SAS), which is particularly valued for its flexibility and streamlined governance framework.

French corporate law is well integrated within the broader European legal framework and provides efficient mechanisms for implementing domestic and cross-border reorganisations, including mergers, demergers, corporate conversions and migrations. Cross-border transactions can generally be carried out both within the European Union and, subject to applicable reciprocity requirements and recognition principles, with non-EU jurisdictions.

Compared with a number of other European jurisdictions, the transfer of shares or businesses in France is generally straightforward and does not typically require the involvement of a notary, resulting in greater transactional efficiency and reduced formality.

From an administrative perspective, the ongoing digitalisation of corporate registries has significantly simplified incorporation and post-incorporation formalities. Most corporate filings can now be completed online, and electronic signatures are now widely accepted for corporate documentation.

In the area of corporate governance, recent years have seen increased transparency requirements, particularly through the implementation of beneficial ownership disclosure rules. The Loi PACTE has also encouraged companies to consider broader stakeholder interests by allowing them to define a corporate purpose (*raison d'être*). In parallel, French corporate law continues to evolve through legislative reforms and case law developments affecting shareholders' agreements, drag-along and tag-along mechanisms, and joint venture governance arrangements.

Overall, France offers a modern and flexible legal framework for the establishment, structuring and operation of businesses, while benefiting from the legal certainty afforded by a mature and well-developed judicial system.

## Foreign Direct Investment (FDI) Screening

France maintains one of the most robust foreign investment control regimes among OECD countries, covering strategic sectors including defence, energy,

healthcare, technology, artificial intelligence, telecommunications, water supply, critical raw materials, and critical technologies such as cybersecurity and biotechnology.

The scope of the regime has been progressively expanded since 1 January 2024 to encompass activities related to the extraction and processing of critical raw materials and expressly included French branches (*succursales*) of foreign companies within its perimeter. This strengthened framework has not, however, diminished France's attractiveness: for the seventh consecutive year, France ranks as the leading destination for FDI in Europe. FDI filing activity continues to grow, with 417 FDI filings submitted in 2025, up from 392 in 2024.

At EU level, the revised EU FDI Screening Regulation – which aims to move from a patchwork system towards a harmonised baseline across EU Member States – was formally adopted by the Council of the EU on 8 June 2026. The Member States will have 18 months to implement the required national screening mechanisms ahead of the regulation's expected application in January 2028.

### Antitrust

In terms of recent regulatory changes, the French Competition Authority (FCA) introduced a "pact of trust" to simplify antitrust screening procedures for straightforward transactions, enabling them to be notified without the need for pre-notification. At the same time, Law No. 2026-403 of 26 May 2026 on the simplification of economic life, enacted following the Constitutional Council's decision of 21 May 2026, raises the French merger control notification thresholds for the first time since 2004. From 1 September 2026, a transaction must be notified to the FCA where (i) the combined worldwide turnover of the parties exceeds EUR250 million (up from EUR150 million) and (ii) at least two of the parties each generate more than EUR80 million in turnover in France (up from EUR50 million). The specific lower thresholds applicable to the retail sector have also been increased, while the thresholds applicable to French overseas territories remain unchanged. The reform is expected to reduce the annual number of notifiable transactions by 20–30%, mainly in the retail sector.

In addition, following the European Court of Justice's decision in the *Illumina/Grail* matter, the FCA is considering adopting new directives that would enable it to review transactions in strategic sectors that fall below the legal thresholds, particularly within the technology and healthcare industries.

The FCA demonstrates a notably active and robust level of enforcement in France, positioning itself among the most vigorous competition authorities both within Europe and internationally.

### Employment Law

France has one of the most protective employment frameworks in Europe, governed by the French Labour Code and extensive collective bargaining, with strong dismissal protections, mandatory employee representation above certain headcount thresholds and an active role for the labour courts (c *onseils de prud'hommes*).

Successive reforms have nonetheless introduced greater flexibility for employers, most notably the 2017 Ordonnances Macron, which capped damages for unfair dismissal and streamlined social dialogue. France also offers employers a comprehensive toolkit to attract and retain talent, ranging from the favourable inpatriate tax regime to a wide range of employee incentive and profit-sharing schemes.

Recent developments include the transposition of EU Directive 2023/970 of 10 May 2023 on pay transparency, currently being discussed before Parliament. The draft bill will replace the existing gender equality index (in place since 2019) with seven new indicators to be published by employers with 50 or more employees, covering in particular overall gender pay gaps, variable pay components and pay quartiles.

### Tax Overview: Key Considerations

After several years of pro-business reforms, most notably the gradual reduction of the corporate income tax rate from 33.33% to 25%, the reduction of production taxes and the steady improvement of incentives for innovation, the French tax landscape has tightened since late 2024, in a context marked by heightened pressure on public finances and the need to consolidate the budget deficit.

Recent reforms have introduced several tax increases targeting both large companies and high-income individuals. For companies, the Finance Acts for 2025 and 2026 introduced and extended a temporary additional contribution on the profits of large enterprises, which can bring the effective corporate tax rate up to 36% for the largest groups, while the planned phase-out of the local *cotisation sur la valeur ajoutée des entreprises* (CVAE, a local value-added tax on businesses) has been postponed until 2030.

For individuals, the Finance Act for 2025 introduced a comprehensive reform of management packages, under which capital gains realised on equity instruments by managers and employees are now in principle taxed as salaries, together with a Differential Contribution on High Incomes (CDHR) ensuring a minimum 20% effective tax rate on the highest earners. The Finance Act for 2026 further introduced a new 20% annual tax on certain assets held by patrimonial holding companies, while the Social Security Financing Act for 2026 raised the social security contributions on capital income from 9.2% to 10.6%.

Despite this tightening, France remains an attractive jurisdiction from a corporate tax standpoint for foreign corporate investors. The country benefits from one of the world's most extensive networks of double tax treaties, with approximately 120 bilateral conventions in force, allowing investors to mitigate withholding tax leakage and secure the tax treatment of cross-border flows.

The French tax framework also offers a number of tax incentives and a particularly competitive environment for innovation, supported by the Research Tax Credit (*Crédit d'impôt recherche*), the Innovation Tax Credit (*Crédit d'impôt innovation*), the Patent Box regime taxing qualifying IP income at 10% and the Young Innovative Company (*Jeune Entreprise Innovante*) regime, which together position France as one of the most attractive European jurisdictions for R&D and innovation activities.

### Intellectual Property and Data Protection

France offers a robust and modern legal framework that effectively protects innovation and intangible assets, fully harmonised with EU standards. The National Institute of Industrial Property (INPI) plays a central role, with fully dematerialised filing procedures and updated guidelines for the filing of registered rights. In addition to registered rights, the French landscape covers the full spectrum of intellectual property rights including copyright, trade secrets and know-how, and is supported by specialised IP chambers within French courts as well as efficient interim relief mechanisms. French companies and IP practitioners also benefit from the Unified Patent Court, which has rapidly built up its case law since 2023 and is now firmly established as a key forum for European patent litigation.

Data protection is equally well established in France, with the GDPR fully embedded in business practices and the *Commission Nationale de l'Informatique et des Libertés* (CNIL) recognised as one of Europe's most active and influential supervisory authorities. The framework provides legal certainty for businesses while ensuring a high level of protection for personal data, supporting France's positioning as a trusted environment for data-driven innovation.

Recent developments confirm the dynamism of this area. The most significant is the progressive application of the EU AI Act (Regulation 2024/1689), with key obligations for high-risk AI systems originally set to enter into force on 2 August 2026, but currently subject to a proposed deferral to late 2027 under the EU's Digital Omnibus simplification package. The CNIL has been designated as the French lead authority and has published a series of practical guidelines articulating the AI Act with the GDPR, providing welcome clarity for businesses developing AI solutions in France. In parallel, the EU Data Act (Regulation 2023/2854), applicable since 12 September 2025, introduced a new framework for access to and sharing of data generated by connected devices and cloud services. Together with the GDPR, these texts form a coherent European framework that strengthens legal certainty in the digital economy and reinforces France's attractiveness for data-driven and AI-related investment.

### Dispute Resolution

France offers a structured and diversified dispute resolution system built around commercial courts (*tribunaux de commerce*), civil courts (*tribunaux judiciaires*)

and courts of appeal, with specialised chambers for complex commercial, financial and IP matters. French courts also benefit from a rich and well-established body of case law across most areas of business law, providing a high degree of legal certainty and predictability for companies operating in France.

Paris also stands out as one of the world's leading international arbitration hubs, hosting major institutions such as the International Chamber of Commerce and the *Centre de Médiation et d'Arbitrage de Paris*, and benefiting from a particularly favourable legal framework as well as the International Commercial Chamber of the Paris Court of Appeal, which hears international commercial and arbitration-related cases in English.

## Outlook for 2026 and Beyond

In a complex and evolving global environment, France is entering a phase of cautious stabilisation rather than rapid expansion. While macroeconomic and political uncertainties may continue to weigh on short-term performance, the country's core structural strengths remain firmly intact, particularly in strategic sectors such as defence, energy and artificial intelligence.

France also benefits from a well-established and sophisticated legal framework that is both flexible and robust. French law offers a wide range of efficient legal structures and transactional tools, providing foreign investors with reliable and adaptable solutions. Fully embedded in the European legal and regulatory framework, French law offers investors a high degree of legal certainty and seamless access to cross-border transactions.

In the current environment, investors are expected to adopt a more selective and strategic approach, focusing on resilient sectors and innovation-driven opportunities. The political calendar will remain a key factor, with the 2027 presidential election likely to influence investor confidence and the pace of reforms in the short term. Provided that political visibility improves and macroeconomic conditions stabilise, France should remain well positioned to consolidate its role as a leading European business and investment hub.

Overall, 2026 and 2027 are expected to be transitional years, but France, despite its high public debt, retains strong structural fundamentals that continue to underpin its attractiveness for international investors.

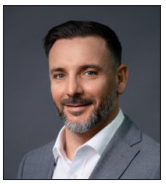
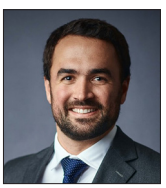
**ISOLAS LLP** is a leading international law firm with its headquarters in Gibraltar. Established in 1892, it is Gibraltar's oldest law firm. Truly independent, ISOLAS offers clients the benefits of commitment, continuity and the close personal interest expected of a long-established firm. ISOLAS has a reputation for combining expert legal advice with commercial pragmatism, and is known to be practical and confident in the advice it gives.

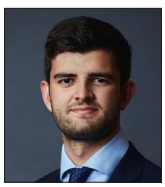


## Authors

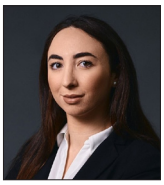


**Emma Lejeune** is a partner at ISOLAS, with a strong private client practice. Emma established her own boutique private client and family office practice, before joining the ISOLAS partnership. Her main practice involves advising ultra-high net worth individuals, high net worth individuals and family offices on all their requirements. She deals with relocations and assists in the establishment of succession plans and family asset planning, as well as advising on family governance. Emma also advises family offices on relevant financial services regulatory matters, and has significant experience in other areas of corporate and financial services law.

**Stuart Dalmedo** is leading tax lawyer and partner at ISOLAS LLP, widely recognised as one of Gibraltar's leading advisers on domestic and international tax, private client structuring and global mobility. Dual qualified in England and Wales, and Gibraltar, he brings over 15 years' specialised experience acting for high net worth individuals, family offices and international businesses. Stuart is the firm's "go-to" adviser for Cat 2, HEPSS, residency, cross-border Gibraltar–Spain tax matters, and complex structuring. He also contributes to Gibraltar's tax policy as a member of the Finance Centre Council Tax Sub Committee and the STEP Gibraltar Technical Committee.



**Adrian Pilcher** is a partner at ISOLAS and is highly experienced in trusts, private client and pensions law. Adrian advises high net worth individuals and families on wealth structuring, succession planning and family governance, with particular expertise in international trust and estate planning. He also acts for professional trustees and family offices on complex cross-border structures and regulatory matters, and has significant experience in financial services regulation, anti-money laundering compliance, and pensions-related advisory work. Adrian is recognised for his involvement in the development of Gibraltar trust and pensions legislation and also advises on corporate and financial services matters, including mergers, restructuring and regulatory frameworks affecting financial institutions.



**Nicholas Isola** is a partner at ISOLAS who works in contentious and non-contentious areas of commercial law, employment, real estate and construction, and civil litigation. Nick joined ISOLAS in 2017 and was previously an assistant manager in the Indirect Taxes Team of Deloitte UK. Nick advises international and local companies in M&A, property transactions and property development involving companies and/or real estate in Gibraltar. He also acts for employers on a wide range of statutory and/or contractual claims, including redundancies, collective redundancies, unfair dismissals, bullying, discrimination and personal injury. Nick has assisted as junior counsel in cases in the Supreme Court of Gibraltar as well as in the Employment Tribunal.

**Danielle Victor** is a senior associate within the litigation and employment team at ISOLAS. As part of her employment law practice, she regularly advises on settlement agreements, employee policies and procedures, and compliance with employment legislation. She also advises and represents clients more generally in relation potential and actual unfair dismissal, discrimination and workplace bullying claims, as well as redundancies and disciplinary and grievance processes.

**James Castle** is a senior associate within the ISOLAS litigation team. His practice focuses on complex litigation matters with an emphasis on insolvency, trusts, fraud and distributed ledger technology disputes. James advises clients on matters relating to the recognition and enforcement of foreign judgments, injunctive relief and other interim applications. James's practice extends to non-contentious financial services matters and data protection and privacy where James regularly advises retail and investment banks as well as other financial institutions on regulatory and contractual matters as well as advising public authorities, law enforcement bodies and DLT entities on privacy compliance, data subject access request handling, conducting GDPR/LED audits, DPIAs and policy drafting.

**Louise Anne Turnock** is an associate in the private client and tax department of ISOLAS. She regularly assists the team on corporate, tax and private client matters, including re-structuring corporate and trust structures, whilst also advising on tax implications under Gibraltar law. She is an active member of the local Society of Trusts and Estate Practitioners branch, and she is currently undertaking the STEP Diploma in International Trust Management.

**Danielle Curtis** is an associate in the financial services and corporate advisory department of ISOLAS. She regularly assists and advises on complex corporate transactions, including financial services, fintech, digital assets and construction finance. In addition to her corporate advisory work, Danielle supports the dispute resolution team on personal injury and employment law matters. Danielle is a dual-qualified Barrister (Ireland and Gibraltar) with deep expertise in litigation, human rights, public law and regulatory frameworks. Prior to relocating to Gibraltar, she developed a strong foundation in constitutional and administrative law, gaining extensive experience handling judicial reviews and strategic public interest litigation within the Irish non-profit legal sector.

# 1. Legal System

## 1.1 Legal System and Judicial Order

Gibraltar is a British overseas territory with a culture that emanates from the UK. Its laws are based on English law (common law system) and although its jurisprudence is largely home-grown, English and Commonwealth judicial precedent and rules of equity, although not strictly binding, are of persuasive authority in Gibraltar.

Gibraltar has its own government and parliament that are responsible for domestic affairs, while its foreign affairs are handled by the UK. It has its own written constitution, and statutes are enacted by its parliament.

Certain English acts are applied, either in whole or in part, in the following ways:

- by express reference to the schedule of the English Law (Application) Act, 1962;
- by Order of Her Majesty in Council;
- as expressed in the English act itself or in any other act; and
- by necessary implication.

### Court Structure

While similar to the court structure in England and Wales, there are notable differences in Gibraltar. This includes the absence of a High Court, Crown Court and County Courts, with Gibraltar's Supreme Court having jurisdiction over both criminal and civil matters. Gibraltar's Supreme Court handles matters that would fall under the UK High Court's Chancery, King's Bench and Family Divisions, as well as serving as an appellate function from the Magistrates' Court.

### Judiciary

Judges and magistrates are appointed locally, with a parallel system of lay assessors in the Magistrates' Court, as seen in England and Wales. The judiciary is independent from the government of Gibraltar and politically impartial.

Appeals from the Supreme Court are made to the Court of Appeal, which sits at periodic intervals and is presided over mostly by English judges. Appeals from that court are to the Privy Council, which sits in London.

### Civil Proceedings

Under Section 38A of the Supreme Court Act 1960, the Civil Procedure Rules (CPR) made under the Civil Procedure Act 1997 in England and Wales, as amended from time to time, apply in Gibraltar, with such modification as the circumstances may require. The Supreme Court Rules 2000 supplement these procedural rules, providing further requirements in terms of, inter alia, interpretation, court records, fees and costs and prescribed forms.

Civil proceedings can be split into a variety of "jurisdictions", but most are handled in the Supreme Court, with the Magistrates' Court hearing only a limited range of civil matters (eg, the Stipendiary Magistrate holds the office of the coroner in the UK). These jurisdictions include the following:

- family jurisdiction – non-contentious probate, divorce and matrimonial proceedings, and child proceedings;
- civil jurisdiction – contract and tort, commercial matters, and constitutional, public and administrative law matters;
- appellate jurisdiction – the Supreme Court will hear appeals from certain tribunals as well as the Magistrates' Court;
- admiralty jurisdiction – ship arrests and general admiralty matters;
- ordinary jurisdiction and company jurisdiction (Chancery equivalent) – equity and trusts, contentious probate, bankruptcy and insolvency, company matters;
- miscellaneous jurisdiction – landlord and tenant, mutual legal assistance, administrator general, deed polls, admissions to the Gibraltar Bar; and
- Court of Protection – jurisdiction over the property, financial affairs and personal welfare of people who lack mental capacity to make decisions for themselves.

### Criminal Proceedings

The Criminal Procedure and Evidence Act 2011 prescribes the applicable procedure in the Magistrates' Court and Supreme Court when they exercise criminal

jurisdiction. Together with the Crimes Act 2011, these acts brought about significant changes to the criminal justice system in Gibraltar, effectively creating a modern criminal code for Gibraltar. From a business perspective, corporate manslaughter prosecutions are also possible, with extension of this offence beyond corporations to the police, trade unions, partnerships and employers' associations.

All criminal proceedings commence in the Magistrates' Court, with the more serious (indictable) offences being sent to the Supreme Court, either for jury trial or sentencing.

### Lawyers

Most lawyers are England and Wales-qualified barristers or solicitors, with a minority of European lawyers. Qualification for call to the Bar in Gibraltar is via a separate procedure to qualification in the UK, and it is possible for UK-qualified solicitors to be called to the Gibraltar Bar. There is a practical training requirement before admission to the Gibraltar Bar, consisting of a period of 12 months' employment at an approved establishment, together with an approved academic course in Gibraltar law. In certain cases, the Chief Justice may waive one or more of these requirements – for example, when an English barrister is instructed to act as an advocate on a particular case or cases.

Gibraltar enjoys what is termed a "fused profession", whereby both barristers and solicitors called to the Gibraltar Bar enjoy rights of audience in every court, and barristers can be "acting solicitors". This results in practitioners with a diverse skill set who are all client-facing and able to conduct litigation or non-contentious work without restriction.

The Legal Services Regulatory Authority (LSRA) regulates the legal services industry in Gibraltar.

## 2. Restrictions on Foreign Investments

### 2.1 Approval of Foreign Investments

In Gibraltar, there is no distinction between foreign and domestic investment. In general, there are no restrictions on foreign or domestic shareholders. However, certain financial services, gaming and telecommunications businesses do require pre-authorisation from a regulator regarding their shareholders to ensure that the shareholders are reputable persons and meet applicable fitness and proprietary requirements.

### 2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance

Generally, an application would have to be made to the relevant regulator (for example, the Gibraltar Financial Services Commission in relation to a financial services business) as part of the wider application for the issuance of a licence in connection with the proposed activities. This sets out the details of the proposed shareholder, source of wealth, details regarding the fitness and proprietary requirements of the individual (for example, whether the individual has ever been declared bankrupt) and details regarding the beneficial interest held.

Failure to notify a regulator of any changes in shareholders, or obtain the pre-approval of a shareholder, could result in regulatory sanctions and revocation of the relevant licence.

### 2.3 Commitments Required From Foreign Investors

Generally, authorities do not condition their approval to certain commitments (although this may vary depending on the activities of the proposed investment), but individuals must notify the regulator should there be any material changes to the information provided in the initial application for approval.

### 2.4 Right to Appeal

The existence and framework of a right to appeal depend entirely on the specific regulatory function and sector involved. However, this will depend on the circumstances on a case-by-case basis as there may be situations where, in certain circumstances, there is some element of recourse. For example, under Section 615 of the Financial Services Act 2019, certain persons aggrieved by a formal decision notice issued by the Gibraltar Financial Services Commission has a statutory right to appeal the decision to the Supreme Court of Gibraltar.

## 3. Corporate Vehicles

### 3.1 Most Common Forms of Legal Entity

Corporate vehicles in Gibraltar may take various forms. These include trusts, foundations, limited partnerships, protected cell limited partnerships, limited liability partnerships, companies limited by guarantee, companies limited by shares, protected cell companies and unlimited companies.

As each form of corporate vehicle contains its own unique set of characteristics, the most suitable vehicle for a particular use case will depend on various factors, such as the nature of the underlying business activity or reasons for the establishment of the vehicle (eg, asset protection or succession planning).

Companies limited by shares are by far the most common form of corporate vehicle in Gibraltar. These may be set up as a private company (in which case the company's shares or debentures are not allowed to be offered to the general public) or as a public company (in which case the company's shares or debentures are allowed to be offered to the general public).

#### Private Companies

Private companies are required to adopt articles of association which set out the rules governing the relationship between the company and its shareholders, as well as the responsibilities of its directors.

Private companies must have a minimum of one director, and there is no statutory maximum number of directors. A company may, however, provide for a maximum number of directors under its articles of association. A sole director of a company is unable to also act as the secretary of that company.

Private companies must have a share capital that is divided into shares of a fixed amount, and there is no minimum or maximum share capital requirement. Therefore, private companies may be set up with a single shareholder and can consist of any number of shareholders (although regard must be had to regulatory implications of what could be construed as a collective investment scheme) without the need to register as a public company.

Due to their flexibility, the ease with which they can be set up and the limited liability offered to shareholders, private companies are usually perceived to be the preferred corporate vehicle for most businesses, joint ventures and holding companies in Gibraltar.

#### Trusts

A trust is an equitable obligation binding one party, the trustee, to control and manage property for the benefit of one or more parties, the beneficiaries. A settlor will transfer property to the trustee (whether during their lifetime or under a will) on specified terms which are usually contained in a trust deed and supplemented by a non-binding letter of wishes from the settlor to the trustee.

The provisions relating to the establishment and administration of a trust are contained in the document constituting the trust, known as the declaration of trust or trust deed. This document sets out the powers and fiduciary obligations of the trustees vis-à-vis the trust property/fund and the beneficiaries.

### 3.2 Incorporation Process

The incorporation process of a private company requires an application form, together with payment of the applicable fee, to be submitted to Companies House.

In the case of a company, the application form must include:

- the proposed name of the company;
- the liability of its members;
- whether the company is to be private or public;
- a statement of the intended registered office address and email address;
- the memorandum of association and articles of association (to the extent that bespoke articles of association or the memorandum of association are to be adopted);
- in the case of a company that is to be limited by shares, a statement of the authorised share capital, initial shareholding and particulars of the rights attached to shares;
- in the case of a company that is to be limited by guarantee, a statement of guarantee from the proposed members; and

• a statement of compliance.

There is no requirement for the first director(s) and secretary of a company to be named on the application form. Instead, the Companies Act facilitates a 14-day period during which details of the first director(s) and secretary of the company may be filed.

Standard incorporation takes approximately three working days and costs GBP100. However, Companies House also offers a same-day incorporation service for an additional GBP100.

Upon successful incorporation, Companies House will issue a Certificate of Incorporation which serves as conclusive evidence that the requirements of the Companies Act have been complied with and that the company is duly registered in Gibraltar.

### 3.3 Ongoing Reporting and Disclosure Obligations

Companies are subject to various ongoing annual and event-driven reporting and disclosure obligations.

All companies are required to deliver an annual return to Companies House, at least once in every calendar year. The annual return is a snapshot of certain information relating to a company including the company's main activity, shareholders, directors, secretary and share capital. The annual return must be delivered within 30 days of the date which the annual return is made up to.

Companies are also required to deliver annual accounts to Companies House. The accounting principles to be observed when preparing the accounts vary, depending on the size of the company, and range from an abridged balance sheet to full accounts (including balance sheet, profit and loss account, notes, directors' report and auditors' report). The annual accounts must be filed within 12 months (in the case of a private company) or ten months (in the case of a public company) of the financial year-end. Special rules apply in the case of a company's first reporting period.

Companies are also required to deliver certain information and shareholder resolutions when particular changes occur within the company. The Companies Act applies various filing dates depending on the event which triggered a filing requirement. In the majority of cases where filing of documentation is required, the Companies Act imposes a 30-day filing period.

### 3.4 Management Structures

There is a separation between ownership and control in companies limited by shares. Shareholders are the owners of a company and the directors are responsible for a company's management and day-to-day running, owing a fiduciary duty to the company.

Most of the obligations and responsibilities of the directors and shareholders are set out in a company's articles of association. However, the Companies Act does prescribe certain statutory obligations and responsibilities – for example, under the Act, any changes to a company's name or articles of association require the approval of a company's shareholders. These statutory requirements cannot be overridden by a company's articles of association.

### 3.5 Directors', Officers' and Shareholders' Liability

#### Directors' and Officers' Liability

Under the Companies Act, the officers of a company may be held criminally liable for certain offences which include where the officers fail to comply with certain filing and reporting obligations.

Directors are subject to common law, equitable and fiduciary duties. Broadly, these include the following duties:

- to exercise skill and care;
- to act in good faith and in the best interests of the company;
- to act within the powers conferred by the company's memorandum and articles of association and to exercise powers for a proper purpose;
- not to fetter their discretion;
- to avoid conflicts of interest; and
- not to make a secret profit.

The concept of "piercing the corporate veil" is recognised in Gibraltar and personal liability may therefore be imposed in certain situations – for example, where the directors permit an insolvent company or

prospectively insolvent company to continue trading unless they can demonstrate that it is beneficial for the creditors to continue to do so.

Under the Companies Act, any provision that seeks to exempt or indemnify a director or officer of the company from any liability which by virtue of any rule of law would otherwise attach to them in respect of any negligence, default, breach of duty or breach of trust of which they may be guilty in relation to the company, is deemed to be void. This does not prevent the company from indemnifying directors or officers against liability incurred in defending proceedings (whether civil or criminal) in which judgment is given in their favour or in which they are acquitted. Companies may also purchase and maintain directors' and officers' liability insurance cover.

### Shareholders' Liability

Under the Companies Act, the liability of the shareholders of a company limited by shares is limited to the amount unpaid on the shares respectively held by them. Shareholders may, however, be held personally liable in certain circumstances, such as where they provide a personal guarantee and accept a direct contractual liability with a third party.

## 4. Employment Law

### 4.1 Nature of Applicable Regulations

The legal rules governing the employment relationship in Gibraltar share some similarities to the employment law of England and Wales, both in terms of legislation and common law, modified to suit the needs of the jurisdiction. The applicable legislation is contained primarily in the Employment Act 1932 and its subsidiary legislation, consisting of Orders and Regulations made under various sections of the Act, including but not limited to the:

- Employment Regulations 1994;
- Employment (Maternity and Parental Leave, and Health and Safety) Regulations 1996;
- Employment (Annual and Public Holidays) Order 1996;
- Conditions of Employment (Redundancy Pay) Order 2001;
- Fixed-Term and Part-Time Employees (Prevention of Less Favourable Treatment) Regulations 2003;
- Employment (Information and Consultation of Employees) Regulations 2005; and
- Conditions of Employment (Standard Minimum Wage) Order 2001.

Other primary legislation includes, but is not limited to, the Working Time Act 1999, the Equal Opportunities Act 2006 and the Employment (Bullying at Work) Act 2014, which is unique to Gibraltar with England and Wales never legislating in this manner for claims of bullying.

Collective bargaining agreements apply to some employers; these are most commonly negotiated by trade unions. However, there are also regulations in this area following the introduction of the Employment (Trade Union Recognition) Regulations 2023 which introduced a statutory mechanism for trade union recognition and collective bargaining rights in certain circumstances.

Gibraltar employment law applies to all employees working in Gibraltar, irrespective of nationality or even residence, given the large proportion of cross-border workers commuting to Gibraltar from Spain on a daily basis.

The parties to a contract may choose the governing law of the contract to be that of a different country. However, such an election of governance will likely be limited to contractual disputes, and Gibraltar law will continue to govern the law on the employment relationship generally.

### 4.2 Characteristics of Employment Contracts

A contract of employment may be concluded verbally. However, there is a minimum requirement to file a Notice of Terms of Engagement with the Department of Employment for all workers. In some cases, this notice may be the only written part of a contract between an employer and employee and sets out basic mandatory terms of the employee's employment, such as working hours, salary, holiday entitlement and notice periods, the minimum of which are set in statute. While the requirement to file the notice is mandatory in all cases, some employers will also

provide workers with a more detailed employment agreement, in addition to that notice, setting out its contractual terms and conditions and incorporating any additional benefits.

In addition to the rights imposed by statute, there are other terms implied into contracts by common law, including a duty to provide work and a mutual duty to maintain trust and confidence.

Variations to the employment relationship must be notified to the Department of Employment on a prescribed form known as the Notice of Variation of Terms of Engagement.

The duration of the employment contract is not regulated under Gibraltar law, but a worker is able to bind themselves to provide services for a fixed or indefinite term. This must be set out in the Notice of Terms of Engagement.

### 4.3 Working Time

Under the Working Time Act 1999, a worker's average working time, including overtime, must not exceed 48 hours each week, over a period of 17 weeks excluding any periods of sick leave, maternity leave or annual leave.

However, any worker may agree with their employer in writing that this maximum should not apply to them, provided the employer can comply with certain requirements set out in the Working Time Act 1999.

In the case of a worker between the ages of 15 and 17 (inclusive), the maximum working time shall not exceed eight hours a day, or 40 hours a week (between midnights on successive Sundays), and such workers may not opt out of the stipulated maximum working time.

There is no minimum working time applicable to workers in Gibraltar. Accordingly, zero-hour contracts are permitted under Gibraltar law.

The Employment (Annual and Public Holidays) Order 1996 sets out the rights employees have who work extra hours on public holidays when they are not ordinarily required to do so.

### 4.4 Termination of Employment Contracts

Employment contracts can be terminated by providing notice. Statute determines what the minimum notice periods are. However, employers often agree notice periods under the contract that are greater than those set out in statute.

A contract may also provide for payment in lieu of the notice period or to place the employee on garden leave for part or all of that notice period.

The first week of any employment under a contract of service is deemed to be probationary under statute, and the employment may be terminated at the end of such a week by either party without notice. After this period, the minimum statutory notice period must be applied, which will depend on, among other things, whether notice is given by the employer or the employee, and how often the employee is paid by the employer. However, in practice, employers typically include express contractual probationary periods extending beyond the statutory minimum, during which performance and suitability are assessed.

In the case of an employee giving notice of termination, the required period is determined by reference to how often they are paid only. For example, an employee must give one month's notice to terminate the employment, unless the employee is paid weekly where one week's notice is required. A failure to provide appropriate notice will give rise to a claim for wrongful dismissal. However, an employer may dismiss an employee, and an employee may abandon the service of an employer, without giving notice where there is good and sufficient cause for such dismissal (eg, gross misconduct) or abandonment, but an employer is not entitled to set up as good and sufficient cause that (a) the employee's lack, loss or impairment of skill, ability or efficiency makes the fulfilment of the contract of service impossible, or (b) that the employee no longer enjoys the employer's confidence.

Additionally, employees have a statutory right not to be dismissed unfairly if they have been employed for a continuous period of at least 52 weeks, ending with the effective date of termination and provided that the employee has not been dismissed for an automati-

cally unfair reason (eg, making protected disclosures) where the qualifying period does not apply. Employees may be dismissed "at will" before they have attained 52 weeks' continuous service, provided that the employer complies with minimum notice provisions under statute or the contract, and provided that the employee is not dismissed for an automatically unfair reason. Depending on the reason(s) underlying the dismissal, employers may also need to consider the Employment (Bullying at Work) Act 2014 and/or the Equal Opportunities Act 2006.

After 52 weeks' continuous employment, the employer must prove that there was a permitted reason for the dismissal of the employee. Permitted reasons for a dismissal are:

- reasons relating to capability of the employee;
- reasons relating to the conduct of the employee;
- that the employee was redundant;
- that the employee's continuous employment would result in the contravention of the law; or
- some other substantial reason of a kind to justify dismissal.

If an employee is found to be unfairly dismissed, they are entitled to compensation calculated by a statutory formula and which includes compensation for the unfair dismissal including a basic award (GBP2,200 or such higher amount as calculated by a statutory formula) and a compensatory award calculated by reference to the lesser of two years' salary of the employee at the time of the dismissal or twice the weekly minimum wage for two years, representing a cap of GBP77,064 based on the current minimum wage. There are deductions that can be made to these awards and the maximum upper limit for the compensatory award does not apply where an employee is found to be unfairly dismissed in certain circumstances, for example, dismissals in health and safety cases.

On termination of employment, a Notice of Termination must be filed with the Department of Employment.

Under the Employment Act 1932, collective redundancy consultation requirements apply where an employer is proposing to dismiss as redundant five or more employees at one establishment within a period of 90 days or less. In such circumstances, the employer must consult with the affected employees' representatives at the earliest opportunity and at least 60 days before the first dismissal takes place. Employee representatives include representatives of a trade union or representatives elected by the affected employee satisfying the requirements of the Employment Act 1932. The consultation must be undertaken by the employer with a view to reaching agreement with the employee representatives and must include a consultation about avoiding dismissals, reducing the number of employees to be dismissed and mitigating the consequences of the dismissals. Further, and as part of the consultation process, the employer shall disclose to the employee representatives and to the director the following in writing:

- the reasons for the proposed redundancies;
- the number and descriptions of affected employees;
- the total number of employees of any such description employed by the employer at the establishment in question;
- the proposed method for the selection of affected employees;
- the proposed method of carrying out the dismissals; and
- the proposed method of calculating the amount of any redundancy payments to be made.

A failure to consult in a collective redundancy situation can give rise to a declaration by the Employment Tribunal, and the Employment Tribunal may also make a protective award of compensation.

Employees dismissed for redundancy reasons are entitled to redundancy pay calculated by a statutory formula that is dependent on the employee's years of service, subject to a maximum of one year's pay and provided that the employee has completed one year's service.

### 4.5 Employee Representations

There are no general mandatory rights under Gibraltar law except regarding the following.

- Various consultation requirements are imposed on employers in respect of collective redundancy situ-

ations (as discussed in 4.4 Termination of Employment Contracts) or where an employee is affected by a transfer of an undertaking commonly known as TUPE.

- Additionally, the Employment (Information and Consultation of Employees) Regulations 2005 provide a framework for the rights to information and consultation upon the request of employees. In such cases, the employer must make a formal agreement about what business information it will share with its employees and when it will consult them, provided the employer employs a minimum of 50 employees, and 15 employees or 10% of the total workforce (whichever number is greater) make the request. Before the consultation process commences, the employer must arrange for its employees to elect the relevant number of information and consultation representatives by ballot: this means one representative per 50 employees or part thereof, provided that that number is at least two and does not exceed 25.
- Sub-Regulation 4 (1) of the Employment (Trade Union Recognition) Regulations provide that if a trade union wants to negotiate with an employer on behalf of a bargaining unit (defined as the group of employees concerned), it must be (a) registered and (b) recognised by that employer. The trade union may apply in writing to an employer for recognition as a bargaining agent (any such application needing to comply with Sub-Regulation 4 (4)) with the employer required within ten working days of receipt of that application to inform the trade union in writing whether it recognises that trade union as a bargaining agent or refuses to recognise the trade union as a bargaining agent and state the reasons thereof (Sub-Regulation 4 (5)). If the employer accepts the request for recognition then the parties must decide on a bargaining procedure. However, if the employer rejects the request for recognition, but (a) agrees to negotiate further, then a further 20 working days will be provided to negotiate (which can be extended by agreement of both parties under Sub-Regulation (7)) or (b) does not agree to negotiate further, then the trade union may apply to the Director of Employment for statutory recognition in accordance with Regulation 5 (Sub-Regulation 4 (6)). Regulation 5 contains the regulations relating to an application to the Director of Employment for a statutory recognition order directing the employer to recognise the trade union, but there are basic requirements that must be fulfilled for an application for statutory recognition including that the employer must employ a minimum of 21 employees or at least average 21 employees in the 13 weeks ending with the day on which the request was received. There are regulations focusing on collective agreements (Regulation 7), bargaining units and disclosure of information (Regulation 10) and rights to be accompanied to a disciplinary or grievance hearing (Regulation 10).

## 5. Tax Law

### 5.1 Taxes Applicable to Employees/Employers

#### Income Tax

Income tax is charged on the profits or gains from any office or employment arising in or from Gibraltar, including any allowances, perquisites or benefits in kind (such as expense payments, vouchers and credit tokens, living accommodation, car expenditure and loans to employees).

For employees, tax on the income from employment is deducted from wages and salaries under the pay-as-you-earn (PAYE) system. An employer is required to deduct tax from the wages of the employee on each pay, and then pay the tax by the 15th day of the following month.

Taxpayers may, in their tax return, choose between an allowance-based system (ABS) or a gross income-based system (GIBS). However, irrespective of the system opted for, on final assessment the Income Tax Office will apply the system most beneficial to the taxpayer.

#### Allowance-Based System (ABS)

This system enables an individual to claim certain allowances against assessable income. Allowances include:

- personal;
- spouse;

- child;
- medical insurance premiums paid;
- life insurance premiums paid;
- pension contributions paid;
- first-time home purchase;
- mortgage interest;
- social insurance contributions paid; and
- pensioner.

The tax rates under the ABS are as follows:

- 14% on the first GBP4,000;
- 17% on the next GBP12,000; and
- 39% on the balance.

### Gross Income-Based System (GIBS)

Under the GIBS, a taxpayer is entitled to very few allowances/reliefs, but the applicable rates are lower.

The allowances/relief available under the GIBS include:

- first-time home purchase;
- mortgage interest;
- pension contributions paid; and
- medical insurance premiums paid.

The tax rates under the GIBS are as follows.

- Individuals with gross assessable income up to GBP25,000:
  (a) 6% on the first GBP10,000;
  (b) 20% on GBP10,001 to GBP17,000; and
  (c) 28% on the balance.
- Individuals with gross assessable income of more than GBP25,000 and up to GBP100,000:
  (a) 16% on the first GBP17,000;
  (b) 19% on GBP17,001 to GBP25,000;
  (c) 25% on GBP25,000 to GBP40,000;
  (d) 28% on GBP40,001 to GBP105,000; and
  (e) 25% on the balance.

Any taxpayer with income of GBP11,450 or less is not liable to income tax in Gibraltar.

### Social Insurance

Social insurance contributions are payable by every employee in any week in which they work.

Employee contributions are 10% of gross earnings, subject to a minimum of GBP14.34 per week and a maximum of GBP40.79 per week.

Employer contributions are 18% of gross earnings subject to a minimum of GBP31.98 per week and a maximum of GBP56.22 per week.

Individuals aged 60 and over are exempt from paying the employee's share of social insurance contributions.

There is also an exemption (subject to certain conditions) from the employer's and employee's social insurance contribution in respect of an employee's secondary employment.

A credit in respect of the employer's social insurance contributions is available to businesses with ten employees or less. This is increased to 20 employees for new businesses within the first year of operation. This is subject to all payments of tax and social insurance having been made on time by the company.

## 5.2 Taxes Applicable to Businesses

Companies are taxed on a territorial basis of taxation, meaning that only income accrued in or derived from Gibraltar will be subject to taxation in Gibraltar. Accrued in and derived from refers to the location of activities, which gives rise to the profits of the company.

A business whose income arises from an underlying activity that requires a licence and regulation under any law of Gibraltar (such as a business licence or licence issued by the Gibraltar Financial Services Commission), or is licensed in another jurisdiction but enjoys passporting rights into Gibraltar, shall have its income deemed as accruing in and deriving from Gibraltar.

Intercompany loan interest (which exceeds GBP100,000 per annum) and royalty income shall be deemed to accrue in and derive from Gibraltar if it is received by a company registered in Gibraltar. Intercompany loan interest and royalty income will be subject to tax at 15%.

The standard rate of taxation for a company is 15%.

There is no VAT or withholding tax on interest, dividend or royalty payments.

Companies could also be subject to import duty on the importation of certain goods, if applicable.

Stamp duty could also be payable on the transfer of a Gibraltar property owned by a company.

Gaming duty is levied at 0.15% on the gross profits of holders of a bookmaker, betting intermediary and gaming operator's licence. The first GBP100,000 of gross profits is exempt from this duty.

On 31 December 2024, legislation was passed implementing the Pillar Two global minimum tax rules in Gibraltar. The legislation confirms a 15% domestic minimum top-up tax (DMTT), which would apply to multinational enterprise (MNE) groups and domestic groups meeting the revenue threshold for financial years starting on or after 31 December 2023. The legislation has also introduced an income inclusion rule (IIR) that would apply for financial years starting on or after 31 December 2024.

Additionally, Gibraltar's DMTT regime has been granted transitional qualified status by the OECD and is eligible for QDMTT safe harbour status.

## 5.3 Available Tax Credits/Incentives

There is no capital gains tax, estate duty, wealth tax, gift tax or inheritance tax in Gibraltar.

### Category 2 Status

Gibraltar offers the opportunity for high net worth individuals to obtain Category 2 status which places a cap over the tax liability of that individual. Tax is applied to the first GBP118,000 of assessable income (including worldwide income) meaning that a Category 2 individual will pay a maximum of GBP42,380 tax per annum, subject to a minimum tax payable of GBP37,000 per annum (current rates).

The requirements for Category 2 status are as follows:

- must have available for exclusive use approved residential accommodation in Gibraltar for the whole year of assessment (can be either purchased or rented);
- must have a minimum net worth of GBP2 million;
- must have private medical insurance (which must meet the minimum requirements of cover);
- must not have been resident in Gibraltar for five years immediately preceding the Category 2 application; and
- must pay an amount equivalent to the maximum tax payable (currently GBP42,380) as part of a Category 2 application, which will be held as a deposit and used to settle the individual's final tax liability upon leaving Gibraltar.

### High Executive Possessing Specialist Skills (HEPSS) Status

HEPSS status is a special employment tax status available to individuals with specialist skills who intend to relocate to Gibraltar to take up employment. An individual in respect of whom a HEPSS certificate is issued shall be charged to tax on the first GBP160,000 per annum of their income under the Gross Income Based tax system of their assessable income only. This would mean that an individual with HEPSS status would pay a fixed amount of GBP39,940 tax per annum (current rates) regardless of their employment income.

The requirements for HEPSS status are as follows:

- must have available for exclusive use approved residential accommodation in Gibraltar for the whole year of assessment (can be either purchased or rented);
- must possess skills that are necessary to promote and sustain economic value in Gibraltar;
- must possess skills that are not readily available in Gibraltar;
- must not have been resident in Gibraltar for three years immediately preceding the HEPSS application; and
- must earn more than GBP160,000 per annum from that employment.

### Development Aid

In order to encourage private development in Gibraltar, promoters and developers of approved projects are offered certain incentives such as tax relief, import duty relief and rates relief. In order to qualify for the above reliefs, the project needs to be a new project and meet certain criteria.

### 5.4 Tax Consolidation

Tax consolidation is not available in Gibraltar.

### 5.5 Thin Capitalisation Rules and Other Limitations

Thin capitalisation rules are applicable in Gibraltar. For instance, interest paid on a loan by a company to related parties that are not companies, or loans secured by related parties where the ratio of the value of the loan capital to the equity of the company exceeds 5:1, would be considered a dividend payment and would not be a deductible expense for tax purposes.

The interest limitation rule in Gibraltar provides that exceeding interest expenses are deductible up to the greater of (i) 30% of EBITDA, or (ii) EUR3 million.

The overarching anti-avoidance provision in place in Gibraltar relates to the principle of "artificial and fictitious", as referring to transactions that are seen as inauthentic and not real.

### 5.6 Transfer Pricing

The general anti-avoidance rules should be interpreted in the manner that best secures consistency with the OECD Transfer Pricing Guidelines for Multinational Enterprises and Tax Administrations and other documents designed as comprising part of the transfer pricing guidelines.

If an amount charged for goods and services by a connected person is not at arm's length, the expense allowed shall be subject to a minimum of (i) the amount of the expense; (ii) 5% of the gross turnover of the company; or (iii) 75% of the pre-expenses profit of the company.

### 5.7 Anti-Evasion Rules

A person commits an offence if they are knowingly involved in the fraudulent evasion of income tax by them or any other person and could be imprisoned for up to seven years.

### 5.8 Tariffs

No response provided.

## 6. Competition Law

### 6.1 Merger Control Notification

On 1 January 2021, the Competition Act 2020 (the "Act") was introduced into Gibraltar law. The Act is the primary legislation governing merger control in Gibraltar. Under the Act, notification of arrangements or proposed arrangements which might have resulted or might result in the creation of a "relevant merger situation" may be done on a voluntary basis.

A "relevant merger situation" is created for the purpose of the Act if two or more enterprises "cease to be distinct" and the value of the turnover in Gibraltar of the enterprise being taken over exceeds certain thresholds or meets the share of supply test.

Enterprises will be deemed to "cease to be distinct" if they are brought under common ownership or control.

Enterprises will be treated as being under common control if they are:

- enterprises of interconnected bodies corporate;
- enterprises carried on by two or more bodies corporate of which one and the same person or group of persons has control; or
- an enterprise carried on by a body corporate and an enterprise carried on by a person or group of persons having control of that body corporate.

The threshold for the value of the turnover in Gibraltar of the enterprise being taken over must exceed: (i) GBP1 million, if in the course of the enterprise ceasing to be distinct, a person or persons has brought a relevant enterprise under the ownership or control of the person or group; or (ii) GBP25 million in any other case.

The share of supply test is met if:

- as a result of the enterprises ceasing to be distinct, one or both of the conditions mentioned in Sub-sections (4) and (5) (as set out below) prevails or prevails to a greater extent; or
- in the course of the enterprises ceasing to be distinct, a person or group of persons has brought a relevant enterprise under the ownership or control of the person or group mentioned in Subsections (6) and (7) (as set out below) was satisfied in relation to the relevant enterprise before it ceases to be a distinct enterprise.

For the purpose of Subsection (4), in relation to the supply of goods of any description, at least two thirds of all the goods of that description which are supplied in Gibraltar:

- are supplied by one and the same person or are supplied to one and the same person; or
- are supplied by the persons by whom the enterprises concerned are carried on, or are supplied to those persons.

For the purpose of Subsection (5), in relation to the supply of services of any description, the supply of services of that description in Gibraltar is to the extent of at least two-thirds:

- supply by one and the same person, or supply for one and the same person; or
- supply by the persons by whom the enterprises concerned are carried on, or supply for those persons.

For the purpose of Subsection (6), in relation to the supply of goods of any description:

- at least two thirds of all goods of that description which were supplied in Gibraltar were supplied by or to the person or persons by whom the enterprise was carried on; and
- that supply was made in connection with activities of the enterprise by virtue of which it was a relevant enterprise.

For the purpose of Subsection (7), in relation to the supply of services of any description:

- the supply of services of that description in Gibraltar was to the extent of at least two thirds of all the services of that description, supply by or for the person or persons by whom the enterprise is carried on; and
- that supply was made in connection with activities of the enterprise by virtue of which it was a relevant enterprise.

### 6.2 Merger Control Procedure

Under the Act, notices of arrangements or proposed arrangements which might have resulted or might result in the creation of a relevant merger situation may be given to the Gibraltar Competition and Markets Authority (GCMA) on a voluntary basis.

Any such notice must contain the information and be in the form prescribed by the GCMA. Where the GCMA is satisfied that a merger notice meets the requirements set out in the Act, the GCMA must give notice to that effect to the person who gave the merger notice.

In the absence of an extension, the GCMA is required, so far as is practicable, to take such action as it considers appropriate to bring the existence of the proposal, the fact that the merger notice has been given and the date on which the period for considering the notice may expire to the attention of those whom the GCMA considers would be affected if the arrangements were carried into effect within 40 working days, beginning with:

- the first working day after the day on which the GCMA gives notice to the person who gave the merger notice; or
- the first working day after the day on which the GCMA informs the person carrying on the enterprises concerned by the notice that it has sufficient information to enable it to bring an investigation.

The GCMA may extend the initial period if it considers that a relevant person has failed (with or without reasonable excuse) to comply with any requirement of a notice under Section 168 requiring them to attend

as a witness and produce documents in relation to the case in question.

### 6.3 Cartels

Under Part VI of the Act, an individual is guilty of an offence if they agree with one or more other persons to make or implement, or cause to be made or implemented, arrangements of the following kind relating to at least two undertakings ("A" and "B").

The arrangements must be ones which, if operating as the parties to the agreement intend, would:

- directly or indirectly fix a price for the supply by A in Gibraltar (other than to B) of a product or service;
- limit or prevent supply by A in Gibraltar of a product or service;
- limit or prevent production by A in Gibraltar of a product;
- divide between A and B the supply in Gibraltar of a product or service to a customer or customers;
- divide between A and B customers for the supply in Gibraltar of a product or service; or
- be an arrangement under which, in response to a request for bids for the supply of a product or service in Gibraltar, or for the production of a product in Gibraltar (i) A but not B may make a bid, or (ii) A and B may each make a bid but, in one case or both, only a bid arrived at in accordance with the arrangements.

Unless one of the last three points as set out above apply, the arrangements must also be ones which, if operating as the parties to the agreement intend, would:

- directly or indirectly fix a price for the supply by B in Gibraltar (other than to A) of the product or service;
- limit or prevent supply by B in Gibraltar of a product or service; or
- limit or prevent production of the product by B in Gibraltar.

Any person that is guilty of a cartel offence is liable:

- on conviction on indictment, to imprisonment for a term not exceeding five years or to a fine, or both;
- on summary conviction, to imprisonment for a term not exceeding six months or to a fine not exceeding the statutory maximum (GBP10,000), or to both.

Proceedings for a cartel offence may only be instituted with the consent of the Attorney General and no proceedings may be brought in respect of an agreement outside Gibraltar, unless it has been implemented in whole or in part in Gibraltar.

The GCMA has the power to conduct an investigation if there are reasonable grounds for suspecting that a cartel offence has been committed.

### 6.4 Abuse of Dominant Position

Under Chapter 2 of the Act, any conduct on the part of one or more undertakings which amounts to the abuse of a dominant position within a market is prohibited if it may affect trade within Gibraltar. For the purpose of the Act, conduct may constitute such an abuse if it consists of:

- directly or indirectly imposing unfair purchase or selling prices or other unfair trading conditions;
- limiting production, markets or technical development to the prejudice of consumers;
- applying dissimilar conditions to equivalent transactions with other trading parties, thereby placing them at a competitive disadvantage; or
- making the conclusion of contracts subject to acceptance by the other parties of supplementary obligations which, by their nature or according to commercial usage, have no connection with the subject of the contract.

The prohibition set out above is subject to certain exclusions. These exclusions cover a number of scenarios including: services of general economic interest, compliance with legal requirements, avoidance of conflicts with international obligations and reasons of public policy.

Where the GCMA has reasonable grounds for suspecting that the prohibition has been infringed, it may conduct an investigation. If the GCMA forms a

decision that the conduct infringes the prohibition, it may give to such a person or persons as it considers appropriate such directions as it considers appropriate to bring the infringement to an end. A direction may, in particular, include provision requiring the person concerned to modify the conduct in question or require them to cease that conduct.

If a person fails without reasonable excuse to comply with a direction, the GCMA may apply to the court for an order requiring the defaulter to make good their default within a time specified in the order, and if the direction relates to anything to be done in the management or administration of an undertaking, to require the undertaking or any of its officers to do so.

If the GCMA is satisfied that an infringement has been committed intentionally or negligently by an undertaking, it may require the undertaking concerned to pay the GCMA a penalty not exceeding 10% of the turnover of the undertaking in respect of the infringement.

## 7. Intellectual Property

### 7.1 Patents

A patent is a form of intellectual property which grants the inventor the right to exclude others from making or selling their invention for a period of time, thus being able to take legal action against anyone who makes, uses, sells or imports the invention without their permission. The invention must not be specifically excluded from protection.

Original applications to register a patent in Gibraltar cannot be made; the Gibraltar Registry will only replicate successful registrations made in the UK Intellectual Property Patent Office.

The grantee of a UK patent may apply within three years from the date of issue of the patent to have such a patent registered in Gibraltar in accordance with Section 2 of the Patents Act 1924.

As part of the registration process, the following documents must be submitted to the Gibraltar Registry in accordance with Section 3 of the Patents Act 1924 together with the application for registration of a patent (Form 1) and a filing fee of GBP30 in accordance with the Patent Rules:

- certified copies of the specification(s) (including drawings, if any) of the UK patent; and
- certificate of the Comptroller-General of the UK Patent Office giving full particulars of the issue on such specification(s) and, in the case of a patent treated as being granted in the UK by virtue of the provisions of Section 2 of the Patents Act 1924, a certificate by an officer duly authorised under the Patents Act that the UK has accepted the European Patent (UK) designating the patent as being effective in the UK and that the particulars of the application are true.

Upon such an application being received, together with the documents mentioned in Section 3, the Registrar of Patents shall issue a certificate of registration in accordance with Section 4 of the Patents Act 1924. The protection of a patent will remain valid for as long as the UK patent is valid; the time period is 20 years from the date of issue of the UK patent, provided that the applicable renewal fees have been paid accordingly.

Patent rights are able to be enforced against a party through the UK or Gibraltar courts. The remedies for patent infringement include the seizure/destruction of the infringing goods, monetary damages and injunctive relief. Section 7 of the Patents Act 1924 outlines the powers of the Supreme Court of Gibraltar and states that:

“The Supreme Court shall have power upon the application of any person who alleges that his interests have been prejudicially affected by the issue of a certificate of registration, to declare that the exclusive privileges and rights conferred by such certificate of registration have not been acquired on any of the grounds upon which the United Kingdom patent might be revoked under the law for the time being in force in the United Kingdom.

Provided that such grounds shall be deemed to include the manufacture, use or sale of the invention in Gibraltar before the priority date applicable to the patent in the United Kingdom, but not to include the

manufacture, use or sale of the invention in Gibraltar by some person or persons after the priority date applicable to the patent in the United Kingdom and before the date of the issue of the certificate of registration under Section 4.

For the purposes of this proviso the expression "priority date" in its application to a patent in the United Kingdom has the meaning assigned to it in Section 5 of the Patents Act, 1949, or any other Patents Act for the time being in force."

### 7.2 Trade Marks

A trade mark is a sign which can distinguish the trade origin of goods and/or services from those of competitors. A trade mark must be considered to be distinctive, which means it can be recognised as a sign that differentiates the origin of goods and/or services from those of other sources. A trade mark may include words, sounds, logos, colours, shape or any combination thereof.

The Registrar of Trade Marks deals with the registration of trade marks under the Trade Marks Act 1948 and the Trade Marks Rules 1948. It is not possible for originating applications to be made in Gibraltar. In accordance with Section 3 of the Trade Marks Act 1948, and subject to Part 3 of that Act, any person being the registered proprietor of a trade mark in the United Kingdom by virtue of an entry in the register of trade marks kept under the Trade Marks Act 1994, or any person deriving title from such registered proprietor by assignment or other mode of transfer, may apply at any time during the existence of the registration in the United Kingdom to have such trade mark registered in Gibraltar in respect of some or all of the goods comprised in the United Kingdom registration.

Part 3 of that Act refers, in particular, to the following.

- An international trade mark (UK) (ie, a trade mark entitled to protection in the UK which results from an international application made on or after 1 January 2021 for registration under the Madrid Protocol and designates the UK) where the registered proprietor of an international trade mark (UK) shall enjoy in Gibraltar the like privileges and rights as though the certificate of registration of the international trade mark (UK) had been issued with an extension to Gibraltar. Those privileges and rights shall continue in force only for so long as the registration in the UK remains in force.
- A comparable trade mark (EU) and (UK) where the registered proprietor of a trade mark registered in the UK as a comparable trade mark (EU) or a comparable trade mark (IR) under the Trade Marks Act 1994 shall enjoy in Gibraltar the like privileges and rights as though the registration in the United Kingdom had been extended to Gibraltar, until the date of expiry of the registration of such trade mark. Those privileges and rights conferred shall continue in force only for so long as the registration of the comparable trade mark (EU) or the comparable trade mark (IR), as the case may be, in the UK remains in force.

The following documents are required in order to register a trade mark under the Trade Marks Act 1948:

- application for registration of a trade mark (Form 1) (the Trade Marks Rules 1948);
- certified representation of the trade mark and a certificate of the Comptroller of the UK Patent Office (under their title of Registrar of Trade Marks) giving full particulars of the registration of the trade mark in the UK and such other documents as may from time to time be prescribed (Section 4 of the Trade Marks Act 1948);
- where the trade mark to be registered is a device, two prints of the trade mark; and
- the applicable filing fee of GBP30 (the Trade Marks Rules 1948).

Once all the relevant documents have been submitted to the Gibraltar Registry, the Registrar will then enter the prescribed particulars in the register and shall issue a certificate of registration to the applicant, who shall then be the registered proprietor in Gibraltar of the trade mark in respect of the goods entered in the register.

The registration of the trade mark is renewable every ten years and valid in Gibraltar as long as it is valid in the UK or the EU.

### 7.3 Industrial Designs

Industrial design is an intellectual property right that legally protects the visual design of objects or part of an object in the territories it is registered in, and constitutes the ornamental aspect of an object. In Gibraltar, there are two forms of industrial design: registered and unregistered.

Designs registered in the UK are automatically protected in Gibraltar by virtue of Section 2 of the Gibraltar Designs Act 1928. UK-registered design right applications are made and obtained through the UK Intellectual Property Office.

A design is legally defined as being the appearance of the whole or part of an object resulting from the features, shape, colours or materials of the object or ornamentation. Both 3D and 2D designs are protected by registered designs. The design must not have been publicly disclosed or published within the EEA prior to being registered. There is, however, a 12-month grace period following the disclosure which allows the designer to make its application.

An unregistered design right in the UK arises automatically on the creation of an original object and where it has been recorded in an article or design document, subject to the provisions of Part 3 of the UK Copyright, Designs and Patents Act 1988.

Designs registered in the UK have their rights extended and protected in Gibraltar, and there is no need for any applications to be made in Gibraltar. Designs produced in Gibraltar enjoy reciprocal protection in the UK under Part 3 of the UK Copyright, Designs and Patents Act 1988.

A registered design can be renewed every five years up to 25 years, subject to the payment of fees. The length of protection afforded to an unregistered design according to Section 216 of the UK Copyright, Designs and Patents Act 1988 will be 15 years from the earlier of the end of the calendar year in which the design was first recorded in a design document or an article was first made to the design; or if articles made to the design are made available for sale or hire within five years from the end of that calendar year, ten years from the end of the calendar year in which that first occurred.

Owners of both registered and unregistered designs are able to enforce action through the UK or Gibraltar courts. For unregistered designs, remedies can include injunctive relief, damages or accounting for profit made. For registered designs, remedies can include injunctive relief, damages, accounting for profit made, delivery or destruction of the infringed product.

### 7.4 Copyright

Copyright is a property right which subsists in sound recordings, films or broadcasts, original literary works – which includes databases, computer programs and preparatory design – dramatic, musical or artistic works and in the typographical arrangement of published editions. Copyright protects the author's work in several ways and prevents others from replicating this work, making an adaptation of this work, putting it on the internet and performing or playing this work in public.

Copyright protection is automatic upon the creation of the qualifying work, so no registration process is required. The length of the copyright is dependent on the type of work – for example, works such as written, sound, films and artistic work will last for 70 years after the author's death.

A copyright holder is able to enforce court proceedings where they believe that there has been an infringement on the copyright, and remedies include damages, injunctions and accounts. It is a criminal offence to infringe copyright.

### 7.5 Others

Other intellectual property rights in Gibraltar also extend to trade secrets. This is a common law right in which the information contained within has commercial value because it is secret, and the use or disclosure is likely to harm the interests of the trade secret holder in several ways – for example, regarding scientific and technical potential, business or financial interests, strategic positions or the ability to compete.

In accordance with Section 4 of the Protection of Trade Secrets Regulations 2018, it is possible the acquisition of trade secrets in Gibraltar shall be considered lawful if obtained by any of the following means:

- independent discovery or creation;
- observation, study, disassembly or testing of a product or object that has been made available to the public or that is lawfully in the possession of the acquirer of the information who is free from any legally valid duty to limit the acquisition of the trade secret;
- exercise of the right of workers or workers' representatives to information and consultation in accordance with any rules of law applicable in Gibraltar; or
- any other practice which, under the circumstances, is in conformity with honest commercial practices.

In accordance with Section 8 of the Protection of Trade Secrets Regulations 2018, the limitation period for bringing a claim for the unlawful acquisition, use or disclosure of a trade secret is six years. The start date for reckoning the limitation period for a claim for the unlawful acquisition, use or disclosure of a trade secret against an infringer begins with the later of:

- the day on which the unlawful acquisition, use or disclosure that is the subject of the claim ceases; or
- the day of knowledge of the trade secret holder.

Where damages are awarded in relation to unlawful acquisition, Section 16 of the Protection of Trade Secrets Regulations 2018 states that all appropriate aspects shall be considered, including:

- any negative economic consequences, including any lost profits, which the trade secret holder has suffered, and any unfair profits made by the infringer;
- elements other than economic factors, including the moral prejudice caused to the trade secret holder by the unlawful acquisition, use or disclosure of the trade secret; and
- where appropriate, damages may be awarded on the basis of the royalties or fees which would have been due had the infringer obtained a licence to use the trade secret in question.

## 8. Data Protection

### 8.1 Applicable Regulations

In Gibraltar, the overarching national law on data protection is the Data Protection Act 2004 (DPA 2004). The DPA 2004 was amended on 25 May 2018 to:

- implement the General Data Protection Regulation (Regulation (EU) 2016/679) (EU GDPR);
- transpose the Law Enforcement Directive (Directive (EU) 2016/680);
- implement a data protection framework under the Convention for the Protection of Individuals with Regard to Automatic Processing of Personal Data of 1981 (Convention 108); and
- implement Articles 126–130 of the Convention of 19 June 1990 applying the Schengen Agreement of 14 June 1985.

The changes made to the DPA 2004 took Brexit into account, as well as the Data Protection Act 2018 of England and Wales (DPA 2018). Both statutes share a similar structure, but with notable differences, such as the repeal of Part IV of the DPA 2004, which related to intelligence service processing and was similar in structure and content to Part 4 of the DPA 2018.

Following the end of the Brexit transition period (see 1. Legal System), the DPA 2004 was further amended, and the EU GDPR now forms part of Gibraltar law by virtue of Section 6 of the European Union (Withdrawal) Act 2019, as read with (i) Section 2 (1B)(a) of the DPA, and (ii) the Data Protection, Privacy and Electronic Communications (Amendments etc) (EU Exit) Regulations 2019. This is now referred to as the "Gibraltar GDPR", which is essentially the EU GDPR read with certain modifications. It is, therefore, important to read the Gibraltar GDPR and the DPA 2004 side-by-side.

The DPA 2004 and the Gibraltar GDPR are supplemented by the following:

the Communications (Personal Data and Privacy) Regulations 2006 (CPDP Regulations), made under the Communications Act 2006; and

- the Data Protection (Search and Seizure) Regulations 2006 (DPSS Regulations).

The Communications Act 2006, together with the CPDP Regulations, transpose the E-Privacy Directive (Directive 2002/58/EC), imposing obligations on publicly available electronic communications services providers and users when they process personal data.

The DPSS Regulations, among other things, authorise justices of the peace to issue warrants to the supervisory authority (see **8.3 Role and Authority of the Data Protection Agency**) in certain circumstances, allowing them to enter premises, inspect and seize as required.

## 8.2 Geographical Scope

Both the EU GDPR and Gibraltar GDPR have what is referred to as "extraterritorial effect", in that, respectively, the EU GDPR can apply outside the EU, and the Gibraltar GDPR can apply outside Gibraltar. This is achieved in a similar manner in both pieces of legislation. Focusing on Gibraltar, the territorial scope of the Gibraltar GDPR can extend to any of the following situations.

- Where a controller/processor has an "establishment" in Gibraltar and processing occurs "in the context of the activities" of that establishment. This applies regardless of whether the processing occurs in Gibraltar or not.
- Where goods or services are offered to data subjects in Gibraltar, irrespective of whether payment is required by a non-Gibraltar controller/processor. There should be an element of targeting and other evidence will be considered, such as whether consumers are able to pay in their local currency, or whether a marketing campaign has taken place. This test is also not limited by citizenship or residency of the data subjects.
- Where the monitoring of behaviour of data subjects in Gibraltar is carried out by a non-Gibraltar controller/processor. Examples of monitoring would be predicting trends, or use of geo-location.
- Where a controller is not established in Gibraltar, but in a place where Gibraltar law applies by virtue of public international law.

Under Article 27 of the Gibraltar GDPR, controllers and processors established outside of Gibraltar would need to consider the appointment of a local representative in Gibraltar, if they are offering goods or services or monitoring the behaviour of data subjects in Gibraltar.

Controllers and processors based in Gibraltar offering goods or services or monitoring the behaviour of data subjects in the EU are subject to the EU GDPR, and will need to consider their obligations in that context. In particular, until the issue of adequacy is decided by the European Commission in respect of Gibraltar, appropriate safeguards (eg, such as standard contractual clauses) would need to be considered prior to a data transfer from Gibraltar to the EU or vice versa, given that, at the time of writing, Gibraltar is considered as a "third country" for the purposes of Chapter V of the EU GDPR.

## 8.3 Role and Authority of the Data Protection Agency

The DPA 2004 designates the Gibraltar Regulatory Authority (GRA) as the Information Commissioner.

The GRA is an independent statutory body responsible for the enforcement of the DPA 2004, as read with the Gibraltar GDPR, and its primary role as Information Commissioner is to uphold the privacy rights of individuals.

Under changes made to the DPA 2004, the GRA now has increased regulatory powers under that Act, as well as those granted under Article 58 of the Gibraltar GDPR. These powers are classed as "investigative", "corrective" and "authorisation and advisory", allowing the Information Commissioner to, among other things:

- bring or defend legal actions in Gibraltar or other courts;
- co-operate with and render assistance to supervisory authorities in other states of territories;
- conduct data protection compliance audits;

- issue information notices, requiring others to provide it with information to investigate compliance;
- issue assessment notices to allow it to enter premises, obtain documents and equipment, and interview persons;
- issue enforcement notices, including warnings and reprimands, which may impose temporary or definitive bans on processing, or order a controller/processor to take corrective action; and/or
- issue monetary penalty notices.

Article 57 of the Gibraltar GDPR also prescribes the tasks and functions of the Information Commissioner. These include, but are not limited to: promoting awareness of rights and obligations; handling complaints; conducting investigations and taking enforcement action against those controllers or processors failing to comply; and certifying and approving certain mechanisms and schemes such as contractual clauses or binding corporate rules.

## 9. Looking Forward

### 9.1 Upcoming Legal Reforms

The Gibraltar government has tabled a Bill (the Employment (Amendment) Bill 2025), which, once enacted, is expected to introduce further protections that are broadly analogous to the Transfer of Undertakings (Protection of Employment) regime in England and Wales. The proposed reforms would align Gibraltar law more closely with UK and EU principles by ensuring continuity of employment rights in cases of service provision changes. This is in addition to existing protections in relation to the transfer of undertakings already contained under Part VIB of the Employment Act 1932.

**Kyriakides Georgopoulos Law Firm** is a leading full-service law firm in Greece, with over 120 lawyers and a history dating back to the 1930s. The firm advises both domestic and international clients, combining deep local expertise with an international outlook. Its lawyers are active in leading legal organisations and global networks, and the firm is a founding member of the South East Europe Legal Group (SEE Legal), a regional alliance spanning 12 countries. Kyriakides Georgopoulos is consistently recognised by Chambers and Partners Global and Europe as a leading law firm in Greece.

## Authors

**Anastasia Dritsa** leads the Internet & E-Commerce practice at Kyriakides Georgopoulos Law Firm, advising on EU and Greek e-commerce, consumer protection, unfair competition, and digital regulation matters. She has extensive experience advising on e-contracting, advertising and product compliance, platform governance, and a broad range of commercial agreements. Anastasia advises multinational clients across retail, FMCG, luxury goods, tourism, food delivery, and vehicle rentals on complex regulatory and day-to-day commercial matters. She has supported leading omnichannel retailers with e-commerce and digital services compliance and advised on cross-border distribution and market expansion projects, including the entry of international brands and digital platforms from the USA, Australia, and EU into the Greek market.

**Elisabeth Eleftheriades** currently leads the Project Development/ Startups and Innovation team at Kyriakides Georgopoulos Law Firm. Her very diverse expertise covers corporate and M&A work in the technology, hospitality and infrastructure sectors, acting for equity investors or buy (private equity/ industry players) and sell sides (founders/other stakeholders) in M&A work. In project finance and PPP projects, Elisabeth typically acts for IFIs and senior lenders on the project development side, leading the due diligence teams and the project development teams in the drafting and negotiation of construction and operation and maintenance contracts.

**Vicky Kriketou** is a partner in the Litigation Department at Kyriakides Georgopoulos Law Firm and a guest lecturer in pharmaceutical law at the Aristotle University of Thessaloniki. With over 20 years of experience, she specialises in complex litigation involving pharmaceutical products, product liability, commercial disputes, distribution, agency, franchise and antitrust matters. She also advises on commercial agreements and regulatory issues. Vicky is a published author and contributor to leading legal publications on pharmaceutical and competition law, and regularly participates in academic and industry conferences. She is a certified mediation advocate and an attorney before the Greek Supreme Court.

**Irene Kyriakides** heads the Intellectual Property and Life Sciences/Pharmaceutical Practice Groups at Kyriakides Georgopoulos Law Firm. She advises global pharmaceutical and life sciences companies on regulatory compliance, market access, intellectual property, data privacy and commercial matters. Her practice covers pricing and reimbursement, clinical trials, interactions with healthcare professionals, digital health, licensing, technology transfers and strategic collaborations. Irene also advises on the protection and enforcement of intellectual property rights and supports clients on GDPR compliance, particularly in relation to clinical trials, patient data and emerging technologies. She also serves as the firm's operations partner.

**Contributed by:** Anastasia Dritsa, Elisabeth Eleftheriades, Vicky Kriketou, Irene Kyriakides, Ioanna Kyriazi, Victoria Mertikopoulou, Claire Pavlou and Panagiotis Pothos, **Kyriakides Georgopoulos Law Firm**

**Ioanna Kyriazi** is a leading employment law expert and the Head of the Employment Practice at Kyriakides Georgopoulos Law Firm. She is renowned for providing strategic and effective legal advice to clients across various industries. With a client-centric approach, Ioanna helps employers navigate the complexities of managing their workforce, ensuring compliance, and mitigating risks. As an active litigator, Ioanna has a proven track record in representing employers in high-stakes litigation, arbitration, and mediation procedures, as well as representing and advising companies in collective bargaining negotiations, large-scale redundancy projects. mergers and acquisitions, and business reorganisations. Ioanna has been consistently ranked in leading legal directories such as Chambers and Partners, with clients highlighting her in-depth knowledge, strategic thinking, and commitment to client service.

**Victoria Mertikopoulou** is competition law partner at Kyriakides Georgopoulos Law Firm with over 25 years' experience in competition/antitrust law, and served as a board member (Commissioner – Rapporteur) of the Hellenic Competition Commission (HCC) until 2019. She represents international and Greek clients before the European Commission, the HCC and other competent authorities and courts in antitrust cases, investigations and cross-border and domestic mergers, acquisitions and joint ventures. Her practice focuses on all types of antitrust and competition procedures, including leniency, settlement, commitments, merger control and dawn raids. She also advises clients under the foreign direct investment (FDI) screening regime and Digital Services Act (DSA). She is consistently ranked in leading legal directories.

**Claire Pavlou** is a partner at Kyriakides Georgopoulos Law Firm with extensive experience in M&A, corporate and commercial law. She advises on private M&A transactions, group restructurings and joint ventures, both domestic and cross-border. Her practice spans the full transaction life cycle, from legal due diligence and strategic advice to drafting and negotiating complex transaction documents. Claire has acted on significant acquisitions across a wide range of sectors, including pharmaceuticals, medical devices, telecommunications, aviation, food, cosmetics, mining and construction materials. She also has considerable experience in franchising, aircraft financing and leasing, advising Greek and international clients on complex commercial transactions.

**Panagiotis Pothos** heads the Tax Department at Kyriakides Georgopoulos Law Firm and is a member of its Private Wealth practice. He advises multinational groups, listed and private companies, high net worth individuals and family offices on corporate and M&A taxation, international tax, VAT, indirect taxation, real estate, shipping and private wealth structuring. He regularly assists clients with cross-border investments and complex corporate and financial transactions and represents them before the tax authorities and administrative courts. Panagiotis is a member of the Taxation Committee of the American-Hellenic Chamber of Commerce, a frequent speaker at tax conferences and a contributor to leading tax publications.

## 1. Legal System

### 1.1 Legal System and Judicial Order

Greece is a civil-law jurisdiction, primarily based on written law, codes and statutes, rather than on binding case law. The main sources of law are the Constitution, legislation enacted by Parliament, codes such as the Civil Code, Criminal Code and Codes of Procedure, as well as European Union law.

The Greek courts are organised into separate branches. Civil courts deal with private disputes between individuals or legal entities, while criminal courts handle criminal offences. Administrative courts hear disputes between individuals or businesses and the State or public authorities.

At first instance, cases are heard by lower courts, depending on the nature and value of the dispute or the seriousness of the offence. Appeals are generally heard by courts of appeal. At the highest level, Areios Pagos acts as the supreme court for civil and criminal matters, while the Council of State is the supreme administrative court. The Court of Audit also has supreme jurisdiction regarding specific public finance matters.

Unlike common-law systems, Greek judges do not formally create binding precedent in the same way as UK courts. Their role is mainly to interpret and apply written law. However, decisions of Areios Pagos are highly influential and help ensure consistency in the interpretation of legislation. In particular, when Areios Pagos issues a judgment and refers the case back to a lower appeal court, this latter court is bound by the legal interpretation adopted by Areios Pagos in relation to the specific legal matter decided. Nevertheless, such rulings do not constitute generally binding precedent for all courts in future cases.

Overall, the Greek legal system reflects the civil-law tradition – ie, Parliament-made statutes and codified rules are the primary source of law, while case law plays an important supporting role in clarifying how those rules are applied in practice.

## 2. Restrictions on Foreign Investments

### 2.1 Approval of Foreign Investments

#### General Framework

Greece introduced its first standalone foreign direct investment (FDI) screening mechanism through Law 5202/2025 (the "Law"), implementing Regulation (EU) 2019/452 on the screening of foreign direct investments into the Union on grounds of security or public order. The regime became operational in November 2025 following the issuance of the implementing Joint Ministerial Decision No 64260/2025 regulating the notification process and supporting documentation.

The Greek FDI regime applies to investments by third-country investors, as well as by EU-based entities directly or indirectly controlled by third-country persons or governments.

The regime applies to both greenfield investments and acquisitions resulting in direct or indirect control, or qualifying minority participations, in businesses active in covered sectors.

### Screening Criteria and Sectors

A filing obligation arises where the following cumulative conditions are met:

- The investor qualifies as a foreign investor.
- The target entity is incorporated under Greek law or otherwise carries out economic activity in Greece.
- The target operates in a designated sensitive or particularly sensitive sector.
- The applicable participation thresholds are met.

The Law distinguishes between "sensitive" and "particularly sensitive" sectors.

Sensitive sectors include energy, transport, health, information and communication technologies, and digital infrastructure. In these sectors, notification is generally triggered upon the acquisition of at least 25% participation rights, with additional filings required upon crossing certain higher thresholds.

Particularly sensitive sectors include defence, cybersecurity, artificial intelligence, critical port and submarine infrastructure, and certain tourism infrastructure located in border regions. In these sectors, the filing obligation is triggered at a lower threshold of 10%, reflecting heightened national security considerations.

The regime is mandatory and suspensory, in that transactions falling within its scope must be notified prior to completion.

## 2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance

### Review Process

The review process is administered by the B1 Directorate of the Ministry of Foreign Affairs and the Interministerial Committee for the Screening of Foreign Direct Investments (ICSFDI).

The authority initially reviews whether the transaction falls within the scope of the regime and whether the filing is complete. Following referral to the Interministerial Committee, the authority may either clear the transaction at a preliminary stage or initiate an in-depth review.

Within 30 days of a complete filing, ICSFDI either clears the investment or opens an in-depth review. Following an in-depth review, ICSFDI submits a recommendation to the Minister of Foreign Affairs, who decides whether to approve, prohibit or condition the investment. If no decision is issued within 60 days from the date of ICSFDI's recommendation, the investment is deemed approved.

The timetable may be suspended where additional information requests are issued.

### Consequences of Non-Compliance

The regime imposes a mandatory pre-closing obligation. Failure to notify, late notification, or submission of inaccurate or misleading information may trigger significant sanctions:

- Failure to submit an application, or the submission of an application after its completion, may result in the imposition of mitigation or reversal measures by the authorities.
- These sanctions may be accompanied by a fine ranging from EUR5,000 to EUR100,000 (however, from the time the Law enters into force (23 May 2025) until the issuance and publication of the Joint Ministerial Decision on Fines, these administrative fines will not be imposed).
- Failure to submit the documentation required, as well as the submission of false information may result in the prohibition of the investment.

Proceeding with an investment despite an explicit prohibition, obtaining approval on the basis of false information, or failing to comply with the mitigation measures or the reversal of the investment imposed may result in a fine of up to twice the value of the investment.

A decision to prohibit, reverse, or impose conditions on an investment entails the automatic nullity of the relevant transaction, which may include reversal of the share sale agreement and any measures necessary to remedy the consequences of the transaction.

Although the regime is still new and no established enforcement practice has yet emerged, investors should approach filing obligations conservatively,

particularly in infrastructure, technology, defence and data-driven sectors.

### 2.3 Commitments Required From Foreign Investors

The Greek FDI regime allows the authorities to approve transactions subject to conditions or mitigation measures aimed at addressing national security or public order concerns.

Although the Law does not provide an exhaustive list of remedies, possible mitigation measures may include governance safeguards, restrictions on access to sensitive information or infrastructure, cybersecurity and data localisation obligations, continuity commitments and limitations on the transfer of strategic assets or technologies.

The authorities may also monitor compliance with imposed conditions and request information or supporting documentation from the parties.

Given that the Greek regime only recently became operational and that there is no published decisional practice, there are currently no clear indications regarding the authorities' substantive approach to remedies or mitigation measures.

### 2.4 Right to Appeal

Law 5202/2025 does not establish a specific administrative appeal mechanism against FDI screening decisions.

However, as a matter of general Greek administrative law, final administrative acts may in principle be challenged before the competent administrative courts and, ultimately, before the Council of State.

## 3. Corporate Vehicles

### 3.1 Most Common Forms of Legal Entity

The principal corporate vehicles used in Greece are the *société anonyme* (*Ανώνυμη Εταιρεία* – SA) and the private company (*Ιδιωτική Κεφαλαιουχική Εταιρεία* – PC), both providing limited liability. Among smaller enterprises, the limited partnership (*Ετερόρρυθμη Εταιρεία* – LP) is a commonly used vehicle.

Prior to the introduction of PCs in the Greek legal framework in 2012, the limited liability company (*Εταιρεία Περιορισμένης Ευθύνης* – EPE) was the most widely used vehicle for SMEs; however, given its more restrictive formalities (eg, mandatory notarial execution of its articles of association (AoA)), it has gradually fallen into disuse, and new EPE incorporations are rare in practice.

#### SA

*Main characteristics*

- A minimum capital of EUR25,000, paid in cash or in kind, is required.
- Capital is divided into registered shares; different classes may be issued (ie, ordinary or preferred shares).
- Shareholders' liability is limited to their contribution.
- A single shareholder is permitted.
- It is managed by a board of directors or, in the case of non-listed small or very small SAs, by a sole director.
- Bond and warrant issuance is permitted.
- Shares may be traded on Regulated Markets.

The SA is the preferred vehicle for large operating companies, regulated entities, public companies and large-sized holding companies. Regulated activities (e.g. credit and financial institutions and investment services activities) may only be conducted through an SA. As a rule of thumb, an SA is more appropriate in case of many shareholders, external investors, or a large volume of business activities.

#### PC

*Main characteristics*

- There is no minimum capital requirement.
- Contributions are divided into company units.
- Partners may contribute through capital contributions, non-capital contributions (obligation to perform work or provide services), or guarantee contributions (assumption of personal liability to third parties up to a designated amount).
- Partners' liability is limited to their contribution.
- A single partner is permitted (note: mandatory registration with the National Social Security Fund (e-EFKA)).
- It is managed by the administrator(s).

The PC is the most flexible and frequently used vehicle for SMEs, greenfield projects and a small or medium-sized Greek holding company due to its flexibility, low costs, and simplified governance.

### LP

An LP consists of at least one general partner, with unlimited personal liability, and at least one limited partner, whose liability is limited to their agreed contribution.

#### *Main characteristics*

- There is no minimum capital requirement.
- The contributions of the partners may consist of their labour, money or other assets, as well as any other form of consideration.
- It is managed by its general partner(s).
- All partners must be registered with the e-EFKA.
- For LPs keeping single-entry books, distributed profits are exempt from dividend tax.

In the LP, partner identity is central to the company's operation and object. Therefore, unless the partnership agreement provides otherwise, the partner's death, bankruptcy, or legal incapacity will generally lead to the company's dissolution, and any change in the partnership structure requires the remaining partners' consent.

The LP is predominantly used by small enterprises and is unsuitable for regulated activities and large-scale operations, being preferred for activities with a low creditor exposure, such as the provision of services.

## 3.2 Incorporation Process

All company types follow a broadly similar incorporation process, completed either online through the E-One-Stop-Shop of the General Commercial Registry (GEMI) or before a notary public, serving as the one-stop-shop, by notarial deed, where required by law (eg, for in-kind real estate contributions) or agreed by the founders.

For online incorporation, the Model AoA (with either standardised or additional provisions) must be used, while for notarial incorporation, bespoke AoA may be used.

In all cases, the incorporation process is carried out in Greek and is completed within the same day. Online incorporation is more straightforward and cost-efficient, and upon completion, the company is automatically registered with GEMI, as well as with the tax and social security authorities.

Prior to incorporation, any foreign shareholder or partner, and any foreign director/administrator, must first register with the Greek tax authority and obtain a Tax Identification Number (TIN).

Under all of the above corporate forms, shareholders and partners may be either legal entities or individuals.

In addition to the incorporation fees, the incorporation of an SA is subject to a duty payable to the Competition Commission, amounting to 1‰ of the share capital.

## 3.3 Ongoing Reporting and Disclosure Obligations

Both the SA and the PC are subject to filing and disclosure obligations with GEMI, while LPs are subject to similar, albeit less extensive, compliance requirements.

Key obligations include:

- Management Changes/Changes to Representation Powers/AoA Amendment: Any change in legal representatives (including directors of SAs or administrators of PCs and LPs), any modification to representation powers and any AoA amendment must be registered with GEMI within 20 calendar days.
- Financial Statements: SAs and PCs are required to prepare annual financial statements under Greek Accounting Standards and to publish them via GEMI by the tenth calendar day of the ninth month following the end of the financial year. LPs keep single-entry books; accordingly, no such obligation applies to them, except for LPs keeping double-entry books (eg, LPs where all of their partners are limited-liability entities or their annual turnover exceeds EUR1,500,000).
- Single-Member Disclosure: Where an SA or PC has a sole shareholder or partner, the identity of that

individual or entity is subject to publicity requirements on the GEMI website.

Further, Greek law requires companies to register their UBOs (ie, individuals holding an interest of at least 25% in the company) in the Central UBO Register. Initial registration and updates must generally be made within 60 days of the triggering event.

### 3.4 Management Structures

Greek companies operate on a one-tier management structure; Greek law does not provide for a formal two-tier supervisory/management model.

#### SA

It is administered by a board of directors (BoD) of three to fifteen members elected by shareholders.

SAs classified as "very small" or "small" may appoint a sole director-administrator (being a natural person), with the same duties and powers as a full board, provided that the AoA so permit.

A legal entity may be elected as a director, provided a specific individual is expressly designated to act on its behalf.

The BoD may delegate its powers to its members or to non-members, provided that such delegation is permitted under the AoA.

Board members who receive remuneration or hold at least a 3% participation in the company must be registered with e-EFKA.

#### PC

It is administered by one or more administrators, who must be individuals, elected by the partners.

Administrators may delegate certain responsibilities to one or more individuals provided that such delegation is permitted under the AoA.

Administrators must be registered with e-EFKA.

#### LP

It is managed and represented by the general partner(s). The partnership agreement, however, may assign such powers to a limited partner, who is then liable as a general partner for any act of representation, unless the third party was aware of their limited partner status.

### 3.5 Directors', Officers' and Shareholders' Liability

Directors and administrators owe duties of care and loyalty to the company, assessed under a business judgment standard; those acting in good faith and in the corporate interest are typically protected from personal liability, though culpable acts/omissions or company debts, including unpaid tax and social security obligations, may attract personal liability. SA shareholders and PC partners are not liable beyond their contributions. Greek courts may exceptionally "lift the corporate veil" where the corporate form is abused to defraud creditors. In PCs, guarantee-contribution partners are directly liable towards third parties up to the AoA amount. In LPs, general partners bear unlimited liability; limited partners are liable only up to their agreed contribution.

## 4. Employment Law

### 4.1 Nature of Applicable Regulations

Employment relationships in Greece are governed by the Greek Constitution, national legislation (ie, the Labour Code and the Civil Code, laws, presidential decrees and ministerial decisions), EU law and international treaties, as well as collective and individual employment agreements.

Case law is not a formal source of law but serves an interpretative function in applying statutory provisions.

### 4.2 Characteristics of Employment Contracts

The duration of the employment contract is agreed between the parties and may be either indefinite or fixed-term, on a full-time or part-time basis.

#### Fixed-Term Employment Agreements

A fixed-term contract may be renewed up to three consecutive times within a total period of three years and may not exceed an overall duration of three years. A break exceeding 45 calendar days is required to

avoid consecutive fixed-term contracts being characterised as indefinite-term contracts.

### Conclusion of Employment Agreements

There is no general legal requirement for employment agreements to be concluded in writing, except in specific cases (eg, part-time or temporary employment, renewal of fixed-term contracts).

### Essential Terms of Employment

Although employment contracts do not generally need to be in writing, employers must provide employees with written information on their essential employment terms (job description, remuneration, working time, etc) within specific time limits (one week/month, depending on the information).

## 4.3 Working Time

### Maximum Working Hours

The statutory working time in Greece is eight hours per day, 40 hours per week, for employees under a five-day weekly work schedule, and six hours and 40 minutes per day (40 hours per week) under a six-day schedule, except for certain employee categories with reduced working hours.

The total weekly working time may not exceed, over a reference period of up to four months, an average of 48 hours, including overtime.

### Overwork

Legal working hours may be exceeded by up to five hours per week (one hour per day under a five-day weekly schedule) due to workload. Under a six-day weekly schedule, overwork covers work performed between the 41st and 48th hour. Overwork is paid with a 20% surcharge on the hourly wage (unless an offset clause is included in the employee's contract allowing set-off against the agreed salary exceeding the statutory minimum wage).

### Overtime

Any work above the 45-hour limit and nine hours per day is "overtime". Employees may perform overtime of up to four hours per day and up to 150 hours per year. Every hour of legal overtime is paid with a 40% surcharge on the hourly paid wage.

Overtime not complying with the statutory formalities and approval procedures is considered "illegal", and employees are entitled to the hourly wage plus 120% for such overtime.

A special permit for overtime beyond the 150 hour limit may be granted by the Ministry of Labor, if justified for specific reasons and extraordinary work. Such overtime is paid with a 60% surcharge on the hourly wage.

The provision of paid time off in lieu of statutory overwork or overtime compensation is not permitted.

The parties may agree that the part of the employee's salary exceeding the statutory minimum can be offset with overwork compensation; however, such offsetting is not allowed for overtime compensation.

### Work During Sundays/Public Holidays

Employees may not work on Sundays or public holidays, unless legally exempt. Compensation amounts to 75% on top of the legal hourly wage. In urgent cases, such work may be authorised by the authorities; otherwise, it is considered as "illegal". If work exceeds five hours on Sunday, the employee is entitled to a day off.

### Work on the Sixth Day

For employees under a five-day weekly schedule, work on the sixth day is not permitted and the employees are entitled to receive an increase of 30% on their normal hourly wage.

By exception, employees of undertakings of continuous operation with rotating shift systems, or undertakings which are not of continuous operation but may operate on a six-day (24/5 or 24/6) shift basis, may be required to work on the sixth day. Prior notification to the Labour Inspectorate and registration through the ERGANI II platform are required, and work is limited to eight hours (no overwork/overtime permitted), and is remunerated with a 40% surcharge on the hourly wage.

### Night Work

Night work is from 22.00 until 06.00 and is compensated with a 25% increase in the hourly wage.

### Executive Employees

Under Greek law, only executive employees are exempt from working time provisions and are therefore not entitled to compensation for overwork or overtime. Executive employees are managerial employees, as defined by law, declared as such in the ERGANI II platform, and employed under a contract reflecting their status.

## 4.4 Termination of Employment Contracts

### Termination of Indefinite-Term Contracts

#### *Requirements*

Termination of indefinite-term employment agreements does not require a "serious cause"; however, in case of litigation, the employer must demonstrate that the termination was justified and the "last resort".

The validity of the termination requires:

- written notification of the employee;
- payment of the severance amount; and
- employee's registration with the competent social security fund.

Where the employee has committed a criminal offence and the employer has filed a complaint, termination without severance may take place. In the event of the employee's acquittal, statutory severance becomes payable.

Employers are also required to notify the labour authorities.

#### *Notice period*

The employer may terminate the employment with prior notice or immediate effect. Where the statutory notice period is observed, the employee's severance is reduced by 50%.

#### *Severance payment*

The statutory severance in Greece consists of the basic severance, applicable to all employees on indefinite contracts, and the additional severance, applicable to employees who, as of 12/11/2012, have completed 17 years of service with the employer.

Basic severance amount (and applicable notice period) depends on the employee's length of service with the employer and is capped at 12 monthly salaries. It is calculated on the employee's total regular monthly remuneration of the last month before termination, multiplied by 14 (to include statutory allowances), and divided by 12, to produce a monthly average. Additional benefits provided regularly, without reservation of amendment or revocation, should also be included.

Employees who, as of 12 November 2012, had 17 years of service with the same employer are entitled to additional severance of one monthly salary per year beyond 17 years, up to 12 monthly salaries, based on last month's earnings under full employment, capped at EUR2,000.

### Termination of Fixed-Term Contracts

Fixed-term contracts are terminated automatically when their agreed term expires. Early termination is permitted for a "serious cause", without notice or severance. In the absence of serious cause, all salaries due until the initially agreed expiration date are payable.

### Redundancies

Any type of redundancy is considered a justified reason for dismissal. However, the employer should be able to demonstrate, in potential litigation, that the position was genuinely made redundant and that selection complied with statutory criteria. Available alternatives (eg, redeployment) should be assessed before termination.

Selection criteria apply to comparable employees and include performance (the prevailing criterion), seniority, age, family burdens, financial status and the possibility of finding a new job.

### Collective Dismissals

Specific provisions exist for collective dismissals. The procedure is triggered where an employer with 20-150 employees dismisses more than six employees in a calendar month, or where an employer with more than 150 employees dismisses more than 5% of its workforce and, in any event, more than 30 employees in a calendar month.

Specific information and consultation requirements exist for collective dismissals, as well as notifica-

tions to the Ministry of Labour. Failure to follow the prescribed procedure renders the dismissals null and void.

The general rules on valid termination and severance continue to apply.

### 4.5 Employee Representations

The establishment of employee representative bodies and participation therein is not generally mandatory and is exercised where the relevant legal requirements are met. Employee representation is primarily exercised through trade unions and works councils.

#### Trade Unions

Union membership is a fundamental right under the Greek Constitution, ensuring employees' freedom to organise and advocate collectively. Any adverse treatment, including dismissal, due to union involvement is prohibited.

Trade unions are structured at three levels:

- first-level unions (sectoral, occupational or company-level unions; local branches; and associations of persons);
- second-level organisations (federations and labour centres); and
- third-level confederations of federations and labour centres.

The establishment of a trade union requires at least 20 employees. Founding members apply for recognition to court, upon which the union acquires legal personality.

Trade unions aim to preserve and promote employees' labour, financial, insurance, social and collective interests. Their main rights include collective bargaining and the right to strike, as well as information and consultation rights in cases of collective dismissals, transfer of undertakings, restructuring, the introduction of new technologies, etc.

#### Works Councils

Works councils may be formed in enterprises employing at least 50 employees, or more than 20 employees, where no trade union exists. They are elected by employees and consist of three, five, or seven members, depending on the size of the workforce.

Their primary function is advisory, with information and consultation rights regarding matters affecting employees, including health and safety, introduction of new technologies, collective redundancies, transfers of undertakings and restructuring measures (in the absence of a trade union).

#### European Works Councils

For multinational enterprises, European Works Councils are established for the protection of employees' rights in a broader, multinational form. Employees from all countries in which the enterprise is engaged participate in an EWC.

## 5. Tax Law

### 5.1 Taxes Applicable to Employees/ Employers

A taxpayer may be subject to taxation either based on their tax residence or because they derive income from a Greek source. Accordingly, any person who is considered a tax resident of Greece is subject to tax on their taxable income arising both in Greece and abroad earned during a specific tax year, whereas a taxpayer who is not a tax resident of Greece is subject to tax only on taxable income arising in Greece and earned during the relevant tax year. However, domestic law provisions apply subject to any double taxation treaty.

With respect to taxes imposed in the context of an employment relationship, employees are subject to progressive income tax brackets, while employers are liable for withholding such (payroll) tax and social security contributions calculated on the employee's income.

The following tax rates apply to the employee's income, from 1 January 2026 onwards, subject to applicable reductions:

- From EUR0 to EUR10,000, the tax rate is 9%.
- From EUR10,000.01 to EUR20,000, the tax rate is 20%.

- From EUR20,000.01 to EUR30,000, the tax rate is 26%.
- From EUR30,000.01 to EUR40,000, the tax rate is 34%.
- From EUR40,000.01 to EUR60,000, the tax rate is 39%.
- For income over EUR60,000, the tax rate is 44%.

With regard to tax breaks/incentives available for employees, from FY 2021, a taxpayer/employee who transfers their tax residence to Greece may qualify for a special tax regime if certain conditions are met, including prior non-residence in Greece and relocation from an eligible country (ie, an EU or EEA member state or from a state with which Greece has an administrative co-operation agreement in the field of taxation in force). Under this regime, 50% of employment income earned in Greece is exempt from income tax for up to seven tax years.

## 5.2 Taxes Applicable to Businesses

Under domestic tax rules, a company is subject to corporate income tax either based on its tax residence or if it maintains a permanent establishment under domestic rules or applicable double tax treaty provisions. Accordingly, a company is considered tax resident in Greece and subject to tax on its worldwide income if any one of the following conditions is met; in essence, a company is regarded as tax resident in Greece if it has been incorporated or established under Greek law, or if it has its registered seat in Greece, or if its place of effective management (POEM) is located in Greece for any period during the tax year.

With regard to taxable income and applicable tax rates, a Greek company and a permanent establishment are subject to corporate income tax at a rate of 22%, after deducting business expenses, provided that all the relevant conditions provided for the deduction under the Greek Income Tax Code (GITC) are met, as well as depreciation and provisions for doubtful receivables (with respect to a permanent establishment, subject to the provisions of any applicable double tax treaty, which may override domestic provisions).

Taxable business profits are generally determined on the basis of accounting profits, as adjusted by the specific rules and classifications set out in the GITC. In principle, they correspond to total revenues minus deductible business expenses, tax-allowable depreciation, and certain provisions for bad debts. As a rule, incorporated businesses are taxed on an accrual basis, while any profits not previously taxed become taxable upon distribution or capitalisation.

### Withholding Tax on Income: Interest, Royalties, Dividends

Income derived from interest, royalties, and dividends falls under the general category of investment income and is subject to withholding tax at a rate of 20% for Greek-source royalties, 15% for Greek-source interest, and 5% for dividends, subject to the provisions of any applicable double tax treaty) or, where applicable, the provisions of the EU Interest–Royalties Directive and the Parent–Subsidiary Directive.

In short, dividend exemption applies where the conditions of the EU Parent–Subsidiary Directive are met, including a minimum 10% participation held for at least 24 months, qualifying EU tax residency and inclusion in Annex I companies, as well as subject-to-tax requirements without exemption options; similarly, exemption from withholding tax on interest and royalties applies to payments between qualifying EU associated companies where a minimum 25% direct or indirect participation is held for at least 24 months, and the beneficiary satisfies the requirements of the EU Interest and Royalties Directive regarding qualifying entity status, EU tax residence (without third-country treaty residence), and full corporate tax liability without option or exemption. Until the minimum holding period is completed, a bank guarantee may be provided for the withholding tax due, instead of immediate payment of the withholding tax and subsequent refund claim.

A special anti-avoidance rule prohibits the withholding tax exemption on the qualifying dividend payments where the relevant exemption is claimed in the context of artificial arrangements.

### Pillar 2 Directive, Law 5100/2024

Greece has implemented EU Council Directive 2022/2523 (Pillar Two Directive) through Law 5100/2024, establishing a global minimum taxation

framework for multinational groups and large-scale domestic groups.

Under this regime, the GloBE Information Return (GIR) must generally be filed within 15 months after the end of the relevant reporting fiscal year (or 18 months for the transitional year). The corresponding tax return must then be filed by the last working day of the month following the submission of the GIR.

The law introduces the QDMTT safe harbour, the CbCR transitional safe harbour, and the UTPR transitional safe harbour. It also expressly provides that these safe harbours are to be interpreted in line with the OECD Model Rules.

### VAT Considerations

VAT is imposed on all transactions for consideration involving the supply of goods and the provision of services. The standard VAT rate is 24%, although reduced rates also apply in certain cases.

### Digital Transaction Duty (DTD)

The DTD is a tax introduced in Greece through Law 5135/2024 and codified by Law 5177/2025, imposing a proportional levy on specific transactions that fall outside the scope of VAT. The DTD applies to transactions where at least one party is a Greek tax resident or has a permanent establishment in Greece, provided that the transaction is connected to that establishment. The duty is calculated as a specific percentage of the financial value of the transaction or the highest debit/credit balance.

### Special Real Estate Tax (SRET)

The ownership of Greek real estate through non-transparent structures is addressed through the imposition of a special tax on property held as of 1 January each calendar year, calculated at a rate of 15% on the imputed/statutory value of the real estate. In practice, the tax does not apply to a significant number of incorporated entities holding real estate in Greece due to various exemptions, particularly where the owning company is not considered to be used as a vehicle for tax evasion or avoidance. Recent amendments to the special real estate tax framework have aligned the exemption for regulated investment vehicles with applicable domestic and EU legislation governing such schemes.

### Unified Real Estate Tax (URET)

The URET (ΕΝ.Φ.Ι.Α.) constitutes an annual property tax imposed on all real estate situated in the country. It is calculated on the basis of objective property values, considering factors such as floor area, age, and location, with main tax rates for buildings ranging from EUR2 to EUR16.20 per square metre.

### Capital Concentration/Accumulation Tax

CCT is levied at a flat rate of 0.2% on contributed capital, including share capital increases made in cash or in kind. This duty applies to commercial companies and corporate transformations, rather than to the initial establishment of a company.

### Listed Shares Sales Tax

Capital gains arising from the sale of listed and unlisted shares are treated as business income and are subject to corporate income tax at the standard CIT rate. However, where such gains are realised by foreign legal entities tax resident abroad, they are taxable in Greece only to the extent that the entity maintains a permanent establishment in Greece to which such gains can be attributed. In addition, the transfer of listed shares is subject to a transaction duty at a rate of 0.1%.

## 5.3 Available Tax Credits/Incentives

### Incentives Offered for All Enterprises

The GITC introduces tax incentives in the form of enhanced “super” deductions for specific business expenses. Scientific and technological research costs, including depreciation of related equipment, are deductible with a 100% uplift. Similar enhanced deductions apply to expenses related to the green economy, energy efficiency, and digitalisation for SMEs, as well as to costs connected with the listing of SME shares or equivalent securities on a regulated Greek market, also with a 100% uplift and a cap on the resulting tax benefit of EUR200,000. The provision aims to encourage investment in research, sustainable development, digital transformation, and capital market participation.

### Digital Business

Greece provides a broad set of tax incentives that may be relevant to digital businesses. Expenditure on scientific and technological research, including depreciation of relevant equipment and instruments, is deductible with an additional 100% uplift. Following amendments introduced by Law 5162/2024 (applicable from FY 2025), this enhanced deduction rises to 150% for eligible research costs linked to collaborations with entities registered in the National Startup Registry, accredited research centres, and universities that are independent from the recipient of the services, as well as for depreciation of research-related equipment. In certain cases, SMEs may benefit from an increased deduction of up to 215%.

Furthermore, GITC establishes a "Patent Box" regime, which allows, subject to specific conditions, tax exemption for income generated from self-developed, internationally recognised patents. Greece also offers a favourable regime for angel investors, providing income tax relief for certified investments in qualifying start-ups.

### Corporate Transformations

Corporate reorganisations, including mergers, demergers, transformations, spin-offs, and contributions of assets, are governed by two parallel legislative frameworks. From a corporate law perspective, Law 4601/2019 provides a comprehensive framework regulating all forms of corporate transformations. From a tax law perspective, rules have recently been introduced to consolidate and modernise the tax provisions and incentives applicable to corporate reorganisations (Articles 47–59 of Law 5162/2024), replacing the previously fragmented framework under Laws 1297/1972, 2166/1993, 2778/1998, and 4172/2013. At the same time, the incentive regime introduced by Law 4935/2022 – primarily aimed at micro, small, and medium-sized enterprises (SMEs) – remains in force. In addition, the special restructuring framework applicable to credit institutions under Law 2515/1997 continues to apply.

### Special Regime of Law 89/1967

Under Law 89/1967, a favourable regime is available to foreign companies operating in Greece that provide specific services to their parent companies, affiliated entities, or other non-Greek businesses, including consultancy, accounting support, quality control, planning, marketing, data processing, and similar activities. In essence, such entities are required to determine their gross revenues on a cost-plus basis, calculated by adding a pre-approved profit margin to total operating expenses and tax-allowable depreciation, excluding income tax, following an audit or review by the competent Committee. The profit margin is set by a committee appointed by the Minister of Development and Investments and is reassessed every five years, subject to significant changes in market conditions.

## 5.4 Tax Consolidation

No response was provided in this jurisdiction.

## 5.5 Thin Capitalisation Rules and Other Limitations

Interest deductibility in Greece is limited under the thin capitalisation (interest limitation) rules set out in GITC. Under these provisions, net interest expenses are generally deductible up to 30% of EBITDA (calculated on a tax basis). Any amount exceeding this threshold is not deductible in the relevant tax year. However, disallowed net interest expenses can be carried forward indefinitely and deducted in future tax years.

An exemption applies where net interest expenses do not exceed EUR3 million, in which case the limitation does not apply. In addition, certain entities – such as credit institutions, insurance and reinsurance companies, and pension institutions – are excluded from the scope of these rules.

## 5.6 Transfer Pricing

In Greece, transfer pricing is mainly regulated under the GITC, supplemented by administrative guidance from the Independent Authority for Public Revenue (IAPR). In addition, the Tax Procedure Code sets out the framework governing tax audits as well as the documentation and procedural requirements applicable to transfer pricing compliance.

Furthermore, the OECD Transfer Pricing Guidelines are recognised and applicable in Greece as an interpretative framework for applying the relevant legal provisions. In particular, the GITC stipulates that the

arm's length principle must be applied and interpreted in line with the general principles and the OECD Transfer Pricing Guidelines in relation to intra-group transactions.

Transfer pricing rules apply to transactions between "related parties" as defined under the GITC. Greek tax legislation adopts a broad definition of related parties, covering both direct and indirect relationships that may influence the pricing of intra-group transactions. In more detail, a 33% threshold is applied to determine related-party status, based on direct or indirect participation in capital or voting rights. In addition, parties may also be treated as related where one entity exercises managerial control or decisive influence over another, regardless of whether any participation in capital or voting rights exists.

### 5.7 Anti-Evasion Rules

Greece has introduced Controlled Foreign Corporation (CFC) rules, a General Anti-Abuse Rule (GAAR), and hybrid mismatch provisions in accordance with ATAD I and II, whereas there are special anti-avoidance rules regarding the taxation on corporate transformations.

The GAAR applies to both domestic and cross-border arrangements, provided that the relevant double tax treaty does not contain its own anti-abuse provisions, such as a Principal Purpose Test. Under this rule, the Greek tax authorities may disregard arrangements or series of arrangements that are primarily, or have as one of their main purposes, the obtaining of a tax advantage that contradicts the intent or purpose of the applicable tax law.

Under the revised CFC framework, even where all applicable conditions are met, the rules will not apply if the foreign entity is located in an EU or EEA jurisdiction and demonstrates genuine economic activity, such as having sufficient staff, premises, assets, and equipment.

Lastly, the hybrid mismatch rules aim to prevent double deductions or deductions without corresponding taxation arising from differences in the tax treatment of entities or instruments across jurisdictions, thereby safeguarding against base erosion.

### 5.8 Tariffs

Greece, as part of the European Union, is subject to the Union Customs Code (UCC). The aforementioned code was adopted in 2013, and its substantive provisions have applied since 1 May 2016, with the aim of bringing EU customs legislation into line with the requirements of the Lisbon Treaty. It supersedes the former Community Customs Code (CCC).

Having said that, tariff classification is governed by the Combined Nomenclature (CN) and specific tariff classification decisions and updates are formally adopted through Commission Implementing Regulations. The European Commission updates this list on an annual basis, with the most recent revisions adding specific subheadings for advanced technologies such as batteries, photovoltaics, hydrogen, and advanced materials (Commission Implementing Regulation (EU) 2026/360 and Commission Implementing Regulation (EU) 2026/333).

Countries with extensive trade agreements with the European Union benefit from significantly reduced or eliminated tariffs, creating heavily integrated market access. For example, the EU–South Korea Free Trade Agreement has eliminated customs duties on nearly all goods traded between the parties. In addition, it has reduced numerous non-tariff barriers affecting exports of products such as automobiles, pharmaceuticals, electronics, and chemicals. The agreement has also liberalised a wide range of services sectors, facilitating market access and investment opportunities for both EU and South Korean businesses. Another example is the EU–Central America Association Agreement, which has been provisionally applied since 1 August 2013 with Honduras, Nicaragua, and Panama; since 1 October 2013 with Costa Rica and El Salvador; and since 1 December 2013 with Guatemala.

## 6. Competition Law

### 6.1 Merger Control Notification

Greek merger control is governed by Law 3959/2011 (the "Greek Competition Act"), which is closely aligned with the EU Merger Regulation (EUMR). The system is primarily administered by the Hellenic Competition Commission (HCC) and operates on a mandatory and

suspensory basis. In the electronic communications and postal sectors, competition law enforcement powers are exercised exclusively by the Hellenic Telecommunications and Post Commission (EETT) within its sectoral remit.

### Transactions Covered

The Greek merger control regime applies to concentrations resulting in a lasting change of control.

Notifiable transactions include:

- mergers between previously independent undertakings;
- acquisitions of sole or joint control over all or part of a business; and
- the creation of "full-function" joint ventures performing on a lasting basis all functions of an autonomous economic entity.

The concept of control is interpreted consistently with EU merger control principles and may arise through shareholdings, contractual arrangements or veto rights.

### Jurisdictional Thresholds

A concentration must be notified to the competent competition authority prior to implementation where the following cumulative turnover thresholds are met:

- The combined aggregate worldwide turnover of all undertakings concerned exceeds EUR150 million.
- At least two undertakings concerned each generate turnover exceeding EUR15 million in Greece.

The Greek regime is exclusively turnover-based and does not provide for market share thresholds.

Transactions meeting the EU thresholds fall within the exclusive jurisdiction of the European Commission unless referred to the HCC under the EUMR referral mechanisms.

## 6.2 Merger Control Procedure

### Filing and Pre-Notification

Notification must be submitted prior to completion of the transaction. Although not mandatory, pre-notification contacts are frequently used in complex cases to discuss jurisdictional and procedural issues, as well as substantive matters.

Within seven working days after the filing, the HCC shall assess whether the notification form is incomplete and request the parties concerned to provide additional information. If they fail to submit complete and precise information as requested, the one-month time limit of Phase I does not commence; thereby, the progress of the procedure is delayed. In practice, it is common that the competent competition authority demands additional information, resulting in a delay of the procedure for 10 to 15 additional days.

### Phase I Review

The HCC conducts an initial review within one month from receipt of a complete filing.

During Phase I, the authority may:

- determine that the transaction falls outside the merger control regime;
- clear the concentration unconditionally; or
- initiate an in-depth Phase II investigation where serious competition concerns are identified.

Requests for additional information are common in practice and may suspend or delay the review timetable.

20 calendar days after the notification date, the parties may also offer commitments intended to address potential competition concerns.

### Phase II Investigation

Where the HCC opens an in-depth investigation, the statutory review period is generally 90 days from the decision initiating Phase II. The case is brought before the HCC within 45 days from that decision, and remedies may be proposed within 20 days from the case being brought before the HCC.

The Phase II investigation period is automatically extended by 15 days, if the parties propose remedies later than the 20-day limit. Thus, the maximum duration of Phase II is 105 days.

The authority may ultimately:

- approve the transaction unconditionally;
- clear it subject to remedies; or
- prohibit the concentration.

If the HCC fails to issue a decision within the applicable statutory deadline, the concentration is deemed approved.

### Gun-Jumping and Sanctions

The Greek merger control regime prohibits implementation prior to clearance.

Failure to notify a notifiable transaction, early implementation ("gun-jumping"), or breach of remedies may result in significant administrative fines. The HCC also has powers to impose behavioural or structural measures where necessary.

## 6.3 Cartels

### Legal Framework

Article 1 of the Greek Competition Act mirrors Article 101 TFEU and prohibits agreements, decisions by associations of undertakings and concerted practices that have as their object or effect the restriction of competition. Typical infringements include price-fixing, market sharing, output restrictions, bid-rigging and exchanges of commercially sensitive information.

The Greek Competition Act also recognises in its Article 1 (3) the equivalent of the Article 101 (3) TFEU exemption, allowing restrictive agreements where efficiency gains outweigh anti-competitive effects and consumers receive a fair share of the resulting benefits. EU Block Exemption Regulations also apply mutatis mutandis to agreements, decisions or concerted practices which are not likely to affect trade between EU member states.

### Additional National Rules

Greek law also prohibits invitations to collude and certain unilateral disclosures of future pricing intentions by large undertakings (Article 1A of the Greek Competition Act).

### Territorial Scope

Greek competition law follows the effects doctrine. Under Article 46 of the Greek Competition Act, the regime applies to anti-competitive conduct capable of affecting competition in Greece, irrespective of where the conduct occurred or whether the undertakings involved are established in Greece.

Accordingly, agreements concluded or implemented outside Greece may still fall within the jurisdiction of the HCC where they produce actual or potential effects on the Greek market.

## 6.4 Abuse of Dominant Position

### Abuse of Dominance

Article 2 of the Greek Competition Act mirrors Article 102 TFEU and prohibits abusive conduct by undertakings holding a dominant position in the Greek market or a substantial part thereof.

Unlike the EU system, Greek law expressly allows settlement procedures not only in cartel cases but also in abuse of dominance investigations.

As with cartel enforcement, the Greek abuse of dominance regime is based on the effects doctrine. Under Article 46 of the Greek Competition Act, abusive conduct may fall within Greek jurisdiction where it takes place in Greece or produces actual or potential effects on the Greek market, regardless of the location of the undertaking concerned. This allows the HCC to investigate foreign undertakings whose conduct materially affects competition in Greece, even absent a physical presence in the jurisdiction.

### Abuse of Economic Dependency

Greek law separately prohibits the abusive exploitation of economic dependency (under Article 18a of the Unfair Competition Act (Law 146/1914)), which may exist where a trading partner is substantially reliant on a commercial relationship and lacks an equivalent alternative.

Article 18a is enforced exclusively by the Greek civil courts, which may order the cessation of the abusive conduct and/or its non-repetition, award damages (actual loss and/or loss of profits) and impose fines of EUR5,000 to EUR50,000 on responsible natural persons. Furthermore, any agreement giving rise to the abusive conduct is void under Article 174 of the Greek Civil Code.

Foreign undertakings without a principal establishment in Greece may invoke Article 18a only if reciprocity is established, namely if Greek undertakings enjoy equivalent protection in the relevant foreign jurisdiction. Accordingly, beyond the existence of effects of the conduct in Greece, Article 18a is subject to an additional limitation, with reciprocity restricting access to protection under the provision.

## 7. Intellectual Property

### 7.1 Patents

#### Definition

A patent is an intellectual property right protecting technical inventions that are novel, involve an inventive step and are capable of industrial application. The main applicable framework in Greece is Law 1733/1987.

#### Length of Protection

Patents are protected for 20 years from the filing date, subject to annual renewal fees. Protection may be extended by up to five years for medicinal and plant protection products through a supplementary protection certificate.

#### Registration Process

Patent protection in Greece may be obtained through the following:

- National Patents: An application is filed with the Hellenic Industrial Property Organization (OBI). Following formal examination and a search report, OBI grants and publishes the patent.
- European Patents (European Patent Convention): A European patent application may be filed with the European Patent Office (EPO), designating Greece. Once granted, the patent must be validated in Greece by OBI.
- International Patents (Patent Co-Operation Treaty): Applicants may file an international application with OBI or WIPO. Upon entry into the European phase and grant of the European patent, the above validation process applies.

Greece has signed but has not yet ratified the Unified Patent Court Agreement.

#### Enforcement and Remedies

Patent rights are enforced primarily through civil proceedings, including injunctions, damages and the removal or destruction of infringing products. Damages may be based on lost profits, reasonable royalties or the infringer's profits. Information claims and publication of court decisions are also available.

### 7.2 Trade Marks

#### Definition

A trade mark is any sign capable of distinguishing the goods or services of one undertaking from those of another and of being represented on the register with clarity and precision.

#### Length of Protection

Protection in Greece is available through:

- national trade marks (Law 4679/2020);
- EU trade marks – EUTMs (Regulation (EU) 2017/1001); and
- international registrations under the Madrid Protocol.

Protection lasts ten years from the filing date/from the date of international registration and may be renewed indefinitely for successive ten-year periods.

#### Registration Process

A national trade mark application is filed with OBI. Upon its formal examination, the application is published and becomes subject to a three-month opposition period. If no opposition is filed, or any opposition is rejected, the trade mark is registered. A similar procedure applies to EUTMs before the European Union Intellectual Property Office (EUIPO).

For international registrations, the application is filed through the applicant's national or regional office and submitted to the World Intellectual Property Organization (WIPO). Following formal examination by WIPO, the designation of Greece is notified to OBI, which examines the application under national law. In the absence of a refusal, the mark enjoys protection in Greece as a national trade mark.

#### Enforcement and Remedies

Enforcement includes:

- cease and desist letters;
- civil proceedings seeking injunctions, damages and measures such as recall, removal or destruction of infringing goods;
- interim measures;
- criminal liability in counterfeiting cases;
- customs enforcement measures; and
- opposition, revocation and invalidity proceedings.

Signs that have acquired distinctive character through use may also enjoy protection without registration.

## 7.3 Industrial Designs

### Definition

Industrial designs, governed mainly by Presidential Decree 259/1997, protect the appearance of the whole or part of a product, provided it is new and has individual character.

### Length of Protection

Registered designs are protected for five years from filing, renewable for successive five-year periods up to a maximum of 25 years.

Unregistered Community designs are protected for three years from first disclosure within the EU.

### Registration Process

Protection is available through the following:

- National Designs: An application is filed with OBI. Following formal examination, OBI issues a registration certificate and the registered design is subsequently published.
- EU Designs (Regulation (EU) 2024/2822): Applications are filed with EUIPO and follow a similar registration procedure to national designs.
- International Design Registrations (Hague System): A single international application may be filed with WIPO, designating Greece. Following publication in the International Register and absent refusal, the design enjoys protection as if registered nationally.

### Enforcement and Remedies

Right holders may seek cessation of the infringement, injunctions against future infringements and damages. Courts may also order withdrawal, removal from the market or destruction of infringing goods. A design may additionally qualify for trade mark and/or copyright protection where applicable.

## 7.4 Copyright

### Definition

Copyright is an intellectual property right granted to original literary, artistic or scientific works in any form, including both economic and moral rights. The main applicable framework is Law 2121/1993.

### Length of Protection

Copyright lasts for the author's life plus 70 years, calculated from 1 January of the year following the author's death.

### Registration Process

In Greece, copyright is not subject to registration. Protection arises automatically upon creation of the work.

### Enforcement and Remedies

Enforcement mechanisms include:

- civil actions, including injunctions and damages;
- interim measures;
- criminal sanctions; and
- administrative enforcement measures, including notice-and-takedown procedures for digital content.

## 7.5 Others

Software is protected as a literary work under copyright law, covering source and object code. Software-related inventions may be patentable if they produce a technical effect.

Databases are protected through:

- a sui generis right, where there has been substantial investment in obtaining, verifying or presenting the contents; and
- copyright protection, where the selection or arrangement of the contents constitutes an original intellectual creation.

Law 4605/2019 protects trade secrets. Protection requires that the information be secret, have commercial value and be subject to reasonable confidentiality measures.

## 8. Data Protection

### 8.1 Applicable Regulations

#### Sources of Data Protection Law in Greece

- System Overview: The Greek data protection framework is based on a combination of constitutional provisions, EU law, national legislation, and regulatory guidance. Overall, the system is characterised by the primacy of the GDPR, supplemented by national laws and extensive regulatory guidance, including sector-specific lex specialis rules.
- Constitution: At the constitutional level, the Greek Constitution establishes core safeguards: Article 9A guarantees the protection of personal data and mandates an independent authority, while Article 19 protects the confidentiality of communications.
- GDPR and National Implementing Legislation: The primary legal instrument is the General Data Protection Regulation (GDPR), which is directly applicable in Greece and establishes the general rules on lawful processing. It is supplemented by Law 4624/2019, which implements the GDPR, transposes Directive (EU) 2016/680 and regulates the operation of the Hellenic Data Protection Authority (HDPA). The framework is further complemented by the residual provisions of Law 2472/1997, which had originally transposed Directive 95/46/EC into the Greek legal order. Notably, the Hellenic Data Protection Authority has clarified, in Opinion 1/2020, that national provisions which conflict with the GDPR, or which lack a valid legal basis under its opening clauses, should not be applied.
- Relevant and Sector-Specific Regulation: The framework is complemented by relevant and sector-specific laws, notably:
  (a) Law 3471/2006 on electronic communications (cookies, direct marketing, soft opt-in and opt-out rules);
  (b) Law 5002/2022 (confidentiality of communications);
  (c) Law 5086/2024 and Law 5160/2024 (cybersecurity); and
  (d) Law 5169/2025, and Law 4961/2022 (emerging technologies).
- Role of Supervisory Authorities: Competent supervisory authorities, such as the HDPA, issue binding decisions, guidelines, and recommendations, which play a key role in interpreting and enforcing the framework.

### 8.2 Geographical Scope

#### Cross-Border Application of Data Protection Law

- Territorial Scope Under the GDPR: The applicability of Greek and EU data protection rules in an international context is primarily governed by the GDPR territorial scope (Article 3). The GDPR applies not only to controllers and processors established in Greece or elsewhere in the EU, but also to non-EU entities where their processing activities relate to the offering of goods or services to individuals in Greece, or the monitoring of behaviour of individuals within Greece (eg, through tracking technologies or profiling). Accordingly, a foreign company targeting customers in Greece (eg, via a Greek-language website) will be subject to the GDPR.
- Supervisory Authority and One-Stop-Shop Mechanism: Enforcement is carried out by the HDPA where Greece is the relevant jurisdiction (eg, where data subjects are located or where a local establishment exists), subject to the GDPR's one-stop-shop mechanism for cross-border processing.

### 8.3 Role and Authority of the Data Protection Agency

#### Data Protection Authority and Regulatory Enforcement Framework

##### *The Hellenic Data Protection Authority*

Data protection in Greece is enforced primarily by the HDPA, established under Law 2472/1997 and operating within the framework of the GDPR, Law 4624/2019 and Law 3471/2006. The Authority exercises a broad range of powers, including monitoring compliance and issuing guidelines and recommendations.

Enforcement activity is largely complaint-driven, although the HDPA also initiates ex-officio investigations in cases of broader public interest. Proceedings before the HDPA follow administrative procedures and typically involve the preparation of a case file, a hearing, and the issuance of a reasoned, binding decision after the parties have been heard.

Where a breach of data protection law is established, the HDPA exercises its corrective powers, including the imposition of administrative fines. Decisions of the

HDPA are binding but may be challenged before the Council of State (see also below).

*Enforcement trends*

Recent enforcement practice indicates an increasing focus on high-risk areas, including employment-related processing and data breaches. Violations of data subject rights remain a consistent priority, with particular emphasis in the past year on the right of access.

Looking ahead, greater emphasis is expected on transparency obligations, in line with co-ordinated enforcement actions of the European Data Protection Board and the participation of the HDPA therein.

*Other relevant authorities*

The Hellenic Authority for Communication Security and Privacy is responsible for safeguarding the confidentiality of communications. It issues regulations, conducts audits, and investigates complaints, particularly in relation to telecommunications and lawful interception.

The Hellenic Cybersecurity Authority is responsible for cybersecurity oversight. It supervises the implementation of the NIS2 framework and co-ordinates incident reporting at the national level.

In the financial sector, additional supervisory responsibilities arise under the Digital Operational Resilience Act. These are exercised by authorities such as the Bank of Greece and the Hellenic Capital Market Commission, which oversee digital operational resilience and ICT risk management.

*Judicial proceedings*

- Civil Law – Compensation Claims: Individuals whose data protection rights are infringed may seek judicial protection before the civil courts. Claims may include compensation for both material damage (eg, financial loss) and non-material damage (eg, distress or reputational harm). Courts assess compensation on a case-by-case basis, considering factors such as the nature and seriousness of the infringement and the impact on the individual.
- Criminal Proceedings: Greek law provides for criminal liability in cases of serious violations of data protection legislation. Criminal proceedings are conducted before the competent criminal courts, either following a complaint by the affected individual or upon initiation by the public prosecutor.
- Administrative Proceedings: Decisions of the HDPA are binding on the parties concerned; however, parties whose rights or interests are affected may challenge such decisions before the Council of State.

Explanatory Note: The above avenues of redress operate independently; none is contingent upon the initiation of another.

## 9. Looking Forward

### 9.1 Upcoming Legal Reforms

#### Merger Control: More Interventionist Enforcement and Procedural Modernisation

The most significant development in Greek merger control is not legislative but enforcement-driven. Recent cases suggest that the HCC is increasingly willing to subject transactions affecting concentrated domestic markets to rigorous scrutiny and, where necessary, require far-reaching remedies or allow transactions to be abandoned. This trend was illustrated by the proposed EUR217 million acquisition by Allwyn International of a controlling stake in Novibet's parent company, Logflex MT Holding. Following the issuance of a Statement of Objections in December 2025, the parties abandoned the transaction in March 2026 (HCC Decision No 904/2026). The HCC's concern was the elimination of OPAP's only meaningful competitor in the Greek online betting market. This follows the HCC's prohibition of the Alphabet/Delta transaction in July 2025, its first merger prohibition in over two decades. Parties considering acquisitions in concentrated sectors, particularly involving digital markets or the elimination of a key competitive constraint, should expect rigorous scrutiny. At the same time, Greece is continuing to modernise its merger control framework. Recent amendments have simplified certain procedural aspects of the notification process and further aligned domestic practice with EU standards. An additional point to watch will be

the interaction between Greek enforcement practice and the European Commission's ongoing review of the EU Merger Guidelines. While the Commission's draft guidelines emphasise innovation and efficiencies, recent HCC decisions reflect a comparatively cautious approach to consolidation in concentrated markets, a divergence that may become particularly relevant where jurisdiction could fall to either authority.

### Foreign Direct Investment Screening: From New National Regime to European Harmonisation

The most significant development in the field of foreign investment is the introduction of Greece's first comprehensive foreign direct investment (FDI) screening mechanism under Law 5202/2025, coupled with the ongoing reform of the EU FDI screening framework. As the regime is still in its infancy, a key issue for market participants will be how the competent authorities interpret and apply the new framework in practice, particularly with respect to jurisdictional questions, substantive assessment criteria and the types of mitigation measures that may be imposed. Further refinement of the recently enacted national framework is expected as the EU's new FDI Screening Regulation – approved on 8 June 2026 and expected to take full effect by early 2028 – will require member states to maintain screening mechanisms meeting common minimum standards and to extend mandatory screening to a broader set of strategic sectors – including artificial intelligence, quantum technologies, advanced semiconductors, electoral systems, designated financial entities and strategic raw materials. Investors should therefore expect the Greek FDI regime to remain a developing area over the next several years, with additional implementing measures and administrative guidance likely to emerge as both domestic and EU rules evolve. From a transactional perspective, deals involving strategic assets or sensitive sectors will increasingly require parallel merger control and FDI screening reviews, alongside any sector-specific regulatory approvals.

### Reform of Greek Succession and Family Law

Whilst not directly relevant to the sections set out above, it is worth noting that with Law 5303/2026 published in the Government Gazette on 22 May 2026, Greece has enacted its most comprehensive reform of succession and family law in eight decades. This reform is expected to give a boost to the attractiveness of Greece as a jurisdiction for high-net-worth individuals, family offices, and internationally mobile wealth. Combined with the existing non-dom tax regime and the Golden Visa programme, the reform adds a further dimension to Greece's offer as a destination for wealth relocation and long-term investment.

# Trends and Developments

### Introduction

Greece's economy is growing at a moderate but steady pace as it enters 2026. Following the debt crisis of the previous decade, the country has emerged as one of the more dynamic jurisdictions in the European legal and commercial landscape. The environment is defined by economic expansion, accelerating investment, and an increasingly dense regulatory framework driven by EU law.

The European Commission's Spring Economic Forecasts indicate that Greece will continue to outperform the EU and eurozone averages, even as the country's economic growth is expected to gradually moderate from 2.1% in 2025 to 1.8% in 2026 and 1.6% in 2027, mainly due to rising energy costs. Economic growth and investment are projected to remain strong in 2026, driven mainly by sustained investment inflows and the continued deployment of funds, particularly under the EU Recovery and Resilience Facility (RRF). The imperative to complete all RRF milestones by August 2026 is driving the pace and priorities of public procurement, infrastructure delivery and several key sectors, including energy, technology, healthcare, gaming and hospitality.

This economic momentum has produced a corresponding surge in transactional activity and regulatory output. The Greek M&A market reached unprecedented levels in 2025, recording record deal volumes and values across a wide range of sectors. At the same time, the legislative landscape has undergone substantial transformation, with new frameworks governing foreign direct investment screening, corporate governance, capital markets, employment, market surveillance, and sustainability all coming into force in rapid succession. For businesses operating in Greece – whether domestic companies or international investors – the environment is simultaneously opportunity-rich and compliance-intensive.

This article aims to provide an overview of the key trends, developments and challenges for doing business in Greece in 2026.

### 2025: An Exceptional Year for M&A – Setting the Scene for 2026

Greece experienced robust M&A activity in 2025, with landmark transactions mainly across financial services, healthcare, energy, gaming, technology, hospitality and real estate. Several defining deals characterised the year, including the following:

- financial services – Piraeus Bank's acquisition of Ethniki Insurance for EUR600 million;
- capital markets – the majority stake acquisition of the Athens Stock Exchange (ATHEX) by Euronext for approximately EUR400 million, which marked a structural integration of the Greek capital market into the pan-European trading infrastructure, with far-reaching implications for listed companies and investors alike;
- healthcare sector – the 60% acquisition of Hellenic Healthcare Group – the leading private healthcare provider in Greece and Cyprus – by Abu Dhabi-based Pure Health Holding for approximately EUR800 million;
- energy sector – the completion of the 100% acquisition of TERNA ENERGY by Masdar – valuing the company at approximately EUR3.2 billion follow-

ing consolidation – standing as the largest energy transaction ever recorded in Greece and a landmark deal for the broader European renewables market;
- gaming sector – the merger of Intralot with Bally's International Interactive Business, valued at EUR2.7 billion, underscoring the growing strategic importance of Greek gaming operators as consolidation targets in the global gaming industry (looking further ahead into 2026, the anticipated completion of the business combination between OPAP and Allwyn – valuing the combined entity at EUR16 billion and creating the second-largest listed gaming entertainment company globally – will define the corporate calendar and generate significant legal, regulatory, and capital markets work across multiple jurisdictions);
- technology sector – the announced acquisition of a majority stake in Skroutz – the leading online marketplace in Greece – by funds managed by Blackstone, the world's largest alternative asset manager, from CVC Capital Partners Fund VII, which is expected to close in the second half of 2026, subject to regulatory approvals; the transaction marks one of the most significant private equity investments in Greek technology to date and reflects growing international institutional appetite for market-leading digital platforms with dominant positions in high-growth Southern European markets; and
- hospitality and real estate – the acquisition by a leading Greek shipowner of the Four Seasons Astir Palace Hotel in Vouliagmeni – a landmark coastal resort comprising two five-star hotels on the Athens Riviera – bringing one of Greece's most iconic hospitality assets into full private ownership.

Beyond the ultra-luxury segment, mid-market hospitality transactions demonstrated equal vitality. A notable example was the strategic partnership between a renowned entrepreneurial Greek Cypriot Family and Donkey Hotels and Resorts and funds managed by AZORA, through which the parties formed a closed-ended joint venture to own, manage, and upgrade a portfolio of Greek hospitality assets.

This volume and diversity of transactional activity reflect both the increased attractiveness of Greek assets and a broader shift in investor confidence, underpinned by the country's achievement of investment-grade credit status.

Yet this dynamic environment also brings complexity. Deal timelines have extended considerably, driven by heightened regulatory scrutiny, more rigorous due diligence requirements, and persistent valuation gaps between buyers and sellers. Transactions that advance to late stages are failing to complete at higher rates than in previous cycles, a trend consistent with broader EMEA market conditions. For clients, this underscores the importance of comprehensive pre-deal preparation, robust structuring, and early engagement with experienced local counsel capable of navigating both the commercial and regulatory dimensions of each transaction.

The medium-term outlook remains cautiously optimistic, particularly in the mid-market segment, where inbound investor interest is sustained and family-owned businesses are increasingly exploring strategic alternatives. Sectors such as technology, hospitality, healthcare, and renewable energy are expected to continue generating deal flow, while Greece's improved macroeconomic fundamentals and regulatory clarity make it well-positioned to attract assets offering visible cash flows and long-term strategic value.

Notwithstanding the generally positive medium-term outlook, several geopolitical risks and sustained inflationary dynamics are likely to weigh on economic performance. Higher energy prices are anticipated to erode household purchasing power and slow private consumption growth. Consumer price inflation is projected to accelerate from 2.9% in 2025 to 3.7% in 2026, driven by rising energy expenditure, robust domestic demand and wage pressures, before moderating to an estimated 2.4% in 2027 as energy markets stabilise. Government measures, such as tax cuts, public sector wage increases and energy support policies, are expected to ease some pressure. Concurrently, imports will likely stay high, reflecting the high import content of ongoing investment activity. However, risks remain if the energy crisis deepens, impacted also by the recent geopolitical developments in the Middle

East, and begins to exert adverse effects on critical sectors such as transport and tourism.

### FDI Screening: Reshaping the Landscape of Cross-Border Transactions

One of the most consequential developments for transactional practice in Greece is the enactment of Law 5202/2025, which came into force in May 2025 and established the country's first comprehensive foreign direct investment (FDI) screening regime. Implementing EU Regulation 2019/452, the law introduces a two-tier screening mechanism: investments in sensitive sectors – including energy, transport, healthcare, and ICT and digital infrastructure – are subject to screening where a foreign (non-EU) investor acquires a stake exceeding 25%, while a more stringent 10% threshold applies to particularly sensitive sectors such as defence and national security, cybersecurity, artificial intelligence, ports and critical underwater infrastructure, and tourism infrastructure in border areas. The screening criteria apply both to direct third-country investors and to EU-based investors where the ultimate controlling entity or beneficial interest is connected to third-country individuals, undertakings, or governments.

For investors and advisers, the practical implications of this new regime are significant. In addition to the FDI screening framework, foreign investments remain subject to pre-existing restrictions on the acquisition of real estate in border regions and certain islands on national security grounds, as well as sector-specific licensing and approval requirements. Together, these overlapping frameworks demand earlier and more strategic engagement with regulatory authorities, more thorough due diligence processes, and carefully drafted transaction documentation.

### Capital Markets Reform and Renewed Investor Confidence

The revival of Greece's capital markets has been one of the defining features of the country's economic rehabilitation, and 2025 saw that revival deepen and broaden considerably. The acquisition of ATHEX by Euronext is significant from a structural perspective, providing Greek-listed companies with access to a deeper pan-European investor base and enhanced market infrastructure. The anticipated upgrade of Greece by MSCI – together with the country's investment-grade credit rating – further strengthens the case for international portfolio and strategic investment, improving the perception of Greek assets among institutional investors subject to index-linked mandates.

Against this backdrop, Law 5193/2025, enacted in April 2025, introduced significant capital markets reforms designed to modernise the Greek capital market regulatory framework, strengthen investor protection, improve financing access for Greek companies, and align Greek law with EU standards. Equity fundraisings and corporate bond issuances throughout 2025 drew oversubscribed interest from international investors, reflecting the scale of the improvement in sentiment towards Greek assets over a relatively short period.

For companies and their advisers, this environment creates a widened range of financing options. The improved capital markets framework means that equity fundraisings, initial public offerings, and bond issuances are increasingly viable alternatives to traditional bank lending, which, while improved, remains selective and pushes several businesses – particularly in the mid-market – towards alternative funding sources. The evolving regulatory landscape also demands careful attention to disclosure, corporate governance, and compliance requirements applicable to listed and pre-IPO companies, reinforcing the value of integrated legal and financial advisory support throughout the capital-raising process.

### Governance, Compliance, Regulatory Modernisation and Interconnection

The pace of legislative reform in the corporate governance sphere has been considerable, and its cumulative effect is to raise the baseline of compliance obligations applicable to Greek companies across several dimensions.

Law 5178/2025, enacted in February 2025, transposed Directive (EU) 2022/2381 on improving the gender balance among directors of listed companies into Greek law, introducing significant amendments to both Law 4706/2020 on corporate governance and Law 4548/2018 on *sociétés anonymes*. In particular,

the law raised the minimum representation threshold for the under-represented sex to 33% on the boards of listed non-SME companies, and – for the first time – extended the application of gender balance requirements to certain categories of non-listed companies (ie, companies bidding for public procurement or concession contracts). These developments reflect Greece's alignment with the broader EU agenda on corporate diversity and signal that governance standards will continue to be shaped by European policy priorities in the years ahead.

Law 5255/2025, enacted in November 2025, established the Independent Authority for Market Control and Consumer Protection, consolidating the market surveillance, consumer protection, and dispute resolution functions previously dispersed across several public authorities and administrative bodies into a single, unified regulatory entity. The consolidation is intended to improve regulatory coherence and enforcement effectiveness; businesses will need to familiarise themselves with the new authority's jurisdiction, procedures, and enforcement posture as it becomes fully operational.

Corporate formation and ongoing compliance have also been modernised. Full automation of the interconnection between the General Commercial Registry (GEMI) and the Independent Authority for Public Revenue (AADE) became operational in 2026, enhancing transparency and tax compliance across corporate registrations and ongoing reporting obligations.

Administrative penalties for GEMI non-compliance are now being enforced for the first time under Joint Ministerial Decision 46982/2025, which activated the administrative sanctions under Article 50 of Law 4919/2022 for breaches of corporate publicity requirements. Businesses that have not maintained up-to-date GEMI filings or have failed to meet statutory deadlines face a materially increased risk of administrative sanctions, and a proactive review of corporate records is strongly advisable for all entities operating in Greece.

In the employment sphere, Law 5239/2025 – re "Fair Work for All" – introduced a suite of digitalisation measures, including the "Fast Track Hiring" mechanism for expedited employment registrations and mandatory work-time monitoring through the ERGANI II digital platform. These measures bring greater transparency and accountability to employment relationships and provide a more auditable record of workforce management. Companies should ensure that their human resources, payroll, and operational processes are fully aligned with the new digital requirements to avoid administrative penalties and to be well-positioned in the event of employment disputes.

## Sustainability, Cybersecurity, Digital Regulation and Taxation: Navigating an Expanding Regulatory Landscape

### *Sustainability*

The regulatory agenda in Greece in 2026 extends well beyond corporate and transactional law. Three interconnected regulatory frameworks – sustainability reporting, cybersecurity, and digital finance – are placing growing and convergent compliance demands on businesses operating across virtually all sectors, and their combined effect represents one of the most substantial increases in regulatory complexity that Greek companies have faced in recent years.

On sustainability, Law 5164/2024 implemented the EU Corporate Sustainability Reporting Directive (CSRD) into Greek law, imposing mandatory sustainability reporting obligations on in-scope companies. However, the EU's 2025 "stop-the-clock" directive – which introduced a delay to the application timeline for certain categories of companies – has created planning uncertainty, as businesses must now carefully assess whether, and when, their own obligations are triggered. Despite this uncertainty, companies would be prudent to proceed with readiness assessments and internal data collection exercises rather than awaiting formal clarification: the underlying obligations are not in question, and early preparation will reduce both compliance risk and the operational disruption associated with a compressed implementation timeline when obligations do crystallise.

More broadly, Greece has placed particular emphasis on the implementation of the UN 2030 Agenda for Sustainable Development and its 17 Sustainable Development Goals, reflecting a wider institutional commitment to embedding sustainability considera-

tions across the regulatory and corporate landscape. In furtherance of this objective, the Athens Stock Exchange (now Euronext Athens) has developed a dedicated ESG Reporting Guide, which, while principally directed at Greek-listed companies, serves as a practical reference tool for non-listed entities seeking to adopt or enhance their own ESG reporting practices on a voluntary basis.

In addition, Greece is required to transpose Directive (EU) 2024/1760 – the Corporate Sustainability Due Diligence Directive (CSDDD) – into national law. The transposition deadline has been extended to 26 July 2028 by virtue of Directive (EU) 2026/470, affording Greek legislators and in-scope companies additional time to prepare for a regime that will require covered undertakings to identify and address adverse human rights and environmental impacts arising from their own operations, those of their subsidiaries, and those occurring across their chain of activities. The Directive is intended to promote a sustainable and responsible corporate culture, and its eventual implementation will impose significant due diligence, reporting, and remediation obligations on companies meeting the applicable size and activity thresholds. Businesses that anticipate falling within scope would be well advised to begin mapping their value chains and assessing their existing due diligence processes in advance of formal transposition, in order to mitigate the compliance burden when the obligations take effect.

In a related development reinforcing Greece's commitment to the green transition, the European Commission granted approval in February 2026 to a Greek state aid scheme valued at EUR400 million, designed to incentivise investment in clean technology manufacturing in furtherance of the objectives underpinning the Clean Industrial Deal and the broader transition to a net-zero economy. The scheme was authorised pursuant to the Clean Industrial Deal State Aid Framework (CISAF) and will deliver support to eligible undertakings through a combination of direct grants and tax incentives. The programme is open to companies operating in Greece and will remain in effect until 31 December 2030, providing a sustained and structured incentive framework for businesses seeking to establish or expand clean technology manufacturing operations in the country.

### *Cybersecurity*

In the cybersecurity domain, Law 5160/2024 transposed the NIS2 Directive into Greek law, significantly expanding the scope of entities subject to cybersecurity obligations and introducing more stringent incident reporting, risk management, and governance requirements. Financial sector entities face the additional layer of the Digital Operational Resilience Act (DORA), which imposes prescriptive requirements in relation to Information and Communication Technology (ICT) risk management, third-party provider oversight, and operational resilience testing. For many companies, the combined effect of NIS2 and DORA represents a substantial increase in the technical and organisational resources required for cybersecurity compliance. Legal advisers should be prepared to support clients in mapping their obligations, reviewing contracts with critical ICT third-party providers, and adapting internal governance frameworks accordingly.

### *Digital regulation*

In the domain of digital regulation, Regulation (EU) 2024/1689 – the Artificial Intelligence Act – entered into force on 1 August 2024 and is being implemented on a phased basis, with prohibitions on certain AI practices applying from February 2025 and obligations for high-risk AI systems taking effect progressively through 2026 and 2027. The AI Act establishes a risk-based classification framework for AI systems deployed or made available in the EU, imposing graduated compliance obligations ranging from transparency requirements for limited-risk systems to comprehensive conformity assessments, risk management, and human oversight obligations for high-risk systems. Companies operating in Greece that develop, deploy, or distribute AI systems should undertake a thorough classification exercise to determine whether their systems fall within the scope of the Regulation and, if so, which tier of obligations applies. Early engagement with the compliance requirements is strongly advisable, given the complexity of the conformity assessment procedures and the significant penalties – up to EUR35 million or 7% of global annual turnover – for non-compliance.

### *Taxation*

Tax law has also evolved considerably. Greece adopted the OECD's Pillar Two global minimum tax rules

through Law 5100/2024, extending minimum tax obligations to Greek-headquartered multinational groups and to Greek subsidiaries of foreign groups that fall within the scope of the rules. Law 5104/2024 modernised the Tax Procedure Code, introducing procedural changes relevant to tax audits, assessments, appeals, and enforcement. Taken together, these tax developments require businesses to ensure that their group structures, transfer pricing policies, and tax compliance processes are appropriately calibrated to the new international standards and that internal reporting capabilities can meet the associated data and documentation demands.

### Emerging Sector: Defence and Defence-Tech

The defence and defence-tech sector merits specific attention as a driver of deal activity and legal complexity in the period ahead.

Greece is emerging as an attractive destination for defence, automotive and aerospace investment. The country's twelve-year, EUR26 billion defence modernisation programme – supplemented by EUR787.7 million in SAFE funding – is generating substantial procurement and investment activity. The establishment of the Hellenic Centre for Defence Innovation as a state-backed co-ordinator for defence research, development, and commercialisation provides an institutional framework for private sector engagement with the national defence agenda. Dual-use technologies – commercial platforms with defence applications spanning robotics, cybersecurity, space services, and surveillance – are a particular area of interest for both strategic and financial investors.

While defence-tech M&A remains a niche segment compared to larger European markets, it presents emerging opportunities for strategic investors and consolidating players in the region as the sector matures.

Clients operating in this space should be alert to the convergence of FDI screening obligations, export control requirements, and national security clearance processes that together characterise defence-related transactions and demand a rigorous and co-ordinated regulatory approach from the outset of any deal process.

### Succession Law Reform: New Framework for Family Business Planning

Whilst not directly relevant with the sections set out above, it is worth noting that with Law 5303/2026 published in the Government Gazette on 22 May 2026, Greece has enacted its most comprehensive reform of succession and family law in eight decades. Key innovations include the introduction, for the first time in modern Greek law, of inheritance contracts – binding agreements executed before a notary that determine how specific assets will pass on death – alongside a recalibration of the reserved-share (forced heirship) framework. The reform also strengthens the position of surviving spouses in intestate succession, equalises the inheritance rights of civil union partners with those of married spouses, and tightens the validity requirements for holographic wills. Although Law 5303/2026 was published in May 2026, the majority of the substantive reforms – including inheritance contracts – will become effective on 16 September 2026. This reform carries direct practical implications for estate planning, business succession structures, and cross-border wealth management involving Greek assets and is expected to give a boost to the attractiveness of Greece as a jurisdiction for high net worth individuals, family offices, and internationally mobile wealth.

### Conclusion

The Greek legal and commercial landscape in 2026 reflects a striking balance of opportunity and complexity. Record levels of M&A activity, a revitalised capital market, and growing investment across sectors such as energy, healthcare, hospitality, gaming, technology and defence highlight a jurisdiction that has undergone meaningful and lasting transformation. The accelerating pace and breadth of regulatory change – encompassing corporate law, FDI screening, sustainability reporting, cybersecurity, digital transition and taxation – is placing increasing demands on businesses across all sectors and sizes. Yet this regulatory maturation, far from deterring investment, reinforces the institutional credibility and predictability that international businesses and investors increasingly require when committing capital to a market over the medium and long term. For businesses and investors prepared to engage with this evolving landscape, Greece – despite rising energy costs and inflationary

pressures – offers one of the most compelling commercial and investment environments in Southern Europe.

Looking ahead, Greece's strengthened credit profile and deepening capital markets infrastructure are expanding financing options and enhancing its appeal as a destination for both strategic and portfolio investment. The country has firmly established itself as a jurisdiction of genuine commercial and investment significance, where a dynamic deal environment, an ambitious reform agenda, and resilient economic fundamentals combine to create a compelling setting for businesses prepared to navigate both its opportunities and its complexities.

**JSA Advocates & Solicitors** is one of India's leading full-service law firms, with a team of over 700 professionals operating across ten offices in seven cities (Ahmedabad, Bengaluru, Chennai, Gurugram, Hyderabad, Mumbai and New Delhi). Founded in 1991, JSA advises leading Indian and international corporations, private equity and venture capital funds, financial institutions, governmental and statutory authorities, and multilateral organisations on complex legal, regulatory and commercial matters. The firm is organised across the Corporate, Finance and Disputes practices, with deep sectoral expertise spanning technology, manufacturing, infrastructure, energy, financial services, healthcare, consumer products, media and telecommunications, among others. JSA is consistently recognised by leading legal directories and industry publications for its expertise across practice areas and sectors. Combining the resources and capabilities of a large national firm with a partner-led and client-centric approach, JSA is known for delivering commercially focused, innovative and practical legal solutions on high-value and strategically significant mandates.

## Authors

**Raj Ramachandran** is an equity partner at JSA and has been with the firm for the last 15 years. He specialises in corporate, commercial, banking and finance, and cross-border investments and acquisitions. He has extensive experience in secured and mezzanine debt transactions, private equity, project finance, security creation, joint ventures, and regulatory and policy issues governing these transactions. He has facilitated many high-profile acquisitions and investments in India across a variety of sectors, involving complex structuring and documentation.

**Kartik Jain** is an equity partner at JSA and specialises in mergers and acquisitions, joint ventures, private equity and venture capital transactions. With close to two decades of experience, he advises multinational corporations, private equity funds, founders, promoters and leading Indian businesses on complex transactional, regulatory and governance matters. Kartik has extensive experience in India entry strategies, cross-border investments, corporate restructurings and high-value commercial arrangements across a broad range of sectors. He regularly represents clients in marquee domestic and international transactions and is recognised for his practical, business-oriented approach to navigating complex legal and regulatory frameworks in India.

**Mannat Nirola** is an associate in the corporate team at JSA. She specialises in providing comprehensive legal support across diverse areas with experience in acquisitions, private equity and venture debt transactions, employment matters and corporate advisory matters. She actively engages in high-stakes transactions, including assisting with legal due diligence exercises, corporate restructurings and negotiation of definitive agreements. Her commitment to precision and excellence helps her to consistently deliver strategic solutions tailored to meeting client objectives in a dynamic legal landscape.

**Anmol Mahajan** is an associate in the Corporate practice at JSA and has been with the firm since the start of his legal career. He advises domestic and international clients on mergers and acquisitions, private equity and venture capital investments, joint ventures and a broad range of corporate advisory matters. Anmol has worked on transactions across sectors including consumer goods, food and beverages, hospitality, manufacturing, technology and renewable energy. He regularly assists multinational corporations, founders and investors with transaction structuring, due diligence, regulatory strategy and negotiations. His practice encompasses both domestic and cross-border transactions involving Indian businesses.

## 1. Legal System

### 1.1 Legal System and Judicial Order

India follows a common-law system, supplemented by a comprehensive written Constitution and an extensive body of statutory legislation.

The judiciary comprises a unified and integrated hierarchy headed by the Supreme Court of India, which is the apex judicial authority and the final court of appeal in constitutional, civil and criminal matters. The High Courts exercise jurisdiction over their respective states and union territories and supervise the subordinate judiciary within their territorial jurisdiction. The subordinate court system consists of the District and Sessions Courts, Magistrates' Courts and Civil Judges' Courts. District and Sessions Courts function as the highest courts at the district level for the adjudication of civil and criminal matters, respectively, while the Civil Judges' Courts and Magistrates' Courts form the lower tiers of the subordinate judiciary, exercising jurisdiction over less serious civil and criminal matters, respectively.

In addition to the ordinary court system, specialised tribunals have been constituted to adjudicate disputes in specific subject matters. Appeals from such tribunals generally lie before the High Courts or, where applicable, the Supreme Court.

## 2. Restrictions on Foreign Investments

### 2.1 Approval of Foreign Investments

Foreign investment in India is primarily governed by the Foreign Exchange Management Act, 1999 (FEMA), the Foreign Exchange Management (Non-Debt Instruments) Rules, 2019 ("NDI Rules") and the Consolidated FDI Policy issued by the Department for Promotion of Industry and Internal Trade (DPIIT).

A foreign investor may invest in India through, among others, the following routes:

- Foreign direct investment (FDI), under either the automatic route or the government approval route. Under the automatic route, no prior government approval is required, and foreign investments may be made up to the applicable sectoral cap, subject to the prescribed requirements. Investments falling under the government approval route require prior approval from the relevant authority. FDI is generally preferred for strategic and long-term investments in Indian businesses, including through wholly owned subsidiaries or joint ventures, particularly where the investor seeks to participate in the management/control of the entity.
- Investment as a Foreign Portfolio Investor (FPI), subject to prior registration with the Securities and Exchange Board of India (SEBI) and compliance with the applicable FPI regulations. The FPI route is preferred for portfolio investments in listed securities, where investors seek flexibility to deal in securities through stock exchanges without adhering

to the pricing guidelines and regulatory approval requirements applicable to FDI.
- Investment as a Foreign Venture Capital Investor (FVCI), subject to prior registration with SEBI and compliance with the applicable FVCI regulations. This route is preferred by venture capital funds and early-stage investors investing in start-ups and high-growth businesses.
- Investment by a Non-Resident Indian (NRI) or an Overseas Citizen of India (OCI): (a) on a repatriation basis through a recognised stock exchange in India, subject to the prescribed limits; or (b) on a non-repatriation basis, including through a company, trust or partnership firm incorporated outside India and owned and controlled by NRIs or OCIs, subject to the applicable sectoral caps and entry routes. These routes are preferred by NRIs and OCIs investing in India, to retain flexibility for repatriation of investment. Investments on a non-repatriation basis are generally treated as domestic investment.
- Investment in units of an Investment Vehicle, being an entity registered and regulated by SEBI under the applicable regulatory framework, including alternative investment funds, real estate investment trusts and infrastructure investment trusts.

The NDI Rules comprehensively regulate foreign investment in India and prescribe sectoral caps, entry routes, pricing guidelines, reporting requirements and sector-specific conditions applicable to foreign investments. The NDI Rules also prescribe additional conditions for certain sectors, including retail trading, e-commerce and construction and development.

### Prohibited Sectors

The Consolidated FDI Policy identifies certain sectors in which foreign investment is prohibited, including lottery business, gambling and betting, chit funds, Nidhi companies, atomic energy, trading in transferable development rights, real estate business or construction of farmhouses, and the manufacturing of tobacco or tobacco substitutes.

Further, as per the Press Note 3 issued in 2020, investments from entities situated in, or beneficially owned by persons resident in, countries sharing a land border with India (LBCs) require prior government approval. However, investments involving non-controlling beneficial ownership of up to 10% from such jurisdictions may be made under the automatic route, provided the applicable sectoral caps and sector-specific conditions are complied with. Additionally, the government has introduced a time-bound approval framework for LBC investments in certain specified sectors, including manufacturing of capital goods, electronic capital goods, electronic components, polysilicon and ingot-wafer.

## 2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance

Foreign investment falling under the government approval route requires approval before the investment is made. Applications are submitted through the Foreign Investment Facilitation Portal and examined by the relevant ministry or department. The application generally includes details relating to the investor, the investee entity, the proposed investment structure, the source of funds, beneficial ownership and compliance with applicable sector-specific conditions. Applications are generally processed within eight to 12 weeks.

All such applications are processed by DPIIT through the National Single Window System. DPIIT is responsible for processing such applications and co-ordinating with the competent authorities. Upon submission, the proposal is considered by the relevant competent authorities, such as the Ministry of Defence, the Ministry of Information and Broadcasting, the Department of Economic Affairs, etc. Applications requiring security clearance are examined by the Ministry of Home Affairs and the Ministry of External Affairs.

The FEMA framework also imposes certain post-investment compliance obligations, such as the requirement to file Form FC-GPR, Form FC-TRS and annual Foreign Liabilities and Assets returns with the RBI.

Making an investment under the government approval route without prior authorisation constitutes a violation of FEMA. Non-compliant transactions may face directions requiring the investment to be regularised, restructured or unwound, alongside potential monetary penalties or compounding proceedings before

the RBI or other competent authorities. Furthermore, both the company and its officers may be subject to regulatory scrutiny and enforcement action for non-compliance with the applicable foreign investment regulations.

### 2.3 Commitments Required From Foreign Investors

There is no general requirement for foreign investors to provide specific commitments as a condition for obtaining approval. However, investments falling under the government approval route may be subject to conditions or undertakings imposed by the relevant authorities on a case-by-case basis, having regard to the sector, the nature of the investment and any national security, public interest or regulatory considerations.

Such conditions may include compliance with sector-specific regulations, foreign investment limits, ownership and control requirements, national security and data protection norms, and reporting obligations.

In certain regulated sectors, including defence, telecommunications, insurance, broadcasting and financial services, additional conditions may apply pursuant to the applicable sector-specific regulatory framework.

### 2.4 Right to Appeal

There is no dedicated statutory appellate mechanism under the foreign investment approval regime against a decision refusing approval of a proposed foreign investment under the government approval route. Such decisions may, however, be challenged before the jurisdictional High Court through a writ petition under Article 226 of the Constitution of India.

The scope of judicial review is limited. Courts do not ordinarily reassess the commercial merits or policy considerations underlying an investment approval decision. Instead, judicial review is confined to examining the legality of the decision-making process.

A different position applies where the matter relates to an enforcement action or adjudication order under FEMA arising from an investment undertaken without the requisite approval. FEMA prescribes a statutory appellate mechanism for such adjudication orders, including appeals before the Special Director and the Appellate Tribunal. Further appeals on questions of law may be brought before the jurisdictional High Court in accordance with the provisions of FEMA.

## 3. Corporate Vehicles

### 3.1 Most Common Forms of Legal Entity

Businesses in India may be carried on through incorporated entities such as companies and limited liability partnerships (LLPs), or through unincorporated entities such as sole proprietorships and partnership firms. Foreign investors may also establish Branch Offices (BOs), Liaison Offices (LOs) or Project Offices (POs) for limited purposes. The principal characteristics of these vehicles are as follows.

#### 1. Sole Proprietorship

A sole proprietorship is owned and managed by a single individual and does not have a separate legal identity. The proprietor bears unlimited personal liability for all debts and obligations of the business. There is no minimum capital requirement, and the proprietor retains complete control over management and operations. Sole proprietorships are commonly used for small businesses, trading activities and consultancy services due to their ease of establishment and low compliance burden.

#### 2. Partnership

Partnerships may be constituted either as: (a) a partnership firm under the Indian Partnership Act, 1932; or (b) an LLP under the Limited Liability Partnership Act, 2008 (“LLP Act”).

A partnership firm does not have a legal identity separate from its partners, who are jointly and severally liable for the firm’s obligations. It is generally suited for professional practices, family-owned businesses and closely held ventures where partners actively participate in management.

An LLP is a separate legal entity with perpetual succession. The liability of each partner is limited to the extent of the partner’s agreed contribution. An LLP combines the operational flexibility of a partnership

with limited liability protection and is commonly used for professional service businesses, holding structures and joint ventures. There is no minimum capital requirement. An LLP must have at least two partners and two designated partners, one of whom must be resident in India.

### 3. Company

Companies are incorporated under the Companies Act, 2013 as either private limited companies or public limited companies.

A private limited company must have at least two shareholders and two directors, one of whom must be resident in India. Shareholders' liability is limited to the unpaid amount on their shares. There is no minimum capital requirement. Private companies are the most common vehicle for start-ups, greenfield projects, wholly owned subsidiaries and joint ventures due to their separate legal personality, limited liability and flexibility.

A public limited company must have at least seven shareholders and three directors. Listed public companies are subject to enhanced governance, disclosure and compliance requirements, including independent director requirements. Public companies are typically used where access to public capital markets is contemplated.

The Companies Act also recognises specialised forms such as One Person Companies (OPCs), small companies and Section 8 companies established for charitable or not-for-profit purposes.

### 4. Branch Office, Liaison Office and Project Office

Foreign companies may establish a BO, LO or PO in India, subject to applicable RBI regulations. These offices do not constitute separate legal entities and operate as extensions of the foreign company.

An LO may undertake only liaison and communication activities and cannot carry on commercial operations. A BO may conduct specified business activities permitted under applicable regulations, while a PO may be established for execution of a specific project in India. These structures are generally used where a foreign company wishes to maintain a limited presence in India without incorporating a subsidiary.

## 3.2 Incorporation Process

A company is incorporated by filing an application with the jurisdictional Registrar of Companies (RoC) through the Ministry of Corporate Affairs' integrated SPICe+ (Simplified Proforma for Incorporating Company Electronically Plus) portal. The principal steps are as follows:

- reservation of the proposed company name;
- preparation and execution of the incorporation documents, including the memorandum of association and articles of association;
- filing of the incorporation application with the RoC, together with prescribed declarations, consents, particulars of the subscribers and first directors, proof of identity and address documents, and other required information;
- scrutiny and registration of the incorporation documents by the RoC; and
- issuance of the Certificate of Incorporation and allotment of a Corporate Identity Number.

Following incorporation, the company must complete certain initial compliance requirements, including verification of its registered office, appointment of its first auditor, holding its first board meeting, maintaining statutory registers and records, and filing the prescribed declaration for commencement of business.

The incorporation process is largely electronic, and where all documents are in order and no regulatory approvals are required, incorporation is typically completed within three to seven business days from the date of filing. Delays may arise where the RoC raises queries or additional approvals are required.

## 3.3 Ongoing Reporting and Disclosure Obligations

Private companies are required to file annual financial statements and annual returns with the RoC within the prescribed timelines. Financial statements must be approved by the board of directors and adopted by the shareholders at the annual general meeting prior to filing.

Additionally, private companies are required to make filings with the RoC in relation to various corporate actions and changes, including:

- appointments, resignations or changes in the particulars of directors and key managerial personnel;
- changes to the company's registered office;
- amendments to the memorandum of association or articles of association;
- increases, reductions or other changes to the company's share capital;
- allotment of shares;
- appointment or reappointment of statutory auditors;
- creation, modification or satisfaction of charges over company assets;
- mergers, demergers and other corporate restructuring transactions; and
- changes to the company's name or other constitutional matters.

Private companies must also maintain statutory registers and records, including registers of members and directors, records of related-party transactions and such other records as may be prescribed under the Companies Act.

Companies are further required to identify and maintain records of individuals who qualify as significant beneficial owners and to make the prescribed filings with the RoC. Companies must take reasonable steps to identify such beneficial owners and obtain the requisite declarations from them.

Failure to comply with the applicable filing, reporting and disclosure requirements may result in monetary penalties for the company and, in certain cases, for the officers in default.

### 3.4 Management Structures

India has adopted a board-centric management structure, under which the board of directors is responsible for the overall management of the company and the formulation of key strategic decisions. The board is authorised to exercise the prescribed powers on behalf of the company through resolutions passed at duly convened board meetings. It must be noted that certain matters also require shareholder approval in addition to board approval. While shareholders retain ownership rights and exercise control through general meetings, they do not participate in the day-to-day management of the company.

Conversely, an LLP does not have a board structure. Instead, it is managed by its partners in accordance with the LLP Act and the LLP agreement, which typically governs management rights, the decision-making framework, profit sharing and the allocation of responsibilities among the partners. The partners are responsible for ensuring compliance with the applicable statutory requirements.

Partnership firms as governed by the Indian Partnership Act and sole proprietorships do not have a statutorily prescribed management structure. A partnership firm is managed by its partners in accordance with the partnership deed, while a sole proprietorship is managed directly by the proprietor.

### 3.5 Directors', Officers' and Shareholders' Liability

Directors and officers of Indian companies owe statutory and fiduciary duties to the company under the Companies Act. These duties include acting in good faith to promote the objects of the company; acting in accordance with the company's articles of association; exercising their powers with due and reasonable care, skill and diligence; acting in the best interests of the company and all the stakeholders; and avoiding situations involving conflicts of interest or improper personal gain. Directors may incur civil and, in certain circumstances, criminal liability for breach of their duties, non-compliance with the Act, fraud, misstatements in public disclosures, failure to comply with regulatory requirements, or violations of other applicable laws.

As a general rule, a company is a separate legal entity and its shareholders, directors and officers are not liable for the company's debts and obligations solely by reason of their position. Directors and officers may, however, incur personal liability where specifically imposed by statute, where they have consented to, participated in or had knowledge of a contravention or where regarded as officers in default under the Act.

Personal liability may also arise under other applicable legislation.

Indian law recognises the doctrine of piercing the corporate veil, although it is applied sparingly and only in exceptional circumstances. Under this doctrine, courts may disregard the separate legal personality of a company and look beyond the corporate structure where it has been used to perpetrate fraud, evade legal obligations, defeat public policy, avoid taxes, circumvent statutory requirements, conceal the true nature of a transaction or otherwise abuse the corporate form. In such circumstances, liability may be imposed on the individuals or entities exercising control over the company. The doctrine has developed primarily through judicial decisions and is applied on a case-by-case basis.

## 4. Employment Law

### 4.1 Nature of Applicable Regulations

India's labour and employment framework comprises both central and state legislation. At the central level, the framework is primarily based on the four Labour Codes, which consolidate and rationalise numerous existing labour laws:

- *Code on Wages*, *2019*: This consolidates laws relating to wages and bonus payments. Key features include the introduction of a floor wage, a revised definition of wages, equal remuneration for the same work, and powers of the government to fix minimum wages.
- *Code on Social Security*, *2020*: This consolidates social security laws and seeks to extend social security benefits to employees and workers across both organised and unorganised sectors.
- *Occupational Safety*, *Health and Working Conditions Code*, *2020* ("*OSH Code*"): This consolidates laws relating to occupational safety, health and working conditions. It prescribes employer obligations concerning workplace safety, working hours, leave entitlements and other welfare measures.
- *Industrial Relations Code*, *2020* ("*IR Code*"): This consolidates laws relating to trade unions, industrial disputes, grievance redressal, retrenchment, lay-offs, closures, strikes and lockouts.

In addition to the Labour Codes, several other employment-related statutes remain relevant:

- *Shops and Establishments Acts* ("*S&E Acts*"): State-specific legislation governing conditions of employment in shops and commercial establishments, including working hours, leave, wages, employment of women and young persons, and establishment registration requirements.
- *Sexual Harassment of Women at Workplace* (*Prevention*, *Prohibition and Redressal*) *Act*, *2013* (*commonly known as the POSH Act*): This establishes a framework for the prevention and redressal of workplace sexual harassment, including constitution of Internal Committees and implementation of prescribed compliance measures.
- *Other employment legislation*: Additional statutes include the Apprentices Act, 1961, the Rights of Persons with Disabilities Act, 2016 and the Transgender Persons (Protection of Rights) Act, 2019, each of which imposes specific obligations relating to non-discrimination, equal opportunity and workplace inclusion.

### 4.2 Characteristics of Employment Contracts

The Labour Codes mandate the employer to issue an appointment letter to every employee upon appointment in the form prescribed by the appropriate government.

Employment relationships are typically governed by employment letters and employment agreements setting out the terms and conditions of employment, including the scope of work, working hours, leave entitlements, notice periods, holidays, remuneration, confidentiality obligations, non-compete/non-solicit restrictions, overtime and dispute resolution mechanisms.

Employment may be for a fixed term or an indefinite term. Fixed-term employment terminates upon expiry of the agreed term, while employment for an indefinite term continues until terminated in accordance with the terms of the employment contract and applicable law.

### 4.3 Working Time

Working hours in India are principally governed under the OSH Code, along with the applicable state-spe-

cific S&E Acts. Under the OSH Code, workers are not permitted to work in any establishment for more than eight hours in a day or 48 hours in a week. Employers are required to obtain prior written consent of a worker and are required to pay overtime wages, generally at twice the ordinary rate of wages.

Additionally, state-specific S&E Acts may prescribe separate requirements relating to working hours, overtime and weekly rest periods. In the event of any inconsistency, employers are required to comply with the provisions that are more favourable to the employee.

### 4.4 Termination of Employment Contracts

Termination of individuals classified as workers under the IR Code is principally governed under the IR Code, whereas the termination of non-workers is regulated by the applicable state-specific S&E Acts, read with the terms of employment and the internal company policies. Employees may be entitled to statutory dues and benefits upon termination, including gratuity, provident fund, leave encashment and such other social security benefits as may be applicable under the Labour Codes.

In terms of the IR Code, termination of a worker for reasons other than disciplinary action, resignation, retirement, non-renewal of fixed-term contract, would ordinarily constitute retrenchment. A worker who has been in continuous service for not less than one year cannot be retrenched unless the worker is provided the prescribed notice or wages in lieu thereof, together with retrenchment compensation as prescribed under the IR Code. Further, in the case of industrial establishments employing 300 or more workers, prior permission of the appropriate government is also required to be obtained prior to any retrenchment.

### 4.5 Employee Representations

There is no general statutory obligation on employers to constitute employee representative bodies or to undertake prior information sharing/consultation with employees or their representatives in relation to ordinary business or management decisions.

However, employee representation and consultation rights may arise in relation to employees who qualify as workers under the IR Code. Recognised trade unions or negotiating unions/councils are empowered to represent workers in matters relating to collective bargaining, industrial disputes and matters involving proposed changes to conditions of service.

Industrial establishments employing 100 or more workers may be required to constitute a works committee. Such committee comprises representatives of both the employer and the workers engaged in the establishment. The principal function of this committee is to promote and maintain harmonious relations between the employer and the workers. The committee is also required to consider matters of common interest or concern to both parties and endeavour to resolve any material differences of opinion arising in relation to such matters.

## 5. Tax Law

### 5.1 Taxes Applicable to Employees/ Employers

#### Direct Tax

An individual is taxable in India as a salaried employee if he or she is a resident in India (present for 182+ days in the tax year, or 60+ days in the tax year and 365+ days in the preceding four years); or he or she is a non-resident who receives salary income sourced in India and meets the threshold time limit and other conditions in the applicable treaty of his or her country of residence.

Under the default tax regime, salary income is taxed at progressive rates ranging from nil to 30%, with the highest rate applying to income exceeding INR24 lakh (approx. USD25,400 at time of writing). A surcharge is applicable at rates of 10%, 15% and 25% where total income exceeds INR50 lakh (approx. USD53,000), INR1 crore (approx. USD106,000) and INR2 crore (approx. USD212,000), respectively. Employees may alternatively opt for the old tax regime, which permits certain deductions and exemptions but is subject to different slab rates, with the highest rate of 30% applying to income exceeding INR10 lakh (approx. USD10,600). Under the old regime, the rate of surcharge remains the same, with an additional slab of surcharge at the rate of 37% for income exceed-

ing INR5 crore (approx. USD530,000). In all cases, a health and education cess of 4% is levied on the aggregate of tax and surcharge.

Employers are required to withhold income tax from employees' salaries and remit it to the government as an advance payment of the employees' tax liability.

### Indirect Tax

Services rendered by an employee to his or her employer in the course of or in relation to his or her employment are explicitly excluded from the definition of supply under the Central Goods and Services Tax Act, 2017. Accordingly, salaries, wages and other remuneration paid by an employer to its employees do not attract Goods and Services Tax (GST). Further, gifts not exceeding INR50,000 (approx. USD530) in value per employee per financial year are also exempt from GST.

Secondment arrangements are generally subject to closer scrutiny by GST authorities, as they may be characterised as services rendered by a foreign affiliate to the entity in India. Accordingly, the GST implications for such arrangements depend on the specific structuring and facts of each case.

Separately, services provided by directors to a company fall within the ambit of GST and are liable to tax under the reverse charge mechanism.

## 5.2 Taxes Applicable to Businesses

### Direct Tax

Companies are subject to a multi-tiered tax system primarily governed by the Income Tax Act, 2025, the GST laws and state-specific levies.

#### *1. Corporate income tax*

Domestic companies may opt for a concessional corporate tax regime at the rate of approximately 25.17%, subject to the specified exemptions and deductions. Alternatively, companies claiming the available deductions and incentives are generally taxed at 25% (where turnover for FY 2024–25 does not exceed INR400 crore (approx. USD42 million)) or 30% (where turnover exceeds INR400 crore), plus applicable surcharge and cess.

Foreign companies are taxed at the rate of 35% coupled with an additional surcharge ranging from 2% to 5%.

#### *2. Withholding tax*

Tax Deducted at Source (TDS) is a mechanism where the payer deducts tax before making certain payments, ensuring tax collection at the source of income. The rate depends upon the nature of income, and it differs for residents and non-residents. The table below illustrates the TDS rates applicable to non-residents for common income types, which are relevant for foreign companies and individuals:

1. Dividend: 20% + surcharge + cess
2. Interest: 20% + surcharge + cess
3. Rent: 30% + surcharge + cess

The TDS rate with a double tax avoidance agreement on all the above categories of income is between 10% and 15%, depending on the country of residence.

### Indirect Tax

Businesses in India are subject to a multi-layered tax regime comprising direct taxes (income tax/corporate tax) as well as indirect taxes (GST, customs duty and excise duty), the applicability of each being contingent upon the nature and scope of the business undertaken.

#### *1. GST*

GST is a destination-based consumption tax levied on the supply of goods and services, subsuming most of the previously existing central and state indirect taxes. GST rates vary based on classification of the goods or services, with rates ranging through 0%, 5%, 12%, 18% and 40%. The liability to discharge/pay taxes to the government devolves upon the supplier.

Exports of goods and services are treated as zero-rated supplies, enabling exporters to claim refunds of input tax credits or taxes paid. Since GST is a value-added tax, businesses are generally entitled to claim input tax credit for eligible taxes paid on procurements and utilise the same against output tax liabilities.

Petroleum crude, high-speed diesel, motor spirit (petrol), natural gas, aviation turbine fuel and alcoholic

liquor for human consumption remain outside the GST framework and continue to be subject to separate indirect tax regimes.

*2. Customs duty*

Customs duty is levied on import of goods into India. Certain key components of the customs duty payable are:

- Basic Customs Duty (BCD);
- Integrated Goods and Services Tax (IGST);
- Social Welfare Surcharge (SWS) levied at 10% on the aggregate of duties, taxes and cesses levied under the Customs Act, 1962;
- Agriculture Infrastructure and Development Cess (AIDC) levied on import of specified products, for the purposes of financing agriculture infrastructure and other development expenditure;
- health cess, which is levied on import of specified medical instruments to boost the domestic manufacturers of such products; and
- anti-dumping duties and safeguard duties, which are levied on import of specified goods/import from specified countries, in addition to the other duties/taxes/cesses that may be leviable.

The provisions under the Customs Act and rules and regulations framed thereunder cover the procedures, documentation, formalities and operations relating to international trade transactions, with the aim of simplifying, harmonising and standardising such transactions.

The Foreign Trade Policy (FTP) provides various export promotion schemes such as the Export Promotion Capital Goods scheme, the Export Oriented Units scheme, the Advance Authorisation scheme, and the scheme for remission of duties and taxes on exported products.

*3. Excise duty*

With the advent of GST, excise duty has been subsumed within GST for most goods. However, excise duty continues to survive on a limited category of goods kept outside the ambit of GST, namely petroleum crude, high-speed diesel, motor spirit (petrol), natural gas, aviation turbine fuel, alcoholic liquor for human consumption (state excise laws) and tobacco/tobacco products, on which excise duty continues to be levied in addition to GST.

## 5.3 Available Tax Credits/Incentives

### Direct Tax

The available incentives are a mix of income-based tax holidays, investment-based deductions and sector-specific benefits. The table below summarises the most common key incentives, on fulfilment of certain prescribed requirements:

Incentive: *Start-up tax holiday*

*Who can benefit*: Eligible start-ups (companies or LLPs)

*Benefit*:100% deduction on profits for three consecutive years in a ten-year block

Incentive: *GIFT City (IFSC) tax holiday*

*Who can benefit*: Units in the International Financial Services Centre

*Benefit*:100% tax holiday for 20 years within a 25-year block

Incentive: *Data centre services tax holiday*

*Who can benefit*: Foreign companies using Indian data centres

*Benefit*: Income tax exemption until 31 March 2047

Incentive: *Patent box regime*

*Who can benefit*: Eligible taxpayers earning royalty income from patents developed and registered in India

*Benefit*: Preferential taxation of qualifying patent royalty income

Incentive: *Scientific research*

*Who can benefit*: Businesses incurring qualifying scientific research expenditure

*Benefit*: Deduction for qualifying revenue and certain capital expenditure on scientific research

Incentive: *In-house R&D facility*

*Who can benefit*: Companies with approved in-house R&D facilities

*Benefit*: Deduction for qualifying in-house scientific research expenditure, excluding land and building

### Indirect Tax

The principal tax credit and incentive mechanisms available to businesses in India under the indirect tax regime may be summarised as follows:

- *Input tax credit under GST*: This is a credit mechanism whereby a registered person is entitled to avail themselves of credit for GST paid on inputs, input services and capital goods procured in the course or furtherance of business, and to utilise such credit towards discharge of output tax liability on outward supplies. Certain categories of inward supplies are statutorily excluded from the purview of input tax credit.
- *Central value-added tax*: Credit under excise law is allowed in respect of excise duty paid on inputs, capital goods and service tax paid on input services, to utilise such credit towards discharge of excise duty payable on manufactured goods which are not subsumed under the GST regime.
- *Credit/incentive mechanisms under customs law*: Customs law read with the FTP provides for certain export promotion schemes designed to neutralise the incidence of customs duty on inputs used in goods meant for export, including:
  (a) the Advance Authorisation scheme;
  (b) the Export Promotion Capital Goods scheme;
  (c) the Duty Drawback scheme;
  (d) preferential trade agreements (PTAs), free trade agreements (FTAs), etc with various countries to eliminate or reduce customs tariff and non-tariff barriers; and
  (e) to promote international and domestic trade and create competitiveness, India provides fiscal incentives by allowing companies to set up units in Special Economic Zones, Free Trade Zones, Export Oriented Units, software technology parks or the GIFT International Financial Services Centre, or for undertaking manufacture and other operations in customs warehouses, etc, along with required infrastructure, utilities and services in such areas.

## 5.4 Tax Consolidation

### Direct Tax

Under Indian tax law, tax consolidation for corporate groups (where a parent and its subsidiaries are treated as a single taxable entity) is not permitted. Each company within a group is treated as a separate legal entity and must independently file its tax returns and meet its tax obligations. This means that the losses of one group company cannot generally be offset against the profits of another group company.

### Indirect Tax

The position under GST law is similar. Each legal entity is required to be assessed and taxed independently.

## 5.5 Thin Capitalisation Rules and Other Limitations

Thin capitalisation rules (interest deduction limitation rules) are applicable in India, aligning with OECD BEPS Action Plan 4 to prevent base erosion through excessive interest deductions on debt from related parties.

They apply where an Indian company or a permanent establishment of a foreign company in India incurs deductible interest or similar expenditure exceeding INR1 crore (approx. USD106,000) payable to a non-resident associated enterprise (AE). The deduction for such interest paid to AEs is limited to the lower of (i) 30% of the company's EBITDA and (ii) the total interest paid or payable to AEs.

## 5.6 Transfer Pricing

India's income tax laws provide for transfer pricing regulations applicable to international transactions between AEs. Transfer pricing regulations also apply to certain specified domestic transactions.

The Indian tax authorities are empowered to adjust income arising from such transactions where the price charged is not at arm's length, as determined under the prescribed methods. Taxpayers are required to maintain appropriate documentation to substantiate the arm's length price. Taxpayers may also enter into unilateral or bilateral Advance Pricing Agreements and, in specified cases, opt for safe harbour provisions, and are required to maintain appropriate docu-

mentation to establish the adequacy of arm's length pricing.

Further, with effect from 1 April 2025, taxpayers have been given the option to opt for a block transfer pricing assessment regime, subject to satisfaction of the prescribed conditions.

While transfer pricing is primarily an income tax concept, a comparable mechanism exists under customs law through the Special Valuation Branch (SVB). Where goods are imported from related parties, customs authorities may examine whether such relationship has influenced the declared transaction value of the imported goods. The SVB reviews the nature of the relationship and the circumstances of sale, and determines whether the declared value is acceptable for customs purposes or requires adjustment.

## 5.7 Anti-Evasion Rules

### Direct Tax

India has a comprehensive anti-evasion framework comprising both general and specific anti-avoidance provisions.

- The General Anti-Avoidance Rule (GAAR) targets impermissible avoidance arrangements where the main purpose is to obtain a tax benefit. Such arrangements are carried out in a manner not normally employed for bona fide purposes, lack commercial substance (in whole or part) and create rights/obligations not ordinarily arising at arm's length, resulting in misuse/abuse of tax provisions.
- Specific Anti-Avoidance Rules (SAAR) address targeted tax avoidance strategies and often take precedence or complement GAAR, such as:
  (a) thin capitalisation rules, which limit interest deductions on borrowings from related non-residents;
  (b) transfer pricing rules, which require international transactions and specified domestic transactions between AEs to be conducted at arm's length;
  (c) Place of Effective Management provisions, which determine residency of foreign companies if key management and commercial decisions are made in India; and
  (d) Significant Economic Presence provisions, which seek to tax certain digital and business activities undertaken by non-residents.
- Additional anti-evasion measures include the Black Money (Undisclosed Foreign Income and Assets) and Imposition of Tax Act, 2015, which prescribes extensive reporting and disclosure requirements and stringent penalties and prosecution for wilful tax evasion, concealment and misreporting.

### Indirect Tax

Each indirect tax law in India prescribes its own compliance obligations and associated penalty framework. There is no unified anti-evasion regime that operates uniformly across the various indirect tax statutes.

## 5.8 Tariffs

India's tariff regime is principally governed by the Customs Act, 1962 and the Customs Tariff Act, 1975. It follows a multi-layered duty structure comprising BCD, IGST, SWS, AIDC and, where applicable, anti-dumping and safeguard duties.

The principal levies are as follows:

- *BCD*: Generally levied at 10% of the value of the goods.
- *IGST*: Levied at the applicable rate of GST on supplies made in India.
- *SWS*: Generally levied at 10% of the aggregate of levies under the Customs Act.
- *AIDC*: Levied on specified imported products to finance agricultural infrastructure and other development expenditure.
- *Health cess*: Levied on import of specified medical devices and equipment (generally at 5%) with a view to promoting domestic manufacturing.
- *Anti-dumping and safeguard duties*: Levied on specified goods and imports from specified countries to address dumping, import surges or injury to domestic industry. These duties are imposed in addition to other applicable duties, taxes and cesses.

Of the above levies, only IGST is generally creditable under the GST framework and may be claimed as input tax credit by eligible importers. The remaining levies ordinarily constitute a cost to the importer.

To facilitate trade and reduce tariff and non-tariff barriers, India has entered into various PTAs and FTAs. Recent and ongoing negotiations include arrangements involving the UK, the EU, New Zealand and Oman, among others.

## 6. Competition Law

### 6.1 Merger Control Notification

Combinations are governed by Sections 5 and 6 of the Competition Act, 2002 read with the Competition Commission of India (Combinations) Regulations, 2024, the Competition (Criteria for Exemption of Combinations) Rules, 2024 ("Exemption Rules") and any other notifications, rules and regulations issued by the Government of India (GoI) and/or the Competition Commission of India (CCI) from time to time.

A "combination" means an acquisition of control, shares, voting rights or assets, or a merger or amalgamation or formation of a joint venture, that exceeds the financial thresholds (based on asset value and turnover of the parties or group) or the deal value threshold prescribed under Section 5 of the Competition Act. If any of the aforesaid thresholds are met, the transaction will qualify as a combination and require the approval of the CCI, unless the transaction qualifies for a specific exemption provided under the Exemption Rules or the notifications/rules issued by the GoI.

#### Target Exemption/De Minimis Exemption

Under the Competition (Minimum Value of Assets or Turnover) Rules, 2024, transactions are exempt from requiring CCI approval if the target company's consolidated asset value in India does not exceed INR450 crore (approx. USD47.7 million) or its turnover does not exceed INR1,250 crore (approx. USD132 million). However, this de minimis exemption is not applicable if the deal value threshold is breached.

### 6.2 Merger Control Procedure

Once a transaction qualifies as a combination and requires approval from the CCI, the parties must file a notice with the CCI. This notice may be filed at any time after the execution of definitive or binding documents. Depending on the nature and extent of overlaps between the parties in India, the notice may be filed in any of the following forms:

- Green Channel Form: Can only be filed if there are no horizontal, vertical or complementary overlaps between the activities of the parties in India. Upon filing and receiving an acknowledgement, the combination is deemed automatically approved.
- Form I (short form).
- Form II (long form).

If there are overlaps between the activities of the parties in India, parties must file either Form I or a Form II notice. A Form II notice is preferred where the parties are: (a) competitors and have a combined market share of more than 15%; or (b) active in vertically linked markets and the combined or individual market share is more than 25%.

Upon filing, the CCI has 30 calendar days to form its prima facie view, failing which the combination is deemed approved. This timeline can be extended if the information submitted in the notice is incomplete or if the CCI requires additional information for its review.

The Indian merger control regime is mandatory and suspensory; therefore, parties cannot consummate the combination or any part thereof prior to receiving approval from the CCI or until 150 days from the date of notification of the combination have elapsed. If no decision is taken by the CCI within the said period, the combination will be deemed approved.

If a notifying party consummates a combination or any part thereof without seeking approval from the CCI, the CCI has the power to: (a) impose a penalty which can extend up to 1% of the combined asset value or turnover or deal value of the combination (whichever is higher) on the notifying party; and/or (b) require the notifying party to file a notice for such combination.

### 6.3 Cartels

The Competition Act seeks to prevent practices that have an appreciable adverse effect on competition (AAEC) in India.

Section 3 prohibits agreements which cause or are likely to cause an AAEC in India, and such agreements are considered void. These include agreements between competitors (horizontal agreements), enterprises at different levels of the production chain (vertical agreements) and other agreements that do not fall within either category but may nevertheless cause or are likely to cause an AAEC in India.

### Horizontal Agreements

Section 3 (3) identifies four types of horizontal agreements (ie, agreements between competitors), also known as cartel agreements, namely: (a) price-fixing agreements; (b) agreements to limit or control production, supply or markets; (c) market-sharing agreements; and (d) bid-rigging agreements. Such agreements are presumed to cause an AAEC in India. This presumption extends to enterprises that facilitate cartels or engage in hub-and-spoke cartels.

### Vertical and Other Agreements

Section 3 (4), among other things, deals with vertical agreements and provides a non-exhaustive list of such agreements, including: (a) tie-in arrangements; (b) exclusive supply agreements; (c) exclusive distribution agreements, including territorial allocation arrangements; (d) refusal to deal; and (e) resale price maintenance. These agreements are prohibited where they cause, or are likely to cause, an AAEC on competition in India. In addition to horizontal and vertical agreements, other forms of agreements may also be examined under Section 3 (4) where they cause, or are likely to cause, an AAEC in India.

The regulatory framework grants the CCI explicit extraterritorial jurisdiction. This means that it has the power to investigate and penalise abuse of dominant position and anti-competitive agreements formed or operating outside of India, provided that they cause, or are likely to cause, an AAEC in India.

## 6.4 Abuse of Dominant Position

Section 4 of the Competition Act prohibits an enterprise or a group from abusing its dominant position. To determine whether an enterprise is dominant, the CCI considers various factors, including the enterprise's market share, size and resources, its economic power and the competitive conditions in the relevant market. Market share is one of the important factors in this assessment. While a market share of 50% or more may indicate dominance, an enterprise with a lower market share may also be found to be dominant depending on the facts and circumstances of the case.

Section 4 (2) lists certain practices that may amount to abuse of dominant position when carried out by a dominant enterprise or group. These include imposing unfair or discriminatory prices or conditions, limiting production or technical development, denying market access, leveraging dominance in one market to enter or protect another market, engaging in tie-in arrangements, and other exclusionary or exploitative conduct.

The Supreme Court in *Competition Commission of India v Schott Glass India Pvt. Ltd.*, Civil Appeal No. 5843 of 2014, underscored the importance of an effects-based analysis in cases involving allegations of abuse of dominant position. The Court clarified that the conduct of a dominant enterprise should be assessed based on its actual or likely effects on competition and not merely on its form. The Court also recognised that objective and legitimate business justifications for the impugned conduct are relevant considerations in determining whether the conduct amounts to an abuse of dominance.

# 7. Intellectual Property

## 7.1 Patents

### Patent Protection

Governed by the Patents Act, 1970, a patent is a statutory right granted for an invention that is novel, involves an inventive step and is capable of industrial application. Patent protection confers upon the patentee the exclusive right to prevent third parties from making, using, selling, offering for sale or importing the patented invention without authorisation. Patent rights are territorial and enforceable only within India.

Patent protection is available for a term of 20 years from the filing date of the application, subject to payment of prescribed renewal fees. Upon expiry, the invention enters the public domain. Certain subject matter is excluded from patentability under Sections 3

and 4 of the Patents Act, including inventions contrary to public order or morality, traditional knowledge and specified biological processes.

### Registration Process

India follows a first-to-file system. A patent application may be filed by the inventor, assignee or legal representative with either a provisional or complete specification.

Applications are ordinarily published after 18 months from the filing or priority date, unless early publication is requested. Any person may file a pre-grant opposition after publication and before grant. Patent examination is initiated only upon filing a request for examination within the prescribed period. Following examination, the Patent Office issues a First Examination Report setting out objections, if any, which must be addressed by the applicant. Upon satisfaction of the statutory requirements, the patent may be granted. Post-grant opposition proceedings may also be initiated on prescribed grounds.

### Enforcement and Remedies

Patent rights are enforced through civil proceedings. Infringement generally occurs where a third party, without authorisation, makes, uses, sells, offers for sale or imports a patented product or process.

Proceedings may be instituted before the competent District Court or High Court having jurisdiction. The principal remedies available under the Patents Act include interim and permanent injunctions, damages or an account of profits, recovery of costs, and seizure, forfeiture or destruction of infringing goods and materials predominantly used in their manufacture.

## 7.2 Trade Marks

### Trade Mark Protection

Trade mark protection in India is governed by the Trade Marks Act, 1999. Under the Trade Marks Act, a trade mark is any mark capable of graphical representation and of distinguishing the goods or services of one person from those of another. Protection extends to words, names, logos, labels, devices, signatures, packaging, shapes, colours, sound marks, numerals and combinations thereof.

Registration confers an exclusive right to use the trade mark in relation to the registered goods or services and provides statutory remedies against unauthorised use. However, registration is not mandatory, as unregistered marks may also be protected through passing off actions. Indian law also recognises prior user rights, transborder reputation and protection of well-known trade marks.

A registered trade mark is protected for a period of ten years from the date of application and may be renewed indefinitely for successive periods of ten years.

### Registration Process

India follows the Nice Classification system and permits multi-class applications. The registration process generally involves filing an application, examination by the Trade Marks Registry, publication in the Trade Marks Journal, opposition proceedings (if any) and registration.

The application is examined for compliance with statutory requirements and potential conflicts with earlier marks. Following publication, any person may oppose registration within four months. If no opposition is filed, or if opposition proceedings are successfully concluded, the Registrar grants registration and issues a registration certificate. India is also a signatory to the Madrid Protocol, enabling international registration through a centralised filing system.

### Enforcement and Remedies

Trade mark infringement generally arises where a registered trade mark or a deceptively similar mark is used without authorisation in a manner likely to cause confusion or deception.

Trade mark rights may be enforced through civil and criminal proceedings. Registered proprietors may institute infringement actions, while proprietors of unregistered marks may pursue passing off claims.

Civil remedies include interim and permanent injunctions; damages or an account of profits; delivery up, seizure or destruction of infringing goods; and recovery of costs. Certain trade mark offences, including falsification of trade marks and dealing in counter-

feit goods, may also attract criminal liability, including imprisonment and fines. Trade mark owners may additionally utilise customs recordation and border enforcement mechanisms to prevent the import of counterfeit goods.

## 7.3 Industrial Designs

### Design Protection

Design protection in India is governed by the Designs Act, 2000. A design refers to the features of shape, configuration, pattern, ornamentation or composition of lines or colours applied to an article which, in the finished article, appeal to and are judged solely by the eye.

To qualify for protection, a design must be novel and original and capable of industrial application. Protection is not available for purely functional features, designs previously disclosed to the public, trade marks, artistic works protected under copyright law or subject matter contrary to public order or morality.

A registered design is protected for an initial term of ten years from the date of registration and may be extended by a further period of five years.

### Registration Process

Applications for design registration are filed with the Controller General of Patents, Designs and Trade Marks. Prior to filing, applicants typically undertake a design search to assess novelty. The design is classified under the Locarno Classification system, and the application is filed together with representations of the design and prescribed supporting documents.

The Designs Office examines the application for procedural compliance and registrability, including novelty, originality and proper classification. Where objections are raised, the applicant is required to respond within the prescribed period. Upon acceptance, the design is registered, a registration certificate is issued and the registration is published in the Designs Journal.

### Enforcement and Remedies

Unauthorised application of a registered design, or any fraudulent or obvious imitation thereof, to articles within the registered class constitutes piracy of a design under the Designs Act. Infringement also extends to the import, sale, publication or commercial dealing in infringing articles.

Design rights are primarily enforced through civil proceedings before the competent District Court or High Court. To succeed in an infringement action, the proprietor must generally establish valid registration and unauthorised copying or imitation of the registered design.

Available remedies include interim and permanent injunctions, damages or an account of profits, seizure or destruction of infringing goods, recovery of litigation costs and border enforcement measures under the Intellectual Property Rights (Imported Goods) Enforcement Rules, 2007 (“Enforcement Rules”).

## 7.4 Copyright

### Copyright Protection

Copyright protection in India is governed by the Copyright Act, 1957. Copyright subsists in original literary, dramatic, musical and artistic works, cinematograph films and sound recordings.

Copyright arises automatically upon creation of an original work and does not require registration. However, registration serves as prima facie evidence of ownership and is commonly relied upon in enforcement proceedings.

The term of protection varies depending on the category of work, although for most literary, dramatic, musical and artistic works, copyright subsists for the lifetime of the author and 60 years thereafter. India is also a signatory to key international copyright treaties, including the Berne Convention.

### Registration Process

Copyright registration is administered by the Copyright Office. The applicant is required to file the prescribed application together with details of the work and supporting documents, including copies of the work and proof of ownership, where applicable.

The Copyright Office examines the application for compliance with statutory requirements. Details of the application are published, following which a pre-

scribed period is provided for third-party objections. In the absence of objections, or upon their resolution, the Copyright Office issues a registration certificate.

### Enforcement and Remedies

Copyright infringement occurs where a person, without authorisation, undertakes acts falling within the exclusive rights of the copyright owner, including reproduction, distribution, communication to the public, sale, importation or commercial exploitation of infringing copies.

Copyright may be enforced through civil and criminal proceedings. Civil remedies include interim and permanent injunctions, damages or an account of profits, seizure and destruction of infringing material, and recovery of litigation costs. Criminal infringement may attract imprisonment and monetary penalties under the Copyright Act.

Rights holders may also utilise border enforcement measures under the Enforcement Rules. In cases of online infringement, copyright owners frequently rely on intermediary takedown mechanisms, notice-and-takedown procedures and court-directed blocking orders.

## 7.5 Others

### Protection of Other Forms of Intellectual Property

India's intellectual property framework provides protection to several additional categories of intellectual property through dedicated legislation and common-law principles. These include the Geographical Indications of Goods (Registration and Protection) Act, 1999, the Protection of Plant Varieties and Farmers' Rights Act, 2001, the Semiconductor Integrated Circuits Layout Design Act, 2000 and the protection of biological resources and traditional knowledge under the Biological Diversity Act, 2002.

### Software Programs and Databases

Computer software is primarily protected as a literary work under the Copyright Act. In limited circumstances, software-related inventions demonstrating a technical effect or technical contribution may also qualify for patent protection. Databases do not enjoy sui generis protection in India but may be protected under copyright law if they satisfy the applicable requirements.

### Trade Secrets and Confidential Information

Trade secrets and confidential information are not governed by any standalone legislation in India and are protected through contractual arrangements and common-law principles relating to breach of confidence and fiduciary obligations. Further, the right to copyright is specifically preserved against any breach of trust or confidence under Section 16 of the Copyright Act. In practice, protection is typically strengthened through contractual confidentiality obligations and specific covenants.

# 8. Data Protection

## 8.1 Applicable Regulations

### Applicable Regulations

India's data protection framework is rooted in the decision of the Supreme Court in *Justice K.S. Puttaswamy (Retd.) v Union of India* (2017), which recognised the right to privacy as a fundamental right under Article 21 of the Constitution. Any restriction on privacy must satisfy the tests of legality, legitimate aim and proportionality.

The principal legislation governing personal data protection is the Digital Personal Data Protection Act, 2023 ("DPDP Act"), together with the Digital Personal Data Protection Rules, 2025 ("DPDP Rules"). Pending full implementation of the DPDP Framework, certain provisions of the Information Technology Act, 2000 ("IT Act") and the Information Technology (Reasonable Security Practices and Procedures and Sensitive Personal Data or Information) Rules, 2011 ("SPDI Rules") remain relevant.

### Digital Personal Data Protection Framework

The DPDP Act applies to digital personal data, including personal data collected offline and subsequently digitised. It regulates the processing of personal data by Data Fiduciaries and grants various rights to Data Principals.

Processing of personal data under the DPDP Framework is permitted either on the basis of the Data

Principal's consent or for specified legitimate uses, including compliance with law, employment-related purposes, public health emergencies, certain governmental functions, etc. Data Fiduciaries are required to implement reasonable security safeguards, establish grievance redressal mechanisms, ensure that personal data is processed only for the purpose for which consent has been obtained, facilitate the exercise of Data Principal rights and notify personal data breaches to the Data Protection Board of India (DPBI) and affected Data Principals in the prescribed manner.

The DPDP Act also recognises the concept of Significant Data Fiduciaries (SDFs), which are subject to enhanced compliance obligations, including audits and impact assessments. Data Principals are granted rights relating to access, correction, erasure, withdrawal of consent, grievance redressal and nomination. Non-compliance may attract significant monetary penalties.

The DPDP Rules operationalise the statutory framework by prescribing requirements relating to consent notices, security safeguards, breach notifications, processing of children's data and the functioning of the DPBI.

### Information Technology Framework

Until the DPDP Framework is fully operationalised, the IT Act and SPDI Rules continue to apply in certain respects. Section 43A of the IT Act imposes liability for failure to implement reasonable security practices, while Section 72A prescribes penalties for unlawful disclosure of personal information.

The SPDI Rules regulate the collection, use, retention, transfer and disclosure of sensitive personal data. The framework requires consent-based processing, purpose limitation, implementation of reasonable security practices and appointment of a grievance officer.

In addition, sector-specific regulators in areas such as financial services, insurance, securities and telecommunications continue to prescribe separate requirements relating to cybersecurity, operational resilience and data governance.

## 8.2 Geographical Scope

### Extraterritorial Application

The DPDP Act applies not only to entities within India but also to entities incorporated outside India that process the personal data of individuals located in India in connection with the offering of goods or services to them. Consequently, any organisation offering goods or services in India or processing data of individuals in India falls within the scope of the framework, regardless of where the organisation is located.

However, Section 17 of the DPDP Act contains various carve-outs, with one carve-out being of particular relevance to India's significant technology and business process outsourcing sector. Section 17 (1)(d) exempts from the core obligations the processing of personal data of individuals located outside India, where such processing is carried out within India by an Indian entity pursuant to a contract with a person outside India.

### Cross-Border Transfer Under the DPDP Framework

One of the more structurally distinctive features of the DPDP Framework is its approach to cross-border data transfers. Section 16 of the DPDP Act and Rule 15 of the DPDP Rules together adopt a negative list model, under which personal data may be transferred by a Data Fiduciary to any country or territory in the world, unless the Central Government has expressly restricted transfers to that jurisdiction. However, as of the date of writing, no countries have been placed on the restricted list.

Section 16 and the cross-border transfer obligations under Rule 15 become fully operational only from 14 May 2027, meaning that organisations have until then to map their global data flows, restructure international transfer arrangements and renegotiate contracts with overseas recipients.

Further, where sector-specific laws or regulations impose stricter transfer restrictions or localisation requirements, those requirements continue to apply alongside the DPDP Framework. Consequently, localisation mandates imposed by sectoral regulators continue to operate independently of the general transfer regime.

### 8.3 Role and Authority of the Data Protection Agency

#### The Data Protection Board

The DPBI, established under the DPDP Act, is the principal authority responsible for enforcement of India's data protection framework. The DPBI functions as a quasi-judicial body with powers to investigate non-compliance and enforce obligations under the DPDP Framework.

#### The DPBI's Mandate and Powers

The DPBI is empowered to inquire into personal data breaches and instances of non-compliance under the DPDP Framework, on the basis of breach notifications, complaints, government references or court directions. Following such inquiries, the DPBI may pass appropriate orders, including directions requiring mitigation, remedial measures or compliance actions, and adjudicate violations under the DPDP framework.

In exercising its functions, the DPBI possesses powers similar to those of a civil court for the purposes of conducting inquiries, including summoning, requiring production of documents and examining evidence. It may also accept voluntary undertakings from regulated entities as part of enforcement proceedings.

The DPBI has significant enforcement powers, including the authority to impose financial penalties of up to INR250 crore (approx. USD26.5 million) for specified contraventions under the DPDP Act. The enforcement regime is civil in nature and does not contemplate criminal penalties.

#### Appeal Mechanism

Appeals from orders of the DPBI lie before the Telecom Disputes Settlement and Appellate Tribunal within 60 days, with further appeals available before the High Court and the Supreme Court.

#### Operational Reality

Although the DPBI has been formally constituted under the DPDP Act, it is not yet fully operational. As of April 2026, appointments to certain leadership positions remained pending.

## 9. Looking Forward

### 9.1 Upcoming Legal Reforms

India has, over the past year, demonstrated a consistent legislative and regulatory trajectory characterised by a dual policy objective: (i) facilitating ease of doing business through structural simplification and rationalisation of legacy frameworks; and (ii) simultaneously strengthening governance, transparency and compliance obligations across sectors.

Further legislative and regulatory developments are expected to continue this trend. In particular, the Corporate Laws (Amendment) Bill, 2026 signals an intent to recalibrate India's corporate governance architecture. This trend assumes heightened significance in the current global environment, characterised by geopolitical volatility, fragmented supply chains, elevated input costs and broader macroeconomic uncertainty. In such a context, regulatory systems are expected to increasingly balance investor protection and systemic stability.

The implementation of the Labour Codes and the DPDP Framework marks a significant regulatory transition. As both regimes move through the implementation phase, the focus is expected to remain on practical compliance, enforcement and operational integration. The coming year is likely to be shaped by how organisations adapt their internal processes and systems to meet these evolving regulatory requirements.

Overall, while no apparent legislative overhaul is currently underway, India is clearly moving towards a more digitised, compliance-intensive and structurally efficient regulatory environment with a particular emphasis on ease of doing business.

**JSA Advocates & Solicitors**

**JSA Advocates & Solicitors** is one of India's leading full-service law firms, with a team of over 700 professionals operating across ten offices in seven cities (Ahmedabad, Bengaluru, Chennai, Gurugram, Hyderabad, Mumbai and New Delhi). Founded in 1991, JSA advises leading Indian and international corporations, private equity and venture capital funds, financial institutions, governmental and statutory authorities, and multilateral organisations on complex legal, regulatory and commercial matters. The firm is organised across the Corporate, Finance and Disputes practices, with deep sectoral expertise spanning technology, manufacturing, infrastructure, energy, financial services, healthcare, consumer products, media and telecommunications, among others. JSA is consistently recognised by leading legal directories and industry publications for its expertise across practice areas and sectors. Combining the resources and capabilities of a large national firm with a partner-led and client-centric approach, JSA is known for delivering commercially focused, innovative and practical legal solutions on high-value and strategically significant mandates.

## Authors

**Raj Ramachandran** is an equity partner at JSA and has been with the firm for the last 15 years. He specialises in corporate, commercial, banking and finance, and cross-border investments and acquisitions. He has extensive experience in secured and mezzanine debt transactions, private equity, project finance, security creation, joint ventures, and regulatory and policy issues governing these transactions. He has facilitated many high-profile acquisitions and investments in India across a variety of sectors, involving complex structuring and documentation.

**Kartik Jain** is an equity partner at JSA and specialises in mergers and acquisitions, joint ventures, private equity and venture capital transactions. With close to two decades of experience, he advises multinational corporations, private equity funds, founders, promoters and leading Indian businesses on complex transactional, regulatory and governance matters. Kartik has extensive experience in India entry strategies, cross-border investments, corporate restructurings and high-value commercial arrangements across a broad range of sectors. He regularly represents clients in marquee domestic and international transactions and is recognised for his practical, business-oriented approach to navigating complex legal and regulatory frameworks in India.

**Contributed by:** Raj Ramachandran, Kartik Jain, Mannat Nirola and Anmol Mahajan, **JSA Advocates & Solicitors**

**Mannat Nirola** is an associate in the corporate team at JSA. She specialises in providing comprehensive legal support across diverse areas with experience in acquisitions, private equity and venture debt transactions, employment matters and corporate advisory matters. She actively engages in high-stakes transactions, including assisting with legal due diligence exercises, corporate restructurings and negotiation of definitive agreements. Her commitment to precision and excellence helps her to consistently deliver strategic solutions tailored to meeting client objectives in a dynamic legal landscape.

**Anmol Mahajan** is an associate in the Corporate practice at JSA and has been with the firm since the start of his legal career. He advises domestic and international clients on mergers and acquisitions, private equity and venture capital investments, joint ventures and a broad range of corporate advisory matters. Anmol has worked on transactions across sectors including consumer goods, food and beverages, hospitality, manufacturing, technology and renewable energy. He regularly assists multinational corporations, founders and investors with transaction structuring, due diligence, regulatory strategy and negotiations. His practice encompasses both domestic and cross-border transactions involving Indian businesses.

## Introduction

In 2026, India has emerged as one of the world's most consequential business environments. With GDP growth projected at around 7% for FY2025–26 (IMF), the highest among major economies, and a clear trajectory towards becoming the world's third-largest economy by 2030, India presents a combination of scale, structural reform momentum and consumer market depth that only a few jurisdictions can match. Private consumption accounts for approximately 60% of GDP, underpinned by a median population age of 29 and consumer spending forecast to reach USD4.3 trillion by 2030.

The geopolitical context has simultaneously posed challenges and strengthened India's investment proposition. Ongoing conflicts in Europe and the Middle East have driven energy price volatility, increases in costs and disruption across global supply chains and trade routes. Additionally, the India–US trade deal framework has meaningfully mitigated tariff exposure for Indian exporters while further strengthening the strategic bilateral relationship.

The landmark India–EU Free Trade Agreement, covering approximately 25% of global GDP and expanding FTA coverage of Indian exports from 22% to 71%, further represents a structural shift of considerable commercial significance. Against this backdrop, sectors such as manufacturing, technology and AI, global capability centres (GCCs), service exports, renewable energy and electric vehicles are increasingly reflecting a durable long-term transformation rather than a cyclical growth opportunity.

## Regulatory Environment

India offers a codified legal framework for business operations, supported by comprehensive commercial legislation, sector-specific regulation and policy-driven government initiatives aimed at improving Ease of Doing Business (EODB).

### *Key regulations applicable to businesses in India*

The principal pieces of legislation governing business activities in India include:

*Companies Act*, *2013* (*Act*): This is the principal legislation governing corporate entities in India, regulating incorporation, financing, governance, mergers, amalgamations, capital reduction, restructuring, distribution of profits and winding up. The Act imposes strict governance requirements such as appointment of independent directors and woman directors for specified companies, constitution of audit and other specialised committees, appointment of key managerial personnel, stricter related-party transaction controls, vigil mechanisms, preservation of records, secretarial audits and compliance with prescribed accounting standards.

*Securities and Exchange Board of India Act*, *1992*: For listed companies, governance moves beyond the Act into a significantly more disclosure-intensive and enforcement-driven framework administered by the Securities and Exchange Board of India (SEBI), effectively acting as the principal gatekeeper of capital market behaviour, promoter conduct, public shareholder protection and takeover discipline. The key SEBI regulations include:

- *SEBI* (*Issue of Capital and Disclosure Requirements*) *Regulations*, *2018* (*ICDR*):These govern IPOs, follow-on public offers, rights issues, QIPs, preferential allotments and other capital raising exercises.
- *SEBI* (*Listing Obligations and Disclosure Requirements*) *Regulations*, *2015* (*LODR*): These prescribe continuous disclosure obligations and the governance framework for listed entities, governing board composition, independent directors, committee structures, material event disclosures, related-party approvals and disclosures, and governance reporting.
- *SEBI* (*Substantial Acquisition of Shares and Takeovers*) *Regulations*, *2011* (*Takeover Code*):These regulate acquisition thresholds and mandatory open offers. Once prescribed thresholds are breached, an acquirer must extend an exit opportunity to public shareholders through an open offer.
- *SEBI* (*Prohibition of Insider Trading*) *Regulations*, *2015*: These prohibit dealing in securities while in possession of unpublished price-sensitive information (UPSI), mandating robust compliance systems. In transactions involving listed companies, due diligence itself must be structured through an insider

trading lens, with UPSI protocols, structured digital databases and disclosure controls.
- *SEBI* (*Delisting of Equity Shares*) *Regulations*, *2021*:These govern voluntary and compulsory delisting. Particularly relevant in buyouts, take-private strategies and the restructuring of listed groups/entities.

In addition, the Securities Contracts (Regulation) Act, 1956 (SCRA) governs listing and trading of securities and operates alongside stock exchange compliance obligations.

*Indian Contract Act*, *1872* (*ICA*): This governs the formation, enforceability, performance and breach of contracts.

*Sale of Goods Act*, *1930*: This complements the ICA and governs contracts relating to the sale of goods.

*Indian Partnership Act*, *1932 and Limited Liability Partnership Act*, *2008*: These govern traditional partnerships and LLPs respectively, including formation, rights, liabilities, management and dissolution.

*Insolvency and Bankruptcy Code*, *2016* (*IBC*): This provides a consolidated framework for insolvency resolution, liquidation, bankruptcy and revival through the tribunal mechanism.

*Foreign Exchange Management Act*, *1999* (*FEMA*): This governs foreign exchange transactions, cross-border investments, overseas investments, capital flows and foreign direct investment. The Reserve Bank of India (RBI) is the principal regulatory authority administering FEMA through rules, regulations, notifications, circulars, master directions and operational guidelines.

*Competition Act*, *2002*: This regulates anti-competitive agreements, abuse of dominant position and combinations through the Competition Commission of India (CCI).

*Income Tax Act*, *2025 and Goods and Services Tax* (*GST*) *laws*: These govern direct and indirect taxation, including taxation of income, capital gains, dividends, mergers, demergers, and supply of goods and services, among other things.

*Digital Personal Data Protection Act*, *2023*: This regulates processing of digital personal data, consent management, data fiduciary obligations and privacy protection.

*Environmental laws*: Key pieces of legislation include the Environment (Protection) Act, 1986, the Water (Prevention and Control of Pollution) Act, 1974, the Air (Prevention and Control of Pollution) Act, 1981 and the Hazardous Waste Management Rules. These regulate pollution control, environmental clearances, waste management, sustainability obligations and industrial compliance.

*Labour and employment laws/Labour Codes*: India is transitioning from a fragmented labour and employment regulatory framework to four consolidated Labour Codes, namely, the Code on Wages, 2019; the Industrial Relations Code, 2020; the Occupational Safety, Health and Working Conditions Code, 2020; and the Code on Social Security, 2020. These govern wages, industrial disputes, employee benefits, workplace safety and labour welfare.

*Arbitration and Conciliation Act*, *1996*: This provides the legal framework for arbitration and conciliation in India.

*Negotiable Instruments Act*, *1881*: This governs the law relating to promissory notes, bills of exchange and cheques. It prescribes the liabilities and obligations of the drawer, drawee and holder in due course, and provides the legal framework for the use, transfer and enforcement of negotiable instruments in commercial transactions.

Other key pieces of legislation include the Consumer Protection Act, 2019, the Real Estate (Regulation and Development) Act, 2016, the intellectual property laws, the Customs Tariff Act, 1975, the Foreign Trade (Development and Regulation) Act, 1992, the Special Economic Zones Act, 2005 and various sector-specific pieces of legislation depending on the nature of business.

### *Key government policies*

India has increasingly adopted a policy-driven framework to promote manufacturing, exports, investment and innovation, with a strong focus on improving EODB. Flagship initiatives such as *Make in India* and *Atmanirbhar Bharat Abhiyaan* (ie, Self-Reliant India) were introduced to position India as a global manufacturing hub by reducing regulatory barriers, improving infrastructure, opening more sectors to investment and encouraging domestic value creation across key industries.

A major incentive in this regard is the Production Linked Incentive (PLI) Scheme, introduced across sectors such as electronics, semiconductors, automotive, textiles, pharmaceuticals and renewable energy. It provides direct fiscal incentives based on incremental sales, generally ranging from 4% to 15%, and is intended to boost domestic manufacturing and attract large-scale investments.

Export-oriented businesses benefit from Special Economic Zones (SEZs), which provide simplified operational regimes. Similar benefits are available under the Export-Oriented Units (EOUs), Electronics Hardware Technology Park (EHTP), Software Technology Park (STP) and Bio-technology Park (BTP) for units exporting their entire production. Additionally, the government has introduced the Free Trade and Warehousing Zone (FTWZ) scheme as a specialised SEZ focused on trading and warehousing infrastructure to facilitate import and export of goods and services with freedom to carry out trade transactions in free currency. Gujarat International Finance Tec-City (GIFT City) is India's first premier Greenfield Smart City, established to elevate India's position in the global financial-services ecosystem by offering a world-class hub for cross-border trade, banking, asset management and capital market activity.

Further, the *Start-up India* initiative supports DPIIT-recognised start-ups through income tax exemptions, labour law self-certification, IPR protection, exemption from certain compliance requirements and fast-track winding up under the Insolvency and Bankruptcy Code, 2016. Reflecting the strength of this ecosystem, India added 11 new unicorns in calendar year 2025, placing it third in the global unicorn rankings.

India is increasingly positioning itself as a preferred destination for GCCs, with several states introducing dedicated GCC policies to attract multinational enterprises seeking to establish offshore capability hubs.

### *Setting up in India*

The appropriate form of entity depends on the commercial objective, whether the focus is long-term scale, operational flexibility, market testing, project execution or strategic collaboration. Some of the most common forms of entities which businesses often use to commence commercial operations in India can be categorised into two types:

- **Incorporated Entities**
  - (a) *Private limited company*: The preferred structure for start-ups, foreign investment, fundraising and scalable operations. It has a separate legal entity status, limited liability and comparatively lighter compliance requirements than a public company.
  - (b) *Public limited company*: Suitable for businesses intending to access public capital markets or operate on a significant scale. It allows wider fundraising and listing opportunities but carries significantly higher disclosure and governance obligations.
  - (c) *Limited liability partnership* (*LLP*): An LLP is a hybrid structure combining partnership flexibility with limited liability. Commonly used for professional services, consulting businesses and closely held ventures. It functions as a distinct legal entity.
  - (d) *Section 8 company*: Incorporated for charitable or not-for-profit purposes. It cannot distribute its profits and must reinvest surpluses in furtherance of its stated mission. These entities offer credibility and enjoy tax incentives. They are commonly used by corporates undertaking social or philanthropic initiatives in India.
  - (e) *Wholly owned subsidiary* (*WOS*)/*joint venture* (*JV*): For foreign investors, a WOS offers the highest degree of control over Indian operations, while a JV with a local Indian partner is preferred where access to local know-how, distribution channels, shared financial resources or business contacts is of higher importance.
  - (f) *One Person Company* (*OPC*): An OPC is de-

signed for single entrepreneurs who seek the benefit of a corporate structure without the requirement of multiple shareholders, with limited liability.

- **Unincorporated Entities**
  (a) *Liaison office* (*LO*): Suitable for market testing, representation and communication. However, commercial activities are prohibited.
  (b) *Project office* (*PO*): Preferred for execution of specific projects or contracts in India.
  (c) *Branch office* (*BO*): Suitable for foreign companies undertaking trading, consultancy, research, IT services and other permitted commercial operations.

### *Trends and developments*

India's regulatory approach in recent years has been focused on replacing older, fragmented and compliance-heavy legal frameworks with consolidated and modern legislation aimed at improving EODB, reducing regulatory overlap and creating greater legal certainty for businesses. A significant example is the notification of the Labour Codes, consolidating 29 central labour laws into a simplified and modern framework.

A similar reform-oriented approach is visible in the corporate and foreign exchange regulatory space. The widening of the scope of fast-track mergers, permitting banks and financial institutions to finance mergers and acquisitions, automatic approval of permissible cross-border guarantees complying with underlying FEMA requirements and capping of penalties for compounding of offences under the FEMA framework, among other changes, reflect a clear move towards procedural efficiency and reduced regulatory friction.

Further, in order to attract investments, the government has introduced reforms under the Foreign Trade Policy (FTP), including permitting higher foreign investment in sectors such as insurance, banking and financial institutions, and contract manufacturing. Additionally, the clarification regarding beneficial ownership and the introduction of a specified approval timeline for Press Note 3 approvals in certain sectors further reflect a forward-looking policy approach aimed at enhancing regulatory certainty, improving EODB and fostering a more predictable investment environment for foreign investors.

Legislative modernisation has also been undertaken in the maritime and logistics sector. In 2025, India replaced several century-old laws with the Indian Ports Act, 2025, the Coastal Shipping Act, 2025, the Bills of Lading Act, 2025 and the Carriage of Goods by Sea Act, 2025, thereby modernising India's port and shipping regulatory framework and strengthening legal certainty in trade and logistics operations.

India's criminal justice framework has also undergone a significant overhaul with the enactment of the Bharatiya Nyaya Sanhita (ie, the erstwhile Indian Penal Code), 2023, the Bharatiya Nagarik Suraksha Sanhita (ie, the erstwhile Criminal Procedure Code), 2023, and the Bharatiya Sakshya Adhiniyam (ie, the erstwhile Indian Evidence Act), 2023, which replaced the colonial-era criminal laws and introduced reforms aimed at modernising criminal law, procedure and evidence.

### M&A in India

Despite global geopolitical uncertainty, tariff-related disruptions and supply chain realignments, India has emerged as one of the most preferred investment destinations as multinational businesses continue to diversify operations under the "China Plus One" strategy. India's expanding trade relationships and growing position within global supply chains are also contributing to increased inbound investment and cross-border transaction activity. At the same time, Indian corporates are increasingly deploying capital overseas to acquire technology, intellectual property, strategic capabilities and market access, reflecting India's evolution from a recipient of foreign investment to an increasingly significant source of outbound M&A activity.

The Indian M&A market remained active through 2025 and into 2026. While large-ticket transactions moderated amid global market volatility, deal volumes remained robust. Q1 2026 witnessed 271 M&A transactions, among the highest quarterly volumes recorded in recent years. Domestic transactions continued to anchor overall deal activity, while outbound M&A reached record levels.

The regulatory framework governing M&A transactions in India is well established. The Companies Act, 2013

provides the principal framework, with the National Company Law Tribunal (NCLT) exercising jurisdiction over such transactions. Cross-border transactions are additionally regulated under FEMA and regulations issued by the RBI, which, among other things, govern receipt of foreign investment, overseas investment and cross-border restructuring transactions. For listed entities, SEBI regulations, including the takeover, disclosure and listing frameworks, continue to play a central role in transaction structuring and execution. Additionally, transactions meeting the prescribed thresholds require approval from the CCI under the Competition Act, 2002, with competition law considerations becoming increasingly significant in big-ticket transactions.

M&A transactions in India are implemented through a variety of structures depending on commercial objectives, regulatory requirements and tax considerations. Transaction structures commonly adopted in India include share acquisitions, asset acquisitions, business transfers, mergers and demergers, joint ventures and strategic investments. Recent years have also witnessed increased use of cross-border restructuring mechanisms, including reverse-flip structures and inbound re-domiciliation exercises, supported by gradual liberalisation of India's cross-border merger framework.

Technology, manufacturing, financial services, healthcare, infrastructure and energy continue to drive M&A activity in India. Technology remains a particularly significant contributor, with increasing investment in artificial intelligence, digital infrastructure and software-enabled businesses. Data centres and digital infrastructure platforms have emerged as attractive investment targets as demand for cloud services, AI capabilities and digital transformation continues to grow.

Domestic consolidation remains a significant driver of deal activity, particularly in sectors where scale and operational efficiencies are becoming critical competitive advantages. At the same time, outbound acquisitions continue to gain momentum as Indian businesses pursue international expansion and strategic capability acquisition.

The regulatory environment is also influencing transaction execution in new ways. The staggered implementation of the Digital Personal Data Protection Act, 2023 over an 18-month period since its notification in November 2025 has introduced a significant additional dimension to due diligence exercises, particularly in technology, healthcare, financial services and consumer-facing businesses. Acquirers are increasingly scrutinising data governance practices, cybersecurity controls and compliance frameworks.

ESG considerations are becoming increasingly embedded in transaction processes, driven by investor expectations, disclosure obligations and evolving governance standards.

As the Indian market continues to mature, transaction structures, diligence exercises and contractual risk allocation mechanisms are becoming increasingly sophisticated.

### Trade With India

India represents a significant trading destination for foreign manufacturers and service providers seeking access to a large and diverse market. While many businesses choose to establish a presence in India, it is equally common to engage with Indian customers and counterparties through cross-border trade models without setting up operations in the country.

Imports and exports are governed by the Foreign Trade (Development and Regulation) Act, 1992, under which the Directorate General of Foreign Trade (DGFT) is responsible for formulating and implementing the FTP. The FTP provides the principal framework for export promotion and trade facilitation and supports multiple incentive schemes for businesses engaged in manufacturing, services and exports.

India's customs and foreign trade processes have been significantly modernised under FTP 2023, supported by high levels of digitalisation, transparent licensing rules and simplified classifications, with the DGFT, the Central Board of Indirect Taxes and Customs (CBIC) and sectoral regulators administering trade. A central feature of this transformation is India's EXIM digital ecosystem, whereby almost all export-import documentation is now processed electronically

through the Indian Customs EDI System (ICES) and its public interface, ICEGATE, across major ports, airports, inland container depots and SEZs, significantly improving compliance efficiency, cargo visibility and movement of goods.

### *Trends and developments*

India has become an increasingly attractive market for foreign manufacturers, exporters and service providers seeking access to a large and growing consumer base.

Consumer spending is on the rise, with over 30 international consumer and retail brands entering India in 2025. Sectors such as fashion, beauty, food and beverages, and lifestyle remain at the forefront. India is now the world's second-largest consumer market, with consumer spending projected to reach USD4.3 trillion by 2030, nearly doubling from 2024 levels.

At the same time, bilateral and multilateral trade agreements continue to strengthen India's global trade position and improve market access. Sectors witnessing significant growth include technology and artificial intelligence through initiatives such as BharatGenAI and the IndiaAI Mission; renewable energy and clean technology, with approximately INR2 lakh crore deployed; electric vehicles, with 77% annual growth; fintech and digital finance; and manufacturing and infrastructure.

## Trade Models

Foreign entities may structure their commercial engagement with India through a range of arrangements. The appropriate model depends on the nature of the business, the degree of commercial involvement and the allocation of rights and obligations between the parties.

- *Agency model*: The foreign company appoints an Indian company to act as its agent in India. The Indian company markets, stocks and distributes the goods and retains a part of the consideration paid by the customer as an agency fee. The balance is remitted to the foreign company. Additionally, the Indian company acts on behalf of the foreign company in relation to customer-facing activities.
- *Marketing and distribution arrangement*: The Indian company undertakes marketing, distribution and stocking of goods on behalf of the foreign company. Goods are stocked in India, and upon identification of a customer, the Indian company supplies them. However, contractual rights and payment obligations remain between the foreign company and the customer. The Indian entity is compensated by way of commission for its services.
- *Marketing arrangement*: A foreign company engages an Indian company to render marketing services on its behalf. The Indian company identifies customers and informs the foreign company, following which the foreign company directly enters into agreements with those customers and supplies goods to them. The Indian company receives a commission for the marketing services provided.
- *Sub-contracting model*: The foreign company engages an Indian company to manufacture goods. The Indian company exports the goods directly to the foreign company's customers. While exports are undertaken by the Indian entity, they are on behalf of the foreign company. The Indian company is compensated on a cost-plus basis along with a subcontracting fee, while the customer pays the foreign company.
- *Teaming agreements/joint development*: A foreign company and an Indian company collaborate to develop products for a specific customer. The foreign company provides technology, know-how and confidential information, while the Indian company undertakes manufacturing and supplies the goods to the customer.

## Conclusion

India's business and investment environment is entering a phase of increasing sophistication. While the country's growth trajectory continues to be supported by strong domestic consumption, favourable demographics and sustained policy support, the next stage of development is likely to be characterised by further regulatory refinement, institutional capacity building and deeper integration into global value chains.

Recent years have witnessed significant regulatory modernisation across multiple sectors. The implementation of the Labour Codes, phased implementation of the Digital Personal Data Protection framework,

liberalisation of foreign investment norms, expansion of the fast-track merger regime and continued simplification of foreign exchange regulations collectively reflect a broader policy objective of enhancing regulatory certainty while reducing compliance friction.

Looking ahead, the reform momentum is expected to continue. Proposed measures such as the Securities Markets Code, which seeks to consolidate India's securities law framework into a unified legislative regime, signal a broader shift towards simplification, regulatory harmonisation and technology-enabled compliance.

From an investment and M&A perspective, India is likely to remain a key destination for global capital. Continued supply chain diversification, increasing inbound investment, expanding GCC activity and growth in manufacturing, renewable energy, artificial intelligence and digital infrastructure, together with rising outbound acquisitions by Indian corporates, are expected to drive transaction activity. At the same time, growing scrutiny of data governance, ESG compliance, beneficial ownership structures and sector-specific regulatory requirements will continue to increase transaction complexity. Overall, the convergence of economic scale, policy stability and regulatory modernisation is expected to create substantial opportunities for businesses adopting a long-term strategic approach to the Indian market.

**ABNR Counsellors at Law**

**ABNR Counsellors at Law** was founded in 1967, is Indonesia's longest-established law firm and has played a pivotal role in shaping the development of international commercial law in the country, particularly during its economic reopening to foreign investment in the 1960s. Today, with a team of around 120 legal professionals – including 27 partners and 3 foreign counsels – ABNR stands as Indonesia's largest independent, full-service law firm. The firm is proud to have female practitioners at the partnership level, reflecting ABNR's commitment to diversity and inclusion. ABNR has consistently maintained its position as a top-tier law firm since its establishment. As the exclusive Indonesian member of Lex Mundi since 1991 – the world's leading network of independent law firms with representation in over 100 countries – ABNR provides seamless global reach for its clients. The firm would like to thank Jacob Zwaan and Ashary Arbaa at PT Alvarez & Marsal Indonesia for their assistance in preparing a response to the questions in section 5. Tax Law in this guide.

## Authors

**Agus Ahadi Deradjat (Agung)** is a partner at ABNR and a former member of the firm's management board. Agung focuses his practice on corporate/M&A, foreign direct investment (FDI) and technology, media and telecommunications (TMT). He advises leading multinational and domestic corporations across all leading industries and sectors, and offers particular expertise and experience in commerce/distribution/trading, technology and telecommunications, e-commerce, life sciences and the food industry. He recently worked on a number of major M&A and FDI transactions for high-end multinational clients, as well as significant FDI transactions in the technology, pharma, chemicals and natural resources sectors. Agung is ranked for TMT (Band 1) and corporate/M&A in Chambers' Asia-Pacific guide.

**Gustaaf Reerink** specialises in corporate/M&A and competition/antitrust, advising clients across a broad range of industries, including automotive, aviation, consumer goods and e-commerce, education, finance, pharmaceuticals and healthcare, power and renewables, real estate and infrastructure, shipping and maritime, telecoms and tourism industries. Gustaaf is a guest lecturer at several Indonesian universities and the Indonesian Ministry of Law. He was admitted to the Amsterdam Bar in 2008 and is a registered foreign lawyer in Indonesia. Gustaaf is the only lawyer in Indonesia to be ranked in the spotlight table as a foreign legal consultant for competition/antitrust in Chambers Asia-Pacific.

**Adri Dharma** is a partner at ABNR. He primarily focuses on corporate/M&A, foreign direct investment (FDI), pharmaceuticals and life sciences, FMCG and TMT. In FDI, Adri has advised international clients, including Fortune 500 multinational companies, across multiple sectors towards establishing a presence in Indonesia. In M&A, Adri has been involved in several notable projects, including the recent acquisition of a prominent construction steel manufacturing company by a consortium of Japanese and Thai investors, and the acquisition of a leading local distribution company by a major EU-based chemical and pharmaceutical distributor. Additionally, he has been involved in a variety of corporate restructurings, including merger, spin-off and asset acquisition/disposal transactions.

**Karina Widyaputri** is a senior associate at ABNR. She focuses her practice on foreign direct investment (FDI), corporate law, and M&A, with an emphasis on the pharmaceutical and life sciences sectors. She advises domestic and international clients on investment structuring and joint ventures across industries. Karina also assists multinational clients with day-to-day governance and compliance matters, helping companies in the multi-level marketing, chemical,

and manufacturing sectors manage their Indonesian operations in accordance with local legal requirements.

**Ilma Sulistyani** is a senior associate at ABNR. Her primary areas of focus are competition/antitrust, foreign direct investment (FDI) and M&A. In competition/antitrust, she regularly advises and represents clients in post-merger notifications to the Indonesian Competition Commission (KPPU) and provides strategic counsel on competition law compliance and agreements reviews. Her experience includes advising US-based global investment firms across multiple transactions and assisting South Korean-based corporations in a range of sectors with post-merger filings to the KPPU, advising numerous foreign investors in establishing and expanding their presence in Indonesia, and participating in various due diligence and transactional projects.

## 1. Legal System

### 1.1 Legal System and Judicial Order

The Indonesian legal system adopts the civil law system, where statutory law constitutes the primary source of law. While judicial precedents may be considered by judges in rendering decisions, they do not carry binding authority as they do in common law systems.

The basic organisation of the judicial order in Indonesia is structured under the authority of the Supreme Court (*Mahkamah Agung*) and consists of four branches of courts, each with a two-tiered structure (first instance and appellate level), as follows.

- General Court (*Peradilan Umum*), which has jurisdiction over civil and criminal cases involving the general public.
- State Administrative Court (*Pengadilan Tata Usaha Negara*), which has jurisdiction over disputes arising from state administrative decisions (eg, issuance of government permits or sanctions).
- Religious Court (*Pengadilan Agama*), which has jurisdiction over personal and family law matters for Muslims (eg, marriage, divorce and inheritance).
- Military Court (*Pengadilan Militer*), which has jurisdiction over criminal offences committed by members of the military.

In addition to the Supreme Court, Indonesia also has the Constitutional Court (*Mahkamah Konstitusi*), which functions as a judicial body of first and final instance, with decisions that are final and binding. The Constitutional Court has jurisdiction over the following matters:

- judicial review of laws against the constitution;
- disputes concerning the authority of state institutions;
- disputes regarding the results of general elections;
- the dissolution of political parties; and
- the impeachment of the president or vice president.

## 2. Restrictions on Foreign Investments

### 2.1 Approval of Foreign Investments

As a general rule, foreign investors are not required to obtain prior approval to invest in Indonesia. Notwithstanding the above, every business undertaking in Indonesia, whether domestic or foreign-owned, is required to obtain the appropriate licences based on its business activities in order to operate legally in the country.

Under the current regulatory framework, business licensing is processed through the Risk-Based Approach Online Single Submission System ("RBA OSS System"), which is administered by the Indonesian Investment Coordinating Board (BKPM). The type of licence required depends on the risk level of the business activities, as classified within the RBA OSS System.

This risk classification directly affects the scope and complexity of the applicable licensing requirements. Business activities deemed to carry a higher level of risk are subject to more stringent licensing obligations. Conversely, if a business activity is considered low-risk – ie, it does not have a significant impact on health, safety, the environment, or the utilisation of resources – it will generally only require a Business Identification Number (*Nomor Induk Berusaha* or NIB) to operate, without the need for additional licensing.

Business activities classified as medium-low, medium-high, or high risk are subject to additional requirements, which may include standard certifications, business licences, and/or commercial or operating licences, depending on the risk level and the nature of the activity.

The applicable licensing requirements for each risk category are detailed in Government Regulation No 28 of 2025 ("GR 28/2025") on the Implementation of Risk-Based Licensing, which supersedes the previous Government Regulation No 5 of 2021 ("GR 5/2021"). These requirements are further regulated by implementing technical regulations, including ministerial regulations.

### Foreign Ownership Limitation

In addition to the above, businesses must also comply with applicable foreign ownership limitations.

Pursuant to Presidential Regulation No 10 of 2021 on Investment and Business Lines, as amended by Presidential Regulation No 49 of 2021 (the "Investment List"), all business sectors are generally open to foreign investment, except for those that are:

- expressly closed to investment; or
- reserved exclusively for the central government – namely, activities of a service-oriented nature or those related to defence and security that are considered strategic and cannot be conducted in co-operation with other parties.

Although the majority of business sectors permit up to 100% foreign ownership, certain sectors remain subject to foreign ownership restrictions or limitations as set out under the Investment List.

## 2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance

Investors seeking to operate in Indonesia may apply for business licences via the RBA OSS System. For businesses categorised as low-risk or medium-low risk, the licensing process is primarily self-assessed. Upon submission of a complete application, the system will automatically issue the relevant licence.

In contrast, businesses classified as medium-high or high risk are subject to an additional licensing process. These include the fulfilment of specific business requirements and verification by the relevant supervisory ministries. Once these requirements are met and verified, the RBA OSS System will proceed to issue the appropriate licence.

Operating a business in Indonesia without proper licensing may result in administrative sanctions under the Investment Law (Law No 25 of 2007, as amended). These sanctions include:

- written warnings;
- limitations on business activities;
- suspension of business operations and/or investment facilities; and
- revocation of business operations and/or investment facilities.

Additional sanctions, including criminal sanctions, may also be imposed in accordance with other applicable laws and regulations.

## 2.3 Commitments Required From Foreign Investors

Foreign investment (*penanaman modal asing* or PMA) companies are subject to a minimum investment requirement pursuant to BKPM Regulation No 5 of 2025 on the Guidelines and Procedures for the Implementation of Risk-Based Business Licensing and Investment Facility through the Electronically Integrated Business Licensing System ("BKPM Reg. 5/2025"). In general, the minimum investment for a PMA company must exceed IDR10 billion (approximately USD600,000), excluding the value of land and buildings, calculated per KBLI (Indonesian Standard Business Classification or *Klasifikasi Baku Lapangan Usaha di Indonesia*) code and per project location. Different minimum investment criteria apply to businesses engaged in certain activities, such as F&B, real estate, accommodation, agriculture, plantation, livestock, and aquaculture businesses. Certain business activities are also subject to a higher minimum investment threshold, including those in the financial institutions, port operations, and activities that depend on sea terminals or jetties.

The required investment amount may be funded through a combination of equity (capital injection), loans, retained earnings (applicable only to existing companies) and/or share premium. This investment is intended to support the company as a going concern and is not required to be fully expended at the outset. The realisation of the investment may be carried out gradually, in line with the company's operational and financial needs.

In addition to the minimum investment requirement above, PMA companies are also required to have a minimum issued and paid-up capital of at least IDR2.5 billion. This reflects one of the key updates introduced under BKPM Reg. 5/2025, which reduces the previous minimum issued and paid-up capital requirement of IDR10 billion.

Furthermore, to obtain the relevant business licences, investors may be required to fulfil additional business-specific requirements depending on the nature of their activities.

### 2.4 Right to Appeal

Generally, investments that meet all stipulated requirements should not be withheld by the authorities. Consequently, there is no dedicated investment-specific mechanism for investors to challenge the authorities' refusal to authorise an investment. However, unlawful refusals by the authorities may be challenged through the State Administrative Court.

Additionally, in accordance with the Investment Law, any disputes between the Indonesian government and foreign investors regarding investment activities must first be resolved through amicable means. If an amicable settlement cannot be achieved, the parties may seek resolution through international arbitration as mutually agreed by both parties. This process applies to investments that have been realised and are based on specific agreements between the investors and the government.

## 3. Corporate Vehicles

### 3.1 Most Common Forms of Legal Entity

The most common corporate vehicle for investment in Indonesia – particularly for profit-oriented ventures – is the limited liability company (*Perseroan Terbatas* or PT). The Investment Law explicitly requires that foreign direct investment be carried out through a PT.

#### General Overview of a Limited Liability Company

Law No 40 of 2007 on Limited Liability Companies, as amended ("Company Law") defines a PT as a legal entity that constitutes a capital partnership, established based on an agreement, and conducts business activities with authorised capital that is entirely divided into shares.

The definition also extends to individual legal entities that meet the criteria for Micro and Small Enterprises under applicable laws and regulations. However, this category is not further discussed herein, as the focus is on PMA.

A PT that is partly or wholly owned by foreign investors is classified as a PMA.

#### Minimum Number of Shareholders

Company Law requires that a PT have at least two shareholders, who may be individuals, legal entities, or a combination of both. If a PT becomes owned by a single shareholder, the law mandates that within six months either: (i) the sole shareholder must transfer part of their shares to another party, or (ii) the company must issue new shares to one or more additional parties.

#### Minimum Share Capital

A PT's capital structure consists of: authorised capital, issued capital, and paid-up capital.

The authorised capital refers to the total capital (or portfolio capital) of a company. The Company Law requires that at least 25% of the authorised capital be issued and fully paid-up, meaning the authorised capital may be up to four times the issued capital.

For PMA companies, the minimum issued and paid-up capital requirement is IDR2.5 billion. Previously, there was no specific rule on whether the issued and paid-up capital could be transferred, spent, and/or repatriated. BKPM Reg. 5/2025 explicitly regulates that the IDR2.5 billion minimum capital cannot be removed/transferred out of the PMA company's bank account in Indonesia for 12 months, unless for specific purposes, namely asset purchase, construction of building, and/or the operational costs of the investment.

### 3.2 Incorporation Process

The incorporation of a PT in Indonesia involves the following key steps.

- Preparation and execution of the Deed of Establishment (DOE) – the founders must prepare a draft DOE, which includes the company's Articles of Association (AOA). The DOE must be executed physically by the founders or their authorised proxies before an Indonesian Notary.
- Preparation and execution of ancillary documents – in addition to the DOE, the notary typically requires all founders, directors, and commissioners to execute various supporting documents. These

may include statements regarding capital payment, company domicile, tax registration, and identification of the company's beneficial owner. The timeline for this step depends on the availability of the relevant parties.
- Filing with the Ministry of Law (MOL) – within 60 calendar days of executing the DOE, the notary must file the DOE and its ancillary documents through the MOL's online system. Approval from the MOL may be granted on the same day following submission of all required documentation. Upon approval, the company obtains legal entity status and is authorised to conduct legal actions in its own name.

The formal incorporation process is quite straightforward and not too time consuming. The process can be completed within a few days. However, investors must consider the time required for the founders to prepare the AOA and ancillary documents, including execution of these documents.

## 3.3 Ongoing Reporting and Disclosure Obligations

Indonesian private PTs are subject to several mandatory filing and reporting requirements, including the following.

- Filing of company data with the MOL – in relation to company establishment and ongoing corporate governance matters – such as amendments to the AOA, changes in shareholding, and changes in the composition of the Board of Directors (BOD) or Board of Commissioners (BOC), every PT must submit filings to the MOL. These corporate actions must be formalised through a notarial deed, which is then submitted to the MOL for approval (in the case of establishment and certain AOA amendments) or notification, as applicable. In practice, these filings are facilitated by the notary who prepares the deed.
- Registration of beneficial owner (BO) – to support efforts in combating money laundering and terrorism financing, the Indonesian government requires corporations – including PTs, foundations, and cooperatives – to identify and report their beneficial owners. Pursuant to Presidential Regulation No 13 of 2018 on the Identification of Beneficial Owners of Corporations, companies must conduct a self-assessment to determine their individual BOs based on the following criteria:
  (a) ownership of more than 25% of shares;
  (b) control of more than 25% of voting rights as stated in the AOA;
  (c) entitlement to more than 25% of the company's annual profits;
  (d) authority to appoint or remove members of the board;
  (e) authority to control the company without requiring approval from others;
  (f) receipt of benefits from the company; and/or
  (g) actual ownership of the funds.

The BO information must then be submitted to the MOL. This submission is typically facilitated by a notary, acting under a power of attorney.

- Investment activity report – as mandated by BKPM Reg. 5/2025, all business entities are required to submit periodic investment activity reports (*Laporan Kegiatan Penanaman Modal* or LKPM). For PMA companies, LKPM must be submitted on a quarterly basis. These reports detail the realisation of the company's investment plans and are recorded in the OSS system.
- Other sector-specific reporting obligations – depending on the nature of its business activities, a PT may also be subject to additional reporting requirements, such as import realisation reports, environmental compliance reports, and manpower-related filings.

## 3.4 Management Structures

### Two-Tier Management Structure of PT

Indonesian PTs adopt a two-tier management structure comprising: (i) a BOD, responsible for day-to-day management and representation of the company; and (ii) a BOC, responsible for supervisory and advisory functions. A PT must have at least one director and one commissioner.

### BOD

The BOD is fully responsible for managing the company in accordance with its objectives and purposes, acting in the best interests of the company. It is authorised to represent the company both in and out-

side of court, formulate policies, and oversee daily operations.

The company's AOA may designate specific director(s) to represent the BOD in acting on behalf of the company.

The BOD's authority to represent the company is generally unlimited and unconditional, unless restricted by the Company Law, the AOA, or a resolution of the General Meeting of Shareholders (GMS). Any such resolution must not conflict with the law or the AOA.

In practice, the AOA often stipulates reserved matters that require prior approval from the BOC or the GMS. Additionally, the BOD must operate within the scope of the company's stated business activities and comply with applicable licences and permits issued by relevant authorities.

#### BOC

The BOC's primary role is to supervise the BOD's management of the company and provide strategic advice.

Unlike the BOD, BOC members do not have executive authority and may not act individually. All supervisory and advisory actions must be taken collectively through formal BOC resolutions. However, in the absence of all members of the BOD, the BOC may temporarily assume management responsibilities for a limited period in accordance with the applicable laws and regulations.

### 3.5 Directors', Officers' and Shareholders' Liability

As a general principle under the Indonesian Company Law, directors of a PT are not personally liable to third parties for corporate actions undertaken in the course of their duties, provided such actions fall within the scope of their authority as defined by the company's AOA, GMS resolutions, and applicable laws.

However, the Company Law recognises the doctrine of piercing the corporate veil, under which directors may be held jointly and severally liable to third parties for tortious acts if they act beyond the limits of their authority. A member of the BOD may be exempt from liability for company losses if they can demonstrate that:

- the losses were not caused by their fault or negligence;
- they managed the company in good faith and with prudence, in alignment with the company's objectives and purposes; and
- they took reasonable steps to prevent the occurrence or continuation of losses, including efforts to obtain information about management actions that led to such losses – such as through participation in BOD meetings.

As the name implies, a PT offers limited liability protection to its shareholders. Shareholders are not personally liable for the company's legal actions or financial losses beyond the value of their shares. However, this protection may be disregarded in certain circumstances where the corporate veil is pierced, including the following.

- The company has not obtained or fails to maintain its legal entity status.
- A shareholder, directly or indirectly, acts in bad faith by using the company for personal gain.
- A shareholder is involved in an unlawful act committed by the company.
- A shareholder unlawfully uses the company's assets, resulting in insufficient assets to cover liabilities.

Additionally, if a PT has only one shareholder for more than six months, that shareholder may be held personally liable for all obligations and losses of the company.

## 4. Employment Law

### 4.1 Nature of Applicable Regulations

Employment relationships in Indonesia are primarily governed by Law No 13 of 2003 on Labour, as amended ("Labour Law"), along with its implementing regulations, including Government Regulation No 35 of 2021 on Fixed-Term Employment, Outsourcing, Working Hours and Rest Times, and Employment Termination ("GR 35/2021").

Under the Labour Law, an employment relationship is established through the existence of an employment contract between the employer and the employee. This contract may be structured as either:

- an indefinite-term employment agreement (permanent); or
- a definite-term employment agreement, which may only be used for:
  (a) completion of a specific task; or
  (b) a specific period not exceeding five years.

## 4.2 Characteristics of Employment Contracts

Under the Indonesian Labour Law, employment contracts, whether for a definite-term and an indefinite-term, are subject to distinct legal characteristics and formal requirements.

A definite-term employment contract must be made in writing, in the Indonesian language, and must include the following elements:

- name, address, and type of business of the company;
- name, gender, age, and address of the employee;
- job title or type of work;
- workplace location;
- amount of wages and the method of payment;
- terms of employment outlining the rights and obligations of both the employer and the employee;
- start date and duration of the employment contract;
- place and date the contract was made; and
- signatures of both parties involved in the contract.

An indefinite-term (permanent) employment contract may be made verbally or in writing. If made verbally, the employer is required to issue a letter of appointment once the employee is confirmed as permanent – typically after completing a probation period of up to three months. This letter must include at least the following:

- name and address of the employee;
- date the employee begins work;
- type of work to be performed; and
- amount of wages to be paid.

## 4.3 Working Time

The Indonesian Labour Law sets out clear standards for working hours and overtime, with flexibility for certain business sectors.

### Standard Working Hours

The law specifies two standard working hours arrangements:

- seven hours per day and 40 hours per week for companies operating on a six-day workweek; or
- eight hours per day and 40 hours per week for companies with a five-day workweek.

These provisions may not apply to companies in specific sectors that require continuous operations or have unique scheduling needs, where alternative arrangements are permitted.

### Overtime Work

- Employer instruction and employee consent – overtime must be explicitly ordered by the employer and agreed to by the employee, either in physical or digital form. Employers are required to maintain records of employees who consent to work overtime, including the duration of such work.
- Maximum duration and rest provisions – the maximum allowable overtime is four hours per day and 18 hours per week, excluding weekly days off and official public holidays. For employees working overtime for four hours or more, employers must provide adequate rest and food and beverages with a minimum caloric value of 1,400 kcal. This requirement cannot be substituted with monetary compensation.
- Overtime compensation – employers must pay overtime wages in accordance with the formula prescribed by applicable laws and regulations.

Employees in roles such as thinkers, planners, implementers, or supervisors, whose working hours cannot be standardised and who receive higher wages, are generally not entitled to overtime pay. However, this exemption must be clearly stated in the employment agreement, employee handbook, or collective labour agreement. If not explicitly stipulated, the employer is obligated to provide overtime compensation.

## 4.4 Termination of Employment Contracts

In Indonesia, all employment terms and conditions are governed by the employment contract between the employer and employee, as well as by applicable laws and regulations, including the Labour Law and GR 35/2021, the company's internal policies, and any relevant collective labour agreements. As such, termination of employment must comply with these legal frameworks, including the procedures and entitlements involved.

The Labour Law emphasises that termination of employment should be a last resort. Employers, employees, and the government are required to make every effort to avoid termination. However, if termination is unavoidable, it must be based on legally recognised grounds and follow proper procedures.

Employers are generally required to provide at least 14 calendar days' notice prior to termination, except in cases where:

- the employee resigns voluntarily;
- the employment contract expires;
- the employee reaches retirement age; or
- the employee passes away.

Under the Indonesian Labour Law, the legally recognised grounds for termination include the following.

### Corporate Actions and Business Conditions

- merger, consolidation, or division of the company, where either party refuses to continue the employment relationship;
- acquisition resulting in changes to employment terms, which the employee rejects;
- efficiency measures due to actual or potential losses;
- company closure due to continuous losses over two years;
- force majeure leading to closure or discontinued operations;
- suspension of payment (with or without losses); and
- bankruptcy.

### Employee-Initiated or Legal Grounds

- voluntary resignation;
- termination requested by the employee due to employer misconduct; or
- termination based on an industrial relations court ruling confirming no employer wrongdoing.

### Employee Conduct and Absence

- Absence without notice for five consecutive working days despite two written summonses.
- Violation of employment terms (employment contract, employee handbook, or collective labour agreement) after three written warnings.
- Serious misconduct as defined in the employment contract, employee handbook, or collective labour agreement.

### Detention and Criminal Cases

- Detention for more than six months, regardless of whether the employer suffers losses.
- Conviction in court before six months, with or without employer losses.

### Health and Retirement

- Inability to work for more than 12 months due to illness or work-related disability.
- Retirement.
- Death of the employee.

Terminated employees are entitled to compensation, which varies depending on the type of employment. Permanent employees are generally entitled to severance packages, while fixed-term employees receive compensation at the end of their contract. The amount is calculated based on factors such as the reason for termination and length of service, in accordance with GR 35/2021.

Employers and employees may also mutually agree to end the employment relationship through a Mutual Employment Termination Agreement, which must be documented in writing.

While Indonesian law does not specifically regulate collective redundancies or mass terminations, such actions are permitted provided they comply with the applicable legal procedures and ensure that all affected employees receive their statutory entitlements. All terminations – whether individual or collective – must follow the same legal process.

### 4.5 Employee Representations

Under the Indonesian Labour Law and Law No 21 of 2000 concerning Trade Unions/Labour Unions, as amended, every employee has the right to establish or join a labour union. While participation is voluntary, the law affirms and protects this right as part of broader labour protections.

A labour union must consist of at least ten members to be validly established. Once formed, the union must submit a written registration to the local office of the Manpower Agency and notify the employer of its registration. The employer is legally obligated to acknowledge this notification. A company may host multiple labour unions, and membership is typically evidenced by a union-issued membership card.

Labour unions are empowered to advocate for and protect the interests of their members. Their core functions include:

- negotiating collective labour agreements with employers;
- representing workers in industrial dispute resolution and labour institutions;
- establishing welfare-related initiatives; and
- engaging in other lawful labour-related activities.

Unions may also organise strikes, manage organisational finances, and participate in bipartite and tripartite co-operation forums.

## 5. Tax Law

### 5.1 Taxes Applicable to Employees/ Employers

An employee is subject to Indonesian income tax at progressive rates ranging from 5% to 35%, if they meet the tax residency criteria. That means that they reside in Indonesia, stay in Indonesia for more than 183 days within any 12-month period, or are present during a fiscal year with the intention to reside (eg, evidenced by a work permit or employment contract).

Otherwise, the individual is treated as a non-resident and is subject to a final withholding tax on Indonesian-sourced income, typically at a flat rate of 20%, unless reduced by an applicable tax treaty.

The employer acts as the withholding agent and must calculate, withhold, pay, and report the employee's Article 21 Income Tax monthly and provide a yearly tax slip (Form 1721 A1).

Employees also contribute to social security programmes, including 1% for BPJS *Kesehatan* (health), 2% for BPJS *Jaminan Hari Tua* (pension savings), and 1% for BPJS *Jaminan Pensiun* (pension programme).

Employers, in turn, contribute 4% to BPJS *Kesehatan* (health), 3.70% to BPJS *Jaminan Hari Tua* (pension savings), 2% to BPJS *Jaminan Pensiun* (pension programme), 0.24–1.74% to BPJS *Jaminan Kecelakaan Kerja* (work accident protection), and 0.30% to BPJS *Jaminan Kematian* (death benefit).

These contributions by both employees and employers are calculated based on the employee's basic salary and fixed allowances.

However, some components of the BPJS programme are subject to a salary cap, meaning contributions are not calculated on the full salary. For example, BPJS *Kesehatan* (health) is capped at a maximum salary of IDR12 million/month, while BPJS *Jaminan Pensiun* (pension programme) is capped at IDR11,086,300/month (starting from 1 March 2026). Any salary exceeding these limits is not subject to additional contributions under those specific programmes.

### 5.2 Taxes Applicable to Businesses

A company is considered resident (and subject to tax on worldwide income) if it is established or domiciled in Indonesia.

Non-resident companies are taxed only on Indonesian-sourced income, generally through withholding tax.

Companies doing business in Indonesia are subject to several taxes, including corporate income tax at a standard rate of 22%; VAT effectively at 11%; and withholding tax (WHT) on payments to resident taxpayers, generally 15% for interest and royalties, and

2% for service fees, consulting, and rentals, except for land and building rentals, which are subject to 10% WHT. For non-resident recipients, WHT is typically 20% on dividends, interest, royalties, and service fees, unless reduced under a tax treaty. Other applicable taxes include final income tax for certain sectors (eg, micro, small, and medium enterprises, and construction), land and building tax, stamp duty, and excise tax on specific goods.

Effective 1 January 2025, Indonesia has committed to implement OECD Pillar Two, which targets large multinational groups with global revenues above EUR750 million to ensure a minimum 15% effective tax rate. To retain taxing rights and maintain investment competitiveness, Indonesia has introduced a Domestic Minimum Top-Up Tax (DMTT) aligned with OECD safe harbour rules.

Further regulations have been issued to provide the substantive and procedural framework for the implementation of the OECD Pillar Two in Indonesia. In particular, Minister of Finance Regulation No 136 of 2024 and Directorate General of Tax Regulation No 6 of 2026 set out the detailed rules, including the determination of in-scope taxpayers, the calculation of the effective tax rate and top-up tax, as well as the related compliance, filing, and administrative requirements.

## 5.3 Available Tax Credits/Incentives

### Tax Credits

In Indonesia, tax credits are relatively limited and mainly apply to taxes already paid, either domestically or abroad. The two primary credits are the Foreign Tax Credit (FTC), which allows resident taxpayers to credit foreign income tax paid on foreign-sourced income, and prepaid taxes, such as income tax withheld at source (eg, Article 21 on salaries, Article 22 on imports, Article 23 on rental and services, and Article 25 on monthly instalments, all of the Income Tax Law).

Additionally, input VAT incurred on purchases (goods or services) can be credited against output VAT collected on sales, provided it relates to taxable business activities, is supported by a valid tax invoice, and is claimed within three months of the invoice date.

### Tax Incentives

Additionally, while not formal credits, Indonesia offers several tax incentives that reduce taxable income or provide additional deductions. These include tax holidays for pioneer industries (5–20 years CIT exemption), tax allowances for labour-intensive or export sectors (eg, 30% investment deduction), Special Economic Zone incentives (CIT/VAT/customs relief), super deductions of up to 300% for R&D, dividend reinvestment exemptions, Free Trade Zone benefits (eg, Batam and Bintan), and green energy incentives including potential carbon credits.

Note that the tax holiday application must be submitted no later than 31 December 2025, meaning that taxpayers will no longer be able to apply for the facility starting from 2026. As of May 2026, there has been no further regulatory update on this matter. Nevertheless, it should be noted that the tax holiday facility remains available for taxpayers operating within a Special Economic Zone.

The implementation of the OECD's Pillar Two significantly reduces the effectiveness of Indonesia's tax holiday regime for large multinationals, as any corporate income tax exemption or reduction that brings the effective tax rate below 15% may trigger a top-up tax. This undermines the intended benefit of tax holidays and could make Indonesia less attractive to large-scale foreign investors.

## 5.4 Tax Consolidation

In Indonesia, tax consolidation is not generally available. Each legal entity is treated as a separate taxpayer, even within the same group.

## 5.5 Thin Capitalisation Rules and Other Limitations

Indonesia applies thin capitalisation rules by limiting the debt-to-equity ratio (DER) to a maximum of 4:1 for the purpose of interest deductibility. Any interest expense on debt exceeding this ratio is non-deductible for income tax purposes, aiming to prevent excessive debt used for tax avoidance through related-party financing.

This rule applies to most corporate taxpayers, with exceptions granted to banks, insurance companies,

mining companies under specific contracts (eg, Production Sharing Contracts or Contract of Works).

In addition, Indonesia has proposed introducing a thin capitalisation rule based on EBITDA, aligning with international best practices, to limit excessive interest deductions. However, as of now, this EBITDA-based limitation has not yet been implemented.

### 5.6 Transfer Pricing

Transfer pricing rules are fully applicable in Indonesia and are actively enforced by the Indonesian tax authority. They apply to transactions between related parties, including parent–subsidiary companies, sister companies (under common control), transactions with related non-residents and domestic related-party transactions if tax benefits arise (eg, different tax rates or a tax holiday/allowance).

### 5.7 Anti-Evasion Rules

Indonesia enforces both general (GAAR) and specific (SAAR) anti-avoidance rules to combat tax evasion and abusive arrangements. Under GAAR, the tax authority may re-determine taxable income or deny deductions if a transaction lacks a bona fide business purpose or is structured solely for tax benefits. They may apply the substance-over-form principle to disregard artificial arrangements without commercial substance.

SAAR covers targeted rules such as transfer pricing, thin capitalisation, beneficial ownership, and Controlled Foreign Company (CFC) provisions. A CFC in Indonesia refers to a foreign entity that is at least 50% owned (directly or indirectly) by an Indonesian taxpayer or jointly controlled (≥50%) by Indonesian residents. Under Indonesia's CFC rules, certain undistributed profits of such foreign subsidiaries may be deemed as dividends and taxed in Indonesia, even if not actually distributed and the CFC is located in a low-tax jurisdiction. These rules aim to prevent profit shifting and tax deferral through offshore entities.

### 5.8 Tariffs

Indonesia's tariff regime is based on the ASEAN Harmonized Tariff Nomenclature (AHTN), with import duties generally ranging from 0% to 40%. Preferential rates apply under various free trade agreements (eg, ASEAN, Japan and Australia). Tariffs are highest on goods intended to protect local industries, including agriculture (up to 40%), automotive (up to 50% + luxury tax), textiles, electronics, and processed food. Non-tariff measures like quotas and import licensing are also used in sensitive sectors.

Global developments, such as the Regional Comprehensive Economic Partnership (RCEP) which is a free trade agreement (FTA) among 15 Asia-Pacific countries, green trade measures (eg, EU CBAM), and supply chain realignment are influencing Indonesia's tariff strategy. The country is increasingly using tariffs to promote domestic manufacturing, downstream industries (eg, mining and EV), and import substitution, while maintaining competitiveness under international trade agreements.

Note that this information is based on general knowledge available within the firm's office, and the authors are not customs or tariff specialists.

## 6. Competition Law

### 6.1 Merger Control Notification

#### General Overview

Mergers, consolidations and acquisitions (whether of shares or assets) are subject to post-closing notification if the following criteria are cumulatively met:

- the transaction constitutes a merger, consolidation, or acquisition that results in a change of control (including a change from sole control to joint control, or vice versa);
- the transaction meets the applicable jurisdictional thresholds; and
- the transaction is carried out between non-affiliated entities.

Foreign-to-foreign transactions that satisfy the above criteria may have to be notified if they have a nexus with the Indonesian market. Currently, the Indonesian Competition Commission (KPPU) applies a dual-nexus approach, meaning that both undertakings involved in the transaction must have assets in, or sales to, Indonesia, either directly or indirectly through affiliates or subsidiaries.

Joint ventures are, in principle, subject to Indonesian merger control regulations unless they qualify as greenfield joint ventures. For the avoidance of doubt, any mergers, consolidations, or acquisitions undertaken by a joint venture after its establishment remain subject to merger control, provided that the above criteria are met.

### Jurisdictional Thresholds

The jurisdictional thresholds for mandatory post-closing notification are:

- the combined value of assets in Indonesia exceeds IDR2.5 trillion (approximately USD145 million) or, if all undertakings involved in the transaction are active in the banking sector, IDR20 trillion (approximately USD1.16 billion); and/or
- the combined turnover in Indonesia exceeds IDR5 trillion (approximately USD290 million).

Of relevance to the calculation are worldwide assets or sales (turnover) in Indonesia of the acquirer and all undertakings (including the target) that, following the acquisition, directly or indirectly control, or are controlled by, the acquirer. This includes the ultimate beneficial owner, which is the highest controller of a group of undertakings that is not controlled by any other undertaking. Accordingly, the Indonesian assets and/or sales include those of:

- the acquirer;
- the target;
- the ultimate parent entity of the acquirer;
- all controlled direct and indirect subsidiaries of the ultimate parent entity of the acquirer with sales and/or assets in Indonesia; and
- all controlled direct and indirect subsidiaries of the target with sales and/or assets in Indonesia.

The jurisdictional thresholds are also met if only one party involved in the transaction meets the threshold.

The asset value and turnover are calculated based on the consolidated audited financial report of the ultimate parent entity – or, if no consolidated financial report is available, the financial reports of the ultimate parent entity and each of its subsidiaries – in all cases that occurred during the last year before the transaction date.

Turnover includes sales of products produced domestically and imported products. Exported products should be excluded from the calculation.

If the asset or sales value of a party involved in the acquisition has decreased by 30% or more in an accounting year as compared with the year before, the value is calculated on the basis of the average of the past three years or, if the decrease occurred in under three years, the average of the past two years.

### Applicable Exemption

A transfer of assets (tangible or intangible) is equivalent to a share acquisition and, accordingly, should be notified to the KPPU if there is:

- a transfer of their management control or physical control; or
- an increase in the ability of the acquirer to control a relevant market.

However, the following asset transfers are exempt.

- A non-bank asset transfer transaction valued at less than IDR250 billion (approximately USD14.5 million).
- A bank asset transfer transaction valued at less than IDR2.5 trillion (approximately USD145 million).
- A transfer of assets that is carried out in the ordinary course of business (this depends on the business profile of the acquiring party and the purpose of the acquisition). Transactions in the ordinary course of business are:
  - (a) transfers of assets that are finished goods from one undertaking to another for resale to consumers by an undertaking that is active in the retail sector (ie, the sale of consumer goods by retailers); and
  - (b) transfers of assets that are supplies to be used within three months in the production process (ie, the purchase by an undertaking of raw materials and basic components from various sources for production).
- The assets have no relationship with the business activities of the undertaking acquiring the assets.

The transferred asset values in points 1 and 2 above are as cited in the latest financial statements, or as calculated at the sale, purchase or other legal asset transfer. The highest of these should be the basis for calculation of the threshold. If the transferred assets are privately owned, the asset value would be based on the value as referred to in the seller's tax filing.

If the transaction is carried out between affiliates, the transaction is also exempt. A company is an affiliate of another if:

- it either directly or indirectly controls, or is controlled by, that company;
- both it and the other company, directly or indirectly, are controlled by the same parent company; or
- there is a main principal shareholder relationship with the counterparty.

The principal shareholder should be a controlling shareholder. "Affiliation" means a relationship of control.

## 6.2 Merger Control Procedure

### General Overview

Indonesia adopts a post-merger notification system. A transaction that meets the relevant criteria should in principle be notified to the KPPU 30 business days from the date that the transaction becomes legally effective.

Notifications must be submitted through the KPPU's online portal. The portal is only accessible for submissions between 9am and 2pm (Western Indonesian Time) on business days, which excludes Saturdays and Sundays, official national holidays and joint leave.

If the target is an Indonesian limited liability company, a transaction becomes legally effective:

- for a merger, on the date of approval by the Minister of Law (MoL) of the amendment of the Articles of Association;
- for a consolidation, on the date of approval by the MoL of the deed of establishment of the new company;
- for an acquisition of shares, on the date of notification to the MoL; and
- for an acquisition of assets, on the date of the asset transfer.

A transaction involving a target that is a public company becomes legally effective on:

- the date on which the public disclosure letter for the transaction is submitted to the Financial Services Authority (OJK) for a merger, consolidation, or acquisition between public companies; or
- the final date of payment of shares or other equity securities in the exercise of a rights issuance, merger, consolidation or acquisition carried out by a private company in connection with a public company.

The legal effectiveness of foreign-to-foreign transactions is determined based on the closing date in the agreement between the parties or approval from the authorities in the jurisdiction in which the transaction is taking place.

If a transaction has more than one date on which the transaction will become legally effective, the final date will apply.

The following parties are responsible for a notification filing:

- for a merger, the surviving undertaking of the merger;
- for a consolidation, the undertaking resulting from the consolidation;
- for an acquisition of shares, the undertaking that acquires the shares; and
- for an acquisition of assets, the undertaking that acquires the assets.

A party may choose to engage in voluntary pre-merger consultation either in writing through the notification portal or verbally. If a party chooses the first option, the procedure is similar to the notification procedure. A consultation will not exempt the party from the obligation to submit a notification after the transaction has become effective. The outcome of the KPPU's assessment conducted as part of a consultation may be used for the post-merger notification, provided

there are no changes to the supporting documents, for up to one year from its issuance date.

### Notification Fees

As of May 2023, filing fees are required. They are calculated by multiplying the value of assets or sales in excess of the notification threshold, whichever is lower, by 0.004%.

The value of assets or sales is based on the total asset or sales value of:

- the surviving entity, the consolidating undertaking, or the acquiring entity and the target; and
- the undertakings that are directly or indirectly controlled by the surviving entity resulting from the merger, the consolidating undertaking, or the acquiring entity and the target.

If both the asset and sales value meet the threshold, the filing fee will be calculated using whichever value is lower and will only be payable if the KPPU finds that the transaction is notifiable. The maximum fee is IDR150 million (approximately USD8,750).

### General Overview of the Timeline

Notification comprises two phases.

1. A check on the completeness of notification documents.

2. An assessment, consisting of initial and comprehensive assessment sub-phases, with the latter only being applicable to transactions that raise potential concerns from the Indonesian competition law perspective.

The first phase, which is applicable to all notified transactions, also consists of a check regarding if the transaction is notifiable. This check should be completed within three business days of the notification being submitted. If the notification documents are complete, the KPPU will issue a notification registration number and official confirmation on whether the transaction is notifiable. If the notification documents are not complete, the KPPU will request the notifying party to provide additional documents or information as deemed necessary.

If the transaction is notifiable, the notification will continue to the assessment phase. Thereafter, the KPPU has 90 business days from the date the notification is declared complete to conduct its review and issue an opinion.

## 6.3 Cartels

The general cartel prohibition can be found in Article 11 of Law No 5/1999 on the Prohibition of Monopolistic Practices and Unfair Business Competition as amended by Law No 6 of 2023 on the Stipulation of Government Regulation No 2 of 2022 on Job Creation into Law and further amended by Law No 1 of 2026 on the Adjustment of Criminal Sanctions (ICL) and several KPPU Guidelines. The ICL contains several provisions for the cartel prohibition which, apart from the general cartel provision, relate to:

- price fixing (Article 5 of the ICL);
- market allocation (Article 9 of the ICL);
- group boycotts (Article 10 of the ICL);
- bid rigging (Article 22 of the ICL); and
- a general prohibition on anticompetitive agreements with foreign parties, which could also apply to cartels with a cross-border element (Article 16 of the ICL).

While certain provisions impose a “per se” or “hard-core” cartel prohibition – such as those relating to price fixing and group boycotts – most are assessed using a “rule of reason” approach. Under this approach, sanctions may only be imposed if it can be proven that the restrictive agreement potentially causes adverse effects on the market resulting in monopolistic practices and/or unfair business competition.

Under the ICL, prohibited conduct or agreements are punishable by both administrative and criminal sanctions. However, only the refusal to co-operate with a KPPU investigation or failure to disclose significant information for such an investigation is subject to criminal sanctions. These criminal sanctions include a maximum fine of IDR5 billion (approximately USD290,000) or imprisonment of up to one year (if the fine is not paid). Other prohibited conducts and agreements are subject solely to administrative sanctions.

The administrative sanctions under the ICL and Government Regulation No 44 of 2021 on Prohibition of Monopolistic Practices and Unfair Business Competition ("GR No 44/2021") include:

- a decision to cancel an agreement;
- an order to discontinue vertical integration;
- an order to discontinue behaviour that causes unfair business competition or harms the public;
- an order to discontinue abuse of dominant position;
- a decision to cancel a merger or consolidation of undertakings and shares acquisition;
- a decision to order payment of damages; and/or
- a decision to impose a fine of at least IDR1 billion (approximately USD60,932), by taking account of the fine amount under the government regulation.

GR No 44/2021 and KPPU Regulation No 2 of 2021 on Guidelines for Imposing Administrative Fines further stipulate that the KPPU can impose a base penalty of IDR1 billion (approximately USD58,000), plus an additional specified amount. The final calculation of fines is subject to the following limits:

- up to 50% of the net profits earned by the undertaking in the relevant market during the violation; or
- up to 10% of the total sales in the relevant market during the violation.

The amount of the fine is calculated based on:

- the negative impact caused by the violation;
- the duration of the violation;
- mitigating factors;
- aggravating factors; and
- the ability of the undertaking to pay.

Cartel conduct taking place outside Indonesian jurisdiction may still fall within the scope of the prohibition of the ICL if one or more of the undertakings involved are domiciled in Indonesia or are directly or indirectly conducting business in Indonesia. Indirect business activities include those carried out by an undertaking's Indonesian subsidiary, which, according to the Single Economic Entity doctrine established in the Temasek case, is considered part of the same economic entity as its parent company.

The existing ICL does not contain provisions for a leniency programme.

### 6.4 Abuse of Dominant Position

Article 25 of the ICL specifically defines abuse of a dominant position. Undertakings are prohibited from taking advantage of their dominant position, either directly or indirectly, to:

- impose trade terms with the intention to prevent or hamper consumers from acquiring competitive goods or services, on price or quality;
- restrict the market and technological development; or
- hamper other undertakings, with the potential to become competitors, from entering the relevant market.

Under Article 25 (2) of the ICL, there is dominance if:

- one undertaking controls 50% or more of the market share for one type of product or service; or
- two or three undertakings or groups of undertakings control 75% or more of the market share for one type of product or service.

The above provision should be read in conjunction with Article 1 (4) of the ICL, which defines "dominant position" as a situation in which an undertaking has no meaningful competitors in the relevant market in view of the market share that it holds, or the undertaking holds a higher position among competitors in the relevant market in view of financial capability, the ability to access supplies and sales, and the ability to adjust offer and demand of certain products and services.

Article 25 constitutes a "per se" prohibition, meaning that once the required elements are fulfilled, the KPPU can conclude that a violation has been legally and convincingly proven. Nonetheless, in practice, the KPPU frequently strengthens its findings by assessing and demonstrating the impact of the abuse to substantiate the evidence and justify the imposition of sanctions.

While Article 25 outlines specific forms of abuse, other types of abusive conduct may still fall under different provisions of the ICL. Undertakings that engage in

abusive conduct may still fall within the scope of other provisions under the ICL, even if they do not meet the market share thresholds for dominance, as long as they possess market power. Market power exists when an undertaking can profitably raise prices above competitive levels. This power may arise from dominance or a substantial market share, or from specific factors such as:

- ownership of intellectual property rights or exclusive licences;
- special positions granted by government regulations;
- control over distribution networks;
- financial backing (eg, from a parent company); or
- high entry barriers.

Provisions applicable to undertakings with market power include Article 6 (Price Discrimination), Article 11 (Cartels), Article 14 (Vertical Integration), Article 15 (Exclusive Agreements), Article 19 (Market Control), and Article 20 (Predatory Pricing) of the ICL.

## 7. Intellectual Property

### 7.1 Patents

Patent protection in Indonesia is governed by Law No 65 of 2024, the third amendment to Law No 13 of 2016 on Patents ("Patent Law"). A patent is an exclusive right granted by the state to an inventor for a technological invention, allowing personal exploitation or licensing to others for a specified period.

A patent is granted for an invention that:

- is novel (new);
- involves an inventive step; and
- is industrially applicable.

The invention may take the form of a product or a process that introduces a new method or offers a technical solution to a problem.

Indonesia recognises two types of patents.

- Standard patents – granted for inventions with a higher level of inventiveness; protection lasts 20 years from the filing date (non-renewable).
- Simple patents – granted for inventions with a lower level of inventiveness, typically improvements to existing products or processes; protection lasts ten years from the filing date (non-renewable).

#### Patent Registration Process

1. Application submission – filed with the Directorate General of Intellectual Property of the Ministry of Law (DGIP) and includes a request form, description, claims, abstract, and drawings (if applicable).

2. Administrative examination – DGIP reviews formal compliance.

3. Publication – application is published in the official gazette.

4. Substantive examination – must be requested within 36 months of filing; DGIP assesses novelty, inventive step, and industrial applicability.

5. Granting of patent – if approved, the patent is granted and published.

Foreign applicants must appoint a registered Intellectual Property Consultant in Indonesia.

Enforcement includes civil remedies (damages and injunctions) and criminal penalties. Patent disputes are adjudicated by commercial courts.

### 7.2 Trade Marks

Trade mark protection is governed by Law No 20 of 2016 on Trademarks and Geographical Indications. A trade mark is any sign capable of being graphically represented – such as images, logos, names, words, letters, numbers, colour arrangements (in two or three dimensions), sounds, holograms, or combinations thereof – used to distinguish goods or services of one party from those of others.

Trade mark protection lasts ten years from the filing date and is renewable for subsequent ten-year terms. Renewals must be filed within six months before expi-

ration, with a six-month grace period available post-expiration (subject to additional fees).

### Trade Mark Registration Process

1. Application submission – via DGIP's online system, including applicant details, mark representation, goods/services list, and supporting documents.

2. Administrative examination – DGIP verifies completeness.

3. Publication – mark is published for a two-month opposition period, during which third parties may file written objections.

4. Substantive examination – DGIP assesses registrability and considers any oppositions.

5. Registration – approved marks are registered and published; a certificate is issued.

Foreign applicants must appoint a registered Intellectual Property Consultant.

Enforcement includes civil and criminal remedies, including damages, injunctions, fines and imprisonment.

## 7.3 Industrial Designs

Industrial design rights are governed by Law No 31 of 2000 on Industrial Design. An industrial design refers to a creation of form, configuration, or composition of lines or colours – either in two-dimensional or three-dimensional form – that gives an aesthetic impression and can be applied to a product, goods, industrial commodity, or handicraft.

Protection of industrial design lasts ten years from the filing date and is non-renewable.

### Industrial Design Registration Process

1. Application submission – filed via DGIP's online system in Indonesian, including design description, drawings/photos, priority documents (if applicable), and designer details.

2. Administrative examination – DGIP checks for completeness; applicants have three months to rectify deficiencies.

3. Publication – design is published for three months.

4. Opposition period – third parties may file oppositions; applicants may rebut within three months of notification.

5. Substantive examination – DGIP considers oppositions and rebuttals.

6. Registration and certificate issuance – upon approval, DGIP issues a certificate.

Foreign applicants must appoint a registered Intellectual Property Consultant.

Enforcement includes civil and criminal remedies.

## 7.4 Copyright

Copyright is governed by Law No 28 of 2014 on Copyright, which provides automatic protection upon creation, based on the declarative principle. Protection applies once a work is expressed in tangible form.

Protected works include:

- literary works (books, articles, poetry and scripts);
- artistic works (paintings, sculptures and photography);
- musical compositions;
- films and audiovisual works; and
- computer programs and software.

Copyright consists of two distinct rights.

- Moral rights – these are perpetual and remain with the creator, regardless of ownership.
- Economic rights – these grant the creator or rights holder the ability to commercially exploit the work.

The duration of economic rights varies depending on the type of work and the rights holder, ranging from 20 to 70 years.

Although registration is not required to obtain copyright protection, recordation with the DGIP is strongly recommended to establish legal certainty and facilitate enforcement.

#### Copyright Recordation Process

1. Application submission – via DGIP's online system in Indonesian, including application form, copy of the work, identity documents, and statement of ownership.

2. Verification – DGIP reviews originality and completeness.

3. Certificate issuance – DGIP issues a certificate upon approval.

Foreign applicants must appoint a registered Intellectual Property Consultant.

Enforcement includes civil and criminal remedies.

### 7.5 Others

#### Software Protection

Software is protected under the Copyright Law as a literary work, with automatic protection upon creation. A computer program is defined as a set of instructions expressed in the form of language, code, schemes, or any other form intended to enable a computer to perform a specific function or produce a particular result.

Software is protected for 50 years from the date of first publication.

#### Database Protection

Databases are also protected under the Copyright Law, specifically for their structure and organisation, not the raw data.

Protection lasts 50 years from the date of first publication.

#### Trade Secrets

Trade secrets are governed by Law No 30 of 2000 on Trade Secrets, which protects confidential business information with economic value. A trade secret is defined as information in the field of technology and/or business that is not publicly known, has commercial utility, and is subject to confidentiality measures.

The scope of protection includes:

- production methods;
- processing techniques;
- sales strategies; and
- other proprietary business or technical information.

Protection is automatic and remains valid as long as confidentiality is maintained. No registration is required.

Enforcement includes civil and criminal remedies.

## 8. Data Protection

### 8.1 Applicable Regulations

Personal data protection in Indonesia is primarily governed by Law No 27 of 2022 on Personal Data Protection ("PDP Law"), which serves as the country's principal legal framework for regulating the processing of personal data. This includes activities such as the collection, use, storage, and disclosure of personal data. The PDP Law is substantially modelled on the European Union's General Data Protection Regulation, reflecting Indonesia's commitment to aligning its data protection standards with global best practices.

The PDP Law officially came into force on 17 October 2024, marking a significant milestone in Indonesia's digital governance landscape. Since its enactment, the Indonesian government, through the Ministry of Communication and Digital (MOCD), has been tasked with overseeing its implementation. The government is currently developing a Draft Government Regulation on Personal Data Protection, which will provide detailed guidance on the implementation and enforcement mechanisms. However, as of mid-2026, no definitive timeline has been announced for the finalisation of this implementing regulation.

In addition to the PDP Law, personal data protection requirements are also stipulated under:

- pre-existing regulations that remain valid insofar as they do not conflict with the PDP Law;
- specifically for children's personal data, in regulations regarding child protection; and
- sector-specific laws and regulations, such as those governing telecommunications, electronic transactions, medical records, and financial services.

### 8.2 Geographical Scope

The PDP Law has a notable extra-territorial effect, extending its reach beyond the country's borders. As stipulated in Article 2, the law applies to all legal acts involving personal data processing that are conducted:

- within the jurisdiction of Indonesia; and
- outside the jurisdiction of Indonesia, if such acts result in legal consequences:
  (a) within Indonesia; and/or
  (b) for data subjects who are Indonesian citizens located abroad.

This provision ensures that foreign-based data controllers – including individuals, public agencies, and international organisations – are subject to the PDP Law if their activities affect Indonesian citizens or have legal implications within Indonesia.

Consequently, a foreign company without a legal presence in Indonesia that provides services to Indonesian users must still comply with the PDP Law. If it fails to process the personal data of those users in accordance with the law's requirements, it may be subject to enforcement actions and sanctions, despite operating from outside Indonesia.

### 8.3 Role and Authority of the Data Protection Agency

At present, the enforcement of PDP Law is overseen by the Directorate General of Digital Space Supervision (DG) under MOCD.

While the PDP Law mandates the establishment of an independent Data Protection Authority (DPA) – tasked with regulatory, supervisory, and enforcement responsibilities – this authority has not yet been formally constituted.

In the interim, pursuant to MOCD Regulation No 1 of 2025 on Organisation and Work Procedures, the DG continues to serve as the competent authority for personal data protection matters. Its responsibilities include:

- formulating and implementing policies related to digital space supervision and personal data protection;
- executing those policies;
- monitoring, analysing, evaluating, and reporting on digital space and data protection activities;
- managing internal administration of the DG; and
- carrying out additional functions as assigned by MOCD.

The MOCD has publicly stated its intention to expedite the formation of the DPA, signalling that its establishment remains a high priority for the government. However, as of mid-2026, no definitive timeline has been announced for the establishment of the DPA.

## 9. Looking Forward

### 9.1 Upcoming Legal Reforms

#### Updates to the KBLI and Business Licensing System

On 27 March 2026, the Ministry of Investment and Downstream Industry/Head of BKPM, the MOL, and the Central Statistics Agency (BPS) issued a Joint Circular Letter to facilitate the implementation of the 2025 Indonesian Standard Business Field Classification (KBLI 2025) within the risk-based licensing framework.

The Joint Circular Letter follows the issuance of BPS Regulation No 7 of 2025, which introduces KBLI 2025 and replaces the previous KBLI 2020 classification. The updated framework includes, among others, the consolidation and splitting of various business classification codes.

Under the new regime:

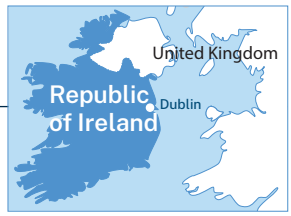
- Existing licences and approvals issued prior to the implementation of KBLI 2025 remain valid.

- However, companies registered with the MOL must align their KBLI classification when undertaking corporate actions – such as amendments to their Articles of Association that affect their business purposes or activities – in accordance with applicable regulations.

Importantly, no action should be required where the adjustment relates solely to changes in numerical KBLI codes without affecting the substance of the company's business activities. In such cases, the alignment will be processed automatically through the Ministry of Law's system and the OSS Risk-Based Approach (OSS RBA) system.

The transition to KBLI 2025 across both the OSS RBA and the MOL's systems is expected to be completed by 18 June 2026, after which all integrated systems will reflect the updated classification.

### Competition Law



As part of the 2025–2029 National Legislation Program, the Indonesian legislature intends to introduce a new competition bill to amend the existing ICL. However, the timeline for its promulgation remains unclear.

### New Regulation on Outsourcing

The government has recently issued Minister of Manpower Regulation No 7 of 2026 on Outsourcing on 30 April 2026. While outsourcing was previously not subject to specific job-type limitations, the regulation now restricts outsourcing to supporting activities such as cleaning services, food and beverage provision, security services, drivers and worker transportation, operational support services, and supporting activities in the mining, oil, gas, and electricity sectors.

Upon its entry into force, ie, 30 April 2026, existing outsourcing agreements remain valid until expiry. However, outsourcing companies are required to align the types of outsourced work with the regulation within two years from its promulgation. Any violation is subject to administrative sanctions in the form of written warning and suspension of business activities.

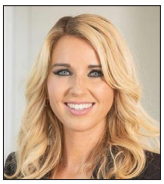
**Matheson LLP** is the law firm of choice for internationally focused companies and financial institutions doing business in and from Ireland. Established in 1825 in Dublin, Ireland, Matheson LLP celebrates its 200-year anniversary in 2025. The firm has offices in Dublin, Cork, London, New York, Palo Alto and San Francisco, almost 900 people work across the firm's six offices, including 127 partners and tax principals and over 600 legal, tax and digital services professionals. The firm's expertise is spread across more than 30 practice groups. Its clients include over half of the world's 50 largest banks, seven of the world's ten largest asset managers and seven of the top ten global technology brands, and it has advised the majority of the Fortune 100 companies.



## Authors

**Philip Tully** is a partner in Matheson's tax department and is a member of the firm's international business group and US business group. He advises multinational corporations doing business in and from Ireland on all aspects of corporate tax. His main focus is on cross-border reorganisations, inward investment projects and cross-border tax transactions, as well as transfer pricing matters and tax disputes. He is a member of the Law Society of Ireland, the Irish Tax Institute and the International Bar Association.

**Emma Doherty** is a corporate partner at Matheson and works with international companies to establish, expand and operate their businesses in Ireland. She advises clients on complex legal issues arising in international transactions involving Irish subsidiaries of foreign companies. She regularly leads group-wide multi-jurisdictional international restructuring projects and provides ongoing corporate advice and strategic counselling to clients. She is a member of the Company Law Review Group, an expert body that advises on the review and development of company law in Ireland. She is also a member of the Law Society of Ireland and the Irish Tax Institute.

**Alice Duffy** is a partner in the employment, pensions and benefits group at Matheson, with substantial experience in all aspects of contentious and non-contentious employment law. Alice has extensive experience providing strategic, practical advice on all aspects of employment law to international and domestic companies, including employee relations issues, contracts, cross-border M&A, redundancies, outsourcings, AI, gender pay gap reporting, fitness and probity, senior executive appointments, diversity and inclusion. She also has substantial WRC and High Court experience, including employment injunctions. Alice is particularly experienced in supporting multi-national companies on international people-related projects including global workforce expansion and restructuring.

**Simon Shinkwin** is a partner in the competition and regulation group at Matheson. His practice focuses on heavily regulated sectors and clients, particularly on merger control and foreign investment screening, behavioural competition issues and sectoral regulation. As part of his regulated sector practice, he advises on regulatory compliance, investigations and all aspects of the product life cycle within the telecommunications, media, technology, life sciences, food and beverage and FMCG sectors.

**Marie McGinley** is a partner and head of the technology and innovation group at Matheson. She has substantial experience advising on complex intellectual property/technology development, procurement and licensing deals, including managed services, systems integration, technology and large-scale outsourcing projects for both domestic and international clients. Marie supports clients navigating the complex regulatory landscape and provides ongoing advice on data protection laws, international data transfers, multi-jurisdictional audits and general/strategic data protection compliance. Marie also assists clients in preventing and responding to cybersecurity breaches and incidents.

# 1. Legal System

## 1.1 Legal System and Judicial Order

The judicial system in Ireland is established by the Constitution and the principal courts are the district courts and circuit courts (with limited jurisdiction), the High Court (with unlimited jurisdiction in civil and criminal matters), the Court of Appeal (with appellate jurisdiction) and the Supreme Court (which usually exercises final appellate jurisdiction only). The judiciary is independent of the legislature and the executive.

Ireland is a member state of the EU and of the UN. The Irish legal system is similar in many respects to that of the UK and the US. Irish law is based upon the common law, statute and the Constitution. The EU also represents an important source of Irish law, and decisions of the Court of Justice of the European Union (CJEU) exercise significant influence over Irish law.

Ireland is the only fully EU common law jurisdiction (as Cyprus and Malta have mixed legal systems), making it an attractive jurisdiction to establish operations and litigate international commercial disputes in. Other factors, such as the ease of doing business and the fact that it is the only Eurozone country in which English is the main language spoken, make Ireland one of the best destinations for foreign direct investment (FDI).

# 2. Restrictions on Foreign Investments

## 2.1 Approval of Foreign Investments

### The FDI Screening Regulation

The EU Investment Screening Regulation (Regulation (EU) 2019/452, the "FDI Screening Regulation") came into force in October 2020. The FDI Screening Regulation sets out rules which enable scrutiny of investment ventures pursued within the EU by third countries. Individual member states retain discretion as to whether they implement a screening system, but any such system must then meet basic criteria concerning confidentiality, transparency and the application of review timeframes.

### The Screening of Third Countries Transactions Act 2023

The Screening of Third Country Transactions Act 2023 (the "Screening Act") came into effect on 6 January 2025. The regime provided for in the Screening Act is suspensory (with criminal sanctions) and involves very low thresholds. It covers a wide variety of sectors (eg, critical utilities and infrastructure sectors, hi-tech and personal data focused businesses and media businesses) and needs to be considered in parallel with other foreign investment regimes, as well as Irish and international merger control rules.

## 2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance

Under the Screening Act, a new mandatory notification to the Minister for Enterprise, Tourism and Employment (the "Minister") would be required for certain transactions that involve third-country or foreign-controlled undertakings that are parties to a transaction if the following conditions are met:

- a third-country undertaking or a connected person is a party to the transaction;
- the value of the transaction is at least EUR2 million;
- the transaction relates to certain defined critical infrastructure, critical technologies and dual use items, supply of critical inputs, access to sensitive information including person data or the freedom and pluralism of the media; and
- the transaction relates to change of control of an asset or a defined change in share or voting rights in an undertaking in the state.

## 2.3 Commitments Required From Foreign Investors

Irish authorities currently impose no specific commitments on foreign investors in relation to their investments. However, the Act does empower the Minister to attach conditions to a notifiable transaction. Section 18 (4) of the Screening Act contains the collective or individual measures that the Minister may require the transaction parties to undertake in order to safeguard the State's security or public order.

## 2.4 Right to Appeal

The parties to a transaction may appeal a screening decision to an adjudicator within 30 days. Adjudica-

tors' decisions may be appealed further within 30 days to the High Court on points of law only. These appeal proceedings are generally not held in public, though there are limited exceptions.

## 3. Corporate Vehicles

### 3.1 Most Common Forms of Legal Entity

The Companies Act 2014 (the "Companies Act") provides for the creation of various types of corporate vehicles in Ireland. A company of any type may be incorporated with a single shareholder.

#### Company Limited by Shares (LTD)

The LTD is the model form of private company limited by shares and the most common form of corporate vehicle used by foreign investors. The LTD has unlimited legal capacity and a single document constitution. Its internal regulations may be set out in simplified form in that constitution. An LTD is prohibited from offering equity or debt securities to the public.

#### Designated Activity Company (DAC)

The DAC is an alternative form of private limited company. A key distinction between a DAC and an LTD is the existence of an objects clause in the DAC constitution (memorandum of association). A DAC may be a suitable vehicle where an objects clause is needed (eg, to restrict the corporate capacity of a joint venture vehicle) or for companies listing debt securities on a stock exchange.

#### Unlimited Company

The Companies Act recognises three distinct types of unlimited company, which are:

- a private unlimited company with a share capital (ULC);
- a public unlimited company with a share capital (PUC); and
- a public unlimited company without a share capital (whose liabilities are guaranteed by its members) (PULC).

Members of an unlimited company may be held liable on an unlimited basis for the debts of the company in the event of it entering insolvent liquidation. ULCs may not offer for sale or list any new securities, but a PUC and PULC may list debt securities.

#### Public Limited Company (PLC)

The key distinction between PLCs and private companies is that only PLCs may list their shares on a stock exchange and offer them to the public. PLCs must have a minimum issued share capital of EUR25,000, at least 25% of which must be fully paid up before the company commences business or exercises any borrowing powers. A *Societas Europaea* (SE), the European model company, is regarded as a PLC under the Companies Act.

#### Guarantee Company (CLG)

A CLG does not have a share capital and is a popular type of company for charities, sports and social clubs, and property management companies. The members' liability is limited to the amount they undertake to contribute to the assets of the CLG in the constitution of the company in the event of its winding-up.

### 3.2 Incorporation Process

To incorporate a company in Ireland, certain documents, including the company's constitution, must be filed with the Companies Registration Office (CRO). Incorporation papers must contain the company name, registered office, directors' and secretary's details, subscriber details, the company's principal activity and the place in Ireland where it proposes to carry on that activity. The incorporation form includes a declaration that the Companies Act requirements have been complied with.

Under an express incorporation scheme, a company can typically be incorporated within five working days. Otherwise, it typically takes two to three weeks to incorporate a company. On incorporation, the CRO will issue the company with a certificate of incorporation. CRO fees are EUR50, and the process is completed online.

### 3.3 Ongoing Reporting and Disclosure Obligations

#### Documents Presented at the AGM

Irish companies must generally present audited financial statements to the annual general meeting (AGM) and then publicly file a copy with the company's

annual return in the CRO (including certain disclosures concerning directors' remuneration). A directors' report on the state of affairs of the company and its subsidiaries must be attached to the balance sheet presented before the AGM. For all LTDs and other company types with one member (other than PLCs), a written procedure is available in place of an AGM. Small and micro companies are subject to fewer public disclosures and more relaxed reporting requirements.

### Directors' Additional Disclosures

Directors may need to make additional disclosures to the company if, for example, they hold shares representing more than 1% of the company's share capital. Directors of companies (with the exception of unlimited companies) with assets exceeding EUR12.5 million and a turnover exceeding EUR25 million must also make a prescribed form of compliance statement in their directors' report.

### Internal Register on Ultimate Beneficial Owner

Most Irish companies must maintain internal registers on individuals considered under law to be their ultimate beneficial owners. The EU (Anti-Money Laundering: Beneficial Ownership of Corporate Entities) Regulations 2019 also require in-scope entities to file their beneficial ownership details on a central beneficial ownership register to which there is currently greatly restricted public access. Where the company has no beneficial owner or the beneficial owner cannot be identified, details of the company's senior managing officials (directors) must instead be provided. Companies whose shares are listed on a regulated market that is already subject to disclosure requirements are exempt from these obligations.

### Filings in Regard to Changes

Among other matters, CRO filings must be made in respect of changes to:

- the company name;
- the directors or company secretary;
- the registered office;
- the annual return date or financial year end; and
- the share capital or the company constitution.

Details of mortgages or charges made regarding a company must also be filed with the CRO.

### Sustainability Reporting

Irish companies can be subject to requirements to report sustainability information in accordance with the Corporate Sustainability Reporting Directive (CSRD) (see **9.1 Upcoming Legal Reforms**) and the Non-Financial Reporting Directive, which continues to apply in Ireland alongside the CSRD.

## 3.4 Management Structures

Irish companies are managed by a single-tier board of directors. All companies, other than LTDs, must have a minimum of two directors. The secretary may be one of the directors of the company. An LTD may have one director but there must be a separate company secretary in that case. A body corporate may act as secretary to another company, but not to itself. A body corporate may not act as a director.

At least one of the directors of an Irish company must be a resident of a member state of the European Economic Area (EEA) unless:

- the company posts a bond to the value of EUR25,000, which will be used to discharge the company's liability in the event that it fails to pay a fine or penalty imposed under company law or tax legislation; or
- the company holds a certificate from the CRO confirming that the company has a real and continuous link with one or more economic activities carried on in Ireland.

## 3.5 Directors', Officers' and Shareholders' Liability

Directors' common law fiduciary duties are codified in the Companies Act and include the duty to:

- act in good faith and in the interests of the company;
- act legally and in accordance with the company's constitution;
- avoid conflicts of interest between the director's duty to the company and their other interests; and
- exercise the care, skill and diligence which would be exercised by a reasonable person in the same

circumstances, accounting for the director's specific knowledge and experience.

An additional duty, to have regard to the interests of creditors, may apply in certain cases (eg, on insolvency).

Where a breach of duty by a director is proved, they may be required to account to the company for any personal gain made and indemnify the company for any loss or damage resulting from the breach. Generally, parent companies are not liable for the acts of limited liability subsidiaries, but they may be liable under parent company guarantees.

Directors' duties are owed (to varying degrees) to the company, the shareholders, the company's employees and the company's creditors. Directors may be found criminally liable for certain breaches of the Companies Act and other offences including in respect of environmental, data protection, health and safety, and tax law.

However, subject to certain limitations in the Companies Act, a company is permitted to indemnify a director in respect of liability incurred in defending proceedings. In practice, the directors of Irish subsidiaries of multinational companies benefit from group-wide D&O insurance policies.

## 4. Employment Law

### 4.1 Nature of Applicable Regulations

Employment protection laws in Ireland apply to all employees working in the country, irrespective of the employee's nationality.

Employment law is primarily governed by:

- the Constitution;
- statutes and EU law;
- judicial precedents;
- common law (including contract law);
- statutory mechanisms put in place by the state to regulate certain sectors, including Sectoral Employment Orders (SEOs) which require acceptance by the Minister of State at the Department of Enterprise, Tourism and Employment following a recommendation from the Labour Court;
- collective bargaining agreements; and
- custom and practice in the workplace and workplace or industry rules.

### 4.2 Characteristics of Employment Contracts

#### The Employment (Miscellaneous Provisions) Act 2018

Under the Employment (Miscellaneous Provisions) Act 2018, which was updated by the European Union (Transparent and Predictable Working Conditions) Regulations 2022, employers must notify employees in writing, within five days of commencement of employment, of the following core terms of employment:

- the full names of the employer and the employee;
- the address of the employer;
- the expected duration of the contract in the case of a temporary contract, or the end date if the contract is for a fixed-term;
- the rate or method of calculation of the employee's pay;
- any terms or conditions relating to hours of work, including overtime and the number of hours the employer reasonably expects the employee to work per normal working day and normal working week;
- the place of work, or where there is no fixed or main place of work, a statement stating that there are various places or that the employee is free to set their own place of work or to work at various places;
- the date the employment started;
- the job title, grade or nature of the work; and
- the duration and conditions relating to the probation period (if any).

#### The Terms of Employment (Information) Act 1994

Under the Terms of Employment (Information) Act 1994, all employers are obliged, within one month of commencement of employment, to provide their employees with a written statement setting out certain fundamental terms of their employment.

Additionally, if the work pattern is entirely or mostly unpredictable, the employer must provide the employ-

ee with information about the number of guaranteed hours, the hours and days the employee may be required to work and the minimum notice of a work assignment.

For temporary agency contracts, the employer must also provide the identity of the person or firm hiring the agency worker. The statement must be signed by both the employee and the employer. Any change to the statutory particulars must be notified to the employee, in writing, no later than the day on which the change takes effect.

## 4.3 Working Time

An employer may not permit any employee to work for more than an average of 48 hours per week over a particular reference period (usually four months). This reference period varies depending on the type of employment in question. Working time should only take account of time spent working (ie, it should exclude rest breaks).

Employees cannot opt out of the 48-hour average working week.

### Overtime

Generally speaking, there is no statutory entitlement to overtime under Irish law or payment for overtime, however such an entitlement may be contained in their employment contract or established by custom and practice. Employers that require employees to work on Sundays are required to compensate them for doing so, whether in terms of paying a Sunday premium or specifically considering that they may be required to work on a Sunday in calculating the rate of pay.

## 4.4 Termination of Employment Contracts

An employer can, under common law, terminate an employment contract without cause, provided this is in accordance with the terms of the contract. Notwithstanding any express contractual right to terminate, employees are afforded statutory protection against unfair or discriminatory dismissal. Under the Unfair Dismissals Acts 1977 to 2015 (UDA), an employer cannot lawfully dismiss an employee unless substantial grounds exist to justify termination.

Generally, a dismissal will only be justified if it is based on one of the following grounds.

- The capability, competence or qualifications of the employee for the work concerned.
- The conduct of the employee.
- The redundancy of the employee.
- The employee is prohibited by law from working or continuing to work (eg, not holding a valid work permit where one is required).

If one of these grounds cannot be established, there must be other substantial grounds to justify the dismissal.

### Ending a Contract of Employment

Where an employee or an employer wishes to end a contract of employment, minimum periods of notice apply where an employee has been in continuous service for at least 13 weeks. The notice period to be given by an employer depends on the employee's length of service. It varies from one week, applicable where an employee has been employed for up to two years, to eight weeks', applicable where an employee has been employed for 15 years and more. Employees are only obliged to give notice of one week, irrespective of their length of service.

However, these are only the minimum periods and a contract of employment may specify a longer notice period on either side. There is no requirement to pay an employee severance in the event of dismissal unless it arises because of redundancy.

#### *PEA procedures*

The Protection of Employment Acts 1977 to 2014 (PEA) prescribe the procedures to be followed in a collective redundancy. Employers must initiate consultation at the earliest opportunity and, in any event, at least 30 days before the first notice of dismissal is given.

The PEA require employers to provide employee representatives and the Minister for Enterprise, Tourism and Employment with certain written information, such as the proposed number of redundancies and a description of the employees the employer proposes to make redundant. The Minister must also be notified

of the proposals at least 30 days before the first notice of redundancy is given.

*Statutory redundancy pay*

Statutory redundancy pay is currently two weeks' pay for each year of service, plus one extra week's pay. A week's pay for these purposes is currently subject to a ceiling of EUR600 a week. For both ordinary dismissals and collective redundancies, it is commonplace for employers to offer employees an ex gratia payment upon termination of employment in exchange for employees waiving all employment law claims against the employer.

### 4.5 Employee Representations

The concept of employee representation under Irish law relates to both unionised and non-unionised employees and is derived from a number of statutory and non-statutory sources.

#### Trade Union Representation

Any employee has the right to join a trade union, although trade unions may not legally compel employers to recognise and negotiate with them. The degree to which trade unions may embark upon industrial action is regulated principally by the Industrial Relations Act 1990. Employee representatives are appointed by way of a secret ballot.

#### Information and Consultation Representation

In addition to any local representation arrangements (whether with trade unions or otherwise), employees may be entitled to representation in certain circumstances as a matter of statute. This form of representation can arise in transfers of undertakings, in collective redundancy situations or where the employees are covered by a local or European-level works council.

The Transnational Information and Consultation of Employees Act 1996 (as amended) (the "1996 Act") requires undertakings with at least 1,000 employees in the EU and 150 or more employees in each of at least two member states to set up European works councils to inform and consult with their employees on a range of management issues relating to transnational developments within the organisation. Under the 1996 Act, a special negotiating body (SNB) is established to negotiate with the employer.

The Employees (Provision of Information and Consultation) Act 2006 obliges employers with at least 50 employees to enter into a written agreement with employees or their elected representatives setting down formal procedures for informing and consulting with them. The legislation will only apply if a prescribed minimum number of employees request it.

## 5. Tax Law

### 5.1 Taxes Applicable to Employees/ Employers

The primary Irish taxes applicable to employees and employers in the context of an employment relationship are income tax, pay-related social insurance (PRSI) and the universal social charge (USC).

#### Income Tax

Irish tax law generally imposes income tax on an individual where they are resident or ordinarily resident in Ireland in the year of assessment or if employment is exercised in Ireland in the year of assessment.

An individual will be considered resident in Ireland in a year of assessment if they are present in Ireland for at least 183 or 280 days in that year and the preceding year when taken together (provided that the individual has been present for at least 30 days in each of these two years). An individual will be regarded as ordinarily resident in Ireland for tax purposes if the person has been resident in Ireland for three consecutive years immediately preceding the year of assessment.

Different income tax rate bands apply depending on an employee's circumstances. The current standard rate of income tax is 20%, which applies to the first EUR44,000 per year earned by a single person without children and to the first EUR53,000 per year earned by a married person or a person in a civil partnership. A higher 40% rate is applied to any remaining balance.

#### PRSI

PRSI is Ireland's equivalent of social insurance or social security contributions. Subject to certain limited exceptions, anyone employed in Ireland is generally subject to PRSI and payments are generally collected by the employer through the PAYE system.

The amount of PRSI paid by an employee depends on the employee's income and the PRSI class of the employee.

The most common PRSI class for private sector employees in Ireland is Class A (employees in industrial, commercial and service-type employment with gross earnings of EUR38 or more in a week). A Class A employee's PRSI contribution will generally be 4.2% of all "reckonable earnings" (including employee share-based remuneration and any benefit in kind). The employer must separately make a PRSI contribution of 9% on weekly earnings up to EUR552 and 11.25% on weekly earnings over EUR552. From 1 October 2026, the rate of PRSI for a Class A employee will increase to 4.35% and for an employer to 9.15% on weekly earnings up to EUR552 and 11.40% on weekly earnings over EUR552.

### USC

Employees in Ireland are also subject to a further tax payable on total income, known as USC. For 2025, the first EUR12,012 of an individual's aggregate annual income will be taxed at a rate of 0.5%, the following EUR16,688 at 2%, the following EUR41,344 at 3% and the remaining balance at 8%. An additional surcharge of 3% applies to individuals who are self-employed or whose non-employment-related income exceeds EUR100,000 in a year.

## 5.2 Taxes Applicable to Businesses

The primary Irish taxes applicable to businesses are corporation tax on income and chargeable gains, VAT, withholding tax and stamp duty.

### Corporation Tax

A company resident in Ireland for Irish tax purposes will be subject to corporation tax on its worldwide profits and gains regardless of where those profits arise. A company that is not tax resident in Ireland is liable to corporation tax in Ireland if it carries on a trade in Ireland through a branch or agency.

A non-Irish tax resident company may be subject to corporation tax on gains realised on the disposal of Irish-situated assets used for such a trade carried on in Ireland or realised on the disposal of certain specified Irish assets, including Irish land or buildings or shares in a company that derive the greater part of their value from Irish land or buildings. Where a non-Irish tax resident entity sells Irish patent rights in return for a capital sum, a charge to Irish tax at a rate of 25% can also arise. A company will generally be considered tax resident in Ireland if it is incorporated in Ireland or centrally managed and controlled in Ireland, regardless of where it is incorporated.

The rate of corporation tax payable on a company's profits will depend on whether the profits arise from trading (broadly, operational activities) or non-trading (eg, passive investment) activities. A low rate of 12.5% applies to trading profits, with a 25% rate applying to non-trading income. Losses incurred by a company in respect of trading operations can generally be carried forward indefinitely for use against future profits of that trade. Losses can also be surrendered to other companies within a group for Irish corporation tax purposes.

### OECD Pillar Two Minimum Tax

Ireland has implemented the OECD's Two-Pillar solution to address the tax challenges arising from the digitalisation of the economy in line with the EU Implementing Directive. The Directive obliged EU member states, including Ireland, to introduce a minimum tax rate of 15% for multinationals with annual revenue over EUR750 million. Ireland introduced its legislation in Finance (No 2) Act 2023 and it came into force on 31 December 2023.

The existing 12.5% corporation tax rate continues to apply to multinationals and domestic businesses operating in Ireland that do not exceed the EUR750 million group revenue threshold.

### Chargeable Gains

Chargeable gains realised by an Irish tax resident company on the disposal of a capital asset are generally subject to corporation tax at an effective rate of 33%, where relief or exemptions are not available. A non-Irish resident company will be subject to corporation tax in a similar manner on gains realised on the disposal of specified Irish assets (broadly, Irish branch assets and Irish land and buildings, Irish minerals and exploration rights, or shares deriving their value from such assets or Irish branch assets).

### VAT

Supplies of goods and services in Ireland are generally subject to VAT. The standard rate of VAT in Ireland is 23%. Reduced rates ranging from 0% to 13.5% may apply to supplies of certain specified goods and services, and full exemptions apply to certain goods or services. A business engaged in an activity subject to VAT should typically be entitled to recover the VAT it incurs on purchases, subject to certain exceptions.

The obligation to account for VAT on supplies made by a company may arise for the supplier or customer, depending on the relevant circumstances, such as whether the supply involves a cross-border element. Businesses are generally obliged to register for VAT in Ireland.

### Withholding Tax

Ireland imposes withholding tax on payments of distributions and dividends by Irish-resident companies at a rate of 25% and payments of interest, patent royalties and certain annual payments at 20%. However, there are broad exemptions from these withholding requirements. As a result, withholding tax will generally not arise on payments made to persons resident in another EU member state or in a jurisdiction with which Ireland has agreed a double taxation treaty.

### Stamp Duty

Irish stamp duty applies to certain documents that transfer property and are executed in Ireland, relate to property situated in Ireland (such as Irish real estate or shares in Irish companies), or relate to a matter or thing done or to be done in Ireland.

However, there are various exemptions and reliefs from Irish stamp duty, including an exemption for transfers of certain IP rights and broad reliefs for intra-group transfers and group reorganisations and mergers. Where an exemption is not available, stamp duty generally applies at a rate of 1% to transfers of shares and 7.5% for transfers of commercial property.

## 5.3 Available Tax Credits/Incentives

There are a number of tax credits and incentives available in Ireland, including research and development (R&D) tax credits and capital allowances for specific types of capital expenditure. Ireland also offers a digital games tax credit to incentivise developers to produce digital games that contribute to the promotion and expression of Irish and European culture. The credit is available on expenditure incurred in the design, production and testing stages of the development of qualifying digital games, provided certain conditions are satisfied.

### Research and Development Tax Credit

Irish tax legislation provides a tax credit regarding certain expenditures on R&D activities, buildings, and plant and machinery. Credit is available for 35% of the allowable expenditure (in addition to a general tax deduction at 12.5%).

A number of conditions must be satisfied for the credit to be available, including a requirement that the research and development seeks to achieve scientific or technological advancement and involves the resolution of scientific or technological uncertainty.

The R&D tax credit is currently regarded as a "qualifying refundable tax credit" for the purposes of the OECD's Pillar Two rules and is expected to also qualify as a "qualified tax incentive" for these purposes.

### Capital Allowances Regime for Capital Expenditure on the Provision of Certain Intellectual Property

A special capital allowances (tax depreciation) regime is available for capital expenditure incurred to acquire certain categories of intellectual property (specified intangible assets) for a company's trade. Specified intangible assets for these purposes include patents, trade marks, brands, copyrights or computer software, among other categories of IP.

Capital allowances on qualifying expenditure may either be claimed: (i) in accordance with amortisation charged to the profit-and-loss account of the company; or (ii) on a straight-line basis over 15 years at the rate of 7% for the first 14 years and 2% in the final year. Capital allowances are available to offset taxable profits earned from the specified intangible assets subject to an 80% cap.

Revenue will expect a robust valuation report to support the arm's length nature of the capital expenditure, and taxpayers must maintain documentation

and records used to prepare the intellectual property valuation.

### Participation Exemption for Certain Foreign Distributions

A participation exemption for certain foreign distributions was introduced in Finance Act 2024 and applies to distributions received after 1 January 2025. The key conditions are, broadly, as follows:

- the parent company must hold at least 5% of the ordinary share capital of the foreign subsidiary for at least 12 months;
- at the time of the distribution and for the previous three years, the foreign subsidiary must have been resident for the purposes of a foreign tax in a "relevant territory" and not have been generally exempt from tax; and
- the distribution must be made out of profits or, if not, made out of the assets of a company in respect of which a disposal of that company's shares would qualify for the substantial shareholders' exemption from capital gains tax.

The new exemption sits alongside Ireland's existing tax and credit regime and must be claimed by a taxpayer in its corporation tax return.

## 5.4 Tax Consolidation

Tax consolidation is not available under Irish tax law, and a company subject to corporation tax must prepare and file its tax return for corporation tax purposes for each assessment period. However, Irish tax law does provide for group relief, which permits companies within the same corporate group to surrender certain losses to other profitable group companies.

## 5.5 Thin Capitalisation Rules and Other Limitations

Ireland does not have any specific thin capitalisation rules, but there are a number of circumstances where interest payments may be considered non-deductible in calculating the taxable profits of a company.

Ireland has introduced anti-hybrid rules and anti-reverse-hybrid rules, in accordance with the EU Anti-Tax Avoidance Directives (ATAD I and II). These rules can deny tax deductions in respect of certain arrangements between associated enterprises, giving rise to tax mismatches as a result of hybrid instruments or entities. These rules can also apply to treat certain transparent Irish entities as subject to tax.

Ireland has also implemented interest limitation rules in accordance with EU ATAD. These rules apply to cap deductions for net interest expense at 30% of earnings before interest, taxes, depreciation and amortisation (EBITDA) in certain circumstances.

In addition, Ireland has introduced defensive measures in respect of certain outbound payments made after 1 April 2024. These measures operate to remove exemptions from withholding taxes on certain outbound payments of interest, royalties and distributions to an associated entity who is resident in a "zero-tax" or "no-tax" jurisdiction or in a jurisdiction listed on the EU Blacklist.

## 5.6 Transfer Pricing

Irish transfer pricing rules apply the arm's length principle to trading transactions between associated enterprises. In this context, "arm's length" is to be construed in accordance with OECD guidelines. The Irish transfer pricing rules were significantly amended from 1 January 2020 to align with the 2017 OECD guidelines, including enhanced documentation requirements. Ireland's transfer pricing rules are currently to be construed in accordance with the 2022 version of the OECD guidelines.

Broadly, Ireland's transfer pricing rules require that if the actual consideration payable or receivable by a trader in a transaction with an associated enterprise is other than at arm's length, then any understatement in the trader's profit will be reversed so that the full arm's length profit of the trader will be taxed.

Ireland's transfer pricing rules have also been extended to non-trading transactions (save for certain non-trading transactions between two Irish residents). The Irish transfer pricing rules can now also apply to capital transactions where the market value of the asset exceeds EUR25 million.

### 5.7 Anti-Evasion Rules

Ireland has strict anti-evasion rules that impose criminal sanctions on those who fraudulently evade tax and anyone who facilitates such evasion. Anyone found guilty of an offence may be fined and/or imprisoned.

#### Anti-Avoidance Rule

Ireland also has a general anti-avoidance rule that applies in respect of tax-avoidance transactions. Broadly, a tax avoidance transaction in this context is a transaction which gives rise to a tax advantage and is undertaken primarily to claim a tax advantage and not for bona fide commercial reasons. In such cases, Revenue may deny or withdraw the relevant tax advantage.

#### Exit Charge

Ireland introduced an ATAD-compliant exit tax in October 2018. The exit tax is charged at a rate of 12.5% and applies to unrealised capital gains inherent in assets where:

- a company migrates its place of residence from Ireland to any other jurisdiction; or
- assets or a business of an Irish permanent establishment (PE) are allocated from the PE back to its head office or to a PE in another jurisdiction (this limb of the charge only applies in respect of companies that are resident in an EU member state other than Ireland).

The exit charge does not apply to assets that remain within the Irish tax charge. A higher 33% exit charge can apply where the transaction forms part of an arrangement to subsequently dispose of the relevant assets.

Where the relevant company/assets have been migrated to an EU/EEA country, the exit charge may be deferred and, in such circumstances, is payable in instalments over five years. If the exit charge is unpaid, Revenue may pursue any other Irish-resident group company or a director who has a controlling interest in the company subject to the charge.

### 5.8 Tariffs

As a member of the EU, Ireland is subject to directly applicable EU customs rules. There is tariff-free trade on goods sold within the EU. The EU typically applies the WTO "most favoured nation" principle, which entails that third countries are generally treated equally in terms of trade benefits, including customs duties and other charges. Reduced tariffs can apply to imports originating in territories which have entered into a free trade agreement (FTA) with the EU.

In response to recent developments in US tariff and trade policy and the threat of EU retaliatory measures, the EU and US reached a framework agreement on tariffs. The EU–US trade deal provides for a single, all inclusive tariff rate of 15% on most EU goods exports to the US and a tariff rate of 0% on certain US goods exports to the EU.

Most recently, the EU and India concluded negotiations on a landmark Free Trade Agreement that aims to strengthen economic ties between the two territories. Once formally approved, it will represent the largest trade agreement that both the EU and India have ever concluded.

The EU also has the "Anti-Coercion Instrument" (ACI) at its disposal, which provides for the possibility of restricting importations or exportations, excluding participation in public tenders, and also allows for the non-performance of international obligations in numerous fields (international property rights, insurance, banking). Given the wide-ranging nature of the measures under the ACI, this instrument is perhaps more likely to be used as a last resort or for negotiation purposes.

## 6. Competition Law

### 6.1 Merger Control Notification

The Irish merger control regime applies to "any merger or acquisition" defined in the Competition Acts 2002 to 2022 (the "Act"), as amended, including transactions where:

- two or more undertakings, previously independent of one another, merge;
- one or more individuals who already control one or more undertakings or one or more undertakings

acquire direct or indirect control of the whole or part of one or more other undertakings; or
- the acquisition of part of an undertaking, although not involving the acquisition of a corporate legal entity, consists of acquiring assets that constitute a business to which a turnover can be attributed (here, "assets" include goodwill).

### Turnover Thresholds

Mergers and acquisitions that meet the turnover thresholds set out in the Act are subject to mandatory notification to the CCPC, where, for the most recent financial year:

- the aggregate turnover within Ireland of the undertakings involved is not less than EUR60 million; and
- the turnover within Ireland for each of two or more of the undertakings involved is not less than EUR10 million.

The simplified merger notification procedure can be used for transactions that meet the financial thresholds for notifications but pose no risk of substantial lessening of competition in Ireland, for example, where there is no horizontal or vertical overlap between the undertakings involved, where the combined market shares are less than 15% in cases of horizontal overlap and 25% in cases of vertical overlap, or where there is a change from joint to sole control in a pre-existing joint venture.

Where these requirements are not met, mergers may still be notified to the CCPC on a voluntary basis and the CCPC can also investigate mergers falling below the turnover thresholds, where they believe the merger could present competition issues.

### Joint Ventures

Only full-function joint ventures (ie, those which perform, on a lasting basis, all the functions of an autonomous economic entity) constitute a merger for the purposes of the Irish merger control regime. Where a joint venture does not qualify as full function, the CCPC may assess it under Section 4 of the Act, based on Article 101 of the Treaty on the Functioning of the European Union (TFEU). Typically, the CCPC will have regard to the European Commission's Guidelines on Horizontal Cooperation Agreements and the Guidelines on Vertical Restraints when undertaking such an assessment.

## 6.2 Merger Control Procedure

A filing must be submitted to the CCPC prior to implementing the merger and may be made as long as the undertakings involved demonstrate a good faith intention to conclude an agreement.

### Phase I

A Phase I clearance determination must be issued by the CCPC within 30 working days of the "appropriate date", which means the date on which a complete filing by the merging parties is made unless either the CCPC has used its power to "stop and restart the clock" by issuing a formal requirement for information (RFI). The clock will restart when the RFI is complied with or when the parties and the CCPC commence negotiating remedies, in which case, the Phase I period is extended to 45 working days. The CCPC also issues "informal" requests for information that do not stop and restart the clock.

### Phase II

A Phase II clearance determination must be issued by the CCPC within 120 working days of the appropriate date. If the CCPC issues a formal RFI in the first 30 working days of the Phase II period, this has the effect of stopping and restarting the clock in the same way as in Phase I. If the parties and the CCPC are negotiating remedies, the Phase II period is extended to 135 working days.

### Obligations and Failure to Notify

A suspensory obligation is included in the Act, which imposes a prohibition on the merging parties putting a merger that has been notified (both mandatorily and voluntarily) into effect prior to the issuing of a clearance determination.

In terms of the Act, failure to notify a merger that meets the turnover thresholds is a criminal offence punishable by fines of up to EUR250,000, plus EUR25,000 per day for a continued breach. The CCPC can now also impose administrative fines or could also seek (with the Director for Public Prosecutions) criminal sanctions.

### 6.3 Cartels

Anti-competitive agreements and practices are prohibited under the Act, based on Article 101 of the TFEU. The Act sets out a non-exhaustive list of agreements, decisions and/or concerted practices that are prohibited as they have as their object or effect the prevention, restriction or distortion of competition in trade in any goods or services in Ireland or any part of Ireland. The Act applies to businesses operating in Ireland and international businesses where an agreement is found to restrict competition in Ireland.

It is a criminal offence to enter into or implement an agreement, decision or concerted practice prohibited under the Act. The CCPC operates a Cartel Immunity Programme with the Director of Public Prosecutions and a separate Leniency Programme which provides for the possibility of immunity or leniency from prosecution or civil action for the company/business to come forward to report certain competition offences.

### 6.4 Abuse of Dominant Position

Abuse of a dominant position is prohibited by the Act and Article 102 of the TFEU. The Act mirrors Article 102 of the TFEU, except that it refers to the abuse of a dominant position in trade for any goods or services in Ireland or any part of Ireland. While the Act refers to trade in goods and services in the state, its provisions are also likely to apply to international businesses/trade that are/is found to be dominant and where there is an effect on trade in Ireland.

#### Definition of Dominance

There is no definition of dominance within the Act. The Irish courts and the CCPC have adopted the definition formulated by the CJEU in case 27/76, United Brands v Commission [1978] ECR 207: "[a] position of economic strength enjoyed by an undertaking which enables it to prevent effective competition being maintained on the relevant market by affording it the power to behave to an appreciable extent independently of its competitors, customers and ultimately of its consumers".

The Act also sets out several examples of what constitutes abuse of dominance. These are:

- directly or indirectly imposing unfair purchase or selling prices or other unfair trading conditions;
- limiting production, markets or technical development to the prejudice of consumers;
- applying dissimilar conditions to equivalent transactions with other trading parties, thereby placing them at a competitive disadvantage; and
- making the conclusion of contracts subject to the acceptance by other parties of supplementary obligations that according to commercial usage have no connection with the subject of such contracts.

#### Remedies

As in the case of cartels, the Act makes abuse of a dominant position a criminal offence that can be prosecuted before the Irish courts and is punishable by financial penalties. The Act also includes specific provisions for aggrieved persons and the CCPC to take civil proceedings before the Irish courts seeking remedies for abuse of a dominant position. The remedies available in civil proceedings include a court declaration, damages, imposing structural measures and an injunction.

## 7. Intellectual Property

### 7.1 Patents

#### Definition

Any inventive product/process is patentable under Irish law if it:

- is susceptible to industrial application;
- is new; and
- involves an inventive step.

Certain subject matter is excluded from patentability under Irish law, including discoveries or scientific theories, computer programs and methods of doing business to the extent that they are claimed "as such".

#### Length of Protection

Patent protection lasts for up to 20 years from the date of the application, subject to the payment of renewal fees. Irish law also provides for the extension of full-term patents for pharmaceuticals for human or animal use for up to five years.

Irish law also provides for short-term patents, which have a ten-year duration. The test of inventiveness for a short-term patent is lower than for a full-term patent. Short-term patents may be converted to full-term patents where they meet the requirements for a full-term patent.

### Registration

Applications for Irish patents are filed at the Intellectual Property Office of Ireland (IPOI). The specification forming part of the application must include the title of the invention, description of the invention and claim or claims and drawings, if any, referred to in the description.

It is also possible to file a patent application at the European Patent Office (EPO) under the European Patent Convention (EPC) or at the World Intellectual Property Organisation (WIPO) under the Patent Cooperation Treaty (PCT) and to designate Ireland for patent protection. The EPC and the PCT both facilitate the application for patents in a number of jurisdictions, but these are effectively a bundle of applications to a number of states.

There are plans to reform both registration and enforcement under the Unified Patent Court Agreement. This reform consists of two pillars: (i) the creation of a new European patent with unitary effect; and (ii) the establishment of the Unified Patent Court.

The Agreement on a Unified Patent Court was signed in February 2013 by 25 EU member states, including Ireland. However, as at the time of writing, Ireland has not ratified the Agreement and the Department of Enterprise, Tourism and Employment omitted any reference to the ratification of the Unified Patent Court in its September 2025 "Action Plan on Competitiveness and Productivity".

### Enforcement and Remedies

Patents in Ireland are enforced through civil claims against infringing parties. A patent owner can prevent direct or indirect use of their invention by third parties in Ireland without consent.

The courts have a wide range of civil remedies available to them to compensate aggrieved owners. These include a declaration of the validity of a patent and that it has been infringed, damages for infringement, injunctive relief and orders to account for profits, and to seize, destroy and/or hand over infringing goods to the patent holder. This will be subject to change upon ratification of the Unified Patent Court Agreement.

## 7.2 Trade Marks

### Definition

A trade mark under Irish law is any sign capable of both:

- distinguishing the goods or services of one undertaking from those of other undertakings; and
- being represented on the register in a manner which enables the competent authorities and the public to determine the clear and precise subject matter of the protection afforded.

A trade mark may consist of words (including personal names), designs, letters, numerals or the shape of goods or their packaging.

Unregistered trade marks have a limited protection in Ireland through the law of passing off, in a manner similar to that applying in other common law jurisdictions.

### Length of Protection

All registered trade marks are registered initially for ten years but, uniquely among intellectual property rights, this term can be renewed indefinitely for successive ten-year terms on payment of a renewal fee.

A trade mark registration is liable to revocation if, within a continuous period of five years, the trade mark has not been put to genuine use in Ireland (or EU, for EU trade marks) in connection with the goods or services for which it is registered and there are no proper reasons for non-use.

### Registration

There are three options open to trade mark proprietors carrying on business in Ireland.

#### *An application for an Irish trade mark at the IPOI*

An IPOI examiner scrutinises the application to ensure that it can be considered a trade mark under Irish law

and generally examines the application to see if its use would infringe pre-existing Irish/EU trade marks or if it otherwise falls within a prohibited form of trade mark. If satisfied with the application, the IPOI publishes it in the Official Journal. Third parties then have three months to oppose the application by filing a notice of opposition.

If there is no opposition, or if the opposition proceedings are unsuccessful, the application will proceed to registration on payment of the registration fee.

#### *An application for an EU trade mark at the European Union Intellectual Property Office (EUIPO)*

EU trade marks are filed with the EUIPO and undergo an examination, publication and opposition procedure prior to registration, similar to that described for Irish trade marks above. However, unlike the IPOI, EUIPO do not investigate whether the trade mark would infringe pre-existing EU trade marks. If the application is accepted, the EU trade mark is published in the EU Trade Mark Bulletin. This is followed by a three-month opposition period, during which time any third party can object to the trade mark's registration. EUIPO also carries out a European Union Search Report and, in the event that the application identifies any existing trade marks which are similar or identical to the trade mark being applied for, EUIPO notifies proprietors of those existing trade marks to give them an opportunity to oppose the application. If no objections were filed or if opposition proceedings were unsuccessful, the EU trade mark will proceed to be registered and the registration published. An EU trade mark is a unitary European-wide property right and protects the trade mark proprietor in all member states of the EU.

#### *An international application designating certain states, including Ireland, under the Madrid Protocol*

On request, the IPOI will forward a trade mark application or registration to the International Bureau of the WIPO in Geneva. The Irish or EU trade mark application or registration serves as a base on which the proprietor may designate the mark for registration in other Madrid Protocol countries, eg, the UK and the US. The International Bureau notifies the trade mark offices designated in the international filing, which, in turn, decide whether to accept the application for registration in their territory.

A Madrid Protocol filing can be a cost-effective and efficient way to obtain trade mark protection in multiple jurisdictions outside of the EU.

### Enforcement and Remedies

An infringement will occur where a mark that is the same as or similar to a registered mark is used in the course of trade in relation to the same or similar goods or services as the registered mark. The reliefs available for trade mark infringement include damages, injunctions and orders for an account of profits, and the destruction or delivering up of infringing goods.

An unregistered trade mark can be enforced through the vehicle of "passing off". To succeed in an action for passing off, the plaintiff must show (i) the trader has goodwill or reputation in the product, (ii) the defendant makes a misrepresentation in the course of trade to prospective customers which leads to confusion between the goods of the trader and the defendant and (iii) such misrepresentation causes or is likely to cause the plaintiff damage.

## 7.3 Industrial Designs

### Definition

Under Irish law, a "design" is defined as the appearance of the whole or part of a product resulting from the features of a product or its ornamentation, including the lines, contours, colour, shape, texture or materials of the product itself or its ornamentation. In order to be registerable, a design must be "new" and have "individual character". Unregistered designs are also granted a level of protection under Irish law.

An EU regulation entered into force in November 2023 which requires member states to put in place a legal framework for geographical indication (GI) protection for craft and industrial products. The Regulation will apply from 1 December 2025.

### Length of Protection

The total term of protection for designs under Irish law is 25 years, renewable at five-year intervals.

An unregistered design exists for three years from the date the design is first made available to the public within the EU, where the disclosure could reasonably have become known to those in the sector concerned, operating within the EU.

### Registration

Designs are registered with the IPOI. An examiner will examine the application for compliance with the Designs Act and, if accepted, the design proceeds to registration and is published in the Office Journal. The examiner does not carry out novelty checks on the design applications and the onus is on the applicant to establish the novelty of the design. An application for a Registered Community Design is made with the EUIPO. The EUIPO also does not carry out an examination into the novelty and individual character of the design.

### Enforcement and Remedies

The reliefs available for industrial design infringement include damages, injunctions and orders for an account of profits.

An unregistered design does not confer a monopoly, unlike a registered design, and infringement can take place only if copying can be established.

## 7.4 Copyright

### Definition

Copyright is an intellectual property right which features mainly in but is not exclusive to the cultural, arts and information technology sectors. It is the legal form of protection used by the creators or authors of such works to protect the tangible form of all or part of their individual works. Irish law specifically recognises copyright in computer software as a literary work.

### Length of Protection

The duration of copyright protection varies according to the format of the work, but ranges from 50 to 70 years after the death of the author, or publication, recording, transmission or creation.

There are some exceptions under Irish law which reflect instances where the wider public interest, or the interests of particular groups, make it necessary to restrict or limit the rights granted to copyright owners.

### Registration

There are no registration formalities in Ireland for obtaining copyright protection. Copyright arises automatically on the creation of an original work.

### Enforcement and Remedies

Copyright in Ireland is enforced by way of both civil and criminal liability. Copyright holders may bring actions for damages, injunctive relief, search and seize orders, and orders for an account of profits. Infringements that may occur include:

- unauthorised copying of the work;
- performing the work;
- making the work available to the public; and
- adaptation of the work.

The District Court and the Circuit Court now have jurisdiction to determine intellectual property claims, including claims in relation to copyright infringement.

## 7.5 Others

### Databases

Irish law provides protection for both original databases and "non-original" databases where substantial investment has been incurred in obtaining, verifying or presenting the contents of the database. Original databases are those in which the contents constitute the original intellectual content of the author.

The protections for databases under Irish law prevent the unlawful extraction or re-utilisation of a substantial part of the database. Where a copyrighted work is included in a database, copyright will subsist separately in that work in addition to the database right.

The protection of databases under Irish law expires 15 years from the end of the calendar year in which the making of the database was completed, although updated editions of the database may successively attract a new period of 15 years' protection if a substantial new investment is present.

### Trade Secrets

Irish law provides for the protection of trade secrets. Trade secret protection is afforded without registration and can last without limitation in time, generally as long as confidentiality is maintained.

Where a trade secret is unlawfully used, various remedies under Irish law, including injunctions, orders for accounts of profit, corrective measures such as recall or destruction of infringing goods and damages, are available to protect the trade secret owner. A person who contravenes or fails to comply with court orders commits an offence and is liable to a fine and/or imprisonment for up to six months.

The EU (Protection of Trade Secrets) Regulations 2018 gave effect to the EU Trade Secrets Directive and came into force on 9 June 2018 by way of SI No 188/2018. The Regulations provide civil remedies in circumstances where a trade secret is unlawfully used and allow for measures limiting access to court hearings and documents to ensure the confidentiality of trade secrets in court proceedings, including making it a criminal offence to contravene such measures.

## 8. Data Protection

### 8.1 Applicable Regulations

#### Principal Data Protection Laws

The principal data protection legislation in Ireland is Regulation (EU) 2016/679 (the General Data Protection Regulation or GDPR), as supplemented by the Irish Data Protection Acts 1988 to 2018 (DPA) as amended.

Irish law-specific nuances, as permitted or required under the GDPR, as well as the administrative powers and procedures of the local supervisory authority, the Data Protection Commission, are set out in the DPA.

The GDPR has general application to the processing of personal data in the EU, setting out extensive obligations on controllers and processors and providing strengthened protections for data subjects. The GDPR carries the potential for large fines of up to 4% of a firm's worldwide annual turnover from the preceding financial year, or EUR20 million (whichever is higher).

In May 2023, the CJEU judgment of *UI v Osterreichische Post AG* (Case C-300/21) confirmed that a mere infringement of the GDPR does not give rise to the right to compensation in itself but that there must be a breach, some damage and a causal link between the two, as in most negligence cases. Claimants do have to prove damage of some kind in order to recover compensation for non-material loss following a GDPR infringement.

On 5 December 2025 the Circuit Court in *Walsh v Irish Prison Service* [2025] IECC 8 affirmed this view and applied the principle set out in *Kaminski v Ballymaguire Foods* [2023] IECC 5 that "mere upset" is not sufficient non-material harm to warrant compensation under the GDPR.

The European Commission is required to conduct a review of GDPR rules every four years. As part of this process, the Commission will likely look at problematic areas identified, such as the exercise of Data Subject Access Requests, the applicability of GDPR to SMEs, and international data transfers.

#### Other Relevant Legislation

Ireland has transposed the ePrivacy Directive via SI No 336/2011 – European Communities (Electronic Communications Networks and Services) (Privacy and Electronic Communications) Regulations 2011 (the "ePrivacy Regulations"). The ePrivacy Regulations deal with security and data breach reporting obligations for certain telecommunications companies and, more generally, electronic direct marketing rules. The same implementing legislation addresses the local Irish requirements around obtaining consent for the use of cookies and similar technologies.

Social welfare legislation such as the Social Welfare Act 2005 strictly prohibits the use of the Irish Personal Public Services Number (PPSN) for purposes other than dealing with specified government bodies.

### 8.2 Geographical Scope

The GDPR applies to the processing of personal data by controllers and processors established in the EU (regardless of whether the processing itself takes place in the EU).

The GDPR also applies to controllers and processors not established in the EU, where the organisation's processing activities involve either the offering of goods or services to data subjects in the EU or the monitoring of the behaviour of data subjects in the EU.

### 8.3 Role and Authority of the Data Protection Agency

The Irish Data Protection Commission (DPC) is the independent authority responsible for enforcing the GDPR and the DPA in Ireland. The DPC has extensive investigative powers to examine complaints from individuals in relation to potential infringements of data protection law and can order corrective measures where necessary.

The DPC co-operates with other European supervisory authorities and will act as the lead supervisory authority in respect of cross-border processing of personal data by organisations that have their main establishments (from a data processing perspective) in Ireland.

## 9. Looking Forward

### 9.1 Upcoming Legal Reforms

There have been a number of recent developments in Irish and EU law, with additional legislative reforms expected in the near future.

#### Corporate Law

##### *Corporate Sustainability Reporting Directive (CSRD)*

The CSRD (enacted in January 2023) introduced mandatory sustainability reporting requirements for many companies, requiring them to include extensive sustainability related disclosures in a dedicated section of their annual reports. The CSRD was first transposed into Irish law by Ministerial regulations in 2024.

In early 2025, the European Commission announced the first "omnibus simplification package", which proposed to simplify certain EU ESG laws, including the CSRD. One component of these proposals (the "Stop the Clock" directive) was transposed into Irish law in 2025, delaying the application of the CSRD to most companies by two years. The EU agreed on other, more substantive changes to the CSRD in early 2026. EU member states, including Ireland, now have until 19 March 2027 to transpose the changes to the CSRD into national laws.

#### Employment Law

##### *Pay Transparency Directive*

The EU Pay Transparency Directive aims to enhance pay transparency for employees and candidates for employment and improve access for redress for pay-based discrimination claims. Ireland has until 7 June 2026 to transpose the Directive. Once implemented, Irish employers will be subject to new obligations which are designed to end pay secrecy, enforce the principle of equal pay between men and women and combat discrepancies in pay between men and women.

#### Tax Law

##### *Research and Development Tax Credit*

Earlier this year, the Department of Finance published the Research and Development Tax Credit and Innovation Compass (the "R&D Compass"). This policy document outlines several measures the Irish government is considering to strengthen the R&D tax credit and ensure Ireland remains competitive in the global market. Updates to the R&D tax credit will likely be introduced through a phased approach over the coming years.

#### Technology and Data Protection Law

##### *EU Data Act*

The EU Data Act entered into force on 11 January 2024, and became applicable on 12 September 2025. It establishes rules on access to and use of data generated by connected products and related services, and lays down obligations on data holders to make such data available to users, data recipients and, in certain circumstances, public sector bodies.

Key features include transparency requirements, data access rights for users, obligations on data holders, interoperability requirements, regulation of smart contracts, and rules facilitating switching between cloud and edge services. Certain obligations under the Act apply on a delayed basis.

##### *EU AI Act*

The EU AI Act entered into force on 1 August 2024 and will become applicable on a phased basis over the following years up to August 2027. It imposes differing obligations according to the classification of AI systems.

Prohibitions on unacceptable-risk AI practices have applied since 2 February 2025, governance and general-purpose AI models obligations have applied since 2 August 2025, and the Act will apply generally from 2 August 2026, with an extended transitional period to 2 August 2027 for certain high-risk AI systems.

**Anderson Mori & Tomotsune**

**Anderson Mori & Tomotsune** is a full-service law firm with more than 600 professionals, which is best known for serving overseas companies doing business in Japan since the early 1950s. The team's combined expertise enables it to deliver comprehensive advice on all legal issues that may arise in the course of a corporate transaction (including those related to M&A, finance, capital markets and restructuring/insolvency) and litigation/arbitration. Most Anderson Mori & Tomotsune lawyers are bilingual and experienced with communicating, drafting and negotiating across borders and around the globe. The firm's main office in Tokyo is supported by offices in Osaka, Nagoya, Beijing, Shanghai, Singapore, Hanoi, Ho Chi Minh City, Bangkok, Jakarta, Hong Kong, London and Brussels. The firm's associate, Risa Sakayori, helped write this article.

## Authors

**Junichi Ueda** is a partner at Anderson Mori & Tomotsune and has nearly 20 years' experience in the fields of labour and employment law, dispute resolution, data protection law, and general corporate and commercial transactions, with an emphasis on various labour and employment matters. Junichi graduated with an LLM degree from Vanderbilt University in 2012 and from University College London in 2013. He was admitted to practise law in Japan in 2004 and in New York in 2013. Junichi is also a member of Japan's Management Lawyers Council (Keiei Hoso Kaigi).

**Etsuko Hara** is a partner at Anderson Mori & Tomotsune and has broad experience in the antitrust field, including multi-jurisdictional merger filings and arrangements for strategic alliances. She is also experienced in cross-border distribution, licensing and franchise agreements. Etsuko graduated with an LLM degree from Columbia Law School and was admitted as a lawyer in Japan in 2001 and in New York in 2007.

**Nobuto Shirane** is a partner at Anderson Mori & Tomotsune and represents clients in transactions driven by IP rights and technology, including technology licences, joint ventures, strategic alliances and joint development agreements. He also has significant experience with IP litigation and proceedings before courts, the patent office and customs offices. Nobuto graduated with an LLM degree from Columbia Law School and was admitted to practise law in Japan in 2010 and in New York in 2018.

**Takahiro Hayase** is a partner at Anderson Mori & Tomotsune and has a thorough knowledge of a variety of domestic and cross-border corporate matters and fields, especially executive compensation and employee incentive plans. He also has broad experience in commercial dispute resolution and corporate crisis management. Takahiro has an LLM degree from Harvard Law School and was admitted as a lawyer in Japan in 2010 and in New York in 2018.

# 1. Legal System

## 1.1 Legal System and Judicial Order

In general, Japan is a civil law jurisdiction. Most of Japan's modern legal systems are based on continental European civil law systems. However, the end of the Second World War also saw the introduction of some Anglo-American legal influences.

Under the Constitution, judicial power is held by the courts, which are expressly guaranteed as being independent from other branches of the government. The Japanese court system can broadly be categorised into three tiers, as follows.

- In the first tier, district courts are the main court of first instance for most cases. However, summary courts may act as the court of first instance for small civil claims and minor criminal offences. This tier also broadly includes family courts, which hear family and juvenile delinquency matters. District courts also act as the first level of appeal for some summary court matters.
- In the second tier, there are eight high courts. These act as the general appellate court for district court cases, as well as for some summary court matters.
- In the third tier is the Supreme Court. The Supreme Court will generally only hear appeals of cases that involve specific questions of law.

Cases are generally determined by professional judges. However, in some serious criminal cases (eg, offences that carry a capital sentence), there is a limited use of a jury of laypersons at the court of first instance. As a civil law system, there is no principle of binding judicial precedent in Japan. That being said, Supreme Court decisions are considered to be strongly persuasive and are usually taken into consideration where appropriate.

# 2. Restrictions on Foreign Investments

## 2.1 Approval of Foreign Investments

There is no general requirement for approval of all forms of foreign investment. However, along with certain actions against invested companies by investors, some foreign investments will require prior notification to the authorities (ie, the Minister of Finance and the competent minister). For foreign investments, investors will generally have to wait for 30 days while the authorities examine the investment. These foreign investments include:

- investments from countries with which Japan does not have existing treaties regarding inward direct investments, such as Iraq and North Korea; and
- foreign investments in certain industries, such as agriculture, fishery, manufacturing, infrastructure projects, telecommunications and IT-related industries.

There are several types of exemptions from the prior notification requirement, which depend on the category of investor (ie, qualified financial institutions or not), the category of industries and companies invested in (ie, listed or not), acquired ratio, etc.

During these 30 days, the authorities can issue a legally binding order for the investment to be modified or suspended in particular cases, as explained in **2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance**. Therefore, the requirement for prior notification is, in practice, a form of approval.

## 2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance

If an investor is required to provide prior notification, the notification should be made from six months to 30 days prior to the intended commencement of the investment.

The authorities will examine the investment from the perspective of national security and the potential effect of the investment on the domestic economy. The authorities may recommend a modification or cancellation of the investment. The investor will still have the discretion to accept or reject the recommendation. However, should the investor reject the recommendation, the authorities can issue a legally binding order for the investment to be modified or suspended.

If an investor is required to provide prior notification but fails to do so, that investor is generally liable to a sentence of imprisonment of up to three years and/

or a fine that will be calculated based on the total value of the investment. However, where the investor is a corporation, a sentence of imprisonment is not applied. The authorities also have the power to order the investor to perform all acts necessary to undo an illegal investment, including disposing of any capital the investor acquired as a result of the illegal investment.

### 2.3 Commitments Required From Foreign Investors

There are no typical conditions. However, as previously mentioned in **2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance**, if an investor is required to provide prior notification, the authorities may recommend a modification or cancellation of the investment and – should the investor reject the recommendation – the authorities can issue a legally binding order for the investment to be modified or suspended.

### 2.4 Right to Appeal

An affected investor can challenge a decision of the authority that negatively affects or suspends the investment to the higher authorities or in court. The challenge to the higher authorities can be made within three months of the date on which the investor becomes aware of the decision of the authorities and within one year of the date on which the decision of the authorities is made. The challenge in the court can be made to the district court within six months of the date on which the investor becomes aware of the decision of the authorities and within one year of the date on which the decision of the authorities is made.

## 3. Corporate Vehicles

### 3.1 Most Common Forms of Legal Entity

The most common types of corporate vehicles in Japan are the stock company (*kabushiki kaisha*) and the membership company (*mochibun kaisha*). A stock company is the vehicle that is typically used. In a stock company, the liability of shareholders is limited to the value of their shares and there is generally no assumption of additional liability by the shareholders to creditors of the stock company.

In order to establish a stock company, there is no specified minimum amount of share capital or a minimum number of shareholders. There is also generally no limitation on the purposes for which a stock company can be established to the extent it is commercial, and a stock company can be established for more than one purpose.

As for membership companies, there are three types in Japan:

- the general partnership company (*gomei kaisha*);
- the limited partnership company (*goshi kaisha*); and
- the limited liability company (*godo kaisha*).

The general partnership company and the limited partnership company are less commonly used. The most common membership company is the limited liability company.

In the case of a limited liability company, the liability of the members of the company is limited in the same way as a stock company. The main difference between a limited liability company and a stock company is that, in the case of a limited liability company, only members of the company can hold positions of management – whereas the management of a stock company is not exclusive to members of the company.

### 3.2 Incorporation Process

The main steps involved in the incorporation of a stock company are:

- preparation of the articles of incorporation and the certification of the articles by a notary public;
- determination of the share issuance, share subscription and shareholders at the point of incorporation;
- determination of the appointment of key organs such as the directors; and
- registration of the stock company for incorporation with the relevant authorities.

There are two ways in which share subscription can be done when incorporating a stock company. The party or parties incorporating the stock company may subscribe to all the shares at the time of incorporation, or they may only partially subscribe to the shares, with

the remainder of the shares being subscribed to by external investors. Share subscription that involves external investors typically involves more stringent procedures, in order to provide some degree of protection for the external investors.

### 3.3 Ongoing Reporting and Disclosure Obligations

A stock company must provide, for the inspection of shareholders, the annual financial statements of the stock company at its head office and branch offices at least two weeks before its annual shareholders' meeting. In addition, changes of management and amendments to certain items in articles of incorporation must be registered with the relevant authorities.

A listed stock company has more stringent disclosure obligations, namely:

- financial statements must be disclosed on a semi-annual basis; and
- material corporate information such as a change of the representative director and the declaration of dividends must also be disclosed from time to time.

### 3.4 Management Structures

Although it is possible for a stock company without a board of directors to make decisions concerning the organisation, operations and management via director(s) or the shareholders' meetings, many stock companies have a board of directors that is in charge of making the day-to-day decisions of the company. Depending on the stock company, it may also have other responsibilities, such as appointing:

- company auditor(s);
- a board of company auditors;
- accounting auditor(s);
- accounting adviser(s); and
- other committees.

The company's management structures will be set out in the articles of incorporation.

A shareholders' meeting can make decisions on the operation, etc, of the company. A company must hold at least one shareholders' meeting in a year.

For companies with a board of directors, the types of decisions that can be made by a shareholders' meeting are limited to those that are stipulated in the Companies Act and the articles of incorporation. In general, decisions relating to the management of the company should be decided by the board of directors.

The board must consist of at least three directors, who are to be elected at the shareholders' meeting. Resolutions of the board must be passed via a majority vote of the directors present at the meeting.

There must be at least one representative director. Representative directors have the power to represent the company – for example, they may execute documents as a representative of the company with third parties.

The company should be audited by the company auditor(s), the board of the company auditors, or external auditors (as the case may be), who will also audit the directors' execution of duties.

### 3.5 Directors', Officers' and Shareholders' Liability

The directors of the stock company have a legal duty of care to execute their duties according to the standard of a reasonably prudent manager. The directors also owe a duty of loyalty to the stock company and must comply with the relevant laws and regulations when executing their duties.

If the directors neglect their duties, they may be liable to the company for the damages caused as a result of the neglect. A director can be exempt from liability via a unanimous vote of all shareholders. There are no articles in the Companies Act that state directors may be liable to the company for damages arising from the performance of the directors' functions, where the performance does not amount to a neglect of duties.

While there is some recognition of piercing the corporate veil in Japan, this is not founded on statutory law and only exists as a matter of judicial precedent.

## 4. Employment Law

### 4.1 Nature of Applicable Regulations

There are many labour-related and employment-related laws and regulations in Japan, all of which were enacted to embody the fundamental principles and rights contained in the Constitution. In particular, the Labour Standards Act (LSA) and the Labour Contracts Act (LCA) provide for the fundamental principles of individual employment relationships, whereas the Labour Union Act (LUA) provides for the fundamental principles of collective labour relationships.

Japan is a country with a civil law system, in which judicial precedents do not have legally binding force. However, in the field of labour and employment law, judicial precedents are considered very important, as it is often difficult to make decisions based solely on the laws and regulations. This is because most of the provisions under those laws and regulations only provide for the basic rules and are therefore abstract in nature.

### 4.2 Characteristics of Employment Contracts

#### Form of Employment Contract

An employment contract may be executed verbally. However, to avoid any misunderstandings regarding major working conditions, the LSA and other applicable laws and regulations require an employer to prepare a document clearly describing those major working conditions and to deliver it to a new employee upon entering an employment contract (eg, Article 15 of the LSA). Examples of major working conditions include:

- the term of employment;
- the location of the workplace (including whether and to what extent the location of the workplace may be subsequently changed);
- the job description (including whether and to what extent the job description may be subsequently changed);
- the working hours;
- whether overtime work or work on holidays will be necessary;
- a description of holidays;
- the leave policy;
- the wages to be paid; and
- the grounds and procedures for termination of employment.

In addition, if an employer usually employs ten or more employees, the employer must establish the rules of employment, which consist of a set of documents stipulating the specific details of the working conditions. A copy of the rules of employment must also be submitted to the Labour Standards Inspection Office together with a written opinion regarding the rules of employment from either:

- a trade union to which a majority of the employees of the workplace concerned belong (majority trade union); or
- if such a union does not exist, an employee representing a majority of the employees at the workplace concerned (employee representative) (Articles 89 and 90 of the LSA).

The contents of the rules of employment must be made available to the employees at all times for inspection (Article 106 of the LSA).

#### Duration of Employment Contract

The two main types of employment contract that exist in Japan are:

- those with a fixed term; and
- those with an indefinite term.

In practice, regular employees are usually hired for an indefinite term.

Under the LSA, the maximum duration of each fixed-term employment contract is three years. However, the maximum duration of each fixed-term employment contract is five years for:

- certain specialists; and
- employees who are 60 years of age or older (Article 14 of the LSA).

Although the maximum duration of each fixed-term employment contract may not exceed three years (or five years in the case of employees who are 60 years of age or older and certain specialists), the employer

may renew the fixed-term employment for more than the maximum duration.

There is no explicit minimum duration for a fixed-term employment contract. However, the LCA provides that an employer must not set a shorter term than is necessary (Article 17, paragraph 2 of the LCA).

Under the LCA, a fixed-term contract employee who has been, or is expected to be, employed by their employer for more than five years is allowed to convert their employment contract to an indefinite-term employment contract upon request to their employer (Article 18 of the LCA). In addition, even if a fixed-term contract employee has not been (or is not expected to be) employed by their employer for more than five years when the employer decides not to renew the fixed-term employee's contract upon its expiry, the employer must have an "objectively legitimate and socially justifiable cause" (see **4.4 Termination of Employment Contracts**) for such non-renewal if:

- the status of the fixed-term employment contract is not substantively different from an employment contract without a definite period (eg, as a result of repeated renewals of the contract); or
- the fixed-term contract employee has a reasonable expectation that their fixed-term employment contract will be renewed (Article 19 of the LCA).

## 4.3 Working Time

### Basic Working Time Regulations

As a general rule, employees' working hours may not exceed eight hours per day or 40 hours per week (Article 32 of the LSA). Any work exceeding eight hours per day or 40 hours per week is recognised as statutory overtime work.

A rest period of at least 45 minutes must be granted during working hours to employees who work for more than six hours per day and a rest period of at least 60 minutes must be granted to employees who work for more than eight hours per day. As a general rule, the employer must grant all of its employees a simultaneous rest period (Article 34 of the LSA).

Employees are also entitled to take at least one day of holiday per week (statutory weekly holiday) (Article 35 of the LSA).

### Article 36 Agreement

In order to have employees perform statutory overtime work or work on a statutory weekly holiday, the employer is required to execute a labour management agreement (*saburoku kyotei*, or "Article 36 agreement") with the majority trade union (or, if such a union does not exist, with the employee representative) and submit it to the Labour Standards Inspection Office prior to having the employees commence any statutory overtime work or work on statutory weekly holidays (Articles 32, 35 and 36 of the LSA). In addition, the employer must refer to the possibility of statutory overtime work and work on statutory weekly holidays in the rules of employment (if any) in advance of requiring the overtime or holiday work.

### Extra Wages

When an employee has performed statutory overtime work or work on a statutory weekly holiday, the employer must pay extra wages for that work calculated at the rate of:

- 125% of the normal salary per hour of statutory overtime work for up to 60 hours per month and 150% thereof if the statutory overtime work hours exceed 60 hours per month; or
- 135% of the normal salary per hour of work on a statutory weekly holiday (Article 37 of the LSA).

In addition to the above-mentioned extra wages, an employee working between 10pm and 5am is entitled to an extra payment in accordance with a late-night work compensation at the rate of at least 25% of the normal salary per late-night working hour (Article 37 of the LSA).

### Employees in Managerial Positions

Employees in managerial positions are entitled to receive an extra wage for late-night work but are not entitled to receive extra wages for statutory overtime work and work on statutory holidays (Article 41 of the LSA). Whether an employee is in a managerial position depends on various factors, such as:

- the actual content and nature of the work performed by the employee;
- the authority, responsibility and manner in which work is performed; and
- the salary and other compensation.

The scope of employees in managerial positions is generally quite narrowly interpreted based on judicial precedents.

## 4.4 Termination of Employment Contracts

### Unilateral Dismissal in General

When an employer unilaterally dismisses an employee, the employer must have an "objectively legitimate and socially justifiable cause" for the dismissal (Article 16 of the LCA). Otherwise, the dismissal is deemed to be an abuse of right and would therefore be null and void. There is no doctrine of employment at will in Japan. It is generally understood that the following five reasons constitute an "objectively legitimate and socially justifiable cause" for a unilateral dismissal:

- inability of the employee to offer their labour to an employer, mainly because of physical or mental disability or extremely poor performance;
- infringement of the disciplinary rules in the workplace by the employee's serious misconduct;
- redundancy;
- termination due to an agreement with a trade union; or
- termination due to an employer's liquidation if an employer is a corporate entity.

In addition, the employer must give the employee at least 30 days' prior notice of the unilateral dismissal or make payment in lieu of the notice (LSA, Article 20). Except as agreed in an employment contract or the rules of employment, an employee is not entitled to any other monetary compensation upon a unilateral termination of employment.

### Redundancy

A unilateral dismissal due to redundancy may occur where an employer wishes to continue business operations in Japan with a reduction in the number of employees. In this case, the employer must demonstrate an "objectively legitimate and socially justifiable cause" for the dismissal by satisfying all of the following factors.

- The shedding of employees is justified by a strong financial or business necessity, such that it would be extremely difficult for the employer to continue its business without implementing a reduction in the number of employees (and not merely the fact that the employer would be more profitable if the employees were dismissed).
- The employer has already endeavoured to take all reasonable means to avoid dismissal of employees, such as facilitating intra-company transfers (or, in some cases, associated-company transfers), offering voluntary resignation with a certain amount of severance compensation, and reducing other operating costs.
- The selection of employees for termination was conducted in a fair manner and in accordance with a reasonable and objective standard established by the employer. In other words, the selection criteria must be fair and rational, and must not be based on the employees' gender, membership of a trade union, race, creed, or any other discriminatory reason.
- Sincere attempts at discussion or negotiation were undertaken, either with employees or their representatives (including a trade union, if applicable), but were unsuccessful.

The regulations regarding notice period and monetary compensation are the same as those applicable to unilateral dismissal due to redundancies.

## 4.5 Employee Representations

### Employee Representative

As explained in **4.2 Characteristics of Employment Contracts**, when an employer establishes the rules of employment, the employer must obtain a written opinion of the majority trade union (or, if such a union does not exist, of the employee representative). Similarly, if an employer intends to execute certain labour management agreements (eg, an Article 36 agreement), these agreements must be executed with the majority trade union (or, if such a union does not exist, with the employee representative). An employee representative must be elected by a majority vote or majority consent of the employees.

### Trade Union

Under the Constitution, workers have the right to:

- form and join unions;
- bargain collectively through the unions to which they belong; and
- engage in other concerted activities for the purpose of collective bargaining or other mutual aid or protection (Article 28 of the Constitution).

A union may represent its members' interests in bargaining with their employer(s) in relation to their working conditions or other treatment of those members. A union does not need authorisation from administrative agencies to represent its members in bargaining with their employer(s).

If a union requests a collective bargaining session, the employer may not reject that request without a reasonable cause (Article 7, item 2 of the LUA).

## 5. Tax Law

### 5.1 Taxes Applicable to Employees/ Employers

Employees are subject to income tax and local inhabitant tax in relation to their salary, and their employers must pay the taxes to national and local governments.

For the purpose of Japanese income tax, an individual (including an employee) is categorised as:

- a permanent resident;
- a non-permanent resident; or
- a non-resident.

A resident is defined as any individual who has their residence (*jusho*) in Japan or who has had their temporary residence (*kyosho*) in Japan for more than one year. A permanent resident is defined as a resident other than a non-permanent resident (as defined below) and is subject to income tax with regard to all of their income (including salary, hereinafter the same in this section) accrued inside and outside Japan.

On the other hand, a non-permanent resident – who is defined as any individual who is a resident of Japan, but who is not a Japanese national and who has had residence in Japan or temporary residence in Japan for five years or fewer in total during the past ten years – is subject to income tax only with regard to income other than foreign-sourced income and any amount of foreign-sourced income that is paid in or transmitted to Japan. A non-resident (ie, any individual other than any type of resident) is subject to income tax only with regard to domestic (Japan)-sourced income. This type of income includes salaries received for work or personal services carried out in Japan or, if outside Japan, by a person acting as an officer of a Japanese corporation.

For the employment earnings of a permanent resident or a non-permanent resident who has submitted a certain application and whose individual income does not exceed JPY20 million per year, such an employee will only be subject to withholding tax and need not file their own tax return. Instead, the employer will be responsible for the calculation and payment of the employees' taxes. This system, especially the year-end recalculation procedure of the system, is called the "year-end adjustment system" (*nenmatsu chousei*) of tax payment. The income tax rates are progressive and the maximum rate is 45% (excluding local income tax).

In addition, reconstruction special income tax will be imposed on income tax at a rate of 2.1% from 2013 to 2047 (from 2027, a rate of 1% will be replaced for defence special income tax). Please see the following progressive income tax rates (including reconstruction special income tax):

- 5.105% (for the portion of taxable income of JPY1.95 million or less);
- 10.21% (for the portion of taxable income of more than JPY1.95 million to less than JPY3.3 million);
- 20.42% (for the portion of taxable income of JPY3.3 million to less than JPY6.95 million);
- 23.483% (for the portion of taxable income of JPY6.95 million to less than JPY9 million);
- 33.693% (for the portion of taxable income of JPY9 million to less than JPY18 million);
- 40.84% (for the portion of taxable income of JPY18 million to less than JPY40 million); and

- 45.945% (for the portion of taxable income of JPY40 million or more).

Employees and their employer jointly contribute in equal parts to employee social expenses, such as national health insurance premiums and employees' pension insurance premiums.

In addition, if an employee dies, their heirs would be subject to inheritance tax. In general, inheritance tax is imposed both on domestic and foreign assets. However, depending on the nationalities and residence period of the decedent and their heirs in Japan, the taxable assets may be limited to domestic ones in some situations. By way of example, in cases where foreign individual Japanese residents with certain types of working visas die in Japan, their heirs without Japanese nationality would be subject to inheritance tax only on domestic assets, as long as they:

- are not Japanese residents at the time of the decedent's death; or
- have lived in Japan with certain types of visas for a period not exceeding ten years in the past 15 years before the decedent's death.

### 5.2 Taxes Applicable to Businesses

A company doing business in Japan is subject to various taxes.

Corporate income tax must be paid where a company has its head office or principal office in Japan (such a company is a domestic corporation). If a company does not have its head office or principal office in Japan, such a company is a foreign corporation. For foreign business operators, several exceptional rules would apply. The company must only pay corporate income tax on domestic-sourced income. As for some categories of income, such as dividends and interest, income tax will be withheld at the time of payment, but corporations can credit the amount of such income tax from the amount of corporate income tax subject to certain limitations.

Inhabitant tax and enterprise tax must be paid if a company has its head office or principal office in Japan or has its permanent establishment in Japan.

Consumption tax, which is a type of VAT, must be paid if a company conducts certain kinds of transactions, such as:

- sales of goods, leases of goods and provisions of services in Japan;
- certain categories of digital services provided to Japan; and
- importation transactions.

Notwithstanding the foregoing, with some exceptions (eg, where a company's capital is JPY10 million or more), consumption tax will be exempted if the amount of taxable sales in the base period – which is the fiscal year two years prior to the current fiscal year – is less than JPY10 million. Under the qualified invoicing system, a buyer who claims an input (purchase) consumption tax credit is required to receive and retain invoices that are issued by a registered seller and include certain types of information.

In addition to the foregoing, there are other taxes, including:

- fixed property tax;
- stamp duty;
- registration tax; and
- real estate acquisition tax.

Regarding Pillar Two of the OECD's Two Pillar solution, the Income Inclusion Rule (IIR) was firstly implemented under the 2023 tax reform in Japan and came into force on 1 April 2024. The IIR specifically applies to the ultimate parent corporation of a multinational corporation group, the consolidated revenue of which is equivalent to no less than EUR750 million in two or more accounting business years in the four most recent consolidated accounting business years.

In addition, the Undertaxed Profits Rules (UTPR) and the Qualified Domestic Minimum Top-up Tax (QDMTT) also apply to the financial years starting on or after 1 April 2026.

The IIR has a certain exemption that is equivalent to the de minimis rule. In addition, there are transitional safe harbours according to the content of country-by-country (CbC) reporting – for example, the de minimis

test, simplified effective tax rate test and routine profits test. Based on the side-by-side package agreed by the OECD on 5 January 2026, these safe harbours will be amended under the 2026 tax reform in order to maintain consistency with that package.

### 5.3 Available Tax Credits/Incentives

Corporations can credit the amount of income tax withheld at source from the amount of corporate income tax imposed. Income tax withheld at source is theoretically recognised as corporate income tax that is collected in advance and therefore this amount can be deducted from the final tax amount.

Domestic corporations are eligible to credit the amount corresponding to corporate income taxes paid in foreign countries from the amount of corporate income tax imposed in Japan – although the amount of this credit is subject to certain limitations. The purpose is to avoid the multiple imposition of tax in different countries on the same income. Foreign corporations that have permanent establishments in Japan are also allowed to claim foreign tax credit with regard to income, which is attributable to their permanent establishments in Japan and taxable status in Japan.

There are also various tax exemptions or tax reductions that encourage investments and R&D in Japan. By way of example, companies that file a blue form tax return are eligible to credit a certain percentage of R&D expenditure from the amount of corporate income tax.

### 5.4 Tax Consolidation

There are two regulatory frameworks in Japan in respect of a group taxation scheme: the full controlling interest framework and the group calculation framework.

The full controlling interest framework is mandatory and applies to intra-group transactions (including transactions involving transfers of assets, losses, dividends and interest) where all companies in the group are wholly owned (whether directly or indirectly) by the ultimate parent of the group, regardless of whether the ultimate parent is a foreign or domestic company or individual, provided that the parties to the relevant transaction are domestic companies. Under this regulatory framework, taxation on intra-group profits from transfers of certain kinds of assets – such as fixed assets, securities, monetary claims and deferred assets ("qualifying assets") – is deferred until those assets are transferred outside the group.

Additionally, intra-group contributions, donations and dividends are disregarded. If the full controlling interest framework is applied, certain tax incentives to which corporations with stated capital of JPY100 million or less are normally entitled would no longer be available to an SME that is fully controlled by a large corporation with a stated capital of JPY500 million or more.

On the other hand, the group calculation framework – if approved by the Commissioner of the National Tax Agency (NTA) – is only applicable to groups in which all companies are wholly owned (whether directly or indirectly) by the ultimate parent of the group and where the companies of the group consist only of domestic companies. Under this framework, corporate income tax is calculated on a group-wide basis (ie, offsetting profit and loss among the group corporations), but is payable by each group corporation.

For group corporations, unrealised profits and losses of qualifying assets will not be imputed to taxable income or losses, as long as certain requirements (which are consistent with those of tax-qualified reorganisation) are met (eg, where these subsidiaries are expected to remain directly or indirectly wholly owned). The Certain Net Operating Loss (NOL) Limitation or Japanese Separate Return Limitation Year Rule is also applied to group corporations.

In addition, under the group calculation framework, taxation on profits from intra-group transfers of assets is deferred until those assets are transferred outside the group. Intra-group contributions, donations and dividends are also disregarded under the group calculation framework.

### 5.5 Thin Capitalisation Rules and Other Limitations

Japanese tax law includes thin capitalisation rules. Under these rules, if interest is paid to a foreign controlling shareholder by a domestic corporation while

the payer's average interest-bearing debt to the foreign controlling shareholder in the financial year exceeds three times the value of the foreign controlling shareholder's equity interest in the payer in the said financial year, the interest income related to the excess debt will not be deductible from the payer's taxable income.

However, a domestic corporation may apply a different debt-to-equity ratio (instead of three times) if it can prove that a different ratio is appropriate in light of the debt-to-equity ratio of similar corporations. A domestic corporation may also benefit from the safe harbour provision if the average aggregate debt in the financial year does not exceed three times the value of the equity interest in the payer in said financial year.

In addition, under the earnings-stripping rules – with some exceptions – when interest payments (excluding those that are included in the taxable income of a recipient under Japanese tax laws) exceed 20% of the statutory adjusted income of the payer, the portion of interest payments exceeding 20% of the statutory adjusted income of the payer is generally not deductible from the payer's taxable income in the financial year. The earnings-stripping rules are also applicable to the calculation of a foreign corporation's Japan-sourced income, even if such income is not attributable to the permanent establishment of the foreign corporation in Japan or if the foreign corporation has no permanent establishment in Japan.

However, the excess portion is carried forward for seven financial years (ten financial years for the financial years starting from 1 April 2022 to 31 March 2025) and can be used as deductible expenses until the total amount of deductible expenses reaches a 20% threshold in each of the following seven financial years.

## 5.6 Transfer Pricing

Under Japanese transfer pricing rules, a domestic corporation that transacts with related foreign entities (such as a foreign parent corporation) will – if the transaction involves non-arm's length consideration – be liable for tax calculated based on an arm's length consideration imputed on the transaction. In calculating the appropriate arm's length consideration, the tax authority will apply the most suitable statutory method of calculation available.

The tax authority will typically request further information from the taxpayer in order to help the authority calculate an appropriate arm's length consideration. Where a taxpayer fails to adequately respond to these requests, or does not promptly provide this information, the tax authority will have the right to determine the arm's length consideration as it deems fit based on reasonable assumptions applicable to the relevant statutory method of calculation.

In addition, in terms of transfer price documentation, four types are required:

- a Notification for Ultimate Parent Entity (NUPE) form;
- a CbC report;
- a master file; and
- a local file.

Of these, the former three types of documentation are applicable to subsidiaries or branches in Japan that are constituent entities of a specified multinational enterprise (MNE). The local file is applicable to all corporate taxpayers engaging in transactions with foreign affiliates.

## 5.7 Anti-Evasion Rules

Japanese tax laws contain general avoidance rules such as the disallowance of acts or calculations:

- by family-owned corporations;
- in relation to organisational restructuring;
- by corporate groups of the group calculation framework; and
- regarding foreign entity profits that are attributable to a permanent establishment.

These anti-evasion rules have recently been applied especially to several corporate intra-group reorganisations. Those cases subsequently developed into tax disputes.

## 5.8 Tariffs

Tariffs are imposed on various types of imported goods. However, certain goods, such as iron ore,

wool, cotton, photographic film, rubber tyres and machinery, are generally exempt from tariffs.

The applicable tariff rate depends on the classification of goods under the International Convention on the Harmonized Commodity Description and Coding System (the "HS Treaty"). Additionally, countries or regions that are members of the World Trade Organization (WTO) or have executed relevant treaties with Japan, such as an Economic Partnership Agreement (EPA), may benefit from tariff exemptions or preferable tariff rates.

For more details of applicable tariff rates, Japan Customs provides "Japan's Tariff Schedule", which is accessible on its website.

## 6. Competition Law

### 6.1 Merger Control Notification

Prior notification is required for share acquisitions, mergers, splits, joint share transfers and acquisitions of business or assets, etc, that meet certain criteria.

The filing thresholds are different for each of these transactions. The major transactions and their thresholds are as follows.

- For share acquisitions:
  - (a) the total sales in Japan of the acquiring company and other companies within the same combined business group as the acquiring company must exceed JPY20 billion;
  - (b) the total sales in Japan of the acquired company and all of its subsidiaries must exceed JPY5 billion; and
  - (c) the ratio of voting rights of the acquiring company upon the acquisition must newly exceed 20% or 50%.
- For mergers:
  - (a) the total sales in Japan of at least one party to the merger and other companies within the same combined business group as the party must exceed JPY20 billion; and
  - (b) the total sales in Japan of at least one other party to the merger and other companies within the same combined business group as the other party must exceed JPY5 billion.
- For acquisitions of business or assets, etc:
  - (a) the total sales in Japan of the acquiring company and other companies within the same combined business group as the acquiring company must exceed JPY20 billion; and
  - (b) the total sales in Japan attributable to the business or assets to be acquired by the acquiring company must exceed JPY3 billion.

Please note that the "combined business group" of a party refers to a group consisting of the ultimate parent company of the party and the subsidiaries of the ultimate parent company. No filing is required for a transaction within the same combined business group.

For joint ventures, it is necessary to analyse whether each step of a transaction to establish a joint venture constitutes one of the above-mentioned types of transactions that would be subject to the prior notification requirement, and whether the relevant filing thresholds are met.

Even where a contemplated transaction is not subject to the prior notification requirement, if the transaction would substantially restrain competition in any relevant market, the transaction would be prohibited under the Antimonopoly Act.

According to the Policies Concerning Procedures of Review of Business Combination (as amended in 2026), the Japan Fair Trade Commission (JFTC) recommends voluntary consultation for transactions that do not meet the mandatory filing thresholds only because the acquired company does not satisfy the monetary thresholds, but that have an acquisition value exceeding JPY40 billion, if one or more of the following factors are met:

- the business base or R&D base of the acquired company is located in Japan;
- the acquired company conducts sales activities targeting Japanese consumers, such as providing a website or a pamphlet in Japanese; or
- the total sales in Japan of the acquired company and its subsidiaries exceed JPY100 million.

### 6.2 Merger Control Procedure

If a contemplated transaction is subject to the prior notification requirement, the relevant enterprises are prohibited from closing the transaction for a period of 30 calendar days after formal filing (Phase I review period, commonly referred to as the waiting period). If the JFTC forms the view that the transaction does not give rise to concerns about competition, the JFTC issues a clearance within the Phase I review period. However, if the JFTC forms the view that a more detailed review is required, the review process moves into a Phase II review.

At the beginning of the Phase II review, the JFTC will request additional information and the Phase II review will continue for 120 calendar days from the formal filing or 90 calendar days from the date of the receipt of all the additional information requested – whichever is the longer period.

Parties planning to file a notification may consult the JFTC not only on the descriptions of the notification form, but also on substantive issues such as market definition and competitive assessment at the pre-notification stage. In practice, unless the transaction is very straightforward without any potential substantive issues, it is common to go through the pre-notification consultation, and the JFTC commences its review of the market situation and the potential substantive issues at the pre-notification stage.

If it is evident that the transaction would not restrain competition in any relevant market and the notifying parties request the JFTC to shorten the waiting period in writing, the JFTC may shorten the waiting period.

### 6.3 Cartels

Certain anti-competitive agreements and practices such as price fixing and bid rigging are prohibited as an unreasonable restraint of trade under the Antimonopoly Act. Unreasonable restraint of trade is defined as business activities by which any enterprise, in concert with other enterprises, mutually restricts or conducts their business activities in such a manner as to fix, maintain or increase prices, or to limit production, technology, products, facilities or counterparties, thereby causing a substantial restraint of competition in any relevant market.

As for the interpretation of the elements of unreasonable restraint of trade, it is worth noting that – although "substantial restraint of competition" is one such element – the JFTC can easily prove that such a requirement is satisfied in the case of extreme cartel behaviour such as price fixing and bid rigging. It would therefore be difficult to justify extreme cartel behaviour in practice.

Major methods of enforcement against unreasonable restraint of trade are cease-and-desist orders and surcharge payment orders. However, criminal penalties are also available. The amendment to the surcharge payment system came into effect on 25 December 2020. The amount of surcharge is calculated by multiplying the amount of sales of the target products or services during the period in which the unreasonable restraint of trade occurred (the maximum period is ten years) by the surcharge percentage rate. The rate is 10% in principle but can be lower, depending on the size of the alleged violators, or higher if there are aggravating factors (such as repeated violation).

A leniency system for an unreasonable restraint of trade is available in Japan. The surcharge reduction rate, which was amended on 25 December 2020, is determined in accordance with the order of application for leniency as well as the degree of co-operation by the offender with the JFTC. In addition, a determination procedure was introduced on 25 December 2020 to protect attorney–client communications in respect of legal advice regarding the alleged violations to which leniency is applicable (the "Specified Communication"). The scope of the protection under the determination procedure is limited compared to that which is available in similar circumstances in the USA or the EU. The requirements for qualifying for protection under the determination procedure include that:

- the fact that the contents of the Specified Communication are recorded is indicated on the document itself (eg, "Specified Communications under JFTC Investigation Rules" is written or printed on the cover);
- the documents are stored separately from other documents that are not subject to the determination procedure;

- the scope of persons who are aware of the contents of the relevant documents is limited to those who need to know them (eg, persons who are, or were, responsible for consulting with attorneys on behalf of the company); and
- the company submits an application form for the determination procedure as well as a privilege log that states an outline of the relevant documents.

A Supreme Court decision confirmed that, even where the alleged price cartel occurred outside Japan, the Antimonopoly Act can apply if the cartel impedes competition in the Japanese market.

### 6.4 Abuse of Dominant Position

Certain types of unilateral conduct and economic dependency are prohibited as private monopolisation and unfair trade practices under the Antimonopoly Act.

Private monopolisation is defined as any conduct that excludes or controls the business activities of other enterprises, thereby causing a substantial restraint of competition in any relevant market. The methods of enforcement against private monopolisation include:

- cease-and-desist orders;
- surcharge payment orders; and
- criminal punishment.

Various types of conduct are designated as unfair trade practices, such as:

- refusal to trade;
- unjustly low-priced sales;
- resale price restrictions; and
- abuse of superior bargaining positions.

Under economic dependency regulations, abuse of superior bargaining positions is the major type of misconduct to be considered, and enterprises are prohibited from imposing terms and conditions that are disadvantageous to other enterprises by unjustly leveraging their superior position over other enterprises.

All types of unfair trade practices can be subject to cease-and-desist orders. However, the surcharge payment order and/or criminal penalties are only applicable to certain types of unfair trade practices.

For conduct to be considered as private monopolisation, it is necessary to prove that it results in a substantial restraint of competition. On the other hand, a tendency to impede competition is all that is required for conduct to fall within the scope of unfair trade practices. In other words, it can be said that a higher threshold (regarding detrimental effect) needs to be satisfied in order to show the existence of private monopolisation, in comparison to unfair trade practices.

Although extraterritorial applicability of regulations on private monopolisation and unfair trade practices is not such a prominent topic of discussion, it nevertheless appears the same approach is taken towards unreasonable restraint of trade as is likely to be taken in relation to private monopolisation.

The commitment procedure, which is a scheme for voluntarily resolving suspected violations via mutual consent between the JFTC and the relevant enterprise, came into effect in December 2018. As of June 2026, 27 cases regarding private monopolisation and unfair trade practices have been resolved through the commitment procedure.

## 7. Intellectual Property

### 7.1 Patents

The Intellectual Property Basic Act of Japan recognises the importance of IP protection as well as the idea of creating a vibrant economy and society by creating new IP. In Japan, IP is mainly protected by:

- the Patent Act;
- the Utility Model Act;
- the Trademark Act;
- the Design Act;
- the Plant Variety Protection and Seed Act;
- the Act on the Circuit Layout of Semiconductor Integrated Circuits;
- the Copyright Act; and
- the Unfair Competition Prevention Act.

Patent rights, etc, are granted by registering with the Japan Patent Office. The Copyright Act, on the other hand, protects copyrights without requiring any special formalities. Although there is no property right

attached to trade secrets, the Unfair Competition Prevention Act protects trade secrets as "legally protected interests".

Japan is a party to:

- the Patent Cooperation Treaty;
- the Paris Convention for the Protection of Industrial Property;
- the Protocol Relating to the Madrid Agreement Concerning the International Registration of Marks;
- the Hague Agreement Concerning the International Registration of Industrial Designs;
- the Berne Convention;
- the International Convention for the Protection of New Varieties of Plants; and
- other major IP-related treaties.

A person that invents an invention with industrial applicability is entitled to obtain a patent for that invention. "Invention" in the Patent Act is defined as a highly advanced creation of technical ideas utilising the laws of nature.

A person applying for a patent must submit a written application to the Japan Patent Office. A description, scope of claims, required drawings and a summary must be attached to the application. The legal requirements for obtaining a patent are:

- industrial applicability;
- novelty; and
- inventive step.

A patent right will become effective upon successful registration. The duration of a patent right, in principle, expires after a period of 20 years from the filing date of the original application. The patent holder has an exclusive right to commercially exploit the patented invention.

As for remedies for infringement, the patent holder may file a claim for:

- an injunction;
- disposal of infringing compositions, etc;
- damages;
- restoration of credibility; or
- restitution of unjust enrichment.

There are presumptive provisions regarding the amount of damages that may arise as a result of the infringement of patent rights.

Acts of importing products that infringe patent rights are subject to border control measures under the Customs Act. Any intentional infringement of a patent right is also subject to criminal penalties.

### 7.2 Trade Marks

An applicant may apply to register a trade mark to be used in connection with goods or services pertaining to the business of the applicant. "Trade mark" in the Trademark Act is defined as:

- any character, figure, sign or three-dimensional shape or colour, or any combination thereof;
- sounds; or
- anything else specified by cabinet order that can be perceived by people.

A person requesting a trade mark registration must submit a written application to the Japan Patent Office. Upon filing an application, one or more goods or services for which the trade mark will be used must be described in the written application. The legal requirements for the registration of a trade mark are that:

- the trade mark is to be used in connection with the goods or services for which the trade mark is registered;
- the trade mark is capable of distinguishing itself from other goods or services; and
- the trade mark is not unregistrable for reasons of public interest.

A trade mark right will become effective upon successful registration. The duration of a trade mark right is ten years from the date of registration, but may be renewed by the holder of the trade mark right by filing an application for registration of renewal.

The holder of a trade mark right will have an exclusive right to use the registered trade mark in connection with the designated goods or designated services. The holder of the trade mark right may also prohibit a third party from using a trade mark that is similar to the registered trade mark.

As for remedies for infringement, the holder of a trade mark right may file a claim for:

- an injunction;
- disposal of infringing compositions, etc;
- damages;
- restoration of credibility; and
- restitution of unjust enrichment.

There are presumptive provisions regarding the amount of damages that may arise as a result of trade mark infringement.

Acts of importing goods that infringe trade mark rights are subject to border control measures under the Customs Act. Any intentional infringement of a trade mark right is also subject to criminal penalties.

### 7.3 Industrial Designs

A creator of a design that is industrially applicable may be entitled to obtain a design registration for that design. "Design" in the Design Act is defined as:

- the shape, patterns or colours – or any combination thereof – of an article (including a part of an article) or a building (including a part thereof); or
- a graphic image on a screen (including a part thereof; but such protection of a graphic image or a part thereof is limited to those for use in the operation of a device or those displayed as a result of a device performing its functions) that creates an aesthetic impression through the eye.

Building interior designs are also eligible for a design registration under the Design Act.

A person requesting a design registration must submit a written application to the Patent Office. Drawings, photographs, models or specimens must be attached to the written application. The legal requirements for obtaining a design registration are:

- industrial applicability;
- novelty; and
- that the design is innovative and without precedent.

A design right will become effective upon registration. The duration of a design right, in principle, expires 25 years from the date of the application for design registration. The holder of a design right has the exclusive right to commercially exploit the registered design and designs similar thereto.

As for remedies for infringement, the holder of a design right may file a claim for:

- an injunction;
- disposal of infringing compositions, etc;
- damages;
- restoration of credibility; or
- restitution of unjust enrichment.

There are presumptive provisions regarding the amount of damages that may arise as a result of an infringement of design rights.

Acts of importing products that infringe design rights are subject to border control measures under the Customs Act. Any intentional infringement of a design right is also subject to criminal penalties.

### 7.4 Copyright

A person who creates a work (the author) enjoys the moral rights of an author and the copyright with regard to the work. "Work" in the Copyright Act is defined as a creatively produced expression in which thoughts or sentiments are expressed and that falls within the literary, academic, artistic or musical domain.

The moral rights of authors include:

- the right to make a work public;
- the right to attribution; and
- the right to integrity.

The copyright includes the right of:

- reproduction;
- stage performance and musical performance;
- on-screen presentation;
- public transmission;
- recitation;
- exhibition;
- distribution;

- transfer;
- rental; and
- adaptation.

Certain neighbouring rights are also granted to performers, producers of phonograms, broadcasters, and cable-caster organisations.

There are no formalities that have to be met in order to enjoy legal rights under the Copyright Act.

The duration of a copyright begins at the time the work is created. A copyright subsists for a period of 70 years after the death of the author.

The copyright does not prohibit (and hence does not restrain other persons from):

- the reproduction of the work for private use;
- the exploitation of works concerning incidental subjects;
- work in the course of consideration; and
- any other exceptions separately provided for in the Copyright Act.

In recent years, a number of more flexible exceptions have been introduced to promote the use of AI and big data.

If the ownership of copyright is transferred to another person, the licensee has the right to continue to use the work as a matter of course.

As for remedies for infringement, the author, the copyright holder, the holder of the right of publication, the performer or the holder of the neighbouring rights may file a claim for:

- an injunction;
- disposal of infringing compositions, etc;
- damages;
- restoration of credibility; or
- restitution of unjust enrichment.

There are presumptive provisions regarding the amount of damages that may arise as a result of an infringement of copyrights.

Acts of importing products infringing copyrights are subject to border control measures under the Customs Act.

Any intentional infringement of a copyright is also subject to criminal penalties. A copyright infringement is, in principle, a crime subject to prosecution after a complaint has been made. However, following the conclusion of the Trans-Pacific Partnership Agreement, distributing pirated copies of movies over the internet has become a crime in and of itself, and no longer requires a complaint.

### 7.5 Others

Devices relating to the shape or structure of an article or a combination of articles are protected by the Utility Model Act without any requirement for a substantial examination to be conducted.

Computer programs contained in software are mainly protected by the Copyright Act as copyrighted works of program. Software-related inventions may also be granted patents, provided that they involve hardware control or process-using hardware. Designs, flowcharts and manuals contained in software are protected by the Copyright Act as copyrighted works of language or of diagrams.

No sui generis database right exists in Japan. Copyright protection extends to databases if they constitute a creation by reason of the selection or systematic construction of information contained therein.

Trade secrets are protected by the Unfair Competition Prevention Act. “Trade secret” in this Act is defined as technical or business information useful for business activities, such as manufacturing or marketing methods, that are kept secret and that are not publicly known. A trade secret infringement may give rise to a suit for an injunction, a claim for damages or a claim for recovery of credit, etc.

There are presumptive provisions regarding the amount of damages that may arise as a result of an infringement of trade secrets. In a lawsuit for the infringement of business interests by unfair competition, if a court decides that it is necessary to maintain the secrecy of trade secrets held by a party to the

lawsuit, a confidentiality protective order or a suspension of disclosure (including omitting an examination of the parties) may be issued. A trade secret infringement with a high degree of illegality is also subject to criminal penalties.

New plant varieties are protected by the Plant Variety Protection and Seed Act.

The circuit layout of semiconductor integrated circuits is protected by the Act on the Circuit Layout of Semiconductor Integrated Circuits.

## 8. Data Protection

### 8.1 Applicable Regulations

The Act on the Protection of Personal Information (APPI) is the main piece of legislation governing the handling of personal information by business operators (information handlers) in Japan. Examples of APPI regulations with which information handlers are required to comply are as follows.

#### Purposes of Use

An information handler must specify the purposes for which it will process personal information and must not process personal information beyond the scope of the specified purpose without first obtaining the consent of the relevant data subject (Articles 17 and 18 of the APPI).

An information handler must not process personal information in manners that could facilitate or lead to illegal or improper activities (Article 19 of the APPI).

#### Collection of Personal Information

An information handler must not collect personal information using fraudulent or other unjust means. In principle, an information handler must not acquire certain sensitive personal information without obtaining the data subject's prior consent (Article 20 of the APPI).

If personal information is collected, an information handler must promptly notify the relevant data subject of or announce the relevant purposes of use (Article 21 of the APPI).

#### Limitation on Transfer of Personal Data to Third Parties

In principle, an information handler must not transfer personal data to third parties, including its affiliated companies, without the prior consent of the data subject (Article 27 of the APPI). An information handler must also obtain the prior consent of the relevant data subject before providing their personal data to a third party in a foreign country and provide certain information to the relevant data subjects when obtaining their consent (Article 28 of the APPI).

An information handler must keep records regarding the transfer and receipt of personal data (Articles 29 and 30 of the APPI).

#### Security Measures

An information handler must take reasonable steps to keep personal data as accurate and up to date as is necessary to achieve the purposes of use and must endeavour to delete the personal data without delay when it becomes unnecessary to use the data (Article 22 of the APPI). An information handler must also take all necessary and proper measures to ensure that personal data is kept secure from loss and from unauthorised access, use and disclosure (Article 23 of the APPI).

In addition, an information handler must exercise necessary and appropriate supervision of its employees who handle personal data and of its data management outsourcing entities to ensure they implement and comply with security measures (Articles 24 and 25 of the APPI).

Data incidents, such as leakages of, loss of or damage to personal data, must be reported to the Personal Information Protection Commission (PPC) and the relevant data subject must be notified thereof when the incident reaches a certain threshold (Article 26 of the APPI).

#### Data Subject's Right

Upon the request of a data subject, an information handler must inform them about the purposes their personal data was used for, grant access to it, correct or delete it, or take other appropriate measures (Articles 32 to 39 of the APPI).

### Proposed Amendment to the APPI: An Overview of the 2026 Bill

Japan is preparing a major amendment to the APPI, following Cabinet approval of the relevant bill on 7 April 2026. The amendment aims to respond to two competing policy needs: promoting the legitimate use of data, including for AI and statistical analysis, while strengthening safeguards against increasingly sophisticated privacy risks. The bill is expected to come into force within two years from promulgation, subject to the Cabinet Order.

A key feature is the promotion of appropriate data utilisation. The amendment would exempt certain processing from consent requirements where personal data or publicly available sensitive personal information is used solely to create statistical information, including AI development that can be characterised as statistical analysis. It would also relax consent requirements where the processing is clearly not contrary to the individual's intention and is unlikely to harm the individual's rights or interests.

At the same time, the amendment introduces more risk-based protections. Special rules would apply to personal information of children under 16, including involvement of legal representatives and a duty to consider the best interests of the child. New rules would also apply to facial feature data and similar biometric information, including notification requirements, relaxed conditions for suspension requests, and restrictions on opt-out third-party transfers.

The bill also addresses improper data use. It would regulate information that is not necessarily personal information but can be used to approach or influence specific individuals, and would strengthen obligations when using the opt-out system for third-party transfers. Finally, enforcement would be significantly enhanced through more flexible PPC orders and recommendations, measures against third parties assisting violations, increased criminal penalties, and the introduction of an administrative surcharge system for serious violations involving large volumes of personal data.

### 8.2 Geographical Scope

The APPI regulates the processing of personal information by information handlers in Japan. Foreign companies doing business in Japan must therefore comply with the APPI when they process personal information.

In principle, the APPI does not apply to the processing of personal information outside Japan. However, if a foreign company that does not have an office in Japan processes personal information of a data subject in Japan in relation to sales of goods or provision of services to individuals or entities in Japan, the foreign company is required to comply with the APPI even if personal information of that data subject is processed outside Japan (Article 171 of the APPI).

### 8.3 Role and Authority of the Data Protection Agency

The PPC is the primary authority with oversight over the APPI. The PPC is an independent administrative commission that ranks at a national administrative level similar to that of the JFTC and the National Public Safety Commission. The PPC is composed of a chairperson and eight members, as well as a secretariat.

An information handler must notify the PPC about data incidents. The PPC can request a report from an information handler or conduct an on-site inspection, if necessary, for compliance with the APPI. If an information handler breaches the provisions of the APPI, the PPC will first advise the information handler to cease or correct the violation. If this advice is not followed, the PPC will then issue a formal order to take the action requested in the earlier advice if the violation of important individual rights is imminent. An information handler who fails to comply with the formal order may be subject to a fine of up to JPY1 million and/or a prison sentence of up to one year (in the case of an individual) and to a fine of up to JPY100 million (in the case of a corporation) (Articles 148, 178 and 184 of the APPI).

## 9. Looking Forward

### 9.1 Upcoming Legal Reforms

No information has been provided in this jurisdiction.

# Trends and Developments

**Contributed by:**

**Oh-Ebashi LPC & Partners**

**Oh-Ebashi LPC & Partners** is a full-service law firm with over 180 attorneys and its main offices are in Tokyo and Osaka. It was originally established in Osaka in 1981 but now has an equivalent-sized operation in Tokyo. It was the first Japanese law firm to open an office in China and, together with its Nagoya office, currently has offices in four locations. Its legal practice covers a broad range of fields, including corporate/M&A, risk management and compliance, IP law, life sciences, restructuring/insolvency, competition and antitrust/consumer protection, dispute resolution, finance and insurance, employment law, administration/regulatory law and tax law. It also provides an international practice, a China/Asian practice, a private practice and a pro bono practice.

## Authors

**Norihiro Sekiguchi** is a partner at Oh-Ebashi LPC & Partners, with broad experience in M&A. He has handled cross-border M&A representing non-Japanese acquirers in various jurisdictions and has been involved in numerous private equity transactions, including the KIOXIA acquisition. Norihiro served as one of the examiners of the Japanese National Bar Examinations. He graduated from Waseda University (LLB) in 1994 and received an LLM degree from the University of Virginia School of Law in 2003. Norihiro was a partner at Baker & McKenzie in Tokyo from 2006 to 2014 and then joined Oh-Ebashi. He is admitted to the Bars in Japan and the State of New York.

**Yuki Kuroda** is a partner at Oh-Ebashi LPC & Partners and is in charge of data protection and data security issues. He has handled a number of law and technology cases throughout his career. His practice includes Japanese and international data protection cases, and he regularly guides clients on various issues including planning a new data-intensive business and implementing a robust data protection/security compliance programme. Yuki received a PhD degree from Kyoto University Graduate School of Informatics in 2023, an LLM degree from the University of California, Berkeley in 2015 and a JD degree from Osaka University in 2008. He is licensed to practise law in Japan and New York.

**Daisuke Mure** is a partner in charge of labour and employment law at Oh-Ebashi LPC & Partners. His clients are involved in various areas including pharmaceuticals, telecoms, electronics, trading, transportation, airlines, energy, real estate, food and entertainment, educational enterprises and medicine. They include Japanese subsidiaries of global enterprises. Daisuke was admitted to practise law in Japan and joined Oh-Ebashi in 2000. He graduated from the University of Tokyo (LLB) in 1998 and received his LLM degree at the University of Michigan Law School in 2007. In 2008, he was admitted to practise law in the state of New York.

**Ryosuke Sogo** is a partner in the finance practice group at Oh-Ebashi LPC & Partners. He has broad experience in project finance, acquisition finance and real estate finance. Ryosuke has overseen the project financing of various infrastructure, renewable energy, storage battery and hydrogen projects. He has a proven track record of assisting in the acquisition of target companies in M&A and advising lenders and borrowers on LBOs and MBOs. Ryosuke has also advised on various domestic and overseas real estate finance matters such as residences, offices, hotels and commercial facilities.

### M&A

#### *Key developments in M&A law and regulations*

The most notable regulatory development in Japan's M&A landscape during 2025–26 has been the ongoing reform of the Companies Act, which is expected to materially affect transaction structuring and execution. While the recent amendments to the tender offer (TOB) regime coming into effect in May 2026 have already been widely discussed, the forthcoming Companies Act reforms are particularly relevant for practitioners and investors structuring acquisitions in Japan.

A central feature of the proposed reform relevant to M&A practice is the acceleration of squeeze-out transactions. Under the current regime, a bidder can compulsorily acquire minority shares only after reaching a 90% voting threshold. Where this threshold is not met, alternative methods such as share consolidation must be used, which require shareholder approval and significantly prolong the process. The proposed amendment would allow a squeeze-out at a two-thirds ownership level, subject to the establishment of a majority of minorities condition as the minimum tender condition in the preceding tender offer. This change is expected to substantially enhance the speed and certainty of going-private transactions.

Another key development would be the expansion of stock-for-stock acquisition structures. The current share delivery framework (*kabushiki kofu*), which enables the use of an acquirer's shares as consideration, is subject to practical limitations – this scheme cannot be used for increasing ownership in existing subsidiaries and the target company is limited to domestic corporations (*kabusiki kaisha*). The proposed amendments aim to relax these constraints, thereby enabling greater flexibility in stock-for-stock transactions, including cross-border deals.

In addition, the reform introduces mechanisms to identify beneficial shareholders. Japanese companies have faced practical difficulties in identifying ultimate beneficial owners behind nominee custodians. The new framework would allow listed companies to request such custodians registered as shareholders to disclose information on beneficial owners, with an administrative fine in case of non-compliance due to intentional misconduct or gross negligence. If a beneficial shareholder, who holds more than 5% of the shares of a listed company, fails to file a large shareholding report under the securities regulations, its voting rights would be suspended. This development seeks to enhance transparency and address concerns regarding undisclosed stakebuilding.

Taken together, these reforms point towards a legal environment that increasingly emphasises speed, flexibility and transparency. For deal makers, this translates into more efficient take-private processes, broader structuring options, and a reduced ability to accumulate stakes anonymously.

### *Recent trends in the M&A market*

Alongside regulatory developments, Japan's M&A market has undergone a notable shift towards a more competitive and dynamic environment.

One of the most significant trends is the rise of unsolicited and non-consensual transactions. Historically, hostile takeovers were rare in Japan, where friendly negotiations were the norm. However, the number of unsolicited transactions has increased in recent years, and a meaningful proportion of these deals have been successfully completed. This reflects broader changes in corporate governance, investor expectations and the influence of global M&A practices.

At the same time, not all unsolicited approaches have succeeded. A high-profile example is the attempted acquisition of Seven & i Holdings by Alimentation Couche-Tard. Despite offering a substantial premium and signalling a willingness to engage constructively, the bidder was unable to secure meaningful co-operation from the target and ultimately withdrew its proposal. This case highlights that, while unsolicited bids are becoming more common, execution risks remain significant, particularly where target engagement is limited.

In contrast, the Fujitec transaction illustrates the continued importance of strategic responses such as white knight interventions. Faced with pressure from an activist investor (Oasis Management), the target company (Fujitec) underwent governance changes, and the founding family partnered with a private equity sponsor (EQT) to execute a management buyout. The transaction ultimately gained support from the activist shareholder. This case demonstrates that activism, governance reform and private equity participation are increasingly interconnected in Japan.

Another important trend is the emergence of competitive bidding dynamics, as illustrated by the acquisition of Shibaura Electronics. The company became the subject of competing takeover bids from a foreign strategic buyer (Yageo) and a domestic white knight (MinebeaMitsumi). The process evolved into a de facto bidding contest, with the ultimate outcome driven by price and execution certainty. This case signals a shift towards auction-like dynamics in Japanese M&A, where multiple bidders compete openly for control of listed companies.

Underlying these developments is a broader shift in the role of boards of directors. Japanese boards are increasingly expected to prioritise shareholder value and to engage seriously with credible acquisition proposals, even if unsolicited. This trend is reinforced by evolving soft-law guidance, in particular, the Guidelines for Corporate Takeovers published by the Japanese government in 2023, and judicial scrutiny of transaction fairness, particularly the FamilyMart case, which emphasises not only formal processes but also substantive outcomes.

### *Conclusion*

Japan's M&A market is undergoing a structural transformation. On the legal side, proposed Companies Act reforms are set to streamline key transaction steps and expand structuring flexibility. In parallel, market practice is evolving towards greater openness to unsolicited bids, increased competition among bidders, and heightened expectations regarding transaction fairness.

## Energy

### *Introduction*

In Japan, the promotion of renewable energy has been a central element of national energy policy, with the development of renewable energy generation being strongly supported by the Feed-in Tariff (FIT) scheme, which enabled project operators to sell electricity at fixed prices over long periods.

In recent years, however, revisions to the FIT system, a gradual transition to the Feed-in Premium (FIP) scheme and a diminishing supply of land suitable for renewable energy development have caused newly developed primary projects to decrease, while transactions involving existing projects – commonly referred to as secondary transactions – have increased.

At the same time, battery storage businesses have attracted growing attention to address challenges in maintaining a stable supply–demand balance in the face of fluctuating weather conditions.

Contributed by: Norihiro Sekiguchi, Daisuke Mure, Yuki Kuroda and Ryosuke Sogo, Oh-Ebashi LPC & Partners

This chapter of the guide provides an overview of secondary transactions in renewable energy generation projects and battery storage businesses in Japan.

### *Secondary transactions in renewable energy generation projects*

Under the FIT regime, renewable energy projects expanded rapidly because investors could expect stable and relatively high electricity sale prices over extended periods. In recent years, however, reductions in FIT prices, the introduction of the FIP scheme and the scarcity of suitable development sites have limited opportunities for new greenfield projects. Against this backdrop, secondary transactions involving the acquisition and sale of existing renewable energy projects have become increasingly prevalent.

Secondary transactions offer several advantages for investors. Existing projects may continue to benefit from FIT prices granted under earlier certification conditions, which are often more favourable than current rates. In addition, given that the facilities are already constructed and operational, purchasers are not exposed to construction or completion risk. The existence of an operational record also allows investors to evaluate actual generation performance. Moreover, as electricity generation has already commenced, the time required to achieve stable revenue generation is significantly shorter than in primary project development.

From a transactional perspective, secondary acquisitions are typically structured either as share transfers or asset transfers. In a share transfer, the buyer acquires equity interests in the project company that owns and operates the renewable energy facilities. In an asset transfer, the buyer acquires specific assets and contractual positions, such as power generation facilities, land use rights and related contracts.

Due diligence is a critical aspect of secondary transactions. Where the project company is organised as a special purpose company, its activities are generally limited to a single renewable energy project. Accordingly, due diligence differs from that conducted in the acquisition of a diversified operating company and focuses primarily on project-specific issues. At the same time, it also differs from due diligence in primary projects, which often commence before assets and contractual relationships are fully established. In secondary transactions, existing facilities, permits, certifications, grid connection arrangements, land rights and key contracts must be carefully reviewed to confirm their validity, legal compliance and transferability.

Recent amendments to the Act on Special Measures Concerning Procurement of Electricity from Renewable Energy Sources by Electricity Utilities have also introduced requirements for community briefings and prior public notice. Where applicable, these procedures must be incorporated into the transaction schedule. The timing of explanatory meetings with local residents and advance notice measures may have a direct impact on the closing of a transaction, making early assessment of these requirements particularly important.

### *Battery storage businesses*

Renewable energy output fluctuates depending on weather conditions, so ensuring a stable electricity supply remains a persistent challenge. In response, battery storage businesses have emerged as an important means of mitigating volatility and supporting grid stability. In Japan, battery storage businesses can broadly be classified into co-located battery storage and grid-scale battery storage.

Co-located battery storage systems are installed alongside generation facilities or demand facilities and are not directly connected to the transmission or distribution grid. These systems are typically used to store surplus electricity during periods of excess generation and may also serve as emergency power sources during outages. Their primary functions are improving self-consumption efficiency and enhancing energy resilience.

Grid-scale battery storage systems, by contrast, are directly connected to the power grid. Electricity is charged from the grid and discharged back when demand or prices are higher, allowing operators to generate revenue by utilising price differentials. Grid-scale battery storage is therefore increasingly regarded as an independent business model rather than merely an ancillary function of renewable energy facilities.

The main markets available to grid-scale battery storage businesses in Japan include:

- the wholesale electricity market;
- the supply-demand adjustment market; and
- the capacity market.

Although participation in these markets can generate revenue, income levels are subject to volatility, and cash flows are not necessarily stable. This variability has posed challenges in securing external financing, as financial institutions typically prefer predictable income streams.

To address this issue, mechanisms aimed at stabilising cash flows have attracted attention, including participation in the Long-Term Decarbonized Power Source Auction operated by the Organization for Cross-regional Coordination of Transmission Operators (OCCTO), as well as entering into contracts with third parties that provide for the receipt of fixed consideration. If such mechanisms succeed in stabilising cash flows, they are expected to facilitate financing through bank loans and other methods, including project finance.

## Labour and Employment

### *Amendments to the Whistle-blower Protection Act and their impact*

In Japan, the Whistle-blower Protection Act was enacted in 2004, and it was subsequently amended in 2022. It has now been further revised, with the latest amendments scheduled to come into force on 1 December 2026.

The main points of the amendment include the following:

1. *expansion of the scope of whistle-blowers* to include freelancers (Article 2, paragraph 1, item 3 of the amended Act);

2. *prohibition of acts that obstruct whistle-blowing* (Article 11-2 of the amended Act);

3. *prohibition of acts aimed at identifying the whistle-blower* without justifiable grounds (Article 11-3 of the amended Act);

4. *introduction of a presumption rule* (*shift in the burden of proof*) concerning dismissals or disciplinary actions taken on the grounds of whistle-blowing (Article 3, paragraph 3 of the amended Act); and

5. *introduction of criminal penalties* for dismissals or disciplinary actions taken on the grounds of whistle-blowing (Articles 21 and 23 of the amended Act).

Among these, items 4 and 5 are particularly attracting attention as having a significant practical impact.

First, with regard to item 4, under the current law, disadvantageous treatment, including dismissal, on the grounds of whistle-blowing is already prohibited (Article 5 of the current Act). Such disadvantageous treatment is interpreted broadly to include, for example, demotion, salary reduction, disadvantageous reassignment, and disciplinary actions. The amended Act introduces a presumption that any dismissal or disciplinary action taken within one year from the date of whistle-blowing is deemed to have been made on the grounds of the whistle-blowing. In other words, the burden of proof is shifted to the employer to demonstrate that the action was not based on the whistle-blowing.

Next, regarding item 5, such criminal penalties do not exist under the current law and will be newly introduced by the amendment. However, the above-mentioned provision on the shift in the burden of proof does not apply to these criminal penalties.

The persons subject to penalties are individuals who were involved in the decision-making process concerning a dismissal or disciplinary action in violation of this provision. Specifically, this may include not only company representatives but also heads of human resources departments and members of disciplinary committees, among others. As for the level of penalties, individuals may be subject to imprisonment for up to six months or a fine of up to JPY300,000 (Article 21, paragraph 1), while a business operator that is a legal entity may be subject to a fine of up to JPY30 million (Article 23, paragraph 1, item 1).

With respect to these items 4 and 5, there was a debate as to whether personnel transfers or reassign-

ment should be included within the scope thereof. As a result, personnel transfers and reassignments have initially been excluded from the scope, but this point is to be reviewed in three years, as stipulated in the supplementary resolutions of the National Diet. In Japan, where employment is predominantly based on a membership-type system rather than a job-based system, personnel transfers are carried out routinely and are considered to fall within the employer's broad discretion. It was therefore determined that including personnel transfers within the scope of items 4 and 5 would have an extremely significant impact on business practices; and, for this reason, such inclusion was deferred on this occasion.

From a practical perspective, it is not uncommon for problematic employees to make whistle-blower reports for the purpose of advancing their own interests – for example, to avoid strict supervision, seek more favourable personnel treatment, or evade undesirable assignments or workplace relationships. It is important to be mindful that such potentially abusive or opportunistic whistle-blowing may increase in the future.

### *Mandatory measures against customer harassment (amendment to the Act on Comprehensive Promotion of Labour Policies)*

On 4 June 2025, the Act Partially Amending the Act on Comprehensive Promotion of Labour Policies and Related Laws was passed, and it was promulgated on June 11 of the same year.

The Act defines customer harassment as "conduct by customers, business partners, users of facilities, or other persons having a relationship with the business activities of the employer (hereinafter referred to as 'customers, etc.') that, in light of the nature of the duties in which the employed workers are engaged and other relevant circumstances, exceeds the range considered acceptable under social norms and thereby harms the working environment of workers."

With respect to such customer harassment, the Act establishes guidelines setting forth the measures that employers are required to take. Specifically, the guidelines provide for the following obligations of employers:

- *clarification of the employer's policy and dissemination/awareness-raising*, including informing workers (including managerial and supervisory personnel) of the content of customer harassment and the predetermined methods of response;
- *establishment of a system necessary for appropriately responding to consultations from workers*, including setting up a consultation desk, informing workers of its availability, and ensuring that the personnel in charge respond appropriately;
- *prompt and appropriate post-incident responses to customer harassment*, including swift and accurate fact-finding, measures to give due consideration to the affected worker, and the implementation of measures to prevent recurrence; and
- *deterrence measures necessary to ensure the effectiveness of responses to customer harassment*, including establishing and disseminating policies for dealing with particularly malicious cases.

These provisions are scheduled to come into force on 1 October 2026.

## Japan's APPI Amendment Bill: Key Changes

The Personal Information Protection Commission (PPC) began its triennial review of the Act on the Protection of Personal Information (APPI) in November 2023 and the cabinet submitted a formal amendment bill to the Diet on 7 April 2026. The bill was passed by the Diet on July 10th.

### *Promotion of proper data utilisation*

*Statistical processing exception (AI development)*

Under the current APPI, acquiring publicly available sensitive personal data or providing personal data to a third party generally requires prior consent. The bill introduces a new exception: consent will not be required where personal data is used exclusively for "creation of statistical information", expressly including AI model development classifiable as statistical processing. To qualify, parties must:

- publicly disclose key information (identities and nature of processing);
- enter into written agreements; and
- strictly refrain from any use or transfer beyond the permitted purpose.

Violation of these conditions may lead to administrative monetary penalties (see Section 4).

*Other relaxations of consent requirements*

Processing that clearly does not conflict with a data subject's wishes will be permitted without consent – for example, sharing a customer's booking data with the hotel at which the customer has reserved a room, or sharing remitter data between banks to process an overseas transfer.

### *Rules to appropriately address risks*

The following rules apply.

- *Children's data* – Consent requests and notices must be directed to the legal representatives of children under 16. Such children (or their representatives) will have a right to request cessation of use or deletion without having to demonstrate a legal violation, and businesses must prioritise minors' best interests when handling their personal data.
- *Biometric data* – Biometric data can be collected without individuals' knowledge and used to track behaviour indefinitely, so specific obligations apply. Businesses must publicly disclose key processing details (business name, purpose and opt-out procedures), individuals will have an enhanced right to request cessation of processing, and it will be prohibited to transfer biometric data to third parties under the opt-out regime.
- *Outsourced processing* – Processors will be explicitly prohibited from using entrusted data beyond the scope of the delegated work. Where a processor acts solely on the controller's instructions and appropriate monitoring agreements are in place, it may be exempted from most obligations under Chapter 4 of the APPI.
- *Breach notification* – Individual notification following a breach may be replaced by alternative measures where there is little risk to data subjects' rights and interests (for example, where only internal system identifiers that are meaningless to third parties have been leaked).

### *Prevention of improper use*

The bill extends certain APPI protections to information that does not qualify as "personal information" but nonetheless enables contact with a specific individual – such as email addresses, telephone numbers and Cookie IDs. Even where no specific individual can be identified from such information alone, its misuse can facilitate phishing attacks, investment fraud and other serious harms. Improper use and unlawful acquisition of such information will be prohibited in the same manner as for personal information.

### *Rules to ensure effective compliance*

The following rules apply.

- *Enhanced orders* – Emergency orders may now be issued where harm is imminent, without waiting until harm has occurred or first issuing a recommendation. Orders may also require businesses to notify or publicly disclose to affected individuals the existence of a violation.
- *Administrative monetary penalty* (*surcharge/kachoukin*) – A surcharge equal to financial gains from the violation will apply where: specific provisions are violated with insufficient preventative care; individual rights are infringed or at imminent risk; and at least 1,000 data subjects are affected. This is designed to remove the economic incentive for large-scale violations that existing tools have not fully deterred.
- *Criminal penalties* – Maximum imprisonment for unlawful database provision will increase from two to three years; other data offences from one to two years, with corresponding fine increases. A new offence will cover obtaining personal data through fraud, unauthorised access or other conduct undermining the data controller's management.

### *Takeaway*

The bill balances relaxing consent requirements to facilitate AI and data-driven business with significantly stronger enforcement tools. Subject to Diet deliberations, it is expected to come into force within two years of promulgation. Businesses processing personal data in Japan should assess the impact on their AI/data analytics operations, handling of children's data, processing of biometric data, and vendor management arrangements.

**Rex Law Partners** is a law firm based in Kosovo, established through the transition of a longstanding legal practice of Deloitte Legal in Kosovo. It represents a continuation of an established team, practice and client base under a separate identity. Rex Law Partners advises on corporate and commercial law, regulatory and compliance matters, employment law, mergers and acquisitions, corporate governance and restructuring, privacy and data protection, and dispute resolution. The firm's professionalism is recognised by leading international legal directories, including Chambers and Partners, where its lawyers are consecutively ranked as leaders in their fields. Rex Law Partners delivers clear, commercially grounded legal advice, combining technical precision with a strong understanding of business realities. The firm advises across core areas of business law, with experience spanning key industries including energy, construction, telecommunications, financial services, manufacturing and technology. The firm's approach is pragmatic, solution-oriented and aligned with clients' operational and strategic priorities.

## Authors

**Ardian Rexha** is managing partner of Rex Law Partners and an attorney at law based in Kosova. Before founding Rex Law Partners, he led Deloitte's legal practice in Kosovo and previously worked in the judiciary. He advises international companies in financial services, energy, construction and telecommunications, with a focus on corporate and commercial law, regulatory matters and fiscal legislation. Ardian holds an LLM in International and European Economic Law from Maastricht University. He is the author of several publications in international legal journals and has been repeatedly recognised as one of the leading lawyers in Kosovo by reputable legal journals.

**Nora Grajcevci Mehmeti** is a partner and attorney at law at Rex Law Partners, with extensive experience in legal practice in Kosovo. She has developed a strong professional background through her work with leading law firms in Kosovo and her recent experience with Deloitte Legal in Kosovo. Her practice covers regulatory compliance, employment law, banking and finance, energy and dispute resolution. Nora leads the firm's litigation practice, drawing on her extensive experience in civil, commercial and criminal proceedings, including white-collar crime matters. This litigation background complements her advisory work and enables her to provide clients with practical, well-rounded legal support.

**Vjollca Hiseni** is a senior counsel at Rex Law Partners. She has developed a strong professional background through her work at leading law firms in Kosovo prior to joining the firm. Her practice spans corporate law, mergers and acquisitions, competition law, employment law, energy law, data protection and consumer protection. She advises major international companies, with particular experience in data protection services, corporate governance and the energy sector. She is an author of several publications in international legal directories.

## 1. Legal System

### 1.1 Legal System and Judicial Order

Kosovo observes a legal system largely derived from the continental civil law tradition. The main sources of law consist of the Constitution at the top of the legal hierarchy, followed by codes, laws and international conventions incorporated as part of the internal legal system via ratification in the Assembly of Kosovo.

The judicial system is established in the Constitution as well as Law No 06/L-054 on Courts and its subsequent amendments. The court system consists of seven basic courts, the court of appeal and the Supreme Court, as well as the Commercial Court and the Administrative Court, which have jurisdiction over economic and administrative disputes. Finally, the Constitutional Court operates independently and handles all cases that involve the interpretation or conformity of laws with the Constitution.

## 2. Restrictions on Foreign Investments

### 2.1 Approval of Foreign Investments

Foreign investors and investments in Kosovo are afforded the same legal rights and obligations as domestic investors, pursuant to Law No 08/L-209 on Sustainable Investments. As such, no general governmental approval is required solely on the basis that an investment is made by a foreign investor. However, specific approval requirements may apply in relation to strategic investments and investments that may affect public order or national security.

An investor can apply for strategic investment status in order to benefit from priority treatment, economic facilitations and specialised state support. This status is given to investors aiming to invest in the following priority sectors:

- manufacturing and processing;
- agriculture;
- information and communication technology;
- education and training, research and innovation;
- health;
- tourism;
- sewage and waste administration;
- transport;
- energy; and
- mines.

An investment must reach a minimum value of EUR10 million to be eligible for designation as a strategic investment.

A strategic investment can be subject to “additional verification” screening if it is likely to affect public order or state security. The screening is particularly relevant for investments involving the following sectors:

- critical infrastructure;
- critical technology and dual-use goods under applicable legislation;
- supply of critical goods, including energy, raw materials and food;
- access to or control over sensitive information; and
- media freedom and pluralism.

Additional approvals may be required where a strategic investment involves the use of public immovable property. Depending on the ownership of the relevant property, approval may be required from the Assembly of Kosovo, the relevant municipal assembly or the competent public enterprise. Public immovable property may be made available for strategic investment projects for up to 99 years.

### 2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance

Since there is no general pre-approval requirement that applies to foreign investments at large, there are also no statutory sanctions if investment proceeds without approval. Foreign investors must obtain specific approvals to gain strategic investment status, or if their investment is subject to screening for public order and security reasons.

There are no direct consequences of investing without approval, but if the investment is subject to screening and is found to affect public order or state security, and does not meet authorisation requirements, the Investment Council may prohibit or order the removal of the investment. Alternatively, the Council may issue a decision that sets specific conditions and deadlines to mitigate the threats posed by the investment. The Council may also cancel the decision for a strategic investment ex-post if the investor provided incorrect data or concealed information that influenced the initial approval.

### 2.3 Commitments Required From Foreign Investors

There is no general statutory requirement providing that conditions or commitments automatically apply to all foreign investments in Kosovo. Most foreign investments are not subject to negotiated obligations unless the investment falls within specific regulated categories. If an investment is granted strategic investment status, approval generally requires an implementation arrangement between the investor and the government, which includes the specific commitments of the investor for the project, the defined timelines for its execution and mechanisms for protection of the interests of the Republic of Kosovo in case the deadlines are not met or the project is abandoned. However, the particulars of these commitments would be subject to negotiations between the government and the specific investor.

For investments undergoing additional verification for security reasons, the Investment Council can issue a decision that sets specific conditions and deadlines to mitigate threats to public order or state security. If an investor fails to demonstrate compliance with these conditions, the Council may issue sanctions as described in **2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance**.

### 2.4 Right to Appeal

A lawsuit for an administrative conflict is allowed against certain decisions, namely Council decisions (including refusals), cancelling or repeal investment status, or screening decisions. The recently established Administrative Court has jurisdiction over these matters.

## 3. Corporate Vehicles

### 3.1 Most Common Forms of Legal Entity

In Kosovo, the most common corporate vehicles for business registration are limited liability companies (LLCs) and joint stock companies (JSCs). The Law on Business Organizations also recognises several other forms, though they are generally less common for larger corporate structures:

- individual business – the owner has unlimited liability for all debts;
- general partnership – all partners have unlimited liability; and
- limited partnership – consists of at least one general partner (unlimited liability) and at least one limited partner.

#### Limited Liability Companies

The LLC is the most common form of business organisation in Kosovo and is generally preferred for private ownership and subsidiary operations. The LLC is a distinct legal person, separate from its shareholders, and is itself liable for its own debts and obligations. There is no minimum capital requirement for an LLC in Kosovo.

The LLC must have at least one managing director. Establishing a board of directors is optional and must be explicitly mentioned in the charter if desired. Within the company structure, the shareholder assembly holds the most power and decision-making authority.

### Joint Stock Companies

JSCs are typically recommended for businesses with multiple shareholders or those intending to trade shares publicly. Shareholders have limited liability, with their ownership interest represented by shares. The minimum capital requirement for a JSC is EUR10,000. A JSC must have a board of directors and must have at least one shareholder at incorporation.

### Branch of Foreign Organisations

In some cases, it is also appropriate to establish a branch. Unlike LLCs or JSCs, a branch is not a separate legal entity but is considered an extension of the parent company located outside Kosovo. The parent organisation assumes unlimited liability for all the rights and obligations of the branch in Kosovo.

## 3.2 Incorporation Process

Businesses in Kosovo have to be registered with the Kosovo Business Registration Agency (KRBA).

### Incorporation of Limited Liability Companies

The authorised representative must submit the following to register an LLC:

- the KRBA registration form, with relevant information provided for shareholders and directors;
- the company charter, which should specify, among other requirements, the company name, address, business activity, corporate governance structure, decision-making procedures and, where applicable, share classes and voting rights;
- the memorandum of incorporation, which should detail who the founders are, share allocation, payment terms, contributions (in cash and in kind), management structure and incorporation costs – if there is only one founder, an act of establishment is filed instead of the memorandum; and
- a copy of the personal identification document of the authorised representative.

### Incorporation of Joint Stock Companies

The authorised representative must submit the following to register a JSC.

- The KRBA registration form.
- The company charter, which should specify the company's name, address, business activity, management structure and detailed rules on share capital. This includes any applicable rules regarding common and preferred shares, their rights, issuance limits and non-monetary contributions. The charter must also comply with gender representation quotas requiring minimum female participation on the board of directors.
- The memorandum of incorporation, with requirements similar to those applicable to LLCs.
- A copy of the personal identification document of the authorised representative.

### Registration of Branches

Pursuant to Article 35, a branch of a foreign business organisation is not a separate legal entity and must submit the following for registration:

- the KRBA registration form;
- a registration certificate of the foreign business organisation from its home country (not older than three months);
- the decision to establish the branch of the foreign business organisation in Kosovo; and
- a copy of the personal identification document of the authorised representative.

According to the Law on Business Organizations, the KBRA must make an entry in the registry and publish the information no later than two working days after receiving the initial application. If an application fails to meet requirements, the KBRA notifies the applicant and sets a deadline of up to ten working days for corrections.

## 3.3 Ongoing Reporting and Disclosure Obligations

All business organisations are required to update their registered data and ensure permanent accuracy. If there is a change related to the business information, an amendment must be submitted to the KRBA within 15 days of the change.

An application for amendment must also be submitted to the KBRA in the event of the appointment, removal or change in the right of representation of a managing director or board member.

When shareholders wish to amend the charter of an LLC, the authorised representative must complete and submit the forms prepared by the KBRA. This filing must include a copy of the shareholder decision regarding the amendment and the full text of the amended charter. The amendment is considered to have entered into force only after registration and publication by the KBRA.

#### Ultimate Beneficial Ownership

Under Law No 08/L-265 on the Register of Beneficial Owner, all commercial companies are required to declare their beneficial owners in the Beneficial Ownership Register within 30 calendar days of incorporation. The Register is a centralised electronic database managed by the KRBA. Any subsequent change to beneficial ownership must also be reported and updated within 30 calendar days of the change occurring. Notwithstanding this, due to missing sub-legal acts, the Beneficial Ownership Register is not yet operational; hence, beneficial owners are not yet being declared.

### 3.4 Management Structures

#### Limited Liability Companies

LLCs are managed by at least one managing director and may optionally appoint of a board of directors if stipulated in the charter. In the absence of a board, the shareholder assembly is the highest decision-making body, holding the power to elect or remove managing directors charged with day-to-day operations and legal representation. If a board is established, the provisions governing the board of directors of a JSC apply.

#### Joint Stock Companies

Each JSC is required to have a board of directors responsible for managing and directing the company's activities. The system is structured as a one-tier model, with board members appointed by the shareholders' assembly. The board appoints at least one managing director to represent and manage the company. This managing director reports and functions under the direction of the board. The roles of chairperson of the board and managing director should be separate; the chairperson of the board of directors may not simultaneously serve as the managing director. In addition, no officer, manager or other employee of the JSC is permitted to serve as a director on the board.

### 3.5 Directors', Officers' and Shareholders' Liability

In exercising their functions, managing directors, members of the board and officers are obliged to act with fairness, loyalty and full care in due account of the interests of the company and other partners or shareholders. As such, they are expected to protect company assets and confidential information, avoid exploiting corporate opportunities for personal gain, refrain from competing with the business and prevent personal interests from negatively impacting the company. If these persons act contrary to these duties, they are liable to compensate the company for damages and must repay any personal profit acquired through the infringement.

## 4. Employment Law

### 4.1 Nature of Applicable Regulations

Employment relationships are governed by Law 03/L-212 on Labour, applicable to all employees and employers in the private and public sector in Kosovo, including foreign nationals working in Kosovo. Certain categories are excluded from its scope, namely:

- employment relationships within the context of international missions;
- diplomatic and consular missions of foreign states;
- international military presence in Kosovo under the Comprehensive Proposal for the Status Settlement; and
- international governmental organisations.

The Law on Labour forms the main framework regulating employment relationships, supplemented by individual employment agreements as well as collective contracts and the employer's internal act where applicable. The employment agreement forms the legal basis for an employment relationship. Collective agreements and internal rules may grant employees

more favourable rights and working conditions than those provided by law but they cannot go below the statutory minimum protections.

In addition, occupational safety and health is regulated separately under the Law on Safety and Health at Work, which establishes mandatory obligations for employers regarding workplace conditions and safety.

### 4.2 Characteristics of Employment Contracts

An employment contract must be concluded in written form and signed by both the employer and the employee. The agreement may be for an indefinite period, a fixed period or for specific tasks (not exceeding 120 days within a year).

The contract must include the following particulars:

- data on the employer, including designation, residence and business register number;
- data on the employee, including name, surname, qualification and dwelling;
- designation, nature and form of labour, and the job description;
- the place of work or a statement that work is performed at various locations;
- working hours and working schedule;
- the date of commencement of work;
- the duration of the employment contract;
- the basic salary and any other allowance or income;
- the vacation period; and
- provisions for the termination of the employment relationship.

If a trial period is included, it must be defined in the contract and cannot last more than six months.

### 4.3 Working Time

Full-time working hours are 40 hours per week. For employees under 18 years of age, the maximum hours are 30 hours per week. For jobs involving hazardous impacts on health, working hours may be reduced, at most to 20 hours per week.

Employees are entitled to rest periods, including a daily rest of at least 12 continuous hours between two work days and a weekly rest of at least 24 continuous hours.

Overtime is permitted in extraordinary cases when workload is significant but is limited to a maximum of eight hours per week. Overtime allowance is to be calculated at 30% per hour of the basic salary. The employer may also decide to compensate overtime with days off if this mechanism is stipulated in the employment contract or internal act.

Specific restrictions on overtime include:

- employees working on reduced or part-time hours cannot work more than full-time hours;
- overtime work is not permitted for employees under 18 years of age;
- employers shall not extend working hours for pregnant employees, single parents with a child under three years old or parents with a child with disabilities; and
- pregnant women and mothers with children under three years of age cannot be obliged to work longer than full-time hours.

### 4.4 Termination of Employment Contracts

An employment relationship may be terminated in three ways.

- Mutual written agreement between the employer and employee.
- By operation of law, which applies, for instance, in the following circumstances:
  - (a) expiry of a fixed-term contract;
  - (b) death of the employee or the employer, with no successor;
  - (c) the employee has reached retirement age;
  - (d) a decision has been issued that verifies loss of working capacity;
  - (e) a decision by a competent court; or
  - (f) bankruptcy or liquidation of the employer.
- By unilateral termination initiated either by the employee or by the employer.

An employee may terminate the contract with a notice period of 15 days for fixed-term contracts and 30 days for indefinite-term contracts. No notice period is required if the employer has committed a serious

breach of its obligations under the employment contract.

Unilateral termination by the employer is permitted if one of the following legal bases applies:

- the employee is no longer capable of performing their duties;
- the termination is necessary for economic (eg, loss of revenue, cost-reduction measures), technical (eg, automation of functions or replacement of certain tasks) or organisational (eg, changes to operational structure, elimination of certain functions) reasons; or
- there has been serious misconduct or dissatisfactory performance of work duties.

For indefinite-term contracts, the notification periods are based on seniority:

- for six months to two years of service, the notice period is 30 days;
- for two to ten years of service, the notice period is 45 days; and
- for more than ten years of service, the notice period is 60 days.

For fixed-term contracts, the notice period is 30 days.

There are two cases in which the employer is permitted to terminate the contract without complying with the notice periods described in the foregoing: (i) the employee repeatedly commits less serious misconduct or breaches employment obligations, or (ii) the employee's performance is unsatisfactory despite a previous written warning.

However, immediate dismissal in these cases is conditioned on the following:

- the employee has previously been issued a written description of the dissatisfactory conduct or performance;
- the employee has been provided a reasonable period within which they could have improved this situation; and
- the employee was provided a clear warning that failure to improve within that period could result in dismissal without further notice.

In any case, the employer must hold a meeting with the employee to explain the grounds before issuing a warning or terminating employment. In this meeting, the employee is entitled to be accompanied by someone of their choosing, and this right should be communicated to them beforehand, usually in the formal invitation.

The decision to terminate employment must be issued in writing and state the legal and factual grounds therefor. Additionally, the employer is obliged to pay all outstanding salary and other allowances up to the effective date of termination.

### Collective Redundancies

A collective dismissal occurs when at least 10% of employees, but no fewer than 20%, are discharged within a six-month period for economic, technical or organisational reasons. If this threshold is not met, the termination of employment relationships is treated as unilateral termination for organisational reasons, per the rules described in the foregoing.

The employer must notify employees and trade unions in writing at least one month in advance, specifying the number of employees affected and measures taken to alleviate consequences. The employer must also notify the employment office in writing.

Employees with indefinite-term contracts are entitled to a single severance payment upon termination, the sum of which is relative to the years of service with the employer.

## 4.5 Employee Representations

As mentioned in **4.4 Termination of Employment Contracts**, when an employer holds a meeting to explain the termination of an employment contract or to issue a warning, the employee is entitled to be accompanied by a representative of his or her choice. Excluding this situation, there is no statutory requirement for employee representation in Kosovo.

Nevertheless, employees are guaranteed freedom of association and trade-union action without interference. Trade unions have the legal role of organising strikes for the protection of employee rights. If an employer plans a collective dismissal, they are required to notify the employees' trade union in writing at least one month in advance (provided a union is active).

With regard to collective bargaining, employee organisations or their representatives are the necessary parties for concluding collective contracts at the state, branch and enterprise levels.

## 5. Tax Law

### 5.1 Taxes Applicable to Employees/ Employers

Pursuant to Law No 05/L -028 on Personal Income Tax, taxation applies to income generated from wages, salaries, bonuses and other forms of compensation. Taxes are primarily through a withholding at source system, where employers deduct income tax and pension contributions from employees' gross salaries and remit them to authorities. Tax residents are taxed on all income, whereas non-residents are taxed only on income earned within Kosovo.

Taxable income from employment is calculated after deducting mandatory pension contributions. Both the employer and the employee are required to contribute 5% of the gross salary each to the pension fund, with optional additional contributions of up to 10%. These contributions are paid into the Kosovo Pension Savings Fund or licensed alternatives.

Following the deduction of pension contributions, personal income tax is applied on a progressive basis, as follows:

- 0% on annual income from EUR0 to EUR3,000;
- 8% on annual income from EUR3,000 to EUR5,400; and
- 10% on annual income above EUR5,400.

For employees that receive income from a secondary employer, a flat rate of 10% applies to the secondary employment income.

### 5.2 Taxes Applicable to Businesses

Corporate taxation is primarily governed by Law No 06/L-105 on Corporate Income Tax, Law No 05/L-037 on Value Added Tax, Law No 05/L-028 on Personal Income Tax and Law 08/257 on Tax Administration and Procedures, supplemented by relevant administrative instructions issued by the Tax Administration of Kosovo (*Administrata Tatimore e Kosovës* – TAK).

#### Corporate Income Tax

Corporate income tax is set at a flat rate of 10% on taxable income.

#### VAT

Companies engaged in the supply of goods or services are generally subject to VAT. The standard VAT rate is 18%, while a reduced rate of 8% applies to certain goods and services, typically those considered essential. Certain activities of public interest are exempt from VAT, including other activities in financial and insurance services, such as loans granted by financial institutions, life insurance and reinsurance, amongst others.

VAT registration is mandatory once an entity's annual taxable turnover exceeds EUR30,000, although voluntary registration is permitted below this threshold. VAT is also applied to imports of goods, whereas export of goods is exempted of VAT.

#### Withholding Tax

Withholding tax obligations apply to specific categories of cross-border and domestic payments, including interest, royalties, rent and certain service payments made to non-residents. Applicable rates are as follows:

- 10% for interest and royalties;
- 9% for rent; and
- 5% for qualifying services paid to non-resident entities.

Dividends are exempt from taxation in Kosovo.

### Payroll Obligations
Employers are required to comply with payroll-related obligations, including the withholding personal income tax and pension contributions defined in **5.1 Taxes Applicable to Employees/Employers**.

### OECD Pillar Two
Pillar Two of the OECD's Two Pillar Solution has not been implemented in Kosovo.

## 5.3 Available Tax Credits/Incentives
Dividend income received by resident and non-resident persons is exempt from taxation.

### Strategic Investments
Investments that meet national objectives or fall within priority sectors benefit from additional facilitations, including simplified or preferential treatment for imports used in manufacturing or processing (such as machinery, raw materials, semi-products or other inputs), as well as exemption from export duties.

### Temporary VAT Exemption on Raw Materials
As per the Law on Economic Recovery, raw materials that are produced from registered and active businesses in Kosovo, regardless of whether they are exported or internally traded, are exempt from chargeable VAT until 31 December 2028.

### Tax Reduction for New Assets
A one-time 10% deduction applies for corporate income tax purposes for taxpayers that purchase and first put into use new heavy machinery classified under the 10% depreciation category. This deduction is not available if the taxpayer already benefits from other tax exemptions or incentives.

### VAT Exemption for Certain Imports
Article 29 of Law No 05/L-037 on Value Added Tax provides that production lines, production machinery and raw materials used in the manufacturing process qualify for VAT-exempt import. The specific categories of machinery are not listed, and communication with TAK is required to ensure compliance.

### Tax Credits
For the avoidance of double taxation, Kosovo residents who earn business income abroad and pay income tax to a foreign country are entitled to a tax credit in Kosovo for the amount paid. This credit acts as a deduction on their owed Kosovo income tax. The deduction cannot go over the amount of tax Kosovo would have originally charged on that specific foreign income.

### Customs Duties Exemption
Manufacturers are granted exemption from customs duties on imports of raw materials, semi-finished goods, production machinery and IT equipment. This is limited to approval entities, as authorised by TAK, and is implemented through a unique customs declaration, which must include the manufacturer's fiscal number. Kosovo Customs records relevant data in the automated system for customs data (ASYCUDA) and informs TAK for compliance.

### Free Trade
Kosovo also applies free trade agreements (FTAs), which eliminate or reduce customs tariffs on certain goods traded with partner countries. For more information, please refer to **5.8 Tariffs**.

## 5.4 Tax Consolidation
Tax consolidation is not available in Kosovo

## 5.5 Thin Capitalisation Rules and Other Limitations
There are no applicable thin capitalisation rules in Kosovo.

## 5.6 Transfer Pricing
Transfer pricing rules are set out in the Law on Corporate Income Tax and Administrative Instruction No 02/2017 on Transfer Pricing, and apply to all controlled transactions with related parties. Controlled transactions arise where there is a special relationship between the parties that could influence the terms and conditions of the transaction, making them potentially non-compliant with the arm's length principle.

"Related parties" refers to the following situations:

- one party holds or controls 50% or more of the shares or voting rights in another entity;
- one party directly or indirectly controls another party;

- two parties share a common controlling third party; or
- parties are related individuals up to the third degree, as per the Law on Heritage of Kosovo.

The taxpayer has to ensure that their controlled transactions are conducted in accordance with the market standards. When requested by TAK, transfer pricing documentation must be submitted within 30 days.

### 5.7 Anti-Evasion Rules

Kosovo's anti-tax evasion framework is primarily set out in Law No 08/L-257 on the Administration of Tax Procedures, which establishes the rights, obligations and enforcement powers of TAK. For instance, TAK may disregard transactions that lack "substantial economic effect" or re-characterise them if their form does not reflect their economic substance. This includes re-characterising elements of transactions entered into specifically as part of a scheme to avoid tax liability.

#### Transfer Pricing Adjustments

With respect to transfer pricing, when controlled transactions do not reflect the open market value, TAK may adjust taxable income and allocate revenues and expenses between related parties to reflect the outcome that would have arisen between independent entities.

#### Fictitious Invoices

TAK does not recognise expenses for income tax purposes or input credits for VAT purposes if they are based on fictitious transactions or invoices. A fictitious invoice is defined as one issued by an unregistered person or for a transaction/supply that did not take place.

#### Payment Restrictions

Since June of 2026, any transaction concluded between a business and a non-business individual is subject to mandatory electronic payment requirements, with cash payments being capped at EUR2,000.

#### Enforcement and Inspection

TAK officials have "full and free access" to any facility where economic activity occurs or where records are stored. These inspections may be carried out at any time, and/or with prior notice, for verifying compliance or recovering outstanding tax obligations. TAK may also conduct visits, without prior notice to the taxpayer, to confirm compliance with applicable tax laws, obtain information pertinent to subsequent audit activity and collect past due tax debts as considered necessary.

### 5.8 Tariffs

Kosovo's tariff system is regulated by the Customs and Excise Code and is based on harmonised system (HS) of the World Customs Organization and the combined nomenclature (CN) of the EU.

Customs duties range from 0% to 10%. A standard 10% duty applies to imports from countries with which Kosovo does not currently have a preferential or free trade arrangement. Preferential tariff treatment applies under Kosovo's FTAs and other applicable frameworks, including the Central European Free Trade Agreement (CEFTA), the Stabilisation and Association Agreement (SAA), the European Free Trade Association (EFTA) and preferential agreements with Turkey, the USA and the UK.

Goods originating from CEFTA members are generally not subject to any custom duty, nor are certain industrial, agricultural and fishery imports from the EU under the Stabilization and Association Agreement.

In addition to customs duties, Kosovo applies excise taxes on specific goods, primarily for public policy purposes. These taxes are calculated as fixed amounts per quantity and apply to products such as tobacco, alcoholic beverages and petroleum products.

## 6. Competition Law

### 6.1 Merger Control Notification

M&A transactions are governed by Law No 08/L-056 on Protection of Competition (LPC). Under the LPC, concentrations have to be approved by the Competition Authority if defined thresholds are met. A concentration is defined as any "steady change of control of enterprises when independent enterprises join together or parts thereof; one or more enterprises

acquire direct or indirect control over all or part of other enterprises, in particular by earning shares, by gaining the majority of voting rights and in other ways provided by the legislation in force".

The following are exceptions and are not considered concentrations:

- transactions which constitute a temporary financial holding;
- transactions which refer to an internal restructuring;
- bankruptcy-related acquisitions; and
- joint ventures.

If there is a concentration that does not constitute one of these exceptions, it must be notified to the Competition Authority if either of the following conditions are met:

- the undertakings concerned have combined worldwide turnover exceeding EUR20 million and at least one undertaking has turnover exceeding EUR1 million in Kosovo; or
- at least two undertakings each have turnover exceeding EUR3 million in Kosovo.

In its turnover calculation, the undertakings should take into account the entire "group of associated enterprises", excluding intra-group transactions for the preceding financial year. An associated enterprise is any entity over which a party exercises decisive influence through ownership, voting rights or management control.

### 6.2 Merger Control Procedure

When a concentration meets the defined thresholds and does not constitute any of the listed exemptions, it has to apply to the Competition Authority for approval.

The application is to be submitted by the enterprise that acquires control over the other, or all concentration participants by mutual agreement. It is generally to be submitted upon conclusion of the contract of the transaction or after the concentration is made public, but before the concentration is carried out.

The application for permitting the concentration should include, but is not limited to, the following:

- the contract or other legal document forming the basis for the transaction (original or certified copy);
- the annual financial report of the participants for the preceding financial year;
- information on the participants, including the names, registered addresses and relevant business activities;
- the shareholder structure before and after the concentration;
- a list of other enterprises in the same market where the parties hold 10% or more of the shares/voting rights, as well as any overlapping board of directors or supervisory board members;
- disclosures of any other foreign competition authorities currently reviewing (or that will review) the same concentration;
- total annual revenues for each participant (excluding VAT and taxes);
- identification of the relevant markets, the parties' market shares before and after the transaction, and an evaluation of their main competitors; and
- the legal and economic reasons for the concentration.

Upon receipt of the full application, the Authority initiates its concentration assessment and publishes a public announcement of the proposed transaction. At this stage, interested third parties may submit remarks regarding the concentration and its potential effects. The Authority has 30 days to determine whether the proposed concentration raises competition concerns. If no concerns are identified and no formal assessment procedure is initiated within that period, the concentration is considered permissible, and the parties may be issued a certificate confirming this.

If, during the initial assessment, the Authority suspects the transaction may significantly harm market competition, particularly through the creation of a dominant position in the market, it may launch a formal assessment of the transaction. During this review, the parties may propose corrective measures to address concerns, including proposed timelines. The Authority may approve the proposed remedies, modify them or impose its own conditions if necessary.

Within 60 days of the initiation of the assessment procedure, the Authority issues a final decision either prohibiting the concentration, approving it unconditionally or approving it subject to specified conditions. If the permit is conditional, the parties are required to comply with imposed conditions; otherwise, the approval decision may be revoked.

## 6.3 Cartels

Article 5 of the LPC prohibits agreements, decisions and concerted practices between undertakings that are aimed at preventing, restricting or distorting competition in a relevant market. In particular, the following are considered anti-competitive:

- directly or indirectly fixing selling or purchasing prices or other trading conditions;
- restricting production, markets, technical development or investment output;
- market sharing/allocation;
- applying dissimilar conditions to equivalent transactions; and
- making the conclusion of contracts subject to supplementary obligations that have no connection to the object of the contract.

Notwithstanding the foregoing, certain agreements may be exempted under certain conditions where otherwise they would be considered anti-competitive. These exemptions are granted for agreements that contribute to improving the production or distribution of goods, or promote technical or economic progress, while allowing consumers a fair share of the resulting benefits. Additionally, these agreements must not impose unreasonable restrictions that go beyond what is necessary to achieve their objectives, nor may it eliminate competition in respect of a substantial part of the products or services concerned.

Block exemptions are also provided for certain categories of agreements, as follows:

- vertical agreements, particularly exclusive distribution agreements, selective distribution agreements, exclusive purchase and exclusivity agreements;
- horizontal agreements in research, development and specialisation agreements;
- tech transfer agreements;
- agreements for distribution and servicing of vehicles;
- insurance agreements; and
- agreements between enterprises in transport sector.

### Scope of Application

The scope of the Law on Protection of Competition is not limited to conduct within Kosovo, but to conduct that produces effects on the Kosovo market, regardless of where the undertakings are established or where the relevant activity takes place. If an anti-competitive agreement is concluded between foreign undertakings, it may still fall in within these prohibitions if it affects competition within Kosovo.

## 6.4 Abuse of Dominant Position

An undertaking is considered to hold a dominant position when, due to its power in the market, it can operate independently of actual or potential competitors, consumers, purchasers or suppliers in the relevant market. Dominant position is especially considered if the undertaking has no significant competitors in the relevant market and has substantial power compared to other competitions, for instance, in reference to their position in the market, financial strength access to suppliers or ability to impose market conditions on its supply or demand.

A rebuttable presumption of dominance is established if the relevant undertaking holds a share of 40% or more in a relevant market. A group of undertakings may also be presumed dominant if their joint market share exceeds 60% and they operate jointly or are able to operate independently of market conditions.

Article 9 of the LPC prohibits the misuse of a dominant position. Examples of abusive conduct include:

- directly or indirectly imposing unfair purchase or selling prices or other unfair trading conditions;
- limiting production, markets or technical development at the expense of consumers;
- applying dissimilar conditions to equivalent transactions with other trading parties, thereby placing them at a competitive disadvantage;

- making the conclusion of contracts subject to supplementary obligations that have no connection to the object of the contract;
- imposing prices that restrict market entry or force competitors to leave the market; and
- denying other enterprises a resource necessary or indispensable for competition in the market for certain suppliers.

If the Authority determines a misuse of dominance, it may adopt a decision prohibiting the unlawful conduct, imposing surveillance or structural measures for avoiding the anti-competitive effects of the conduct and imposing administrative fines.

## 7. Intellectual Property

### 7.1 Patents

Law No 08/L-059 on Patents determines the process for patent protection in Kosovo. A patent is defined as an exclusive right granted for an invention in all fields of technology, if that invention is new, involves an inventive step and is capable of industrial application.

Patent protection entails the right to prevent third parties from making, offering for sale, selling, using, exporting, importing or stocking the patented product or a product that results from a patented process.

#### Length of Protection

The term of a patent is 20 years from the filing date of the application. For pharmaceutical or plant protection products, a supplementary protection certificate (SPC) may extend protection for a period equal to the time elapsed between the filing date and the first market authorisation, reduced by five years. The maximum duration of an SPC cannot exceed five years.

#### Registration Process

The Industrial Property Agency (IPA) is responsible for the legal protection of inventions and the patent registration procedure. The procedure consists of the following steps.

- Application for the patent is submitted to the IPA; this must include a request for recognition, a description of the invention, patent claims, drawings and an abstract of the invention. At the request of the applicant, the IPA can issue a certificate of the right of priority, acquired on the date of submission of the patent application.
- Once the application procedure is completed, the IPA performs a formal examination to check for completeness and fee payment. If the IPA determines that the conditions for the patent application have not been met, it may request the applicant to correct the issues concerned. If the applicant does not correct these issues, the IPA may issue a decision rejecting the patent application.
- The IPA also conducts a substantive assessment to determine whether the subject matter meets the patentability requirements and whether it complies with the rule on the unity of invention.
- The IPA grants patent applications that meet all formal and substantive requirements. Once the patent is successfully registered, the patent owner receives an official certificate and specification, which officially establishes their enforceable rights against third parties. To maintain protection beyond the tenth year, the owner must submit written evidence of patentability from recognised national or international offices; otherwise, the patent protection lapses (or may be amended or invalidated) on the date of the expiry of the tenth year of the patent term.

#### Enforcement and Remedies

Claims for protection may be initiated by the patent holder, authorised representatives or exclusive licensees.

There are two primary legal avenues for right holders in cases of infringement; they may request a court order to terminate current violations or prohibit future ones (where infringement is imminent), and/or they may request a court order to seize and remove all infringing products as well as the materials or tools used in their manufacturing from the market.

Right holders can additionally claim for damages in proportion to actual damage, including lost profits and moral prejudice. Alternatively, compensation may be calculated as a lump sum based on elements such as hypothetical licensing fees applicable had the infringer pursued a licence to use the patent. If an

offender acted without knowledge of the infringement, the court may order the return of profits gained from unauthorised use.

Legal entities may face fines between EUR2,000 and EUR6,000 for using products or services in violation of patent rights, while natural persons may be fined between EUR1,000 and 3,000.

## 7.2 Trade Marks

Pursuant to Law No 08/L-075 on Trademarks, a trade mark may be "any mark, in particular words, including personal names or drawings, letters, numbers, colours, the shape of goods or their packaging, or the sounds-voices", provided they distinguish goods or services of one particular entity and are clearly defined in the register.

Trade mark rights are acquired through registration in the Trademark Register maintained by the IPA. This registration entails an exclusive right and allows the holder to prohibit third parties from using identical or similar signs for identical or similar goods or services in commercial business without their prior consent.

### Length of Protection

Trade marks are registered for an initial period of ten years from the date the application is submitted. Registration may be extended for subsequent periods of ten years through a renewal process.

### Registration Process

The procedure begins with a submission to the IPA containing the application for trade mark registration, data on the applicant, a list of goods and services for which registration is required based on the Nice Classification system, and the appearance of the mark.

After the application is submitted, the IPA conducts a formal examination for completeness and fee payment. It also examines absolute grounds for refusal, including a lack of distinctive features, the likelihood of misleading the public and whether the mark is contrary to public policy.

If the requirements are met, the application is published in the IPA bulletin. Within three months of publication, holders of earlier trade marks or authorised representations may oppose the registration based on relative grounds, such as similarity to their earlier mark. If no grounds for refusal exist and no opposition is successful, the IPA registers the trade mark.

### Enforcement and Remedies

Enforcement procedures and remedy options closely observe the same actions outlined in **7.1 Patents**. However, unique to trade mark protection, right-holders have the additional option to request courts to prevent continuous infringement by ordering a fine of EUR5,000 to EUR10,000 for each infringement.

General sanctions for violations include fines between EUR 5,000 and EUR15,000 for unauthorised use by legal persons, while natural persons may be fined between EUR200 and EUR3,000 depending on their business status.

## 7.3 Industrial Designs

Protection for industrial designs is covered by Law No 08/L-055 on Industrial Designs, pursuant to which an industrial design is protected if it is new and possesses individual character. A design is considered to be new if it is not identical to any other design made available to the public before the filing or priority date; and it considered to have individual character if the overall impression it produces on an informed consumer differs from the impression left by any previous design.

Protection grants the owner the exclusive right to use the design and prevent unauthorised third parties from activities including processing, offering, marketing, importing and exporting products incorporating the design.

### Length of Protection

The initial term of protection is five years from the date the application is submitted. This registration may be extended for additional five-year periods up to a maximum total duration of 25 years.

### Registration Process

The procedure is initiated by filing an application with the Agency for Industrial Property (AIP). The application must include a request for registration, applicant identification, a representation of the design suitable

for reproduction and the names of the relevant products. Once the application is submitted, the applicant has the right of priority over any other future applicant for registration of the same design and may be issued a priority certificate upon request.

The AIP then conducts a formal examination to verify compliance with filing requirements and fee payments. It may reject the registration if the design does not meet legal definitions, is contrary to public interest and moral principles, or constitutes an unauthorised use of the products outlined in Article 6 of the Paris Convention for the Protection of Industrial Property.

### Enforcement and Remedies

Enforcement procedures and remedy options closely observe the same actions outlined in **7.1 Patents**. Legal entities infringing industrial design protection face fines between EUR3,000 and EUR9,000, while natural persons in business may be fined between EUR1,000 and EUR3,000.

## 7.4 Copyright

The framework for copyright is set out in Law No 08/L-205 on Copyright and Related Rights. Copyright protection applies to "works", which are original intellectual creations in the fields of literature, art or science. This includes literary works, computer programs, musical works, audiovisual works, works of fine art, architecture and photographic works.

Authors possess exclusive economic rights under Article 23 to authorise or prohibit the use of their works, including reproduction, distribution, rental, public performance, broadcasting and communication to the public. Moral rights are also protected, namely the right of disclosure, the right to claim authorship, the right of integrity and the right of withdrawal.

### Length of Protection

The exclusive economic rights are protected for the life of the author and for 70 years after their death. Moral rights are protected without time limit.

### Registration Process

Authors enjoy copyright protection by the sole fact of creating the work. No registration or other formality is required for the copyright.

### Enforcement and Remedies

Unique to copyright, claims may also be filed by collective management organisations or professional protection bodies, in addition to right holders and authorised licensees. The statute of limitations for filing a lawsuit is three years from the moment of discovery of the infringement.

Courts may issue interim injunctions to prevent infringement, order the seizure of suspected infringing goods, order a recurring penalty payment or block financial assets and bank accounts in cases of wider commercial-scale infringement. Once a final verdict is issued confirming the infringement, the court implements permanent corrective actions, including:

- ordering the definitive recall from the channels of commerce;
- removal from the market; or
- destruction the infringing goods and the tools used in their manufacturing.

With respect to damages, compensation is to take into consideration financial losses, lost profits, moral damages and any unfair profits the infringer generated. Alternatively, they can be set as a lump sum payment, which, at a minimum, are to be equal to twice the normal licensing fee an infringer would have been subject to pay had they sought licensing, or three times if the infringement was conducted for commercial gain.

With respect to administrative sanctions, legal persons using works without authorisation face fines between EUR5,000 and EUR20,000, and individual businesses face fines between EUR500 and EUR3,000.

## 7.5 Others

### Software

Treatment of software IP is treated within the framework of the Law on Copyright and Related Rights, where computer programs are expressly listed as protected works.

### Databases

Databases are offered dual protection under Copyright Law.

- They are protected as works as long as the creation, selection or arrangement of their contents represents an original intellectual creation. However, copyright protection for databases is limited specifically to the structure or arrangement of the information and does not extend to the contents themselves, nor does it cover the software used to operate the database.
- Pursuant to Article 78, a database creator who has made a substantial investment in gathering, verifying or presenting data has the right to prevent the extraction or re-utilisation of all or of substantial parts of those contents. This right is independent of copyright eligibility, which means the database can be protected under copyright for its structure as well as through the sui generis right for its contents. This right is protected for 15 years, calculated from January 1 of the year following the date of completion or when it was made available to the public.

### Trade Secrets

Trade secrets are protectable under Law No 08/L-076 on the Protection of Trade Secrets, under which a trade secret is any information that is not generally or readily accessible within the circles that normally deal with the kind of information in question, has commercial value due to its secrecy and has been subject to reasonable steps by the person lawfully in control of the information to be kept secret.

Protection is granted against the unauthorised acquisition (accessing or copying documents/files), use or disclosure of the secret, especially when it involves a breach of a confidentiality agreement or a duty to limit use.

This protection ends if the information becomes generally known or readily accessible over time, or if a court order is issued confirming that the secret does not meet legal requirements.

## 8. Data Protection

### 8.1 Applicable Regulations

Law No 06/L-082 on the Protection of Personal Data (LPPD) constitutes the relevant regulation in Kosovo for data protection obligations. It is designed to be in compliance with the EU's General Data Protection Regulation (EU) 2016/679 (GDPR). The competent authority for the supervision and implementation of this law is the Information and Privacy Agency.

The LPPD applies to the processing of personal data by both public and private bodies (bar processing for purely personal purposes), including Kosovo's diplomatic and consular offices abroad, as well as data controllers not established in Kosovo who use Kosovo-based equipment, automatic or otherwise, for processing purposes.

Under the LPPD, a data controller is defined as any natural or legal person, public authority, agency or other body that, alone or jointly with others, determines the purposes and means of personal data. When two or more controllers jointly determine the purposes and means of processing, they are considered joint controllers.

A data processor is defined as any natural or legal person from the public or private sector who processes personal data for and on behalf of a data controller. If a processor acts beyond its instructions and determines the purposes and means of processing, they are legally considered to be a controller relative to those specific processing activities.

Data processing is considered lawful only if at least one of the following bases applies:

- consent of the data subject;
- performance of a contract;
- compliance with a legal obligation;
- protection of vital interests;
- performance of a public task; or
- legitimate interest.

### 8.2 Geographical Scope

The LPPD extends its scope to data controllers established outside of Kosovo if they use automatic or other equipment within the territory for the purpose of processing personal data, unless that equipment is used only for transit.

Foreign controllers are obliged to designate a representative registered in Kosovo to handle processing issues and ensure compliance with the LPPD.

The obligation to designate a local representative does not apply if:

- the processing in question is occasional;
- the processing does not include large-scale processing of special categories of data (ie, data revealing racial or ethnic origin, political opinions, religious or philosophical beliefs, identifiable biometric data and other categories as expressly listed in Article 8 of the LPPD);
- the processing is related to criminal convictions; and
- the processing is unlikely to pose a risk to the rights and freedoms of natural persons.

Additionally, foreign public bodies or authorities are exempted from the obligation to designate a local representative.

### 8.3 Role and Authority of the Data Protection Agency

The Information and Privacy Agency (the "Agency"), led by the Commissioner, is the independent authority responsible for supervising the implementation of Law on the Protection of Personal Data and other regulations concerning personal data protection and access to public documents.

The Agency is additionally tasked with providing advice to public and private bodies on data protection-related issues, informing the public on relevant developments, issuing decisions about complaints from data subjects, supporting the fundamental right of personal data protection, carrying out inspections, carrying out periodic reviews of issued certificates to data controllers, and providing opinions for public institutions and advising the Assembly of Kosovo and the government on legislative measures.

The Agency has the authority to carry out inspections and audits ex officio to monitor compliance with data protection rules. If a violation is identified during the inspection, the Agency can order the elimination of processing irregularities or deficiencies, including the erasure, blocking, deletion or anonymisation of relevant data. Other available measures are temporary or definite bans on data processing or transfers, orders directed to controllers to meet data subjects' requests for the exercise of their rights and fines. In cases of serious and great violations, the Agency may impose fines between EUR20,000 and EUR40,000, or for companies, an amount representing 2% to 4% of their general turnover from the previous fiscal year.

The Agency also holds specific authorisation powers; for instance, private sector controllers may only implement biometric measures upon receiving authorisation.

## 9. Looking Forward

### 9.1 Upcoming Legal Reforms

Kosovo may see several legislative reforms in the near future, although their timing and adoption remain uncertain given that the country has held three general elections within 18 months. Based on the government's Draft Laws Programme 2026–28, potential reforms may affect taxation, customs, investment and financial markets, public-private partnerships, state aid, business organisations, trade, consumer protection, employment, occupational safety and competition.

However, these reforms should be treated as indicative rather than confirmed until a fully mandated government and assembly advance them through the legislative process.

**ASAR – Al Ruwayeh & Partners** is a Tier 1-ranked corporate law firm and has operated in Kuwait for over 35 years. As one of the region's premier law firms to both domestic and foreign companies, it has a strong network of contacts throughout the MENA region. With its team of lawyers, its expertise extends over a wide range of areas that cater to the needs of local and foreign multinational corporations, banks and investment companies, industrial conglomerates, governments and state authorities, and private clients. Its work cuts across various sectors and includes IPOs, capital markets, M&A, banking and finance, real estate, government projects, securities, taxation, construction, corporate and commercial matters, franchising, commercial litigation and arbitration. ASAR is also regularly retained by leading international law firms and has won numerous awards for legal services rendered. The firm has multilingual capabilities, including being able to provide services in English, Arabic and French.

## Authors

**Sam Habbas** is the chairperson and co-founder of ASAR and brings over 30 years of legal experience in Kuwait. He was instrumental in providing strategic direction and development of ASAR it into the leading legal practice it is today in both Kuwait and Bahrain. An accomplished corporate lawyer, Sam has extensive expertise in corporate and commercial law and serves as lead counsel to a wide range of local and international clients. His practice covers a broad spectrum of matters, including commercial, banking and finance, aviation finance, mergers and acquisitions, oil and gas, energy, infrastructure and projects, as well as complex multi-jurisdictional corporate transactions across both the private and public sectors.

**Luis Cunha** is a partner at ASAR and heads the firm's corporate commercial team. With over two decades of top-tier legal experience across three continents, he has played a pivotal role in ASAR's growth and success since joining the firm in 2009. Luis advises both international and domestic clients on a wide range of corporate matters, including mergers and acquisitions, and cross-border transactions. His sector experience spans pharmaceuticals, construction, defence, telecommunications, e-commerce, manufacturing, and oil and gas. He has been involved in several market-first transactions, notably the establishment of a majority foreign-owned company under a hybrid framework aligned with Kuwait's Foreign Direct Investment Law. Luis is admitted as an attorney of the High Court of South Africa and as a solicitor of the Senior Courts of England and Wales.

**Hisham Al-Quraan** is a partner in ASAR's commercial litigation department, for both Kuwait and Bahrain. He has represented local and international clients in various litigation matters involving banking and finance, Islamic financing, construction and agency matters. Hisham holds a Bachelor of Laws (LLB) from the Applied Science University in Jordan and a Master of Laws (LLM) (Commercial and International Law) from the University of Buckingham, England.

**Mustafa Sayed** is a senior associate in ASAR's corporate and commercial department. Mustafa's practice is focused on advising on and assisting with the restructuring of companies, the acquisition and sale of businesses, and the regulatory compliance issues associated with such matters. Mustafa has assisted clients in various sectors, including oil, retail, pharmaceutical and health sectors. Mustafa holds a Bachelor of Laws (LLB) from Cairo University, Egypt and has been admitted to the Egyptian Bar Association since 2015. Mustafa practices law in both English and Arabic.

## 1. Legal System

### 1.1 Legal System and Judicial Order

Kuwait is a civil law jurisdiction, and the judiciary of Kuwait is structured in three levels: the Court of First Instance, the Court of Appeals and the Court of Cassation. The structure of the judicial system is briefly as follows.

#### The Court of First Instance

The Court of First Instance is made up of several circuits/divisions, each with its separate jurisdiction. These circuits/divisions include:

- the Small Claims/Summary Court;
- the Administrative Court;
- the Civil and Commercial Government Court;
- the Civil and Commercial Court;
- the Labour Court;
- the Court of Rent;
- the Criminal Court;
- the Court of Personal Matters; and
- the Court of Minors' Affairs.

The Court of First Instance also has three important support divisions:

- the Authentication Department, which authenticates signatures, etc;
- the Experts Department, which reviews any technical and complicated matters that the court may refer to it, etc; and
- the Execution Department, which is tasked with executing the judgments of the court.

#### The Court of Appeals

The jurisdiction of the Court of Appeals is generally limited to the review of issues being appealed from the Court of First Instance, but it is empowered to make a de novo review of appealed cases as well. The Court of Appeals regularly conducts trials de novo. Judgments rendered in the Court of Appeals are final, except for those appeals taken to and accepted by the Court of Cassation.

#### The Court of Cassation

The Court of Cassation may be viewed as the supreme court of Kuwait. It has final jurisdiction over matters relating to the proper application, interpretation and enforcement of Kuwaiti law, and rectifies procedural and substantive defects committed by the courts below it. The Court of Cassation is divided into commercial, civil and criminal divisions, and its judgments are typically respected and followed, even though they are not legally binding on the lower courts (ie, Kuwait is a civil law jurisdiction without binding court precedents).

## 2. Restrictions on Foreign Investments

### 2.1 Approval of Foreign Investments

Certain restrictions may apply, depending on the nature and extent of the foreign investment being made (including in relation to foreign ownership limitations).

As a general premise, but subject to certain limited exceptions, Article 23 of Law No 68 of 1980 (the

"Commercial Code") requires that foreign entities conducting business in Kuwait do so either through a local agent or through a Kuwaiti "partner" (typically facilitated through the establishment of a Kuwaiti company with Kuwaiti or GCC participants owning at least 51% of the capital). Significantly, Article 24 of the Commercial Code was amended (under Law No 1 of 2024) to allow for the establishment of a Kuwaiti branch of a foreign business (an "Article 24 Branch"). Under these reforms, a foreign entity can, strictly speaking, operate in Kuwait without the need for a Kuwaiti sponsor or an agent (assuming they operate through a branch). In this regard, the authorities are currently in the process of formulating new regulations setting out the relevant practices and rules for its implementation and the establishment of such an Article 24 Branch. At present, these reforms are not being implemented in practice.

An exception to these conduct of business rules is the establishment of a company or branch under Law No 116 of 2013 (the "Foreign Direct Investment Law" – FDIL). The primary purpose of the FDIL is to improve the overall investment climate in Kuwait with respect to foreign investors, and to encourage foreign investment in Kuwait by offering certain benefits to foreign investors (owning up to 100% of a Kuwaiti entity, tax credits, etc). The Kuwait Direct Investment Promotion Authority (KDIPA) was also established under the FDIL, and has regulatory oversight over matters relating to the FDIL. To obtain an investment licence from KDIPA, the prospective foreign investor must satisfy the criteria set out under Article 29 of the FDIL (see **2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance**).

Certain activities are excluded from benefiting under the FDIL but these are narrowly defined activities relating to certain sectors, such as the extraction of petroleum and natural gas, security and investigative services and the manufacture of fertilisers.

GCC individuals and GCC companies wholly owned by GCC nationals may establish branches of their businesses in Kuwait and/or own more than 51% of the shares of a Kuwaiti company (see Ministerial Resolutions No 141 of 2002 and No 237 of 2011 – the "GCC Exemption"). Except in limited instances, GCC nationals are afforded the same rights to establish and to do business in Kuwait as Kuwaiti nationals.

## 2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance

Any approvals that may be required will depend on the nature of the investment and how it will be made. As a general premise, the following may be of significance.

### Requirements to Open a Wholly GCC-owned Company Under the GCC Exemption

GCC nationals and GCC companies wholly owned by GCC nationals may take advantage of the GCC Exemption to open a Kuwaiti company or a Kuwaiti branch of their operations. The process and timing will vary, depending on various factors such as the desired corporate form and the relevant activities to be undertaken.

During the establishment process, the authorities will also seek to confirm that the relevant investor is a GCC national or a GCC company wholly owned by GCC nationals. This is typically evidenced by the relevant identification documents in the case of GCC nationals (ie, the passport of the GCC national, etc) and/or the constitutional documents of the GCC company (including the shareholder details). See also **3.2 Incorporation Process** for details of the process generally followed to establish certain Kuwaiti companies.

### Requirements to Open a Branch Under the GCC Exemption

Foreign investors must satisfy the following conditions in order to open a branch under the GCC Exemption.

- The relevant GCC entity must be wholly owned by GCC nationals, whether directly or indirectly. If at any time a non-GCC shareholder acquires an interest in the relevant GCC entity, the Ministry of Commerce and Industry (MOCI) may cancel the branch licence.
- The relevant GCC entity must have been in existence for at least three years before the submission of the branch establishment application to the MOCI.
- The activities of the relevant GCC entity must be permitted in the GCC region, and the Kuwaiti

branch activities must be covered under the relevant GCC entity's licensed activities.
- The establishment of a GCC branch in Kuwait should be completed within one to two months from the date all required documents are submitted to the MOCI. Generally, the documents required for submission are the MOCI establishment application form, the constitutional documents of the foreign entity and the details of its partners/shareholders. The identification documents must be attested and legalised at the Kuwaiti Embassy in the country of issuance and then attested and legalised in Kuwait before being submitted to the MOCI.

### Requirements to Obtain an Investment Licence From KDIPA

To qualify for an investment licence under the FDIL, the foreign entity has to satisfy certain special requirements set out in the FDIL and its executive regulations. As a key factor, the foreign entity has to demonstrate that its activities will benefit Kuwait as a whole and satisfy the criteria set out in Article 29 of the FDIL (that the activities will result in the transfer of technology, modern methods of governance and practical/technical experience to Kuwait; create employment opportunities and training for national labour; enhance the use of national products, etc). KDIPA will also take into account 15 sub-criteria pursuant to Decision No 329 of 2019, which elaborates on the criteria as set out in Article 29.

The steps to obtain the investment licence are as follows.

- Application request: the submission of the application request online through the KDIPA portal is the first formal step in the application to be licensed under the FDIL. The application request should briefly summarise the proposed investment/project that the foreign party wishes to undertake in Kuwait under the FDIL. Once the application request is finalised and submitted, KDIPA will review the application and will typically respond to the applicant within two/three business days regarding the success of the preliminary application.
- Formal application: if KDIPA believes that the investment/project as set out in the application request complies with and addresses the points required under the FDIL, the applicant will proceed to the second stage of the application process. As part of this process, the applicant will have to submit an application form appropriate to the vehicle it will use to pursue the project.
- Consultation: KDIPA and the relevant applicant discuss and consult on the application and the supporting documents (which will include a business study/plan); KDIPA may require additional information on particular aspects of the project that should be addressed.
- Consideration: once the application and business study are finalised and formally submitted along with the attested, legalised and translated constitutional documents of the applicant, KDIPA is to respond to the applicant within 30 days regarding the success or failure of the application.
- KDIPA approval and investment licence: if the application is approved, the necessary formal steps to give effect to the investment/project are put in place, and an investment licence is issued by KDIPA following the completion of the incorporation process and the issue of the trading licence by the MOCI. If the application is rejected, a written explanation will be given. The applicant may challenge this decision within 30 days.

## 2.3 Commitments Required From Foreign Investors

Certain commitments may be required by KDIPA in order for it to issue an investment licence, as set out under **2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance**. Such commitments are typically agreed on the basis of the relevant business plan. If the agreed commitments are not adhered to, this may have an impact on the investor's licence and the benefits being enjoyed under the FDIL.

## 2.4 Right to Appeal

See **2.2 Procedure to Obtain Approval and Sanctions for Non-Compliance**.

## 3. Corporate Vehicles

### 3.1 Most Common Forms of Legal Entity

Law No 1 of 2016 (the "Companies Law") provides for several types of companies that may be established. The more common forms used by foreigners when investing into Kuwait are the Single Person Company (SPC) or the With Limited Liability Company (WLL).

SPCs and WLLs are largely subject to similar rules/regulations, with a significant difference being that an SPC may only have a single shareholder while a WLL is required to have between two and 50 shareholders. If an SPC has more than one shareholder, it is automatically converted into a WLL. WLLs are the most common form of corporate entities established by foreign parties in Kuwait.

The objects of an SPC/WLL have to be selected from a pre-approved list issued by the MOCI. An entity is not authorised to undertake activities that are not consistent with its objects as listed in its memorandum of association (MOA). The minimum required share capital of an SPC/WLL is currently KWD100 per licensed activity, which will be cumulative: the minimum share capital of each registered object (ie, licensed activity) will be added together to reach the required minimum share capital of the relevant SPC/WLL. The capital amount is usually dependent on the objects selected and approved by the MOCI for inclusion in the MOA of the SPC/WLL.

The liability of shareholders of an SPC/WLL is limited to the extent of their share capital contribution in the company. However, in relation to an SPC, the owner may also be liable for the debt of the SPC if the shareholder:

- liquidates the SPC in a mala fide manner before its expiry or the realisation of its objectives; or
- does not separate the financial rights and obligations of the SPC from its other activities to the prejudice of bona fide third parties.

Investors may also establish a Kuwaiti Joint Stock Company (KSC). There are two types of KSCs: Public Joint Stock Companies (KSCPs) and Closed Joint Stock Companies (KSCCs). KSCCs are more common than KSCPs but, given that KSCs are subject to certain additional taxes (such as Zakat and contributions to the Kuwait Foundation for Advancement of Science) and increased regulation, and have greater minimum capital requirements compared to an SPC/WLL (the minimum required capital is KWD10,000 for KSCCs and KWD25,000 for KSCPs), investors prefer to establish SPCs/WLLs unless the particular project requires a KSC. SPCs/WLLs are also easier to set up and administer, are subject to less stringent regulations and are relatively cheaper to establish and operate than a KSC. In light of this, what follows in this chapter does not address issues in relation to KSCs, focusing instead on SPCs/WLLs.

### 3.2 Incorporation Process

As a high-level summary, in order to incorporate an SPC/WLL, an application must be submitted to the MOCI using a standard Arabic application form accompanied by the required documentation/information. This is submitted online through the MOCI's website. Certain information must be provided as part of the online application, including the names of the shareholders/manager, the capital amount, the manager's authority, the company name, the ultimate beneficial owner (UBO) details, etc.

As an initial step, the UBO must approve their inclusion and be named as such in the application. Currently, only Kuwaiti nationals or expatriates holding a Kuwaiti Civil ID can be listed as a UBO. Under Resolution No 4 of 2023 on the Procedures for the Identification of the Actual Beneficiary (the "UBO Resolution"), the actual beneficiary of a corporate entity is the party that directly or indirectly owns or controls 25% or more of the capital or voting rights of the entity or otherwise has the right to appoint and remove the majority of the board of directors. Where it is not possible or practical to identify the UBO on that basis, the UBO is the person who has actual control over the relevant corporate entity. Where this is not possible or practical, the UBO is the person responsible for the management of the relevant corporate party.

Once the UBO has approved their inclusion, the MOCI must approve one of the proposed names. The online application is then referred to the Ministry of the Interior (the MOI) for its approval regarding the partners

and manager of the SPC/WLL. After obtaining the MOI's approval, the MOA of the company should be signed by all partners (or their representatives) before the Notary Public at the Ministry of Justice. Following the signing of the MOA, the MOCI issues a certificate confirming the registration of the SPC/WLL on the Commercial Registry.

After completing the Commercial Registration application, an online application must be submitted to the MOCI for the issuance of the SPC's or WLL's trading licence. At this point, the lease agreement and rent receipt of the SPC's/WLL's premises must be submitted to the MOCI. During this process, the approvals of the Municipality and Fire-Fighting Administration should also be obtained, after which the trading licence should is issued for the SPC/WLL. Additional approvals may also be required, depending on the business of the SPC/WLL.

The incorporation of the SPC/WLL takes approximately three weeks (from the date all required documentation and information is submitted), provided that no substantial changes are made to the standard MOA proposed by the MOCI.

### 3.3 Ongoing Reporting and Disclosure Obligations

Companies are subject to various ongoing reporting/disclosure obligations after establishment. While the particular obligations will depend on the company itself and the activities it undertakes, examples of what may be required include:

- changes of management must be registered with the MOCI, as well as any amendments to a company's constitutional documents;
- financial statements must be submitted to the MOCI annually for review/approval;
- any change in the shareholding must be registered with the MOCI;
- if the company is licensed under the FDIL, KDIPA will require ongoing disclosures evidencing compliance with commitments made during the licensing process; and
- the UBO and any update thereto must be registered with the MOCI.

### 3.4 Management Structures

An SPC is managed by its owner, but such an owner may appoint one or more managers to manage the company on its behalf. A WLL is managed by one or more managers (and not by a board of directors, which is typically charged with managing KSCs). Managers can be of any nationality, but must have a Kuwait civil ID card and be a resident of Kuwait.

The MOA of the company sets out the powers of the managers. In the absence of any provisions regarding the powers of the managers, the managers have the full power to act on the SPC's/WLL's behalf (it is common to provide in the MOA that the manager has full authority to act on behalf of the WLL) but this can be restricted in the company's MOA or by the ordinary general meeting of the partners (although certain restrictions apply in practice). In relation to a WLL, if the manager is named in the MOA, their termination/replacement should be approved by an extraordinary general meeting. The manager would be considered an employee of the company, so their relationship with the company would be subject to Law No 6 of 2010 (the "Labour Law").

### 3.5 Directors', Officers' and Shareholders' Liability

Managers are jointly liable towards the company, the partners and third parties for breaches of the law or the MOA, or for mismanagement (Article 105 of the Companies Law).

## 4. Employment Law

### 4.1 Nature of Applicable Regulations

Generally speaking, all employers/sponsors in the private sector in Kuwait are required to comply with the provisions of the Labour Law regarding matters such as working hours, overtime, rest days, sick leave, annual leave, holidays, etc, and other statutory benefits, regardless of whether or not such benefits have been waived in an employment contract. In this regard, the Labour Law provides for the minimum rights for employees in Kuwait, but employment contracts can provide for more beneficial rights.

The Ministry of Social Affairs and Labour (MOSAL) regulates employment matters in Kuwait and issues regulations, which should be complied with by employers/sponsors in addition to those in the Labour Law (eg, in respect of the minimum wage). While the Labour Law provides certain express protections for unions and collective bargaining arrangements, in practice these are quite rare and are typically only seen in certain sectors where Kuwaitis, rather than foreigners, form the majority of the sector's workforce.

### 4.2 Characteristics of Employment Contracts

The employment contract is used to obtain the necessary work permits, residence visas and any other government approvals required for an employee, and the Labour Law sets out the basic information required to be included in employment contracts. According to Article 28, the employment contract should be in writing (although an employment relationship can be evidenced through all means of proof) and must include the contract date (both the date of conclusion and the date of validity), the wage payable and the duration of the contract (if a fixed-term contract). The employment contract must also be filed with the MOSAL.

The duration of an employment contract can be either fixed (ie, for a specific period) or indefinite. Depending on the applicable duration, this affects notice periods to be afforded prior to termination, end-of-service benefits payable upon conclusion of the contract, etc.

### 4.3 Working Time

As a general premise, Article 64 of the Labour Law provides that employees are not to work more than eight hours per day or 48 hours per week, except as specified in the Labour Law. Article 66 stipulates that workers may work overtime if the necessity arises, provided that the overtime work does not exceed two hours a day, three days a week, 180 hours a year or 90 days a year. Workers are entitled to a 25% increase on their original remuneration for the period of overtime worked, and employers must maintain overtime records detailing the dates, overtime hours and wages.

Employees are also afforded certain rest periods under the Labour Law. In this regard, during the month of Ramadan, the working hours should not exceed 36 hours per week (Article 64). In addition to public holidays, employees are entitled to a one-hour break after working for five consecutive hours (Article 65) and to at least one 24-hour rest day every six days (Article 67). If employees are required to work on a rest day or holiday, then employers must pay such employee an additional 50% for rest days or an additional 100% for holidays, and must afford the employee an alternative rest day/holiday, as applicable.

### 4.4 Termination of Employment Contracts

Kuwait is not an employment-at-will jurisdiction. Under Article 41 (a) of the Labour Law, an employer may terminate the services of an employee without notice, compensation or benefit if:

- the employee has committed a mistake that resulted in a significant loss for the employer;
- the employee obtained employment through cheating or fraud; or
- the employee divulged secrets related to the establishment that caused or could have caused real losses.

Article 41 (b) provides that an employer may dismiss an employee (subject to the payment of the employee's end-of-service benefits) if the employee:

- has been found guilty of a crime that relates to honour, trust or morals;
- has committed an act against public morals at the work site;
- has assaulted one of their colleagues, the employer or their deputy during work or for a work-related reason;
- breached or failed to abide by any of the obligations imposed on them by contract or under the Labour Law; or
- is found to have repeatedly violated the instructions of the employer.

Employees also have the right to terminate their employment contracts without notification and shall be entitled to their end-of-service benefits if:

- the employer does not abide by the terms of the contract or the provisions of the law;

- the employee was assaulted by either the employer or their deputy;
- continuing work will endanger their safety and health pursuant to the decision of the medical arbitration committee at the Ministry of Health;
- the employer or their deputy committed an act of cheating or fraud with regard to work conditions upon signing the contract;
- the employer accused the worker of committing a punishable act and the final verdict acquitted the worker; or
- the employer or their deputy commits an act against the employee that violates public morals (Article 48).

If the term of the work contract is not specified (ie, an indefinite-term contract), both parties have the right to terminate by providing three months' prior notice of termination (assuming the employee is paid on a monthly basis – this notice period is one month for contractors paid on another basis (Article 44)). In relation to fixed-term contracts, Article 47 of the Labour Law provides that, where the contract is unlawfully terminated prior to the expiry date, the terminating party shall compensate the other party for damages suffered, provided that the amount of compensation does not exceed the remuneration of the worker for the remaining period of the contract. The damage suffered is typically determined in light of trade custom, the nature of the work and the unexpired portion of the contract. All amounts due to the other party may be deducted from the value of the compensation.

Except in limited instances (eg, termination under Article 41 (a) of the Labour Law), employees are generally entitled to certain end-of-service benefits following the conclusion of the relevant employment relationship. In this regard, according to Article 51 of the Labour Law, employees paid on a monthly basis are entitled to 15 days' salary for each of their first five years of service and 30 days' salary for each subsequent year. Other employees (eg, employees paid on a commission basis or an hourly, daily or weekly basis, etc) are entitled to ten days' salary for their first five years of service with the employer and 15 days' salary for each subsequent year. The total end-of-service indemnity is based on the latest monthly salary (including all regular, customary and ordinary payments made to the employee, such as regular benefits, allowances and grants) and should not exceed one and a half years' salary. Other factors that affect the calculation of the end-of-service benefits include whether the employee was on a fixed-term contract, the term of employment and whether the employee resigned.

### 4.5 Employee Representations

Articles 98 to 132 of the Labour Law address employees' rights to organise/form unions, collective employment contracts and collective labour conflicts. Such issues are rarely encountered in practice unless an employment field is populated primarily by Kuwaiti employees, and such arrangements are by no means mandatory.

Article 109 of the Labour Law requires employers to provide their employees with copies of all laws and regulations relating to their rights and duties. Additionally, Article 35 of the Labour Law requires employers to inform employees in advance of the penalties to which they may be subject.

## 5. Tax Law

### 5.1 Taxes Applicable to Employees/ Employers

Natural persons are not generally subject to tax in Kuwait. As such, no taxes are typically payable in the context of an employment relationship. However, with respect to the employment of Kuwaiti nationals, such persons and their employers are subject to the Social Security Law of Kuwait and are obliged to make certain social security contributions (ie, 10.5% of the employee's salary from the employee and 11.5% from the employer).

### 5.2 Taxes Applicable to Businesses

There have been certain developments regarding the application of income tax in Kuwait. The following are particularly noteworthy.

- Decree Number 3 of 1955 (the "Corporate Income Tax Law"): this law applies generally and provides that tax will be levied at a flat rate of 15% on the net profits generated in Kuwait by any corporate body "carrying on business" in Kuwait. As a matter

of practice, natural persons, both Kuwaiti and non-Kuwaiti, are currently not subject to the Corporate Income Tax Law unless acting in a nominee capacity for a foreign company. Persons subject to the MNE Tax Law (defined below) are also excluded from the scope of the Corporate Income Tax Law.
- Law of Taxation on Multinational Entities No 157 of 2024 (the "MNE Tax Law"): this law was issued pursuant to the global "base erosion and profit shifting" (BEPS) initiatives and the OECD Pillar II Model Rules. Under the MNE Tax Law, and subject to certain exemptions/qualifications, multinational entities operating in Kuwait which form part of a group which generates annual revenues of EUR750 million or more are subject to a tax of 15% on their Kuwaiti profits. The MNE Tax Law covers various entity types, including companies, joint ventures, and permanent establishments of foreign entities in Kuwait. However, government entities, non-profit organisations, international organisations, pension funds, investment funds, real estate investment vehicles, and certain entities directly owned by any of these excluded entities may be able to take advantage of exemptions under the Law.

It is noteworthy that these two tax laws do not apply in parallel. Where an entity is subject to the MNE Tax Law, the Corporate Income Tax Law does not apply.

The Department of Income Tax (DIT) also seeks to tax foreign corporate bodies under the Corporate Income Tax Law in their capacity as shareholders in a Kuwaiti company by taxing their percentage interest. The DIT would likely seek to apply the same practice to foreign corporate shareholders of GCC companies operating in Kuwait and/or where a foreign corporate shareholder appoints an individual nominee to hold its shares in a Kuwaiti company on its behalf.

While, strictly speaking, there is currently no "withholding" tax in Kuwait, there is a requirement under the Corporate Income Tax Law for government agencies and private entities in Kuwait to notify the DIT of all contracts entered into by them, and to retain 5% of the contract value (in practice, this is achieved by retaining 5% of all payments made to the counterparty) until the counterparty provides a tax clearance certificate. Although this procedure is sometimes loosely referred to as a withholding tax, it is, in essence, a retention mechanism to secure the counterparty compliance with its Kuwait income tax obligations, rather than a tax as such. That said, while this remains subject to formal confirmation, entities subject to the MNE Tax Law may be exempt from such retention requirements.

While Kuwait has not yet introduced a value added tax (VAT), it is expected to implement a 5% VAT in line with the GCC Framework Agreement on VAT signed in 2016. As briefly mentioned in **3.1 Most Common Forms of Legal Entity**, KSCs may be subject to additional taxes (Zakat, etc) compared to other corporate forms such as WLLs.

### 5.3 Available Tax Credits/Incentives

Given the restricted scope of taxes in Kuwait (relatively low flat tax rates, etc), there is limited scope for additional tax credits and incentives.

It is of particular significance, however, that several tax credits are provided to parties operating under the FDIL. These tax credits are related to the commitments made to KDIPA and are set out below (with the figures given being the set percentage/multiplier value for calculating annual benefits).

- Technology transfer: specialised equipment cost – 20% of the value of the specialised equipment cost.
- Creating job and training opportunities for Kuwaiti nationals:
  - (a) total expenditure on salaries paid to Kuwaiti employees – five times the annual salaries paid to the Kuwaiti employees in excess of the percentage covered under the applicable laws; and
  - (b) total number of Kuwaiti employees – KWD36,000 for each Kuwaiti employee.
- Expenditure on training of Kuwaiti employees – ten times the annual expenditure on training of Kuwaiti employees.
- Utilisation of local resources:
  - (a) rental of the local head office of the investment entity – equivalent to the value of the annual contracts with local suppliers;
  - (b) contracts with local suppliers (especially in-

cluding SMEs) for the provision of local products and services – equivalent to the value of the annual contracts with local suppliers; and
(c) raw material and other material from local sources – double the annual value of inputs used from local sources.

Article 8 of the executive regulations to the Corporate Income Tax Law is also significant, as it provides that the profits accrued by corporate bodies from trading on the Kuwait Stock Exchange are exempt from taxation.

## 5.4 Tax Consolidation

While there is no express rule restricting tax consolidation, the Corporate Income Tax Law provides that every taxpayer must file an income tax declaration (Articles 1 and 8 of the Corporate Income Tax Law), and this requirement is applied in practice by the DIT. In practice, consolidation is permitted in relation to affiliates and is expected to develop further with the introduction of the MNE Tax Law and its requirements.

## 5.5 Thin Capitalisation Rules and Other Limitations

The Corporate Income Tax Law does not expressly address thin capitalisation (where a company is primarily financed by debt rather than equity) or the tax consequences thereof; however, it is of possible significance that Executive Rule No 38 provides that the DIT may scrutinise financial costs/expenses to detect whether a taxable transaction has occurred (considering, amongst other things, the necessity of loans/interest in relation to loans from banks and related parties, and the surrounding documents, inter-group interest charges and interest paid in relation to foreign financing). Executive Rule No 38 provides as follows (informal translation).

### First: Bank Interest

The interest locally paid on bank facilities and loans used in the main activity of the incorporated body shall be accepted after ensuring the necessity of the loan and also the supporting documents. The interest on the loans utilised in financing the capital operations shall be capitalised and added to the asset value.

All interest charged by the head office for its current account in the incorporated body's branch in the State of Kuwait shall be discarded. The same applies to the interest charged by the agent.

The interest paid abroad shall be discarded unless it is proved that such interest has been paid for loans and bank facilities to finance the incorporated body's activities in the State of Kuwait.

### Second: Letter of Guarantee's Commission Paid Abroad

This commission shall be allowed if it is only paid to a foreign bank to issue a letter of guarantee from a local bank and the letter of guarantee is related to a taxable project in Kuwait. Commissions related to a letter of guarantee where the revenue is not taxable shall not be allowed.

## 5.6 Transfer Pricing

Save for certain limited guidance in the executive regulations (see Article 5) and the Executive Rules, little is expressly provided in the tax laws/regulations on how taxes should be treated between a branch and its head office.

That being said, Executive Rule No 38 does provide that no interest charged by a head office in relation to its account with the Kuwaiti branch shall be deductible. In practice, however, such interest charges may be allowed if the Kuwaiti tax authorities are satisfied that the interest is a legitimate charge that relates to a Kuwaiti project. Also of significance, Executive Rule No 49 provides that the tax authorities may inspect intergroup transactions to ensure that such transactions are not concluded for illegal tax purposes. Executive Rule No 49 goes on to provide that each entity is responsible for its own taxes but that, in special cases, related entities can be treated differently after consulting with the tax authorities.

It is also understood that, in practice, the DIT applies limits on the deductibility of expenses incurred outside Kuwait in relation to a head office, related entities and third parties to varying degrees. The following are provided as examples:

- costs of imported materials to be resold in Kuwait – deductions cannot exceed 85–95% of the related value;
- design costs incurred outside of Kuwait – deductions cannot exceed 75–85% of the related value; and
- foreign consulting expenses – deductions cannot exceed 70–80% of the related value.

Depending on an entity's status (ie, whether it is a head office, a related party or a third party), the applicable deduction allowed may be greater or lower within the range provided. Transfer pricing rules are also introduced under the MNE Tax Law, which broadly provides for concepts which align with the OECD Transfer Pricing Guidelines (including arm's length principles etc).

### 5.7 Anti-Evasion Rules

See **5.6 Transfer Pricing** regarding the scrutinisation of related party transactions. Where there are reasonable grounds to believe that a taxpayer will not comply with its tax obligations, Article 35 of the executive regulations to the Corporate Income Tax Law empowers the DIT to make preliminary attachments (and potentially seek to dispose of the assets) and to ban the relevant management of the taxpayer from travelling. The following may also be of possible relevance.

- See **5.2 Taxes Applicable to Businesses** in relation to the 5% tax retention required to be made from payments being made to counterparties.
- Under Executive Rule No 57, the authorities can institute precautionary attachments when the Tax Department becomes aware that the taxpayer intends to:
  (a) leave the country forever;
  (b) cease its activity; or
  (c) dispose of its assets with the aim of evading the tax due.
- Under Article 36 of the executive regulations to the Corporate Income Tax Law, if the final and payable taxes and penalties are not paid on the required date, the Tax Administration may approach the courts to attach the property of the taxpayer (including such assets of the taxpayer as may be in the possession of a third party). With respect to penalties, Article 34 of the executive regulations to the Corporate Income Tax Law provides that a penalty of 1% per month (calculated on the taxes due) shall be imposed for failing to submit a tax return as from when the tax return was meant to be filed, and a further 1% per month (calculated on the taxes due) for failing to actually pay taxes as from when the tax was due to be paid.
- Under Article 44 of the executive regulations to the Corporate Income Tax Law, the Tax Administration may cancel any agreement or procedure that has the intention of tax avoidance.

Significantly, the MNE Tax Law also includes new rules regarding tax avoidance/evasion. The following is of particular importance.

- Unlike previous tax legislation in Kuwait, the MNE Tax Law includes a provision which expressly seeks to combat manipulative structures which are aimed at reducing tax liability. In this regard, it is provided that an agreement/transaction shall be disregarded where its principal purpose or one of its principal purposes is to reduce, defer or be exempt from tax.
- Without prejudice to any stricter penalty, a person can be subject to imprisonment for up to three years and/or a fine of up to three times the tax liability in relation to tax evasion by committing or contributing to forgery, fabrication, concealment or destruction of records.

The MNE Tax Law also includes provisions for, amongst other things, precautionary attachments, administrative penalties (for late filing and payment of taxes) and increased penalties for repeat offences.

### 5.8 Tariffs

The tariffs (customs duties) are regulated under the Unified Customs Law (enacted in Kuwait by Law No 10 of 2003) and the Kuwaiti regulations issued under the Unified Customs Law by Decree 200 of 2003. The General Administration of Customs (GAC) is the government entity responsible for undertaking all tasks and duties related to the customs affairs, including implementing decisions issued by the government ministries and other departments in the State of Kuwait with respect to the importation of goods.

The standard customs duty rate in Kuwait is 5% of the cost, insurance, and freight value of the imported goods. However, certain categories of products are subject to different duty rates or exemptions depending on their nature, purpose or country of origin. For example:

- Kuwait applies unified customs duties with other GCC countries and there are certain preferential agreements with other Arab countries which impact the applicable customs duties;
- tobacco and its derivatives, amongst other products, are subject to higher customs duties;
- items imported for official use by government institutions may be exempt; and
- raw materials and machinery used in industrial production by Kuwaiti entities may be eligible for exemptions or reduced rates.

Personal belongings and items accompanying a person moving to Kuwait are often exempt.

## 6. Competition Law

### 6.1 Merger Control Notification

Kuwait has recently overhauled its competition regulatory regime, with a new Competition Law (No 72 of 2020) promulgated during November 2020. The Competition Protection Authority (CPA) has been tasked with implementing the Competition Law and regulating competition matters generally in Kuwait. The CPA issued implementing regulations, which were published during July 2021 (under CPA Resolution 14 of 2021) and which have since been supplemented; these regulations give further effect to the Competition Law. The Competition Law and its implementing regulations have brought about a number of significant changes to M&A, which should be accounted for going forward.

When acquiring or merging with another business, certain reporting obligations and approval requirements arise in the context of what is considered to be an "economic concentration". Such economic concentration is defined under the Competition Law to include "a permanent change of control in the relevant market, arising by way of merger or acquisition". Such control may also be exercised in concert with other persons, whether directly or indirectly.

Article 10 of the Competition Law provides that such economic concentration is deemed to be present in the following instances:

- the merger of two or more persons or parts of their businesses that results in control or an increase of control;
- the acquisition of direct or indirect control over another one or more persons through acquiring, amongst other things, assets, equities, usufruct and/or shares; or
- the existence of a partnership between two or more persons that leads to a permanent and independent economic or commercial activity, whatever the legal form or activity that is practised.

Article 10 of the Competition Law has been drafted in broad terms and is largely duplicated in the implementing regulations. However, the definition of what is to be considered an economic concentration provides that there should also be a change of control of a particular market. Of particular significance is the fact that, while the previous and now repealed Competition Law (No 10 of 2007) provided that control would be established where a person (or group of persons), directly or indirectly, controls 35% or more of a particular market, this has not been carried over into the current Competition Law or its implementing regulations. However, Article 12 of the Competition Law does provide that such reporting obligations are triggered where the value of the underlying registered assets or annual sales in Kuwait subject to the economic concentration exceeds certain thresholds. These thresholds are set out in CPA Resolution No 26 of 2021 on Controls of Aggregate and Individual Thresholds, as amended by Resolution No 32 of 2026.

### 6.2 Merger Control Procedure

As indicated in **6.1 Merger Control Notification**, the Competition Law provides that the participants of an economic concentration situation are required to obtain the approval of the CPA before completing such economic concentration. A CPA application is required only if the relevant registered assets or annual sales in Kuwait exceed the applicable thresholds.

The application to be submitted to the CPA should include confirmation of the payment of an administration fee in an amount equal to 0.1% of the paid capital or the aggregate value of the assets of the relevant persons in Kuwait, whichever is less, subject to a maximum of KWD100,000. The CPA should then examine the application to determine the possible negative consequences of the economic concentration on free competition. Given the timelines afforded to the CPA in evaluating such application, this process may take several months to complete, but currently, in practice, this would take two months.

### 6.3 Cartels

The Competition Law guarantees the freedom of exercising economic activity in a manner that does not affect free competition for all in Kuwait. The Competition Law also contains a general prohibition on acting in an anti-competitive manner (by stating that all agreements, practices, etc, that are harmful to free competition are prohibited) and elaborates on particular agreements/practices that are restricted. The Competition Law provides that it shall apply to all acts perpetrated abroad that affect competition in Kuwait.

The Competition Law has introduced the concepts of horizontal relationships and vertical relationships into Kuwaiti law.

Persons are in a horizontal relationship when they are on the same level of production/distribution level in a particular market, whereas a vertical relationship exists when they are on different levels of a production or distribution chain of a particular market.

In a horizontal relationship, parties are restricted from:

- setting the prices of products, either directly or indirectly, whether by increasing, decreasing, fixing the price or imposing any commercial restrictive requirements relevant to the sale or distribution of commodities or the provision of service or any other form contrary to ordinary market forces;
- dividing the product markets according to areas, volume of sales or purchases or products being sold in any other manner;
- fixing the quantity of production, distribution or sale for commodities or determining a specific method or means for the provision of a service;
- restricting the technical development or investment in connection to the production, distribution or sale of a commodity or provision of a service; and
- colluding in submitting bids or offers for the sale, purchase or provision of any commodity.

Significantly, the Competition Law provides that the CPA is to provide further guidance on what is permitted/restricted in relation to persons in vertical relationships; such guidance remains outstanding.

### 6.4 Abuse of Dominant Position

See **6.1 Merger Control Notification** and **6.3 Cartels**.

## 7. Intellectual Property

### 7.1 Patents

Law No 71 of 2013 (the "Patent Law") addresses patent protection issues in Kuwait. Although the Patent Law does not expressly define the word "patents", Article 3 provides what should not be considered as a patent, including:

- discoveries, scientific theories, mathematical methods and computer programs;
- schemes, rules and methods of doing business, practising pure mental activities, and playing a game;
